A Couple Of **Bullish Notes In Grain Market**

The level of prices where it is, a grain farmer could use any encouraging word he can get.

A couple of current economic reports offer some bullish words, one on a more or less current basis, the other a general, indefinitely timed one but encouraging if one buys its theme.

The latter report is from H. Hentz & Co. of Chicago, which simply says that sometime in the future the world will discover that wheat is priced too

Basically, the Hentz report says there is a shorter supply of wheat in storage on hand in relation to the world's population than in the past and any emergency or expanded demand that arises will affect prices within the recognition of sma'ler storage supplies.

The Hentz report points out that in 1962 the major wheat

nations had 3.1 million bushels on hand and the world's population was about the same in number. In short, there was about one bushel of wheat in storage for every person on earth.

Since then, the Soviet Union has largely removed itself as a wheat-exporting nation, supplies of major nations total about 2.8 billion bushels and the werld's population has certainly advanced, perhaps to 3.3 billion. There has been a change in the supplyto population ratio of more than 15 percent, a change that normally makes itself felt in the market place.

The Hentz thesis is obviously incumbent upon some change in demand and a recognition of the change in supplies. Such a change could occur anytime, but, of course, that "anytime" might be some distance into the future. The main question, then, if Hentz' theory is right, is

The more current bullish effect on the grain market is increased demand for feed inputs from Japan. Japan's feed industry was growing rapidly for several years, then struck a snag last year because of low hog prices and disease in poultry. The hog market has evened out and Japan apparently whipped the disease problem, and Japan is back in the market place for ingredients, not only

for hog and poultry feed, but also for beef and dairy cattle, areas of growth in Japan also.

Obviously the U.S. hopes to be in the competition to sell corn and sorghum grains to this major grain market.

Biggest Federal Deficit Since World War II

The nation's largest one-year deficit since the World War II period was reported by government officials closing the books on fiscal year 1968.

as expenditures outweighed receipts, \$178.9 billion to \$153.5 billion.

It was in line with unofficial guesses of \$25-plus bi'lion widely circulated in the closing weeks of the fiscal year, but it was a third above the \$19.8 bil-'lion deficit forecast by the administration in January.

Although only half as large,

In a joint statement, Secre-

They said also that the estimate "assumed earlier enactment of the President's proposals for an income tax surcharge and an acceleration of corporation tax payments."

This package was relied on to bring in \$2.7 billion by the end of the fiscal year, they said, ad-

collected before June 30 due the later enactment of the charge legislation."

In January, President Johns estimated the cost of the Vie nam war for the fiscal year \$24.5 billion but on March 3 tacked on an additional \$25

The Fowler-Zwick stateme offered no firm figure on the cost of the war for the year They said only that outlays military assistance and all tary functions of the Depart their bins. This ment of Defense — not just Vietnam — were up \$1.1 bills and estima from the March 31 estimate.

For all the other activities government, they said, the result was that spending was summarized the \$400 million less than estimate port of grain sto

Grain Supplies Top '67 Levels

At the first of each quarter, Uncle Sam calls upon grain outlays for dealers and processors to show nd all mile how much grain they have in e Depart, their bins. This information not just in along with amounts in CCC \$1.1 billion bins and estimates of farm stocks — is published on or activities of about the 24th of January, Aptid, the net ril, July, and October. We have summarized the quarterly reding was n estimated port of grain stocks that was issued on July 24, and have added other information to make a picture of the present and prospective supply of the major and brothed grains.

Wheat. The carryover of old the fourth wheat on July 1 totaled 537 mil-Polansky, jon bushels — 26 percent more pionship than a year earlier. Stocks at d consecut elevators (including mills and rother, Ad warehouses) were 308 million erve honor bushels — up 10 percent. Farm heat and stocks were 228 million — up 57 percent. CCC bins held only 1 million bushels — the same as

ws weekly. a year before. lay at 1207 The USDA The USDA has estimated the new wheat crop at 1588 million hushels — 4 percent more than last year. The carryover plus the new crop makes a total supply of around 2125 million bushels — 9 percent more than was in sight a year ago.

The best chance to get wheat

prices up seems to be to feed a large amount to livestock and lock up as much as possible under price-support. That could lift prices 10 to 15 cents over the loan level by next spring.

Oats. The carryover of oats on July 1 was 270 million bushels the same as last year. The new oat crop has been estimated at 889 million bushels - up 14 percent from 1967. That makes a total supply for this marketing year of 1159 bushels - 10 percent more than a year

Barley. The carryover of barley was 136 million bushels, up 11 percent from a year before. The new crop has been estimated at 406 million bushels — up 10 percent. Thus, the new crop plus the carryover totals 542 million bushels - 10 percent more than a year ago.

Sorghum Grain, Stocks of sorghum grain on July 1 were estimated at 372 million bushels -11 percent more than a year earlier. The government has not yet made a forecast of 1968 production. Acreage is down 7

Corn. Stocks of corn on hand July 1 totaled 2149 million bushels, according to the USDA. This was 23 percent more than

One for grain, one for

one year before. Corn at elevators, etc., was listed at 431 million bushels — up 40 percent. Farm stocks were posted at 1621 million — up 21 percent. CCC bins held only 98 million bushels — the same as one year

The carryover of corn on October 1 probably will be at least 1200 million bushels. This would be 45 percent more than the 1967 carryover.

The new crop has been fore. cast by the USDA at 4452 million bushels — only 6 percent less than last year. Hence, the prospective supply may total around 5650 million bushels, or a shade more than for the current marketing year.

Soybeans. Stocks of soybeans on hand July 1 totaled 285 million bushels — 43 percent more than a year before. Beans in elevators, etc., were listed at 164 million bushels — up 44 percent. Farm stocks were estimated at 120 million bushels — up 42 perpercent. There were no beans in CCC bins during either year.

It now appears that the carryover of soybeans on September 1 will be around 160 million

bushels, compared with 90 million last year. As yet, there is no official forecast on the 1968 soybean crop, but acreage is liisted as up 3 percent.

(The bigger the "bite" you take on every round, the more you appreciate the extra work capacity of Case high-torque power.)

Stepping up to as big a tractor as your farm can justify is good business. Keeps your heavy tillage schedules on target. Makes your time more productive.

Stepping up to Case high-torque power pays still bigger dividends. For, whether you operate a 3-plow Case 430 or the big 6-plow 930 shown above, you'll find something extra going for you with Case. The big extra? Torque! High torque from true tractor-engine design: big bore, long stroke, relatively low rpm. Big-leverage muscle that takes you through heavy going that would

make other tractors shift or stall. Lets you handle bigger implements, work at higher speeds with confidence. Invest in that bigger tractor you need in

'67 . . . but get the one with high-torque reserve capacity. See your Case dealer. He has the power—3-plow to 8-plow—to help you make more money. And a Crop-Way Purchase Plan tailored to your needs.

that's the big CASE difference!

Fewer Members, But Co-op Volume On Rise

Farm cooperatives and their memberships have declined in numbers but have increased substantially in business volume, a Department of Agriculture report shows.

The study, released by the department's farmer cooperative service, is for 1965-66 and includes a comprehensive analysis of the nation's farm co-op marketing, supply and service

Total volume was \$20,600,000,-000, an increase of 5.1 per cent from the \$19,600,000,000 reported the previous fiscal year. Net volume — not counting business done among co-ops themselves — was \$15,600,000,000, a gain of 6.1 per cent.

The number of cooperatives declined to 8,328 from 8,583 the previous year, and memberships totaled 6,826,275, a decline of 3.6 per cent.

HOW WILL YOU HANDLE ALL OF THOSE STALKS?

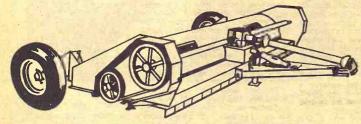

► The best way to handle the tangled mass of tough, heavy hybrid stalks is a Brady flail shredder. It shreds your stalks, makes plowing easier, faster, better ... knocks out most of your corn borers, too. You can even pull a tandem disc behind a Brady and be ready for minimum tillage. It's a great labor-saver . . . and excellent for clipping pastures and idle acres.

► Two, three, and four-row available. See them

Mergers among cooperatives and the long-time trend of fewer farm people were major factors, the department said.

But the trends to larger farm operations, higher output and increased operating costs were reflected in the increased business volume.

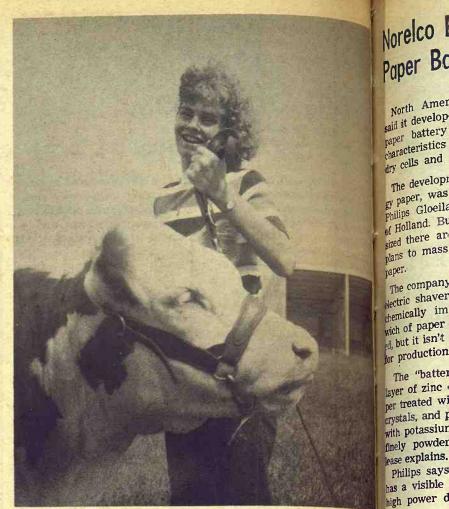

The gross value of farm products marketed by cooperatives in the year was \$15,500,000,000, up 4.6 per cent from a year earlier, the department said. The net value, after deducting intercooperative business, was \$12,-200,000,000, a 6.2 per cent in-

Gross value of farm supplies handled was \$4,800,000,000, up 6.9 per cent, with the net totaling \$3,100,000,000, an increase of 6 per cent. Services related to farm product marketing totaled 325 million dollars, a gain of three per cent from the previous year.

Overall, the total volume of cooperative business about doubled from 1950 to 1961, the sur-

California continued its firstplace ranking in the value of net cooperative business with a \$1,800,000,000 volume, about 12 per cent of the total net, the department said.

Minnesota was second with 1 billion dollars, and Iowa was third with 989 million dollars.

A Nebraska Feed Manufacturer's Philosophy

"Production of Meat and Eggs Is More 'Naturally' a Function of an 'Entrepreneural' Organization, Including The Family Farm, Than of a 'Mature' Corporation"

Humboldt, Nob.

nave to say might be of some interest, for I can speak more freely than can a functionary of a large corporation.

A company is people, and people formulate the company's policies. The policies of The O. A. Cooper Co. are formulated by a special kind of people—that is, small town people.

My brother (John R. Cooper, executive vice president) and I were born and have lived all of our lives in Humboldt. Humboldt has a population of 1,400 today, just as it did when our father was born here 88 years ago. Humboldt has thrived, even though it has not grown, and it has thrived by doing just one thing—serving the people and their needs in the rural areas surrounding it. surrounding it.

So, serving agriculture is a philosophy and a way of life for us, and for the 170 other small town people

for the 170 other small town people in our company.

As an example, we do not believe it is in the best interest of agriculture, or the formula feed industry, to indulge in integrated operations. While it is not in the scope of this argument to make judgments on matters of conscience, in our advertising we do name the companies in our area that are raising animals in competition with their customers and ours. Our large competitors only say, "Of course, what you say is true." Many of our non-integrated competitors tell us that they feel exactly as we do but don't have the nerve to speak up.

At least we are doing what we think is right, and it works well for us.

At least we are doing what we think is right, and it works well for us.

In 1928, we had one custom mill serving the farmers of the Humboldt community only; now we have four full service feed mills serving the people of more than 500 communities. But the philosophy is the same—service and dedication to agriculture and our customers.

our customers.

It is interesting that, having lived in a farming community all of my life, I still have not been attracted to integrated livestock and poultry operations. The paradox is that large companies in the feed business, with management several generations away. agement several generations away from the farm, have been mightily at-

tracted to integration.

The purpose of this article is not to condemn those who disagree with us but to explain why we are what we

First, because I have had social and

COZAD, NEBRASKA

The family-owned regional feed manufacturer has become the exception instead of the rule in our industry. For this reason, if no other, what I have to say might be of some interest, for I can speak more freely than can a functionary of a large corporation.

A company is people, and people formulate the company's policies. The policies of The O. A. Cooper Co. are formulated by a special kind of people—that is, small town people.

My brother (John R. Cooper, executive vice president) and I were born and have lived all of our lives in the farmer as the top half of the farmers. It has never even to suinessman could be a good businessman and at the same time, as good a farmer as the top half of the farmers. The farmer is the farmer as the top half of the farmers is the farmer as the top half of the farmers.

My brother (John R. Cooper, executive vice president) and I were born and have lived all of our lives in the farmers and the same time, as good a farmer as the top half of the farmers.

I know.
In all frankness, I have even tried farming, and I proved I was right. I was not as good a farmer as my neighbors. Owning farms as an investment, and renting the farms to good farmers, in additional matter. There I have done well from the standpoint of op-

The person removed from first hand and continuing contact with farmers might think that a big corporation could do what the farmer does, but

Can't Farm Better

Now I agree that a big corporation can make steel or cornflakes, or can market dog food in a metropolitan area, better than any farmer. But I don't agree that the big corporation don't agree that the big corporation can farm better than a good farmer can. If size by itself led to efficiency, Russia would be tops in agriculture. A large corporation cannot farm, or raise hogs, or produce eggs or broilers, or feed cattle as efficiently as can a highly motivated farmer and his family, any more than General Motors can operate a retail car franchise as efficiently as can its independent dealers. operate a retail car manches ficiently as can its independent dealers.

There is often a tendency to forget that the business executive does not compete with the farmer—he hires people to compete with the farmer, and it is not in the books to hire agand it is not in the books to hire agricultural laborers who are as motivated and efficient as the farmer and his family. The man at the lowest level in a corporate farming operation—docile, unmotivated and careless—is not to be compared with the farm operator who is independent and highly motivated.

Really, I feel that "agricultural entropreneur" is a better term than farmer, for "farmer" is too restrictive in that it popularly refers to a small agricultural operator, the type of operator that is declining in relative importance. The family farm may be a corporation, and it may approach big

Norelco Develops Paper Battery

North American Philips Co. said it developed a "wafer-thin" paper battery that has many characteristics of conventional dry cells and storage batteries.

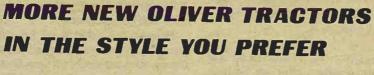

The development, called energy paper, was made by N.V. Philips Gloeilampenfabrieken of Holland. But Philips emphasized there aren't any current plans to mass produce energy

The company said a prototype electric shaver powered by a chemically impregnated sandwich of paper has been developed, but it isn't currently planned for production.

The "batteries" consist of a layer of zinc or magnesium paper treated with common salt crystals, and paper impregnated with potassium persulphate and finely powdered carbon, a release explains.

Philips says its energy paper has a visible energy reserve, high power density, flat discharge curve, low cost and unusually long shelf life.

When the paper is moistened, current is generated for five minutes, "more than ample time for a clean shave," Philips

plet than maximization of profits and with possible crippling uncerables, its decisions are arrived at by the kind of consensus of its people competence in various areas.

If the consensus of its people competence in various areas, and as its long range planning. To successful, long range planning certain determinable factors, recy. (a) cost of materials, together the cost of production and maring costs, to arrive at unit cost, and a lorecast of attainable sales at a determined price. mined price.

ate a rather of efficiency: which to argue may be. Ohio wer individual of the efficiency of family and and the efficiency of the efficiency of family when dailing were in the efficiency of the toler, cattle, hog, egg or turkey suction does not fit into this picton the cost of material varies with market (as grain, grain byproducts). It is impossion any economist or group of decision of the cost of any economist, weeks or even to approximate the cost ingedients months, weeks or even ahead. Since it is impossible to this cost of in-puts, it is imposto to estimate unit cost. It is true labor contracts can be negotiated. labor on the standard of the s farm white it is a second of the carring up sadd at the carring up s labor contracts can be negotiated, that costs of real estate, machin-interest, depreciation and many factors can be accurately estimed, but then the market comes in

The real crux, however, is that share of market can never be determined where numerous others produce identical end products, or can in a few months, and their plans cannot be controlled. All broilers can be sold, it is true, but only by chance can a long range planner "guesstimate" at what price.

range planner "guessimate" at what price.

Some things are amenable to long range planning, and some are not. I am president of Consumers Public Power, which is right now entering into a \$300 million expansion program. In the generation and distribution of electricity, long range planning is sound and essential. The industry exists as a monopoly. It must plan to meet the demand for its product 2, 5 and 10 years ahead. Its rates must be economical but with demand increasing at predictable rates (linear projections have been valid for 25 years), it is well within the range of sound probability to plan ahead and meet demands with reasonable certitude.

The food business is not predictable.

The food business is not predictable in the same way. I am in the flour milling business. Look at what has happened to our per capita consumption of wheat flour in the past 25

tion of wheat flour in the past 25 years.

Look at the situation in the pork market. Here a multitude of agricultural entrepreneurs" do "what comes naturally" rather than following a staff prepared "long range plan for growth!" There is plenty of pork, and prices are fair to producers and consumers alike.

Look at the situation in the broiler market, where industrial giants have ground ahead on long range plans that have crushed the "agricultural entre-

ground ahead on long range plans that have crushed the "agricultural entrepreneur," glutted the market and ruined what was a nice goal for everybody. If the feed companies had been content to service the independent, if greed for growth had been restrained, there would still be, as an example, "broilers in Nebraska." Not only that, but I contend that likely their stockholders would be happier.

Commercial cattle feeding operations are not integrated to the extent that broilers, turkeys and eggs are, but still there is a constant pressure from "outsiders" moving into the game, whether by national feed companies operating so-called experimental feed yards or by other routes.

In my own mind, I have certain

yards or by other routes.

In my own mind, I have certain categories into which successful and unsuccessful cattle feeders fall. Let me illustrate by listing individual operators whom I know well. They are amenable to being classed as prototypes, and one picture is worth a thousand words.

sand words.
Successful Feeders Successful Feeders

1. Feeds 25,000 head year around. The owner is a self-made millionaire. He has low capital investment. He tries to prove no theory regarding nutrition, buying or selling. He is knowledgeable in all three areas. He personally watches all parts of the operation, he can smell trouble as quickly as he can smell a profit, he knows how to delegate, holds those delegated to accountability, measures efficiency, pays well, fires fast, is pleasant for everyone to get along with.

2. Feeds 2,000 head annually. Cat-

2. Feeds 2,000 head annually. Cat-tle feeding is incidental to a substan-tial grain farming operation. The cat-tle are used to utilize native and wheat pastures, to clean up the corn and milo fields. The cattle are bought light, grown for six months or longer and then fattened on a farm grain ration. It is a third generation farming operation. It is a third generation farming operation. Owners have accumulated a considerable worth in good stocks for surplus funds. The principal income is from cash grain sales. They buy additional farm units for cash when offered attractively, and if they will fit into their expanding operations. They don't need to borrow any more.

3. Keeps 3,500 head in the lot year around. The owner grows half of his own grain. He has fed cattle for 40

and, as regards the major in-put, up-sets everything.

The real crux, however, is that share of market can never be determined five year structure. Over any five year period, he makes good

Unsuccessful Feeders

1. A mature corporation, unrelated to farming or feed milling, builds a big feed yard, builds a feed mill, hires a manager. In five years it is disgusted with returns and recurring problems, so quits the operation and is seeking a buyer.

buyer.

2. A corporation is set up by small town business and professional men. They put in a little cash, get an SBA loan, build a feed mill and yard, hire a manager, lose \$100,000 the first year. What will they do next?

3. An old time successful feeder makes lots of money, gets old and cranky, doesn't have a good organization, gets stubborn; the problem won't be settled except as an estate liquidation, some time.

The moral is that there is no money in cattle feeding per se. The experi-

in cattle feeding per se. The experi-nced, flexible, cattle feeder with know-how and capital can literally make a profit out of "doing business."

make a profit out of "doing business."

DIFFERENCES — Let us think briefly of the differences between General Motors' long range planning (it can approximate cost, units to be sold and at what price) and the long range planning of a major corporation producing broilers. The latter can closely plan units it will sell; the cost of same and selling price are in the hands of the gods.

Now these are the kinds of risks that an entrepreneur accepts willingly, and as a matter of course. He does it knowing that he may prosper and grow, or fall by the wayside to be replaced by another, as the case may be. Besides, where complicated long range plans for products and markets are not feasible, the entrepreneur has built-in advantages. He can draw in his belt as no mature corporation can; he can even operate broke and come back, which is hard for a public corporation to do.

back, which is hard for a public corporation to do.

Agriculture in the over-all is large and efficient but operating on very narrow margins. The number of farmers goes down yearly, which proves that agriculture is not a growth industry. We all want to be in a growth industry. My contention is that serving agriculture is a growth industry, though agriculture itself is not a growth industry. As farmers get bigger, though fewer, their demand for service grows.

service grows.

The 80-acre farmer has very lim-The 80-acre farmer has very limited call for service; he performs nearly all of his own services. But, his neighbor who farms on 10 times the scale that he does needs services. He needs all kinds of service that will save him labor, strengthen his management decisions, add a percent to his net on operations, or enable him to grow even bigger within the limits of available labor and management.

Growth Facet

Growth Facet Yes, we have chosen the growth facet of our industry, which is serving the big and growing family farm. In fact, it stretches us to keep up with him, and his demands; we must run like a deer to keep far enough ahead of him to be able to offer leadership along with service.

along with service.

We are not happy with our competitors competing with our customers and theirs. We are only happy that if it must be done, it is not us who are doing it. We prefer to concentrate in the area of our competency, and the one true growth area in our industry, which is service to farmers.

From the constant trek of those going out of integrated operations, which about matches those who come in, we know that competing with the farmer is not duck soup. We honestly think it is a reflection on management not to find better uses for money and manpower than to operate in this market-dominated, hazardous area where it is not needed. The family farm can and always has produced abundant high quality protein foods for our expanding population, and will continue to do so. We feel that our economy is panding population, and will continue to do so. We feel that our economy is sufficiently affluent that it can afford to pay cost of production for protein foods, and that large corporations which dump broilers and eggs on the market at below cost of production, are not doing so for the long run benefit of the consumer. If the family farm would be crowded out and monopolies instituted, then it would be that the housewife would really pay dearly. It is a day that we are confident will never come.

fident will never come. It is hardly fair to criticize without offering, or at least attempting to offer, a constructive alternative to that which we criticize. We do it knowing that we are moving out of our area of true competency.

What is the solution to overproduction of agricultural end products, especially broilers, eggs and turkeys?

First let us see how the farmer or "agricultural entrepreneur" handles overproduction. If the corn-hog ratio becomes unfavorable, he breeds fewer sows. He may turn to other alternatives, such as a beef breeding herd, or he may just sit it out. This is difficult for him to do, but he does it.

It would solve overproduction of broilers if the broiler industry, as inof eggs an arbitrary 10% or 20%, instead of going ahead until the bankruptcy route does it clumsily. This latter route seems the route that industry follows, and it smacks of unfair trade practice, for the economically streams can be the economically streams or such the economically weakstronger crush the economically weak er units—though the latter may have equal or superior efficiency in terms of unit costs.

This route has two other bad side effects. First, it is so bruising to the red meat industry—beef, pork and lamb—for they all compete at the same meat counter. Secondly, it seems to be repetitive. When good prices are obtained for broilers (and what is said of broilers applies equally to turkeys) following the route of bankruptcy or voluntary withdrawal (e.g., General Mills), then the remaining units an new entries repeat the cycle.

Now let's look at how mature corporations in general operate. The steel industry maintains a certain inventory but basically produces what the market will absorb at pre-determined price. It operates at only the percent of capacity that the economy will absorb "at its price." So does the automotive industry. So do those who op-This route has two other bad side

motive industry. So do those who operate on government contracts. If they don't get contracts, they don't go on grinding out engineering and develop-ment, regardless.

Preferred Solution

So here is my preferred solution. Let the major broiler producers (for they are now presumably mature cor-porations) do as other mature cor-porations do. Let them maintain an inventory as their facilities permit, and not sell from that inventory except as profitable prices are received, and not set eggs except as there is need to re-plenish that inventory, or, as a more likely thing, as they can get profitable

contracts for future delivery of the broilers, from the eggs that they would set today or at a future date. Only in this way will they operate as a mature corporation, rather than as a production-oriented entrepreneur. Only in this way can there be fairness to the composite of efficient producers in the industry, and to producers of other types of protein-rich feeds. After all Purina (as a prototype) doesn't grind out formula feed, or Ry-Krisp, at a pre-determined rate, and sell it at the price its dealers will bid.

The only thing that I can see that would hold this back would be a disinclination on the part of the strongest units to compete on a basis where the most efficient would do the business, regardless of their financial staying power. Would the largest units, and those financially strongest, have the moral temerity to see smaller units profitably operate under the umbrella of their cost-plus-reasonable-profit formula, when the largest units have the power to crush the gadflies through the route of a price war?

Such a plan would not eliminate competition, as each unit's cost would set a floor, and as profit margins could be separately squeezed or expanded at will. Break-even would be the bottom as a corporate policy. There would still be as great, or greater, incentive to produce specialized consumer products that would permit

er, incentive to produce specialized consumer products that would permit better returns to the broiler processor

better returns to the broiler processor
than broilers per se.

I accept cheerfully the following
criticisms of my suggested solution:
"Over-simplification," and "a country
boy's cracker barrel philosophy." I accept these specific criticisms because
they are true.

One thing I know—the market
place settles disputes. I sense a sharpcontent of the place of the place

place settles unspittes. The set a map er interest in the stocks of companies who are involved in feed milling, measured by earnings price multiplier, if those companies are taking a realistic and sharp look at their operation, and moving over into growth areas, and handling their integrated operations very realistically and likely with tions very realistically and likely drawing from or eliminating them.

GARDEN GLORY SALAD

1 package lemon gelatin

1 cup hot water 2 stalks celery, diced fine

½ green pepper, diced fine 2 sweet pickles, diced fine grated carrots teaspoon minced onion

12 stuffed olives, sliced 1 small carton (small curd) cottage cheese

1 small carron (Shan to 1) to up mayonnaise
Dissolve gelatin in hot water. Let cool till it barely starts to thicken then add all the other ingredients. Chill until it sets.

By Beverly Macy

We had a little excitement last week when we suspected our nearly-five-year-old had been bitten by a spider. As we were preparing to leave for the emergency room at the hospital my husband frowned at me and cautioned, "keep calm, keep

calm." "I am keeping calm," I snapped, then looked down and realized I was trying to stuff a quart jar with the spider in it into a purse about the size of a business envelope. The topper came when the potential patient called, "hurry up Daddy, or Mama's going to go to the hospital without us."

For weeks we made plans to see "Rosemary's Baby" when it came to town. We hired a sitter, hurried to the theatre, saw about an hour of the picture then the tornado sirens blew. After scurrying home the

spouse remarked, "well, I knew we didn't get to the movies very often, but I didn't think it'd cause all this commotion." PS: Finally saw the rest of the movie at a drive-in.

My poor old second-hand automatic washer, that we bought just to "get by" on has finally given out. We've been "getting by" with it for about eight years and it has served me so faithfully that it's almost like an old friend. Seems a pity to toss it on the junk heap. Anyone have any suggestions on how to make a lamp or something out of it?

May Use Stainless Steel Flatware, China Together

It is all right to use stainless steel flatware with good china if they blend nicely with each other. For example, you wouldn't want ornate or old-fashioned china patterns together with a severe ultra-modern design in flatware.

When you go shopping, take along one of your plates. Regardless of the metal, see how they look together. If you're still in doubt, an experienced sales person should be able to advise you. If well chosen, stainless steel can look elegant. It is very popular and needs little

or no care.

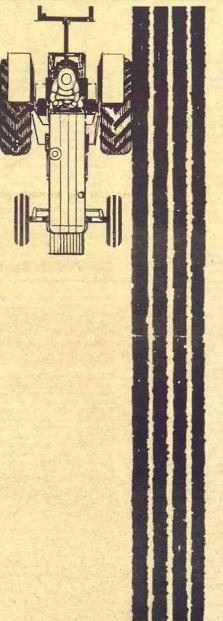

We say: "The Massey-Ferguson Tractor right for your farm will out-perform any other tractor in its price range."

That challenge we make is not an empty boast. We are confident we can prove-on your farm and doing your kind of work-that a new MF is the wisest tractor investment you can make.

First, we can help you select the "just right" tractor capability from 20 different models that make up the Massey-Ferguson line. Tractors from 26.5 to 120 horsepower. Diesel, gasoline, or LP gas engines. And the widest possible selection of options and accessories to permit precise customizing according to individual needs.

In addition, our Massey-Fergusons offer major features not available on other tractors. Exclusives such as tractionboosting Pressure Control-"The most important tractor advance in 32 years." Advanced Ferguson System hydraulics that provide the fast, easy way to handle even the largest implements and equipment.

There are many other sound reasons why you should select your next tractor from this great Massey-Ferguson line. Come in and talk it over. We wouldn't say these are the most capable tractors on the market if we couldn't back it up with comparison figures and tractor-against-tractor tests in

The increasing demand for patios stems from a growing desire for the pleasures of "outdoor living." Patios are a practical answer to outdoor living, entertaining, recreation and relevation.

If you're building a patio, make sure you get its maximum advantages by careful planning. Here are some suggestions:

Whenever possible locate the patio on the southern side of the house. This affords plenty of sunlight without excessive heat. If the area is subjected to high winds put the patio on the leeward side so the house will act as a shield.

Use the patio to visually expand the house interior. The best way to do this is with gliding patio doors. Their uninter-

rupted glass area gives the room adjacent to the patio an extensive outdoor view and their easy operation makes access to the patio convenient.

The doors are obtainable with

The doors are obtainable with tempered insulating glass as a safety feature or tinted glass to reduce sun glare.

Install a few electric outlets so you can light the patio at night and have convenient plugins for an automatic coffee-maker, radio or TV. An outdoor water faucet should be nearby.

Provide some storage space for outdoor and sports equipment. This could be a bin, closet or storage shed — depending on whatever gear you wish to keep at hand and out of the weather.

If necessary, protect the patio's privacy with a high hedge or fence.

Neat Repair

A neat and easy method to mend a hole in a garment is to turn the garment to the wrong side, cut a patch to fit from the facing or hem, then place over the hole to be repaired. Next, iron on an adhesive patch.

IHCC makes it a true family purchase

HOW? By providing the means to buy the equipment you need now without depleting family savings. HICC simply arranges a way for you to pay for income-boosting equipment as the equipment earns for you. You can pay seasonally as crops and livestock are marketed. Or, if your income is on a regular monthly basis, you can arrange for monthly payments. Provision can be made to skip certain months when you know that your income will be reduced, or expenses will be high.

IHCC respects your privacy and values your patronage. All transactions are made in strictest confidence with your IH dealer, a man who's interested in satisfying you and keeping you as his customer. Through IHCC, he can finance all your IH farm equipment needs—large or small, new or used—as well as equipment overhaul and other service work. To protect your family from the unforeseen, physical damage and credit life insurance are also available—as well as crop failure protection for combine and cotton picker purchases.

See your International Harvester Dealer today and buy the equipment you need to make your operation more profitable. Make it a family purchase with the help of IHCC ... with a personalized payment program that fits your budget and protects your family.

FFA Has Named Its Finalists For Star Farmer

The four regional finalists who will compete for the Star Farmer of America title at the FFA convention at Kansas City October 17 are:

 DeLane Ruess, Owosso, Mich. Jack Gibbons, Clymer, N.Y. Boyd Spencer, Albert, Okla. Michel Oakley, Scio, Oregon

Ruess farms in partnership with his father and attends Michigan State University. The family enterprise includes 360 acres and a milking herd of 66 Holstein cows, plus replacements, calves and a poultry flock of 2000 laying hens. Crops include 185 acres of hay, 20 acres of oats and 16 acres of wheat.

In five years Ruess has earned about \$51,000 from his share of the operation. His financial statement shows assets of \$60, 000 and a net worth, after deducting indebtedness, of about \$36,000.

Gibbons has managed his family's farm for the past three years. His father is in ill health and has arranged for Gibbons to buy the farm outright when he is 21. The 214-acre farm includes a 54-cow Holstein milking herd averaging 13,243 pounds of milk per cow a year. His present net worth is about \$37,000.

Spencer attends Oklahoma State University, majoring in agricultural economics, and is married. His farming programs include a 65-cow purebred Polled Hereford beef herd in partnership with his father. Spencer has bought two farms totaling 240 acres.

His earnings for six years total \$52,752.

Oakley is married and has a

operates a dairy farm, but during high school, he struck out on different production pro-He is one of two producers cabbage seed; he also raises sugarbeet seed, strawberries,

in the country of Rio Verde mint and wheat. His land includes 87 acres of irrigated acreage, which he bought, and 46 acres which he rents.

Oakley's net worth is about \$22,500.

The four young men have shown FFA officials that they can manage and develop farm assets. Each has had a base from which to launch his farm programs, and has utilized help available from educators, bankers and other experienced people. This is the essence of tomorrow's agriculture.

Reins On Wheat Exports Are Proposed

A House report recommended three ways to prevent domination by a few firms of government-financed wheat exporting.

At the same time, investigators said they found no evidence of restrictive trade practices by the four major firms in the bus-

The investigation was made by the House government operations committee. Its recommendations to the foreign agriculture service of the U.S. Department of Agriculture were:

• Lowering of purchase authorizations so smaller export firms will not be prevented from sharing in the benefits of government-financed export

• Broadening the base of participation and competition among firms making agricultural exports under the government program for sales for foreign currencies.

• It also suggested the House agriculture committee consider placing an appropriate upper limit - perhaps 10 to 15 per cent - on the amount of exports financed under the government program that any privately-owned exporting firm is permitted to undertake during any calendar year.

Using the lowest "cash basis" quoted on any given day rather than the "cash basis" currently used, which is a composite of a range of quotations and estimates. The present practice of using an average "cash basis," the committee said, "increased the price the government is willing to finance."

Wheat is the principal agricultural commodity exported by the United States. The U.S. exported wheat valued at about \$3,500,000,000 at world market

prices during the fiscal year 1966-67.

The four exporters that handle 75 to 80 percent of the government-financed wheat are Cargill, Continental, Dreyfus and Bunge, according to the committee.

The committee said "no substantive leads resulted which could prove restrictive trade practices on the part of those four dominant wheat exporters."

Record Low Rate Of U.S. Births

The U.S. birth rate dropped to a record low last year, the Census Bureau says.

Americans produced only 17.9 births per 1000 persons, plunging below the previous lows during the Depression years.

The previous low was 18.4 in both 1933 and 1936.

August 13, 1968

The Census Bureau said the net increase in the population was the lowest since World Wat II at 1.08 percent. The popular tion at the start of this year wa figured at 200,248,000 persons

The median age of the popu lation was 27.7 years. One out of every nine persons was N 1271 from 1 gro. And there were 100 gro. And there were 100 women for every 96.7 men.

Wild Turkeys On Increase

Wild turkey broods have increased substantially in Kansas, according to a first-half observation period report by state game biologists.

Twenty-three broods with 204 poults have been viewed by observers including cooperating landowners in turkey release localities. The average brood consists of nine young birds.

The figures are optimistic when compared to 1967 brood counts which tallied 39 broods with 263 poults for the entire reporting period, Steve Capel, McPherson, wild turkey project leader, announced.

Commission Co., Inc. Sale Every Thursday

We had a real active market last Thursday with all classes of cattle selling at strong prices. We are expecting a good run of cattle for this Thursday's sale and will have plenty of buyers for all classes of cattle. We don't want to try to scare anyone, but if you have big calves to sell it might be a good time to sell them. Below is a partial listing of our sale last Thursday.

CLAY CENTER, KANS.

Talmage, Kans., State bank was placed on five years probation after pleading guilty in U.S. district court to violation of federal banking laws.

Charles E. Montgomery, 27, Topeka, was charged in eight counts of a 10-count grand jury indictment with making false entries in bank records and conversion of bank funds to his personal use.

Judge Wesley E. Brown sentenced Montgomery to five years in prison and then placed him on probation after the defendant pleaded guilty to one

Montgomery pleaded guilty to knowingly and willfully making a false entry showing a debt of \$1386 being owed to the Chase-Montgomery insurance agency. On August 19, 1965, payment in that amount was made to the agency.

The defendant pleaded innocent to seven other counts of the indictment.

Also charged in the same indictment is Kenneth M. Chase, 24, Talmage. He entered a guilty plea to one count.

Onetime Soybean King Dies On Welfare Rolls

A man who once made a half million dollars in one day in the soybean market has died in California, on the county welfare rolls.

The man was Arom Der Zakarian, 65, killed in an auto accident. Der Zakarian made millions speculating in soybeans, but was nearly wiped out by the 1967 bumper crop which sent the bean market plunging last year and this. Der Zakarian then switched to

frozen pork bellies — bacon and went under when his market folded also.

His first venture came in 1950 when he put a few thousand

340 N. Santa Fe SALINA, KS

dollars into soybean futures and made a 90 percent profit in two weeks.

This vanished in other deals but Der Zakarian came back 1956 when he made \$1 million for himself and several asso. ciates. In 1957 he reportedly made \$500,000 in one day when he sold off two million bushels of soybeans.

your sow is a pig factory

A sow has the tremendous job of converting feed into big litters of thrifty pigs twice a year. She must supply enough milk to give her pigs a good start in life and build herself up to perform this task again.

Nature has given the sow a safety valve...the ability to resorb developing embryos if she doesn't get proper care and nutrition. Studies show 20% to 33% of all pig embryos conceived are resorbed during gestation. Pig embryos grow fast. During the last 12 weeks of gestation, each healthy embryo increases in size 800 times!

Years of continuous Purina Research have built and improved Purina Sow Chow Complete . . . a highlyfortified ration that gives a sow the nutrients she needs during gestation and nursing.

Sows that farrow and raise big litters will make more money for you. That's why thousands of hogmen follow Purina's Sow Feeding and Management Program to help them send eight and nine pigs per litter to market. Let us tell you more about it.

demonstrations and production ,practices, reports Frank G. Bieberly, chairman of this Experiment Station event.

Major emphasis will be on high plant populations involving various hybrids, the influence of narrow rows on yields, fertilizing corn for maximum profit, use of herbicides to control weeds, high lysine corn - the new development in breeding, and a comparison of the old open pollinated corn varieties with the newest hybrids.

President James A. McCain and Vice President for Agriculture Glenn Beck head the list of more than a dozen K-State faculty members who will appear on the 9:30 a.m. to 3:00 p.m. program.

Since Kansas farmers are interested in more than one crop,

the day's activities will also include a look at soybean varieties and practices, sudangrass varieties and hybrids, and a discussion on harvesting and handling high moisture grain.

A popular feature of Field Day is the silage harvesting demonstration in both corn and forage sorghum fields. Several companies have been invited to show their equipment "in action." This array of new equipment will be on display during the entire day, Bieberly indi-

A special program has been arranged for ladies who accompany their husbands to the Field Day. Activities include a demonstration in ceramics, an exhibit of pottery made from Kansas clay, a demonstration on preparing table decorations, and a field trip to select materials for their own table decorations.

Topeka Fair Slate Settled

The 88th annual Mid America Fair will be held in Topeka Sept. 6 thru Sept. 11. Approximately \$55,000 in cash premiums will be offered in the various departments, with top money going to the livestock divisions.

Closing date for entries is August 24; however, in most of the cattle divisions the closing date was August 12. Early entries gave assurance of a better than average year for the livestock show which each year attracts the top herds from all parts of the nation.

1968 premium books listing the thousands of dollars in cash premiums offered are available free to anyone desiring a copy. Each of the 160-page premium books contains an official entry blank. To obtain a free copy, interested persons should address their request to the Mid America Fair, P.O. Box 945, Topeka. A copy will be mailed immediately.

Entertainment for the 1968 exposition will include top attractions of th eoutdoor show world.

Featured at the grandstand night show the first three nights, Sept. 6-7-8, will be Alan King who has been featured many times on the Ed Sullivan Show. King will bring his own 23-piece orchestra, plus "The Brothers and The Sisters", a 19person group of international fame.

Following the Alan King show, the Grand Ole Opry will take over for two nights. Heading the performers will be Red Foley and a big group of Nashville stars.

Auto races, featuring speedway-type cars will be featured on Saturday and Sunday afternoons, Sept. 7-8. Royal American Shows will be featured on the mile-long midway in Topeka during the six days and nights.

Nebraska Wheat Losing Protein Reputation

Western Nebraska, which for several years was getting quite a reputation for producing high protein wheat, is apparently finding out that the area was rather more lucky than good.

For the third straight year. protein records from western Nebraska haven't been any better than any place else, wiping out some feeling that the region had discovered some magic that made its wheat more desirable to millers than other parts of the midwest.

August 13, 1968

A current issue of the University of Nebraska college of agriculture quarterly publication discusses the fall, suggesting that what gives wheat a high protein content is still unknown, that high nitrogen doses do not necessarily produce high-protein wheat, and that the matter is likely still mostly related to the

The more expensive your watch, the more it needs the attention of experts. But ordinary watches need extra special care because keeping perfect time is not just built-in. It s the result of extra care.

ONE DOLLAR WHEAT SPECIALS

We have three & four plow tractors, standard models, Cas-es, John Deeres, IHCs, MMs. These are good serviceable low priced tractors.

They have a lot of good cheap hours left in them, most of them have good tires.

We have three and four bottom plows to match the above. Look them over, pick out the pair you can use, and let us sharpen our pencil.

We will make that bushel of wheat buy a lot of service.

Most of '67 Corn Still Under Loan

With 2,426,359 bushels of 1967-crop corn redeemed thru June 30, farmers in Kansas still had about 8,475,000 bushels of the grain remaining under loan, Lawrence E. Brennan, chairman, Agricultural Stabilization and Conservation state committee, has said. Corn from the 1967 crop put under loan thru June 30 reached a cumulative total of 10,902,717 bushels.

Also remaining under loan in the state at the end of June were the following 1967 crops: Grain sorghum, 2,606,914 hundredweight; and soybeans, 895,170 bushels.

Price-support activity for 1968-crop wheat through June covered 3,997,518 bushels. Brennan reporter that a total of 28,640 loans have been made on 1967 crops, led by wheat with

August 13, 1968

22,619 loans.

Nationally, almost 389 million bushels of 1967-crop corn remained under loan through June 30, with more than 49 million bushels redeemed. Also, still under loan as of that date were 135 million bushels of 1967-crop soybeans (nearly 62 million bushels redeemed); 23 million hundredweight of grain sorghum (12 million hundredweight redeemed); 64 million bushels of wheat (105 million bushels redeemed); 20 million bushels of barley (16 million redeemed); and 15 million bushels of oats (13 million redeemed). These figures do not include 1967 crops putunder extended (reseal) loans.

ASCS had made a total of 408,299 loans on 1967 crops, led by soybeans with 139,708 loans; corn, 124,300; and wheat, 96,759.

No Mention Of Balanced Budget

Almost missed by most observers of the Republican convention at Miami Beach was the failure of the GOP platform to even pay lip service to the virtues of balancing the budget.

Writers of the party platform did not even mention the \$23 billion deficit of the 1968 federal budget.

Instead the platform made four general observations on budget: 1) that over a long period of time, it is prudent to have a balanced budget; 2) that current deficits are dangerous, particularly as breeders of inflation; 3) that a budget surplus is desirable when inflation is a danger; 4) that a budget deficit may be helpful when the country's economy is sluggish.

Horse Pull

Web Lohmeyer of Greenleaf came to the Riley County Fair to enter his team in a horse pulling contest. Web said he had placed third in two other county fairs this summer.

Auto Companies May Cut Guarantees

Those five-year or 50,000 mile warranties on new cars may go the route of the rumble seat with the introduction of the 1969 models.

If you do get a warranty it might cost extra. And it may have a deductible feature, like auto insurance.

Insiders report the automakers would like to get rid of these warranties altogether. Some believe they'll do just that.

If the 5-50,000 warranty on power trains goes by the boards, the automakers would extend the 24-month or 24,000 mile quarantee that applies to the rest of the car to the power train - the engine, transmission, drive shaft, wheels and bearings.

Figuring in the debate on the 5-50,000 elimination is the fear that this, coupled with higher prices for the cars, might set off a loud howl by critics, particularly those in Congress.

General Motors, Ford, Chrysler and American Motors refuse any comment regarding elimination of the 5-50,000 warranty or a rise in prices, except to say they will announce their decisions when new models are introduced in early September.

As late as 1960, the industry's warranty was for 90 days or 4000 miles, whichever came earlier. This applied to the whole

AUCTION

We are quitting farming and will sell at public auction on the farm located 9 east, 1 north & 14 west of Clay Center or 21/2 south & 13/4 east of Green, Ks.

240 Acres More or Less As we have moved to Wakefield, Kans., we will sell at public auction the real estate described below at the farm located 2 miles south and 1 mile west of downtown Lucas, Kans.

SAT., AUG. 17 Starts 2 p.m.

This is a very good producing farm in Russell County with no erosion problems and requires no terracing. It has 155 acres of level to gently rolling cultivated land and 85 acres of grassland. Good water well, fencing, and ½ mile of shelter belt. All mineral rights are included in the sale of the real estate. Cultivated land has been expected and kept clean of which worked and kept clean of which 30 acres are summer fallowed. Wheat Base for 1969 72.6 acres. Grain Sorghum 36 acres. Barley 7 acres. Balance is conserving

POSSESSION: Immediate upon payment of full purchase price. For further information or inspection contact G&H Auction Co., Ellsworth, Kansas.

OWNERS: MR. & MRS. Alvin C. Klusener Sale Conducted by G&H Auction Service, Ray Gerbitz, GR 2-3491, Ellsworth, Kansas.

Ford came up in 1961 with a 24-month or 24,000 mile guarantee on Lincoln Continentals, and made this standard on all Ford's 1963 models.

Chrysler and GM went to a 12-month or 12,000 mile warranty in 1961, then Chrysler rocked the industry in 1963 by introducing the 5-year or 50,000 mile warranty on the power train and continuing its 12-12,000 on the rest of the car. In 1967, Chrysler added the 24-month or 24,000 mile guarantee for the rest of the car.

American Motors and GM joined Ford in extending to the 24.24,000 coverage in 1963. These three got to the 5-year or 50,000mile power train warranty on 1967 models, continuing the 24-24,000 warranty on other components.

Those facts become clear as wisit with Dr. John Wheat, neticist in the animal science d industry department of ansas State University who has just returned to Manhattan after two years in Northern Ni-

Wheat has been one of sever-KSU faculty members workng under an AID (Agency for nternational Development) 24.70 greement at Ahmadu Bello Unrersity, Samaru, Northern Ni-

> During the two years he was n Nigeria, Wheat traveled 54,miles over narrow and rugged roads as he worked to build reeding programs for both beef nd dairy cattle.

CATTLE SALE VERY MONDAY

HOG SALE WERY WEDNESDAY

Sale Time 12:00 Noon BEATRICE, NEBR.

Beatrice 77 26.70 LIVESTOCK SALES CO. 2 miles north of Beatrice, Nebr., opposite the airport. Phone 223-3571

CLARENCE TEGTMEIER DELMAR JURGENS

JR. THIMM

His work took him to nine livestock investigation and breeding centers located in the provinces and to Bornu Ranch, a 20,000-acre expanse, located 22 miles south of Maiduguri in Northern Nigeria.

One of the difficulties encountered by Wheat and his associates was convincing Nigerian livestock men that individual animals are different and of varying value.

"To most of them, an animal was an animal. All cattle were the same," Wheat said.

It was also part of Wheat's work to show the local cattlemen the need for, and methods of, conserving cattle feeds during the rainy or wet seasons when feed grew abundantly.

The feed needed to be saved, the K-State geneticist explained, so the cattle would have something to eat during the "dry" season which extended usually from October to the last of May.

Some cattle "literally starved to death" each year because of the lack of feed, he said.

Disease is a major obstacle to the efforts of Wheat and others in establishing breeding programs. Streptothrycosis, a skin fungus disease, is one of the worst. It causes many deaths during the wet season. Rinderpest is a contagious disease common to cattle throughout Africa and Brucellosis is another formidable foe of cattle pro-

A disease that caused Wheat one of his greatest heartaches and most disastrous setbacks in his breeding program endeavors was "contagious bovine pleuropneumonia," he said. It killed several animals important to his program.

Nigerians trained by K-State personnel in the veterinary school at Ahmadu Bello University are helping combat the diseases, Wheat said.

At Bornu Ranch, where Wheat conducted the breeding program, there is a goal. It is to establish a 1,000-head female breeding herd, he said. A bull would be assigned to each group of 20 cows. Individual records would be kept on calves and performances of tested bulls. When Wheat left Bornu Ranch, the program was getting under-

The KSU livestock geneticist believes the secret of establishing effective breeding programs in Nigeria may be achieved by introducing new genes by cross

The genes would be ones that would increase the rate of

growth in the cattle and improve their body conformation, particularly in the hind quarter, rump and loin areas. Genes are needed also, Wheat said, to increase the amount of marbling in the carcass. "There is essentially no marbling in the carcass now," he explained.

Wheat also said that animals must be developed that are able to survive under the "adverse" environmental conditions of Nigeria.

Wheat's family, including wife Margaret, Mary 16, David 15, and Alice 11, went to Nigeris with him. They are all back in Manhattan now where Dad will resume work in the animal science and industry department.

And Mrs. Wheat is glad about that for at least one reason. Dr. Wheat may be home for meals more often now. He missed a few of them while traveling those 54,000 miles around the Nigerian countryside.

Better Year For Dairy Plants

produced by Kansas cows in 1967 went to manufactured dairy products like cheese, ice cream, butter, cottage cheese, condensed milk, prozen desserts, and dry milk, and state dairy manufacturers grossed nearly \$50 million on their production.

Those figures come from an annual study by the Kansas Reporting Service, showing that 1967 was an up year from 1966 for the dairy manufacturers but was still slightly below the 5-year average 1961-65.

The figures do not include grade A milk used for bottling.

The report indicates continued shifting within the industry with several manufacturers

the major dairy manufacturing counties is Allen County, which two years ago lost its Pet Milk factory at Iola after ranking as one of the top three dairy plant counties in the state for many

Dairy plants have either quit or drastically reduced operations in Wichita, Topeka, Dodge City and Salina. Output in Lyon County has also declined, perhaps reflecting the purchase of the Braum plant at Emporia by the Steffen interests of Wichita. But new or expanded plants at Hill City, Garnett, Hiawatha, Winfield, and McPherson have made up for these declines except for the closing of the Pet. plant at Iola.

More than half the milk going into manufactured products goes for butter output, which accounted for \$13.7 million of the \$49.99 million gross. American cheese produced was worth \$9.5 million, and iced products like ice cream, sherbet, and frozen desserts accounted for \$13.3 million, altho taking only 15 per cent of the total milk used in manufacturing.

Cottage cheese accounted for \$4.0 million, condensed milk for \$3.1 million, non-fat dry milk solids for \$4.9 million, and dry buttermilk for some \$107,000.

The butter output was 23 percent above a year ago, but 20 percent below the 1961-65 average. American cheese declined from its record output in 1966 but was still well above average.

For the first time in 22 years, cottage cheese production did not show an increase but it was still above the 5-year average.

Ice cream was up 9 percent from a year ago, but still did not make up the loss from a year ago. The other frozen products like iced milk, sherbet, and various dairy desserts continue to show modest increases.

TOO MANY VOTERS ON TOWNSHIP ROAD TAX

CLAY CENTER - Thirteen Clay County townships passed 5-mill road taxes at last week's election but one of them, Chapman township, got the ballots into the hands of too many voters and its election has been held invalid. The residents of Longford got the township ballot but were not eligible to vote on the question, which passed 57 to 33. A special election may be held, as November election would be too late to allow for collection of the tax in Decem-

Four Lambs A Year An Aussie Research Goal

Australian ewes might produce four lambs a year instead of one if experiments at Melbourne and Sydney universities are fruitful

A ewe produces a lamb in just under five months and, at present, spends five months feeding it. She then goes out to pasture for two months before the breeding cycle is repeated.

In the Australian experiments for a higher birth rate, the lambs are taken from their mothers when they are one day old. Hormones are given to ewes in the hope they will produce twins every time.

Professor Derek Tribe, of the Commonwealth Bureau of Agricultural Economics, said that in the experiments lambs taken from their mothers were given a liquid diet based on whole milk powder for three weeks. then fed solid food. The results, he said, were promising, and the mortality rate low.

Hope To Speed **Payments For** Diseased Stock

Farmers who have livestock killed in federal animal-disease programs should be able to get their money faster than in the past, if new USDA regulations work out as intended.

Amendments to regulations concerning brucellosis, tuberculosis, and paratuberculosis of cattle were made effective by the Department of Agriculture on July 30, with intent to get indemnity payments for destroyed animals made in quicker time.

Basically, the changes give more authority to the veterinarian in charge of an area, allow more leeway in giviing a farm22

Start 1:00 p.

Residence EA 5-2393 Barn Phone EA 5-2266 Washington, Kans.

HOGS START AT 11:00 A.M. CATTLE AT 1:00 P.M.

In spite of the rain all Saturday morning we still had a remarkably good sale. We sold a lot of cattle and hogs; more than we ever thought we could get in through the mud. Prices were steady to strong all the way through.

CONSIGNMENTS

42 head of good black heifers, 600-650 lbs. 55 choice calves, 475-550 lbs.

We will also have a lot of other cattle that we couldn't get in through the rain last week, and plenty of buyers will be here to take care of them.

The following is a sampling of the sales made last Saturday:

STEER CALVES 54 whif steers 170 @ 37.00 10 black steers 727 @ 26.8 1 black steer 240 @ 34.50 12 whif heifers 630 @ 26.00 1 whif steer 531 @ 29.75 15 blk&bwf hfrs 620 @ 15 whif steers 11 black steers 430 @ 29.55 61 black heifers 590 @ 25.70 470 @ 28.85 27 whif heifers 593 @ 25.45 8 blk bwf strs 420 @ 29.90 7 whif heifers 620 @ 25.7 11 whif steers 8 black steers 564 @ 27.90 475 @ 30.10 21 whif steers

HEIFER CALVES 4 blk bwf hfrs 315 @ 26.40 32 mixed 6 black hfrs 420 @ 26.50 37 mixed 5 whif heifers 4 black heifers 380 @ 26.00 16 whif heifers 500 @ 26.00 4 whif heifers 1 black heifer 495 @ 25.70 1 red sow

COWS

The cow market was exceptionally good with good cows selling from \$17.50 to \$19.20. A few heiferettes were selling from \$19.50 to \$23.00. The thinner cows were selling from \$15.00 to \$17.00.

FEEDER STÉERS & HEIFERS 22 black steers 1815 @ 26.85 \$24.50 per head. Little pigs

HOGS 11 whi butchers 218 @ 19.50 8 hamp butchers 254 @ 19.50 245 @ 19.45 215 @ 19.40 480 @ 26.00 91 mixed butch 231 @ 19.40 236 @ 19.40 206 @ 19.30

21 mixed 27 hamp butch 465 @ 25.60 8 mixed butch 210 @ 19.35 315 @ 16.90 300 @ 16.90 1 hamp sow 330 @ 16.00 2 mixed sows 395 @ 15.60 1 red sow 410 @ 15.40 1 hamp sow

PIGS

Pigs were higher this week with the good pigs from 60 to 90 lbs selling from \$17.00 to \$19.25. Pigs weighing from 90 to 110 lb were bringing from \$19.00 to 23 whif steers 673 @ 27.30 sold from \$12.00 to \$15.00.

downtown civic center was rejected for the second time this time 6,706 to 3,520. The proposal was defeated May 21 by 5,162 to 4,496.

The issue went on the ballot a second time after Dr. Vernon Osborn last month presented petitions signed by 2,187 voters calling for another election.

Saline County voters approved 9,281 to 2,338 the county commission's plan to sell the county highway department yards in

In Hutchinson and Reno County, voters defeated a plan increasing number of pensionto build a \$1.6 million joint city-county government center.

The Reno County proposal was defeated 6,959 to 4,523. A companion proposal in Hutchinson lost 4,198 to 3,609.

At the same time, voters gave permission 8,040 to 2,117 to county commissioners to seil Broadacres, the Reno County

A \$400,000 municipal swimming pool apparently won't be built in Manhattan. Opponents of the plan won 3,957 to 3,123.

Plans for a \$490,000 high school gymnasium at Moran were blocked by voters in Moran-Elsmore Unified School District 256. The proposal lost 526 to 141

Allen County voters turned down a .3 mill levy increase for construction and maintenance of county fair buildings. The measure lost 1,812 to 1,238.

Fort Scott voters blocked plans for a low-rent housing project on a 14-acre tract in the southeast part of the city by approving a proposal to retain the single-unit zoning ruling. The vote was 1824 to 624.

A 1-mill levy to finance recreation programs for Unified School District 431 at Hoisington was turned down 900 to 437.

Soviet Work Force Shrinks

A falling birth rate and an ers threaten to reduce the Soviet work force. And if the trend continues, the population will start dropping in the 1970s, a statistician has warned.

The number of old-age pensioners is expected to go from 40 million in 1970 to 50 million in 1980 and 80 million by the end of the century. The present population is 238 million.

Recent newspaper articles have expressed concern over the situation. Family allowances have been proposed to encourage more births. Schemes have been put forward to get older peop'e back on the job.

Working mothers and crowded living conditions are cited as the main causes of the falling

birth rate,

A typical Soviet family in a big city has one child, or two at the most. Mothers who work 41 hours a week find it hard to look after even this number.

It is still common for a whole family, including grandparents, to be jammed into a single room. Bathrooms and kitchens have to be shared.

Free abortions make it easy to restrict the size of families.

While these factors have reduced the number of young people joining the work force, experienced men and women have been leaving it while still vigorous and able to do the job.

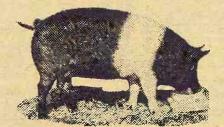

The retirement age, 60 for

men and 55 for women, was established when life expectancy was shorter and aging started

Under present law a person. who works after retirement age generally does not get his pension. One proposal is to let people collect both pay and pension. Another proposal is that half-day shifts be introduced for older persons.
