Eighteen insane persons were passengers on the west train Wednesday, enroute for Colorado. They were boing taken there for the bene-fic of the climate.

The Farmers' Alliance is steadily gairing in number and promises much good to the farmers of this vicinity. At the next meeting, del gates to the county alliance are to be colesied, and members are requested to be on hand. Meetings on second and fourth Tuesday in each month.

In the Naval Academy at Annapolis the cadets are not allowed to decorate their rooms or add to the furniture provided by the authorities. The quarters of one student are exactly like those of another, and all are fur rished with Spartan simplicity. The object of the restriction being to prevent the jealousy which might arise if the rich cadets were permitted to surround themselves with luxuries beyond the reach of their less fortunate alassantes. It would be well if nate classmates. It would be well if all our great colleges and universities should unite and prevent the present ext-avagance of young men in college. It is growing to be one of the great evils of collegiate education in these

John Brown seems to be still gain ing in notoriety if not in popularity. It is now reported that John Walker writes the speeches for Mr. Brown, who commits them to memory and delivers the same to the edification of the party leaders. Miss Spencer's caudidacy seems to meet with as little favor as Mr. Brown's. And the prospect for Mr. Arnold, as the democratic candidate, is very good unless some independent aspirant should come forth to obscure the merits of all three of the above. The office ought to command the services of a good man.

On Wednesday, twenty-five students of Haskell institute left for St. Joseph in response to an order from the department of the interior, to at-tend the industrial exposition. They are in charge of Prof. H. B. Pears. The Haskell institute band in charge of Prof. Bunch, are a part of the number, and will give daily concerts. The students have their tools with tnem and will be engaged in different pursuits, showing their knowledge of the industriel arts as taught at Haskell. Some of them will construct a we can there and others will work at different things. A party of Indian girls dressed in dark blue uniform dresses, in charge of Mrs. Fiske, accompanied the boys.

At Winchester on Saturday night about 11 o'clock a crowd of boys started out to have some fun. One of their number, Willie Ray, left them and went home. Soon after the boys suggested that they visit him and put a "ticktack" on his win-dow to scare him. The joke turned out to be a serious one, and as a result Samuel Low aged fifteen years, and Tom Gardiner aged eighteen years, were fatally shot. Low re-ceived three shots in the face, one lodging in the brain paralyzing the left side of his body. Another shot entered his cheek and another went through his nose. He cannot possible recover. Gardiner was shot six places, the neck, head, mouth, throat and lungs. He may recover. Bay fired a single barrel shot gun at three of the boys. He thought they were burglars. Ed. Lacas received a flesh wound in the arm.

The Jefferson county fair was held this week at Oskaloosa.

It is now expected that the Santa Fe will take a leap forward.

Valley Falls has a new paper, the Republican.

Fall rains follow closely after sum-

net rains It will insure good fall feed for stock. The heavy shower of rain Tuesday afternoon, beat into the fronts of the stores, wetting the show windows.

There is satisfaction in believing that the best democrats of Shawnee county are indignant at the action of the late county convention, in making such an uncalled for attack upon the

Let the ordinance, which is now on ecord, be rigidly enforced in regard to the keeping of dogs. There are entirely too many curs in town, and the law says there shall be paid taxes from one to three dollars per head for all dogs.

Several of the old soldiers of this vicinity propose to attend the reunion at Elsworth next month, and take their wives with them. Some of them will go with wagons and camp by the way, making an outing of two weeks

John Boorhees has been promoted to the superindency of the telephone offices in Colorado Springs, and gives his brother Arthur a position in his office. We wish the boys success and are glad to note the prosperity of our young men.

There is a rumor that B Watkins is making arrangements to connect his Lake Charles (Louisiana) railroad with the Northwestern, and run into Lawrence. Mr. Watkins is said to in Europe now negotiating the funds for the enterprise. We do not know how much truth is contained in the rumor, but merely give it for what is worth.

The dressed beef senatorial investigation began in Kansas City on Mon-day. Gov. Glick was the first to witness. He testified as to the manner the combine affected him when he took stock to Kansas City. He could not get the market price, be-cause the packers interfered. He had then reshipped his stock to Chi-cago, only to find that the packers controlled that end also. Under this influence the price of beef cattle had declined 30 to 40 per cent. An Atchison butcher testified that he went to Kansas City to buy sheep, and secured an option on a lot, but while he was looking around for bargains, the packers bulldozed the owner into selling the sheep for less than he would have paid. There can be no doubt but the packers have demoralized the prices of beef cattle, but it will not be easy to make it appear by direct evidence.

Periodic Headache and Neuralgia; cold hands and feet, and a general derangement of the system, including impaired digestion, with torpor of the liver, &c., are, in certain localities, invariably caused by malaria in the system in quantity too small to produce regular chilis Many persons suffer in this way and take purgatives and other medicines to their injury, when a few doses of Shallenberger's Antidote for Malaria would cure them at once. Sold by druggists.

The Czar's treatment of Emperor William continues to embitter the relations between the two countries. The semi-official papers are permitted or instructed to speak with notable frankness and severity. The Cologne uzzette declares that the first line of danger is not Paris, but St Petersburg. The Hamburg correspondence, in an undoubtedly inspired article, says: Germany must accept the fact of the permanent hostility of the czar, persistance in the Russian policy is more dangerous to the peace of Europe than French Chauvanism The Czar's treatment of Emperor Wil-

Regarding the controversy over the Haskell Indian institute at Law-rance, Mr. Funston said, "I am most decidedly opposed to having a Massachusetts man put in for superinten-dent. If Kansas is not able to take care of her own offices she might as care of her own offices she might as well become a territory again. Any good Kansas man would be satisfactory to me. When this appointment was to be made, I picked out a half dozen men and told the Indian commissioner that they would be satisfactory to me. I submitted these names to Dr. Dorchester when he deme, but he saw fit to select Dr. Coffin—a man who was unknown to me. came, but he saw fit to select Dr. Cof-fin—a man who was unknown to me at that time. I' found him to be a man of ability and most highly re spected, and I immediately endorsed him, but Senators Plumb and Ingalls protested against his appointment and he was thrown overboard. Their action has brought on the appoint-ment of this Massachusetts man. I hope it will—yet be possible to give the place to a resident of the second district."

The above ridiculous specimen of gotism, we take from the CAPITAL. Congressman Funston seems to as sume, as Senator Ingalls has assumed that the United States Indian school at Lawrence, is his especial protege It is a new idea that congressmen have the sole right to name the men who shall be appointed to superintend government institutions that may be located in their districts. What would be thought of Representative Morril if he were to talk in the above style as to the commander of the military post at Leavenworth? And what if Ingalls should kick up such a rumpus in regard to that institution as he has about Haskell Institute?

The miserable truth is that our members of Congress have come to believe that it is their right to attend to everybody else's business except their own; that the control of offices is their exclusive prerogative, and this extravagant and unrepublican claim they are extending in a man-ner that would do credit to any petty old country. preying upon everything that comes within their reach. If the reader will carefully study the above extract he will grow more and more disgusted. "I picked out half a dozen men," that "I" would graciously permit our puny government to take. "I" did this, "I" did that. It is hoped that the end of this political demagogue is not so distant as it seems.

Mr. Frank R. Stockton has written a new and characteristic story called "The Merry Chanter." It will begin in the November Century and run through four numbers. The story takes its name from a vessel which started from a Massachu-setts port on a peculiar cruise. The setts port on a peculiar cruise. The owners, a young married couple, are on board, and the vessel is commanded and manned by four village captains of unusual experience. Mr. Dana Gibson will illustrate it. The November Century is also to contain a new story by Mark Iwain. During the coming volume The Century is to have an illustrated series of the strategy on the England Salons of the Century is to have an illustrated series of articles on the French Salons of the seventeenth and eighteenth centuries, including pen portraits of many of the leaders and a detailed account of the organization and composition of several historical salons. A great number of interesting portraits will be given with the series.

#### The Best Tree Wash.

Randolph Peters, a prominent and successful nurseryman, has from experience found the following tree wash to be the best:

"Take stone lime, slack and prepare it as for an ordinary whitewash, in an old barrel or box. Take enough at a time to make a bucket two-thirds full of the proper consistency for ordinary whitewashing. Now add one pint of gas tar, one pound of whale oil soap dissolved in hot water, (or one pound of potash, or strong lye from wood ashes), then add clay or loam enough to make the bucket full of the wash of proper thickness to be applied with a whitewash brush. If the trees have had the earth ridged up around them, take the earth away from around the collar and apply the wash to the body of the trees from the limbs to the ground or down to the roots.

Its advantages are, first, it will destroy the bark louse, and give the tree a bright, clean and healthy appear-ance. Second, this wash will drive all borers that may be in the trees and the moth will not deposit eggs on or about the trees the same season the wash is used.

All who grow apple, peach, dwarf pear, quince and ash trees, should use this wash; don't fail to use it because not patented and sold at a high price. I have known cases where peach trees have been badly affected by the borer; they have all left and the trees become healthy and vigorous with one application of this wash.

North Topeka Postoffice will open on Sunday hereafter, from 9 till 10 a. m.

Colonel W. A. Harris, the veteran thoroughbred short horn cattle breeder, writes from Omaha that all the cattle men are headed for the Kansas state fair with fine exhibits.

Mrs J. Davison, of 817 Kansas Avenue, Topeka, offers her business for sale. Here is a chance for some one to step into a good millinery business and make money. Mrs. Davison's health is such that she is compelled to get out of business. She has built up a good trade, and carried it through the dull season, hoping to be able to continue in it, but is obliged to give it up. Call and see her. 817 Kansas Avenue, first door south of Harbaugh's Bakery.

Next week will come the great state fair. Barnum & Co., in their advertisement elsewhere, make an of-fer that will induce many to attend.

A large, illustrated catalogue of the Lawrence Business College, containing complete information regarding the institution will be mailed to any address Free.

Address, E. L. McIlravy, Pres. Lawrence, Kansas.

THE STEEPLE AND THE VINE The steeple stood so grand and high, It challenged the gaze of the passers by. "Who so lofty, I say!" Look ye over the way!"

A gentle voice at its foot made plaint, "Give me support, or I fall, I faint;
I'm only a clinging vine,
Let me about thee twine."

The steeple barely deigned submit To the gentle tendrils clasping it, And with superior air Sustained the vinelet fair.

Over the stone, so stained and gray, The beautiful verdure found its way From base to lofty spire, Ever reaching higher.

The marvellous growth in its graceful lines Wreathes and drapes and waves and twines, Clasping with loving arms, Giving its many charms.

Till even the haughty granite smiles Beneath the tender, witching wiles, Seeing itself adorned By the humble vinelet scorned.

"This is my pride of all, I own;
It is sweeter not to be alone;
Grace can add to ruggedness,
And love alone can bless."

—J. A. K., in Boston Transcript.

#### AN ANGEL.

Of course I was an old maid, any body in Maple Ridge could have told you that, and a good many would have said I was several years older than the old family Bible affirmed.

I felt all my three and thirty years, and knew that the dark little face that looked back at me so soberly from the cracked mirror showed them beyond question. But, what of that! I had other things to think of than that I was

an old maid—many others.

There was poor Susie, our pet, the youngest of us all, who would marry handsome, reckless Noll Dasher, who, after a wild life of only a few years, ended it in a drunkard's grave, and left poor Susie and her two babies to

me.
Nor was that all, for Fred, our eldest, the pride of our old father and mother's hearts, must marry too-which was well enough, only after one brief year in his city office he, too, grew sick and died—but oh, so peacefully, so nobly!
"You'll care for my wife and baby,

Mary?" he said, looking at me so pleadingly, and I answered: "Yes, Fred, always."

So it wasn't much wonder I looked old, since only my little dress-making shop stood between us all and starva-

Father and mother had become so feeble they could only sit on the side of the chimney and talk of their trials and sorrows. Susie took upon herself the care of

the large household, and I've shed many a secret tear at night thinking how wan and white she was growing, our beautiful little Susie.

What did Fred's wife do? I-that's a sore subject: no one ever said any-thing, but I have seen Susie shut her lips in a strange way when "the lady" swept into our simple meals and never offered to soil her white hands even to wash her own dishes or clothes.

"She's never been taught to work, I suppose," I thought: "poor thing!" ippose," I thought; "poor thing!"
Then I bent lower over my sewing and sat up a little later.

Things had gone on in this way for nearly a year, until one night when it was growing very late, Susie came in and shut the door of my shop carefully. "What is it, my dear?" I said cheerfully, for there was a look on her face

that troubled me.

"Mary," she said, sinking down at my side and laying her pretty golden head on my knee, "my poor Mary!" and then she began to sob so pitifully. "What is it, my darling; tell me, won't you?"

"Oh, Mary, so good, so unselfish. I can't bear it. You are working yourself to death for me and mine. I've thought and thought and planned, and there's only one way."

"I don't understand—how hot your cheeks are. You're going to be sick." "I'm going to die. Don't look so startled. I'm very wicked and foolish, but I can't see you kill yourself nor my precious children starve. I'm only —only going to get married," desper-

ately.
"Then I felt her whole body shud-

der.
"Yes, darling, but who?"
"Tm going to marry Mr. Caleb Lef-

'Susie! You are mad!"

"No; he proposed to-night as I left the store, and I accepted him, that's all; why don't you congratulate me?"
"Because I can't, for I know—oh, my darling! I know you don't love him!"

"Love! I loved once and got a sweet reward. "Yes, I'm in love with the old miser's money; that's honest." "Hush! Never mind, sleep on it, pet. We'll talk about it to-morrow; I

must finish this dress now. "Mary, do stop and rest, you unsel-fish housekeeper! Your burden shall be lightened. I'm not half as miser-able as you fancy."

But I knew how much she suffered,

and I sighed, for things had come to a very bad state. What with poor father down with the rheumatism and Susie's children suffering for shoes, and none of us too warmly clad, unless it was "the lady"—that is what Susie had called Fred's wife to me more than once; but I could only sigh and remem-

ber that they were her old gowns.

Nevertheless it did seem hard that she and her baby should have the one spare room and a fire, and coal so dear. But la, me, I had promised. Such a rosebud as that little cooing baby was! If I'd had time I'd have cuddled it by the hour and strange to say the mother. the hour, and, strange to say, the mother had called it "Mary." She never said it was for me, and I often wondered. but never asked her-for somehow all brought us. - Exchange.

us simple folks were a bit afraid of "the lady."

It was a dull rainy evening in February when poor Susie came to me with her pitiful story of sacrifice she had resolved to make. I remember very particularly, because Mrs. Great house was to have a party on the 25th, the next night, and I was hurried with her gown.

She came in quite early for it, but the rich silk was all finished. I trembled a mite as she scanned it so closely, but she found no fault whatever, and paid me the \$5 for it promptly. Her last words were:

ly. Her last words were:
"You are looking far from well, Mary.
Tom would hardly recognize his old sweetheart if he could see you now. You need rest, my dear; do take some." Then she passed out. "Good advice, excellent," said Susie

in a hard voice, and I was glad she had not noticed what Mrs. Greathouse said about her brother. "I wish you had charged her fifteen

instead of five, Mary. The dress was worth it."

"Yes, I know," I answered, drearily; "but even that would not have paid all the bills."

And for the first

time in Susie's presence I broke down Even as I wept softly and Susie tried to comfort me, somebody entered the little shop, and, bending over Susie and me, dropped a letter im my lap—a

great, big, funny-looking affair.

"A letter! Oh, Mary! who would send you a letter?" said Susie. "The lady" paused a moment in the

shadow of the room, and I tore off the envelope, and there fell into my lap a great lot of bank bills.

'Money!' cried. Susie, 'money!
Who—what does it mean? Oh, here's

Who—what does it mean? On, here's a note! Listen:
"Dear Mary: Accept a little present from a loving Friend."

That was all; we looked at each other

That was all; we looked at each other stupidly.

"Who could have sent it? Oh, Susie, it's a mistake!" I gasped."

"No, it is not; the letter is sent to you and is for you. I find it is just \$100. I am so glad!"

I kept the money. I needed it sorely, and they all said it really was mine; but I felt uneasy all the time, and wondered and wondered, for we hadn't a dered and wondered, for we hadn't a rich relation in the world. But even that hundred dollars would not last forever, and by and by I saw Susie looking over her old things and trying to make up her mind that the time had come when she could tell her betrothed husband that she was ready. Poor, poor little Susie!

"I've set the day at last," she said.
"It's to be next Tuesday." Then she

began to sob.
Once more "the lady" entered and dropped in my lap another letter and a This letter was not so bulky, but

when I opened it I iound it contained two bills of a hundred dollars each.
"What—who?" I began vaguely as before, when once more "the lady" bent over Susie and I, and winding her when I opened it I found it contained white arms around our necks, fell into

'a violent fit of weeping.

"Oh, my sisters!" she sobbed, when she could speak. "Do you think me blind as well as heartless? Do you think you are to do all the work and me none? Dear, patient fingers!" and to our astonishment she bised first my to our astonishment she kissed first my needle-pricked hand and then Susie's

chapped and toil-marked.
"There's the book," she continued; "read it when you can. I began it when my husband was first taken ill. I fancied I could get it done in time to help him, but I couldn't. Yet he knows-he must know, how glad I am able to help those so dear him.

"Florence," I said, in wonder," what are you talking about?"
"Why, my book; it is there in your

lap, as well as the money for it—a portion of it. I always scribbled more or less, but in a careless way, until saw the great need, and then I found I could write even better than I dared hope. I never told, because I wanted to surprise you. Susie, little sister, don't dream of that distasteful marriage. I was so afraid it wouldn't come in time to save you. And Mary, gentle one, Iv'e something for you even better than gold. I—forgive mc! I found out all about your sad lover in the west, and I sent a little bird with a message of your faithfulness, your noble life, and the answer came (Oh, the west is not very far away): 'I'm

I wondered why Susie, with such a face of peace and joy as I had not seen her wear for years, should look startled and step back, while "the lady"—oh, such a lady—stood between and the door.

me and the door.

Suddenly she bent and kissed my hot cheek, and deftly snatching the comb that held my curls so very primly—as I deemed most becoming a staid old maid—she fled with Susie into the next room and closed the door.

I knew then why she had held her-

self so persistently before me, for, standing on the threshold of the outside door stood a tall man, tanned and

I could not speak. I would have fled, too, but I could not move. The tall man smiled and approachd me, took me in his arms and whispered:

"Is it my own little Mary?" And somehow in his sheltering arms I found my tongue and answered bold

"Yes, Tom." We call her "the lady" still, some times, for she is famous now and rich, and Susie and her children live with and susie and her culturen live what her. The old folks have found a better home with Fred, and I can not help but think they told him how we love his wife and all the happiness she

#### A SNAKE CHARMER.

He Has Been Bitten Forty-Nine Times-His Remedy for Snake-Bite.

"I have been bitten forty-nine times by rattle-snakes," said Col. Ironmonger of this city to a Fresno (Cal.) Republican reporter.

"Yes, sir, forty-nine times, either while catching them, handling them, or performing before the public with them. I am known as the great serpent charmer, or tamer. I have handled thousands of venomous serpents. and twenty-three years ago I performed in the Bella Union theatre as a snakecharmer, when it was managed by Mrs. Tetlow and son.

"I have often heard that if a rattlesnake bites a person, the sore, even if healed, will break out again every twelve months. That is not so. you are once cured you are cured forever. I have often read in the newspapers of snakes charming little children, and of children feeding them without being bitten. That is all non-

"No venomous snake will eat dead food; it must be live food that he catches himself, and he will not take food while caged up, not even the most inviting morsel. They can live a remarkbly long time without food. I once rattlesnake in Marysville, in a cage, that had not taken food for eleven years. I have kept many of them from five to eleven years without food. They will, however, drink water, I suppose to keep their poison replen-

"Rattlers are epicureans. They will crawl out of their dens in the spring, and if they catch a quail, a young rab-bit, or a squirrel during the summer they are satisfied. If not, they will take their drink of water in the fall and go to their dens and wait until next spring for their breakfast."
"What remedies do you use for snake

bites?" was asked.

"I put an ounce of ammonia into a two-ounce vial. Then I add a dozen or so leaves of the mistletoe. The leaves so dissolve, and the liquid becomes of a reddish color. Put eighteen or twenty drops of this liquid into a tum-bler half full of water, and drink it as soon as you can after being bitten. Then drink a pint of whisky. After that you must wait fifteen or twenty minutes, and if you feel no signs of inebriation repeat the dose; but the moment you feel the effects of the whisky, drink no more, but you may take another dose of the ammoniated liquid.

"Some people when bitten by a snake keep pouring down whisky until they get thoroughly drunk, but in such cases the remedy is worse than the disease Those who know me say that I am poison-proof, but that is not true, while at the same time a snake bite that would kill some men would injure me very little. Harmless snakes are all gourmands and want to be swallowing all the time."

"Do you believe that snakes can fascinate or charm other animals? asked the reporter.

"That is an error," was the reply. 'No serpent has that faculty. Every animal has its own instinctive way of taking its prey—by stealth, agility brute force, or strength. My experience during the last forty years confirms my belief. I have often heard birds making a great noise in a swamp, and I used to say: 'There's a snake charming a bird.' I would go down there to see what was going on, and sure enough there would be a black snake going along slowly from one branch of a tree to another. There would be a cathird or some other kind of a bird flying around the snake, great-ly excited, while the snake moved along slowly toward a nest to rob it of

its young, .
"The maternal instinct of the mother bird makes her forget the danger in a great measure. So she flies around and over the snake and flutters along just ahead of him, trying to lead him in an opposite direction, but all to no purpose, and as he comes near the nest

with her wings, and like a flash he grabs her, for he would as soon have her as the young, because she is a larger mouthful, if not so delicious.

"She was not spellbound; she had all the use of her muscles and could leave him at her will

"At the Sacramento state fair some twenty years ago I was bitten by a rattler in the bowels, and he left his fangs behind. I performed in the tent until 9 o'clock at night. In closing up of the snakes out of my bosom, as I thought, but I overlooked one. I went around the town to see the sights, playing a game or two, and started for

my hotel.
"It was called the Oro then, but "It was called the Oro then, but the name is changed now. Then I threw myself across the bed, and the first thing I knew I was bitten. I was smothering him. I grabbed him by the head through my shirt, and gave him a twist. Hence I broke his fangs. I held him up to the moonlight, and found him to be a favorite of mine.

mine.
"I had no remedies with me, and the drug-stores were shut up at that hour. At last I found a doctor named Logan. At last I found a doctor named Logan, who gave me a bottle of whisky and twenty-five drops of ammonia, and I was soon all right, but the fangs remained in me. I beggan to grow sick at last, and the wound had to be opened afresh and the fangs extracted. It was three months after I was bitten that the network of fat that covers the lighest number of admissions in a day has been 298,000.

bowels began to inflame, and it came

near killing me.
"I have not said anything about tarantulas, scorpions, and centipeds but they are all in my line. I have been stung by all of them, and I used the same remedy.'

#### Suggestions for Sickrooms

A large, sunny room should be selected for the invalid; if without a carpet so much the better. Sunshine as a disinfectant is worth bushels of chloride of lime.

The bed linen should be changed at least once in three days; the blankets once a week, those that have been removed being hung in the open air for a few hours, then thoroughly aired in a waim room. The room should be kept thoroughly

ventilated and at a temperature not lower than 68° nor higher than 70° If the patient is kept warm air may freely admitted without the le least danger. The carpet of the sickroom should be

lightly brushed once a day with a wetted broom. The furniture and wood word should be wiped with a damp cloth. Dry dusters and feather brushes are worse than useless

The cross sheet should invariably be kept free from crumbs and wrinkles, as these are a frequent cause of bed sores. Whenever the least redness shows on the patient's body the skin must be at once bathed with alcohol, thoroughly dried, and dusted with powdered oxide of zinc.

A sheet folded once lengthwise, laid across the bed, with the upper edge just touching the pillows and the ends tightly tucked under the mattresses, will be found to add greatly to the patient's comfort. It does not wrinkle like a single sheet, and crumbs may be readily brushed off it.

The nurse's dress should invariably be neat, tasteful and pretty. Slippers or boots of felt should be worn. To be continually smoothing the bed, pestering the statement of the ing the patient with sympathy and saying a dozen times an hour, "How do you feel now?" is enough to drive a

sick man wild. Meals for invalids should look as tempting as possible. The tray should be covered with the whitest napkin, and the silver, glass and china should shine with cleanliness. The patient should not be disgusted by a display of too much food, and should not be consulted beforehand as to what he will eat or drink.

In bathing the invalid never uncover too large a surface at once. Pin a blanket round the shoulders, fastening it behind, and remove the night-dress under that. Put the hand under the blanket and sponge the skin, a small portion at a time. A woman's hair should be combed every day if she is able to bear the fatigue. If it has be-come tangled a little sweet oil will

Household troubles should be kept far from the sick room. Above all, an invalid or an apparent convalescent should be saved from his friends. One garrulous acquaintance may in half an hour undo the good of a week of tender nursing. In long illnesses a small bed-table will be found indispensable. Every cup, glass, spoon and utensil used should be taken out of the room and washed as speedily as possible. As to walking on tiptoe and whispering, nothing can disturb a sick person

#### A Religious Fraud.

An extraordinary religious fraud is reported from Croatia. The whole population was wrought up to a great pitch of excitement by the announcement that the Virgin had appeared in the forest. A shrine was built at once of boughs and branches and in its cen tre a hole was dug into the ground, looking into which the Virgin was said to be visible to all true believers, who forthwith laid down their offerings round the sacred spot. Some unbelieving Thomases, who maintianed that they saw absolutely nothing in the black hole, were maltreated by the fanatic multitude as evil-doers; one man was killed, another had his leg broken, and many went home with bleeding faces and sore backs. On some days a crowd of 10,000 human beings kneit in the forest and left its offering, which promptly disappeared. But the day of reconing came. Five peasants and a peasant woman, the latter in the act of sending up the 'holy spirit' in the form of a turtle dove, were arrested for putting the play on the scene and have already confessed that for two years past they have been making preparations for this swindle.

#### A Faithful Dog.

One day last week a Boston police man saw a man lying at full length on the sidewalk. He was intoxicated and unconscious. Over his body, however, a large and handsome Newfoundland a large and handsome Newfoundland dog stood guard. No one could approach his prostrate master without the animal emitting a savage growl and assuming a most formidable attitude. It was fully twenty minutes before the officer could call the dog off and ring for the patrol wagon. Both and ring for the patrol wagon. Both were taken to the station and put in the same cell. There the man was permitted to sleep off his drunk, while the dog allowed no one to go near the door or attempt to enter the cell.

#### THE BIRCH TREE.

And the Various Substances That Are Derived from It.

A casual glance at the surrounding s of any lumber country, notably along the creeks and ravines, reveals the fact, says the New York Lumber Trade Journal, that at least some birch twigs have withstood the onslaught of country pedagogues, who from time remote have been identified with the legend of birch-oil and elbow-grease as an accelerator to the sluggish school-boy as he stumbles along over the obstacles on the side of science hill. Many twigs remain, and outside their legendary historic value suggested in the foregoing the twigs and bark of the common birch (Betula alba) have really an intrinsic value not second to many of the

most valuable plants.

Even the leaves and young shoots secrete a resinous substance having an acid reaction which under the longlegged names of the pharmacist is sold a medical preparation for as high as \$16 per fluid ounce. The inner bark secretes a bitterish alkaloid not unlike secretes a otherish attaining not unlike cinchona in its nee, and is used largely as an adulterant for quinine in many parts of Europe. The so-called "cinchona mixture" has been found by analysts to consist in many instances of the alkaloid found in the inner bark of the humble birch tree.

The outer bark subjected to dry distillation yields a peculiar empyreumatic oil, having the peculiar odor of Russia leather, and the secret of preparing skins, and that, too, of the very poorest quality of skins, being taken from cattle that have perished on those barren, desolate plains, is the only obstacle thus far to prevent American artisans competing with Russia and

Austria in fine leather goods.

It is not necessary, however, to go into chemical technicalities and details in order to arrive at a profitable solu-tion of the uses of birch twigs and birch bark when the larger timber is being cut away and hauled to the sawbeing cut away and natured to the saw-mill or the turning-lathe. The oil of wintergreen (Oleum gaultheria), so useful, fragrant, and expensive, is nearly always adulterated with birch oil, much of it even is birch oil pure and simple, but is sold as wintergreen oil and is wintergreen oil to all intents and purposes, having, when properly prepared and refined, the same properties—viz., specific gravity, 1,173; boiling point, 412 degrees, and mixes readily with alcohol, chloroform, etc.

The appliances necessary for the preparation of this oil are neither intricate nor costly, being simply a large tub supplied with a coil and steam connection. Of course we are not expected to go into all the details of manufacture. Only brief outlines can be given.

The birch limbs, twigs, bark, and even the leaves, if a mere commercial oil is to be made, are gathered and placed in this large tub, containing the coil for steam-heating, and as fast as the mass accumulates it is kept covered with water, and the tub, being supplied with a tight-fitting lid, or manhole, should be opened as little as possible. After becoming nearly full steam is turned on and the batch kept about blood-warm for twenty-four hours. This will dissolve nearly all the oil and resinous matters, which, being precipitated, causes the mass to assume a very sticky consistency. Steam may now be turned on and the mass brought to boil for a moment or two. With a wooden connection with a small barrel or keg the tank is made tight and brought to a boil; the steam, having previously dissolved the oils, etc., will now vaporize them and will condense in the last-named keg. After a few hours the job is done, the keg is bunged or corked up, and is ready for shipment as commercial wintergreen oil, though made from birch refuse continually in the way.

#### Bathing in Cold Water

Concerning bathing of the body, I think our sanitarians are very extravagant, and they have done a great public mischief by setting the great towns to plunder the rivers of their supplies

from the head streams.

Even the prophet Mahommed, a great fanatic of cleanliness, regarded friction with sand as compensatory for wash-

ing.

If any one supposes that the limbs and trunk of the body cannot be kept as perfectly clean by dry rubbing as by. any amount of washing, I say he has something to learn.

All the hardy barbarians of the north

have, at all times, been reproached by southern people for their neglect in

washing.
The old Romans did not—as a nation—betake themselves to baths till the era of effeminacy set in.
The Scythians of Herodotus were removed not to wash: but in cold weather, at distant intervals, to cover their bodies with a hot, spicy paste. It dried on them, and dropped off when cold, leaving the flesh clean.

Northern races know that cold water takes the strength out of them, and they do not volunteer to touch it. Their practice has more weight with me than recent theories.—T. W. Newman, M. D., in St. Louis Magazine.

Table Etiquette.
Traveler (in Western restaurant)-"There's a hair in this soup."

Watter (imperiously) — "Well, ye might know better than to lean y'r head so far over w'en ye eat."—New York Weekly.

## Jews in Warsaw

There are no fewer than 151,000 Jews in Warsaw, the whole population of which is but 440,000.

#### FARM AND HOUSEHOLD.

Small Farms Best.

It is most natural that in this country, where large tracts of fertile land can be cheaply secured, the tendency should be to buying more land than can be successfully cultivated. We have improved agricultural implements more than any other country in the world. If it were possible any-where for men single-handed to till darge numbers of acres, it would be possible here. After a fashion men do run over and skim over large farms, but every year it is becoming more certain that this mothod of farming must be acres to the pointed by a care. give way to the painstaking and careful cultivation that is found in the older parts of this country and in Europe. We must make the land richer, as they do in the Old World, grow larger crops per acre, and make more profits from a smaller investment of land, capital and labor.

Does this imply a return to the condi-tions of the thickly settled portions of Europe, where peasant farmers work-ing land they do not own wring only a bare subsistence from the soil? By no means. In a few respects conditions will be the same; but there will be enormous differences. In the farming of the future more account will be made of the richness of land than of the acreage under nominal tillage. It is evident to any one who studies current events that the wholesale method of farming no longer pays. Men have got into it through the fact that land by cultivation for a time tends to increase in value. This rise in land has made many rich, and as it is the easiest of all ways to make money, thousand est of all ways to make money, thou-sands have bought lands they did not need, hoping to profit by their increase

value. Of late years, especially in the older parts of the country, farm lands have been on the decline. The reason is not far to seek. Decreasing fertility has brought many sections below profitable productive capacity. Under a system of farming that meant a continual decrease in fertility, farm lands soon change from the very best to the very worst forms of security. Land cannot run away. But for farming purposes fertility is all that makes land valuable. Fertility is as volatile as ammonia.

A change to smaller farms, with thorough tillage and increasing fertility, is the effectual remedy for this evil. But if the farm be reduced in evil. But if the farm be reduced in size to the Old World standard, will not the American farmer become like the European, merely a peasant, a serf or a boor? We do not believe this danger exists. Conditions here are not, and cannot for hundreds of years yet be what they are in Europe. The land in France is doubtless too much divided for the public good. There is yet land enough here for comfortable sized farms for all willing to work them. It is not and never can be here difficult to buy land. The trouble is the question whether it is worth buy-

ing and worth cultivating.

Yet with Yankee energy, skill and tact it is easier here to restore poor land to fertility than it is anywhere else in the world. Of the scarcest mineral plant food, phosphate, this country has enormous supplies in South Carolina rock. Fertility is going to waste on every side, and only needs that men put forth their hand to stay it. With smaller areas under individ-ual ownership we shall use as much labor-saving machinery as ever, but it will be by co-operation among farmers in each neighborhood, who will combine to purchase and work it. will surely be better than individual ownership of large areas that do not and where farmer is obliged to purchase more tools than he can afford, with a result of decreasing the fertility and therefore the productive capacity of his land with each returning season.—American Cultivator.

Grain Feed in Summer.

The general impression is that dairy stock needs only the grass of the pasture in summer. Of course a good deal depends on the quality of the pasture. Some afford much richer feed than others. But it stands to reason that some dry food in summer, for animals as well as men, is not only relishable but conducive to health. Many by experiment have found that the pays to feed meal in summer. Col. F. D. Curtis, of Charlton, N. Y., says he has found that giving his cows an extra feed of wheat bran in summer increases the quantity of milk and makes a better quality of butter. He local at night four quarts of hean with feeds at night four quarts of bran with one quart of cotton-seed meal. He puts one quart of cotton-seed meal. He puts his butter up in three to ten pound packages, and delivers it to special cus-tomers in Schenectady, for 30 cents a pound the year round. That he has pound the year round. That he has extra cows, appears from the yield—7 pounds of butter from 100 pounds of milk. He used to be satisfied with 6 to 6½ pounds, but now succeeds in getting 7 by not mixing sweet and sour cream and taking outre care in ringing his gream for ing sweet and sour cream and taking extra care in ripening his cream for the churn. But this question of feeding grain in summer is one that each dairyman must decide for himself. Some appear to find it p fitable; but in most if not all cases, we note that they have superior cows. It might not pay to feed grain or much of anything else to poor cows. A little experimenting ought to settle the question. else to poor cows. A little experi-menting ought to settle the question menting ought to settle the question—and it is not a very wide - awake man, in these days who does not experiment. Mr. W. H. Gilbert, of Richland. N. Y., feeds shorts in summer. Then beginning in September to feed 4-to 5 pounds of cotton-seed and wheat hran mixed, he save of Richland, N. Y., feeds shorts in summer. Then beginning in September to feed 4sto 5 pounds of cotton-seed meal and wheat bran mixed, he says, "I can bring my dairy to give me a pound of butter for every 12 pounds of half a cup of milk. Bake until brown.

milk." His cows, it will be seen, must be extra, and readily respond to good feed and treatment. In winter, he feeds about 5 pounds of hay, and 35 pounds of corn ensilage, with 5 to 7 pounds of cotton-seed meal and shorts. This is strong feed, but he finds it pays.—Practical Farmer.

Farm Notes.

Unless fence corners are carefully cleared out after having and harvest they soon become unmanageable by ordinary means. This work is much more apt to be neglected since the horse mover and reaper have dissuaded far-mers from the habit of swinging the scythe. That is still a handy imple-ment to have around for cutting weeds in places where without it they must e left to go to seed.

Hogs that are not kept for breeding should always be in condition for killing. Their food need not while grow-ing be of distinctly fattening character, but if well fed with nutrition to make bone and sinew, a good pig will lay on fat enough to furnish good pork at any time. They should always have plenty of not very rich food. This will improve their digestion, while either underfeeding or stuffing with fattening grain, like corn, will ruin digestion and make the pig stunted in growth,

For some reason the first few tomatoes that ripen of some varieties are apt to rot as they turn red. Pluck them off and throw them away, or better still burn them, to prevent the spread of the infection. It seems probable that in such cases the plant has born fruit before it had drawn on the soil for the proper portion of nutrition to perfect its fruit, or while all that its roots furnishes was needed to perfect its own growth. This is the only the-ory we can suggest for explanation of facts well known to all gardeners.

In preparing wheat ground at this season there is usually some moisture in the soil when first turned up. But if the furrow is left rough, the large surface exposed to the air causes it to dry out very quickly. It is very important to save in the soil all the moisture possible. To this end good wheat farmers keep a drag in the lot, and a little before turning at time at night they hitch on to that and brush down what has been upturned during the day. The good effect of this prac-tice in fitting a mellow, moist seedbed for the grain is almost incalcuable.

The increase of insect enemies and diseases among cultivated fruits make them much more difficult to grow than formerly. Nobody, however, need be discouraged by this. There is nothing uncertain about fruit growing, except the price, and when the large proportion of unskilful fruit planters are driven from the business the price will be always a paying one. By under-standing how to destroy insects the crop can be made at least as certain as hay or grain of any kind, and by making fruit crops certain every year, they can be sold at comparatively low prices with good profit. Where insect depredations are prevented, the quality of fruit will be improved, and this is what is needed to enlarge the demand.

After the crops are harvested, how shall they be marketed? Here is the economy of good teams, good wagons capable of hauling large loads, and good roads. With all these, the exgood roads. With all these, the expense of hauling grain to market need not be half what it usually is. Western farmers have learned a lesson of farm economy in this matter. Many large grain growers own elevators on the railroads, where they store their grain, and it is easily and cheaply transferred to cars for shipment when sold. When the western farmer draws his grain with teams he usually puts on much heavier loads than are common in the east. Western farm horses are heavier than those of average eastern farmers. It costs no more for a driver to haul a large load to market than a small one.—American Culti-

The Household.

WHITE MOUNTAIN CAKE. - One and a half cups of sugar, two-thirds of a cup of butter, the yolks of four eggs, half a cup of milk, three cups of dour, one teaspoonful of baking powder. Bake in jelly-cake tins.

COCOANUT FILLING FOR CAKE. - One pound of pulverized sugar, the whites of the four eggs, one grated cocoanut. Mix all together and spread between the layers, on the top and around the Keep some of the cocoanut to sprinkle on top of the cake.

DRIED APPLE PUDDING .- Boil dried apples until nearly done; save a teacur juice of the apples for a sauce chop them and mix with soaked bread and boil in a bag; make a sauce of melted butter, sugar and flour, with enough apple juice to give it flavor; spice with nutmeg.

LEMON JELLY. - Make a rich lemon ade, using about four lemons to a pint of water, also enough sugar to make it sweet. Strain carefully though a cloth and then add one-half box gelatine; after having dissolved it in a little water, strain again several times; then

stew for three or four hours. Flavor the broth with some thinly cut lemon peel; salt to taste, and add a little sage tied in a piece of muslin. All fat must be removed.

MINCED VEAL. - Take an earthen dish and put in it a layer of breadcrumbs; over this place pieces of butter, then a layer of

ROBERT AND HIS PONY.

Once upon a time there was an honest young fellow named Robert, who lived all alone in a little house in the middle of a forest. His mother had died when he was a mere child; his father died a few years later, and at his last hour he had said to him: "My dear son, if I had not been the victim of a cruel sorceress you should have inherited a handsome fortune; but now I can only leave you this house and my pony, a good beast; treat him

This pony was, in fact; a remarkable animal, very intelligent and very

handsome.

Robert had no other means of living except his work in the forest. He gathered dry branches for firewood, and heath to make brooms. He tied them in bundles, and placing them upon the pony's back he went to the city to sell them. There he bought food and gar-ments for himself, and oats for his

faithful beast.
One day, after having sold his bundles, he was preparing to return to his home, when an elegant lady approached him and said:

'Is that your pony?"

"Yee."
"He is a fine-looking beast. Will you lend him to me for half an hour? I wish to go and look at one of my farms, and I will give you a shilling for him."

Robert had never parted with his brave little horse, and he hesitated to confide it to the beautiful unknown. But a shilling was more than he made in a week.

"Very well," he said, "I will lend

you my pony, but only on condition that you treat him gently, and that you will not beat him. He has never been beaten. "Have no fear," replied the beautiful

lady. She seated herself upon the pony and rode off.
"Who is that woman?" Robert ask-

ed. "What! you do not know her? That is Mistress Hippoharpy, who lives in

the great house you see down there. She is very rich. "I hope," he replied, "that she will

treat my pony well. He was very uneasy, and impatiently awaited the rich lady's return. At last she appeared. She tossed him a shilling, and hastily departed. Robert had no time to thank her, and he certainly would not have done so had she remained, for he saw that his pony was remained, for ne saw that his pony was panting and was covered with mud, and on his skin he could see the marks left by a whip. Robert wiped him carefully carressed him and led him

to his stable. A few days later he once met Mme. Hippoharpy, who called him to lend her

his pony again.

"No," he replied; "you shall never have him again."

"I will give you two shillings, she said.

"No," he said, "not for your entire

fortune." "Ah!" she cried, looking at him angrily, "you will repent this." Suddenly, as he was enternig the forest, five men threw them-

selves upon him, bound him and carried him off with the pony to the great house where Madam Hippoharpy lived.

There he was obliged to break stones to repair a road in the park, and his dear little pony was delivered to the cruel lady, who beat him and drove him almost to death.

Alone, defenseless, closely watched by his vigilant guards, poor Robert had to submit to his lot. But often he could not restrain a groan. One day, as he was moaning over his cruel fate as he was moaning over his cruel late, he heard a little flutelike voice, which said: '1 pity you, I pity you.''

The same voice repeated: 'I pity you, Robert, I pity you.''

He looked again, and saw on a bush a robin redbreast, who nodded his head

"Is it you," said Robert; "Is it you my beautiful bird, who spoke to me?"
"Yes," replied the bird, making a little bow and wagging his tail. "Can I be of any assistance to you?

"I am very much obliged to you, but I fear that you can do nothing for "Do you think so? Well, tell me

vhat you desire." "I wish to regain posession of my

"If I restore him to you will you do for me what I ask you to!,
"Oh, certainly!"

"Well, listen to me. When the dinner-bell rings, instead of returning to the kitchen, conceal yourself among the bushes near the stable, and you will see what will happen."
Robert did as the bird told him.

The robin redbreast flew to the stable where the pony was shut up. A servant was there, who, on coming out, ought to carefully close the door,

by his mistress' order. But while he was finishing his work he did not notice that the active bird had piled some bits water, strain again several times; then that the active bird had place on ice to become solid.

Chicken Sour.—Take all the bones of a chicken, crack them, and add the dark meat; cover well with water, and stew for three or four hours. Flavor was a difficult one. Notwithstanding all its efforts the bird could not break the rope. Suddenly he heard a shrill little voice, which said: "Do you want

me to help you?"

The bird looked and saw a mouse on the hay.
"Thank you, my little friend, I should

like some assistance."
"Will you render me a service?"
"Very willingly."
The mouse began to gnaw the rope, and in a moment it broke.

The pony, feeling itself free, rushed out of the stable, followed by the bird. "Stop, stop!" cried the mouse, who could not go so fast; "you promised to render me a service." The robin redbreast did not hear him. Robert leaped upon the pony, which departed as full gallon.

at full gallop.
"Stop, stop," cried the bird. "You promised to do what I asked you to."
But Robert did not hear. He thought only of reaching his home in the woods. Arriving there, he took the pony's head in his arms and stroked it affectionately.

"You would not listen to me," said

robid redbreast, which had flown after him; "now you must return to the great house."

"But why?" "To punish the wicked woman who has treated you so cruelly, and prevent her retaking the pony.

"First, pull out the longest feather in

my tail. What an idea! Certainly not.

am afraid I should hurt you."

"I beg you to, and recollect that you promised to do what I asked you."

Robert obeyed. He pulled out the feather, and this feather transformed itself into a shining steel sword with a gold hardle. At the same moment, in gold handle. At the same moment, in the place of the bird, appeared a hand-some page, who bowed politely te Rob-ert and said: "I thank you, I am de-livered from a cruel enchantment, and I will serve you faithfully as I served your father. It was this Hippoharpy, your father. It was this Hipponarpy, this frightful sorceress, who, with her magic ring, changed me into a robin redbreast. She also transformed one of my companions, by her soceries she also robbed your father of all his property." erty.

"But," said Robert, "if I attempt to regain my inheritance, she may change me into a frog or spider."

"Fear nothing. Her magic ring cannot resist your sword."

Robert and the page went back to

kobert and the page went back to the house of the sorceress, and in spite of the servants who endeavored to pre-vent them, they entered the room where she was dining.

"Ah, wretch!" she cried at the sight of Robert, "you dare to come here? You shall be punished!" and brandish-ing her madia ring she repeated:

ing her magic ring, she repeated:
"You shall be punished, you shall be changed into a vile insect!"

But Robert struck the ring with his sword. Immediately it turned black and broke into a thousand pieces. The and broke into a thousand pieces. In scorecress uttered a frightful cry, leaped out of the window and fled across the fields. All her servants, partners in her evil deeds, disappeared at the same time.
"Victory!" cried Robert.

"You have forgotten me," murmur-

ed a little voice. "Ah!" said the page, 'It's the mouse who helped me to break the pony's

rope."
"What do you want, little one?" asked Robert. "I wish to retake my real form."

"And what is it necessary to do?"
"You must cut off my tail." "All right, off it comes then,', said Robert.

As soon as the tail was cut off, in the place of a mouse appeared a young and

vigorous youth.

"Ah!" cried the page, "it is the groom who was in your father's service

groom who was in your rather a service at the same time as myself,"
"Very well," replied Robert, "he shall take care of the pony." Robert regained all the property of which his father had been deprived. He had a kind and generous heart, and all the people, far and near, blessed

him for his generosity. More Uniform Than Brains.

In England we do not dote quite so much upon uniforms as they do in France, says the St. James's Gazette, and little incidents of this kind are therefore not very likely to occur on this side of the channel. Still a very well-known English cabinet minister—it is need-less to say that he was a Gladstonian—did once get into difficulties, not through going about in mufti, but through wearing too much uniform. We will not mention the gentleman's name, for he is still extant and it might hurt his dignified Gladstonian feelings. This distinguished politician -not even his friends ever thought he was a statesman—was once upon a time first lord of the admiralty. Full of the importance of his office he determined to wear the gorgeous uniform of lord high admral, whose represen-tative he was. The first time he had official business with the fleet the right honorable gentleman put on his form and went aboard one of her majesty's ships. The minister who liked to look upon himself as lord high admiral had his flag run up and the vessel started. In a few minutes one of the officers came up and politely touched his hat to the first lord. "If you please, sir, what are your orders?" he asked. "Orders! what orders?"

"As your flag is flying you are in com-mand." "But I don't understand at all." "Well, sir, you are in command, and in a few minutes we shall run into the queen's yacht. Will you give me my orders?" The unlucky first lord became crimson with vexation; and the lord high admiral's penant was promptly hauled down.

Selling Cows by the Quart.

They get at the real value of a cow in Sussex county, New Jersey, by selling her at so much a quart. The scheme is pronounced by dairymen as the most equitable yet proposed in the sale of milch cows. The purchaser pays \$2.50 per quart. Thus if she gives twenty quarts daily she is worth \$50. The purchaser keeps the cow on trial for a week. MAN IN HIS CRUDITY.

Charles H. Ham Lectures on "The Inventive Genius" at the Princess Opera-House.

"Whether we accept one or the other of the theories of the origin of the human race, it is agreed that the first man stood naked upon the earth and wanted nothing," said Charles H. Ham at the Princess opera-house last

evening
His lecture, "The Inventive Genius," was delivered to an appreciative audience composed of members and friends of the Chicago Secular union. Mr. Ham began at the beginning, picturally and the property of the chicago secular union of the chicago secular union. ing man in his crude and savage state and following him through the various stages of his development and progress up to the present time. His first idea of architecture reculted in the construction of a dug-out, then a hut, and his inventive genius grew as his neces-sities broadened until architecture be-came an art, and the elegant mansions of to-day are a witness to the high de-gree of perfection to which it has

Man in his first estate was a wanderer a hunter, with flint-pointed arrows killing animals for food. He took a long step forward when the thought of domesticating the animals, and when the thought was put into practice there became shepherds and shepherds' associations, which developed into tribes and communities.

The beginning of commerce was described by the lecturer in the rude methods of the trade between the tribes, and followed from century to century in its improvement and growth. The discovery of the uses of wool, the art of spinning and weaving it into cloth and of coloring it, and of the perfection of the machinery by which labor was reduced in the manufacture of wealen groups were told in detail. The of woolen goods were told in detail. The different modes of agriculture in the different ages, and how the inventive genius of the present century supplied the reaper and mower and about the present advanced modes of tilling the soil, sowing the seed, and gathering in the products were enu-merated in order.

The history of cotton and cotton fabrics was similarly dealt with. The cotton-gin was invented in 1792. The cotton-gin was invented in 1792. The growth of cotton manufacture in the United States has kept pace with that of Englana. The progress of shipbuilding, the invention of the steambart and the growth of the growth boat, and the appearance of the various appliances and machinery for navigation were brought in as evidences of the inventive genius of man.

Iron and its uses constituted one of the greatest discoveries of any age, and the lecturer went though the category of what the inventive genius had done with iron, from the manufacture of a nail to the invention of a Corliss engine and the railways, locomotives, and steel vessels. The invention of movable types and the printing-press and the development of the modern. newspapers were dilated upon, and were followed by an eloquent tribute

to the power of the press.

In conclusion, Mr. Ham referred briefly to the conflict between capital and labor, which, he said, would never be settled except by the immutable laws of justice, and education would bring that settlement about.-Chicago Times.

A Warning for the Bathing Season.

A writer in one of our contemporaries, in summing up the causes for so many bathing accidents, concludes that most of them are mainly or entirely personal, and so far preventable. Chief among these, we need hardly say, is cramp. To a large ex-tent this is practically identical with fatigue, for it is not the fresh and vigorous muscle which most readily passes into spasm. It is that which is vearied with over-action, in which effete products are in excess, nutrition consequently impaired, all molecular changes languid; where, finally, the movement of contraction, once initiated, gives way but slowly, and tends to linger and become tetanic. The numbing influence of cold is another well known obstacle to muscular activity, and for this reason it is not as a rule advisable to remain more than a few minutes in the water. Malnutrition of muscles is a factor which ought not to be forgotten. supplies a reason why bathing very soon after a meal is not advisable. much of the blood required for muscular exertion being then diverted to the digestive organs. So likewise must it impose a check upon the rashness of impose a check upon the rashless of those, adult and youth alike, who after a period of town life, with little physical exercise, find themself at the coast, and insist on trying whether with jaded energies they cannot safely accomplish feats of swimming. Yet one more caution. This is that every bother check in the sente of tide bather should know the state of tide, the currents, and the ground. Unless the currents, and the ground. Unless he is thus careful, he may find himself at any time confronted by unexpected dangers, the end of which it is impossible to foresee. It may seem ridiculous to urge that only those who really can swim should bathe in deep water, yet neglect of even this precaution is by no means uncommon. Scientific American.

A Raid Worse than Solomon.

A Pennsylvania paper tells of a manwho was gored by an angry bull and who was gored by an angry bull and severely injured "while passing through a cow pasture with a red flannel shirt on." We have been telling the farmers of this country for years that if this foolish and expensive decoration of cow pastures in bright colored flannel shirts wasn't stopped, somebody would get have been the state of the second sec would get hurt. Now see what we told you.—Burdette in Brooklyn Eagle.

#### SATURDAY, SEPTEMBER 14.

Farmers will not be in any hurry about selling their grain.

Some new corn is already harvested, while new Kansas sugar is already in the market.

Shawnee county democracy in convention, have resolved to make war upon the churches. Poor, mad fools

Gov. Humphrey honored himself in appointing Ex-Gov. Robinson a delegate at large to the deep water con

It might go without saying that Prof. Canfield made a powerful ad-dress at the dedication of the new Abilene High School building.

The street railway lines of Indianapolis, desiring an extension of their franchises, have presented the city with a 200 acre park. Does this look at all like attempted bribery?

This is a pretty cold world, and an argument which rests on a crisp greenback, as a luscious oyster does on the half shell, is the most convincing thing in the politics of the time.—N Y. HERALD.

Governor Mellette, of North Dako ta, has issued a proclamation order-ing an election by the people for the first Tuesday in October next, for the usual State and local officers and for the adoption or rejection of Prohibition as well as the Constitution as a whole.

Congressman Flood, of New York, threatens to resign if Corporal Tanner is not removed from his office as Pension Commissioner. The Law-JOURNAL-TRIBUNE thinks this is too bad, and asks if any one ever heard of this man Flood before. We reply, no, he is always heard from behind. He is a constitutional kicker.

The Shawnee county democrats have formulated a set of palpable lies which they thrust out as a platform. It is a pity they could not have some horse sense. Instead of that they exhibit only the most per-verse donkey sense. They assert that the state is being depopulated and going to ruin. And great crocodile tears run down the cheeks of the con-

We have a copy of the Southeast Texas Journal, published at Orange on the Sabine river, near the lake of that name. Orange is bidding for the deep water harbor, and is consequently ambitious to become the great commercial metropolis of the south. It evidently has many advantages, and its claims will no doubt be considered by the convention to meet in Topeka next month.

near Ithica, N. Y., owns 100 colonies care. of bees. Recently he found that two of his colts were being stung by the bees and went out to save them. The bees made a fierce attack on him and the point of death. The physician who attended him counted over 100 stings on his face. One of the horses was stung to death and it is expected that the other will not survive Graves probably saved his life for the time being by plunging into a pool of water.

In regard to the gratuitous advice so freely given by all classes to the farmer to "keep out of politics," the farmers themselves have about all reached the same conclusion. It is this: The more others urge them to keep out of politics, the more necessary they believe it is for them to go into and keep in politics. But let no one imagine that they propose to bring their organizations into politics, or politics into their organiza-tions. The farmer proposes to go into politics as a farmer to fight for his rights as a farmer and to elect only farmers or those solemnly pledged to work for the interests of

Professor Budd, of Iowa, in a paper on orchards of the northwest, gave expression to many statements general interest, among which the following were included: As to the stems, experience in all countries now favors low heads, the setting of the trees at a marked angle towards the 1 o'clock sun, encouraging the heaviest top on the south side, and even screening the trunk on the south side until the spread of top will suffiside until the spread of top will sufficiently protect from sun scalding. As to culture, we may not need the continued stirring of the soil required in drier climates, but all experience favors stirring the soil in the early part of the season in young orchards, and shading the soil with a crop of the season that the season in young orchards, and shading the soil with a crop of the season that the season in young orchards, and shading the soil with a crop of the season that the season in young orchards, and shading the soil with a crop of the season that the season in young orchards, and shading the soil with a crop of the season that the season is the season in young orchards, and shading the soil with a crop of the season that the season is the season in young orchards, and shading the soil with a crop of the season in young orchards, and shading the soil with a crop of the season in young orchards, and shading the soil with a crop of the soil required in drier climates, but all experience favors stirring the soil required in drier climates, but all experience favors stirring the soil required in drier climates, but all experience favors stirring the soil required in drier climates, but all experience favors stirring the soil required in drier climates, but all experience favors stirring the soil required in drier climates, but all experience favors stirring the soil required in drier climates, but all experience favors stirring the soil required in drier climates, and the soil required

Special.

It is with pleasure that we announce to our many patrons that we have (again) made arrangements with that wide-awake, illustrated farm magazine, the AMERICAN FARMER, published at Fort Wayne, Ind., and read by nearly 200,000 farmers, which that great publication will be mailed direct, one year, FRE E, to all who send us 50 cents to the Kansas NEWS Co, Topeka Kansas, for this paper six months. This is a grand opportunity to obtain a first class farm journal free. The American Farmer is a large 16 page journal, of national circulation, which ranks among the leading agricultural papers. It treats the question of economy in agriculture and the rights and privileges of that vast body of citizens—American Farmers—whose industry is the basis of all material and national prosperity. Its highest purpose is the elevation and ennobling of Agriculture through the higher and broader education of men and women engaged in its pursuits. The regular subscription price of the American Farmer is \$1.00 per year. IT COSTS YOU NOTHING. From any one number ideas can be obtained that will be worth thrice the sub scription price to you or members of your household, yet you get it free.
Send money to Kansas News Co., Topeka Kansas. 50 cents for this paper six months and the Farmer one per six months and the Farmer one year, or this paper, the Weekly Tope-ka Capital and the Farmer one year all for \$1.50. The Kansas Nzws Co., of Topeka, is offering the greatest subscription combinations ever known. Send for circulars now.

Kansas girls are ruminating creatures. They chew the cud.

It is easier for a school boy to take a blue pill, than for Shawnee county democrats to swallow prohibition.

It is very poor economy to throw soft feed into the dirt. Place boards in front of the coop to feed the chicks on. Place troughs in the hen-house in such a position that the hens cannot get their feet in them.—RURAL NEW YORKER.

The Southern Immigration Society has suggested that Southern agricultural products be exhibited at fairs in the products be exhibited at fairs in the Northern and Western States as a means of bringing Southern lands to the attention of Northern and Western people. Accordingly the farmers of Louisiana will send a special exhibit to the agricultural fair soon to be held in Sioux City. The farmers of the States of Georgia and South Carolina will make exhibits at other fairs.

Year by year the wild plum receives more attention from fruit growers.
If one-half the labor and effort that has been given to producing hardy apples had been expended in finding and producing good varieties of plums, the Minnesota list would have there are many delicious plums that deserve cultivation and are perfectly hardy. A few should be released as the second and deserve cultivation and are perfectly ed recipe: Wash and drain well as the second are perfectly ed recipe. hardy. A few should be planted every spring in the vicinity of every farm house. They come into bearing Jackson Graves, a farmer who lives early and well repay the cost and

of the greatest in the country. There taste. Stir into this mixture six cups are a score of firms or persons of flour, reserving one half cup to mix he was soon disabled and now lies at plying the vocation of swindling inventors. No sooner is a patent is settling to the bottom. Add fruits sued than the inventor is flooded with last. propositions to sell his patent for him. They all want money, and are full of expedients for getting it. A San Francisco dispatch of the 7th says: "Samuel Sanborn, Clarence Sanborn and Edware S. Aiken, proprietors of the fraudulent Pioneer, Globe and Occidental patent agencies who have swindled inventors all over the United States, were arrested last night." It would be well if others could be arrested. They may be found in most all cities. Inventors everywhere should let all these selling Patent Agencies alone and the press ought to do more in exposing them than it does.

Prof. E. H. Snow will for the present, be acting Chancellor of the University Prof. Snow is the senior member of the faculty, and in many respects would be as good a man at the head of the Uni-versity as Prof. Canfield. But his line of work is so different, and his tastes so little in harmony with the duties of the Chancellorship, that he should not be embarrassed in his special work. Prof. Canfield would naturally fall in the line Canfield would naturally fall in the line of executive work, as president of the Univesity. Prof. Snow would not. His services to the great institution cannot be over-estimated. In fact, they have never been appreciated by the state. His department is one that ought to receive the especial support of the state. His salary should be adequate to all the wants of the position, and liberal appropriations should always be provided for his department. He is the one more closely allied to the great agricultural interests of the buckwheat during July and August. when the world does not realize it.

The Chas. Wolff Packing Company.

The Chas. Wolff Packing Company.

The Chas Wolff Packing Co., of Topeka, is an important institution for this part of the country. About fifty men are employed, while about \$4,500 per monith is required to operate the establishment. Mr. Wolff expends over \$35,000 every month in the surrounding country for live stock. In the enclosure near the packing house on Friday last were about sixty head of as fine cattle as could be found anywhere. They were obtained from Andy Wilson's old place, which is located sixteen miles west of Topeka. The next lot may come from a point are far to the east, or the nerth, or the south.

One hundred head of stock are slaughtered daily, and in this department the latest approved methods are employed. The house contains four chill rooms. latest approved methods are employed. The house contains four chill rooms. One for cattle with a capacity of 100 head, a second for hogs capable of holding 200 head; another for sheep, also one for miscellaneous meats. The chilling is done with an ice machine. The house has its own water works system. An interesting feature is the sausage department. There are two sansage meahluss. interesting feature is the sausage department. There are two sausage machines which are capable of disposing of 300 pounds of meat each, in fifteen minutes. Not the least interesting sight is to see the steam sausage stuffer in operation. Sausage is made by this machine in large quantities and in a very short space of time. A large smoke house for the sausage is provided.

In Denver, during the month of August, over a dozen persons, mostly women, have lost their lives by using kerosene in starting their fires.

#### Berry Growing.

The grower of such perishable articles as berries is subject to a constant nervous strain while the season lasts, and should in the nature of things, be better remunerated than the stolid laborer or the producer of non-perishable products. Some fruit-growers are so happily situated that they can employ women as pickers, and then there is no need of foreman or tickets, as each picker can keep her own accounts, and pick in separate crates, subject to inspection at noon or night.

The trouble with children is generally lack of mature judgment, but some are tricky and dishonest. Most every extensive fruit grower is subject to strikes when the picking gets poor, and I have found it best to have a contract with their parents, subject to penalty if broken. This is enforced by withholding pay until the close of the season, with forefei-ture of a portion if contract is broken.

I once visited a large berry growing firm, near Philadelphia, who had erected a cheap two-story barrack of twelve rooms, where were housed their sixty pickers. They cooked for themselves on an old stove in the open air, and the escape from the hot city to the open fields and profitable employment was a rare picnic to them.—Vick's Magazine for September.

CAKE A YEAR OLD. I have often eaten fruit cake a year old that was pound of raisins; chop, or slice, one-half pound of citron. Beat five eggs and two cups of brown sugar together; then add to them one cup of buter, one cup of molasses, one The patent agency swindle is one of sour milk, teaspoonful of spices to with the raisins, to prevent

> Weights in the Kitchen.—As a help in the absence of any handy weighing, the following rules for measuring will be found very convenient:

One and one-third pints of powdered sugar weigns one pound.

Two and three-fourths teacups (level) of powdered sugar weigh one pound.

One pint (heaped) of granulated sugar weighs fourteen ounces. Two teacups (level) of granulated sugar weigh one pound.

One pint of coffee A sugar weighs welve ounces.

Two teacups (well heaped) of coffee A weigh one pound.

One pint of best brown sugar weighs thirteen ounces. Two and one-half teacups (level) of best brown sugar weigh one pound. One tablespoon (well heaped) of granu-lated, coffee A or best brown sugar equals

one ounce. Two tablespoons of powdered sugar or flour weigh one ounce. One tablespoon (well rounded) of soft

butter weighs one ounce. Soft butter the size of an egg weighs

One quart of sifted flour (well heaped) weighs one pound. Two teacups of soft butter well packed weigh one pound.

One generous pint of liquid or one pint of finely chopped meat packed solidly weighs one pound, which it would be very convenient to remember.

Ten common-sized eggs weigh one pound.

Teaspoons vary in size, and the new ones hold about twice as much as an old-fashioned spoon of thirty years ago. A medium-sized teaspoon contains about a

#### Romantic.

Albert G. Bradstreet, of Topeka, and Miss Nina M. Pesse, of Lima, Peru, were married Sunday, August 25th at the College St. Francis Xavier, New York city, by Rev H. C. Denny, S. J. This marriage was the result of a

friendship which was formed fifteen years ago when Mr. Bradstreet became acquainted with the young lady at her home in Peru. An engagement was the result of the acquaintance. Mr. Bradstreet however, returned to the United States and engaged in the mining business in Arizona. Bad luck attended him. The parents of his affianced finally wrote him that he must return to South America or the engagement would be dishonored. His business interests in Arizona, or rather his straitened circumtances, made his immediate return impossible. The correspondence ceased. He drifted down into Old Mexico and worked for the Mexican Central under Gov. Anthony. Six years bad elapsed when by chance he met some South American friends who told him that Miss Pease was unmarried. The exchange of love letters as in former years, was renewed and they decided to marry. Her parents still objected but the young lady insisted and it was agreed to meet in New York City. The date was set and the wedding occured, and now a happy honey-moon is being spent in the east. Mr. Bradstreet is employed at the general offices of the Atchison, Topeka & Santa Fe Railroad Company.

Denmark annually exports 111,000,-000 eggs, mostly to England.

#### Usstern Farm News.

An old and reliable English cook book gives the following recipe as an oil-cloth restorer: Melt one-half of an ounce of beeswax in a saucer of turpentine. Rub the surface all over with it and rub with a dry cloth.

The Winnebago Indians in Nebraska are developing praiseworthy in-dustry. They have just broken up 500 acres of land on their reservation and planted flax upon it. Previously they had planted 100 acres of garden vegetables and 2,000 acres of corn.

Good Housekenping gives a rule for making camphor ice for chapped hands: Take one and one-half ounces of spermaceti tallow, four teaspoonfuls of oil of sweet almonds and three fourths of an ounce of gum camphor pulverized fine. Put on back of stove until dissolved, stirring constantly, using just enough heat to melt the ingredients together.

If the "chemical dehorners"—now undergoing experiment—prove suc-cessful, says The Breeder's Gazette, the problem is satisfactorily solved for those who desire to maintain polled stocks, so far as the "rising generatious" are concerned: for they certainly offer obvious advantages eyer the use of gouge, knife, or saw.

In certain localities on the Canadian border of Maine the fisheries dispute is overshadowed by the international question, Can boys of Maine pick blueberries in Canada? An instance has occurred in which several Maine boys who crossed the boundary line to gather berries in Næawis bog were ordered back by the Dominion officers of customs.

Rye sown in September will make during the autumn enough grazing to be profitable. This grazing has an extra value because it comes when other green feed is very scarce. The rye may be grazed during the winter when not buried by snow, and pasturing on it may begin early in the spring and continue until the last of May, when the ground can be broken and put in corn.

In a recent address on New England Agriculture, at Hanover, N. H., Mr. A. W. Cheever, of Massachusetts, said there should be a co-operative dairy factory in every town where grass and corn will grow; and after securing a skilful workman, it should have all the milk and cream he can handle. Wherever well-managed factories are established, and the farmers crowd their barns with cows there the husbandmen are satisfied with their business, and have "an abiding faith in New England agriculture." Farmers in other sections than New England should give the matter of co-operative dairying at tention.

Writes a farmer: There is no earthly reason why farmers should not combine for the purchase of needed supplies. On the contrary, there is every reason why they should. Combination is the power which is stirring the manufacturing, mercantile and financial world to its foundations. The class which does not get left. There are many things that can be bought to advantage by a combination of farmers, and then divided, which it would not be feasible for one farmer to undertake to purchase. The Grange has been a great educator in this direction, and if all farmers were united in this way, instead of a minority of them, there would be a strife among dealers to secure their trade. Before the Grange agitation a man could not buy goods at wholesale rates unless he were a dealer; now any man with the cash can do so.

The more the money of the country gets into a few hands, the more valuable they wish to make money, and the cheaper they wish to make every thing else. On this subject the National Economist says: "Capitalism says: 'Fill the the land with cheap workers. Let them come until wages are merely nominal. Money will become dearer: a thousand dollars will buy five thousand dollars worth of luxury. Just as wages decrease so does the power of money multiply." This is a fact that not farmers only, but every other class of people in the country ought to reflect upon. Laborers at all trades, manufacturers and business. facturers and business men are interbut little exercise, and Mr. Smith claims that in the case of cows sufficient is furnished in the elaboration of milk. The best stockmen in Ontario claim that cattle may be tied in the same thing. The theory sorted in the same thing. The theory is true and experience has proved it, that the more money there is the more business there is. The restriction of the currency beyond a certain limit, means destruction of business. Give use more money and ganeral prosperity. We have everything now but the Mr. Smith properly we have abundant crops and yet the farmer cannot get his nose from the grindstone.

but little exercise, and Mr. Smith claims that in the case of cows sufficient is furnished in the ease of cows sufficient is furnished in the elaboration of cows sufficient is furnished in the elaboration of milk. The best stockmen in Ontario claim that cattle may be tied up in the fall and not turned out until spring, and the very best results obtained, and have yet to hear of evil results from such a course. The writer has for some years pursued this course with one or two cows with the themore money there is the more business there is. The restriction of the currency beyond a certain limit, means destruction of business. Give use more money and ganeral prosperity. We have everything now but the most serious objection to the soiling system, and there is little doubt that, before another decade, splicition as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is prosperition of the ear. There is only one way to cure deafness, and that cattle may be tied up in the fall and not turned out until spring, and the very best results is decastled. The theory constitution as they cannot reach the deafness only one way to cure deafness, and that out until seased portion of the ear. There is only one way to cure deafness, and that out until seased portion of the ear. There is only one way to cure deafness, and that out until seased portion of the ear. There is only one way to cur ested in seeing that there is more

Lamp chimneys should never be washed in soapsuds or clear water. If a cloth wet with alcohol was used for this purpose, or, what is much cheaper and always at hand, kerosene oil, there would be a perceptible falling off in the manufacture and sale of lamp chimneys. It is really sur-prising how seldom chimneys will break, and what a fine polish will be given them by cleansing in kerosene or alcohol.

It costs about two and a half cents a week to feed a hen, says a correspondent of the New England Farm-ER, and it costs that amount whether she lays four or five eggs in the time or stands around doing nothing. Obviously, if she lays four or five (or better still six) eggs, she pays a good profit for her keeping. If a hen lays two eggs a week one revising for her two eggs a week, one paying for her food and the other being profit, obviously, if she lays four eggs in a week one pays for the food and there are three for profit."

The total value of Kansas crops this season is estimated at \$100,000,-000. The yield of wheat is put at 40,000,000 bushels, and of corn 300,-000,000 bushels. Hay is the best crop the state ever produced. the state ever produced. Potatoes double crop of last year. Oats, rye, barley, buckwheat, all biggest crops in years. No doubt these estimates are liberal, but the crops are enormous. The important question is, What are the farmers getting for them? the entire gross proceeds of all the crops in Kansas, big as they are, pay the taxes and interest on mortgages? We doubt it. Kansas and most of the other states are fairly burdened with the products of nature and it would seem as the people were fairly revel-ing in prosperity. Yet they are so poor, that many of them are being sold out of house and home.

Generally spring planting is better than fall planting of orchard trees; but always the ground should be pre-pared in the fall, and the plowing should be done quite early in the fall before the birds leave, for one object of plowing is to get rid of larve, worms and insects, secreted in the ground, and upon which the birds will feast if brought to the surface by the plow. The ground, plowed in the fall and surred at times with the harvor will be fairly well claused by harrow, will be fairly well cleaned by the birds, and the job will be finished in the spring when the ground is stirred again. This getting the ground rid of larvæ, insects, eggs, etc., is a matter of no small importance, and it can not be accomplished unless the pests, some inches below the surface, where they may safely pass the winter, are brought to the surface. There the frost can better work for their destruction while the birds are away. There are other advantages in fall plowing the ground. When the ground is plowed in the fall it can be got in a condition more favorab y the next spring than is possible when the plowing is deferred till sping. This is largely due to the chemical and mechanical changes made by air, moisture, frost, etc., and which are much greater in plowed than in unplowed ground. The plowing should be thorough—deep, and every inch of ground turned. While it is bad policy to set the plow much deeper than the soil extends, it is to be hoped that the ground selected for the orchard has a dep soil, not only that the plow may be set deep, but also that the trees may be able to make a good growth and yield of fruit. It is a mistake to select the poorest, rockiest spot on the farm for the orchard. Fruits must be fed as well as grained. well as grains, and when they are given scarty supplies of food they can not yield much. Much harm has been done by the ill advised recommendation which has appeared in some agricultural journals, to put the poor, worn, gullied spots of the farm in fruits. "These spots are about as good as any for fruits; can be made to yield good crops, and in fruits will pay much better than in grains," it is usually said. But, any ground not capable of growing good crops of corn or wheat, is not fit for orchard.

#### Do Cows Need Exercise?

The Hon. Hiram Smith, Dairy Commissioner for Wisconson, recently made the statement that cows do not need exercise. It has long been conceded that ruminants require but little exercise, and Mr. Smith

## Horticultural Department.

B. F. SMITH, Editor.

A large portion of the "current jelly" sold to hotel-keepers and bak-ers, is said to be manufactured from gluten and acids, colored to resemble somewhat the genuine article. As it can be bought for about four cents a pound, and "answers the purpose" as well as the more costly genuine jelly. the latter is not in great demand.

Borers may be deterred to a great extent from entering peach trees, if the earth is scraped away from the collar of the tree, and a few shovelfuls of coal ashes applied close to the tree. It prevents the moth of the borer from laying her eggs in the bark. This is an unquestionable fact.

Lawns, says the Country Gentle-man, should be cut frequently, but not so short as to deprive the grass plants of their leaves and vigor. As a general rule, the grass should never be sheared nearer than two inches of the ground. A longer growth than is necessary during the Summer should be permitted after the middle of Autumn to serve as Winter protec

A Nebraska paper declares that the great need of the West is pore stock to consume the grain surplus. That is true, but as it further avers the stock must be of higher grade than the average which now exists in the West. With cattle at present prices, even with extreme low prices of corn, there is no money in anything except the best quality. In daifies and in good sheep, say of the middle woolled variety, which are profitable for both wool and mutton, and in strictly firstwool and mutton, and in strictly insi-class beef cattle, there is a fair profit. In eight-month pigs that will weigh 200 to 250 pounds, and two-year-old steers that run from 1,200 to 1,400 pounds, there is good profit. But there is nothing in scrubs. Better to sell corn even at 15 cents than to feed

"If the farmers were as money-wise as other classes are, all creamery shares would be owned by the men who own the cows that furnish the milk to run them." This is the bed-rock principle on which to build a creamery, writes that veteran cheese-maker, T. D. Courtis. Then, if no dividend is declared, each stockholder has had the advantages of the creamery in disposing of his milk, just the same as any farm-building on his own land. The dividend is of no real consideration. A creamery has recently been started A creamery has recently been started in Thayer, Kansas, on this basis. The owners of the cows behind it own the owners of the cows behind it own the creamery, and all are interested in making it a success. The shares were \$50 each, and only one patron holds, or did hold a short time since, more than one share—and he held only two. It might be well to have each own stock in accordance with the number of his cows. This creamery already frapiled with our ance with the number of his cows. This creamery, already furnished with supplies to run it for three months or so, cost \$2,700. It started with 70 patrons and \$800 surplus capital. They did not have it built on somebody else's estimate. They consulted builders and dealers in dairy supplies before giving orders and making a contract for building. The result is a the creamery, well worth the money paid for it, and starting on a sure foundation.

A Canadian correspondent of the AMERICAN CULTIVATOR describes the following ingenious method of cleansing and preserving horse blankets:
"I take my blankets after they get through using them in the Spring, and nail them on the eaves of the barn or shed, whichever is the most convenient. Take some leather buttons and put them on the heads of the nails, so as to prevent the blanket from being torn. I fasten them with butt end down, and lining side out. The drop from the eaves will wash them, and the motion caused by the action of the wind will remove all the hairs that usually stick on blankets, that are hard to remove in any other way. I will warrant that in a few weeks, when taken down, they will be nice and clean and free from hairs. I have by this treatment used blankets anywhere from ten to fifteen years When you want them repaired you can take them to the house and tell the good wife: "Here are some blankets that I want you to mend. You need not be afraid of them, they are nice and clean." It does no take any longer to hang them up as above described, than it does to throw them down and leave them un-til wanted next Fall, and find them rotten or perhaps eaten by the rats."

# To the State Fair and Return FREE OF CHARGE

This is the twentieth anniversary of our business career in Topeka. The occasion of our interesting State Fair, to be held here Sept. 16th o Sept. 21st inclusive, will mark one of the most promising harvests that the state of Kansas has ever known.

As an expression of our appreciation for patronage already enjoyed, and also to INTRODUCE to OUR NEIGHBORING CITIES, THE NEW SYSTEM OF LOW PRICES introduced by us LAST FALL, we make

## TWENTIETH ANNIVERSARY OFFER.NG!

To anyone visiting the State Fair at Topeka, and who will purchase of us DRY GOODS, CARPETS OR CLOTHING amounting to NOT LESS than \$10. we will

REFUND IN CASH

THE PRICE OF-Railroad Ticket to and from Topeka,

# Cost of Admission Ticket to Fair Grounds

This offer will apply to any person residing

NOT OVER 50 MILES From the City of Topeka, and will not hold good unless the Purchaser will

Show his or her return railroad Ticket. Visit the Great Fair free of expense. Make your Fall Purchases at a CONSIDERABLE Saving over home Prices.

YOU WILL NOT SOON AGAIN HAVE SUCH A TREAT.

For curing dandruff, a weak solu-tion of borax water is effectual, prepared by putting cold water on borax: pared by putting cold water on porax; also sulphur water is excellent, made by pouring a pint of boiling water on a tablespoonful of dry sulphur. Use either one every day or two and dan-druff will disappear.

Mrs. John Morrissey, widow of the late pugilist and statesman, is now in almost abject poverty, She is hemming collars and cuffs for a Troy manufactorer.

PRESIDENT CARNOT of France is very fond of Americans and is cultivating sedulously the society of our countrymen now in Paris. At his receptions more Americans are to be found than in any drawing-room in Europe.

ROBERT LOUIS STEVENSON is last heard from the Gilbert islands in the South seas. He is on board his schooner Equator, and has picked up not only his health but much good material for a book. He announces his intention of visiting the Ellis group of islands which have the attraction for him that the natives are still addicted to canni-

DEBORAH POWERS, the senior partner in the bank of D. Powers & Sons, Lansingburg, N. Y., is the oldest banker in the country, being 99 years of age, She is in full possession of her faculties, and her business shrewdness is as remarkable as it was a generation back. She established and maintains "The Deborah Powers Home for Old Ladies" in Lansingburg. She has been engaged in the banking business over a dozen years.

BISHOP KEANE, the rector of the Catholic university which will be opened at Washington in the coming autumn, did not display any marked ability at school. He was very fond of cakes and candy, but won few prizes and none of the first order. His studious tastes developed when he went to college to prepare for the priesthood, which he did at the age of 20, after a brief experience as a clerk in a book store.

THE duke of Fife is only the third duke, not of royal blood, who has been created during Victoria's long reign, excluding the dukedom of Inverness, which was conferred upon Lady Cecilia Underwood and is now extinct. The other two dukes created by the queen are Abercorn and Westminster. Fife is the sixth duke of this century. It may be added that most of the dukedoms are painfully modern in comparison with other ranks of the peerage.

Miss Bole, the pretty girl blacksmith who is said to be making quite a pile of money in Frisco, has already a rival in Alida Wilder, a tall and not unattractive brunet, who makes creditable horse-shoes in a little shop under an elm tree in the suburbs of Brooklyn. Miss Wilder is 26 years old, and has dark, oriental looking eyes, and short, curly, dark hair. Her form is slender but well knit, and she has been accustomed to help her father in the smithy ever since she was a child.

THE pedestal for the Gen. Robert E. Lee monument to be erected in Richmond, Va., is rapidly approaching completion. The bronze equestrian statue, by the sculptor Mercie, is now being cast in Paris. It is expected that the monument can be unveiled in the latter part of November. The program for the ceremonies includes a military parade, a reunion of confederate veterans, and an address by Col. Richard Anderson. There is much dissatisfaction because the pedestal is built of granite quarried in Maine. It is asserted that it should be of Virginia

THE prince of Wales is short, stout, and bald. He is a very friendly and sociable man and enjoys a holiday like a jolly school-boy. He will be known in history as the "Good-Natured Prince." The story goes that the prince called upon Tennyson at his home on the Isle of Wight and was denied admittance, the poet having given strict orders to his servants to admit no strangers into the house, and they did not recognize the future king of England in the portly gentleman wearing a very neglige morning suit. The prince from Massachusetts has a large and retired good-humoredly from the door of the churlish poet.

THE long and proper boast of the Hohenzellerns that their blood is free-er from the effects of intermarriage than that of any other royal family will not be so true fifty years hence. Annot be so true fifty years hence. Another member of the family is to marry his cousin. The engagement of the crown prince of Roumania, prince of Hohenzollern-Sigmaning, to Princess Henrietta Maria, daughter of the count of Flanders and Princess Louise of Hohenzollern will be announced in the near future. The bride is 19 years of age. Her father is a brother of the king of the Belgians and her mother king of the Belgians and her mother to speak, whenever any case is up in-the aunt of Roumania's future ruler.

#### WHAT KIND OF MEAT?

The Sort of Books That States men Feed On.

MRS. CLEVELAND'S TASTES

Hoar and Sumner-Judge Bradley as an Inventor-John Hay's Library-Senaters Edmunds and Sherman-Blaine-Supreme Court Judges-Ladies.

Special Correspondence:

WASHINGTON, D. C .- "What do our supreme judges and cabinet ministers and congressmen read?" lasked one of our best known booksellers, one day this week.

"They don't read anything!" he exclaimed with a sniff of disgust, pushing his fingers through his gray hair.

"To be more accurate and more explicit," he explained, "our law makers do not read broadly, as the statesmen of former generations did. They read narrowly and confine their reading to certain limited lanes—finances, wages, interests, heavy ordnance, patents, or what not."

PROF. SIMON NEWCOMB. The misguided cynic only meant that the day of brilliant smatterers is past, and that our statesmen, like our workmen, are now specialists; they read at a mark, instead of firing pigeonshot into the air, which fact, on a whole, is a compliment to them. this age of encyclopedic knowledge and of universal machinery no one man can either do much or know much, and he is wisest who confines himself to limited spaces. Ever since Moses, men of one idea have moved the

There are far more books in Washington than in any other city of its size in the world—the great congressional library being flanked by twenty other public libraries in the departments, aggregating pretty nearly a million books

in all.

The largest private library, I guess, is George Bancroft's, numbering some 12,000 volumes. He has a copy of 'Don Juan" which Lord Byron gave him with an autographic note pasted in it, and he has poems which Words-worth gave him. He is an old man and reads no more.

Mrs. Cleveland stirred up the book

stores here with her passion for good books. She entertained her callers by deftly turning the conversation upon books and ascertaining what there was once mentioned "Lonra Doon" to her, and with her permission sent it to the white house. The next time I saw her was at a crowded diplomatic reception, but she found time to say: "Thanks; it is one of the great books of the world." Later my wife called her attention to "Little Lord Fauntleroy," and sent the book to her. Mrs. Cleveland returned it the next day with, a note in which she said: "You know from your own experience how much I have enjoyed the reading of it. I finished it five minutes ago with tears very near in my eyes for the sweet, manly little heir to the earldom of Dormcourt.'

Judge Hoar is probably the best scholar at all points there is in the senate. He is a great reader, a good Greek, Latin and French scholar, and an extensively informed man in every direction. In thoroughness he is the equal of that omnivorous reader, his predecessor, Charles Sumner. Sumner was more universally accomplished, having made a study of French, Italian and German literature, of engraving and the fine arts; but it must be added that Hoar is far more accurate than Sumner, who was careless in cita-tions and whose speeches abounded in errors of fact. The senior senator

very select library, especially strong in history and biography.

The private library that stands next to Bancroft's numerically is, I think, that of Judge Bradley, of the supreme

Congressman Hitt of Illinois who, before he married a fortune, was Lin-coln's phonographer, has a fine library here. He possessess scholarly acquihere. He possessess scholarly acquisitions and a culture and taste quite exceptional in the house. He is fond of rare and handsome editions in tree calf and old illuminated volumes. He

calf and old illuminated volumes. He probably reads more French and German books, especially novels, than any other member of either house, not excepting his intimate friend Phelps.

Hitt finds a rival in John Hay, as a snapper-up of luxurious editions, nothing being too sumptuous for the poet. Hay's library is worth a visit for it is the handsomest in Washington, unite fitted for his superh mansion onquite fitted for his superb mansion op-posite the White house. It is on the ground floor and its ceiling is heavily panneled in old oak with circular disks which sparkle under the soft light of chandeliers as if sprayed with gold dust. The books are in low cases all around the walls, forming a rich and decorative base for the choice paintings above and a harmonious frame for the great carved oaken desk in the middle of the room. Hay delights in rare editions of Don Quixote and Thackery, of Omar Kharzam and the Vedas, and the Zend Aresta, and Elihu Vedder's grotesqueries, and books written and painted on vellum. He is a good French and German scholar, reading and speaking both, as does Mrs. Hay, and, by the way there is scarcely a noted dwelling in Washing-ton in which French novels are not read. It is a greater reproach here and a greater inconvenience, too, not be able to read and speak French, than in any other American city. Every Washington society woman is supposed washington society woman is supposed to speak French, as every educated man and woman in London is. Secretaries Bayard, Whitney and Endicott all read French novels in their little leisure, and Robert Lincoln's great familiarity with French will help him to scintillate on both sides of the channel. Sam Cox, congressman, diplomate, author, traveler, brought a load of French books when he returned to this city from the east, filled with Oriental poetry.

One of the most discriminating read-

ers of the senate is Cash. K. Davis of Minnesota. He is a good Latin scholar and doesn't permit his knowledge to rust; he is well acquainted with the French and German languages and literatures; is an expert on Shakespeare and has more comprehensive knowledge of the literature of the Napoleonic wars than any other congressman, per-haps than any other American. He buys all rare books of Napoleonana that he hears of. His book, 'The Law in Shakespeare," has been widely read.

Prof. Simon Newcomb one of the

country's most renowned scientists, has his library in his wife's great parlor, his desk occupying a large bay window. Few literary workers could avoid being out of place in such elegant surroundbut Prof. Newcomb keeps his desk marvelously neat. His library is largely of mathematics and political economy, and "A Plain Man's View of the Labor Question," one of the twenty books he has written, is an admirably clear treatise and hsa a very large cir culation.

Prof. Lester F. Ward, who stands at the head of the paleontologists of the country, replied to my question. "What do you read?" by saying, "I read nothing but what my work requires me to read. I never read novels or poetry. Before taking the time to read any book I thoroughly canvass the necessity for it, get the opinions of others who have read it, and satisfy myself that it is indispensible. And I never permit myself to read a translation. If I conclude to read a book written in a town we have a pulsower to me I tion. If I conclude to read written in a tongue unknown to me 1 go and study the language for the pur-

Major J. W. Powell, director of the geological survey, in answer to a ques-tion as to his favorite novels, said:

"Here are the dozen preferred: Bunyan's Pilgrim's Progress," 'Vicar of Wakefield," 'A Man Made of Money," 'Douglas Jerrold,' 'Ivanhoe,' 'David Copperfield,' 'The Three Guardsmen,' Copperned, 'Ine Inree Guardsmen,'
'Les Miserables' (if you could cut out
Hugo's preaching this book would be
grand), 'Uncle Tom's Cabin,' 'The
Cloister and Hearth,' 'A Strange
Story,' 'Lorna Doon' and 'Middle
March.' Neither Thackeray nor March.' Neither Thackeray no Wilkie Collins ever had a masterpiece I think. George Sand repels me with her wildcat philosophy."

JUDGE GRAY.

Major Powell enjoys poetry even better than prose fictions, but he is punctilious in the matter of art in rhyme and rhythm in which respects whittier, Longfellow, Burns and Wadsworth often "cause the judicious to grieve." He is intolerant of Walt Whitman and says, "When I want exclamatory emotional frenzy I prefer to go straight to the Indians."

Thurman is a great reader of French romance, but he is not content with taking Hugo in course, but he wants to

go back to the habits and romancers before Rabelais and the Lorraines. His daughter, Mrs. Cowles, who lives at Richmond, just out of Brooklyn, speaks French elegantly.

Henry Cabot Lodge has a good many fine books at home, it is said; to Washington he brings only an obvious acquaintance with them. He keeps up his studies even in the midst of his studies even in the midst of his work studies even in the midst of his work on the elections committee, and he always reveals the possession of a fine literary tastes and even skill—the literary tastes and even skill—the art of putting things.
Senator Berry's loss of a leg in the

army made a great reader and student of him. His tendencies are toward novel reading and he especially likes translation, Hugo and Balzac prominently.

Senator Edmunds has a well stocked avenue and he constantly replenishes it. The library where he reads and writes has a spacious copper bay-win-dow, ornamented with nails, the heads of which are as big as trade dollars. He knows French and German, and it is alleged that he, too, reads French novels when he has time.

Senator Sherman has a finely stocked library of standard books, but he practices the theory of Gladstone: "Never read a book till it is a year old." He buys all rare and valuable books on fi-nance and informs himself of their con-tents. He knows the history of prices, and has a theory of his own about what creates values creates values.

Judge Lamar, lost his fine library during the war, but he is rebuilding it with immense industry and discrimination. He possesses a keen, quick and penetrating intellect, well stored with classic traditions. He still reads his Greek, with confidential doubts as to certain quantities, but if he has not the attic taste of Edward Everett, who wanted to read his Virgil through "at least once a year, he has a perception that would enable him to choose an author better worth reading.

Judge Gray, also of the supreme

court, has a Massachusetts love of luxury, and he is found in the amiable emulation for the possession of hand-somely printed and bound books. When the edition de luxe is in the mar ket it finds in Judge Gray an admirer He reads French "with avidity," and it is reported that he has drawn from the congressional library a thousand French novels of the better class in the

last five years.
Secretary Blaine possesses about verything that is considered essential in the way of books; but it is said that he personally buys little nowadays but works of history and politics.

SENATOR DAVIS.

The ladies of the present cabinet circle seem quite able to hold their own in society, but of their bookish tendencies little is yet known in Washington. Mrs. Windom, living with her family in the elegant mansion of Prof. Gardner Hubbard, finds herself surrounded with an immense library, containing some of the rarest of antique volumes. Here, with every side of the house open to the day, she will spend the summer and defy the dog star. She is a woman of a vigorous mind and keen intellectual tastes, and she keeps up with the current thought of the literary world. The wife of Gen. Noble, secretary of

the interior, has given Washington a glimpse of her only at the two or three receptions of the spring. It found her agreeable and prepossessing; but she is said to be also scholarly, and to have a well defined ambition to know something of the world's best books. In St. Louis the Noble household has been a sort of intellectual and literary center, where thoughtful people of congenial tastes meet to consider the latest utterance concerning science, art, philosophy or imaginative literature. Mrs. Noble has no children, but will be accompanied in Washington by two brilliant sisters, one of whom has published a book and the other of whom is the wife of one of our wealthy citizens.

W. A CROFFUT.

steel-engraving tools. The tools, are made white hot, plunged repeatedly into sealing wax until cold, and then just touched with oil of turpentine.

The big four-masted schooner John Paull. lately launched at Bath, Me., is a marine wonder in her way. She went from Bath to Norfolk, Va., loaded there with 2,459 tons of coal, and reached Providence, all in eleven days, which is steamer time. The Paull is 210 feet long, forty-four feet wide and twenty-one feet depth of hold. All hoisting is done by steam, even to the clewing up of the big topsails. She is wire-rigged, and spreads 7,000 yards of canvas.

The pearl oyster, containing the pearl, and whose shell is lined with the brilliantly tinted mother-of-pearl used in so many ways, is found chiefly about the southern coasts of Asia. An uncomfortably sharp substance entering the shell is covered by the inmate, thus forming a pearl. habit has been utilized to force the oyster to produce pearls, sometimes the form of a cross being placed in the shell to be converted into a beautiful ornament. taken from the bed of the sea by divers.

An amusing marriage took place in Elber-Ga., the other day. A couple came into the court house to be married. A new justice was called in. He had no form, and improvised a ceremony. He first ordered the couple to join hands, and then, after hesitating a while, he asked the groom these questions: "Will you stick to this woman through thick and thin, up and down, right and left, hot or cold, wet or dry, and have no other wife but her? If you will you can have her for a wife.' Similar questions having been propounded to the woman, and affirmative answers having been given, he pronounced them husband and wife.

A beautiful live white owl is on exhibition at a music store in Louisville. It was sent by L. J. Smith, of Niagara Falls, and belongs to a very rare species. It was captured by a young hunter in the woods near Quebec. It was found in a hollow tree, and the bird is in the extreme north, so Mr. Smith wrote them when he sent the owl, and only extremely cold weather drives it as far south as Quebec. So far as known only seven of the birds have been captured or killed in Canada during the last three years. The one on exhibition is a perfect specimen. It is snow white, and about the size and shape of the common large owl

Very few consumers of wheaten products are aware of the fact that crackers are the oldest form of bread. Fragments of unfermented cakes were discovered in the Swiss lake dwellings, which belong to the neolithic age of the world. Although this rude form of bread was early discarded for the fermented variety, yet in this, as in many other matters, it was found convenient to return to a discarded and apparently valueless process. Thin, unfermented cakes were found to possess merits for special purposes. They would keep good for a great length of time, and thus afforded wholesome and nutritious food in a portable and convenient form. The simplicity of their making and baking was also a point in their favor.

Along the shore of the Oneida Lake there is an Indian's grave, where at times a weird and supernatural light makes its appearance. It is described as a ball of fire about the size of a large orange, and sways to and fro in the air about twenty feet from the ground, confining its irregular movements within a space about one hundred feet square. People have attempted to go near enough to solve the mystery, but it Many years ago, when the first Dutch ambassador was sent to the porte, he visited the sultan. "What does the dog want?" asked the sultan. This was translated in a speech full of ornate oriental compliments, and the ama crock in the Indian cemetery containing immense treasures, and that if he went there at the hour when graveyards yawn he could secure it. These dreams were re-peated so often that they had a strong effect, and he went there with pick and shovel ac-cording to instructions, but he failed to turn round three times when he found the crock, as the dream directed. He went to pick it up, but was stunned by a flash of lightning, and the crock disappeared. Since that time the spot has been haunted by the mysterious light.

#### A NIGHT IN WHITECHAPEL

A Journalist Visits the Wickedest Spot in the World.

RESORT OF THIEVES,

Prize Fighters and Low Women-An Ap paling Saturday Night-Drunken Women and Children-A Graphic Picture.

Special Correspondence.

English romancists have had no more fruitful topic than crime and criminals, and for many years the Seven Dials and Petticoat lane have been the localities where the villians of fiction were supposed to have their habitation. No novel was complete without reference to the crooks of the localities named. The Seven Dials was indeed a thug's paradise, and Petticoat lane a place where murderers, thieves prize fighters, scarlet women and rob-bers held high carnival. But time has changed all this. The two sections of London above referred to are bad

IN THE GROGGERY.

enough in all conscience, but White-chapel has completely eclipsed them and to-day the East End of London has no rival in the world as the hot-bed of sin, misery and squalor. Denver, the Black hills country and the mining camps of the far west, and Australia, never in the midday of their sin could hold a candle to Whitechapel. It is a new Sodom and Gomorrah and stands alone among the big cities as the wick-edest spot in the world. New York adone among the big cities as the wickedest spot in the world. New York
and Chicago are wicked enough, but
they are as suckling babes to Whitechapel. Paris is a city of gilt-edged
sin. It is below the surface, and is
done with an art that may somewhat
palliate its enormity. Berlin, Vienna,
Brussels and Liverpool may well hang
their heads in shame, but none of them
can in the slightest degree approach
Whitechapel. The scenes nightly enacted there, the drunken orgies, the
filthy talk, the beastiality of it all is
appaling in the extreme, and cannot be
depicted in cold type.

The recent unequaled performance
of the skillful carver who hid his talent
under the anonimity of Jack the Ripper, has brought Whitechapel squarely to the front, and the dashing
American tourist bent on taking in
London town first inquires the route to
Whitechapel. There are many ways

American tourist bent on taking in London town first inquires the route to Whitechapel. There are many ways of seeing it. If you go in a hansom in daylight, and simply drive along the Mile road there is little to be seen that cannot be duplicated in the city proper or in Liverpool, Berlin, Vienna, San Francisco, New Orleans, Chicago or New York. If you go on ton of one of New York. If you go on top of one of the four horse buggies, as many persons do, you come away with a con-fused idea of dirty children, drunken women, a blare of yellow lights, and the sickening odor of decayed fish and vegetables. If you would see it at its worst, go on a Saturday night and remain until Sunday morning. Walk from any point beyond the Bank of England through the crooked streets and ellars with other based. and alleys, with only here and there a light, and you will see Whitechapel at its worst and at a time when you will

remember it to your dying day.

It was my good fortune to fall in with a Scotland yard detective, who, for a consideration, agreed to accompany me. He was a typical English detective, a looker-on more than a worker, brave as a lion, a man known to most of the wretched gang who make up the London crooks, and who had won the blue ribbon of his bureau for personal bravery and acuteness.

crook is afraid of a knife. You will not have to use it, but if we should get into a tight corner the sight of it will make the rascals fly."

It was a beautiful night, a trifle warm but fairly comfortable. A big, glorious harvest moon hung in the sky like a ball of molton fire. Myriad stars looked down from a perfect sky. The streets were thronged with humanity. The doors of the Three Nuns tavern swung to and fro, a thirsty crowd surging in and a drunken mob elbowing its mg in and a drunken mob elbowing its way out. A dozen or more bartenders were on duty. They were collarless, wore their shirtsleeves rolled up to their elbows, and now and then wiped their sweatly faces with a greasy, beer-soaked rag that they also used for wiping the mugs and counter. In the crowd were longestoremen, blue is letter. crowd were longshoremen, blue jackets children who had never known childhood, teamsters, clerks, women young and old, and children from babes in arms to young men and women. Every-body was drinking. The men smoked and swore. The women shouted coarse epithets at their husbands, brothers, or a brazen style, while the men kissed and hugged them with perfect freedom. Where some peculiarly attocious thing was done or some unusually filthy suggestion made the girls smiled a half tipsy smile, while the men leered at them. Or, perhaps, one woman not quit so drunk as her neighbors, took umorage at the liberties, and spat in her companion's face or dashed a must of feering her. ties, and spat in her companion's face or dashed a mug of foaming beer over him. This was always the signal for a wild guffaw that could be heard across the street and attracted more visitors. A policeman pushed open the door, playfully chucked a girl under the chin, took her mug of beer from her, drank it himself and continued his round. Over in another corner a drunken mother was holding pewter mug of beer to the lips of dirty-faced 2-year-old child, who boast ed of only one garment to cover his nakedness, and who probably never wore shoes or stockings. The little fellow was as tipsy as a lord in the hunting season, and by reason of his queer grimaces and the way he had of staggering for a step or two, then falling, afforded infinite amusement for those sober enough to enjoy it. Seated in an old chair was a young wo-man, hatless, shoeless, stockingless, with hair streaming down her back and her eyes almost burned out from the use of liquor, drinking gin by the glass while a young dock rat hovered over her, and trying to be witty as the poor creature rolled into the sawdust on the floor at his day. dust on the floor at his feet hopelessly drunk. What there was going on in the crowded rooms in the rear of the tavfrom the bawdy songs and shouts I judged the occupants were enioying high jinks. As I passed out a couple of brawney-armed bartenders were rudely shoving the drunken men and women into the streets.

WHITECHAPEL MAIDENS.

A breath of fresh air was welcome indeed. We passed along a few doors to another place, where a big sign in gold letters, "Gin Palace," told that its proprietor was at any rate candid. A peep through the door revealed scenes somewhat like those which we had witnessed in the "Three Nuns." Along a block or two we moved and a neighboring clock chimed 12. The electric light and the ill-smelling petroleum lamps made the street as light as day. Here is an old clothes store and next to it a gin place, then a cheap restaurant, where "stinking" fish are frying in the window and going off like that cakes at a penny each. They are still hot, and are wrapped in dirty newspapers for purchasers, who sneak away in some dark ally to de your them. away in some dark ally to de vour them. The odor was paralyzing. Now and then we came upon big fine looking stores and sometimes a group of innocent looking factory girls, in smart red jerseys, eager for a frolic. But these were rare. Unless appearances are deceptive the maiden tribute is still paid in Whitechapel, for the stamp of sin and degradation seemed to be set on half the women encountered. Hucksters thronged the streets and shouted sters thronged the streets and shouted their wares in stentorian tones. There are Punch and Judy shows, places to try your skill in shooting, machines for inflating your lungs, and all sorts of places for the sale of penny gimcraks. The men smoke their pipes as they move along, now and then singing and shouting. The women join in with them and high above the shout is often heard a paralyzing oath. So it goes on block after block. As we come full upon a crowd of young ruffians on a corner they see my companion, the desters thronged the streets and shouted

to run. How shall I describe the thieves, foot-pads and murderers who call Whitechapel their home? They are a low-lived, brazen, dirty, filthy set, who would murder for a shilling or attempt to crack the Bank of England for a pound. They swarmed the streets, nodding familiarly to the police, fought among themselves, danced, sang, swore, drank, in fact did as they pleased, and the police looked on and smiled, for be it known that the London bobby never interferes unless some one makes a complaint. Even on the Strand, in Piccadilly Circus, in Ox-ford street, in the Haymarket, or wherever the crowd of brazen women congregate to accost passers by, the police take no cognizance of them unless the person accosted complains. And in Whitechapel they are particularly free to do as they please.

Hour after hour we walk through the

streets. The glorious harvest moon is melting away. In the east the first gray signs of dawn are visible. From a hallway where half a dozen persons are stretched on the floor asleep comes the moaning of a woman. In her arms she holds the cold form of a 3 month's old babe. Its life went out with the tide, and her shrieks are pitiful to hear. How long the babe had been dead no one could tell, nor whether it died from natural causes, a fall or suffocation. We know not. And the mother can tell nothing. She, like all her companions, laid down in her drunken stupor to sleep, and when she awoke her lifeless child lay at her side.

fish venders are preparing their stale fish for their customers' break st, or perhaps a kinney pudding for a new set of bartenders began work at 7 o'clock. Every hallway and stoop, and even the wagons in the streets have their occupants sleeping the sleep of the drunkard. Here and there the degraded and lost women couch in windows, and with many honeyed words and gestures bid us enter. The milkmen's wagons are rattling through the Streets. Newsboys are crying out the Sunday papers. St. Paul's church bells are pealing out the glad tidings that another Sabbath has come, and as we pass by the Three Nuns, tired of head and feet, we see the lights still burning, a score of men standing at the bar and the drunken mother with her baby boy lies snoring soundly in an adjoining alley. The little fellow has lost his only garment and is as naked as when As we step over him a childish smile illumines his face and the dimple in his sickly cheek was moving.

Who can tell what stirred his boyish

brain and made him smile this glori-ous morning? DAVID WECHSLER.

Princess Louise Elevated by Her Marriage

An Englishman who is particularly well informed on the state affairs of his country said to a New York Graphic man: "There has been a deal of talk about the Princess Louise of Wales deto learn that she is in some very real, legal ways elevated by the unoin. I'll explain. As the daughter of the prince of Wales, supposing she had committed a crime—begging her pardon for the supposition—she would have been tried by the ordinary courts; there would have been no other way. She is not the queen's daughter; she is princess royal; she is, or rather was,

Two Lilies. Upon the water of the lake In shore where gentle ripples break, The pure water lily lies, And looks up to the sunlit skies.

It faces wave and wind and sun. Yet to it these no harm has done; For still the lily day and night Is clad in robes of purest white.

Oft, as the languorous afternoon Broods o'er the broad and still lagoon, A little maid from yonder town To the lake's margin wanders down. The little maiden with delight Looks on the lily clothed in white; She wonders that a thing so fair Should lie upon the waters there.

You lily has a spotless gown; But, fairer lily of the town, Though waves of sin about thee rolf, Thou hast a white and spotless soul.

A Bird's Nest in a Letter-Box.

In a letter-box at the farm of White Park, Castle Douglas, says the Pall Mall Gazette, there was to have been seen, a week or so ago, a tomtit's nest, containing five young birds. Though when building the nest the material was frequently removed, the mother The men smoke their pipes as they move along, now and then singing and shouting. The women join in with them and high above the shout is often heard a paralyzing oath. So it goes on block after block. As we come full upon a crowd of young ruffians on a clothing you have," he advised me, "and leave at home your jewelry, your valuables and all your money bat enough to carry you through, and meet me at the Three Nuns tavern at 11 o'clock. Don't take any firearms. It might be well, however, to carry a good, keen-edged knife. A London The men smoke their pipes as they move along, now and then singing and shouting. The women join in with them singing and shouting. The women join in with them and high above the shout is often heard a paralyzing oath. So it goes on block after block. As we come full upon a crowd of young ruffians on a corner they see my companion, the detective, and in a twinkling. It's escared rates, have scattered and hidden them selves. They knew the detective's face, and when one gave the alarm the others knew better than to tarry.

"I had one of them up on suspicion of being 'Jack the Ripper,'" the destroyer is the mother moved, the mother bird in its perseverence gained its way, the nest was built, and five eggs safely hatched. During the incubation letters were frequently found right over the little dame, and at other times it manded to push some of the letters out at the aperture by which the postman had put them in. If Mr. McAdam happened to open the box himself it would raise its wings and hiss as if angry at the intrusion. When his niece went, which was generally the case, it was quite pleased, and allowed her to stroke its plumage.

tective sententiously remarks, "an' I CATTLE RAISING IN MONTANA guess they thought it would be safer Railroads Taking the Place of Railroads Taking the Place Trails and Cowboys.

The romance has gone from the cattle industry in Montana. The business is, in all its features, from capitalist to cowboy, severely and sternly practical. In reducing the business to a rigid system the stockmen of Montana have classified themselves into "steermen" and "she-stockmen." The steermen are increasing. They are those who realizing that this is rather a grazing country than a breeding country are getting out of stock raising as fast as they can make the change. They furnish the market for the cow-men of Texas, New Mexico and Arizona. They are ready to buy all of the 2-year-old steers the southwestern breeder can supply, and they pay cash. They turn these young steers upon the Montana ranges, graze them there two years and then market them for beef. Montana-Texans sold in Chicago the other day averaged 1,150 pounds and brought \$3.60 per 100. On the same day, Texans of the same age, which had matured in their native state average. had matured in their native state, averaged between 900 and 1,000 and sold for \$2.75 in the market. Montana maturity means 200 pounds in weight and from 50 cents to \$1 per 100 increase in price for quality. In that margin is found the explanation of the close relationship which is devoloping between the southwestern and northern stock-

It is 7 o'clock as we emerge into the Mile road and start toward the city proper. The streets are still crowded.

The fish venders are proposited by settles up between the sections, thus obliterating the trail. Well, the cowmen have virtually discounted the trail obstructions. Steers, if they are or perhaps a kiency pudding for a men have virtually discounted the penny, or fried eels and mashed potatoes for a like sum. The odor of stale beer, putrid vegetables and fish prevades everything. The old clo' men are standing in their doorways and urge us to enter and buy a real good suit of clothing for four shillings. The gin palaces have many occupants and a ranges they could put them into the new set of hartenders began work at ranges they could put them into the winter in better form and with less danger of losses. Some herds still come by the old way, weeks on the trail. But the more popular method now is to drive to the railroad in the Panhandle of Texas, put the steers aboard the cars there, bring them north the whole length of Colorado, and almost to the center of Wyoming, to a place called Wendover. There they are taken from the cars because it is the northern terminus of the railroad and driven 150 miles north to Montana. But it is only the question of a year or two when the needs of this transfer between the southern and northern ranges will prompt the building of one or more lines of road northward through Wyoming into Montana, and the train loads of young Texans will come all the way through by rail, reaching these incomparable ranges in time for May grass.

But the item of expense? A 2-year old steer now makes the entire trip

from Texas or New Mexico to Central Montana for less than \$3. Add to that the cost of keeping him two years in Montana at \$2 a year, and estimate the risk of the winter on his life. Subtract risk of the winter on his life. Subtract that aggregate from 200 pounds of ad-ditional weight, and the fifty cents to \$1 a hundred for extra quality, the re-sult of his northern grazing. You have the margin, which is the sure profit on

Jay Gould has a son clerically in-lined. If he means business, reclined. If he means business, ligion won't be free much longer. no one that the law took account of as anybody in particular. Now, however, she is a duchess, a peer of the realm, and can only be tried by the house of dim with age, but a miserable corn will never pass away.

In Ceylon the marriage ceromny is performed by tying the couple to-gether by the thumbs. In this glorious star-spangled country they are more frequently put together by the

In Cincinnati a neatly dress and apparently well-to-do man, twenty-seven years old, committed suicide a few nights ago, by taking strychnine. A local paper says, "Cause unknown; he was married." That may have been the nights ago, by taking strychnine.

Every modern choir has a leader, but for all that, the person who pounds the ivories is the one who organ-izes

A worthy temperance advocate who A worthy temperance advocate wno was engaged in getting up facts for a new lecture, visited a penitentiary to learn the experience of the convicts. Addressing the first prisoner he came to, a burly burglar, he said, "My friend, did gin have anything to do with bringing you here?" "Yes, it had all to do with it." "How so?" "Why, the judge and jury who tried me were the judge and jury who tried me were all drunk."—St. Louis Magazine.

Work of Electricity.

There are now in the United States more than 5,650 central electric stations for light and power. There are 210,000 arc lights and 2,600,000 incandescent lamps. There were fifty-nine electric railways in operation in March electric railways in operation in March last, and eighty-six roads in process of construction. The increase of capital in electrical investments during 1888 was nearly \$70,000,000. These are very significant figures, and they point unmistakably to the course of future inventions and discoveries.—

Scientific American.

A SUBSTITUTE FOR GLASS. An English Invention Which Per-mits the Passage of Light.

It is impossible to conceive of anything that could supercede glass in the matter of transparency, but in respect of brittleness and rigidity it is very far from being a perfect material, says the Pall Mall Gazette. A substitute is now proposed, which if it lacks from transparency is free from the defects mentioned. To describe it briefly it is fine wire netting covered with a prepared varnish which permits the light to pass through as freely as glass of the variety known as cathedral. It is almost as lexible as a sheet of canvas and is solutely air-tight and water-tight. Dr. Ford, the inventor, has been working at the problem for years, and after experimenting with many products he found that he could, by passing the wire netting through a series of baths of linseed oil chemically prepared, produce a material with the preparties of luce a material with the properties amber. It is at once tough and elastic, and can not be broken even by a very considerable weight falling upon

The London company that is working the patent displayed in the Royal acquarium recently a number of pro-ductions in which the new material is utilized, but perhaps the most striking of all was the roofing of the acquarium itself. Unless one's attention was di-rected to the roof of the building it would never strike the visitor that the dome was not covered with glass, but with the new transparent material. In their last report the directors of the aquarium state that the change has effected a saving of over £200 a year in glass and labor, that there is now no danger of falling glass and that the indanger of falling glass and that the insurance rate has been reduced by 25 per cent. The material is made in sheets 10 feet by 4 feet, and by the use of varnish on the overlapping edges they are practically connected into one great covering. It is unaffected by heat up to 230 degrees and is a nonconductor. The initial cost is perhaps greater than cheap glass but the new greater than cheap glass, but the new material compares favorably with the dearer qualities, and its durability must, of course, be taken into consideration. A coarser material, termed car-boline, is being utilized for the roofs and walls of soldiers' huts, and we are informed that the government has given orders for its use. Experiments are being made in garden forcing houses, and if the exclusion of the sun's ays is no drawback then the gain in durability will be very great.

TRUE TO HER PROMISE.

Dying Woman Recovers Just to Spite Her Husband. The chuckling and other symptons

of satisfaction led the Oxford county man to tell another story, says the Lewiston (Me.) Journal.

"A woman up our way was very sick," said he. "She grew worse and worse and the doctor finally gave her up. She had fought a good fight for life, but at last made up her mind that she was going to die, and said her parting words to her friends. Last of all she had a talk with her husband.
"'John,' said she, 'I'm going to

leave you forever.'
"'Yes, Mirandy,' said he, dropping a tear.

"'I ain't like some women, John. I want you to be happy and have a com-panion through life.' "Yes, Mirandy."

"'Yes, Intrancy."
"Yes, I want you to marry again, and I've been thinking that one of Mr. Smith's girls would make you an excellent wife.' "'Yes, Mirandy, I've been thinking

"Yes, Mirandy, I've been thinking of that same thing myself."
"You have, eh? you brute! You better wait till I'm gone before you pick out another wife! Oh, you wretch! Fixing your heart on another woman before your first wife's under ground! But you shan't have her! I'm going to well just to spite you and Ann

"The woman was true to her promise.
To everybody's astonishment she recovered and lived to attend her husoand's funeral.

What Steam Has Done.

A very interesting calculation has recently been made by the Statistical Bureau in Berlin. Four fifths of the power machines at present in activity in the world have been erected during the past twenty-five years. The country which possesses the highest amount try which possesses the highest amount of horse-power is the United States, with 7,500,000-horse power; then follow England, with 7,000,000; Germany, with 4,500,000; France, with 3,000,000 and Austro-Hungary, with 1,500,000. These figures do not include locomotives, of which there are 105,000 at work, with a total horse power of 3,000,000. Thus the total horse power is 46,000,000. A steam "horse power is 46,000,000. A steam horse strength, and each living horse represents the strength of seven men. Thus the total horse power of the entire world represents the work of 1,000,000,000 men, or more than twice the total working population of the earth. total working population of the earth. Steam has thus tripled the entire human work power of the earth.—London Tablet.

Mr. Hughes's article contains incidentedly also a criticism of Mr. Gladstone's cerefor, whom he calls "the lost leader." Of her political articles are, "The Speilf of Office," by Goldwin Smith, where comps resthe outlook for civil-service reference in the United States with what has been achieved in this way in other countries: and a defense of Henry George against? I service reformers, but he asks some v ary hard questions in his discussion of the relations of patronage and party government. Mr. Shearman makes a salf julation to show that three fifths of the vealth of the country is owned by a lattle more than 30,000 men.

There are two articles on Social-Science top, ics—A "Remedy for Social Ills," by W ashington Gladden, and "The Outlook if or Industrial Peace," by Prof. A. T. Hadley, of Yale University. Mr. Gladden insist on the simple and common-sense remedy of economy, for it is only by economy that capital can be accumulated and Mr. Hadley takes a broad view of industrial conflicts and rees a way toward peace by a gradual evolution and readjustment of present forces. There is an other article of this class by Charles F. England symp

justment of present forces. There is an other article of this class by Charles F. Beach, Jr., of the New York bar, who makes a defense of trusts by an argument to show that they serve the public better, and will in the end be obliged to serve it more cheaply, than a large number of small concerns under a system of comptition,
The Rev. Dr. J. R. Kendrick writes of

the conflict between Catholicism and our that has hitherto been made to reconcile them has but emphasized the necessary conflict. Mrs. Helen E. Starrett, Principal of the Kenwood Institute, at Chicago par of the Kenwood Institute, at Thicago, is as bold a reformer in the field of domestic economy as any political economist is in the field of political economy. She finds a difficulty in the present system of domestic service that can be overcome on ly by organizations which shall serve

food and clean houses precisely as coffee is roasted and cloth is woven,—before it comes into family use. Other articles of this number are "Causes of the Belief of Immortality," by Prof. Lester F. Ward of the Smithsonoy For, Lester F. Ware of the Smithson-ian Institution, and "The Luxury of Pity," by James Sully, the well-known psychological writer. [The Forum Pub-lishing Co., 253 Fifth ave., New York, 50 cts. a copy; \$5 a year.

While the Grange has always declared that it had no part in the schemes of Anarchist, Communist or agrarian to seize upon and distribute the wealth of the world in money or lands, it also proclaims by its words and deeds that it recognizes another evil, in vast accumulations of wealth individuals and corporations, through combinations, monopolies, "trusts," etc.; and while it declares that it "is not the enemy of capital," opposes the tyranny of monopolies."

What becomes of all the paper? There are 1,000 pulp and paper mills at, work the year round. But the newspapers and magazines consume vast quantities of it. The Century Company take nearly two hundred tons a month for their publications, and their paper bill amounts to \$300,-000 yearly. Harper & Brothers take 25,000 reams, Robert Bonner 10,000 reams at a time. Two cheap literature firms buy \$500,000 worth of paper a year. One patent medicine firms buys \$300,000 worth of paper a year.

Two famous explorers of the present day began life in a state of abject penury. Stanley, the finder of Livingston, lived in a workhouse until he was thirteen years old. Vambery, at the age of eleven, was looking about hungrily for errands and street "jobs" of all sorts. He was for a time a "boots," or something of caught on yesterday, but since we did the kind in a village inn. He taught we have been makin' things hum, so't himself to read and write. Yet in spite of all these stupendous difficulties he worked his way to the temple of learning, and now he is a profes in Pesth, and one of the best linguists in the world.

The Agricultural industries of the country are confronted by great combinations of corporate and individual interests under the indefinite and irresponsible name of 'trusts,' which have for their objects the limitation of all other production except agricultural production. The effect of this is to enchance the cost of everything the farmer has to buy. On the other hand, this industry is assailed by combinations of capital organized to come between the producer and the consumer and fix the prices for both, so as to levy tribute upon both the producer and the consumer.

THOMAS JEFFERSON MAYALL

How a Poor Boy from Maine became a Recognized Leader Among In-Ventors.

Thomas Jefferson Mayall, who died at his home on Summer avenue, Reading, on Saturday evening, was one of the most noted inventors in the United States, says The Boston Herald, and he had procured more patents than any other man in this country. Mr. Mayall was about 62 years of age. . He was descended from a remarkable family of inventors. He was born in North Berwick, Me., August 10, 1826, and obtained work in the mills at Great Falls, N. H., when only 8 years old, as bobbin boy at 30 cents per day. After working here for two years he started for Boston. Upon his arrival here his worldly possessions consisted of only \$3 and a small bundle of clothes.

He had not a friend or acquaintance in this city. After much suffering and hunger he obtained employment at Roxbury in a paper-mill at \$2 per week. He managed, by working overhours, to pay his board and have a balance of 50 cents over at the end of the week. While at this mill he made the first rubber belt ever used in this country, and also made a number of improvements in the factory. One year later he made a model of the first cylinder printing machine ever made, from which has grown not only the present industry of wall-paper printing, but of calico printing as well, for calico printing was then done on blocks like paper printing. This machine made one thousand rolls of wall paper each day, printed in two colors. By the hand system the work of a man each day was but one hundred rolls in one color. Shortly after this he experimented with rubber as a glue, and while at work upon this he hit upon a method of producing satin-faced paper. Not long afterward he went to work for Mr. Goodyear, in the basement of the building that is now owned and occupied by the Boston Belting company. This was about the year 1841, and during this period he discovered the method of vulcanizing rubber.

He was one of the most prolific inventors of rubber goods and articles, and had taken out over two hundred patents in this country and over seventy in England. Among his most prominet inventions were revolvers, guns, automatic batteries, and revolving cannon. He visited the various capitals of Europe, where he was received, and where his cannon was introduced. The cannon was a breechloader, the breech being shaped something like that of a Colt's revolver. By means of machinery, operated by steam, this gun could be loaded and fired forty times a minute, and needed only one man to attend it. The process of loading, firing, swabbing. etc., all go on at the same time.

He also invented cannon shells whose edges were sharpened like chisels so that they would bore through the armor of ships. Another invention was a coffee-hulling machine, which he introduced into Brazil. He invented printing-presses and self. bridges for railroads, and at the time of his death he was at work on an electric elevated railroad and electric cable road; also on a pneumatic elevated railroad, which he intended to put in operation in Boston and Washington, D. C. A hearing was to have been given him before the legislature this month. He was interested in underground telegraph experiments and numerous other inventions at the time of his death.

An Unfair Advantage. "Say, Bill," shouted a boy to his friend at his elbow, 'lem me see them skates! They're bully! How'd you get'em?" The other boy stopped singing and his face lighted up with a joyous smile. "Git 'em? You kin git anything at our house now. Dad thinks he's awful sick, and ma coaxed the doctor to tell him 'et mebbe he couldn't live mor'n a week, an' ma's been strikin' him for every thing she wants ever since. Us children only ma's got scared an' is tryin' to hold us in a little. But it ain't no good; we got pop on the run now, an' we don't count on gettin' anything new for room house, good fruit, cheap at \$500. more'n a year after he gets well, and we're just workin' the claim for all she'll assay while the boom lasts .-Burdette.

A Bad Break.

He stole softly up-stairs, and in the dim light began to rock the cradle and

"What's the matter John?" Tasked his wife, sleepily.

"The baby wash (hic) nest'ling m' dear," replied John, "and I got up to quiet him."

"You had better come to bed, John; the baby is in here with me."—Omake

Every day of the state fair next week will be a big day.

The man who sells tiles is not ecessarily a hatter.

The rain which fell during the reater part of Monday, in this tensive all over Kansas, the Indian territory and Northern Texas. In Oklahoma it was especially hard.

Farmers in the Grange are considering this question of "trusts" that contains so much danger to our material interests, and to the pre-manence of our free institutions. The National Grange at its last session unanimously adopted the following resolutions regarding "trusts:"
"Whereas, It is well known that

there are in existence combinations known as 'trusts,' which are able to control the prices of produce and commerce, and by their combined power are unjustly taking millions of dollars from the people; therefore, be

"Resolved by this National Grange, That we do condemn the said 'trusts' as being unjust and dangerous to the rights and liberties of the American people and the freedom of American

"Resolved, that we earnestly roquest our National Congress to give this matter their earliest possible attention, by enacting a law that will protect the people from the encroachment of said combinations and trusts."

None too soon have the farmers in this great National organization taken hold of this important work. Here is genuine work for all true Patrons and patriots.

#### "THE HUNT BALL."

The gayeties of life at Newport are strikingly illustrated in the picture called "The Hunt Ball," in Frank Leslie's Illustrated Newspaper for September 14th, which also illustrates the granite quarries near Concerd, New Hampshire, the American Rifle Team at the Wild West Show, and gives a page illustration of "Fortune-telling in New York City." with a handsome portrait of Mrs. J. W. Water-burg, one of the leading ladies of New York
