JUST A HEREFORD

With all the exotics in the Dittmar herd, this Hereford cow and her registered calf might feel out of place. Glenda Dittmar, a veterinary major at Kansas State University, has used registered Herefords as foundation stock in her artificial breeding program.

IN THIS ISSUE:

- State Cattle Inventory by counties
- Flint Hills Leasing Report
- Poultry Count
- Dairy Cow Survey
- Hog Inventory
- Special Reports & Forecasts
- Sheep Inventory
- Special Maps
- Features

A PASTURE FULL OF EXOTICS

Glenn Dittmar, Clay Center, checks a set of twins that are 50 per cent Maine-Anjou. These two calves valued at \$700 when they were born are just part of the exotic herd Dittmar's daughter, Glenda, has developed from a 4-H project. The herd consists of Simmental, Registered Herefords, Maine-Anjou, Brown Swiss, Charolais and several artificially bred Hereford heifers that will produce 50 per cent Chianina calves.

Muscle-Cell Test Could Identify Superior Beef

A quick way to identify superior beef animals is the goal of muscle-cell studies at Oklahoma Agricultural Experiment Station.

To investigate the characteristics of beef muscles, Dr. J. J. Guenther is taking periodic samples from the longissimus dorsi muscle along the animal's back.

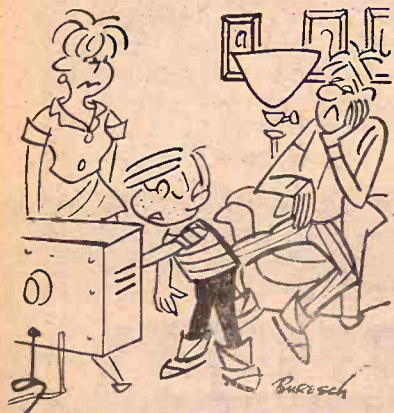

This is a convenient muscle from which to take samples. It also is the quality muscle of the animal — the rib-eye or major muscle in a T-bone steak.

"We hope to find one quick, easy-to-get index," the animal sciences researcher says of his complicated studies. "Of course, it's a little far-fetched to think it'll be that easy."

"This is a new approach to the identification of fast-growing animals," he continues. "If we can find a biochemical index at the cellular level, we may be able to identify superior animals soon after birth."

An animal purportedly is born

with its full number of cells, Guenther explains. They don't increase in number, but only in size. This makes the cell's growth potential especially important.

Guenther began with the premise that a lot of time and money are being expended to identify quality animals. Breeders want a fast-growing beef that converts feed efficiently, then produces a high percentage of quality lean meat.

That's a large order, and most methods are fairly time-consuming, Guenther points out. Many researchers work from data on such things as weaning weight, market weight, fat cover, etc.

"Up to now, we've been studying

effects by studying progeny, and this is a fairly long procedure," Guenther says. "By the time you find superior animals, their ancestors may be worn out."

Of course, experiment station researchers such as OSU's Dr. Lowell Walters have made important strides with techniques such as the K-40 counter to identify animals with high percentages of lean, he adds. Guenther hopes his research will add to these improved methods.

By taking samples, he plans to follow changes in the muscle cells during the commercial lifespan of the animal. He's screening many factors and crosschecking his

results with other test methods.

Near the end of his first test series now, Guenther is gathering animals for a second set of tests.

Seven calves have been put through six muscle biopsies. This operation to remove the muscle samples doesn't impair the animals' health or performance.

"We even have one test calf with heart trouble, and he hasn't been bothered by the biopsy operations," Guenther says. "There have been no complications from the removal of cores of muscle. They recover completely within two weeks."

"We feel optimistic that we'll come up with something," Guenther says. "The method looks promising

2

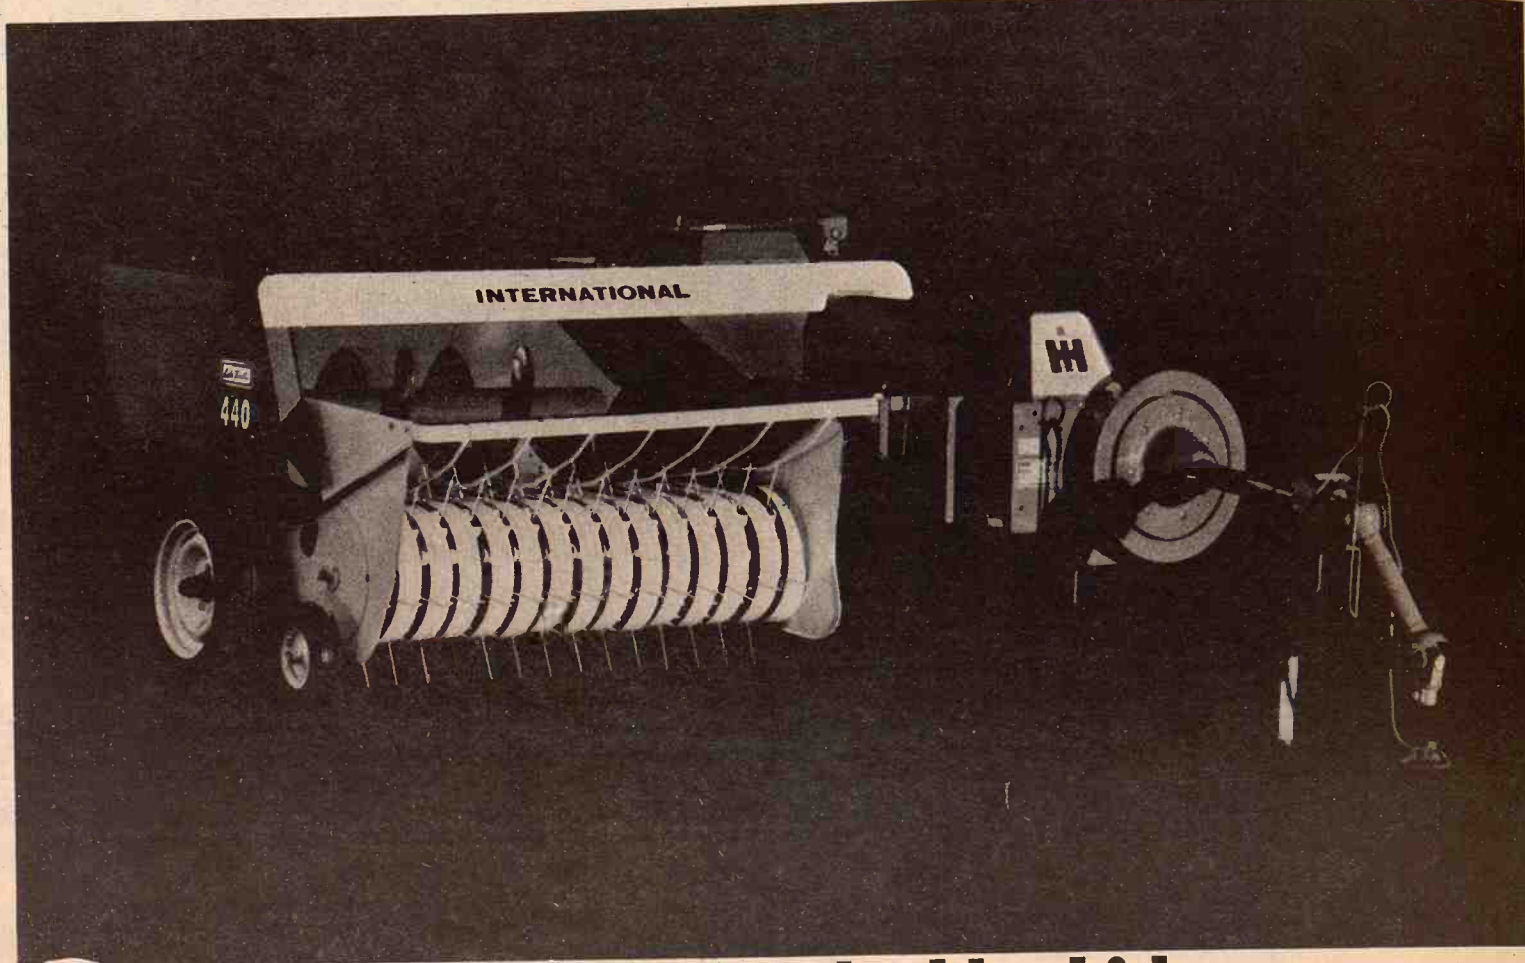

Grass & Grain

May 16, 1972

to date."

For his second set of tests, he's assembling a group of large calves and a group of small calves. He wants to look for cellular differences between the groups.

"Eventually, we hope that by weaning time we can identify the good strains — those with the potential for a lot of high-quality muscle," Guenther sums up his research.

Our exclusive double-thick twist ties your heaviest bales.

For keeps.

Extra-strength, double-thick twists. Exclusive with International self-stripping Lok-Twist Balers.

Your bales stay tied. For keeps. From rough handling in the field, through storage, until bales are fed.

Four wire double thickness makes a cushioned twist. At the loop. Then twists down toward the bale. No stretched, crimped or weakened wires. Wire ends tuck into the bale. Makes

handling safer. No cut hands.

Baler operation is smoother, gentler because of our faster twisting cycle and slower needle cycle.

Look over our heavy crop balers—430 and 440 Lok-Twist models. Let your International Harvester Dealer show you how to avoid missed ties.

OUR DAILY BREAD

- by G&G Area Cooks

Mrs. Walter Sims Of Abilene Wins Prize

Winner, Mrs. Walter R. Sims, 902 West First Street, Abilene: "This is a good dish to take as a covered dish — good hot or cold."

WILD RICE CASSEROLE

1 box wild rice, fix as it says on box

1 onion

1 green pepper

1 can mushroom soup

1 cup half & half

1 into casserole and bake 35-40 minutes at 350 degrees. Can use a 9x9-inch baking dish if you want to cut into squares.

+++++

Mrs. Bob Scheibler, Bennington: This looks so pretty and cool. It fills an 8x8-inch pan."

SEAFOAM SALAD

No. 2 1/2 (large) can pears,

1 1/2-ounce packages cream cheese,

1 package lime-flavored gelatin

1 envelope whipped Dream Whip

1/2 cup juice off the pears; add to gelatin and let cool. Mix together

cream and Dream Whip; beat until smooth. After gelatin mixture

thickens add cheese mixture. Place pears in blender and blend until

smooth. Add to rest and chill until firm. Garnish with maraschino

cherries.

+++++

Mrs. John C. Patterson, Haddam: Say folks, if you have an over

supply of Morel mushrooms like we have you might like to try some of

them in this manner and be

delighted with your efforts."

MOREL MUSHROOM CASSEROLE

3/4 cup regular rice cooked in water until 3/4 done. Place in strainer and rinse. Set aside.

1 pound hamburger slightly browned and surplus grease removed

1 can cream of chicken soup

1 1/2 soup cans of milk

3/4 quart or three cups of Morel mushrooms cut crosswise into small pieces

Add salt and pepper to taste

Mix above ingredients thoroughly and place in casserole dish that has

three tablespoons of butter on bottom. Bake at 350 degrees for 1 1/2

hours or until done.

+++++

Mrs. Joe Kriss, 7665 High Drive, Prairie Village: "Really great and

easy to do; hope your many readers enjoy it."

WACKY CAKE

1 cup sugar

1/2 teaspoon salt

1 1/2 cups flour

1/4 cup cocoa

1 teaspoon soda

Mix above together then add:

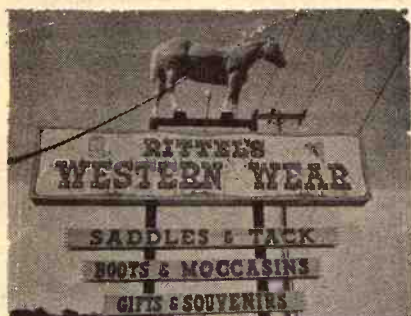

1 teaspoon vanilla

1 teaspoon vinegar

one-third cup salad oil

1 cup cold water

Stir in pan until there are no lumps. Bake 30 minutes at 350 degrees. Do

Baby Food Jars Useful

Baby food jars offer many possibilities for recycling, a concern of many in these ecology-conscious days.

But baby food processors warn against using the jars for home canning, the jar lids are designed for one-time use only. However, they are good for freezing preserves and jams or small amounts of chopped green pepper or onion. At least half an inch should be allowed between the food and lid. Place freezer tape around lid and keep frozen until used.

Other uses include filling the jars with herbs and spices and decorating them if you have an artistic bent. Use them for carrying measured amounts of bleach and

detergent to the laundromat, or tidy up your sewing area by using them to store pins, buttons, snaps, needles, and so on.

Gardeners can use the jars for storing seeds and starting cuttings. The junior-sized jars are perfect for youngsters who want to watch the growth of a seed at close range.

Furniture For Elderly Is Now Available

Specially designed furniture for the elderly widely used in Scandinavia has now been introduced for the first time in the United States.

The result of 10 years of research and engineering studies in Sweden and Denmark the geriatric furniture line consists of a variety of chairs, sofas, beds, and tables as well as accessories.

The president of the manufacturing company, said, "The furniture industry of the United States has largely neglected the needs of the elderly in spite of the fact that this group — more than any other segment of our society — requires correctly designed furniture."

With that in mind, designers have worked closely with Scandinavian geriatric specialists to produce special furniture that combines the particular functional needs of senior

citizens along with attractive design features.

The company head went on to explain that elderly people should have an anatomically correct posture chair with an adjustable mechanism. Thus, an adjustable high-backed easy chair was designed to adjust to nine different sitting positions for height, depth, angle, stiffness, contour, support, and armrests.

The chair for the elderly is available in a variety of colors and comes with different accessories.

Cooked Escarole

If you've known the flat, frilly-leaved green called escarole solely as a great salad ingredient, try it cooked while it is in such good

supply at your market. Wash the greens well. Simmer them gently until tender in a tightly-covered pan. Use more or less water depending on your own taste. Large amounts of water tend to give a milder flavor while less water gives stronger flavor and conserves more

nutrients. Drain the greens and chop, if desired. Add a dab of margarine or butter, salt and pepper to taste, and reheat for a few minutes. Escarole, high in vitamin "A", is a nourishing green to enjoy right now.

Limes In Limelight

In the lime-light are luscious limes with tangy, spicy flavor contrast in your meals. A squeeze of fresh lime juice over vegetables is delectable. It's good, too, in dressing for fruit salad. Fresh Lime Chiffon Pie is one of the great desserts. Don't forget a wedge of lime to serve with fish or seafood. The Crusades brought limes home with them to Europe, and it was Columbus who introduced limes to the New World on his second voyage.

Rhubarb Time

Spring is rhubarb time. . . rhubarb pie and tart time. Serve pink and pretty rhubarb stewed for breakfast and for dessert. Rhubarb dates back to about 2700 B.C. in China, and the root is still used in Chinese medicine. Good quality rhubarb stalks are fresh, firm, crisp, and bright in appearance, and should not be excessively thin. The leaves are not edible.

Protects Numbers

To prevent numbers from wearing off a flexible steel tape measure cover the tape with transparent tape.

Milk-Based Products Kind To Skin

Milk is a baby's first nourishment, so baby your skin now with milk.

The manufacturer of fine beauty products has developed milk-based treatments that even women with the most delicate, sensitive skin can use.

The company, which believes in natural ingredients, has combined the best in nature and science to create New Pure Milk Creme Wash, New Pure-Milk Freshener, and New Iced-Milk Mask.

The cream wash is a rich milky white cream that's applied with the fingers and washed off with water. It works to smooth and soften the skin while cleansing away all traces of makeup, dirt, and grime.

The milk freshener is the natural follow-up to the cream wash. A final

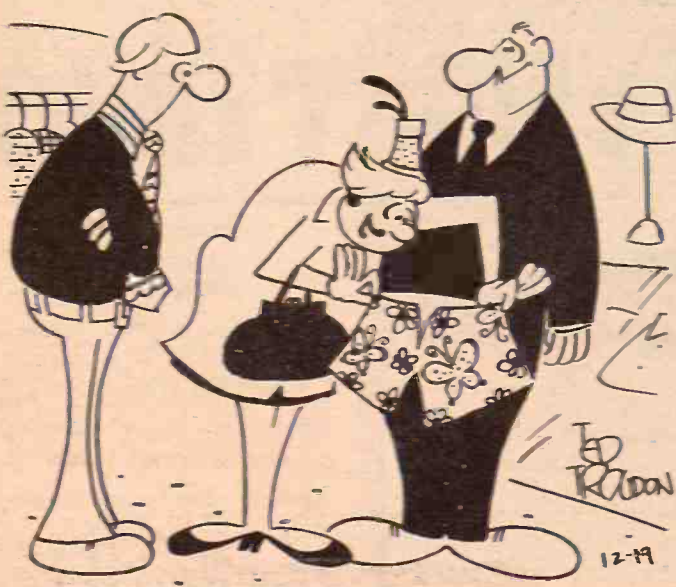

splash of this milk, nondrying lotion helps to tone and clarify the skin, leaving it baby-soft and supple.

The final part of the beauty treatment, the iced-milk mask, is a shimmery milky white gel mask that's creamed on the face and dries to form a transparent film that can be peeled off or washed away. The tightening action lifts away impurities and deep-down dirt without depleting the skin of its natural oils while the milk protein leaves behind a protective coating that makes the skin feel soft and silky.

The new milk-treatment products are available at better cosmetic counters in handsome frosted-glass containers with silver caps and modern graphics.

Preserve China

Cut down on chipping by giving your best china special care. Use pinking shears to cut round doilies from flannel and slip one between each piece of china as it is stored.

Aching Feet Can Cause Frowning Face

If you're on your feet a great deal in your part-time job, your feet will need special care.

Many persons wear a scowl without realizing it because their feet hurt.

When you get home, lie down with your feet elevated. Raise the feet and do a few exercises to relax them. Wiggle your toes. Roll your ankles, making little circles in the air. Walk around the house in your bare feet.

If your feet become sore, there are several good soothing lotions available, or use witch hazel. After a shower or bath, dust your feet with

talcum powder.

Keep your toenails trimmed. Cut nails straight across.

Revive Flowers

Revive faded cut flowers with hot water. Recut the stems, remove wilted foliage and place stems in water that has been heated to boiling; let the flowers stand until water cools.

Tape Removal

To remove transparent tape from paper or cardboard without marring the surface, run a warm iron over the tape to soften the adhesive. Then gently pull off the tape.

Make Storage Bags

The good parts of unlined plastic curtains or tablecloths may be used to fashion bags that can be hung in

the closet for storage purposes. Hem the tops of the bags and run a cord through them.

No Odors

Place a small square of plastic over the jug opening of a vacuum bottle before inserting the cork. Push the cork into place over it. It is the direct contact with foods that causes the cork to collect odors.

Shrimp Farmers Could Challenge Hamburger Prices

Shrimp could become as cheap as hamburger if scientists can find a way for female shrimp to reproduce in man-made lakes or ponds.

The reproductive organs of the female shrimp will not mature

outside its natural habitat and, despite millions of dollars spent in research and testing, marine scientists have not been able to find out why. Dr. Albert W. Sparks, director of the National Marine Services Laboratory, and his men are baffled.

Since each female shrimp lays 500,000 to a million eggs at a single spawning and it takes them only 24 hours to hatch, the possibilities of raising thousands of pounds of shrimp in ponds or "farms" would appear to be relatively easy. But the survival of the eggs and small shrimp in the Gulf of Mexico is less than 5 per cent because they are delicacies for fish and other marine life.

Because of the reproductive problems, commercial shrimp farmers now must rely on catching the small shrimp and fattening them in captivity. And the mortality rate in transferring them from their natural habitat to artificial surroundings can be as much as 80 per cent.

Some farmers keep the baby shrimp in bays by "fencing" them in with nets and feeding them high protein diets until they reach maximum size for marketing. This has proved more successful than transferring them to ponds, not only because of the high mortality rate, but because shrimp do not grow as large in an artificial environment.

Economically, the failure of female shrimp to attain sexual maturity has left commercial shrimp farming a poor investment. There is money to be made, but it requires heavy investing and good luck.

In Florida, Marifarms, Inc., a private venture using Japanese scientists, has spent more than \$4 million in three years for one 500,000-

Grass & Grain

5

May 16, 1972

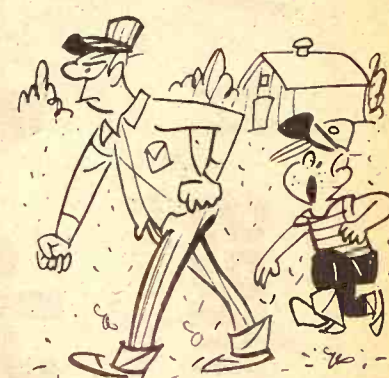

pound harvest from 2,500 acres of St. Andrews Bay at Panama city. They expected twice as much.

It all goes back to breeding. Bob Temple, an assistant to Sparks, said researchers have tried to improve the diet of the female in hope her sexual organs would mature.

"Nutritional studies must be done in labs, not ponds," Temple said. "Before people can raise shrimp for food we must provide a good, preferably artificial diet."

It is all most scientific, but until Mother Nature relents and some female shrimp somewhere develops her reproductive capabilities out of the ocean, low cost food, cheap bait and the big money for shrimp farming remains unattained.

Salina, Ks.

head, according to the State-Federal Division of Agricultural Statistics. This is up 11 per cent from the 1,312,000 on feed April 1, 1971 and down 4 per cent from March.

Nebraska feeders placed 891,000 head on feed during the January-March quarter, up 2 per cent from the same period last year.

Nebraska fed cattle marketings for the first quarter of 1972 totaled 985,000 up less than 1 per cent from the marketings during the same period last year.

Cattle on feed April 1 weighing 900 pounds and over numbered 519,000, up 3 per cent from a year ago. Those in the 700-899 pound group at 453,000 head, were up 18 per cent from last year.

Nebraska feeders reported in-

tentions to market 976,000 head during the April-June period.

George Wallace Running In Red

Washington — Gov. George C. Wallace of Alabama appears to be running roughly \$100,000 in the red in his protest bid for the Democratic presidential nomination.

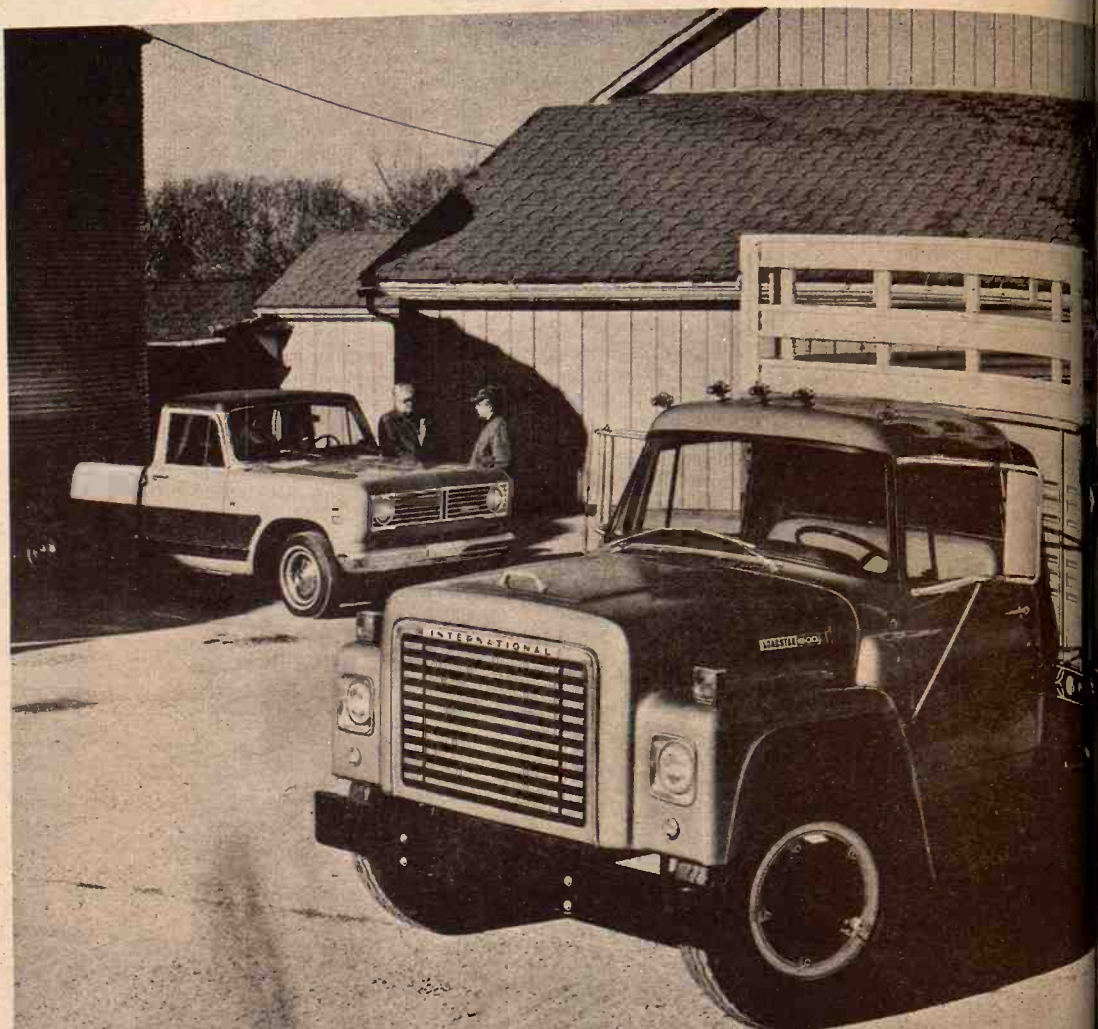

The Wallace debt, looming as a sharp reversal from his 1968 third-party campaign which wound up with a surplus of nearly \$1 million, popped up in the latest spending reports filed here.

In Montgomery, Ala., Charles S.

Snider, campaign director, said "Money is tight. We're operating from day to day." The Wallace report, filed with the General Accounting Office, showed the campaign standing as much as \$100,000 in the red as of April 23.

G&G AREA DAIRYMEN RECEIVE RECOGNITION

Several Grass and Grain area dairymen were recognized by the Holstein Assn. of America, for exceptional milk and butter production. They are: Elmer Moran, Topeka; Herbert Olson, Vista; Quinn Steenbock, Manchester; Chester Hillsboro.

International trucks look as good on your books as they do on your farm.

Sure, the optional fiberglass hood can give your next INTERNATIONAL® LOADSTAR® truck a smart new look. But it can also give your operating expense records a smart new look. Because the tilting hood and fender assembly lets a serviceman walk right up to the engine. That saves time. And that, of course, can save you money.

A new 5/16-inch frame is standard on most models and available on all. And the longer your truck lasts, the less it really costs.

When you do need service or parts, Loadstar puts you ahead again. With the

back-up of the largest organization of heavy-duty truck service centers in the business.

And it's nice to know that this same service is available for your International 1110 pickup truck. Which, incidentally, offers you many of the heavy-duty features you get in the big Loadstar truck. Including the optional 392-cubic inch V-8 engine.

International Loadstar. International 1110 pickup. Built to perform reliably on the job. So they perform beautifully on your expense records. Check them out soon at your International dealer.

THESE PEOPLE WANTED BETTER PRODUCTS AND SERVICE -- THEY FOUND BOTH AT CO-OP

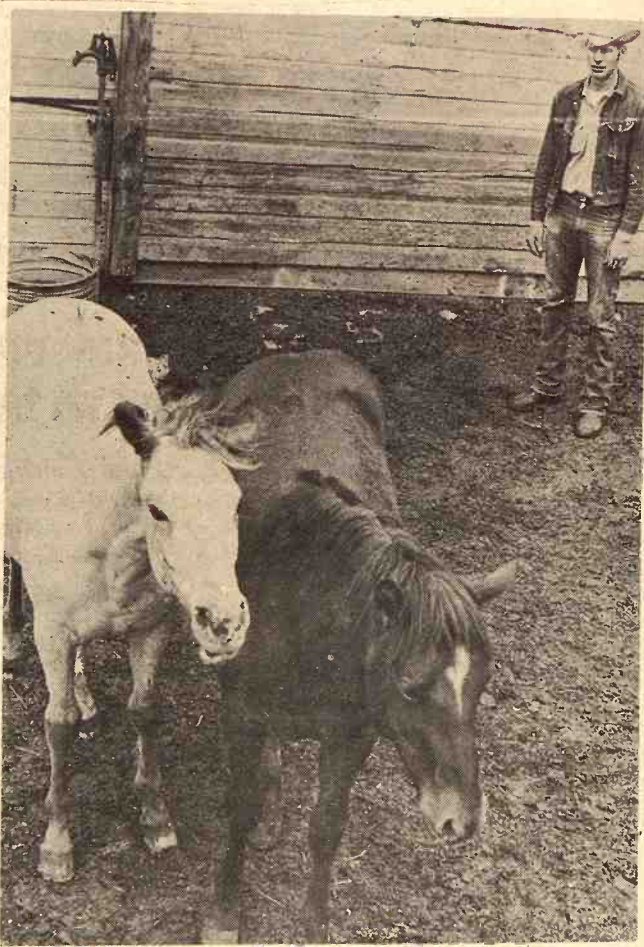

FULL HEN HOUSE

Floyd Wohler and his wife, Mabel, Manhattan, feed 400 hungry chickens with Co-op all purpose mash and have for as long as they can remember. The Co-op mixes specific bulk rations for the surrounding area.

ESSENTIAL PROGRAM

Co-op has been an essential part of the Lyle Goff farm west of Manhattan. Co-op mixes and delivers all Goffs grain and has for 10 years.

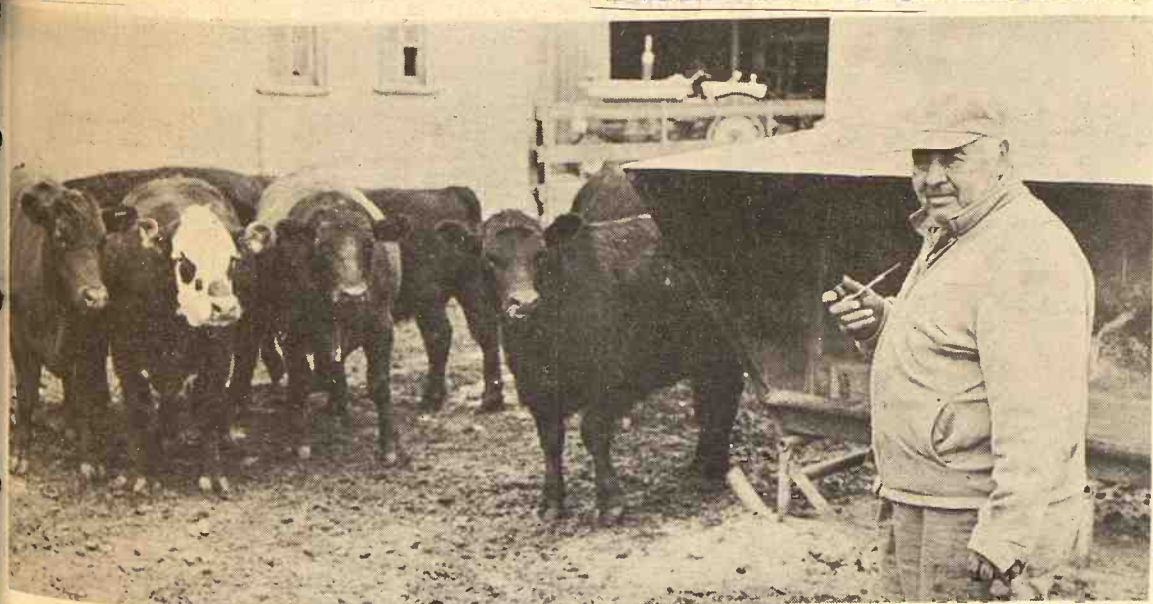

STUDENTS AND THE TEACHER

These two, two year olds are being broken by Bernard Wells, Manhattan. "Co-op has improved its horse feed in the last several years," Wells said. He believes the molasses in the Co-op feed holds down the dust from the oats he mixes into his horse ration.

WHAT A LITTER

There are 14 pigs and all doing well on Co-op litter fritters 10-30 hog starter says Roy Goff of Manhattan.

EXPENSIVE STOCK

With the price of feeder cattle up Albert Kauer says he can't take chances so he feeds Co-op 42 beef concentrate along with corn and milo. He has been using Co-op feeds for over 10 years.

Cattle Count Over 6 1/2 Million

THE TOP 25 CATTLE COUNTIES IN KANSAS

The ranking cattle counties in Kansas, based on numbers of all cattle—dairy, beef cows, calves, and cattle on feed—as of January 1, 1972, were these:

1. Butler.....	164,000
2. Finney.....	124,000
3. Cowley.....	120,000
4. Ford.....	120,000
5. Barton.....	119,000
6. Greenwood.....	112,000
7. Haskell.....	108,000
8. Washington.....	107,000
9. Gove.....	105,000
10. Barber.....	104,000
11. Gray.....	101,000
12. Nemaha.....	93,000
13. Lyon.....	93,000
14. Marion.....	91,000
15. Dickinson.....	90,000
16. Woodson.....	90,000
17. Wichita.....	90,000
18. Labette.....	89,000
19. Scott.....	87,000
20. McPherson.....	84,000
21. Sheridan.....	84,000
22. Pottawatomie.....	82,000
23. Smith.....	82,000
24. Kearny.....	80,000
25. Sumner.....	78,000

Kansas cattlemen will likely look with some satisfaction on the newest estimate of cattle numbers in the state.

The Kansas Livestock Reporting Service puts the figure of all cattle—dairy, beef cows, calves and feeders—at 6.757 million, as of the January 1, 1972, reckoning.

That figure is 4 percent higher than the count of one year before, an increase that many cattlemen will find a livable gain and not too enthusiastic a buildup during a period of exceptionally good prices.

Moreover, there are a couple of items in the current report that indicate that stockmen have been resistant to any extreme buildup that by past records has always led to a quick, and often disastrous, downturn in prices.

One note is the adjustment from the January 1971 estimate. A year ago the preliminary guess was that there were 6.618 million cattle and calves in Kansas. That had represented a 10 percent gain over the 1970 count and made cattlemen more than a little apprehensive that the gain in numbers was too fast. Now the Reporting Service has revised the January 1971 count back to 6.497 million.

Another calming figure is a new one from the Reporting Service. For

COUNTY-BY-COUNTY CATTLE COUNT, SHOWING CHANGE

The figures in each county show number of head of cattle and calves on January 1, 1972. The plus or minus figure shows the change from the count of one year ago. Butler county—the state's leading cattle county—in south central Kansas, had 164,000 head of cattle of all kinds—dairy, beef cows, calves, and cattle on feed. That was a gain of 4,000 from the 1971 count.

the first time the statistical agency has broken out the number of beef cows from the total cattle figure. They reckon the January 1972 count was 1.919 million beef cows that have had at least one calf. That is about 3 percent more than the 1.865 million figure from the year before.

The 3 percent gain in beef cows will not generally be considered unduly alarming.

The jump over 6.5 million cattle in the state would have been considered a sure sign of disaster just a decade ago. In 1961 Kansas counted for the first time in history over 4½ million cattle. Prior to that, for seven decades of statistical history, the state had rather steady cycles of cattle inventories, building up to around 4 million cattle at peaks, then falling back closer to 2½ million when oversupplies cut cattle prices.

The last deep plunge in the cycle was made after the 1957 price disaster. There was a moderate cutback in 1965 and even slighter decreases in cattle numbers in 1967 and 1968. Otherwise the graph shows a steady increase since 1957. In three years the deep slash of 1957 was recovered and the count went over 4½ million in 1961. The 5-million figure was broken in 1963 and the 5½ million in 1966. The count hit 6 million in 1970 and two years later the current figure has passed 6½ million.

Cattlemen who insist that what goes up must come down have reason to be nervous about a graph that shows a steady buildup in cattle for 15 years, with only three minor downturns in that time.

A graph accompanying this article

shows that five previous downturns occurred generally about every 10 to 12 years, in each case preceded by regular gains in inventory during period of favorable prices.

Only once before, between 1895 and 1914, was there a longer interval between major market breaks.

Not all cattlemen feel that the basis of the boom-or-bust cycle of the past still exists. Some feel that the buildup in the state is a result of the increasing importance of feedlots in the state, at the expense of competing states, and also of increasing favor by the consumer for beef, even when the price at the retail market is high.

Per capita consumption of beef has risen even faster than the population and this persuades some stockmen that the market can absorb larger increases in beef cattle than were built up in the late 1960s.

In some years past, cattlemen have been skeptical of consumption increases, feeling that people bought more beef merely because of lower prices. The gains in per capita consumption in the last decade, however, have been in the face of steadily rising costs of beef at the super market.

Cattlemen watch several aspects of the early inventory carefully. One, of course, is the gross number of cattle and the changes in each county year-to-year. The new figures should be studied even more carefully for they contain what cattlemen have long maintained was necessary to get a clear view of the market—a count on the number of beef cows.

The cow is the factory of beef. The total numbers may vary with in-

shipments, changes in feeding patterns, and other variations in moving the cattle to slaughter, but beef cows remain steady, then obviously the capacity to produce more beef has not gained.

The Reporting Service puts the number of beef cows at 1.9 million, up just 3 percent from a year ago. Beef cows—that is, cows that have calved at least once—comprise about 28 percent of the total cattle numbers in the state. Milk cows account for about 3 percent of the total and the remainder of 69 percent includes calves and cattle on feed, either in the feedlot or on pasture.

The mix of beef cows to total cattle numbers varies considerably from region to region. In the southwest, dominated by major feedyards, the percentage of beef cows to total cattle count runs to 13 percent. Dairy counts there run to considerably less than 1 percent. That means that about 86 percent are either calves or cattle on feed. Presuming that what heifer calves become brood cows are mostly replacements, it means that close to nine out of 10 cattle in the southwest are destined rather quickly for slaughter.

Both the northwest and northeast sections of the state have fewer cattle on feed and have greater percentages in cow herds. Cow herds most dominate the southeast corner, principally lower Flint Hills counties. In that section beef cows account for 37 percent of all cattle.

One other figure that is closely scrutinized is the "adjusted" figure from the year before. The January 1, 1972, figure is a preliminary one. It is based on a mailbox survey taken

FRONTIER FACTS

FRONTIER HIDAN 35 IS REALLY DIFFERENT! IT IS unexcelled for pasture or grazing, for greenchop, bundle feed and makes good silage.

Hidan 35 has a very sweet, juicy stalk. Its palatability is unexcelled. Leaves are more numerous, and stalks slender. Its seed is smaller and takes less per acre when planting. Is one of the earliest in maturity, starts quick and vigorously. Highly resistant to leaf diseases.

Mr. W. K. of Kansas planted Hidan 35 following wheat harvest. He got 15 tons per acre of top quality ensilage, 10% protein. At \$7 per ton this is an extra \$105 per acre.

For pasture it has two of the most important features. It is very low in HCN (prussic acid), as proven in tests, and it has exceptionally high protein.

In Wisconsin sheep were turned on several varieties of sorghum-sudangrass hybrids. The sheep went to Hidan 35 eating it to the ground, and would go to nothing else.

Mr. F. J. C. of Dodge City, Kan., put 400 head of 550 pound steers on 130 acres of Hidan 35 June 20th, at 12 inch height. He took these steers off at an average of 747 pounds Nov. 8th. He reports steers were in top condition, no bloat or diarrhea, hair in excellent condition, and they RECEIVED NO SUPPLEMENT. He recommends cattle be turned in early when 12 to 15 in. high, and not allowed to get over 30 in. high, otherwise it gets ahead of them. Best feed value of Hidan is in the grass stage, for pasture purposes. He uses half his acreage and when pastured down to about 6 inches, moves them to other half, allowing first land to regrow to around 15 in. before turning them back.

TRY NEW HIDAN 35. YOU'LL BE IMPRESSED AND SO WILL YOUR LIVESTOCK.

COW HERDS OR FEEDLOTS?

This map shows the percentage of cattle in each county, dividing classes into beef cows that have calved, dairy cows, and other cattle and calves.

The C in each county stands for beef cows and indicates the percentage of all the cattle in the county that are beef cows. The D stands for dairy cows. The F designates feeders, and includes all calves as well as cattle on feed. While presumably some of the heifer calves will eventually become part of cow herds, these generally will become replacements and the percentage listed under "F" should be a fairly accurate estimate of the county count that is headed for slaughter.

As an example, Montgomery county, third from the east on the southern border, had an estimate of 50,000 cattle and calves. Of these, 24,000 were beef cows, or 48 percent. The county had 2100 dairy cows, or slightly over 4 percent. The remainder, 23,900, rounds off to 48 percent.

6 1/2 Million On 4% Increase

FEEDLOTS AND COW HERDS

This map graph shows counties in which beef cow herds dominate. The counties in black are counties in which 40 percent or more of all cattle are beef cows that have calved. Counties in color are heavy feedlot counties—that is, they have 70 percent or more of all cattle that are on feed or are calves. The remaining counties generally have an average mix of cow herds to feeders. The state as a whole has 28 percent beef cows, 3 percent dairy cows, and 69 percent feeders and calves. See another related map which shows exact percentages for each county.

shock after a 9 percent increase was tacked onto a 4 percent upward revision of preliminary figures from the year before.

Over the years the Reporting Service—a cooperative program of federal and state agencies—has kept its adjustments in the one percent neighborhood and three times in eight years has virtually hit the figure right on the head in its preliminary guess—accuracy enough to make any scientist beam.

For the most part, even the county-by-county figures have been correct. In years past the preliminary figure of perhaps a dozen counties was off by 20 percent or more. These tended to balance out one another—a high estimate of 10,000 cattle would be countered by a low guess of the same size in another county.

In the past, estimates have tended to be more accurate in the grassland areas of the east than they are in the west. Major revisions are not typical in Butler, Greenwood, Cowley and Lyon counties, generally the state's leaders in cattle numbers.

The tide flows less evenly in western Kansas, usually the first to

react to drouth or build up herds when grass or wheat pasture are available. The percentage of cattle in the west is also higher than eastward, and this also counts for major variations in the counting.

The western feedlots were clearly full on January 1 this year, judging from sizable increases recorded in the southwest and northwest. Cattle numbers jumped 14 percent in 14 southwest counties and 14 percent also in eight northwest counties.

The count was steady from a year ago in the north central area (11 counties north and west of Clay Center). Gains ran from 2 to 5 percent in the west central, central (along Interstate 70 from Abilene to Hays), southcentral (south and west of Hutchinson and Wichita), and in the southeast (mostly the lower part of the Flint Hills).

Two regions actually showed slight decreases—about three percent in the upper end of the Flint Hills and east, and about one percent in the northeast corner.

Of the state's 105 counties, 26 were down in numbers, 11 held even, and 68 showed gains.

Butler county (El Dorado) again led the state in cattle numbers, as it

THE TOP 25 COUNTIES IN BEEF COWS

The top-ranking counties in Kansas in number of beef cows that have calved are these:

changes in feeding the Reporting Service and of other variations in the method of sampling.

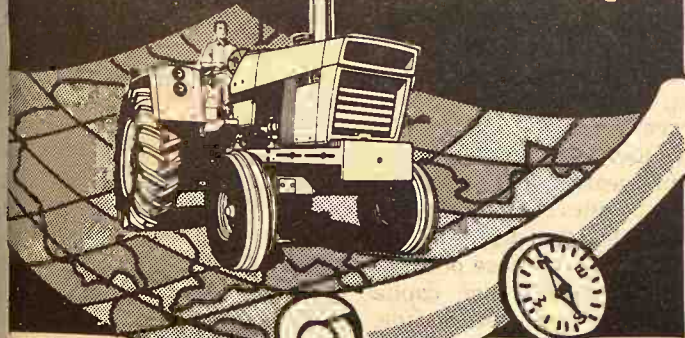

Later in the year, after abstracts of county assessors' reports are completed, the figures are changed to "official" ones. Cattlemen watch the figures closely, for if it

ent from a year ago has changed much from the original estimate, it means their preliminary estimate has been remarkably accurate since 1966, when some cattlemen went into near

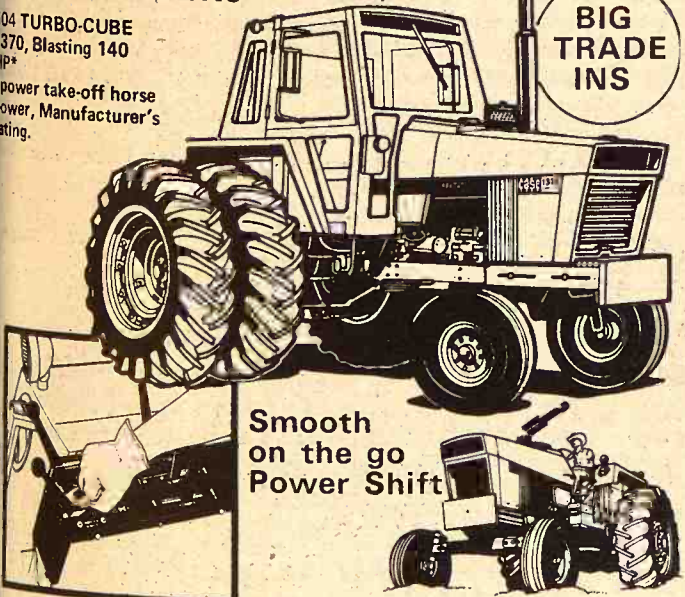

year's preliminary figure downward by less than 2 percent. Generally cattlemen do not react adversely to an overestimate as they do an underestimate. In any event, a 2 percent error in a sampling is within scientific bounds.

A year ago the Reporting Service had its 1970 estimate substantiated right to the thousand. In fact the preliminary estimate has been remarkably accurate since 1966, when some cattlemen went into near

YEAR-BY-YEAR

This graph shows the regularity of cycles of cattle numbers in Kansas since statistics were first tabulated in 1890. Until past World War II the trend was to approach peaks of four million cattle in high tides, then ebb back to around 2 1/2 million when supplies forced prices down. Following a shorter drop after World War II, cattle inventories grew as stockmen prospered in the early 1950s. A decline came in 1957 as dry pastures and heavy supplies devastated prices.

The buildup started back the next year, however, and there was a steady increase from 1958 until 1965. The figure dropped then, shot back to a record in 1966, but declined about 3% in 1967, slipped back another 1% in 1968, and first approached six million in 1969. The six million figure was reached in 1970, climbed to within a whisker of 6 1/2 million last year and hit the 6 1/2 million mark this year.

WHERE THE BEEF COWS ARE

This map shows where are the principal concentrations of the factory that produces beef—the cow. Counties in full color are ones which have at least 25,000 beef cows. The list includes Greenwood (Eureka) in the lower Flint Hills, which leads the state with 50,000 beef cows that have had calves estimated as of January 1.

The counties with the patterned color are ones which have 21,000 to 24,000 beef cows. These are major beef producing counties. Counties in tinted color are ones which have 15,000 to 20,000 beef cows.

The unmarked counties are ones with either low cattle totals or counties in which the principal cattle activity is feeding rather than producing calves.

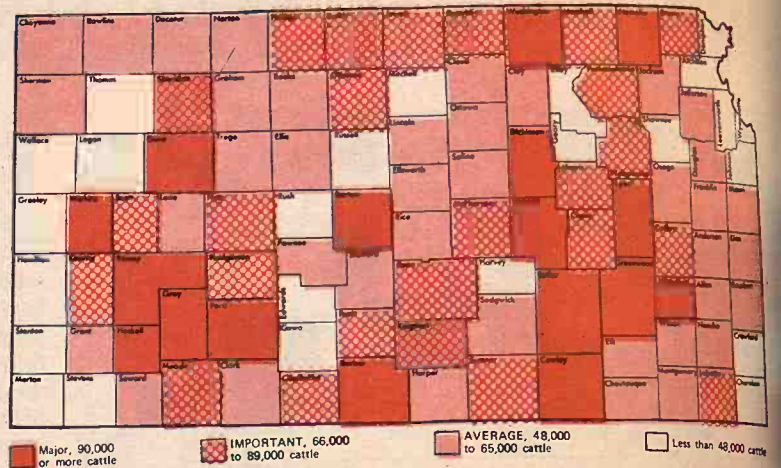

has for the past four decades. Butler has nearly 600,000 acres of pasture, far more than any other county in the state and has some substantial feedlots.

Butler's total cattle count was 164,000, a gain of about 4000 over a year ago. Eleven counties had over 100,000 cattle, counting dairy and beef cattle and calves. Finney county was second with

124,000 count, and Cowley (Winfield-Ark City) and Ford (Dodge City) ranked next with 120,000 each. Barton (Great Bend) with a big feedlot count ranked 5th with

119,000. Greenwood (Eureka) was 6th.

Haskell (Sublette) was 7th, Washington 8th, Gove (Quinter) 9th, Barber (Medicine Lodge) 10th.

WHERE THE CATTLE ARE

There are at least 25,000 cattle in every Kansas county except for metropolitan Wyandotte, indicating the major beef status of the state. This map shows the general distribution of the inventory as of January 1. Counties in solid color have 90,000 or more cattle and calves. Counties that average over 66,000 cattle are marked in patterned color. About average in cattle numbers are the counties marked in tinted color. The white counties have less than 48,000 cattle each.

No Major Switches Among Top-Ranking Counties

There were no major shifts among the ranking counties of Kansas in cattle numbers in the past year.

There was only one shift out of the top 10 and only one new name in the top 25.

Movements within the top-ranking group went on, of course, but even these shifts were of a few positions only.

As it has for more than four decades, Butler (Eldorado) county easily topped the list again. It's 164,000 count of all cattle and calves was 40,000 more than the 2nd place county, Finney (Garden City), which showed 124,000.

Butler has nearly 600,000 acres of pasture, far more than any other

county in the state and in recent years has added substantial feedlot counts also.

Cowley and Ford tied for the 3rd spot in the rankings, each with 120,000 cattle. Cowley (Winfield-Ark City) has the second most grassland in the state and has ranked in the top five every year, except for 1969 when it finished 6th, for several decades.

Finney and Ford (Dodge City) were the first western Kansas counties to make the top 10. New feedlots in the early 1960s put Ford on the list first in 1962. Ford has dropped out of the top 10 a couple of times when the feedlots were quiet but ranked 2nd in 1964 and 1966. Finney first made the top 10 in 1966

and the 2nd place finish this year is its highest rank ever.

Bulging feedlots in the Great Bend area put Barton county in the top list three years ago. Barton ranked 4th in 1970, 3rd last year, and 5th this year, by the preliminary count.

Greenwood (Eureka), which has large grassland areas and maintains as many beef cows as does Butler county, finished 6th with a 112,000 count. This was only the third time in 16 years that Greenwood did not finish in the top five.

Haskell (Sublette) ranked 7th with 108,000 cattle. Washington county was the top rated county in the north area, finishing 8th with 107,000.

Ninth and tenth ranked were Gove

(Quinter) and Barber (Medicine Lodge). Another major western Kansas feedlot county, Gray (Cimarron), finished 11th and was the final county to count over 100,000 cattle.

Haskell was the only new county in the top 10 from the rankings of a year ago. It supplanted Nemaha, which ranked 12th in the preliminary count of this January, with a 93,000 count. Nemaha (Sabetha-Seneca) perhaps has the most consistent record in the state save for Butler. Its 9th ranking a year ago was its first in the top 10 since 1961 but it hasn't missed the top 20 since that year.

Tied with Nemaha was Lyon (Emporia) county, a comedown for a county which has often ranked 2nd to Butler and has seldom finished out of the top five in the past four decades. Lyon finished out of the top 10 last year and also missed in 1963 and 1964. Otherwise it has been a top-ranking county since the 1930s.

Marion finished 14th with a 91,000 count. Marion ranked as high as 3rd in 1955 and usually has been in the top 10, dropping back into the 2nd 10 group four years ago.

Dickinson (Abilene), Woodson (Yates Center) and Wichita (Leoti) tied for 15th with 90,000 estimates. Dickinson's rank was a repeat of its 1971 finish. The county finished 7th as recently as 1969 and that county was in the top 10 in all but one year of the 1960s.

Woodson first made the top 20 last year. Labette's finish at 18th was based on the 89,000 estimate in the area around Parsons. Labette ranked 11th in 1970, 16th a year ago.

Scott and McPherson rounded out the top 20. McPherson dropped out of the top list in 1970 but has been a fixture on the list for 20 years, making the top 10 in 1959.

Pottawatomie county (Wamego) ranked 22nd on an 82,000 figure. This was only the second time in 20 years that Pottawatomie had not ranked in the top 20. Through most of the 1950s the county ranked in the top five, and even after the loss of some grazing land to the Tuttle Lake expansion it still generally rated in the top 10 until three years ago.

Smith was the top rated county in northwest Kansas, finishing 23rd with an 82,000 count. Kearny (Lakin) was the only new county in the top 25, finishing 24th with an 80,000 figure. Sumner (Wellington) ranked 25th.

Phillips county was the only county to fall out of the top 25. It ranked 27th on a 75,000 count. Neigh-

boring Jewell (Mankato) was with a 72,000 total. Republic, Marshall, and Brown followed closely with 70,000 or more.

Morris and Wabaunsee finished 36th and 37th, the same position a year ago and a considerable comedown for those two grassland standbys. Wabaunsee (Alma) was regular in the top 10 in the 1950s, has been generally right back since. Until last year Wabaunsee had missed the top 25 only twice (1963-64) in 30 years.

Perhaps even more surprising was the 38th position of Lyon county, often considered the edge of the Flint Hills country, because it is almost completely a grassland with no towns of any size and important manufacturing. Lyon's January estimate was 68,000 cattle. Of course by mid-May when the Flint Hills are full the position changes — as well as neighbors Lyon, Wabaunsee, and Morris counties — would be considerably higher.

Nearby Coffey (Burlington) ranked 40th with a 67,000 count. Osborne had a similar estimate.

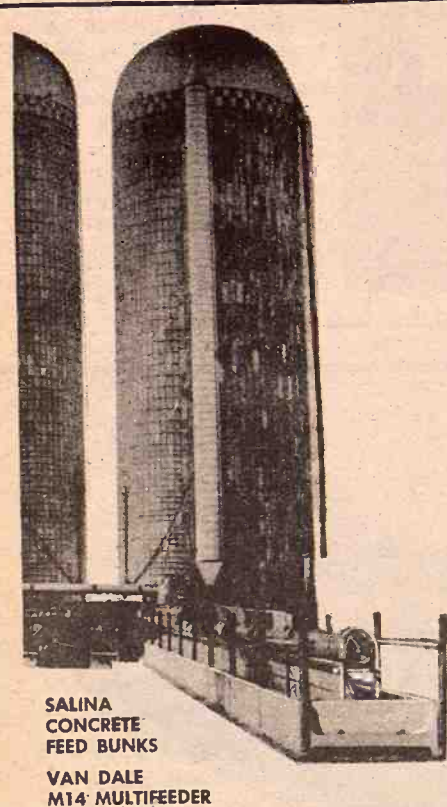

Eastern border counties Marion (Paola) and Bourbon (FL) ranked 45th, each with 64,000 cattle. Clay Center, Rice (Lyon), Chautauqua (Cedar Vale), Sedgwick (Wichita) followed with 60,000 or more each.

Ranking about average in cattle numbers were Jackson (Howard), Elk (Howard), Franklin (Ottawa), Saline, Anderson (Garnett), Lincoln, Linn (Mound City), Iola, Osage (Osage City), McPherson (McLouth), Chanute, Wilson (Frederick), Ottawa (Minneapolis), Independence (Coffey), and Montgomery counties. These counties had an estimated 50,000 to 60,000 cattle each.

In a group of 40,000 to 50,000 were Cloud (Concordia), Marshall (Beloit), Rush (LaCrosse), Harvey (Newton), Douglas (Lawrence), and Crawford (Pittsburg) counties.

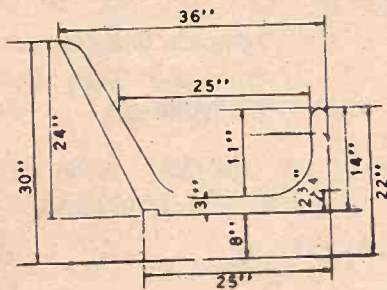

None of these counties have been major beef producers in the days before Tuttle Lake, the expansion of Fort Riley, and county sometimes ranked in the top 20.

Ranking near the bottom of the list were Atchison, Leavenworth, Geary, Shawnee, Cherokee, and Wyandotte counties.

FEEDING NETWORK

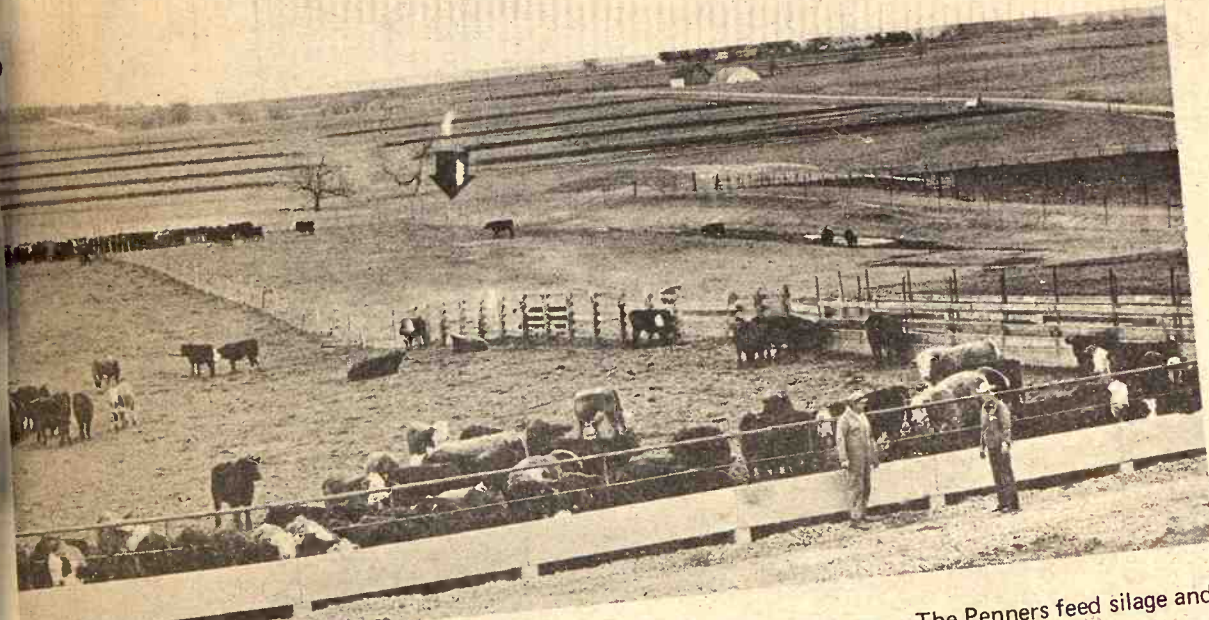

When you have as much invested in the feedlot business as the Penner family, Beatrice, Nebraska, you keep an eye on pollution control laws. Don Penner, Delmar Jurgens, an owner of the Beatrice "77" Livestock Sales, and Paul Penner, Don's father, discuss the Penner's recently built feedlot waste control lagoon. Jurgens, who is familiar with the Beatrice area said he knew of only one other feedlot lagoon. The Penners built this lagoon anticipating the passing of a state feedlot pollution control law. Instead, the bill was sent back for further research.

STILL EATING

The Penners have about 800 feeder cattle in their lots. They can handle up to 1,200 head. That could be why they have the big bins and farm over 1,600 acres.

Feedlot Pollution Control Costs

GOOD DRAINAGE

This feedlot drains to a settling area, (check arrow), then feeds into the lagoon. The Penners feed silage and high moisture rolled milo in this concrete bunk.

SETTLING AREA

This concrete structure keeps large pieces of fecal material out of the lagoon. Only the dissolved portion goes into the lagoon. The Penners had over 9,300 yards of dirt moved to construct this lagoon.

AN EXPENSIVE TOILET

It cost \$4,100 to handle the manure created by this operation. This lagoon holds 4 acre feet of water and is about 22 feet deep. When the pit reaches a set level, Don Penner pumps the liquid fertilizer into a tank spreader and heads for the field.

Dairy Count Drops Another 2%

Dairying for several years has been about as profitable as any part of the farm spectrum, but profits are apparently not close enough to the work and management required to attract more farmers into dairying.

At least the numbers of dairy cows on Kansas farms declined again in the past year. The Livestock Reporting Service made its January 1, 1972, estimate of 192,000 dairy cows that have calved.

That is about 2 percent less than the 196,000 in the final tally of a year ago. A year ago in its preliminary estimate, the Reporting Service reckoned the dairy cow count at 198,000 but revised that guess downward in its later official tally.

The revision from the preliminary estimate was not major, compared with the 10 percent adjustment made a year ago when the Reporting Service called the 1970 count 204,000 after initially estimating 224,000.

There has been a feeling in dairy circles for a couple of years that the

decline in milk cows has slipped about as far as it can go and still meet consumer demand.

The number of milk cows in the state now are considerably less than 20 percent the number in the state at the peak, in 1934. At that time there were 967,000 milk cows in the state. The number has dropped steadily since 1934, although there was a brief increase during World War II, when the count got back to 841,000.

When livestock inventories were first taken in Kansas in 1890, there were 648,000 milk cows.

The decline in dairy cow numbers has averaged more than 5 percent a year since the mid-1940s.

One change in the past year that may indicate that the bottom has been reached is the fact that there were gains in dairy counts in some counties. By the Reporting Service's reckoning, 49 counties showed decreases and 45 counties had so little change that the new tabulation is identical to the official figure of a

year ago. That means that 11 counties actually showed some increase, although none were large.

Dairymen were about low men on the financial totem pole through the early 1960s but in the last four years dairy income has turned around considerably, not so good as some dairymen would hope for but certainly more favorable than was possible in the early and mid 1960s.

For a number of years the decline in the number of dairy cows on Kansas farms was primarily at-

tributed to the small family milking operation. Old Bossy lost her place in the barnyard.

As a symbol of the family farm, the milk cow became less representative and for several years it appeared that the large dairy operation was losing out too.

Four of the top 10 dairy counties in the state showed gains in the past year. The state leader, Nemaha (Sabetha-Seneca) showed a loss of 100 from a year ago but easily was the top-ranking county with an 8300 count.

Marion, Leavenworth, Franklin and Miami counties — all in the top 10 showed increases in the past year.

Sedgwick was the 2nd ranking dairy county and Marion third. Both finished 2-3 last year also.

All of the top 10 dairy counties are adjacent to the Kansas City or Wichita milk markets except Nemaha. Leavenworth was the 4th ranking dairy with a 5500 estimate

and Franklin (Ottawa) was 5th with 5300.

McPherson and Reno were next with 4600. Three near-Kansas City suppliers Miami (Paola), Bourbon (Fort Scott), and Douglas (Lawrence) — rounded out the top 10.

The rest of the top 25 counties were ones which traditionally have had some strong dairy interest, except for Riley (Manhattan) which ranked 21st on a 2900 estimate.

While the number of milk cows drops, the production per cow goes up each year so that the decline in milk production is slight and in some years the productivity gain exceeds the loss in cows producing.

THE TOP 25 DAIRY COUNTIES IN KANSAS

The top 25 ranking counties in Kansas in number of dairy cows as of January 1, 1972, are these:

1. Nemaha.....	8,300
2. Sedgwick.....	7,500
3. Marion.....	6,900
4. Leavenworth.....	5,500
5. Franklin.....	5,300
6. McPherson.....	4,600
7. Reno.....	4,600
8. Miami.....	4,400
9. Bourbon.....	4,300
10. Douglas.....	4,200
11. Marshall.....	4,100
12. Washington.....	4,100
13. Jefferson.....	3,800
14. Labette.....	3,600
15. Brown.....	3,600
16. Allen.....	3,400
17. Anderson.....	3,400
18. Neosho.....	3,300
19. Linn.....	3,200
20. Lyon.....	3,200
21. Harvey.....	2,900
22. Riley.....	2,900
23. Dickinson.....	2,700
24. Jackson.....	2,700
25. Pottawatomie.....	2,700

DAIRY COUNT IN KANSAS

The map shows the number of dairy cows that have calved in each county as of January 1, 1972. The second figure within each county shows the change (+ or -) in each county from a year ago. For example, the state's leading dairy county, Nemaha (third from the east, northern tier of counties), has 8300 head of dairy cattle, 100 less than a year ago.

GATEWAY FARM SHOW NEARLY FULL

Available exhibit spaces for the Gateway '72 Farm Show at Kearney, Nebraska, are almost completely filled, according to show spokesmen. All inside exhibit spaces have been reserved, and more than 170 outside spaces are filled. A few outside spaces are still available.

More than \$6 million worth of farm machinery and products for farm and rural living will be on display when the show opens May 19 at the Kearney Municipal Airfield.

increased 35,718 acres in 1971 over 1970.

The change in acreage for different crops is due to a change in the "federal farm program," Earle believes, and not a shift planned in farming operations.

Sedgwick Co. Land Being Developed

Sedgwick County is losing agricultural lands to urban development and additional highways.

During 1971, the county lost a total of 47 farms containing 4,785 agricultural acres. The number of farms in the county was reduced from 1,385 in 1970 to 1,338 in 1971 and acreage totals dropped from 535,628 to 530,840, according to figures released by county assessor, Louis Earle.

Since 1962, the number of Sedgwick County farms has dropped from 1,653 to the present 1,338, a loss of 315 farms during the 10-year period, the office reported. Farm land acreage dropped 8,041 in the same period.

Irrigated acreage in the county, however, increased in 1971 by 1,858 acres to a total of 8,258, Earle said.

The county now has 196,059 acres of winter wheat and 7,394 acres of alfalfa, 89,607 acres of pasture, 59,654 acres in summer fallow and 87,791 in farmsteads and miscellaneous uses.

Planned for the 1972 crop are 1,135 acres of oats, 8,452 acres of corn, 85,613 acres of sorghum, 6,517 acres of soybeans and 6,585 acres of sudan.

Statistics indicate only small amounts of land in use for sweet clover, hay, and lespedeza.

Township assessors cattle including 6,417 milk reported 18,071 apple trees, 51,338 peach trees, 48,548 cattle including 6,417 milk cows, 15,976 hogs and pigs, 10,665 sheep not including 30,417 lambs being fed for market, 193,839 hens and pullets of laying age, 70,773 turkeys and 60 bee colonies.

Crop changes show 27,719 more acres of wheat and 9,709 less acres of barley planted in the fall of 1971 than in the fall of 1970. Summer fallow,

Nader Charges Big Corporations With Tax Dodge

Washington — Ralph Nader says big corporations like U.S. Steel aren't paying their fair share of property taxes.

Sen. Edmund S. Muskie, who agrees with Nader, says many companies threaten departure or mass layoffs in communities which move toward property tax reform.

"The tax revolt is a protest not just against the taxes most

Americans are paying, but against the tax burdens some Americans are evading," Muskie said.

Muskie invited Nader to testify before a Senate government operations subcommittee during the Maine Democrat's first appearance at a congressional hearing since withdrawing as an active candidate in the Democratic presidential primaries.

Nader said U.S. Steel Corporation's plants in Gary, Ind., and South Chicago are underassessed by more than \$250 million, costing schools and other public services tens of millions in revenues.

He accused tax assessors in Chicago of permitting "a lewd

carnival of favoritism to political supporters, race tracks, railroads and especially the banks."

Nader said many coal fields in Appalachia are worth up to \$500 an acre, but are assessed at \$10 or less.

Value Of Meat Up

ST JOSEPH, Mo. — Burglars backed a truck up to a supermarket door and hauled away almost every piece of meat in the store.

Several safes were untouched. "Does that mean," a policeman speculated, "that cold meat now more valuable than cold cash?"

Eisenhower Silver Dollar Sales Value Near \$600 Million

The U.S. Treasury stands to make \$600 million in profits by selling collectors versions of Eisenhower silver dollars at \$30 to \$40 each.

Secretary John B. Connally, of the Treasury, brought up the subject at a session of the Senate Appropriations Committee and said: "The profit we're making on sales of the Eisenhower dollars is just un-justifiable, that's the truth."

Connally didn't have the exact figures on the profits but the U.S. Mint did.

A spokesman said the Treasury profit last year on sales of \$10 "proof" dollars and \$3 uncirculated dollars was exactly \$40,411,669.14 with the profit for both types of coins averaging \$3.89. Multiplied by the

\$150 million — each containing 40 per cent silver — that the Mint is authorized by Congress to make and sell, the total potential profit is \$597.5 million. And a Mint spokesman said the profit margin probably will rise as initial production costs go down.

"We're selling all of them we can make," the spokesman said. "We're limited only by our production capacity. As a matter of fact, our profits should be more than \$3.89 on each coin. I figure that profit margin will either stand firm or go up. It won't go down."

Last year the Mint sold 110,400,980 of the special coins bearing the likeness of the late President. Collectors paid \$58.2 million for them. Total costs, including manufacturing application blanks, transportation and special boxes, were only \$17.8 million, or an average \$1.71 for each coin sold.

The profit from the 3,858,626 proof coins sold at \$10 each and the 6,542,354 uncirculated coins sold at

\$3 each went into the Treasury's general fund. In addition the Mint shipped 196 million of the ordinary cupra-nickel Eisenhower dollars to the banks. The cost of the metal in each of those one-dollar coins is just six cents.

As for the collectors versions, "unconscionable" profits or not, the Mint spokesman said he doubted if the price would go down.

"That's because the people who bought their coins at \$10 and \$13 last year probably wouldn't like it if other people start getting them cheaper, wouldn't you think?" he said.

Irrigated Sorghum Acres Decline

Only 18 percent of the record 1971 Kansas sorghum grain crop was produced on irrigated acres, reports the Kansas Dept. of Agriculture. By comparison, 22 percent of the

previous record crop in 1969 was grown under irrigation.

Production from irrigated fields totaled 43,176,000 bu., with an average yield of 86.5 per acre. The yield on non-irrigated acres averaged 49.8 bu. to the acre, as the total production topped 190 million bu.

1972 Wheat Crop Prediction Drops

The Agriculture Department forecast a 1972 winter wheat crop of 1.49 billion bushels, down one per cent from the 1971 output and 11 per cent less than an initial estimate made last December.

Officials said further government farm program curbs announced in January along with drought and freeze damage were important factors in the reduced estimate.

The department's Crop Reporting Board said the forecast was based on field conditions as of May 1.

Winter wheat is planted in the fall and harvested the following summer.

In December the department estimated the winter wheat crop at 1.29 billion bushels.

The report said only 82.4 per cent of the winter wheat acreage planted last fall would be harvested this year, the lowest percentage since 1963.

There was no production estimate for durum and other spring planted wheat, but an earlier projection based on acres planted and recent yield trends put 1972 production at 374 million bushels.

Thus, including both winter and spring types, this year's wheat crop could total more than 1.5 billion bushels, still a large crop. The record was 1.64 billion bushels last year.

The report said farmers have 34,823,000 acres of winter wheat for harvest this year, compared with 33,049,000 in 1971 which represented 89.4 per cent of last year's planted acres.

Despite the reduced harvest estimate, the crop still spells trouble for Nixon Administration farm policies, currently aimed at curbing production of wheat and livestock feed grains.

Farmers recently have been producing much more wheat than is needed for domestic and export markets. The huge crop last year, for example, was about 240 million bushels more than can be used.

As a result, the carryover or surplus of wheat on July 1 is expected to be 971 million bushels,

including reserves from earlier crops. That is the largest surplus in a decade.

The indicated production of winter wheat and average yields in 1972 by major producing states included:

Missouri 37,050,000 bushels and 39 bushels per acre; South Dakota 23,265,000 and 33.

Nebraska 89,530,000 and 35; Kansas 288,000 and 32; and Oklahoma 74,360,000 and 20.

Kansas Beef Shipped From Wide Area

Cattle from more than 15 other states and Canada were shipped into Kansas in 1970 to be fed for market, the Kansas Crop and Livestock Reporting Service said in a statistical survey of the state's livestock feeding activities.

The survey showed of 2,134,000 head of cattle shipped into the state in 1970, nearly 632,000, or 30 per cent, originated in Oklahoma. Texas was next, with 20 per cent, followed by Missouri (11 per cent), Colorado (8 per cent), Mississippi and Alabama (5 per cent each), Arkansas and New Mexico (4 per cent each), Tennessee (3 per cent), Nebraska (2 per cent) and Louisiana (1 per cent).

Grass & Grain
May 16, 1972

19

Another 7 per cent came from other states and Canada.

"Most people don't realize the number of states that ship cattle into Kansas," explained J. E. Pallesen, state statistician.

Also shipped into the state in 1970 were 156,000 hogs and pigs from Missouri, Tennessee, Arkansas, Illinois, Nebraska, Oklahoma, Minnesota, Iowa, Wisconsin, Colorado and "other states," in that order, and an identical number of sheep and lambs.

The mutton came from Texas, New Mexico, Missouri, Colorado, Oklahoma, Wyoming, Arizona, Nebraska and "other states."

The statistical summary showed a continued decline in grass-fed cattle marketed, and a continued increase in grain-fed cattle. In 1970, the latter totaled 1,968,000 head — up 11 per cent from 1969 and a record high. Grass-fed cattle fell 15 per cent.

Shipments of cattle and calves into Kansas increased 8 per cent in 1970 over 1969, though incoming hog shipments declined slightly.

Nearly a third of the cattle and calves flowing into the state were destined for the southwest part of the state, where 695,000 head were received in 1970. The west central district received 295,000 head, followed by the southeast and east central.

Hog imports were largest to the south central district, with 44,000 head, followed by the southeast, with 37,000 head. Out-of-state sheep and lambs were brought mainly into the south central and southwest sections, with 56,000 and 36,000 head, respectively.

In 1970 Finney County again had the largest number of grain-fed cattle marketed, with an estimated total of 119,000 head. Barton County was next, with 110,000 head, followed closely by Ford County at 106,000. Another eight counties marketed more than 50,000 grain-fed cattle each during 1970.

There were an estimated 9,000 farms and commercial lots in Kansas producing grain-fed cattle for market in 1970.

Two Concordia FFA Members Win Foundation Award

Two members of the Concordia Future Farmer of America Chapter are State Foundation Award Winners this year, according to Harold Shoaf, Topeka, executive secretary of the Kansas Association of FFA.

They are Don Garlow, son of Mr. and Mrs. Dan Garlow, who is the state winner in crop production, and Terry LeDuc, son of Mr. and Mrs. Donald Dean LeDuc, the state winner in the category, "placement in agricultural production."

Each youth will receive state FFA Foundation cash prizes of \$100. Their awards will be presented as a highlight of the 44th state FFA convention to be held at Kansas State University, Manhattan, May 30-June 1.

SENEK HOG TEST STATION

SENEK is a self-supporting operation that growth tests hogs for producers. It then holds a sale with statistics on growth open to the buyers. The people putting hogs in SENEK have to pay the costs but if their hogs pass the growth tests they pocket the profit of the sale. Delmar Gerdes, manager, keeps exact records of weights. Full capacity is 240 head and the next sale will be July 28.

Your Speedometer Is Probably Wrong

By Donald Kauffman
Safety Sergeant
Kansas Highway Patrol

Recently a camper was surprised to be notified by a friend that his speedometer was incorrect. This frequently occurs when two or more units are traveling together.

Most speedometers are incorrect. In fact, it is nearly impossible to have an absolutely correct speedometer due to the change of tire size caused by wear.

Since we cannot depend upon speedometers to tell the correct speed, it is the duty of every driver to know the amount of adjustment required to obtain the correct vehicle speed from the speedometer reading. This is done by a very simple method of comparing the correct vehicle speed with the speedometer speed.

You have seen the small white "airplanes" painted on the Kansas highways. These airplanes are a measured mile apart. By maintaining a constant speed between two airplane shaped markers and clocking the time required to travel between the markers, you can compute the actual speed your vehicle is traveling.

Compare with the actual speed with your speedometer speed, and you know the amount to add or subtract for the correct speedometer reading.

Say you travel at a speedometer reading of 60 miles per hour between two markers. The time you travel is 58 seconds. By dividing 58 seconds into 3,600 seconds, you would be traveling 62 miles per hour. So your

speedometer is 2 miles per hour slow.

If you traveled the measured mile at 52 seconds your speed would be 69.2 m.p.h. and your speedometer would be 9.2 miles slow.

The number to remember is 3,600, the number of seconds in an hour.

If you travel the measured mile at a speedometer reading of 50 miles an hour and your time is 66 seconds, you would divide 66 seconds into 3,600 seconds, which would give your actual speed to be 54.5 m.p.h. Your speedometer would be 4.5 slow.

Of course, the best way to beat radar, stop-watch, aircraft, vascar, or any of the speed timing methods is to stay about five miles per hour under the speed limit. This gives

your passengers a comfortable, friendly ride, and permits the troopers to do less work. We like it that way.

May, Beef Month Reveals Cattle Industry Statistics

The beef industry is the first billion dollar Kansas industry, ranking first among all Kansas industries. Meat packing ranks second among Kansas industries. Kansas ranks fourth in total cattle number — 6,757,000.

Kansas beef cow numbers were up three percent over last year on January 1, 1972.

Kansas ranks fifth in beef cow

numbers — 1,919,000.

Fed cattle production in Kansas has increased 197 percent since 1965.

Kansas now feeds 10 percent of all U.S. fattened cattle and ranks fourth as a feeding state.

Kansas has a one time commercial feedlot capacity for 1.2 million cattle, or a potential for three million per year.

Total beef cattle slaughtered in Kansas during 1971 numbered 2,341,000 head, up 16 percent from 1970.

Sixty-two cents of each meat dollar is spent for beef.

Beef cattle are the number one source of income on Kansas farms and ranches.

The National Live Stock and Meat Board, located in Chicago and famous for its work with meats, was first conceived by members of the Kansas Livestock Association in

1919.

The total production of red meat in Kansas for the 12 months of 1971 was 1.8 billion pounds, up 15 percent from 1970 and a record high.

Kansas ranks fifth among all states in beef cattle slaughtered.

Cattle on feed in the state on April 1 included 1,050,000 in Kansas feedlots. This included 803,000 in feedlots with a 1,000 head or more capacity. Smaller farm operations had 247,000 on feed. This is 35 percent more than a year ago on April 1.

Packing of red meat is a 771 million dollar Kansas industry annually. More than seven thousand people are employed. The volume of Kansas meat packing has increased some 20 percent the past ten years.

Each year Kansas stockmen spend 181 million dollars for commercial livestock and poultry feed.

ARE YOU PINCHED FOR TIME?

When it rains and the weeds and grasses grow and the fields are wet, time can be critical. Late plantings can cost you bushels and \$ \$ \$.

Many farmers are finding Skelgro Liquid Fertilizers combined with herbicides can save those bushels and \$ \$ \$.

Just contact any of the Skelgro managers listed below. Find out how Skelgro + Herbicides, applied in one fast, easy application can be profitable for you.

Roland Glessner, Alta Vista, and his nephew, Don Glessner, just finished separating 54 head of stock from his neighbors herd. "Somebody left a gate open," Glessner said. Roland owns 250 stock cows and grazes them on about 4,000 acres. "I haven't had any problem with rustling yet," he said.

Grass & Grain 21 May 16, 1972

compared with 193.8 million in 1969-70.

Although the 1971-72 output will not be announced until next August, production is expected to rise again by about 7 per cent, based on growers' intentions at the start of the season.

Pennsylvania produces about 62 per cent of the U.S. mushroom crop. Other states with commercial production include New York, New Jersey, Delaware, Maryland, Ohio, Illinois, Indiana, California and Michigan.

DISASTER HANDBOOK FOR COUNTY AGENTS

Extension agricultural agents in the U.S. are being called on to play an important role in helping rural citizens make preparations for protecting their lives and property in event of a nuclear attack or natural disaster.

To assist them, Kansas State University, through its Cooperative Extension Service, has developed a "Disaster Handbook for Extension Agents" for distribution to approximately 3,200 agricultural agents throughout the United States.

Mushrooms Boom, US Production Up

Mushroom production is continuing to set records but still is not able to keep pace with American waste for the vegetables.

Consequently, imports of canned mushrooms, mostly from Taiwan,

are also thriving. Last year, says the Agriculture Department, about 30.8 million pounds were imported, up one-fourth from 1970. In January and February, officials said, the imports were up 10 per cent from a

year earlier.

Production by U.S. growers, a highly skilled and specialized business, was a record 206.8 million pounds during the 1970-71 season,

hurry hogs to market with PURINA® HOG SUPPLEMENT

They say time doesn't mean much to a hog—and maybe that's right. But time and labor and feed cost mean something to the man that owns 'em. It makes good sense to feed a ration that helps you get hogs to market as fast as possible.

Try Purina Hog Supplement. Feed with your own grain. It's made right and priced right—does an efficient, economical job of making pork. Available in Checker (pellet) form for free choice feeding.

Kansas Livestock Assn. Promotes May, Beef Month

"Picture an empty meat case and a sign that reads: Beef and other rare foods by special order only. If you're a housewife with a beef-loving family, that scene is no fun to imagine. Americans have been

accustomed to meat counters full of fresh wholesome beef every day of the week." In a recent May Beef Month announcement, Kalo Hineman, the president of the Kansas Livestock Association, assured beef shoppers that "as long as cattlemen continue to make a reasonable return on their investment, there'll be an adequate supply of beef in the supermarkets". As a matter of fact, Hineman said that there have already been some important management decisions

within the industry which may ensure plenty of steaks, roasts and even hamburger into the foreseeable future.

Beef production, which has fully doubled since 1960, is related directly to the number of beef cows on American farms and ranches. As in any business, this number must be closely analyzed as to its effect on the law of supply and demand.

This year cattlemen are planning to increase the number of beef cows by more than a million head and

they're holding back about a third of a million more heifer calves to add to the cow herds. These decisions may worry some economists but to the consumer they should mean lots more beef to the supermarkets in the next several years.

American beef production has had to grow quickly. As Hineman points out, per capita consumption of beef has almost doubled in the past twenty years. That trend, coupled with mushrooming population growth, makes it obvious that steady

annual growth has been needed just to keep up with consumer demand. More affluence seems to mean more consumption of beef. Hineman is confident, nevertheless, that the increased cow herd numbers, along with new efficiency and new production methods, will keep meat cases full of America's favorite food.

In explaining cow herd growth, Hineman stressed that cattlemen are faced with long-range management decisions. There are always implications for several

has been needed in the past. For example, it can be seen that the cow herd has increased in the past few years or more before there will be a return on a heifer calf. The cow herd has increased in the past few years or more before there will be a return on a heifer calf. The cow herd has increased in the past few years or more before there will be a return on a heifer calf.

the cow herd increase is significant, according to Hineman. It will have a real effect on the supply of beef for some years to come.

The very nature of the American cattle industry is unique. It is one of the few industries left in America which are good examples of the free enterprise system. Cattlemen are proud of their independence and proud to be free. They are free to succeed and they are free to fail. If they make poor decisions, they are free to work more than a forty-hour

Summer Cattle Prices Down, Hog Market Higher

Cattle prices are expected to continue weaker through the summer, but hog producers can be expecting better prices for several months, says the Agriculture Department.

"Fed cattle prices have slipped from February levels and likely will continue drafting lower into summer," the department said. "Hog prices will increase seasonally to a midsummer high well above last year."

Production of all red meat, including beef, pork, lamb and mutton, is expected to be down slightly from last year during this spring and summer, due to a sharp reduction in pork output. Beef production will be up. The analysis was included in a summary of a livestock and meat situation report issued by the Economic Research Service.

Cattle being fed for slaughter in 23 major producing states were up nine per cent on April 1 from a year

earlier, and feeders plan to boost spring marketings six per cent, the report said.

But hog production, still readjusting after the huge 1970 pig crop which tumbled prices early last year, is down. Commercial slaughter was down eight per cent from a year earlier during the first three months of 1972 and probably will remain "moderately smaller" the rest of the year, the report said.

Choice steers at Omaha, Neb., were \$34.65 per 100 pounds in late April, up \$2.35 from a year earlier but down from mid-February when they rose to nearly \$37, the report said.

A year ago, average hog prices nationally were about \$16 per 100 pounds. Last month they averaged \$22.50 which was down about \$3 from February.

The report said hogs at the seven major markets in late April were \$23.25 per 100 pounds, up about \$7 from a year earlier.

"This summer's price peak for hogs will top the 1970 summer high of \$25.40. Price weakness is likely next fall as slaughter rises seasonally, but the average may be moderately above the \$20 of Oct. — Dec. 1971," the report said.

building blocks

CO-OP Mineral Concentrates provide a solid foundation for building livestock profits. Whether you feed sheep, swine, beef or dairy cattle.

Minerals are essential for efficient gains, top production, vigor and health. CO-OP Mineral blocks and concentrates supply a wide range of calcium to phosphorous ratios, from 4:1 to 1:1. Disease-fighting additives are available plus built-in fly and worm control. All are formulated to latest recommendations by feeding experts.

See your double-circle Co-op for help in selecting the CO-OP Mineral Concentrate that's best for building your livestock operation.

USDA Rural Phone Bank To Help Telephone Systems

Small rural telephone companies, often unable to meet costs of implementing communications technology, now have a new source of financial aid in the Rural Telephone Bank of the U.S. Department of Agriculture.

The purpose of the bank, established by Congress last year, is to provide nonfederal sources of financing to rural telephone companies to supplement existing federal loan programs, John H. Arnesen, director of the southwest area of the Rural Electrification Administration (R.E.A.) of the Department of Agriculture, said.

"Under current loan programs Congress authorizes \$125 million annually to R.E.A. to make loans to

telephone systems," he said. "But these rural systems are growing so rapidly that we have a backlog of loan applications totaling \$670 million."

Initially the bank will be partly financed by the government, Arnesen said, but sometime after 1985 the bank will become a private corporation.

The telephone bank will issue stock like any other corporation, he said. The federal government will purchase up to \$30 million in stock annually until it has invested \$300 million. By law the bank must retire the stock as soon as possible after June 30, 1985. When 51 per cent of the stock held by the government has been retired, the bank will be converted to a private corporation, he said.

"In the fiscal year 1973 the Rural Telephone Bank will offer \$125 million in loans to rural telephone systems, which combined with the \$125 million available from existing

R.E.A. loan programs will allow \$250 million in loans," Arnesen said.

"The main purpose of the bank is to upgrade rural telephone service from 8-party to 4-or-one party service. So far we've made loans to upgrade over 1,100 rural exchanges across the country to one-party service. A second improvement is the transition from above-ground telephone lines to buried lines, which require less than one-third the maintenance of aerial systems."

Arnesen said that in Missouri R.E.A. has loaned more than \$87 million to 32 rural telephone companies serving more than 135,000 subscribers.

\$1,000 Award For Limousin Champions In '72

The North American Limousin Foundation will give a \$1,000 award for any grand champion carcass of at least 50 per cent Limousin blood at any of the 36 foundation approved carcass shows in 1972.

The Foundation listed 19 approved live steer shows in the United States. The Foundation will pay \$500 to the grand champion steer of these shows if he is at least 50 per cent Limousin.

The added premiums will be paid only if the grand champion comes as a result of inter-breed competition.

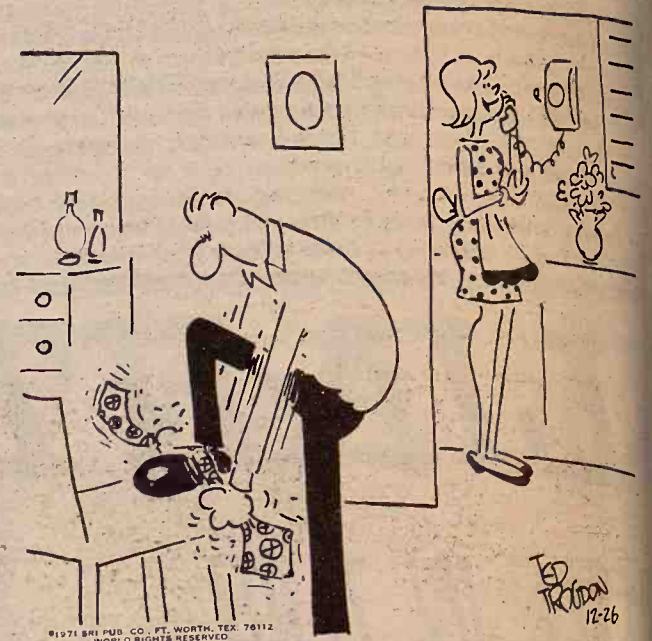

"We want the cattle industry to see these Limousin carcasses, and thought the added premiums would stimulate entries in this important phase of our business", Bob Vantrease, executive vice president of the Foundation said in making the announcement.

A complete list of Foundation approved shows may be obtained by writing the North American Limousin Foundation, 309 Livestock Exchange Building, Denver, Colorado 80216.

MILTON NAGELY RECORDS MOST APRIL SHORTHORNS

Milton Nagely, Abilene, was the largest recorder of Shorthorns and Polled Shorthorns in Kansas during April according to the American Shorthorn Association, Omaha, Nebraska, Nagely recorded 43 head.

HAYS ROUNDUP

Attendance records soared as more than 3,000 persons took in a couple of popular spring events at Kansas State University's Fort Hays Branch Station 59th annual Roundup. About 2,000 persons were on hand for the annual 4-H and FFA judging school and contest and over 1,000 farmers and ranchers listened to the latest research results at the Station.

This group of 4-H and FFA judges typifies the record attendance. Wendell Moyer, a swine specialist from Kansas State, right, explains how he placed the class. At left is Loren Thiele, Norton, owner of the animals.

Balbo Rye Tops in Grazing Test

A study of ewe grazing days on Balbo Rye, Von Lochow Rye, and

triticale pasture was conducted recently at the Colby, Experiment Station.

According to a summary of the results, reported by Larry G. Henry, Finney County agent, Balbo Rye provided 1,526 ewe grazing days per

acre followed by Von Lochow Rye at 1,447 days and triticale at 475 days.

Over 300 Million Bushels For 1972 Wheat Harvest

The Kansas wheat crop, is promising another big year, according to the Kansas Wheat Improvement Association.

After completing the annual KWIA wheat observation tour, a 22-man group gave an average estimate of 303,000,000 bushels from the Kansas crop.

The group, the largest ever to make the tour, traveled nearly 1,200 miles over five routes which included portions of Oklahoma, Texas, and Colorado stopping regularly to observe the condition of the 1972 wheat crop.

The men, including millers, wheat breeders and agronomists, hold extreme optimism for the Kansas crop. Their average estimate of 303 million bushels is 10 million below

Larri Gish
Hill City
agricultural mechanics

The FFA Foundation awards will be formally presented during the 44th annual convention of the Kansas Association of FFA meeting on the Kansas State University campus at Manhattan, May 30-June 1.

Net Farm Income To Record High

Sharply higher prices for livestock and some other commodities are boosting prospects for a record \$17.7 billion in net farm income this year, says the Agriculture Department.

The prediction, made in a summary report on the demand-and-price outlook for farm products, represents a \$2 billion gain from 1971 net income. Until now, economists have said the rise this year would be \$1.5 billion to \$2.0 billion.

"Farmers are earning more income this year," the report said. Farm prices are averaging well above a year earlier despite large grain supplies.

"Continued strong consumer demand for red meat, coupled with a reduction in pork production, has caused substantial increases in average prices and receipts for livestock products," the report said.

Soybeans and cotton supplies, too, are under pressure from strong market demand, thus boosting

26

Grass & Grain
May 16, 1972

prices for those items, officials said. Over-all, the report said, gross farm receipts will rise about \$4 billion this year, including grain sales, up \$500 million; livestock \$2.5 billion and government payments \$1 billion.

Expenses, however, are expected to continue rising by about \$2 billion, thus leaving farmers a net gain of around \$2 billion for the year.

The report said grocery store food prices are expected to be up about 4.0 per cent for all of 1972 from last year's level. That is the same increase as predicted by USDA economists last February.

THREE-I SHOW MOVES TO PRATT IN 1973

The annual Three-I Show was held April 27 in Lawrence, established a new record on attendance and increased display numbers. It's a show that presents products of Western Kansas Manufacturers, Inc. Members of the WKMI announced that the Three-I Show will be moved east to Pratt.

NO FREE PARKING AT KANSAS STATE FAIR

Don't look for free parking at the Kansas State Fair parking lots this year because the Board of State Fair Managers decided to charge for general patron parking and season parking.

SERVING MANHATTAN SINCE 1937

Here's Annual Flint Hills Report

The annual Flint Hills pasture and leasing report covers the situation early in the grazing season. This report is a reprint from the April 18, 1972 Grass and Grain for the Cattle Empire Edition.

Pastures in the 14-county east-central Kansas Bluestem area were well filled on April 1 and lease prices were generally

strong, according to the Kansas Crop and Livestock Reporting Service.

The percentage of available pasture leased by April 1 was the largest in the last four years. An estimated 90 percent of available grassland was leased by April 1, some 8 percent more than last year but still moderately less than the record 97 percent in 1952.

Ranchers indicated pasture still available this season was limited, but in a few areas was not filled because of scarcity of prospective grazing cattle.

The April condition of pasture feed was 86 percent of normal, down 5 points from last year's very good conditions and 2 points below average.

With an early start, grass prospects were fairly good. However, surface moisture was short following a dry winter and rain will be needed soon.

Ponds ranged from low in some drier areas to well filled in others, with water supply adequate for current needs.

The Bluestem pasture lease prices this season averaged slightly higher than last year.

For steers and heifers under 700 pounds, lease prices per head for the season averaged \$25.10 compared with \$24.10 last year.

The rate for steers and heifers over 700 pounds was \$28.70 compared with \$28.00 last April.

The season leasing rate for cows with fall calves increased from \$41.90 last year to \$42.70 this year and the rate for cows with spring calves went from \$38.10 to \$38.20.

The average for all cows with calves was \$39.90, up 40 cents from a year earlier.

The leasing rate per acre for pasture was at a new high of \$6.20, compared with \$6.00 in 1971 and a previous high of \$6.10 two years ago.

The guaranteed acreage of pasture per head this season was down slightly for steers and heifers but unchanged for cows.

The acreage guaranteed for steers and heifers under 700 pounds was 3.9 acres and for steers and heifers over 700 pounds was 4.8 acres, both 0.1 acre below a year earlier.

Grass acres guaranteed per head for cows with fall calves was 7.3 acres, and for those with spring calves 6.4 acres, both the same as last year's.

Year	Average Lease Price per Head for Season					Price for Pastures Rented on "Per Acre" Basis	Percent of Pastures Leased April 1

- My Kind Of People Says Arnold Helms —

CO-OP IN ACTION

Arnold Helms looks to Co-op for feed for his 1,000 head hog operation. "They're my kind of people," he added.

Bill York, Co-op manager in Greenleaf, and Gene Wenzl check Wenzl's grinding operation. Wenzl has been using Co-op products for more than 18 years. "I don't know where else we would find the service they have provided," Wenzl said.

Farmers Co-op Elevator Assn.

Greenleaf

Linn

Washington

Louis Carter and his son, Bruce look over part of their feeder stock operation. "Co-op feed is good but sound management and a fieldman make the Co-op program go," Carter says.

Hogmen Get Message, Put Clamps

Kansas hogbreeders got the word rather fast in the past year.

After a 34 percent increase in hog numbers the previous year that eventually put a good-sized dent in the market, Kansas hog men got the message. The hog count in the state as of December 1, 1971, was 2.1 million, down about 5 percent from the 2.202 count of the previous December.

The figures are from the Kansas Livestock Reporting Service. The hog counts are made as of December 1, rather than the January 1 cutoff that is used in inventory estimates for other livestock.

Just as the increases a year ago were nearly unanimous, as no county cut its hog numbers, this time only a few counties did not have a reduction in their hog numbers. Of the state's 105 counties, 80 of them reduced their hog and pig inventories. Of the remaining coun-

ties, 9 held about even and 16 were up, none drastically. Most of the gain was in the northwest corner of the state where all eight counties northwest of Hill City tacked on gains.

The two-million count reached the last two years was the first at that level since World War II. The late 1969 count was 1.643 million.

The hog business has always been rather like a yo-yo — up and down, up and down, up and down.

Hog breeders had one of the longest up-cycles in the late 1960s, as prices were clearly profitable much of the time and at least satisfactory to all but the most pessimistic.

From about 1966 on, the state's hog count pushed up about 50 percent, but the count in 1969, reflecting persuasion from oldtimers in the field, dropped about 7 percent. As it always has in the hog business, the buildup ultimately made itself felt in the latter part of 1970. Prices were not great enough in the late year to show substantial profit, especially for latecomers in the field.

The past year has produced much of the same medicine. Prices were plainly profitable for some of the

period but late in the year and early in 1972, many hogmen found lower prices worth grumbling about.

Of course the view that higher or lower hog counts in Kansas reflect market prices may be excessively parochial. It doesn't count the other major hog-raising states of the midwest, which didn't increase their hog numbers nearly as much as did Kansas a year ago. Kansas' cutback in 1971, however, was about in line with other hog-producing states.

It also presumes that the current inventory estimate by the Reporting Service is reasonably accurate, a point of contention sometimes.

The Reporting Service should have regained some of its status with hogbreeders, however, for the third time in four years the preliminary estimate has proven to be substantiated almost to the thousand by the official figures gathered later in the year from assessors' reports.

Thus, the statisticians have gained some face with the hog breeders who were muttering about "figures don't lie, but liars can sure figure" after the preliminary figures of 1966 and 1967 proved to be 9 percent and then 8 percent too low.

The hog situation has long been a nightmare for the statisticians. The size of litters, the ease of breeding, the shortness of gestation, the quickness of fattening and the easy relationship of the public's taste for

HOG COUNT

Figures in each county show the number of hogs as of December 1, 1971. The second figure shows the change from the year before count. The leading county in the state, for example, is Washington (5th from the east, northern tier), which had 90,000 hogs and pigs, about 3000 less than a year ago.

THE TOP 25 HOG RAISERS IN KANSAS

The top 25 counties in hog production as of December 1, 1971, are these:

1. Washington 90,000
2. Nemaha 75,000
3. Jewell 69,000
4. Marshall 57,000
5. Republic 56,000
6. Marion 54,000
7. Butler 51,000
8. Brown 49,000
9. Clay 48,000
10. Cowley 48,000
11. Smith 42,000
12. Pottawatomie 41,000
13. Montgomery 41,000
14. Dickinson 40,000
15. Phillips 37,000
16. McPherson 33,000
17. Harvey 33,000
18. Kingman 32,000
19. Reno 30,000
20. Doniphan 30,000
21. Lyon 30,000
22. Mitchell 28,000
- Jefferson 28,000
- Riley 28,000
- Morris 28,000
- Neosho 28,000

Farmers Union Opposes Research Wheat Bill

Washington — The National Farmers Union is opposed to the wheat research and promotion bill now under consideration by the agriculture committees in the House and Senate.

The National Wheat Institute already is carrying out research and promotion of wheat products on a national scale with money collected from wheat exporters, the Farmers Union argues.

"Before another organization with the same function is created," Weldon Barton, assistant legislative director, said, "we should at least give wheat producers an opportunity to vote in referendum on whether a duplicating program is needed, especially since the cost of a new program likely will be passed back to producers."

Clamp On Inventory Buildup

Statistics have been with the hog inventory, but liars can sure figure preliminary figures of the situation has long been for the statisticians, the ease of breeding, the ease of gestation, and the ease of fattening and the ease of the public's taste.

HOG COUNT

Figures in each county show the number of hogs as of December 1, 1971. The second figure shows the change from the year before count. The leading county in the state, for example, is Washington (5th from the east, northern tier), which had 90,000 hogs as of December 1, 1971, about 3000 more than a year ago.

JANSEN
NEBRASKA
PHONE

402-424-2670

with its price, had promoted changes in the market. A row of counties along the northern border continue to dominate the statistics. Washington is the leader for the fourth straight year, with a 90,000 count, down about 3000 from a year ago.

For years the northeast dominated hog production in the state, utilizing its longtime leadership as a corn producer. For years, it was automatic that Nebraska would be the state's leading producer and Brown and Nemaha would follow.

Four years ago Nemaha lost its title to Washington county as the state's number one hog producer

and its lead this year is by 15,000 hogs and pigs.

The dominance of the Nebraska border counties in state swine production has prevailed for many years but has shifted westward from Sabetha-Hiawatha-Horton-Troy.

Jewell, Marshall and Republic counties — all along the Nebraska border — finished 3-4-5 in the rankings. Jewell counted 69,000; Marshall 57,000; Republic 56,000.

The other principal seat of hog production besides the northern border is on an axis through El Dorado. Marion and Butler counties finished 6-7 and Cowley county was 10th.

The other spots in the top 10 were

filled by Brown and Clay counties. Clay is immediately south of pacesetter Washington county. The place in the top 10 by Brown county was the first for that county in four years. Brown (Hiawatha-Horton) ranked 1st, 2nd or 3rd through most of the 1940s, 1950s and 1960s.

The two-million mark which Kansas reached a year ago was quite a comeback from the all-time low of 697,000 in 1954.

The state didn't get back to the million mark until 1958, with the count then staying rather steady around 1.3 million, finally breaking the 1.5 million mark in 1968, for the first time since 1951 and only the second time since the middle of World War II.

Though the current count is the highest since then, it is no record. The state had over 2.5 million hogs as early as 1890. There were 3 million hogs counted as early as 1898, and the 3 million figure was reached again in 1907, 08, 1929 and 1932-33.

Federal programs of the depression 30s and low prices cut state herds down to little more than one-fourth peak numbers in 1937 and 1938.

Hog counts have been relatively stable since 1939, however, except for a buildup during World War II and the drastic retrenchment of 1953-58.

On the basis of population growth, it appears reasonable that Kansas would be only maintaining its share

of the market if its hog inventory continued over 1.5 million. Two million might indicate too much of a buildup for a profitable market, unless Kansas gets its increase at the expense of other hog-producing states or unless hog promotions effectively get more pork into the American diet.

Kansas has added some sizable hog slaughtering operations in the last few years, however, and the prospect of a super-huge Oscar Mayer operation in the Manhattan-Wamego area may mean that hog production in Kansas will go up even faster than it has in the past five years.

Range Prices Climbing, Renters Take Notice

The Flint Hills pastures are loaded with cattle as usual. But, an in depth look shows that cow-calf herds and backgrounding calves are increasing and less beef is being finished on Bluestem grass.

This trend hasn't affected the price grassland owners are getting because in the last decade the price per acre has increased over 50 per cent from an average of \$3.90 to \$6.20. About 90 per cent of the pastureland had been rented April 1, according to the Kansas Crop and Livestock Reporting Service.

Although the price of grassland has climbed steadily some ranchers, who have been steady customers are finding this is the year for price hikes.

Paul Hatcher, an Emporia cattleman, told Fred Kiewit, agricultural editor of the Kansas City Star, that he leases 25,000 acres of bluestem pasture every summer and owns another 10,000 acres. Hatcher said that about 50 per cent of the land between Pawhuska, Okla., and Eureka, has gone from beef steers to cow herds in the last several years. But, over 500,000 head of cattle were moved into this bluestem area.

Hatcher said he could rent all the pasture he needed at \$3 to \$4 an acre until last year, when the price jumped to \$6. But, he doesn't look for another big jump in the near future.

The normal stocking rate in the bluestem is one steer to each four acres. For cows, it is one to eight.

The owner of a 22,000-acre ranch near Scottsbluff in the Nebraska Panhandle and his late father had leased the property for 10 years to

the same cattlemen. The price for a lease running from mid-April to the end of grass in October was \$45,000. The owner paid only taxes and furnished fence posts as needed.

Last year, John Cook, Jr., taking note of rising property taxes, higher land values and an improvement in the cattle industry, asked for and received \$90,000.

Cook told his tenants the 1972 lease would cost them \$150,000. The tenants first said they would not pay, but later returned to Scottsbluff to resume negotiations, presumably after checking into the costs of alternative pasture leases.

"I wouldn't take \$5 million for that ranch," Cook, head of a Scottsbluff livestock firm, said. "When you figure a \$150,000 return (3 per cent) on an investment that big, it isn't excessive."

"Besides, these cattlemen are smart operators. Since they've been leasing the ranch, they've made enough money to buy farm-ranch lands in Wyoming and elsewhere that are worth \$1 1/4 million."

"People who own large tracts of pasture land are beginning to rear back and say, 'This has got to start paying its way. We're either going to get it, or sell out for today's appreciated prices.'"

This attitude has led to the so-called "Backgrounding" programs in which farmers raise weaned calves weighing 450 to 500 pounds into beginning feedlot cattle weighing 700 pounds or more. Many farmers buy weaned calves, or keep their own, and raise them to feedlot weights in smaller pastures, where they eat a combination of grass and

hay or grass silage.

Traditionally most yearling cattle feeding weights on summer grass, such as that found in the the Kansas bluestem and the contiguous Osage pasturelands of Oklahoma.

In recent years that pattern also has been changing. More and more cattlemen are maintaining cow herds in the bluestem, particularly in the southern part, where winters are moderate.

Gen. H. L. Oppenheimer, head of a Kansas City cattle and investment firm with deeded and leased ranch interests throughout the Midwest, brought out the bit operators point of view on range costs.

He said, cattlemen can make a profit at 1972 lease prices if they are big and efficient enough, and if cattle prices hold up fairly well through the year. He said size was the single most important factor, because equipment and labor costs can be prorated over larger numbers.

"In the last two years there has been an increased awareness of the savings in labor and equipment of a land assemblage that could handle 1,000 head over one that could handle 500," he said. "Larger holdings consequently have been creeping up in rent."

Oppenheimer explained that three men with a \$25,000 investment in trucks, tractors and haymaking equipment can handle 1,000 head and that two men with \$15,000 in equipment are needed to handle half that many.

"The magic ingredient for the above economic facts is land — land assembled in sufficient proximity that your labor force and vehicles don't have to spend 30 per cent of their time going from pasture to pasture."

The Kansas City executive said ordinarily such land can be found only from Kansas westward, adding: "A further corollary is that a pasture for 50 head has no market at all and cannot be rented at any price except to a neighbor. If there is no neighbor — such as occurs on transition land near a city — it might be given to somebody who will go to the trouble of mowing the weeds."

The switch to cow herds on the

Bluestem grass could counter the need for large herds and large acreages to make the necessary profit margin. Roland Glessner, Alta Vista, is an example of the rancher with a stock herd. Glessner has 250 stock cows on about 4,000 acres.

Carl and Jim Patterson, Dwight, also run a stock herd. They have 130 head of cows on about 1,400 acres. More of the grassland in the Grass and Grain area is being used for stock herds.

But, whatever the situation, the demand for good grazing land hasn't diminished. The prices owners are asking and getting prove it.

DON'T WIGGLE

As usual sale barns in the Grass and Grain area are moving a lot of stock, whether it be single lots or 30 head. People watch intently as cattle move through the ring and the auctioneer's ringing voice has the attention of everyone. Fathers tell their young sons not to wiggle or they might be paying for that animal, while some men sitting down the row nod their head slightly and makes the big investment in one second.

Food Prices Follow Predicted Trend

Despite sharply higher food prices this year, the Agriculture Department is sticking to its January prediction that beef prices will pay only 4 per cent at the supermarket in 1972. The latest estimate, included in a food-situation report, said beef prices during the first six months this year averaged 5

per cent more than in the first quarter of 1971.

That bulge now has settled a bit because of recent declines in meat prices, the report said.

"But some further rise may be in store this summer," it cautioned. "Seasonal factors, brisk demand and some tightening of pork supplies will account for most of the expected advance."

The predicted 4-per-cent gain for grocery store prices this year compares with a 2.4 per cent rise in 1971.

All food prices, including meals eaten away from home, are expected to increase between 4 and 4.5 per cent this year, compared with an all-foods boost in 1971 of 3.0 per cent, the report said.

That estimate also was a repeat of a projection made by the department in February.

Officials said meat products, buoyed by higher farm prices and larger middleman spreads, will account for most of the increase this year.

"Pork prices will be sharply higher than last year's extremely low levels, and beef prices will also average significantly higher than last year," the report said. "Poultry and eggs, on the other hand, which were depressed last year, will rise at a more moderate pace. The advance for fish may be about the same as last year and... dairy products, less."

Some other predictions included: —Potato prices may rise slightly this year, compared with a decline in 1971, and fruit is likely to increase during the summer, but not as much as last season.

—Any gain in vegetable prices will be tempered by the usual seasonal increase in supplies. Vegetable prices will likely increase into early summer, (but) perhaps by less than... a year ago."

For all of 1972, the report said, consumer food spending is expected to total 5.5 per cent more than last year, including adjustments for population increases as well as an upswing in prices. That would mean a national food bill of about \$124.8 billion, a \$6.5-billion boost from last year.

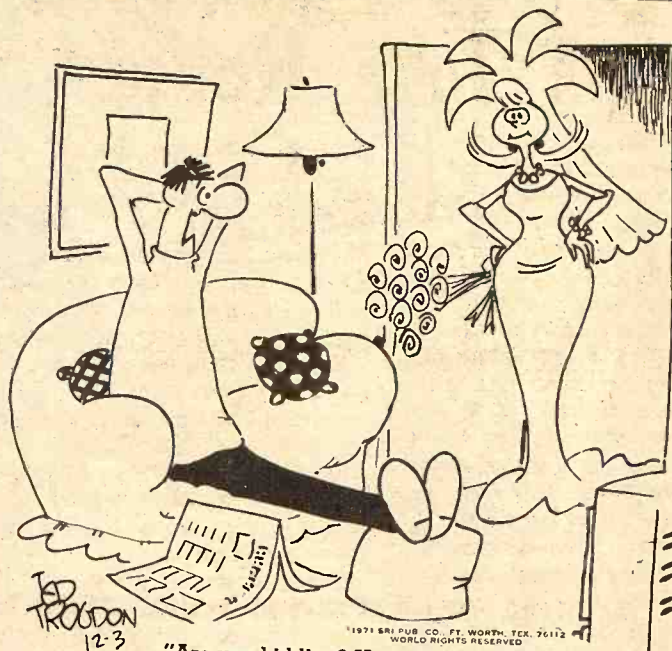

MANHATTAN FFA SENIOR WINS DEKALB AWARD

Dave Nelson, has been announced as the winner of the 1972 DeKalb Agricultural Accomplishment Award, given to outstanding high school seniors in vocational agriculture departments.

Dave is the son of Dwight Nelson of Route 5, Manhattan.

TICKLE BOX®

by Ted Trogdon

"Are you kidding? Have you seen my horoscope for today?"

PARDON US FOR BEING A LITTLE PROUD:

LEO DEEDS - AAA - AQHA 101,504 - SORREL

Retired at stud in North Central Kansas! Proven in the rodeo arena. Proven in the show arena. Proven top sire of race horses, rope horses, cutting horses, barrel horses, reining horses or just a pleasure to ride horses!

He has won for himself and his get will keep right on winning. Be the proud owner of a LEO DEEDS colt! A colt that will go places! CHECK THE RECORDS.

Some of his get include —

Linda Deeds AA ROM has won at halter, has carried cowboys and girls to the pay window in bulldogging, cutting and barrel racing!

Deeds Be Bomb, top barrel horse!

Kanda Deeds AA+ — Miss Leo Deeds AA

Big Deeds AA+ Grand champion halter stallion in Oklahoma

Leo's Good Deed AA — Pansa Deeds AA+

Baldy Deeds — Register of Merit Roping

Leo Deeds colts are easy to break and can do whatever is asked of them. They have proved their speed and pleasurable disposition —

Plus, this is the big one, Versatility! What more can one ask!?

Enjoy the trip to the pay window — own a Leo Deeds colt!

SOPHIA A. ROEPKE, EXECUTRIX

Don Roche, Auctioneer & Real Estate Broker, Blue Rapids, Ks., 226-7485
State Bank of Blue Rapids, Clerk

HE HELPED HOUSEWIVES

Dr. Don C. Warren, left, active in poultry genetics research for 45 years — 25 of them at Kansas State University — was awarded distinguished service in the field of agriculture from Dr. James A. McCain, president of KSU, right. Warren developed a way to strengthen the white in hens' eggs "so the housewife won't have to worry about it spreading all over the pan." He also served the poultry industry by helping develop ways to increase the thickness of egg shells—a major concern in transporting eggs. Also, is internationally known for discovering a method to determine the sex of baby chicks by feather characteristics.

FFA Honors Adult Supporters

Eleven adults who have been vigorous supporters of vocational agriculture and the Kansas Future Farmer of America program have been designated for recognition as "Honorary State Farmers" this year.

The degrees will be presented as a highlight of the annual state convention of the Kansas Association of FFA, to be held at Kansas State University, Manhattan, May 30, May 31, and June 1. The awards will be presented at the evening program Wednesday, May 31, at 7:30 p.m.

Among those to be cited this year are Congressman Keith Sebelius and KSU President James A. McCain.

Johnny Kaw Says:

"Don't cuss the mudholes, repair the road."

Hinton Super Service Station & Garage, Sedgwick, Ks.

Weather Affects Grain Business

Rod Turnbull
Kansas City Board of Trade
KANSAS CITY — The weather is entirely absent as a factor in grain prices. Most of the time, it is of major importance. During the growing season, it is no exception. The week after week went by with appreciable rain in parts of the Plains, notably Oklahoma and Texas, futures prices on hard winter wheat at the Kansas City Board of Trade nervously responded to a forecast of moisture or a lack of dust blowing. In the spring of 1972, one good general rain can be the assurance of a big crop. Obviously, the opposite is true when the rains do not come. The weather affects the grain business in ways other than the impact of moisture on growing crops. As an example, farmers with wheat in storage often wait until they are almost harvested. So do country elevators. Grain trade analysts will speculate whether a rain was of sufficient quantity to induce farmers to sell. Grain actually can influence the amount of wheat already on hand will be sent to market.

In recent weeks, market analysts have hedged their estimates on the planted corn and soy bean acreage as "depending on the weather." In part of the country, wet weather was delaying corn planting. Conceivably, a farmer could give up on planting corn while still having the opportunity to switch to soybeans. The relatively high soybean futures as compared to corn led some analysts to conclude that farmers would not be too reluctant to make the switch to the bean crop this summer. Occasional sharp breaks in soybean prices, however, clouded the issue. USDA estimates on yields before crops are planted are based on the intended acreage times the yield that might be expected on an assumption of normal weather. Thus this year, farmers indicated in March that they would plant 68½ million acres to corn. The USDA has estimated that with "normal" weather, this acreage would produce a crop of about 5.1 billion bushels, compared to the record 5.5 billion bushels grown last year. Last year, it will be recalled farmers planted corn on the average earlier than ever before. They did this in the hope that they could get the crop up and to maturity before

the southern corn leaf blight set in. Fortunately, the weather was almost ideal for early planting and early germination. In fact, the weather cooperated all summer and the record yield resulted. The blight never did develop seriously. Normally, USDA authorities aver, farmers do not deviate much from their March plans to plant. But last year when corn prices were relatively high and the spring weather ideal for early planting, farmers seeded 2½ million more acres than they had indicated earlier. Last year, where milo could be grown, many farmers switched to this feed crop in preference to corn because they thought it would be a good hedge against the blight. This year, nationally, farmers have indicated they would reduce their milo acreage by 13 per cent as compared to last year. But the popularity of corn is indicated by Missouri, a corn belt state, where the farmers have indicated they will reduce the milo acreage by 39 per cent this year, now that the blight threat has been lessened. Missouri had tripled its milo acreage in 1971. Milo will withstand more dry weather than corn, and that is why it is so popular as a feed crop in

Kansas, Texas and Nebraska. Missouri, which normally gets more rain than Kansas, feels safer with corn. While U.S. weather has and will continue to get the closest attention from the grain trade, perhaps almost as much interest has been shown in conditions in the Soviet Union and Eastern Europe. That area suffered a cold dry winter and a dry spring.

What's A Farmer?

The government has published a new "Fact Book of U.S. Agriculture" which includes definitions for such terms as farm, soil, disk and 4-H club but does not list farmer. Agriculture Department information specialists put the 87-page booklet together. The word farmer is used throughout the text in sections dealing with a wide range of subjects. But the glossary only a "farm operator" is defined, not "farmer." The definition of farm operator: "A person who operates a farm, either by doing or supervising the work." A farm is defined in various ways, including the census interpretation based on 10 or more acres if sales of agricultural products were at least \$50 in a year.

Grass & Grain 33 May 16, 1972 Hunting-Fishing License Sales Up

PRATT — Hunting and fishing license sales showed an increase again this past year according to the Kansas Forestry, Fish and Game Commission. Robert E. Ward, chief administrative officer for the Commission, revealed over 8,000 more persons purchased licenses in 1971 than in the previous year of 1970. A total of 570,152 hunting, fishing and trapping licenses were sold in Kansas with the largest increase being noted in fishing license sales. Actually, Kansas residents purchased 800 fewer hunting licenses than the year before but out-of-state hunters numbered 421 more than in 1970. Non-resident fishermen also swelled the ranks as 35,155 of these anglers joined their Kansas neighbors for the increased fishing opportunities afforded by the numerous lakes and reservoirs. The number of trappers declined by 848 when compared to the previous year with only 2,154 licenses sold. The sale of upland game birds stamps, needed for hunting pheasants, quail and prairie chicken, amounted to 199,585.

This weekend...visit the Briercliffe Townhouses...a new concept of living designed to give you the time to enjoy life. Step inside elegant homes with spacious rooms, formal dining rooms, extra bedrooms for guest rooms or libraries, conveniently designed Total Electric kitchens featuring Westinghouse appliances, garages and basements. All this...with the option of custom-designing in your new home. You can add fireplaces...wood beams...plan your own color scheme...and you can select from five different floor plans, in three convenient sizes.

Life at Briercliffe means you have all the privacy and individuality of a custom-built home. It means you don't have to worry about painting, mowing, snow removal or trash collection. Instead, you will have the time to enjoy the Mt. Brier Inn Clubhouse and swimming pool, basketball and tennis courts and your own private balcony. You can sell or lease your home, your monthly payments build equity and your taxes and interest are tax deductible.

Visit Briercliffe this weekend...and see a new way to begin living.

HOLDING UP THE FENCE

Jim Patterson, Dwight, are cleaning their feedlot now that they have their 140 head of stock cows on pasture. Jim had trouble with heifers calving this spring. Most of the calves to be pulled and he lost one heifer.

Arkansas River With Pollution and Fish Kill

GARDEN CITY — About 22,000 were killed in the Arkansas river by stale water from the sewage lot drainage system at Garden Industries Inc.

The septic water, devoid of oxygen, was flushed from the pipes and into the river by weekend rains, according to Major Hager, Dodge City, Kan., area engineer for the Kansas Board of Health.

Most of the fish killed in the nine-mile area east of Garden City were minnows, although more than 1,000 carp, channel catfish and green sunfish were found dead along the river bank.

"I first thought that Farmland had dumped a lagoon into the water," Hager said. "But I checked it and found the sewage (in the lagoon) was six inches below the drainage pipe, and that couldn't have been the cause."

The drainage system that apparently caused the kill receives runoff from a parking lot and a hill overlooking the beef processing plant.

Council Grove Man Top Veterinarian

L. Derald Jernigan, a man who has been treating beef cattle for 26 years, was named veterinarian-of-the-year by his colleagues.

The Council Grove veterinarian has a one-man practice but provides one-week internships for some 75 Kansas State University students each year. Jernigan believes more and more students are turning to large animal medicine and that "agriculture is looking up because the rural life is getting better."

Farm Exports Close To 1971 Record

Baring a further labor tieup at the nation's docks, farm exports for the year ending June 30 are expected to be near the record \$7.8 billion set in 1970-71, according to Assistant Secretary of Agriculture Clarence D. Palmby.

We now expect, if the ports remain open, that we will finish up on June 30 with exports not too far from the record of 1971, and with another sizable agricultural contribution to the balance of trade and the balance of payments," Palmby said.

The export outlook was included in a speech Palmby prepared for a meeting here of the Virginia State Chamber of Commerce.

"In fact," Palmby said, "shipments through the first nine months of the fiscal year totaled one per cent more than in the same period a year earlier."

The Agriculture Department official said farm exports have made an average net contribution to the U.S. balance of payments of about 700 million annually the past three years, including a \$1.1 billion plus last year.

Palmby said federal farm programs are "market-oriented" and are aimed at helping farmers to compete more effectively in markets both at home and abroad. "They recognize the shift in American agriculture from a basic grain to a livestock economy as consumer demands have changed," Palmby said.

"They are directed toward the use of grain through livestock rather than its storage, and this has resulted in a substantial increase to our farmers in gross receipts and net income."

On Monday, the Agriculture Department predicted net farm income would rise this year by \$2 billion, to a record \$17.7 billion, largely because of improved prices for livestock and certain other commodities.

Palmby said the shift to livestock from cash grain production is occurring in other countries, too. However, he said, trade barriers still exist which prevent full access to major markets.

"One of our major concerns is the agricultural policy of our best customer, the European Community, where variable import levies protect artificial grain prices

36

Grass & Grain

May 16, 1972

and eliminate the competitive advantage of efficient producers, such as the United States," Palmby said.

Johnny Kaw Says:

"Success follows hustle."

Auction SALE

MONDAY, MAY 22

STARTS 12:30 NOON — LUNCH SERVED

As we have sold our farm, we will sell at public auction the following described property located 1 1/2 miles east of Aurora, Kansas and 1 mile north and 1/4 east.

Opens Doors Women Agents

Edgar Hoover out, the FBI ended its men-only policy and is taking applications from women for special agent positions. Edgar Hoover, who died May 1, had vehemently opposed hiring women for crime investigating jobs. He was FBI director because the work was too dangerous. Patrick Gray III, acting director, said the intensive 14-week training course will remain unchanged. It includes firearms training with a .38-caliber revolver, a shotgun and rifle. It also contains a physical fitness program and requires applicants to become proficient in defensive tactics. Gray first announced the abandonment of the men-only policy at a meeting with the bureau's 15 assistant directors. Gray also ordered a staff study of whether the bureau can increase the number of blacks, Chicanos and American Indians among its corps of agents. Now there are about 100 agents from minority groups. Gray named three young lawyers as his special assistants, including a woman. They are David Kinley, 30, Barbara L. Herwig, 30, and Daniel M. Armstrong III, 30. Three were on his personal staff when he was assistant attorney general in charge of the Justice Department's Civil Division. Last Aug. 4, two women filed suit

in U.S. District Court asking that effort to order Hoover's men-only policy be declared unconstitutional. One of the women, Sandra R. Nemser, said yesterday in Denver the policy change is "just amazing." She said she would submit her application as quickly as possible and estimated that "hundreds, if not thousands, of other women will do the same."

"I would really like to meet Gray and shake his hand," the 29-year old lawyer said.

Gray said he was changing the policy because of President Richard

Nixon's anti-discrimination executive order and the Equal Employment Opportunity Act signed by Nixon March 24.

As assistant attorney general Gray was responsible for defending Hoover against the women's lawsuit filed by the American Civil Liberties Union.

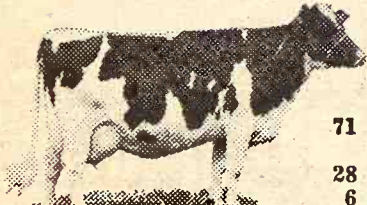

FBI regulations have required that all special agent applicants be men between the ages of 23 and 41, at least 5 feet 7 inches tall, with good vision and hearing, a valid driver's license, and be U.S. citizens willing to serve anywhere.

Sheep Count Gains After Six Straight Losses

After six straight years of decreases, Kansas sheep breeders produced a gain in sheep numbers in the past year.

The count as of January 1, 1972, was 337,000 — an increase of less than a third of one percent of the 328,000 count of a year ago, but a gain nonetheless.

The census on sheep and lambs a year ago was the smallest in the state since the mid-1920s.

The sheep business hasn't lacked

THE TOP 25 SHEEP COUNTIES IN KANSAS

The top 25 counties in the state in number of sheep and lambs as of January 1, 1972, were these:

1. Sedgwick	43,400
2. Reno	26,100
3. Harvey	17,200
4. Republic	14,800
5. Hamilton	13,200
6. Sumner	12,100
7. McPherson	10,100
8. Mitchell	8,000
9. Kingman	8,000
10. Dickinson	7,400

11. Lincoln	6,900
12. Cowley	6,500
13. Sherman	5,900
14. Butler	5,800
15. Marion	5,300
16. Harper	5,200
17. Jewell	5,100
18. Wabaunsee	5,000
19. Washington	4,300
20. Cheyenne	4,100

21. Kiowa	4,000
22. Pottawatomie	3,900
23. Grant	3,700
24. Pawnee	3,700
25. Cloud	3,600
Rice	3,600

for good boosters for some time. There are professional livestock people who are convinced there are profits in the sheep business, and promoters are enthusiastic that frozen meat packaging will allow grocers to effectively sell lamb to the consumer.

But such optimism hasn't convinced many farmers to get into the field. The number of sheep in the state declined yearly from 1965 until the past year. In fact the current total is only about 40 percent of the 1962 census of 848,000.

The middle plains around Wichita continue to dominate the sheep field with seven of the top 10 counties contiguous or centering around Wichita.

Sedgwick led the state with a 43,400 count. Reno had 26,100 and Harvey 17,200. Sumner, McPherson, Kingman and Dickinson were other in-line counties to make the top 10.

The non-Wichita counties to make the top list were Republic, Hamilton and Mitchell.

Until about six years ago, western Kansas counties tended to dominate the sheep statistics. But last year there were no western counties on the top 10 list, and this year only Hamilton made the group.

As always there were some good-sized variations from county to county. Sheep numbers do jump about considerably from county to county, reflecting the vagaries of the market, the quickness of the breeding season, and the ease of

great movements of sheep from one area to another.

The latter fact explains how one county may double or triple its sheep numbers from one year to another, and another county may see its sheep census slip to one-half in the same period.

Big sheep owners move their flocks quickly from one grazing area to other, and a feedlot moves from full to empty.

Actually, changes last year were less abrupt than in many years. Hamilton gained by 5900 to 13,200, Jewell by 1100 to 5100, and Sedgwick by 10,200 to 43,400. The largest cut was in McPherson, by 800.

Across the state, 60 counties were down, 29 held about even, and 16 went up. The gains, especially in Sedgwick, were enough to offset the losses to accomplish the slight increase in the state.

While the total number of sheep is just barely above the low of 1971, that doesn't mean the count won't climb again, the total dropped below 600,000 in 1956 and was nearly 50 percent greater inside three years.

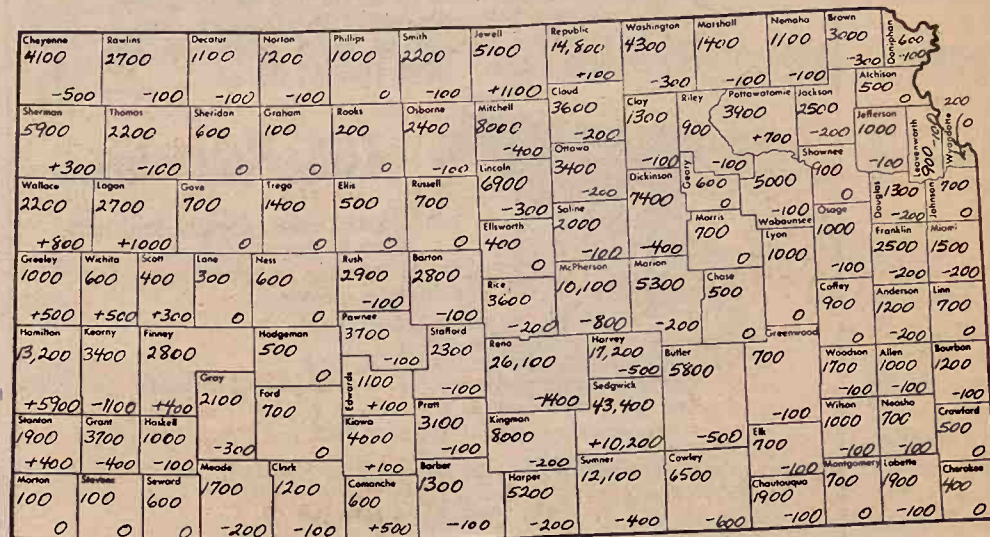

The high count since World War II was the 883,000 counted in 1959 but the 1962 census showed close to that, at 848,000.

But the state's sheep census totals are still a long way from the state's

peak. Back in the 1880s Kansas had over a million and a half sheep (stock sheep only) for six years running.

Profits from wool are just about beyond reach at current market prices, but sheep promoters think there's much potential in the sale of lamb frozen packages. There have been test programs which have satisfied grocers, who have objected to handling lamb in the past because sales were too low to justify spoilage. There are still processors for frozen lamb, however, close enough to the supplying retail outlets in the area.

Still, many sheep men haven't given their advocacy. They still think more farmers might take a look at the business and find it a worthwhile cash venture.

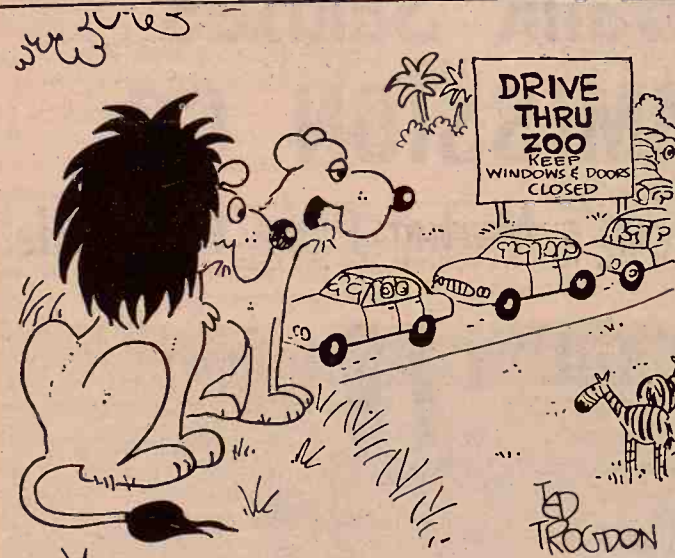

SHEEP COUNTY-BY-COUNTY

This map shows the number of sheep and lambs estimated in each county as of January 1, 1972. The second figure shows the change or — from 1971. Seven of the top 10 counties are among the top 25. For example, the state leader, Sedgwick, had 43,400 sheep and lambs on January 1, an increase of 10,200 from a year before.

"Big Mac" Still Stirs Controversy

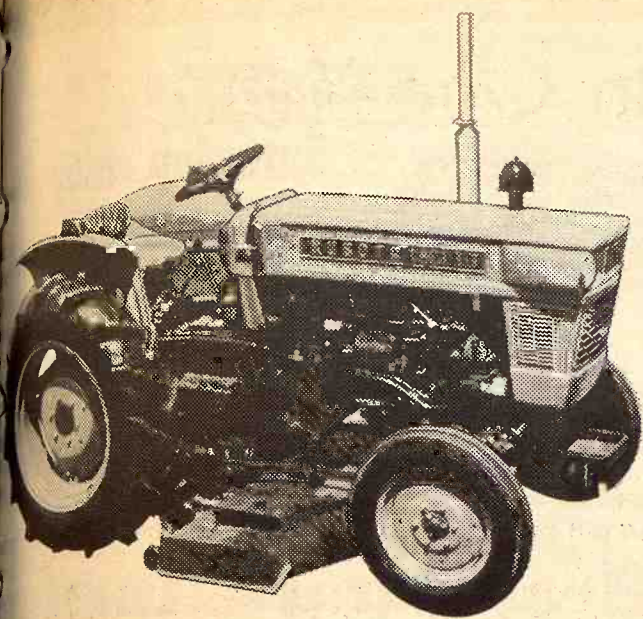

Everybody wants the \$14,250 McDonalds Systems, Inc., paid for the champion steer of the National Western Livestock show in Denver. But, nobody wants Big Mac, the infamous grand champion.

After classifying him as an estray, the brand board wants to put the money into the estray fund. McDonalds Systems Inc., the purchaser, wants the money back that they paid for the bogus steer. Rex Miller, Alta, Iowa, the exhibitor, wants the money he sold the steer for and the Denver Livestock Market wants to hold onto the money until it can be placed in the jurisdiction of the Denver District Court.

These facts were brought out in a brand board hearing in which the DLM is seeking to retain its stockyard operators license. Prior to the National Western sale, the brand

board placed a hold order on the sale proceeds until the Millers could provide proof of ownership on Big Mac which carried the brand of the Skylark Ranch. According to the Colorado brand law, if proof of ownership is not produced within 30 days, the animal becomes an estray and the funds must be turned over to the brand board.

William S. Howard, president of the DLM, has refused to turn the funds over to the brand board because of the extenuating circumstances surrounding the case. Howard said he has been threatened with several law suits involving the Big Mac proceeds and has refused to relinquish them to the brand board in order to provide some measure of protection for the DLM until the courts can decide who should have the money.

TRACTOR IMPORT

Shades of the Ford 8N, a two cylinder tractor, is now being imported to the United States from Japan. This small farm tractor, the Kubota, is offered with a 26.21, 17 h.p. diesel engine. The selling price starts at \$1,800 and Burns-Salisbury Ford farm machinery dealer in Manhattan is one of the three Kansas firms handling the Kubota.

On-Farm - Testing for Hog Producers

YMORE, NEBR. — Hog producers in the northeast Kansas and southeast Nebraska area will have a chance to begin an on-the-farm testing program. The SENEK Swine Testing Station Manager, Gerdes, feels this testing will give a picture of the whole herd. Beginning July 1, SENEK Swine Testing Station will begin its on-the-farm testing program.

Gerdes said plan was to test the whole herd in actual farm conditions, something impossible at the SENEK Station.

The pigs will be weighed and

formation fed into a computer.

The farmer will receive information how to select sires, what bloodlines to follow, and the herd's strengths and weaknesses.

In many ways it will be like the Dairy Herd Improvement tested for milk production, and a computer used to help the dairyman manage his dairy operation.

The SENEK Board of Directors is considering using computers at the University of Nebraska, Kansas State University, or possibly a commercial computer, Gerdes said.

Gerdes is now interviewing men to hire for the new testing program,

and expects to hire one next week.

He expects to begin the program with 20 to 80 herds with about 60 litters each. The new men will be trained at SENEK, and sent to farms to weigh and test the hogs.

Farmers in the program will use their present pens and will need to build nothing new.

On-the-farm testing can do some things that the SENEK Station can not do, and in some ways the SENEK Station is superior.

Together, they should provide a well rounded program, Gerdes said.

Testing on the farm can provide a better picture of a herd since the whole herd is tested. But since conditions vary widely farm to farm, comparing pigs from different herds would be less accurate.

Testing at the SENEK Station is done under carefully controlled conditions and provides valuable information when comparing individual boars from different herds.

The SENEK Station provides information on individual bloodlines, but does not show the performance of the herd or of pigs in actual farm conditions.

The SENEK Board of Directors also at its meeting last week approved the long awaited expansion of SENEK Testing Station.

A third 16 foot by 160 foot building will be built to house 60 pens of pigs. It will be identical to the first two pens.

Construction is expected to begin July 1. Cost of the building complete with feeders and plumbing, is estimated at \$15,000.

The building will be ready for the next testing period beginning September 15.

There are still several pens rights available, but Gerdes expects them to be gone long before the building is built.

A pen right purchased by a swine producer guarantees him a pen at the station. He still must pay the regular cost of testing his pigs.

SENEK will have 90 pens and be testing 360 pigs when the new building is completed.

Also approved by the SENEK Board was the building of a lagoon for the test station.

SENEK (Southeast Nebraska and Northeast Kansas) Swine Testing Station was financed by swine producers in the two states who were seeking ways to improve their herds.

BARN CLEANING

"You have to clean out the barn every so often," says Melvin Wandersee, Dwight. His father, Gus, has retired but still helps with some of the work on this Grade A dairy farm. Melvin and his wife, Leona, milk about 70 Holsteins year round, in addition to farming 660 acres.

Vo-Tech Schools In Money Bind

Governor Docking says that Vocational Technical schools are important to the Kansas job scene,

but many of the Grass and Grain area Vo-Tech Schools are suffering from the lack of operating funds.

McPherson's Area Vocational Technical School should be in full operation next year despite an announcement in April that some of the funds were to be cut by 12 per

cent.

In mid April, the state issued a notice to the local school that funds would be cut from 50 per cent to 38 percent. In the vocational technical program, half of the budget is provided by the state and federal governments and the other half is provided by local school funds.

Later on, however, an agreement was reached that will permit the local school to receive the same amount of state and federal funds in the 1973 fiscal year as in the 1972 fiscal year, providing the 1973 budget does not exceed this year's budget.

"If the cut in funds had gone through, it would have meant we would have lost between \$19,000 and \$20,000 in funds for the 1973 budget," according to AVTS director, Dick Ramsdale.

The Salina area vocational-technical school also is caught in a financial vise, according to its director, and the only solution to its money problems appears to be a gift from Salina UD305.

Estimated receipts for the vo-tech school's 1972-73 school year are about \$50,000 short of funding the budget approved by the Kansas Board of Education, said Eugene Lundgrin, school director.

New Greenbug Insecticide OK'ed

Sorghum growers should inquire about a newly approved insecticide

(Cygan) which extends the period of control of greenbugs up to 19 days and may reduce the number of treatments needed. It is absorbed by

the plant, and works from within and is not exposed to weathering.

ATTENTION CATTLEMEN

Did you miss the performance
tested bull sale at Beloit? We
had a Charolais bull that index-
ed in the top 1/2 of his breed.
He had a 140 day ADG of 3.08
and a weight per day of age of
2.93.

We also have a good selection
of percentage bulls that are
ready for service, for the com-
mercial cattlemen.

The Flying Realtor Offers

FOR SALE — Taste Freeze, 214 W. Kirwin, Salina. This is a well equipped and established business. Owner's records indicate gross sales in 1971 near \$50,000 and a 20 percent return on investment. This is a seasonal business and we feel worth your investigation. Price including business & equipment \$24,000.

An established well-stocked hardware business in Salina, Ks. since 1902. Priced at \$32,500, including inventory. Details upon request.

80 acres well improved, 2 1/2 miles north of Riley, Kansas. Pretty new home, with bath and half. Will sell all in one unit or home plus 5 acres with garage. Very nice and will sell.

160 acres priced to sell, 1 mile south and 1 1/2 mile west of Denmark, Kansas.

400 acres most all tillable, 10 miles north of Delphos, Ks.

160 acres balance ground, 1/2 mile east, 2 1/2 miles north of Aurora, Kansas.

160 acres most all tillable, 1 1/2 mile east, 2 miles north of Aurora, Kansas.

AUTOMOTIVE PARTS & REPAIR BUSINESS

This well-established business is located at Osborne, Kansas. Carries an average \$40,000 parts inventory — showing a nice return. County seat town. Complete one stop repair including front end overhaul & radiator shop. Excellent Red Carpet treatment with delightful office and bookkeeping system. Value enhanced with its exclusive location — Owner states no other complete automotive parts store within 35 to 40 miles. Value packed with six inside stalls — one drive through, four full time mechanics, one full time & one part time bookkeeper. A near new building designed thru experience. Priced to sell and selling for health reasons.

600 ACRES No. 1 cattle and hog ranch with finest equipment, 5 mi. northeast of Wells, Kansas.

Sugar Beet Plant Kept Open In '72

Great Western Sugar Co. has announced it will continue to operate its Greeley plant through the 1972-73 season even though sugar beet acreage contracted for in the north-central part of Colorado fell short of the firm's previously declared requirements.

Operation of the Greeley plant will require installation of an estimated \$200,000 in pollution control equipment.

The company previously had said it could not afford to operate the factory unless growers contracted for at least 65,000 acres of sugar beets. Actual contracted acreage totaled 57,500 acres.

The company said in its announcement the short fall in sugar beet acreage probably resulted from the prolonged 1972 contract negotiations between the company and growers. The company also cited a growers association's attempts to purchase the company.

But company president George Wilber Jr. said nearly 100 per cent of the contracted acres were planted early in the season. This, he said, "means that we have the potential of maximum yields per acre throughout the district."

Welfare Chiseling Could Be Stopped With Reform Bill

The Senate Finance Committee adopted additional new provisions in the Social Security-welfare reform bill designed to strike at welfare chiseling.

One would eliminate a regulation of the Health, Education and Welfare Department that permits a welfare applicant simply to file a declaration and go on he rolls.

The new requirement would be that the applicant offer evidence of eligibility.

Another would require that all welfare cases be investigated thoroughly for eligibility every two years.

A third would penalize states that permit large numbers of ineligible to get on their welfare rolls.

Under this provision, a state which permitted ineligible to exceed 3 per cent of its total caseload would lose one percentage point of federal matching funds for each percentage point of ineligible above 3 percent.

The committee said it believed the level of ineligibility nationally exceeded 5 per cent.

Other principal provisions adopted would:

- Require use of Social Security numbers to identify welfare recipients and permit states also to use fingerprints and photographs for identification.

- Make clear that welfare recipients must permit case workers to enter their homes for purposes of checking.

- Require that persons seeking copies of state welfare regulations pay the cost of printing the books

containing the regulations.

- Permit state welfare departments to set up their own work training programs for welfare recipients, ending the requirement that these must be operated by the Labor Department. California and New York have indicated they might like to operate their own projects.

Stiffer Tuberculosis Tests For Steers From Mexico

The U.S. Department of Agriculture (USDA) is proposing stiffer tuberculosis entry requirements for steers imported from Mexico.

Under proposed regulations of USDA's Animal and Plant Health Inspection Service (APHIS), steers entering the United States from Mexico must have a negative tuberculin test within 60 days of entry or have a negative test at the port of entry when presented for importation.

Cucumber Contract To Help Raise Rural Income Level

COFFEYVILLE — One hundred acres of cucumbers have put dollar signs in the eyes of several area farmers.

The cucumbers will be processed by an Arkansas cannery.

Planting, promoted by Farm Products Management Inc., Coffeyville, is being done under contract with Atkins Pickle Co., Atkins, Ark.

The nonprofit Coffeyville firm, three years old, is coordinating efforts with the Office of Economic Opportunity and the Washington-Nowata (Okla.) County Community Action Program, as well as the four-state Ozarks Regional Commission to raise income levels in rural areas of northeast Oklahoma and southeast Kansas.

Cucumber seedlings on some fields are beginning to break through the ground, officials reported. Wet weather is hampering early planting, although it is hoped all seed would be planted by May 15.

About 50 farmers are involved in the cucumber contracting, ac-

ording to Charles McFate, former Wichitan, who is assistant to the general manager of the Coffeyville firm.

A grading station is being set up at Delaware, Okla., 15 miles south of Coffeyville, by the pickle company, McFate said. Growers will deliver

May 16, 1972
their harvest to the grading station, where cannery trucks will take it from there.

Goal per acre for the climate and soil conditions of the area is likely to be about 10,000 pounds, but there is greater potential, McFate said.

See 8% Smaller Wheat Crop

The 1972 Kansas wheat crop is expected to total 288 million bushels based on May 1 condition, according to the Kansas Crop and Livestock Reporting Service.

If realized, this production would be 8 percent less than last year, but still the State's seventh largest crop.

On the basis of May 1 condition, some 9.0 million acres of wheat are expected to be harvested for grain.

The 11 percent anticipated abandonment of seeded acres is more than in the past 3 years, but about average for the 1960's.

Following a dry winter, wheat and other fall seeded grains in eastern and northern areas benefitted greatly from rains in the second half of April, and yields are expected to be good except in a sizeable dry area in southwest Kansas.

Seeding of oats and spring barley was completed in April and these crops appear off to a good start.

Corn planting was about one-fourth complete by May 1, and a start had been made on sorghum planting.

Most of the sugar beets in the western area have been planted and some were coming up. Alfalfa hay has made good growth and pastures about an average start.

Winter Wheat

Kansas winter wheat production is forecast at 288 million bushels, the smallest crop in 4 years, but only 8 percent below last year's record crop.

Grain harvest is expected from 9.0 million acres, 1 percent less than in 1971 and the smallest acreage harvested for grain since 1963.

Expected abandonment of 1.1 million acres includes additional set-

aside under the government wheat program, considerable acreage being grazed off by livestock, drought damage in western Kansas, and some local losses from blowing or hail.

May 1 condition points to a wheat yield of 32 bushels per harvested acre.

If realized, this will be below the 34.5 bushels last year and 33.0 bushels in 1970, but higher than in any other year on record.

Wheat stands are generally good and responded well to rain after mid-April. However, in a dozen counties or so in west central and southwest Kansas, wheat suffered severely from lack of moisture and a considerable acreage is expected to be abandoned or grazed out.

Freeze injury is expected to reduce yields in a half dozen southern counties. So far insect damage to wheat has been light. Soil borne mosaic and streak mosaic

have caused some local problems but damage has been limited.

Pasture And Hays

Pastures and range feed have about an average start this spring and should benefit from last April rains.

The May 1 condition of pasture and range feed was 81 percent of normal, compared with 79 percent at this time last year and the ten-year average of 80 percent.

Dry weather in early April held back growth of cool season grasses in many areas, but was relieved in eastern and northern sections of the State by late April rains.

Dry weather has continued to slow the growth of new grass in southwest Kansas. More cattle than usual have remained on wheat pasture.

There has been considerable supplemental feeding of livestock on pastures in the drier areas.

Hay stocks on Kansas farms on May 1 totaled 1,209,000 tons, farm above last year's 697,000 tons and the largest for the date since 1959.

The large hay carry-over reflects a bumper hay crop in 1971 and relatively light usage during the mild weather of late winter.

United States

The Nation's 1972 winter wheat production was forecast at 1,150 million bushels on May 1, down 1 percent from last year's crop.

Acreage of winter wheat to be harvested for grain was estimated at 34,823,000 acres compared with 33,049,000 last year. An average yield of 33.0 bushels per harvested acre is expected, down 2.2 bushels from last year's record high.

'71 Corn Crop Worth \$6.9 Billion

The Agriculture Department says the 1971 corn crop was worth a record \$6.9 billion to farmers, including government price support payments, despite sharply reduced market prices during the season.

Of the record 5.5 billion bushels harvested, according to an Economic Research Service report, farmers sold about 3.1 billion for a season average price of \$1.08 per bushel for nearly \$3.35 billion.

About 2.4 billion bushels of the 1971 crop was kept by producers for their own feeding operations and for seed, the report said.

When government price support payments were included, the average value of 1971 corn was \$1.24 per bushel. Including the corn used

on farms where produced, the total 1971 crop value was nearly \$6.9 billion, the ERS said.

In 1970, when blight and drought held output to 4.1 billion bushels, the average season market prices was \$1.33 per bushel. Including government payments, the total 1970 crop was worth slightly more than \$6.0 billion, or \$1.47 per bushel, the report said.

New DES Law

Covers Emergency

New regulations on stilbestrol withdrawal provide for emergency slaughter of cattle without certification that such animals have been off the feed additive for seven days have been passed, a University of Nebraska livestock specialist said.

In emergency cases, for example broken legs, cattle can be slaughtered subject to tissue analysis, explains Dr. Paul Guyer. Carcasses of such animals must be retained until laboratory results are known, he added.

"If the animal has consumed stilbestrol within 24 to 48 hours of slaughter, the liver probably will show stilbestrol residues but the carcasses or muscle tissue will usually be free of residue — and if so — can enter normal trade channels," Guyer stated.

"Since you cannot anticipate when emergency slaughter might be necessary, check with your packer

and establish procedures to be followed should an emergency occur," the NU beef specialist advised feeders.

Killing subject to clearance following laboratory analyses does cause additional problems for the slaughterer, Guyer conceded, because the carcasses must be kept in the cooler until results of analyses are known — which may be up to two weeks.

"Slaughterers will undoubtedly consider this extra cost when arriving at prices paid for carcasses which are free of residues," he concluded.

No Grazing On Set-Aside Acres

Farmers who signed in the 1972 Wheat and Feed Grain Programs are reminded that the "no grazing" period began May 15. This is the period all livestock are to be removed from set-aside acres. The "no grazing" period is in effect until Oct. 15.

Farmers who intend to comply

with the provisions of the wheat and feed grain programs have agreed not to graze set-aside acres during this five-month growing season.

In addition, no crops can be harvested from set-aside acres at any time during the year. An acceptable cover should be established on the land sometime during the year.

It is important to remember that intentions as shown on the agreement will need to be followed closely.

Some producers who signed to set-aside more than the minimum acres may think they can comply and earn payment as long as they meet minimum requirements. This is not the case. Compliance will be checked on the number of acres as shown on the agreement at the end of the sign up period, says the ASCS office.

**"You Can't Make A Profit
 Feeding Your Livestock
 Hot Air and Cold Potatoes"**

We at Hines Farm Center get to know
 our customers and what they need. We don't
 sell them a thing. Only supply what they need
 to produce the kind of livestock and poultry
 that they can market at a profit. Many of our
 customers have been with us for a good many
 years, and we think that is a good recommenda-
 tion to feeders who need that kind of service
 and product to come to Hines.
