Plays Its Part in
The Kansas Dairy Belt

A Certain Source of Income—The Dairy Cow

EVERY CAN of

- ills Bros Coffee

CAN MAKE THIS EXCLUSIVE CLAIM

Cereal cooks without lumps if stirred into the boiling water a little at a time. Hills Bros. Coffee has a fine, unwarying flavor because it is roasted a few pounds at a time — never in bulk.

WHEN it comes to making claims for goodness, Hills Bros. Coffee has one no other coffee can make. It is the only coffee roasted a few pounds at a time by the patented, continuous process—Controlled Roasting. The distinctive, delicious flavor created by this process cannot be equaled by bulkroasting methods.

When you open a can of Hills Bros. Coffee it is just as fresh as when it came from the roasters. Air, which "flattens" the flavor of coffee, is completely removed and kept out of the can by Hills Bros.' vacuum pack process. No coffee packed in a so-called airtight tin will ever remain fresh.

Make up your mind to try Hills Bros. Coffee. Ask for it by name and look for the Arab on the can. Sold by grocers everywhere.

HILLS Bros. Coffee, Inc., 2525 Southwest Boulevard, Kansas City, Mo.

The Creek Contains More Water Than It Has Had at Any Time Since Last Spring

BY HABLEY HATCH

farm in half is running a good stream roads are hard surfaced, and a good this morning for the first time since proportion of the main township roads last spring. The limited amount of will be graveled, also. oil drilling that was being done in this locality has been slowed up by lack of sufficient water; all that has been done has been with gasoling on the form of a neighbor fact. been done has been with gasoline power, as it requires close to 200 barrels of water a day for steam drilling, which amount, taken for 30 days, would take more water than was above ground in any pond near here. Now drilling can proceed with either steam or gasoline. The rain fell so heavily that it beat down the roads. So far it has been a fine fall on stock; the good weather has been a feed saver, which is fortunate, as there is no surplus here, as will be found out before March 1, 1931. Prairie hay has dropped from \$1 to \$2 a ton of late, probably to keep company with other farm products. The papers can preach returning prosperity as much as they wish, but it will not come this time until farm business improves.

Calves at Bottom Prices

A paragraph in this column some time ago regarding the neighbor who bought 210-pound Whiteface calves for \$15.70 a head brought me a number of inquiries as to where like calves could be found at that price. The calves of which I wrote came from Texas via Wichita; they are of good breeding but evidently are late sum-mer calves, as the weight shows. I have been told that good Whiteface calves could be bought on the Wichita market cheaper than at any other point in the West, and that there are all kinds and weights to choose from. Perhaps that condition does not obtain now, but I note that last week Brother Colglazier of Pawnee county claims. had visited the Wichita yards and there found calves in plenty being offered at prices ranging from \$5 to \$7 a hundred. That supply may not be there now, but anyone wishing calves could procure the address of firm and write to them for particulars. If one has feed suitable for wining a very good grade of flour for tering calves it does not seem pos- 95 cents, altho most stores still are good, thrifty Whiteface calves at around \$7 a hundred, but almost anything can happen in times like these. However, there is little chance of loss in buying stock as young as spring · calves.

Roads Cost \$700 a Mile

Nearly all the ponds are well ing the last two years it will be but filled and the creek that cuts this a short time until all Coffey county

on the farm of a neighbor just over the fence, and one "location"—400 feet—from the well on this farm has come in a "dry hole." No trace of oil or gas was found, and the formation varied considerably from that found on this farm. On the other hand, in the water well drilled at our farm buildings 250 rods from the oil well, we found almost the same formation as in the oil well. No more drilling than actually called for by offsets is being done; the low price of oil makes such business much like a farmer raising corn for 25 cents a bushel. For oil of 38 gravity, which is the grade produced on this farm, only \$1.01 a barrel is now being paid. By a barrel is meant 42 gallons, which is considered a barrel in oil field measure. This is about equal to 21/2 cents a gallon for crude oil. Good grade gasoline is being sold in carlots at refineries at from 41/2 to 5 cents a gallon. The difference between that price and what you pay at filling stations or delivered by tank wagons at your farm is accounted for by freight, loss by evaporation and waste, cost of handling and profit and the state road tax of 3 cents a gallon. By the way, I note that at the recent state meeting of county commissioners they recommended that all gasoline sold to those using it in farm work, and so liable to the tax refund, be colored. In this way they hope to curb the small number who take advantage of the refund to "fudge" their

Flour Below \$1 a Sack

For the first time in many years the price of bread flour has dropped below \$1 for a 48-pound sack. It is true that the price has not gone some Wichita livestock commission much below the dollar line, but one or two stores in Burlington are pricsible that he could lose by buying holding it at around \$1.10. Much of this flour was made of wheat that cost more than it is quoted today. When they get down to making flour out of wheat bought on the present price basis it should not cost more than 85 cents for a 48-pound sack. Feed made from wheat still is selling above a wheat price basis; today Considerable mileage of both wheat bran is quoted here at \$1 a county and township roads in Coffey 100-pound sack and shorts sell for \$1.20. Down here where our corn In this township—Liberty—nearly 10 failed we have to pay the market miles have been graveled. Upward Trend in the Hog Markets?

Evidently the "Mortgage Lifters" Will Start to Work Soon

OGS promise to make up one of the brighter spots on the sas farmers in the next 18 Compared with last season, then, ably will prevent any extreme re- were down about 18 per cent.

Denmark, the leading export

1930, will be less than last year because of smaller receipts, lighter average weights and a smaller carryover of stocks in storage. The pig survey of last spring, together with other supply barometers, indicates that the number of hogs for slaughter under federal inspection will be 2 or 3 per cent below the 45.5 million head slaughtered in the last season. Two years ago, slaughter reached 49 million head.

An 8 Per Cent Decrease?

How much the average dressed weight a head of the hogs marketed will be cut down by the short corn supply can only be guessed at, but a decrease of 2 per cent appears to be a conservative figure. During October, the reduction was quite pronounced, but owing to the decline in corn prices and the use of cheap wheat, recent arrivals have included fewer unfinished hogs. The fact that the states which produce the largest numbers of hogs have fairly good corn supplies probably will prevent any extreme reduction in the average weight at which hogs will be sold.

year by 153 million pounds of meats This is equal to a decrease of 3 per

The small corn crop also is likely Convincing signs of improvement have

than last year, while lard exports

Denmark, the leading exporter, has a record hog population. German market supplies in the next 12 months are expected to be 10 to 15 per cent larger than in the last year. These increases have grown out of the fact that price ratios between feeds and hogs abroad have been favorable during the last two years, as well as out of the desire of European countries to be self sustaining. This relatively unfavorable foreign market for American pork products may be expected to continue for at least a year and probably longer, even the Euro-pean production of feed grains in 1930 was about 20 per cent less than

ports of pork from January 1 to No-

vember 9 were about 20 per cent less

Even with some further shrinkage in foreign takings, the total demand for American hog products is not likely to fall much below that of the

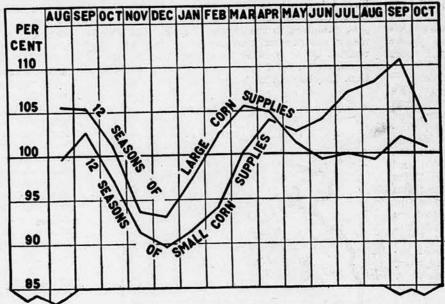

last season.

A Lower Commodity Price Level

Besides these direct supply and demand factors, the lowering of the general commodity price level is to reckoned with. Such evidence as we have indicates that the general level of all commodity prices is going to remain lower in the next few years, altho there may be a partial recovery in the coming year. Wholesale prices now are about 15 per cent below last year. Assuming a direct relationship, a price of \$8.50 for hogs today would be equivalent to \$10 a year ago.

This last influence has the same bearing on prices for other farm was extremely small, especially those public buying power will be at least products, however, so that it still seems justifiable to say that hog prices are likely to compare favorably with the rest of the list.

The size of the corn crop also tends to affect the distribution of the marketing of the hog supply. The hogs apparently are not finished quite so (Continued on Page 24)

Passing Comment

By T. A. McNeal

ARRY S. KENEDY of Cedar Bluffs, Kan., insists that the corn is so large this year out in Decatur county that he has to break the cobs two or three times to get them down to a size so they will go into the cook stove. The McCook Daily Gazette, which is published just over the line in Nebraska, ran a corn contest, offering a prize for the biggest ear. A farmer brought in an ear 12½ inches long with 30 rows of kernels. The ear was 10½ inches in circumference and had 1,048 kernels.

Incidentally, Harry relates an interesting story of Free Silver times. John J. Ingalls was slated to make a speech, and Kenedy was to introduce him. There was a crowd of perhaps 2,000 folks, about 1,900 of them free silverites. When Senator Ingalls got thru the Populists proposed three cheers for Bryan. The only way the chairman could head it off was to suddenly propose three cheers for McKinley. The cheers were pretty feeble, but the chairman managed to put them over and shut off the other crowd.

L. H. Davis of Liberal writes a bit of history that is new, at least to me. It seems one Colonel Robinson obtained a land grant from Mexico in what afterward became Texas, and founded a colony and town which he called Salodo. Afterward when Texas became a state and delegates were chosen to select a site for the capital there was rivalry between Austin and Salodo, and Austin won by one vote. Mr. Davis evidently still has a certain admiration for Jim Ferguson, who has had such a hectic career in Texas politics. He says that Jim's parents were the finest of people; his father was a Methodist preacher, an unselfish, kind-hearted man of fine ideals and unusual ability. "I never could be-lieve," continues Mr. Davis, "that Jim Ferguson, having the background he has, would be a

stories told by Ferguson's political enemies."

I know nothing about the noted Texan, Jim Ferguson, except what I have read and heard from those who do know him. Practically all of those I talked to were against him, but all of them acknowledged that he has a strong following which is ready to rally to him whenever he calls on them. A man who is able to gather a large following and hold them as long as Jim Ferguson has, despite his defeats and impeachment, must be a man of a good deal of ability and magnetic power.

traitor to Texas. I find it hard to believe the

Kansas, a Good State

RITING from Mullinville, Murphy Miller What some good things to say about his locality and his neighbors. "I am a farmer and have been one all my life," says Mr. Miller. "I have been over half of the states trying to find a better place to make money farming than in Kansas. I spent a year in this search, but failed to find such a place. For 38 years I have lived in Kiowa county. I have fine neighbors. We have no stealing here. We leave our tractors and wrenches in the field, and when we go back to work we find them undisturbed. We have lots of good boys and men come here to work. When a man really needs work I hate to see him fail to it. I have hired a good many harvest hands and have never, with two exceptions, had a man leave me until I was done cutting my wheat. I am of the opinion that most men care more for good treatment than for big wages and poor treatment. For the farmer with not more than two or three quarter sections, mules furnish the cheapest power. However, I cannot raise wheat the old way for 55 cents a bushel.

"I think chain farming is far worse than chain stores. I trade with the home store, but was told that the proprietor of the home store took his profits and invested in stock in the corporation farm, which helps to put farming by private individuals 'on the blink.' Some of these days a big corporation will own 10,000 tracts, and all the profits will go east of the Mississippi River.

Our community is declining in population as power farming takes over the ground. We are breaking out all the pastures and raising more wheat. Who is there to sell it to? We also have the roads here in a county unit. Just a few do all the grading and dragging; the poor man can't even work out his poll tax. I hope the farmers will not break out any more sod or plow up any more feedlots to sow wheat on. I am praying for a more equal adjustment all around. I hope the corporation that is buying land and raising wheat will give the men who work for it more than 90 days' work in a year, especially if the men have families."

Mr. Miller senses a problem, but like most of us does not see clearly what the remedy is. There have been such startling changes within recent years that we simply have not been able to adjust ourselves to the change. I have read a good many articles on this subject, some of them written by very intelligent men, but no one of them, so far as I have seen, offers a real solution. Maybe Gandhi is right and the way out is

to go back to the simple way of living. The farming business was the last to feel this tremendous industrial revolution, but evidently is feeling it now. Maybe the machine is destroying our civilization. I am not ready to believe that, but that we are facing a serious situation there is no doubt.

A New Brinkley Story

A SUBSCRIBER from Independence, H. E. Hanson, sends me a new Brinkley story. "A man 64 years old went to the doctor to be examined. Brinkley looked him over and told him that for \$500 he could make him feel like a man of 40. 'Can you do any better than that?' asked the prospective patient. 'Yes, for a thousand dollars I can make you feel as you did when you were in your 'teens.' 'Go to it,' said the 64-year old, 'but I will have to give you my note or a contract to pay you in three months. I haven't the thousand with me.' The doctor looked up the man's financial rating, found it was good and agreed to take a contract that the payment

would be made in three months from date. At the end of the three months Brinkley went to this man's town to collect. He saw the patient on the street playing skip-the-rope with some 14-year old children. He stopped and asked 'Is your name?' 'Yep, that's my name,' answered the rope jumper, never missing a skip. 'Well,' said the doctor, 'I have come to collect that \$1,000 you owe me.'

"'Sorry, Doc,' said the former patient, as he hopped lightly in the air to let the rope pass under his feet, 'but you see I'm a minor and not responsible for my contracts.'"

Bessie Writes Again

DR. BESSIE BARTHOLOMEW writes from Lake Bay, Wash. The doctor, or doctress, which is it? is a right good scrapper, and I am rather surprised to learn that she has changed her location and given up the fight so far as her Kansas town is concerned.

"When last I wrote," she says, "my subject was Liberty. I was so serious about it that eventually I landed on the Pacific Coast, where it is generally understood that one can express his or her opinion more freely than in the East.

"The Kansas election was quite a surprise to me. I especially refer to the 184,000 folks who strayed from the straight and narrow path and voted for Brinkley. That vote was a protest against the present program. The office seekers who were left at home, and those who won by a narrow margin, probably are more conscious of that fact than they were before.

"What is all this dissatisfaction about? People are being taxed to death, and the cost of running our public affairs seems to be growing greater. Our public officials use but little discretion or economy in expenditures. If they were as particular about spending tax money as they are about collecting it no doubt they could reduce expenses one-half. Are people getting a fair deal in exchange for the taxes they pay?

"They are not.
"I want to mention one instance where a corporation bought a municipal light plant. About half of the voters of the little 'burg' of 200 people signed a protest of the election. Thinking perhaps the state that granted the corporation the charter to do business would also revoke the charter for 'dishonesty, an appeal was made to

charter for dishonesty, an appeal was made to the Attorney General. He came back with the information that the people of the town had only one method of redress, and that was to go down into their own pockets and pay for a lawsuit against the corporation. What show would a small town have in a fight with a corporation that has a chain system of lighting small towns? What are our public officials doing toward giving the people the protection they should have in return for the taxes they pay? They are granting special privileges to this corporation. I ask in all fairness why the state allows a corporation to continue to transact business when it has violated the law? No wonder the people are looking for a Brinkley or a Moses.

"Another instance where there was a waste of tax money—a 16-year old feeble minded boy stole a car. He is to do about 16 months in the reformatory, where he cannot get well, instead of being put into a sanatorium where he belongs. I believe it would be the proper thing to put both him and the officials in an institution for mental

"Taxes are not just extra loose pocket money that we save for the privilege of staying here on earth a while longer. They are hard earned dollars that mean so many less beefsteaks for many a person who must pay them. I know of an old lady whose case might be multiplied by thousands. She owns two places and rents one for \$120 a year, pays \$80 taxes and lives on the difference between \$80 and \$120. Of course we cannot exempt from taxation worthy old souls who have given their lives in the service of hu-

manity because of the increasing extravagance of our officials.

"The mills of the gods grind slowly. The corporation I mentioned has a 20-year lease on the little town, and the people will pay tribute to this corporation for 20 years. The feeble-minded boy is in the reformatory. The 'small burg' officials are collecting taxes, just and unjust. The old lady figures, as no one else can, how to live on the difference between \$80 and \$120. There is still a need for a Brinkley or a Moses. Will the new officials take the hint?"

Speaking of the vote for Doctor Brinkley, here is a rather strange thing. The doctor in his radio talks outlined a platform that certainly would have increased taxes instead of decreasing them, but the people who voted for him did not seem

"We Want New Men"

SUBSCRIBER at Arlington, A. P. Graber, is A evidently dissatisfied. "How is it," he asks, "about that Pres. Hoover is going to help us farmers. You have said 2 years ago when we vote for Hoover we will prosper. Do you call that prosper when we got to sell wheat for 52 cent? The cattle down to bottem and cream was 23. Eggs was 13. Chicken is from 9 to 14 right now. Corn is up to 75 cwt because we farmer did not get no corn this year and we farmer start to use distil in our tractor; sure enough it went up 2 cent on a gallon in spite the wheat is only 52 cent. is that just to pinch the farmer every direction? what do you think will happen if it keep on that way? Why does Hoover let the rich man or compy, rob the poor people? If it is that he wants to help us it is worst than ever before; it is geting from bad to worst. And the next is what I want to ask is, what good does the tariff do when the price is lower than before. What is the use to talk something that is noting to it? The tariff does more harm to us farmer than anything else; the facts talks louder than all the newspaper writes. One thing is sure Hoover help the farm board more than the farmer. They got a job with a big salary which we got to pay with our cheap wheat, and so on the line. And did it not show the last election how crooked the Old party is when they tried to vote for the dead people in Kans city Kans? Therefore we want new men like J. R. Brinkley is. I am glad he made such a good run in spied the newspaper did run him down. The people are geting wake up now when it come as it is now."

Law Mentions Two Ages

How old does a boy in Colorado have to be to own and operate a car?

The laws of Colorado do not state the age at which a boy might own a car. If his parents per-

mitted him to own a car he might own it at any age. The law of Colorado forbids minors under 15 years old to drive a car and another section of the same law forbids the employment of a minor under 16 years as a driver of a car. In other words, a boy with the consent of his parents who is not employed but who is 15 years old might drive either his own car or the car of his parents, because in that case he is not em-

ployed to do so. But he could not drive a public bus or any other car for hire if he were under 16 years.

Must Register First

I have had 10 years' of home experience in barbering and have cut my brothers', sisters', friends' and neighbors' hair, but never charged them. Could I without any other schooling get a license to charge? Could I start a shop in a small town where there is no shop or would I have to take an examination and work for an experienced barber for some time? Could I charge at home?

It is unlawful in Kansas for one to follow the occupation of a barber unless he shall first obtain a certificate of registration. He is required to make application to the barber board and pay to the treasurer of said board an examination fee of \$5 and present himself at the next regular meeting of the board for examination. Whereon said board shall proceed to examine such person and, being satisfied that he is above the age of 19 years, of good moral character, free from contagious or infectious diseases, has either studied the trade for one year as an apprentice under a qualified and practicing barber, or studied the trade for at least one year in a recognized bar-

ber school or college, under instructions of a qualified barber, or practiced the trade in another state for at least one year, and is possessed of the requisite skill in such trade to properly perform all of the duties thereof, including his ability in shaving, hair cutting, preparation of tools, and all duties and services incident thereto, and is possessed of sufficient knowledge concerning the common diseases of the face and skin, to avoid the aggravation and spreading thereof, shall enter his name in the register hereinafter provided for, and shall issue to him a certificate of registration, authorizing him to practice said trade in this state. Provided, that whenever it appears that applicant has acquired his knowledge of said trade in a barber school or college the board shall be judges of whether said barber school or college is properly appointed and conducted to give sufficient training in such trade. The penalty for practicing the occupation of barbering without having obtained a certificate of registration is that he may be found guilty of a misdemeanor and upon conviction thereof punished by a fine of not less than \$10 nor more than \$100, or by imprisonment in the county jail not less than 10 days nor more than 90 days, or both such fine and imprisonment.

An Exemption of \$200

If a farmer in Arkansas moves and leaves his household goods and canned fruit stored at a neighbor's house and leaves a grocery bill, can the storekeeper take the household goods and canned fruit in payment of the bill?

E. F. ment of the bill?

The exemption law of Arkansas which is embodied in the constitution of the state permits the head of a household to have an exemption covering household furniture to the extent of \$200. But there is a provision that if a debt was contracted in buying the material that such ma-terial would not be exempt. Therefore, if the head of the household bought canned goods from this grocer and this debt was in part for the purchase price of these canned goods, they would not be exempt and the grocer could levy upon

Must Pay Full Damages

How close to a residence is it legal for a natural gas pipe line to be laid? Can they lay one within 60 feet of a residence?

D. G.

The law does not specify the distance from a residence that a pipe line may be laid. If the laying of the pipe line within 60 feet of the residence endangers the residence, it would figure in the amount of damages that might be required to be paid by the pipe line company. A private individual would have no right to lay a pipe line across the premises of another without the other's consent within 60 feet of the residence or anywhere else on the premises

Would Flood Dry States With Liquor

In a Statement Senator Capper Points Out What the Effect of Rascob Plan Would Be

In a statement issued at Washington, Senator Capper refutes the Raskob argument that states' rights in regard to liquor would permit dry states to remain dry. Instead, he declares, the South would have no protection against booze invasion and cites as proof the experience of Kansas. Senator Capper issued the statement as a member of the recently organized committee of 100 business men to uphold prohibition. The statement follows.

IRTUALLY all appeals for the repeal of the 18th Amendment contain the deceptive argument that such repeal would not menace those states which want prohibition, because the principle of states' rights could be invoked in behalf of prohibition within their borders. Such an argument was advanced by Governor Roosevelt of New York in the recent campaign and his position was publicly indorsed by Mr. Raskob, chairman of the Democratic national committee, in the following language:

Your suggestion is admirable. It recognizes the principle of states' rights, or home rule, thru returning control of liquor to the states with provision that local option will maintain, thus giving every city, town and village in a wet state the right to prohibit liquor within its borders by local referendum. It also provides that it shall be the duty of the Federal government to protect states which continue to prohibit liquor.

This new thought should receive great applause from the Southern members of our party because it at once restores respect for states' rights and home rule.

Still more recently another national spokesman for the Democratic party, ex-Governor James M. Cox of Ohio, urged that the next Democratic national convention pledge the repeal of the 18th Amendment and return the Democratic doctrine of states' rights in handling the liquor problem.

The constant reiteration of the assertion that the operation of states' rights would safeguard prohibition in event the Federal amendment were repealed may convince those who never experienced the utter breakdown of that theory prior to the adoption of the 18th Amendment. But the people of the Western and Southern states which adopted state-wide prohibition in the pre-war days know, out of their bitter experience, that states' rights in connection with prohibition means the legalized liquor traffic of "wet' states conducting a constant, powerful, persistent campaign of invasion of "dry" states, and the criminal defiance of their laws and rights.

Before the 18th Amendment was adopted, Kansas had great difficulty in enforcing its state prohibition law because of the activities of the liquor dealers in the adjoining states which did not have prohibition. This is an illustration of a "dry" state exercising its "rights," but which were flagrantly disregarded by the liquor interests in other states.

There should be no illusions as to the meaning of the repeal of the 18th Amendment. It means the instant return of the open saloon. It is difficult to credit the sincerity of the utterances of those who advocate the Amendment's repeal, but at the same time insist they are not in favor of the return of the old saloon or the old criminal liquor traffic. The very day the repeal of that Amendment would become effective, that day each of the 48 states would automatically revert to the legal liquor status existing within their respective borders. In many of our states that would mean the instant opening of the saloon,

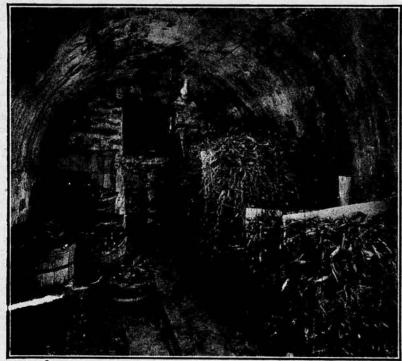

without restriction or hindrance other than that imposed by their state license laws.

Given those conditions, does anyone think that the liquor interests of those many wide-open states would confine their activities to their own commonwealths and respect the time-honored Democratic doctrine of states' "rights" of the "dry" states?

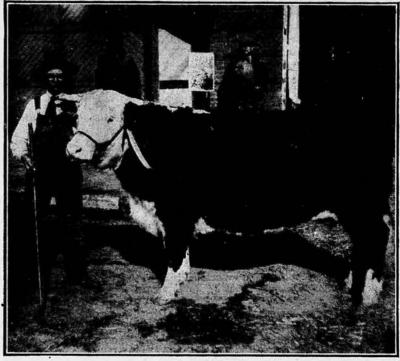

It should be perfectly apparent that if the liquor interests—outlawed as they now are—are yet strong enough to defy the Federal Government and conduct a gigantic business of international smuggling and illicit manufacture within our boundaries, if their legal status were restored in "wet" states, they would practice the same criminal disregard of state boundaries and state rights as they now practice in regard to interna-tional boundaries and the Federal Constitution. And if the Federal Government is unable to cope with this organized outlawed traffic-as the advocates of the repeal of the 18th Amendment insist-how could individual states cope with it under the Democratic plan of handing the control of the liquor traffic back to the states?

Isn't it time to destroy the legalistic camouflage of those Democratic leaders who are urging upon their party the repeal of the 18th Amendment on the ground that such a position is entirely consistent with the traditions of Democracy, and in nowise antagonistic to the interests of prohibition? The repeal of the 18th Amendment lends itself to only one thing, and that is the return of the saloon and the legalization of the liquor traffic.

Let's Have Faith in Kansas During This Business Depression

ANY a fortune, great or small, has its beginning in a period of business depression. In such a period men's minds are inclined to be gloomy and their spirit of initiative weakens. But always there are some men who see beyond the immediate present. These are men of faith in humanity and of confidence in the future. They are not frightened by the present nor forgetful of the past. They have perspective. Frequently their attitude prompts them to obtain information that the general public does not seek and that gives them an advantage. A classical example is the story of Nathan Rothschild who arranged to be the first man in England to learn the result of the Battle of Waterloo and then invested in securities of the British government and of British business at prices that were greatly depressed by the general pessimism regarding the future of the British empire. The prices of the securities he purchased rose rapidly as the future unfolded and this contributed significantly to the development of the Rothschild fortune.

Right now there are men in Kansas who are laying the foundations of financial independence by the exercise of business judgment based on faith in the state. Some are buying good breeding cattle at low prices. Others are buying low priced Kansas real estate, rural or urban. Others are improving their farms and farm buildings at costs that are comparatively low because of business depression. Recently a Kansas cattleman, after buying a large herd of low priced cows and calves, went away on a trip lest, as he said, the opportunities tempt him to buy too many cattle. He has faith in the future of the

cattle industry and in Kansas.

And why shouldn't people have faith in Kansas? She has wonderful resources in her location,

And why shouldn't people have faith in Kansas? She has wonderful resources in her location, soil, climate, markets, transportation, education. She has a population unexcelled in any state in vigor, resourcefulness, and ability. Her chief business is to help feed a world that must and will be fed. She is improving at a remarkable rate her efficiency in the conduct of that business. She is learning to respect her competitors, but she need not fear them, for she will continue to increase her fitness to meet competition. People are not going to stop consuming bread, meat, milk, eggs, fruit and other dietetic necessities produced abundantly and cheaply in Kansas.

Ten or 20 years from now many well-to-do Kansans will point to the depression of 1930 as the event that gave them their opportunity and to the fact that their faith in Kansas gave them

courage to accept it.

A Lonely Trip, Maybe?

A LONELY freight car traveled a few nights ago from Pritchett, Colo., to a grade just east of Johnson, Kan., a distance of 85 miles. It was loaded with kafir, and was lost in the

By F. D. Farrell

President Kansas State Agricultural College

switching yards at Pritchett; it soon obtained considerable speed on a down grade, and at one time was traveling 50 miles an hour. The fact that it caused no accidents on the 40 grade crossings in the 85 miles is a miracle.

On Feeding Wheat

A SPLENDID booklet on Practical Experiences in Feeding Wheat, which contains a vast amount of decidedly worth while information, has just been issued by the farm board. It may

be obtained free on application to the Federal Farm Board Washington, D. C.

100 Millions in Loans

THE Federal Land Bank of Wichita had 30,573 loans in force on October 31, which originally were made for \$100,038,750. This is the first time the loans had exceeded 100 million dollars.

To Aid Crippled Children

THE Kansas All-Star football game, between the stars from the Central Conference and the Kansas Conference, will be played at 2 p. m. Saturday, December 6, in the Washburn stadium at Topeka. The cost of reserved seats is \$1. An unusually large attendance is expected, judging from advance sales, as there is a keen interest

in this conflict between the outstanding men of the two conferences. All the money made from this game, less the actual expenses, will go to the Capper Fund for Crippled Children.

Park for Northwest Kansas

THE sportsmen of Northwest Kansas, under the leadership of E. D. Samson of Quinter, have asked the Forestry, Fish and Game Commission to establish a state park on the Saline River near the corners of the four counties of Sheridan, Gove, Trego and Graham.

15-Year-Old Girl Is a "Vet"

L OUISE SKLAR of Manhattan, 15 years old, the youngest student in the Kansas State Agricultural College, is one of two women students in veterinary medicine. The other is Helen Richt of Omaha, Neb., a junior.

Fruit Growers Will Meet

THE Kansas Horticultural Society will meet in Topeka next Wednesday, December 10. An excellent program has been arranged; everyone interested in fruit growing is urged to attend.

Is Feeding 5,000 Cattle

A BOUT 5,000 cattle are being wintered by Arnold Berns of Peabody. He is looking forward to better prices next year.

To Repair the Tools

THE annual Farm Equipment Week will be the feature of rural affairs from February 16 to 21. Practically all manufacturers and retailers are co-operating.

Goat Grass in Harvey

A BOUT 5 per cent of the farms of Harvey county are infested with goat grass, according to R. R. McFadden of Newton, the county farm agent. This pest is very difficult to eradicate

Road Show at Wichita

THE Sixth Annual Road Show and School will be held February 24 to 27 at Wichita, in connection with the annual tractor show.

Plenty of Fall Plowing

A VAST amount of fall plowing has been done this year in Kansas—far more than usual. This should help in increasing crop yields in 1931.

Why the Nation's Diet Changes

F THE countless reasons why people eat less of one thing, more of another this year as compared with any other year, one reason stands foremost—a change in income. The steady increase in urban income during recent years thus largely explains why the American people now eat more dairy products, vegetables, pork and veal, and less wheat, rye, corn and barley. Whether the current business depression will cause a reverse shift from the more expensive dairy products, vegetables and meats to the less expensive cereals remains to be seen.

The influence of income on consumption, tho obvious enough, is rarely considered by farmers in planning their production programs. The prospect for any long-time change in the income of our non-farm population deserves consideration. Should their income during the coming 10 years be on a lower level than it has been during the last 10 years, that change would certainly affect the proportion of different items in the diet.

To say that the price of a product influences the consumption of it is simply another way of saying that income is of first importance in deBy Arthur M. Hyde Secretary of Agriculture

ciding what people shall eat, and how much. Obviously price affects the consumption of every product from apples on thru the alphabet. When the supply of any necessary foodstuff is short, up goes the price. Consumers turn to less expensive substitutes.

Nowhere is the complexity of this world we live in better illustrated than in the influences—some obvious, some highly subtle—which cause changes in our diet and in the demand for the products of the farm.

As might have been expected, prohibition has affected materially consumption of certain farm products. Barley and corn consumption have suffered slightly, but dairy products and sugar owe much of their rise in popularity in the diet to the Eighteenth Amendment.

If city people go in for golf, if they keep their houses warmer than they used to, if they wear lighter clothing, or go in for weight-reduction with the earnestness appropriate to that undertaking—if, in other words, city people do anything to change their living habits, that change may be of direct importance to the farmer:

There is some evidence that people do not eat as much—measured in calories—as they used to. For one thing, the dietary changes indicate a decline in the amount of food needed to maintain body heat and furnish energy for active work. Movement of population from the farm to the city accounts for some of this. The man who wields a pen or who tends a machine for 8 hours doesn't need so much energy-producing food as the man who plows 10 hours and then adds a couple of hours doing the chores.

Mechanization of urban life is a factor of enormous significance. The automobile; the shift from hand labor to machine labor, both in the home and in the factory—these influences have much to do with the changes in food consumption. Improvements in house heating and the decreasing amount of labor required at outdoor, exposed work, doubtless mean that less energy-producing

(Continued on Page 24)

The Modern Agriculture Legion, for Men From 18 to 35 Years Old, Will Have a Splendid Growth

A formed in Cheyenne county. The treasurer, name, Modern Agriculture Legion, suggests the type of men who are its founders and gives one an idea of the purposes of the new organization.

For some time it has been apparent that there is no farm organiza- side of life and too young for pestion home for farm boys who are too old for club work and not old enough to feel at home in the councils of the Farm Bureau. With this in mind the first Modern Agriculture Legion order in America was organized at Saint Bird City Lions Club enjoys the dis-Francis last April.

Boys and single men between the bership in the new order. The principal aims of the new group are to fourth of its members farmers the promote advanced and modern ideas give attention to the betterment of folks. The town draws its support social life in the rural communities and towns, and by every legitimate means encourage young folks to stay on the farms.

Free from the traditions and prejudices of the past, these young men are especially fitted to carry good will from one town to the other and to promote the fine feeling of understanding and co-operation between the people who live in the towns and those who live out on the farms and

come to be the group that the community will expect to do the most important things that interest the peo-ple as a whole. Chambers of Commerce, Lions clubs and farm bureaus will in the future sponsor the different activities and furnish the sinews of war, but the Agriculture Legion is destined to occupy the front line trenches and carry the fight for progressive methods in farming and community building farther than it has ever before been carried. Co-operating with the Bird City Lions Club, Saint Francis Chamber of Commerce and County Farm Bureau, the organization put on one of the larg-They were at the Goodland state contest held a week later, dressed in uniform and organized to the last minute ready to render any day before. service or meet any emergency that

just nick-named him plain Tony.

This particular individual very likely has used the scissors as much as the average seamstress, and more paste than anybody else except the man who sticks huge advertisements on billboards along the highway. Tony has spent most of his life clipping interesting things he has read and pasting them into scrapbooks - poetry, anecdotes, stories and a world of other things. Most persons decide at times that it would be a mighty fine thing to keep a scrapbook or diary, but on the average, if they start one at all, it soon is neglected and then forgotten entirely. But Tony still is at it, as happy as can be, and a little serious at the same time. So that is how "Tony's Scrapbook"

came into being. What a fund of memories it must contain - sunny days, a few storms, moods as changeable as the four seasons; the romance of moonlight, some heartaches, and altogether a fine philosophy of life. We all cannot read this rather remarkable collection, but Tony generously gives us 15 minutes with it every morning over WIBW. He started clipping and pasting when only 12 years old, and the World War halted his work. Then this same savage war gave sudden impetus to his reading by putting him in the hospital for a year, and he went on with his pasting. Perhaps the agony of those long months could be found in word picture in the scrapbook, but if not there, certainly seared into his memory. You will understand then why Tony's scrapbook can even hold fellowship with folks who find life lonesome, or those who have been hurt inside a bit. WIBW invites you to enjoy this broadcast. And here is the program for next week.

BARGAIN

in fuel value

Everyone is looking for a bargain ... not just a bargain in price but a bargain in value! Sunflower coal can be classed in a group of "bargains in value." Because first it is a genuine Cherokee Coal. And second it has been so thoroughly, prepared at the mines by screening, rescreening, hand picking and boom loading that you have only to ask for Sunflower by name in order to buy the most modern economical fuel obtainable. Just compare Sunflower coal with ordinary coals. Note the shiny blackness, the purity and convenient sizing of this new fuel. Then use it! And see how much it saves you by its intense heat - few, ashes - no clinkers. You will always obtain the same qualities if you order by the name ... SUNFLOWER. The label protects you. It is a visible guarantee. For the name of the Sunflower

92% More Winter Eggs!

Here is a way to bring summer egg-laying conditions inside your laying house during the winter months. Use CEL-O-GLASS. In coldest weather it brings warmth and the sun's ultra-violet rays to your layers. This results in healthier birds, lower

mortality and more eggs.

The Washington State Experiment Station at 20° below zero had a drop in egg production of only 10% to 15% in CEL-O-GLASS houses, while the drop was 25% to 55% in muslin front houses. Last winter another experiment station got 92% more eggs in CEL-O-GLASS houses than from pullets of the

Farmers, too, have similar experiences. Clark L. Baker, Lafayette, Indiana, writes, "I have found that by the use of CEL-O-GLASS more eggs are produced." The Cane Poultry Farm, Rosemont, N. J., says, "We did not have to use heaters for the water pans even when the temperature was 10° below zero

CEL-O-GLASS helps you get so many more eggs that it pays for itself long before it needs to be renewed. Properly installed, it will last you for years.

The ultra-violet rays, which it admits, can't get through ordinary glass or soiled cloth curtains. These rays cause the hen's blood to manufacture Vitamin D. She gets more good from the calcium and phos-phorus in her diet. You get more eggs and no thin-shelled eggs.

CEL-O-GLASS in brooder houses reduces chick mortality, raises healthy chicks—in hog houses prevents weak hogs. Good for dairy barns, cold frames, hot beds, back porches, storm windows, storm doors,

and sleeping porches.

Valuable blue print booklets, containing information about buildings and the care of poultry, sent free. Also similar information on hog houses, back porches, cold frames. Write Acetol Products Inc., Dept. 1512, 21 Spruce St., New York.

Lowest prices since 1924

Sunday School Lesson by the Rev. N.A.M. Cune

quarrel. Many Jews were in Jerusalem aid. The Greek-speaking Jews, more especially the women, were making complaint that they did not receive their share in the distribution of food. The apostles felt that they should devote themselves to the work of evangelizing, and hence seven trustards of this fund. Stephen was one of these.

It was soon evident that Stephen could do other things besides hand out baskets of groceries. When he had no way responsible, cry out, "Does finished with that, he would do some God care?" talking for the new faith. A public debate followed, and his antagonists found that they could not match him. Instead of relying on their arguments they fell to accusing him of blasphemy, a most serious crime. They could not answer him. Force was their only weapon.

He went before the Sanhedrin and replied to their statements about him. It is a great speech, this speech of Stephen, in the seventh of Acts. As he came toward the close he used plain terms. "You stubborn people, with heathen hearts and ears, you are always opposing the Holy Spirit, just as your forefathers did! Which of the prophets did your forefathers not persecute?" Even these grave old men could not stand that, and, stopping their ears, they rushed upon him and took him to the edge of the city and stoned him to death. The stone-hurlers left their clothes in charge of a young man named Saul.

Stephen's face, as he talked to the members of the council, shone like that of an angel. It was like the face of Moses, when he came from a great religious experience.

Who knows when to use words of denunciation? Stephen used them before the Sanhedrin. Paul used them when he addressed Barjesus, the false prophet, "You monster of underhandedness and cunning! You son of the devil! Will you never cease trying to make the Lord's paths crooked?"

Jesus shot such words at least once: "Woe unto you, scribes, Pharisees, hypocrites!" Once, when the English preacher, Robertson, was faced with a man who had committed a dastardly and wilful crime, we are told that, "his words had all the awfulness of a judicial sentence. The hardened sinner writhed under them as if under a whip." But occasions like these are none too common, and most folks could not use the language that ought to be used for such a time, anyway. Only those who feel wrong or injustice all the way down to their feet are equipped to employ the language of denunciation. Most of us do not have such intense feeling over wrong done to others. We do not have the depth of soul for it. We do not possess the command of word and phrase necessary for such occasions. But

OW human these early Christians when such an occasion does come, How human these early christians which says who has the mental and were! Stephen is introduced to us and the man who has the mental and spiritual acquirment for it speaks, it because there had been a church spiritual equipment for it speaks, it is a time to be remembered. Once, from all over the East, and many of when the sultan of Turkey was comthese had become Christians. Some mitting atrocities on the Armenians, were poor, and a fund had been created and all Europe was aroused, Joseph so that such persons should receive Parker, England's greatest preacher abandon myself to Thee. I am silent, aid. The Greek-speaking Jews, more at that time, stood up in his pulpit I offer myself in sacrifice." But such in City Temple, and cried out before an immense congregation, "May God damn the sultan of Turkey!" who will say that God did not?

Does God care? is a question often asked. People whose loved ones have worthy men were selected to be stew- died, people who have lost all their money, people who have suffered loss who have been broken and mangled

Stephen did not ask that question. His face was as the face of an angel, we are told. He died with a smile, asking forgiveness for those who tween Stephen and these good friends tried to get here.

who cry out against God? Probably Hear Tony's Scrapbook their spiritual state has something to do with it. We are all sons of primitive man, and one of primitive man's main ideas is self-preservation. It takes considerable development to get away from that as life's chief concern. If we had the attitude that Fenelon had, we would be happier and more content. In one of his prayers he says, "Smite or heal! Depress me or raise me up. I adore all Thy purposes without knowing them. I an attitude does not come in a day. It is the fruit of long self discipline.

Lesson for December 7-Stephen. Acts 6, 7-10 and 7, 54-60.

SAVE Labor and Money with these handy machines

McCORMICK-DEERING Corn Shellers

A McCormick-Deering Corn Sheller will enable you to shell corn for seed, feed, or market at low cost. Built strong to give long service. The line includes shellers for hand, engine, or tractor power.

HE saving in time and labor, the economy, and the convenience of being able to grind your own feed and shell your own corn whenever you want to, more than justifies owning a McCormick-Deering Feed Grinder, Corn Sheller, and Engine. The small investment required to put these machines to work on your farm is offset many times over by the many advantages they offer the year around, and by the savings they effect.

Examine the models the McCormick-Deering dealer has on display. Ask him to point out the exclusive features, quote prices, and demonstrate for you.

Write for illustrated folders and read all about the many features of these money-saving machines

The Outlaws of Eden

E STIRRED the fire with the long poker. "Twelve per cent, eh?" he ruminated. "The sort that kicks you when he gets you down. A coward and a potential crook. Money-mad. A schemer. Miss Lorry, he wants the Circle K ranch."

'I think so and for this reason. He knows where he can sell it again at a large profit. He told father about a month ago that a San Francisco man was desirous of purchasing your ranch—as a plaything where he could raise blooded cattle and horses and have a splendid hunting and fishing preserve. Father gave him your attorney's address. It's none of my business, of course, but did Babson write

"Yes, thru a San Francisco attorney, which proves to me that the San Francisco man Babson spoke of is a myth. The real purchaser was Silas Babson, but he desired to keep that news a secret from me-hence he approached me via his attorney. When he ascertained from my attorney that the Bar H was not for sale, he decided to acquire the Circle K, so immediately he purchased your mort-

gage."
"But he may have purchased it for this prospective purchaser."

"I doubt that, because the mortgage is now in Babson's name. This mythical other man would not be likely to hand that amount of money over to Babson to play with for him; he would have come to your father and asked him to place a price on your ranch. This whole procedure is that of a principal who works by indirection, and Babson answers that description, does he not?"

"But why has he developed this sudden interest in Eden Valley?"

"I do not know, but I intend to find out. However, his activities constitute a case of love's labor lost. He'll never own the Circle K. Whenever you find yourself unable to hang on to it, I'm the rightful heir to it. Understood?"

"Perfectly. You're sure you will not permit him to crowd me? Sure this isn't a generous impulse because you find me in such a sad case today? An impulse you may, with reason, regret next week?"

He drew a check-book from his inner breast pocket, went to her desk and signed a check in blank. "You fill that in for what your father's estate owes Babson and his bank," he ordered curtly, "and secure me with your promissory note. I'm only a half-breed Hensley but I play for keeps and don't you ever forget it."

Before Cantigny

She tossed the check in the fire. "What's your interest in me?" she demanded. "I can understand sympathy and gentlemanly kindness but not a blank check that could be filled in for nearly two hundred and ninety thousand dollars. I play for keeps,

"I met your brother, Owen, in

"Nothing, Miss Lorry. His face sort I knew he was ruined; I thought it of twisted. You see, we were all expolicy to wait until he was helpless and hopeless—he'd change with the years and adversity—we all do, you know. I see now that was poor strat-

"Life," the girl said drearily, "is a game that is played to be lost."

His hand strayed over and imprisand the sun just rising over Eden after a long eclipse. Life may be a game that is played to be lost, but we'll play it like sportsmen and go smiling to our defeat."

At the Bar H

Nate Tichenor slept at the Bar H digging Rance Kershaw's grave in the pointing out to them the desired spot. About noon the coffin arrived from Valley Center and he helped the man who delivered it place Kershaw in it. drove it around and tied the team in girl met his inquiring glance bravely and said:

"We might as well proceed, Nate. me back to Eden Valley. But if you Nobody's coming to my father's fu-

She had commenced calling him

mary masculine belief that it was his duty to keep Lorry's mind off her troubles. Evidently Miss Lizzie Bachman was similarly inspired. He no-ticed, however, that in her presence Lorry addressed him as Mr. Tichenor, so he was careful to address her as Miss Kershaw. He enjoyed (and was certain Lorry did also) the efforts of Miss Bachman to elicit from him information as to his comings and goings, joys, sorrows, and activities since he had left Eden Valley. For three hours he withstood her assaults: then, weary and discouraged, excused himself and motored back home to the comforting presence of his silent valet.

The two days that followed Rance

Kershaw's funeral were spent by Nate Tichenor at the Bar H headquarters, until his old superintendent, Rube Tenney, should arrive and, with his wife, assume the duty of looking after Lorry Kershaw's affairs and keeping her company. Nate was resolved not to visit the Circle K until Miss Lizzie Bachman had been dismissed. He spent those two days looking over his decayed estate and formulating plans for its restoration, but in the midst of these thoughts his mind constantly shuttled back to a consideration of Lorry Kershaw and her affairs. He did not know Silas Babson except by sight; hence, lacking knowledge of the man's character, he was at a loss to know why Babson had so suddenly turned on the Kershaws. Apparently Babson had purchased the overdue Kershaw mortgage for the sole puraction puzzled Tichenor. Had Babson desired to acquire the ranch cheap, it was his privilege to bid for it at the sheriff's sale when the original holder of the mortgage foreclosed, and acquire it quite as cheaply as he might when foreclosing on his own account. Seemingly, all Babson had done for the present was to saddle himself with the expense and annoyance of the suit in foreclosure. Was it possible he had purchased the mortgage because he feared the holder of it might grant an extension? If so, then Babson desired it, not as an investment, but as a weapon. Certainly, Tichenor decided, he was moving by indirection; and since Tichenor was resolved, if the mortgage had to be foreclosed eventually, to acquire the Circle K for himself or rather for the Bar H Land and Cattle Company, of which he was the sole owner, he decided finally to try a shot in the dark and halt Babson's operations before they had fairly started.

Say
no moreI'm sold!

THAT'S what I told the chap who introduced me to pipe-joy, with a first load of P.A. I knew I was slipping the instant I opened the tidy red tin and got a full whiff of that tantalizing Prince Albert aroma. "If the taste is half as good as that," I said...

Half as good? It was cool as the wife's reminder of an anniversary—sweet as her smile when you prove you've remembered the date. Refreshing? Yes, sir! Mild and mellow

and long-burning, that's what it was. Was I sold? Ask me another!

As far as I'm concerned, Prince Albert is the world's greatest tobacco for pipes or roll-your-own. There must be millions of others who feel the same way about it, because P. A. is sure a world-beater, any way you figure it. On the word of a friend, get some P. A. this very day. Load-up and light-up... and learn the truth direct!

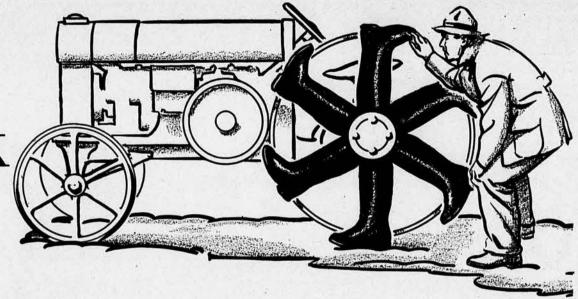

Here you are—TWO full ounces of downright pipejoy.

PRINGE ALBERT

-the national joy-smoke!

"No work today...

the tractor has bunions!"

If your tractor wore boots, you would buy it the very best boots you could find. Just think what it would cost you in time wasted and repair charges if that tractor broke down right in the middle of the spring plowing.

But your feet are a lot more important pieces of farm machinery than your tractor. If your feet break down, everything stops. It's even painful to get out and feed the hogs, let alone doing a full day's work. And there isn't any service station that can do a quick repair job on a pair of broken-down feet.

So it's mighty important that you protect your feet—and nothing protects your feet against breakdowns like a fine

pair of boots. Good-fitting, comfortable boots help to prevent corns and bunions, chilblains and blisters, and many ordinary foot troubles.

Rubber footwear for the entire family.

For work, dress and play.

U. S. Blue Ribbon Boots—The minute you slip on a pair you recognize the superior qualities—fit and comfort. Red uppers with white soles or Ebony black with white soles. Three lengths—knee, medium, hip.

"U. S." Blue Ribbon Walrus—(All-rubber arctic.) Try this one for that early morning cold weather work. You'll like it. Slips right over your leather shoe. Kicks off in a jiffy. Built to stand the hardest usage. Four, five or six buckles.

Style for the modern farm wife— Do you know that Paris style authorities have declared Gaytees the most stylish women's overshoes in the world? You'll be especially attracted by the many different colors and fabrics of Gaytees there's one that will just match your coat.

Gaytees come in cloth or all rubber—in high or low uppers. Snap fastener, Kwik-glide fastener, or 4 buckles. Look for the name "Gaytees" in the shoe.

For Son and Daughter—Keds are the most popular canvas rubber-soled shoes in America. They give barefoot freedom—encouraging the feet to healthy growth—yet afford the protection you want. They are not "sneakers." They are the chosen shoe of star athletes because they are so comfortable and healthful for the feet. Recommended by physicians and gymnasts.

We know that. So, when we make a pair of "U.S." Blue Ribbon Boots, we start with the design of your feet. We mould these boots on special aluminum lasts that duplicate the shape of your right foot and your left foot. We build each boot, inch by inch and piece by piece, so that it will fit around your toes and instep and ankle like a glove. We leave plenty of room for free movement, but not enough to cause chafing. We put extra thickness at the wearpoints, but we're careful about too much weight—we don't want your Blue Ribbon Boots to weigh you down.

The boot that's comfortable is the boot that fits!

"U.S." BLUE RIBBON

foot-saving footwear

A FREE book you ought to have

We'd like you to have a copy of this valuable book, "The Care of Farmers' Feet." It was written by Dr. Lelyveld, nationally known foot specialist. We believe you'll find it mighty handy to have around the house because it tells all about corns, bunions, itching feet, chilblains, etc. And suggests good common-sense remedies. Check the coupon below.

	Rubber Company , 1790 Broadway, New York

THE PROPERTY OF THE PARTY OF TH	

this (hristmas own the radio praised by MARCONI

In performance and price the new Radiolas are especially suited to the farm!

WHAT a useful, practical gift ... not only affording glorious hours of home entertainment, but also home education for the young, helpful household hints for mother, weather forecasts, crop news, market reports and other business services for father! It's more than a musical instrument—it's a farm necessity!

What an amazing instrument—this new RCA Radiola Super-Heterodyne! So highly developed that Marconi himself, the inventor of radio, acclaims it "a great advance in radio reception."

So pure in tone, so alert in performance that it is indeed worthy to carry the greatest stamp of approval in radio-the RCA trademark, the symbol of the world's foremost radio organization. The new Radiola, with its remarkable power and performance, is an ideal instrument for rural homes located at great distances from broadcasting stations. It brings in even far-away stations, strong and clear, with life-like tone.

New Features - Low Prices!

What fascinating new features... models with the very latest electric phonograph...so you can have the pleasure of directing your own musical programs...home recording...so you can have the amusement of making "talkie" records of your own voice, or of radio programs you would like to hear again...remote control...so you can change stations from your easy chair...tone color control...so you can adjust tone quality to suit your own taste.

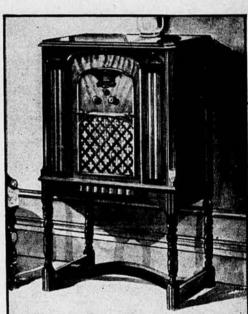

Only four Christmases ago, a Radiola Super-Heterodyne console cost \$570. Now, with all the great developments of the last four years, the model 80 illustrated comes to you for \$142.50, less Radiotrons.

Whether You Have Electric Service - or Not!

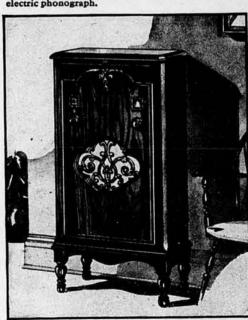

No matter where you live, RCA Radiola has an instrument to suit your needs. Four different models operate from light sockets. For battery operation we recommend the Radiola Model 22, a highly perfected Tuned Radio Frequency circuit.

Go to your nearest Radiola dealer. He's a dependable merchant selling the world's most dependable musical instrument—the Radiola. Hear the various Radiola models-and look for the RCA trademark on the dial. Insist on this guarantee of future satisfaction!

Radiola SUPER-HETERODYNE

New RCA Radiola Super-Heterodyne Model 80— Screen grid -9 tuned circuits—magnified, illuminated tuning dial—improved volume control—local-distance switch—push-pull power amplifier—improved electro-dynamic speaker—handsome walnut cabinet—§ 142.50, less Radiotrons. Also de luxe model and Radiola with electric phonograph.

RCA Radiola Model 22—(Tuned Radio Frequency) operated by batteries—at a price all can afford! Screengrid receiver for pattery operation. With enclosed RCA loudspeaker. A wonderful value for the money. An excellent set for receiving your favorite station with amazing clearness and lifelike reproduction of tone. Beautiful cabinet.

RCA

Right now is the time to do some figuring for next spring

We don't know just what kind of records you've been keeping this year or how you figure your costs but we urge you to make them as complete as possible. It's the only way to make sure you are eliminating all waste and making the greatest possible profits.

Here is a good example of how it helps to keep careful records. We know a couple of farmers in Ohio who live right across the road from each other. They both work about the same acreage and raise the same crops.

One of them is very progressive. He makes use of every modern method possible, and keeps accurate figures on every-thing he does. He knows what it costs to feed his cattle and what the return is when he sells them. In the fall, after corn-picking time, he knows exactly what every bushel costs—including seed, labor, tractor, fuel and oil, repairs, etc.

With such records in front of him he has been able every year to lower costs at some point or another. And the result is greater profit. It is evident too. He has a beautiful home and a new car-everything about his place looks prosperous.

But the farmer on the other side of the road was very much different, in spite of the fact that his land was just as good and he had just as much of it. He looked far from prosperous. We asked him how much it cost him to put in his corn. He looked puzzled for a moment. He had no records and finally made a couple of wild guesses that varied considerably. Well, it was no wonder he wasn't making money.

Naturally, we were interested in the lubricants these two farmers used in their tractors. Our more successful friend was using the highest quality oil he could buy. His cost records showed him that he saved money that way. You've probably guessed what his neighbor does. Yes, he buys low-priced, inferior oils. Since he keeps no records, it's only natural he should figure that he was saving money by purchasing oil at low prices. And yet he wondered why his tractor was such a wreck and had hardly enough power to pull a drag, let alone make a plow bite in. He was losing money on the operation of

Why farmers use Mobiloil

In this little story you have the exact

Do a thorough job of storing your tractor for the winter. It will add extra years of life.

reason why so many modern farmers use Mobiloil. They know, for instance, that Mobiloil holds its rich lubricating character right up to and beyond the 60-hour draining period. And during those 60 hours, Mobiloil does a *complete* lubricating job.

Mobiloil protects bearings, pistons and piston walls from wear. It does not cause excessive carbon deposits. It's no wonder farmers save money with Mobiloil when it accomplishes so much toward eliminating repair and overhauling costs.

Besides, Mobiloil helps the tractor develop more power, saves fuel and keeps it working like new over a longer period of

How Mobiloil gives these results

In Mobiloil, ALL the essential properties of a full duty oil are present and in correct proportion for your tractor engine.

These properties are: (1) OILY CHAR-ACTER—provides moving parts with rich lubrication—and holds down wear; RESISTS HEAT-lasts longerkeeps down oil consumption, and makes for economical use; (3) CONTROLS CARBON—keeps hard carbon deposits from piling up in your cylinders; (4) OXI-DATION CONTROL—keepsoil systems from clogging, and valves from sticking and gumming.

How about the transmission?

Here's some information that may prove valuable for you to remember when it comes time to start the spring work.

This summer, some of our men traveled around over the southwest calling on farmers. They just stopped here, there and everywhere, looking into the transmissions of tractors. They found quite a few that were not in any too good condition because the farmer had been running the machine for two seasons, without cleaning out the transmission and putting in fresh oil.

It is really mighty important that you renew the oil in the transmission every season-twice a season if you use the machine a great deal.

For transmissions use Mobiloil "C" or Mobilgrease in the summer, and Mobiloil 'CW" in the winter. They will protect the gears from wear and add extra years of life to the machine. Consult the Mobiloil Chart for the correct grade.

Pressure fittings and grease cups

Applying the grease gun and turning down grease cups every day, during the busy season, is just another part of the good lubrication a tractor needs.

We've developed a grease for pressure

VACUUM OIL COMPANY

fittings called Mobilgrease, which we are sure you'll want to try. It stays on the job longer than ordinary greases—it works to every friction point and stays there—it is not readily washed away with

Then, we have another one, called Mobilubricant, which is specially suited for use in grease cups. And for water pumps, use Voco Waterproof Grease. It stops water pump leaks-affords a perfect packing gland seal and will not clog the radiator.

Winter storage

Have you stored the tractor away for the winter yet? Be sure to do a good job because it will help add years of life to the machine. Get out the instruction book that came with your tractor and follow carefully all the directions it gives about cleaning the machine up and applying plenty of grease and oil for protection.

Mobiloil Arctic for car and truck

car and truck

The danger point in engine lubrication is 32° F. Beyond that point, look out! The oil in your crankcase which is correct for summer may be stiff as molasses in January. When you step on the starter this cold-stiffened oil is slow to circulate. Your battery strains under a load it should never be asked to carry. Your engine gets more destructive wear in the first few minutes of starting and running than in miles of ordinary driving.

Yet an oil that merely gives quick starting is not good enough. Many so-called "winter oils" are too thin to stick to hot metal surfaces. They break down when the engine warms up.

Mobiloil Arctic is double-range—specially refined to do the two-way job winter weather demands. Mobiloil Arctic remains fluid at zero temperatures. And when your engine heats up, Mobiloil Arctic continues to give full, rich lubricating protection.

For your gears, use Mobiloil Gear Lubricant "CW." It is specially made to give you easy gear shifting and complete lubrication in your differential.

TRANSMISSION AND DIFFERENTIAL For their correct lubrication use Gargoyle Mobiloil "C", "CW", Mobilgresse, Mobilubricant, or Engine Oil, as recommended by complete Mobiloil Chart shown by all dealers.

The Outlaws of Eden

(Continued from Page 12)

timental. . . . Well, he'd been out of Eden Valley to a private school for a few years. . . . He'd been civilized. "Yes, Owen," Tichenor soliloquized,

"it is hard to accept too many favors from a traditional enemy. The suspicion, distrust, and dislike of a half-century aren't to be eradicated in a day . . . and she did throw my check in the fire! Well, she has something I want and I'm willing to pay for it and pay heavily. . . . That cursed feud is dead and I'll not revive it with a lawsuit. Why rub into the girl money while she's bankrupt?"

Forthwith he motored into Gold Run and telephoned to his attorney in San Francisco. "Tichenor speaking, Paddon. Listen carefully. Ranceford Kershaw is dead and has left a bankrupt estate to his sole heir, a daughter named Lorraine. But two years ago he gave a deed of gift to his daughter of those four thousand acres I spoke to you about-you have the legal description. Well, Lorraine Kershaw filed that deed of gift for record very recently, as I discovered when running down the title at the court house in Gold Run. The local bank kiss him. of Rance Kershaw's notes, unsecured, overdue and with interest in default, owner of that bank holds also an overdue first mortgage in the sum of two hundred and fifty thousand dollars, with a year's interest in default. In addition the Kershaw estate owes the Bar H Land and Cattle Company more than three hundred thousand dollars. The bank and the banker are going to foreclose, but the Bar H isn't."

"Good news," the lawyer inter-jected, as Nate Tichenor paused for breath. "It would seem that the girl is not in a position to hold you up, so you ought to get that four thousand acres cheap."

No Price Argument

"Precisely. But I'm not going to give her the opportunity to begin to think she can hold me up! there'll be a check in its favor for four hundred thousand dollars, with instructions to issue a certified check in favor of Lorraine Kershaw and send it over to your office. Meanwhile, prepare a deed from Lorraine Kershaw to the Mountain Valley Power Company for that four thousand acres-"

to pay her a hundred dollars an acre, Paddon interrupted, "when you can get it for ten."

dred years into the future and realized the possibilities for power and irrigation on Eden Valley Creek. My grandfather was no fool, either-in some ways. He got the dam-site but Kershaw beat him to the lake-site. The Kershaws never mortgaged that property; it was the ace in the hole for the clan, and they know its value."

"Why not do a little trading? Offer

the girl twenty an acre and work up." "Listen, Paddon. You transact my for me, but I do no need you for my general manager. I'm more than nine years old. That land is worth four hundred thousand dollars to me if I can get it without a fight and without leaving a bad taste in Lorry Kershaw's mouth. I can afford to pay for my fancies, I have a fancy for this four thousand acres, and I fancy it now! But I do not wish to be known in the premises, so do not come up yourself to close this deal. Send somebody not connected with your office; the Kershaws have dealt with me thru you in the past and the girl would suspect collusion.

"Aye, aye, sir."

Understood?"

The following afternoon a livery car from Gold Run arrived at the ranch, bearing Mr. Rube Tenney, Mrs. Rube Tenney, and two little Tenneys, a boy and a girl. Mr. Tenney, in his younger days, had been a Hensley body-guard, willing (albeit never called upon to do so) to kill a Kershaw out of loyalty to the bread he of humor. ate. With the passage of the years, however, he had taken stock of himself and decided to abandon his ignoble calling; following the death of Taylor Hensley and the crippling of Rance Kershaw, he saw long years of peace ahead of him and applied himself wholly to advancement in the cattle industry. He was riding boss the knowledge that I'm rolling in under Nate Tichenor's father, and when the latter died was elevated to the position of ranch superintendent, which position he had held with credit can allow for her peculiarities." and honor until Nate Ticenor had now, but active and still trustworthy. He greeted his old master as inforother since 1917, but Mrs. Tenney was more exuberant. Nate Tichenor had ests, eh?" an uncomfortable presentiment she would have kissed him if given half a chance; at any rate she compromised by ordering her offspring to job."

"So Here I Come"

"Well, I got your wire ordering me and the president and controlling to report, Nate," Rube Tenney announced. "So I come a-runnin'."

Tichenor smiled. When the Bar H retirement had left Tenney without a job, Nate had financed his old superintendent in the lease of a ranch and a band of two thousand sheep. Sheep were and always had been repugnant to Rube Tenney, but he had worried along with the nuisances and even during those lean years had managed to make more than a living off them. "You left a good man in charge of

your sheep, I hope, Rube?"

"I sold 'em to a good man. My lease was expiring in October, an' after three bad feed years I reckoned I'd better quit before my sheep died o' starvation." He handed Nate a check. "There's the money you staked me to. I got a few thousand over an' above that. Thank God, the rest o' my no argument as to the price. I'm mail- life will be spent with decent, reing my bank in San Francisco today spectable cows. Nate, a sheep dies if you look at him hard; he dies out o' sympathy for another sheep that's died; last fall I'm driving a band o' lambs along a road above a box canon an' one fool lamb gets frightened an' jumps off into space. Would you believe it, Nate, three hundred and nineteen more jump after him before me "Good gad, man, you're not going an' my herders can stop the fools. Yes, sir, I lost three thousand dollars' worth o' lambs just like that."

He bit a crescent out of a plug of "Don't be foolish, Paddon. I know chewing tobacco, wiped the bitten who declined with thanks.

"Now's a fine time to git back into

business, Rube. But you are. You're to be riding boss of the Circle K—on the salary of a ranch superintendent."

"Ah! Closin' in on them Kershaws, eh?" Tenney grinned. He regarded the ruin of the Kershaws as a holy duty, cently enacted a State Water Comin addition to being a delicious piece

Patiently Nate proceeded to dis-illusion him, and while he was doing it the Tenney head wagged under-standingly. "Never did figger you'd be able to keep up steam like the Hensleys," he declared. "That's your father's blood. Very well, son, I'm glad to have the job. We'll look after the Kershaw girl right kindly, and see location to it of these so-called unapthat nobody brands her calves. I never propriated waters, provided you can worked for a woman before, but if prove to the satisfaction of the state she knows her business I reckon I

"You'll not be riding boss for more than a year, Rube. Sooner or later gone out of the cattle business. Rube than a year, Rube. Sooner or later Tenney was nearly fifty years old the Bar H will take over the Circle K and the cattle."

"The present ain't no nice time to mally as if they had not seen each haze the girl around," Mr. Tenney agreed. I'm a-representin' your inter-

Tichenor nodded, and Tenney rose

Miss Bachman staying with her at in this rented car of yours."

He gazed long and affectionately after the departing Rube Tenney and his brood. "Old Faithful," he soliloquized. "He doesn't suspect I bought him out of the sheep business and took a loss to do it. But it's worth it to have him back on the job-to be free of worry about that Kershaw girl and her finances—and mine. Fine

Three Legal Documents

When Silas Babson returned to Valley Center he brought with him three legal documents, all undated. One was a petition to the county board of supervisors for permission to form the Forlorn Valley Irrigation District; another was a formal application to the State Water Commission requesting the allocation to the Forlorn Valley Irrigation District of the flood or freshet waters of Eden Valley Creek; the third was the articles of incorporation of the district. From which it will be seen that Babson was not the sort who starts an action before the ammunition has been brought up. The power company, being a public servattorneys he had consulted, Messrs. Brooks, Gagan and Brooks, had agreed possession by another similar corpowith him that, under the circum-ration. Y stances, his strategy was excellent, clearly?" But had taken occasion to warn him the Kershaws. Old Robin Kershaw the spot on the leg of his trousers, and that if Nathan Tichenor and Lorraine First was no fool. He looked a hun-hospitably proffered the plug to Nate, Kershaw should decide to oppose his proposition seriously he would realize he had a fight on his hands before he the cattle business," Mr. Tenney went got thru with them. Gagan had taken on with his mouth full. "Prices is ad-occasion to read Babson the legal vancin' but you can still stock up modus operandi for acquiring the

"I'm not going back into the cattle of the Code of Civil Procedure of the State of California.

Babson was comforted. "We can lick him with that," he suggested.

Maybe. It depends entirely on how hard they fight. Under legislation remission has been appointed and this commission has control of the socalled unappropriated waters in all streams in this state. There are, undoubtedly, billions of gallons of socalled unappropriated water in Eden Valley Creek, and there is no doubt but that the State Water Commission will grant the petition of the Forlorn Valley Irrigation District for the alengineer that the water thus allocated can be led to the land it is proposed to irrigate and that you have proper impounding facilities. As I understand your situation, if you can get your machinery in operation to enter a condemnation suit before Tichenor sells his dam-site to this power company you suspect of having an interest in it, and before the Kershaw girl sells her lake-site to the same power comand stretched his parenthetical legs. pany, you will, by the filing of that "Well, recken I'd better git on the suit, automatically ruin the aspirations of your competitor, and you "Miss Kershaw knows all about you may safely accept my assurance that knows I've sent for you. There's a you can win such a condemnation liss Bachman staying with her at suit. However, what the proposed irpresent. Tell her I suggested she send rigation district will have to pay Tich-Miss Bachman back to Valley Center enor and Miss Kershaw for these properties is, of course, a matter for a jury to decide, but whatever the figure the jury sets—and it is entitled, under the law, to set a figure some-what higher than the reasonable value of the properties in the case of condemnation by an irrigation district—your irrigation district will have to pay the price within thirty days or forfeit forever its right to acjoke on Rube and me if she takes a quire the lands. You cannot keep your notion to fire him - for a woman's paw on this mouse indefinitely, Mr. Babson; hence, when you enter the suit you should make certain of the funds for payment, immediately upon being granted judgment. I suggest, therefore, that even before the district is organized, you confide your plans to some substantial bond house, have them examine the potential security of the bonds you purpose issuing and selling them and be all set for closing the transaction promptly.' Babson nodded his comprehension

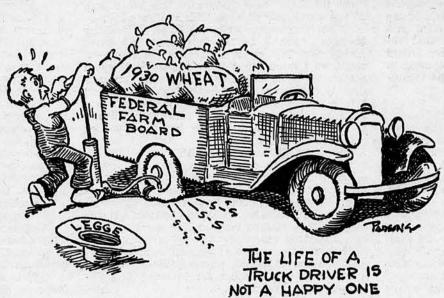

and the attorney continued: "Your first choice of an impounding dam is now owned by Tichenor and the lakesite by Miss Kershaw. If these properties are sold to the power company before your district is organized, the ice utility, cannot be disturbed in its ration. You understand that point

"Will Never Occur"

Again Babson nodded.

"We will assume that this is exactly what will come to pass. You will understand that in the position the power company will occupy, it will not have to purchase or condemn water, as embodied in paragraph 534 any water rights from Tichenor and Miss Kershaw. The water will pass over their ranch lands just as it has been passing for centuries, and the power company will merely impound it just above the point where it normally goes to waste on barren lands which still lie in the public domain. The Department of the Interior, which has jurisdiction over the public domain, will doubtless make no objection to the impounding of the water by the power company, but in the event that settlers should in the future file homesteads on the infertile lands just below the power company's dam, the power company will be forced to let such settlers on lands riparian to the old channel of the stream have their fair share of the water."

"That is a contingency which will never occur, Mr. Gagan. Those waste lands, even with irrigation, will never (Continued on Page 26)

Power Washing Machines Head the List in the Equipment Budget

BECAUSE of the labor which it saves, the washer is generally one of the first pieces of electrical household equipment purchased for farm homes. In a survey of Kansas rural homes it was found that the energy consumption for the newer types of washers is around 2.5 kilowatt hours a family a month or approximately one-third kilowatt hour a person, a month. Some types have slightly higher consumption and with the older types the consumption may be about doubled. However, when compared to the service rendered and the

Good Equipment Deserves Good Care

saving of woman power, it is evident that the consumption of electric power is negligible.

The strength required to wash by hand power

The strength required to wash by hand power the family laundry is prohibitive to the average woman's well-being; and the time required does not result in a well balanced day. In addition, the effect of scrubbing fabrics on a hard washboard results in shortened life and increased upkeep.

The family washing can be done with a power washer in one-half the time that it would take with a hand washer and in less than one-third of the time required with a washboard, according to records kept by the committee on the relation of electricity to agriculture. It requires approximately .55 kilowatt hours for an average washing of 35 pounds.

Studies of repair costs on power washers have been made too and the results show that most repairs are due to failure on the part of the operator to follow manufacturer's instructions in regard to lubrication. The moving parts of the machine and the motor should be oiled and greased according to the instructions that accompany the washer. The manufacturer knows best what is necessary to keep his equipment in good running order and the procedure he recommends should be followed.

Improved Gasoline Models Available

For homes without electric current the gasoline motor is quite ideal. The machine is controlled by a convenient foot pedal which makes starting as easy as an automobile. A pint of gasoline will do the average family washing. The newer models are built so that they can be safely used in the kitchen.

Some machines are so designed that by removing only four bolts, the gasoline motor is interchangeable with the electric motor. In case the farm is equipped later on with electricity, the same washer can be used. Some washers are equipped for a removable ironer; some even have a power meat grinder attachment and an alum-

By Katherine Goeppinger

inum power churn attachment furnished as extra

Choosing the right washer is a serious matter. The investment should be justified by years of satisfactory service. In the first place, just as with any piece of equipment, it pays to buy from a manufacturer and a dealer with an established reputation for maintaining service. Then if repairs are needed, you will not be inconvenienced with long waits for parts. Repairs due to natural wear and tear may include occasional replacement of motor brushes, belts and wringer rolls.

In deciding upon the size and style of machine that will best serve your needs, you must consider your own facilities, your method of washing and the amount of washing to be done. Altho most of the washers on the market will wash clothes clean, there is considerable difference in the amount of time required for the process, the amount of strain upon the clothes, and the general convenience of using the machine.

The Household Equipment Department at Iowa State College has conducted extensive practical tests with laundry equipment and their recommendations are summarized as follows:

Requisites of a Washer

The washers which move the water rather than the clothes cause less wear on the clothes. The material of which the tub of the washer is made, as well as the material of the wringer and all other parts exposed to water, should be rust-proof, easily cleaned and durable. All moving parts should be enclosed and all electrical wiring should be protected from water. The electric cord should be rubber covered. A minimum of noise and vibration is essential in a home washer.

Provision should be made for the tub to drain quickly and completely. It should be impossible for stale water to remain in the tub while the drain is open. It is often convenient to have the outlet threaded for a hose connection so in case there is no floor drain, the tub can be emptied by suction into the sink without lifting pails of water.

The oiling of the washer is often neglected in the home and undue wear of the mechanism results. This process, if simplified or made automatic, will relieve the homemaker and will, in many cases, increase the life of the washer.

The wringer should lock in at least four positions as this number of positions is used in the standardized washing process. The new wringers are made of soft resilient rubber and are a protection to buttons and fluffy fabrics. The wringer safety release should be so located, preferably at the top of the wringer, that it can be operated by either hand and should work easily and instantly.

Youth Is Well Dressed

976—Sports costume. It's full of style. Designed in sizes 14, 16, 18, 20 years, 36, 38, 40 and 42 inches bust measure.

2861—Practical set for Christmas gift. Designed in sizes 12, 14, 16, 18 and 20 years.

999—Tailored mode. Shows simplicity, a keynote to well-dressed youth. Designed in sizes 8, 10, 12 and 14 years.

Any of these patterns may be ordered from the Pattern Department, Kansas Farmer, Topeka, Kansas. Price is 15 cents each.

Sane Philosophy Works Best

By Lucille Berry Wolf

HE winner of the parent's contest on the fundamentals of character building is a farm mother of seven children living in Colorado. The editors feel you would be more interested in a picture of this home than in the name and address. This mother says:

"I am the mother of seven children, ranging in age from 3 to 14, four boys and three girls. We live on a farm and do our own work, so I know what it means to be tempted sometimes to do the easiest thing with the children to obtain peace and quiet. My husband and I both have a college education. We wanted our children, and are trying to rear them in the fundamentals without making life too much of a burden for them or us."

Character fundamentals which were held to be most essential in child training are these: self control; wholesome attitude toward society, meaning friendliness, co-operation, good citizenship; honesty, including truthfulness, dependability, honest thinking; industry; serious and sincere attitude toward religion and morals; courage, including independence and initiative; unselfishness; perseverance; general optimism, geniality, sense of humor, proper contentment; regard for health; respect for learning and accomplishment; tolerance.

Regarding these fundamentals this mother

comments

"To assist me in instilling these fundamentals, I have the aid and co-operation of a husband who believes in and practices them. As a further aid I am using the Bible, the public school, the 4-H club, a good home library, and access to the best in art and literature; lots of fresh fruit, vegetables, milk, fresh air and sunshine; regular work that is not too hard; a chance to earn and spend their own money; and a piano, a violin and a trombone.

"I have evolved this code for parents which I endeavor to follow:

"Live your precepts; do not preach them. "Answer questions frankly and honestly.

"Punish sparingly, rather let misconduct reap its own rewards.

"Never ask foolish or impossible things in an attempt to 'show off' a child for your own glorification.

"When you are in the wrong, admit it.

"Inspire confidence, and you will not need to emphasize obedience.

"Be as fair and square with your child as you are with a friend or stranger.

"Try to keep in mind what is best for the child. Be slow to anger."

Why Not Say It With Fondant?

Homemade Christmas Candy Delights Every Member of the Family

THE mastery of a foundation fondant recipe makes possible the preparation of an array of beautiful and delicious candies, including bon-bons, chocolate creams, dipped nuts, stuffed dates and mints. In my opinion, no box of homemade candy has quite the appeal to the eye and taste that these fascinating candies of many colors, flavors and shapes have. Aside from its many possibilities as the basis of fancy candies, fondant also makes excellent cake icings or foundation for creamy hard sauces into which a little butter may be beaten after the fondant has been slightly melted. Fondant can be made successfully with only a little experience. It should always be made on a clear day as a damp, heavy atmosphere has an unfavorable effect on the boiling of sugar. The following recipe for fondant has been successfully used many times.

Fondant

2 cups sugar $\frac{1}{2}$ cup boiling water $\frac{1}{2}$ teaspoon cream of tartar

Dissolve the cream of tartar in water. Add to sugar and put ingredients in a smooth granite saucepan. Stir, place over fire and heat gradually to boiling point. Stir mixture occasionally to dissolve sugar, but only until boiling begins. Any stirring after boiling begins will cause the candy to granulate. The sides of the pan must be kept free from crystals, for if these get into the candy it will be back to a sugary condition when it is cooled. A fork covered with cheesecloth and tied with thread may be dipped in hot water and used to swab the sides of the pan and keep these crystals out; or a clean pastry brush may be used. Boil without stirring until, when tried in cold water, a soft ball may be formed that will just keep in shape. This is 238 degrees Fahrenheit for those who use a thermometer in their candy making. Remove from fire, and when boiling stops, pour onto oiled platter or marble slab. Do not scrape pan. When lukewarm, not before, stir with a wooden spoon, spatula, or fork until creamy and white. Then knead with the hands until perfectly smooth. Pour into oiled bowl, cover with oiled paper or damp cloth, to exclude air that crust may not form on top, and let stand 24 hours.

Bon-Bons

The centers of bon-bons are made of fondant shapes in small balls. Work in any flavoring desired. For cocoanut centers work as much shredded cocoanut as possible into a small quantity of fondant; for nut centers surround pieces of nut meat with fondant, using just enough to cover. Candied cherries, candied ginger, glace pineapple or apricots are often used in this way. The nut meats or fruit may be chopped fine, if preferred, and worked into the fondant. The centers should be allowed to stand a few hours or over night to become firm, when they are ready to be dipped in melted fondant of contrasting color, or into dipping chocolate. To dip bonbons, put fondant in double boiler and melt over hot, not boiling, water until it barely runs. Keep over hot water that it may be of right consistency during dipping. Color and flavor as desired. Place bon-bon centers one at a time on a twotined fork, twisted wire or sharp hat pin if confectioner's bon-bon dipper is not available. Dip quickly into the fondant, then out, and place on heavy oiled paper. Stir fondant between dippings to prevent a crust from forming. Bon-bons may be topped with nut meats or candied cherries if

Chocolate Creams

Prepare centers of fondant, any of the suggestions given under bon-bons being suitable. Cut dipping chocolate in small pieces, place it in a double boiler and melt, being sure no water or steam gets into the chocolate. Then cool until it is of the consistency of frosting just before it is put on a cake. Dip centers in this, one at a time, place on heavy oiled paper and allow to stand until firm. Dipping chocolate may be obtained from any confectionery or high class grocery. It is sweetened and easier to use for dipping than ordinary sweet or bitter chocolate because it is more creamy in consistency when melted. If ordinary chocolate is used, 1 part of paraffin may be added to 2 parts of chocolate.

Mints are made by melting fondant over hot water and flavoring with a few drops of oil of peppermint, wintergreen, almond or other flavoring, and any coloring that may be desired. Drop from tip of spoon on oiled platter.

By Grace Carlson Fowler

To make cream nut bars, melt fondant and flavor. Stir in any kind of nut meat, cut in pieces. Turn into oiled pan. Cool and cut in bars with sharp knife.

Nuts are dipped as bon-bon centers are dipped. Melt fondant and add flavoring. Dip halves of walnuts, pecans or whole, blanched almonds.

walnuts, pecans or whole, blanched almonds.

Dates are delicious stuffed with fondant and
pecan or English walnut meats, then rolled in
sugar.

(Editor's Note. The Charm Shop is open for your every beauty problem. Please feel free to write to us. Your questions will be answered thru this column, but no names will be signed.)

IT ISN'T just that your teeth are white and perfect in line that gives you a well-preserved mouth. If your gums are neglected until they become tender, soft and weak you are in utmost danger of suffering for a long while. When treatment is given it will have to be faithfully applied to ward off further danger.

A point should be made to train the children in the home to cleanse their teeth thoroly in the morning with a reliable toothpaste and comfortable brush. Gums massaged before breakfast are stimulated and strengthened thus defying a gum trouble arising from soft foods and abnormal

A thoro cleansing of teeth and mouth before retiring also is important. This removes all the bits of food which may have lodged in the teeth and against the gums. Pass dental floss between the teeth to remove the food which was not reached by the brush. This also purifies the breath and removes the acid taste present in the morning when the cleansing was left undone the night before. Once the necessity of washing the teeth and massaging the gums daily is instilled in the child's mind the habit becomes fixed and good, clean teeth are the result.

The presence of unpleasant breath may be caused by abnormal organic conditions. Much benefit is gained by using a balanced diet and general exercises. A physician should be consulted, however, if the condition is chronic.

Even the persistent care of a dentist and per-

fect cleanliness habits at home do not insure white teeth because many teeth can never be made white.

But constant cleaning does give them a shining surface. I have directions for making and applying an excellent homemade tooth polish and will be glad to send it to anyone wishing it. Send a self-addressed, stamped envelope with your request to Barbara Wilson, The Charm Shop, Kansas Farmer, Topeka, Kansas.

Beauty's Question Box

Will you please send directions for cleaning the hair and scalp without the use of water?

Mrs. J. M. M.

In a personal letter I am giving you the names of two common preparations used as a shampoo without water. Also additional treatment for oily or blonde hair. This information will be sent to anyone else desiring it upon receipt of a 2-cent stamp. Address your requests to the Beauty Department, Kansas Farmer.

Please tell me how to remove freckles from my face.
Claudine.

I am sending you our list of three homemade remedies for removing freckles. These will be sent to anyone requesting them and inclosing a stamped envelope addressed to the Beauty Department, Kansas Farmer, Topeka, Kansas.

What's What in Jewelry

BY ANN PERSCHINSKE

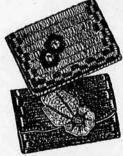

COSTUME jewelry is being worn this season. The designers have created their ware from the most unusual compositions and in the most effective fashions. Fortunately, the heavy glass bead necklace lives no longer, and the tawdry necklace developed from rhinestones or large pearl beads is no longer favored. As in dresses, rich dull colors and simplicity in design are emphasized.

Crystal beads have long been recognized as the ideal ornament for evening wear. They are effectively combined this season with gold and silver. In some cases, tiny odd shaped mirrors are alternated between crystals. If crystal beads are worn in daytime, they are designed simply and are in choker length. It is always advisable to adhere to colored sports jewelry for daytime wear rather than pearls or crystals.

The smartest feature in costume jewelry is a light weight, button-like composition called bakelite, from which attractive novelty jewelry is created. Necklaces, earrings, bracelets, or pins may be obtained in this in every conceivable color. Extremely new and rich is the luscious burgundy shade, which blends pleasingly with most of the dark winter shades. Turquoise blue, emerald green, amber, combinations of black and white, garnet and coral are equally popular colors in costume jewelry.

Complete sets of costume jewelry are available at a low price and should be purchased to harmonize with other garments.

Handicraft Department

How do you like our handicraft department? We are having lots of fun gathering new ideas for it. This week's offering is especially appealing. Anyone who can manage a crochet needle can make the bags pictured on this page, as well as the

doilie shown in the center of the page. The bags shown

here are made in black and white, and orange, yellow and tan. Any combination might be used, and if a person is clever she can have a bag to match her new knit suit or dress. We have beret directions, also, if you want to crochet a beret to complete the ensemble. The

beret directions sell for 10 cents each or 2 for 15. We have the directions for either the wool or cotton. The directions for the bags are 4 cents each. I want to tell you a little about the centerpiece.

It is made of old silk stockings which have been

dyed, cut and crocheted. These are especially

pretty on old-fashioned walnut tables. The directions for this centerpiece are 4 cents.

Roses may bloom in the winter in the form

Roses may bloom in the winter in the form of attractive pajama pillows. The one shown here was made of a rayon silk in old rose and was truly pretty. You see how it draws up with a cord. It makes an ideal place

to keep pajamas during the day. This might be used to an advantage in train-

advantage in training a child to keep his night-clothes in one place, and where he himself can find them. The girl away at college would appreciate a rose like this for Christmas. The directions for the pajama pil-

low are 4 cents, also, and are easy to follow.

Order any of these items from the Handicraft Department, Kansas Farmer, Topeka, Kan.

Rural Health

Liver and Onions Helped, and the Patient With Pernicious Anemia Made a Prompt Recovery

WHEN I was a young doctor one ounce of rose water in such a way as of my distinguished colleagues to make a well-blended compound.

had more than he could do handed

4. After washing the hands well ho had more than he could do handed his particular doctor made me a gift. seems necessary. anticipated that the patient would ot have been sent my way had he ot seemed doomed to early death.

In those days we used to feed such atients Red Bone Marrow and a lot f other inedible things, none of which id any good. I liked my patient and elt sorry for the poor man looking out from his lemon yellow face with pitiful, appealing eyes that peered forth from deep caverns. So when he expressed his dislike of what he was getting and begged for liver and onons I told him to go to it. It might urt my budding reputation, but it vould not hasten the demise of a man o far gone. They told me afterward hat he made a wonderful meal and vanted to do it again. I agreed. He cept it up and improved so that the gain was quite remarkable. I suppose ne might have been living yet had I een smart enough to realize that his improvement came from the lowly liver, of which, unfortunately, he grew tired. The case gave me quite a o my medicine.

Nowadays it is quite generally nown that the deficiency in a patient's bone marrow that causes a should be carefully bandaged and carshortage of red blood cells can be overcome by feeding liver. The substance that is deficient is found in once daily and very gentle massage high concentration in domestic meat- given. producing animals. It is not limited to the liver, but is also in the kidneys and stomach. Doctors therefore treat pernicious anemia by giving the paient compounds of liver extract, dessicated stomach and kidneys. The material selected depends on what the patient can take best and what can be secured.

When liver is used it may be raw or cooked, but must not be overcooked. If used raw the liver is first ground in a meat grinder and the fibrous material strained out. The pulp remaining may be flavored with lemon, orange or catsup to suit the taste; also microscopical tests would be of value. salt and pepper may be used. Liver extract may be purchased of druggists fully prepared for use.

Build Up the Body

Please tell me what to do for my face. I had a spell of sickness when I was 18 years old and have had brown patches since. They call them liver spots.

J. L. F.

Liver spots are patches of skin in which a brown pigment has been deposited. They have nothing to do with the liver, but are often associated with uterine disturbances in women. They will go away when you get back to good general health and proper circulation.

Will Aid Chapped Hands

Will you please publish the recipe for making a hand lotion for chapped hands? It contains quince seeds, soft water, rose water and glycerine. S. M. C.

We have published this excellent prescription for healing cracked hands and keeping them from chapping for several years in succession. We are glad to repeat it.

1. Put 1 ounce of crushed quince seed in a quart of rain water and let it stand all day in some mildly warm place such as the back of the kitchen range.

2. Strain to get rid of the seed. 3. Add 4 ounces of glycerine, a half pint of bathing alcohol, and half space to come by."

ver to my care a patient with per- and drying with a dry towel, rub the icious anemia. Green the I was, I lotion in thoroly. Repeat the applinew enough to be suspicious when cation two or three times a day as

But Let's Store the Food

Please say whether it is very dangerous to allow canned foods to stand in an open can. Would the use of such foods cause death from ptomaine poisoning?

M. C. S.

No. It is fair to say that the danger of a tin can usually is exaggerated. The inner surface of a can used for packing food is treated with a preparation which is insoluble in ordinary juices. It is only when a flaw is present that acid foods may attack the container. However, a better plan, once a can is opened, is to store what remains of the contents in a clean, covered vessel.

Absolute Rest Is Needed

I am anxious to know what neuritis of the arm is and whether it ever can be cured. P. W. D.

Neuritis is a term applied to an inflamed nerve. The arm is rather a common site. It may come from the poost because people gave the credit arm getting thoroly chilled, from injury, from strain, or it may follow a wasting illness. The best remedy is absolute rest and warmth. The arm ried in a sling for at least three weeks. The sling may be removed

Acid Stomach, Maybe?

I am an unmarried girl, 24 years old. I have what seems to me an odd aliment. No matter how much I eat, I have a "gone" feeling in my stomach most of the time. This, is a miserable feeling, and causes great weakness, too. Can you tell me what is the name of this disease? And is there any cure for it?

A. B. C.

Such a "gone feeling" is often felt in hyperchlorhydria, a condition in which there is excessive activity of the acid glands of the stomach. An examination of stomach contents with chemical tests for acidity and also

A Flank Attack

The camp counselor was explaining the rules of a new game.
"If the enemy calls your number

from his side of the battle-field," she said, "you must be a 'dead man' immediately. Drop just where you are and lie still."

Ten minutes later, came an agonized whisper from the youngest camper:

"Please may I move now? I'm a dead man, but I'm on an ant-hill!"

Pass the Murads

A tabloid newspaper, offering \$1 each for "embarrassing moment" letters received the following epistle:

"I work on an early night shift in a steel plant. I got home an hour early last night and there I found another man with my wife. I was very much embarrassed. Please send me \$2 as my wife was also embarrassed."

The editor, so we are told, sent a check for \$3, admitting the possi bility that the stranger, too, might have been embarrassed.

Moving Hiatus

I was warning my little neighbor about being careful crossing streets. "Oh, don't worry," the child assured me. "I always wait for the empty

Make it! Taste it! Comparel

See what a difference Calumet's Double-Action makes

2nd ACTION 1st ACTION

MAKE THIS TEST

Naturally, when baking, you can't see how Calumet's Double-Action works inside the dough or batter to make it rise. But, by making this simple demonstration with Calumet Baking Powder and water in a glass, you can see clearly how Calunet acts twice to make your baking better. Put two level teaspoons of Calumet into a glass, add two teaspoons of water, stir rapidly five times and remove the spoon. The tiny, fine bubbles will rise slowly, balf filling the glass. This is Calumet's first action—the action that Calumet specially provides to take place in the mixing bowl when you add liquid to your dry ingredients.

After the mixture has entirely stopped rising, stand the glass in a pan of hot water on the stove. In a moment, a second rising will start and continue until the mixture reaches the top of the glass. This is Calumet's second action-the action that Calumet holds in reserve to take place in the heat of your oven. Make this test to-day. See Calumet's Double-Action u protects your baking from failure.

FREE

NEW

CALUME1

BAKING

BOOK

WANT proof? Want to know why Calumet is the most popular baking powder in the world? . . . the favorite baking powder of millions of women?

Just make a Calumet cake-you'll see! You'll see the difference Calumet's Double-Action makes. New delicacy of texture! Extra tenderness! Superb flavor!

Calumet brings this extraordinary success to baking because it acts twice-not just once! The first action, which begins in the mixing bowl, starts the leavening. Then, in the oven, a second action begins. It continues the leavening. Up! . . . up! . . . it keeps raising the batter and holds it high and light. Cakes, muffins, quick breads bake beautifully, even though you may not be able to regulate your oven temperature with utmost accuracy.

All baking powders are required by law to be made of pure, wholesome ingredients. But not all are alike in their action nor in the amount that should be used. And not all will give equally fine results in baking. Calumet is scientifically made of exactly the right ingredients, in exactly the right proportions to produce perfect leavening action-Double-Action!

Try Calumet. Try it confidently—even if you're a beginner you'll have marvelous luck. Remember to use only one level teaspoon of Calumet to each cup of sifted flour. This is the usual Calumet proportion and should be followed for best results-a splendid economy which the perfect efficiency of Calumet's leavening action makes possible . . . Will There be a Shortage of Livestock Feed in Kansas Before "Spring Comes North Again?"

OLDER weather recently has in-a creased the amount of feed re-aired by livestock. The state will be pasture. There will be no corn or kafir to sell on the markets. Roads are in bad condition. Wheat, 58c cream, 24c; eggs, 30c.—James McHill. quired by livestock. The state will be most fortunate if a feed shortage the wheat and fall sown alfalfa over much of Kansas. An amazingly large amount of wheat is being fed to livestock; it has been estimated that 27 million bushels of the Kansas wheat crop of 1930 will be used in this way. Livestock is generally in good condition, with less cholera, flu and blackleg than usual.

Barton-We have received considerable moisture recently, and the wheat has been making a fine growth. Wheat, 56c; butterfat, 24c; eggs, 26c; prairie hay, \$8; alfalfa hay, \$14; turkeys, 18c.—Alice Everett.

Bourbon-Wheat is making a fine growth. Farmers are busy husking corn. A good rain would be helpful. Corn, 80c; hogs, \$7.50; milk, \$1.70 a cwt.—Robert Creamer.

Cherokee—Wheat has made a rather slow growth, because of a lack of moisture. Farmers are husking corn; this work was delayed somewhat, due to the crop being too green to crib. Pumpkins are plentiful, but small. Cream, 24c; eggs, 30c; mixed feed, \$1.45.—J. H. Van Horn.

Cheyenne—All farm work, and especially corn husking, was brought to an abrupt stop a few days ago by an 8-inch snow. About half the corn is still in the fields. The Farm Bureau held a corn show at St. Francis December 3, in connection with its annual meeting. Cream, 25c; eggs, 25c; heavy hens, 12c; potatoes, \$1.—F. M. Hurlock.

Clay—Two inches of rain fell here re-Clay—Two inches of rain fell here recently, which was fine for the wheat. Corn husking is finished; yields were light. A considerable amount of road work is being done, which is supplying work for the folks who desire employment. Hens are laying fairly well, altho considerable illness is being reported with poultry. Prices are improving.—Ralph L. Macy.

Ellis—We had another good rain a few days ago, which supplied enough moisture to carry the wheat thru to spring. There is plenty of wheat pasture. Corn husking is mostly all finished. No public sales are being held. Not much wheat is going to market. Wheat, 55c; corn, 55c; kafir, 45c; shorts, \$1.40; bran, \$1.20; turkeys, 17c; hens, 13c; butterfat, 24c.—C. F. Erbert.

hens, 13c; butterfat, 24c.—C. F. Erbert.

Ford—A 2-inch rain here a few days ago put the wheat in excellent condition for the winter; it is supplying a great deal of pasture. The corn and feed crops were light. Farmers are well along with their work. Some butchering is being done. The gas pipe line thru the county is finished; the company is building a big "booster" station in the southwest part of the county. Wheat, 59c; barley, 45c; eggs, 28c; flour, 95c.—John Zurbuchen.

Graham-We had a 21/2-inch rain recently that put the wheat in fine condition for the winter. Fields are muddy. Corn husk-ing has been delayed. Livestock is doing well, as there is plenty of wheat pasture. Farm labor is plentiful. Not many farm sales are being held. Wheat, 50c; corn, 50c; barley, 30c; cream, 24c; eggs, 30c; hogs, \$7.—C. F. Welty.

Harvey—The weather has been cold and stormy. Wheat has been making a fine growth, as the soil contains plenty of moisture. Wheat, 56c; corn, 70c; bran, \$1; shorts, \$1.35; oats, 35c; kafir, 50c; flour, 95c to \$1.15; butterfat, 25c; turkeys, 16c; heavy hens, 14c.—H. W. Prouty.

Jefferson—Wheat and rye have made a good growth and are supplying some pasture. Feed is disappearing rapidly. Hog cholera is prevalent. Corn husking is nearly finished. Public sales are well atgood growth and are supplying some pasture. Feed is disappearing rapidly. Hog cholera is prevalent. Corn husking is nearly finished. Public sales are well attended, but prices are low. Some soil terracing is being done. The county will take over the township roads about the first of the year.—J. J. Blevins.

Labette—The weather has been rather cold, almost too much so for work outdoors, in any comfort at least. Wild game is more plentiful than usual. There still is some grass in the pastures. Corn, 70c;

some grass in the pastures. Corn, 70c; wheat, 70c; bran, \$1.10; eggs, 25c; cream, 32c.—J. N. McLane.

Neosho—Wheat has enough moisture to take it well into the winter. The crop has made an excellent growth, and it is supplying a great deal of pasture. Corn husking is completed. More fall plowing than usual has been done this year. Cattle are beinging feirly good prices at public sales. usual has been done this year. Cattle are bringing fairly good prices at public sales. Some farmers are "getting up" their year's supply of fuel. Wheat, 70c; corn, 75c; kafir, 80c; oats, 45c; alfalfa hay, \$15; prairie hay, \$9; potatoes, \$1.20; hens, 15c; eggs, 30c; turkeys, 15c; butterfat, 24c.—James D. McHenry.

Ness—A great deal of rain in the last few days has put the wheat in splendid condition. Livestock is doing well on wheat work on the Chinese War.

Osborne-We received a fine rain of 21/2 does not develop before spring. Reinches a few days ago, which made it neccent rains have been of great help to
wheat pasture. Not much kafir has been threshed, as it is damp and the price is low. Some hog cholera is reported. Cream, 22c; eggs, 27c.—Roy Haworth.

Rawlins—Considerable moisture has fallen here recently in the form of rain and snow. This has been fine for the wheat, which is doing unusually well. Following the snow of November 20 the roads were blocked for a time. At least part of this moisture has gone into the subsoil, and it doubtless will be helpful later.— Madsen.

Rice—Recent rains have been very helpful to the wheat, which is making a fine growth. Farmers have made good progress with their corn husking and other work. Considerable farm real estate is changing hands, but there is very little sale for city property. Livestock is in good condition. Wheat, 56c; eggs, 27c; cream, 24c; hens, 13c.—Mrs. E. J. Killion.

Riley—We have had some nice rains recently, which have put the soil in splendid condition for winter. Wheat is moking an excellent growth. Quite a few cattle have died in this county because of corn stalk poison. Corn, 82c; wheat, 74c; rye, \$1; oats, 45c; eggs, 20c; cream, 29c; geese, 10c; ducks, 9c.—Ernest H. Richner.

Rooks—We have had 2% inches of rain, which "soaked up" the feed and delayed corn husking. Corn is not yielding so well as had been expected, and the grain is of rather poor quality. There is a vast amount of wheat pasture. Eggs, 25c; cream, 24c; bran, \$1; shorts, \$1.40; wheat, 45c; corn, 43c.—C. O. Thomas.

Wallace—We had a very bad blizzard here a few days ago. Fields were drifted full of snow as high as the vegetation. Corn shelling will start as soon as the snow clears.—Everett Hughes.

Wyandotte—We have been enjoying fine fall weather, which was helpful in saving feed for livestock and also in enabling farmers to do field work. Some kafir and soybeans have been threshed; kafir made 45 bushels an acre, soybeans about 20 bushels. 45 bushels an acre, soybeans about 20 bushels. Corn husking is almost finished. Farmers are butchering hogs. Hogs in the feeding pens are doing well on new corn. Another gas well was "brought in" a few days ago. Taxes are higher than ever this fall.—Warren Scott.

A Good Almanac

Armour's Farmers' Almanac for 1931 is an unusually attractive publication, with a fine cover and splendid illustrations. It ought to be in every Kansas farm home. A copy may be obtained free on application to Armour Fertilizer Works, 111 W. Jackson Blvd., Chicago, Ill.

Fortunately for father, Willie's history teacher isn't requiring any home-

He gets the Best grain Prices...by Telephone

A Bell System Advertisement

INCREASED profits from his sales of grain are made by a farmer near Athens, Ill., who uses his telephone to keep in touch with his local farmer's co-operative. His additional returns from this source amount to a substantial figure. Among other transactions, he sold 300 bushels of wheat at a price within one cent of the highest figure that was quoted during threshing time—a price that was from 10c to 15c per bushel higher than that received by many other farmers in his neighborhood. By keeping posted on the right times to sell, he is always assured of receiving the maximum return on his crops.

The telephone is equally helpful in promoting profitable sales of livestock, fruit and vegetables through co-operative associations or local markets. It is always valuable in keeping up friendly contacts, making engagements and summoning help when sickness or accident occurs.

The modern farm home has a telephone that serves faithfully and well, rain or shine.

An Ideal Christmas Present for Your Boy

The Book of **ODCRAFT**

By Ernest Thompson Seton

A treasure chest of Woodcraft and Indian lore for the boy of any age. Written by the founder and head chief of the Woodcraft Indians; author of "Wild Animals I Have Known," and other popular books of the great outdoors. A book that every boy, when he sees it, will consider his most prized possession.

Here are just a few of the many things this great book for boys contains: How to Read Sign Language; How to Make Fire by Rubbing Sticks; How to Make a Camp; How to Find Your Way When Lost in the Woods; How to Tie All Kinds of Knots; How to Know Which Plants Are Edible and Which Are Poisonous; Weather Wisdom; How to Use Your Watch as a Compass; How to Make a Bed of Branches; How to Make a Bow, Arrow, Thongs, Buttons, Bird Boxes; How to Know Trees, Animals, Birds, Wild Flowers, Fruits, Stars and the Good and Bad Snakes; How to Tell Mushrooms From Toadstools; Scouting, Signaling, Signs, First Aids, Trapping, Tracking, Boat Building, Bird Stuffing, Curing Skins, and many, many, other practical things for the outdoor boy.

In addition the book, profusely illustrated, not only has chapters on Indian Ways and Legends, but contains a good many carefully-selected campfire stories of Indian character, natural history, etc., as well as practical ideas for financing a camping trip by making money during spare time at home, manufacturing bird houses, Indian stuff, rustic seats, etc.

Here's a Tip to You "Lucky" Folks Who Won "Free Lots" at Recent Fairs and Stock Shows

tive Service Department during the of persons then are informed they last several weeks: "Gentlemen: have been awarded a lot in a new While attending the Kansas State subdivision worth approximately \$300 Fair at Hutchinson this fall, we were or \$400. To get the lot it is necessary asked to write our names on some only to pay a small sum for title, abcards. I signed one card and my wife another. We were instructed that we ally is placed at \$59 or \$69. The fol-Now each one of us has received a most prevalent plans require that the letter stating that we have won lots in Wichita, but we must go to Wichita, inspect the lots, and, in case we approve them, we are to pay \$29 each in fees before a certain date. My wife's letter reads the same as mine.

"What I should like to ask is, do you know anything about this company, and what do you think of a proposition of this kind? Since both of our letters are exactly alike, I think there must be a catch some-

"Yours truly, "Richard J. Johnson."

we advised that we knew nothing about this particular company, but that we had collected some informa-tion on the "free lot" scheme as it is being operated in many parts of the country. Judging from the number of similar inquiries received, we believe paragraphs was taken from a bulletin put out by the Business Protective Committee of the Wichita Chamber of Commerce, and we believe it needs no explanation.

"Free Lot" Epidemic Widespread

"The epidemic of 'free lot' schemes which seems to be sweeping this terand complaints that an outline appears necessary. We are not opposed to real estate developments as such; values. However, when misrepresensell subdivisions, we believe the purchasing public is entitled to know the facts. At county fairs, stock shows, picture shows, and other public gatherings as well as by personal calls, cards are handed out or names are taken by the promoters, and the impression left that a drawing will be held, the winners of which will receive a piece of real estate.

"The Bureau has no record show-

THE following letter is typical of ing that such drawings have ever a number received by the Protec- been held. Everybody wins. Hundreds stract, and other expenses. This usuwould not be obligated in any way. low-up system used varies. The two winner come to the property to see the lot which has been won and at that time pay down the amount required.

Pay Cost of Improvements

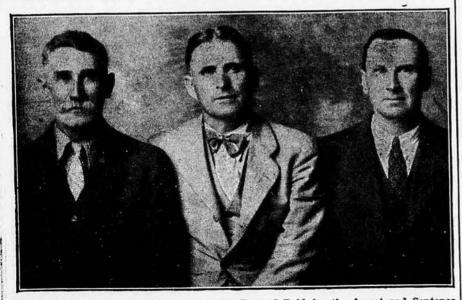

"Under the one plan, a regular lot 50 by 100 feet, is shown the so-called winner, and the title sum is collected. Then the 'winner' is required to sign a contract for the deed, which, in addition, calls for monthly payments of \$5 until a total sum ranging from \$309 to \$369 is paid. The 'winner' is told that the additional amount In reply to Mr. Johnson's inquiry, represents the cost of improvements to be made at a later date. Thus, this lot costs the 'winner' from 'free' \$309 to \$369.

Have Big "Trade-In" Value

"The other plan is to show the winner a lot which is unsuitable the time has come to put all of our for use. Sometimes it is in a gully, readers "wise" on this proposition, sometimes on a rocky cliff. The pro-The outline given in the following moters have no intention that the prospective purchaser be pleased with what he has won. This gives them the opportunity to allow the dissatisfied 'winner' a \$300 trade-in value on a so-called \$600 lot in a better location. Either plan secures the desired results. Many persons are brought to the property, thereby giving the salesmen an opportunity to dispose of the ritory has brought so many inquiries lots. In neither case are the lots and complaints that an outline ap- 'free,' and affidavits in the bureau files show that in many cases promises have been made to re-sell the lots neither do we advise regarding land for the purchaser at several hundred dollars' profit in a few months. But tation and bait advertising is used to such promises are never found in the contracts signed by the purchaser.

Business Bureau Against It

"In the files of the bureau are many complaints from victims of this bait practice. The plan, which depends on deception for its success, is not allowed in many states which have Real Estate Commissions. Winners of 'free lots' may do well to 'Before you invest, investigate.'

Why Diet Changes

(Continued from Page 7)

food is needed. A counteracting influence is the increased athletic activity of the city man.

The extent of malnutrition in the nation is a factor in consumption. Health agencies in recent years have made notable gains in correcting malnutrition by disseminating understanding of the body's needs. Some of the increase in the use of vegetables, fruits and dairy products can be traced to efforts like these. The campaign against malnutrition has been aided materially by the increased ease with which fresh vegetables and fruits and dairy products can now be obtained.

In a multitude of ways we see how changes in methods of transportation affect consumption of food. Development of railroad refrigeration has brought fresh vegetables and fruits and dairy products within reach of consumers thruout the year. The advent of the truck has operated to the same end. Fresh vegetables are no needs. longer only seasonal dishes on city tables.

Changes in methods of food preparation and processing are of significance. For instance, one reason for the decline in wheat consumption may be the rise in commercial baking. Commercial bakers, it has been pointed out, permit less waste in the raw materials they use than does the average housewife. Accordingly, wheat goes farther than it once did. The new freezing processes may materially affect consumption of fruit. increase meat consumption.

and San Francisco, say, might order smaller proportion from February to the second half of 1932.

The Outlaws of Eden

(Continued from Page 17)

attract anybody. The soil, in addition to being of a wretched quality, is so very porous the water would sink shortly after reaching it. Irrigation in this area, therefore, would be impossible to an extent that would be liable to embarrass the owners of the dam."

"We will assume you have the correct viewpoint. We have already assumed that you will not be able to acquire the Tichenor dam-site and the Kershaw lake-site. Now, have you an alternative dam-site and an alternative lake-site? Unless you have, just hand us a check for the cost of this interview and forget your irrigation project."

(TO BE CONTINUED)

Grain View Notes

BY H. C. COLGLAZIER Pawnee County

The moisture we received in the last few days has put the wheat in fine condition for the winter. Altho at times the rain assumed the proportions of a flood, very little of the moisture ran off as surface water. The absence of hard freezing following the rain allowed the moisture to settle into the subsoil, where the wheat plants can use it in the spring. If the amount of moisture we received had fallen as snow, things would have been tied up for several days. Just before the storm struck, the sky and distant objects took on a very peculiar color. Everything appeared strange, and the clouds were vellow and tinged with green. The clouds were boiling and rolling close to the ground, and occasionally a portion would dash toward the earth like the tail of a fish that is partly out of the water. Several small "twisters" were reported in the county, and we were not surprised to learn of the big "twisters" in other parts of the state and in Oklahoma. At any rate we were glad to get so much moisture stored in the soil at this season. A big snow does so little good that it usually is a liability instead of an asset. Considerable wheat is moving to market the last few days despite the low market. It will soon be tax paying closing date, and farmers are afraid the price will go lower near the time when taxes must be paid.

The local Granges and the city of Larned are working hard to complete arrangements for entertaining the State Grange annual session that meets here the second week of December. If the weather is favorable there will likely be a large crowd.

SALE OR EXCHANGE

BARGAINS IN LAND, TRADES A SPECIAL-ty, Lee Schesser, Calvert, Kan.

MISCELLANEOUS LAND

PROSPERITY—INDEPENDENCE FOR YOU on a Western Dakota farm. A well selected dairy, grain, or diversified farm or stock ranch in Western North or South Dakota offers a real chance for independence. If you're working for wages or are dissatisfied with your present location, you'll find more contentment, more comfort on the farm today than ever before. Prices are low, terms easy. The Milwaukee Road wants only to help new settlers get best land values for their money; guard them against any misrepresentation. Our Agricultural Agents, having carefully investigated these lands, will gladly advise you the kind of farming suited to each locality—and continue to advise you after settlement. Only a successful farmer is a benefit to the Milwaukee Road. These rich lands vary—from level to slightly rolling good for each locality—and continue to advise you after settlement. Only a successful farmer is a benefit to the Milwaukee Road. These rich lands vary—from level to slightly rolling, good for tractor or horse farming—to rough or hilly land good for grazing. Prices vary with location and quality, from \$5 to \$25 per acre, unimproved; from \$15 to \$40 per acre, improved. We recommend only land where corn, wheat, flax, oats, barley, alfalfa, alfalfa seed, sweet clover, vegetables, small fruits grow profitably, where stock, poultry, hog raising and dairying are proven successes. Good roads, railroads, markets, schools, churches, good neighbors. Ask questions. Write now for free, illustrated booklet. Tell us the kind of farm you wish, crops or stock you want to raise. All questions reliably answerd. No obligation. Low Homeseekers Fares. Write R. W. Reynolds, Commissioner, The Milwaukee Road, 917-U, Union Station, Chicago, Illinois.

VALUABLE FARMS, CHEAP NEW LAND OR improved farms, rich soil, low taxes, low cost production. Any sized farm for any kind of farming in Minnesota, North Dakota, Montana, Idaho, Washington, Oregon. Write for free book. E. C. Leedy, Dept. 9003, Great Northern Railway, St. Paul, Minn.

OWN A FARM IN MINNESOTA, DAKOTA, Montana, Idaho, Washington or Oregon. Crop payment or easy terms. Free literature; mention state. H. W. Byerly, 81 Northern Pacific Railway, St. Paul, Minn.

in territories in the following states: Missouri, Kansas, Nebraska, Okishoma, Iowa, Illinois, and North Dakota. These agencies are worth 2,000 to 3,000 dollars yearly. We furnish a Ford service truck and refer all territorial mail orders to our distributors. Men selected must be over 25 years of age, favorably known in their communities and must be prepared to furnish references. Small warehouse space required. If you have these qualifications and if you are looking for a life-long connection, write at once in your own handwriting to The Salt Products Company, General Offices, Western Reserve Building, Cleveland, Ohio.

This is the year for the election of state officers, and that will have a tendency to draw a larger attendance. The details for handling a meeting of this size are numerous, and local conditions are rather handicapped by not having a full time paid secretary of the Chamber of Commerce. The major part of directing the arrangements has fallen to the local Grange deputy, who like every other farmer is pretty busy at home. The expense money for the meeting is being raised by means of a play at the city auditorium. A ticket campaign has been carried on thruout the county, and it is likely a very large number of folks will see the play. Larned has sent out a state welcome call for all Grangers to come and enjoy the week as her guests.

A co-operative creamery and produce business is being organized in the adjoining county. It seems as if the time would have to come when every farmer would sell his crops and produce thru a co-operative organization. Without doubt large profits have been made from the farmers' products. If there were no profit how could every little town support from one to half a dozen cream stations? Where did the privately owned elevators, poultry establishments, creameries and numerous other businesses get their money if they did not make it out of the farmers' produce? The Board of Trade building in Chicago was not built with groceries, shoes or clothing but from the profits made in juggling the price of farm products, much of which never was produced. The farmer owned co-operative creamery at Wakeeney has without doubt held the cream price up in North Central Kansas several cents over what it has been in this part of the state. Friends near Paige City have been receiving about 6 paid in Larned despite the cheese plant. Several cents' difference in the price between light hens and heavy hens is a nice graft. Did you ever difference in the price when he w birds are dressed they are all the Canada.-Minneapolis Journal. same price, and the consumer just asks for a large weight or a light weight. Most of the co-operative

When the Worst Comes

The little boy was gazing pensively at a gooseberry-bush.

"What's the matter, darling?" asked his mother. "Have gooseberries any legs, moth-

er?" asked the little chap. "No, darling, of course they haven't," said his mother.

The boy's look became more pen-

sive than ever. "Then I guess I must have swallowed a caterpillar," he said.

Mind Your Gears

An Englishman on a visit to the West decided to go horseback riding. The hostler who was to attend him asked: "Do you prefer an English saddle or a Western?"

"What's the difference?" he asked. "The Western saddle has a horn," replied the attendant.

"I don't think I'll need the horn," cents more for cream than has been said the Englishman. "I don't intend to ride in heavy traffic."

Looking Backward

LIVESTOCK NEWS

BY J. W. Johnson Capper Farm Press, Topeka, Kar

Henry Murr, pioneer breeder of registered Chester White hogs at Tonganoxie, Kan., is of-fering nice spring boars at attractive prices.

G. M. Shepherd, Lyons, Kan., has had a nice trade in Durco boars this fall and still has for sale some nice ones at very fair prices. He is also offering last spring glits that he will hold and breed for you or he will ship them open.

Harry Bird, Albert, Kan., breeds Polled Shorthorns and has for sale some exceptionally nice young bulls for sale of serviceable ages. Albert is in Barton county and not far from Great Bend.

Ray Marshall, Stockton, Kan., breeder of registered Jerseys, writes me he has been receiving splendid results from his advertising and that he has sold 10 heifers and a young bull and that he only has four more heifers for sale, one of them to freshen during the winter.

Latham, Kan., who have been advertising Polled Shorthorns with milking qualities and some good records back of them saying they have had splendid results and still have some nice bull caives for sale.

Petracek Bros., Oberlin, extensive breeders and exhibitors of Chester White hogs write me they have had a splendid trade this fall and because of the demand for both boars and for open glits they will not have glits enough for a bred glit sale this winter. However they will have some mighty fine bred glits for sale a little later on.

Next Thursday, December 11 is the date of the Henry C. Meyer dispersal sale of registered Holstein cattle. It is important to remember that this herd is a Washington county herd and that good records are back of every cow in the sale. Three former Washington county buil association buils have been used in building this herd and its dispersal is your opportunity to buy real cattle at your own price in the auction ring. The catalog is ready to mail and you still have time to secure it by addressing W. H. Mott, sale manager, Herington, Kan. The sale is next Thursday, December 11, at the farm a few miles southeast of Linn, Kan.

David Page, owner of the Fairfield farm herd of registered Ayrshires at Topeka, is advertising young bulls sired by prize winning bulls and out of cows with good record for milk and butterfat and at prices that are certainly very reasonable. The Page herd of Ayrshires has won signal victories in the show ring again this year and for years has been the outstanding herd at all of the leading fairs all over the country and at the national dairy shows. It is an unusual opportunity to secure a future herd bull at a very low price cosidering what is back of him. He offers bulls from caives up to those off enough for service. The farm adjoins Topeka and you are invited to come and see the herd and the caives that are for sale. You can write him for full descriptions and prices. Address David Page, Fairfield Farm, Topeka, Kan.

Page, Fairfield Farm, Topeka, Kan.

F. M. Conroy's recent decision, because of the illness of Mrs. Conroy to disperse his herd of registered Ayrshire cattle at the old Vinewood park farm, three miles southeast of Topeka, affords every breeder of Ayrshire cattle a splendid opportunity to strengthen his herd with some choice cows or heifers or yearling and heifer caives. Both the senior and liquior herd bulls are going in this dispersal sale and both are valuable animals. It is a working herd and in 1927 was a member of the Douglas County Cow Testing Association, and made an average of 385 pounds of fat for the year. There are 25 cows in the sale that are money makers and a nice lot of them are fresh or will fresl n within a short time and all are to freshen during the winter. Look up the advertisement in this issue and plan to attend this sale. C. M. Crews & Sons of Topeka are the auctioneers. The sale will be held under cover if it is stormy and lunch will be served on the grounds. The sale is next Thursday, December 11 at the farm three miles southeast of Topeka on Vinewood Farm.

I want to remind Kansas Farmer readers that the Fred M. King advertising appears in this issue of Kansas Farmer. The sale will be held at Mr. King's Sunflower state dairy farm at Overland Park, Kan., a suburb of Kansas City. The sale catalog and booklet of photos is being mailed out to those who have requested them by W. H. Mott, sale manager, Herington, Kan. There are 165 head of registered Holsteins catalogued, and it is a complete dispersal of the entire herd. It is being referred to by those in a position to know the best lot of cattle ever dispersed in one sale in the state. Both the senior and junior herd sires are catalogued and both are animals of great value and selling as they are at auction they are sure to bring less than their value. The 66 cows and heiters in milk are equally as valuable and the young stuff in the sale should prove attractions and should go to the best herds in the country. The herd is in the very best of health country. The herd is in the very best of health and the milk from this herd right now is being retailed at fancy prices in Kansas City. It is a two days sale and will be held under cover right on the farm. You have plenty of time to secure the sale catalog if you write for it at once to W. H. Mott, Herington, Kan. Look up the advertisement in this issue and write for

Let Me Send You My New Enlarged] **KOZY Book**

om dodurn

Brand new 1931 edition, just off the press! Largest and most complete we have ever issued. 48 pages. Over 100 illustrations. Several brand new buildings. New features. New, low prices. See the high grade materials, splendid workmanship. How KOZY is warmer, tighter, more convenient. Built of best lumber. Longer lasting.

Read Experiences of Users

Letters from many users tell how KOZY saves chicks and little pigs. How they start chicks early, bring them through blizzards without loss,

grow them faster. Read how you save enough chicks to pay for the house the first season. How you have early cockerels to bring in big money. How you have pullets laying heavily all winter.

Write for Low Prices!

See how KOZY'S price is less, yet gives you a better house. Better than you can build, yet costs less than retail price of lumber. Get this year's big savings on KOZY houses. New catalog tells all. Get your copy, quick. Don't wait — send right now. . N-O-W!

State R. F. D.....

Raise More Chicks, Easier Quicker, Cheaper, Start Earlier!

You can sure make lots of poultry money with a KOZY. It is bigger . . . stronger . . . tighter . . . warmer —yet lower priced! Offers a remarkable value!

Start chicks in February or March, regardless of zero temperature or bad weather. Raise every chick. No worry about chick losses from chilling, bunching or being killed by prowling animals. Have young roosters to sell when prices are high.

Have laying pullets by August or September.
THAT'S the way KOZY brings amazing profits to thou-

sands of poultry raisers. "I raised 529 out of 535 chicks," says Mrs. Anderson (Nebr.). "Sold broilers for \$98 which far more than paid for the KOZY. Had 240 pullets left that started laying at 4 months. Never made so much money before."

Cuts Work in Two

Actually easier to care for 400 chicks in the KOZY than 2 hens with broods. Everything under one roof. Saves you hours of work every day. Enables you to raise hundreds instead of dozens. Multiplies your profits.

Splendid Design

A marvel of efficiency. Development of 16 years of improving. Built high enough in the middle so caretaker has ample head room. Built low at front and rear so it is easy to heat. Built close to the ground -strong winds sweep right over it. Cold-proof walls and windtight corners keep KOZY snug and comfortable.

Many windows admit a flood of warming, purifying sunshine. Entire interior is light and sunny.

roof sections wide open gives full sunbath.

Full size door at each end. Lower windows, including one in East end. Metal slide runway. 3 adjustable roosts. Skids for easy moving.

Ready-Built of Extra Durable Lumber

Made of heavier, thicker and more durable lumber than you'll find in other similar equipment. Makes a stronger, tighter, warmer building. We use a very high grade "clear" 4-in. tongue-and-groove Fir flooring. Absolutely no knots. Never shrinks or warps. Walls and corners are so tight that cold and wind cannot penetrate. Built over strong frame of 2x3s and 2x4s.

Costs Less, Ready-Built and Painted, than You'd Pay for Lumber, Alone

Amazingly low price! Nothing else like it. As little as \$33.25 buys the KOZY Brooder House, walls painted, floor creosoted, durable roofing on the roof—all complete.

Our immense quantity production and efficient manufacturing methods save you a lot of money. We buy trainloads of lumber, direct from huge lumber mills, at tremendous savings. We build thousands of houses at a time. Over 1,000 carloads were shipped last year.

6 Sizes; Choice of Colors

Built in sizes to hold 275, 400, 600, 800, 1,200 and 1,500 chicks. The one shown above is the 600-chick size. Measures 10x12-ft. Peak is 7 ft. high. We also have 3 sizes of improved 6-sided brooder houses with many features. Painted cream, with red trim. Or red with gray trim. Or gray with red trim.

G-U-A-R-A-N-T-E-E-D!

Entire interior is light and sunny.

Chicks are warm and cozy.

Fresh air, without drafts, provided by opening upper windows and front roof sections.

On warm days, throwing frontroof sections wide open gives

WRITE! Send TODAY for my page KOZY Book. See the new houses, many improvements, low prices. 100 illustrations. Brooder houses, farrowing houses, feeders, waterers, garages, wagon boxes and other KOZY bargains. Mail coupon N-O-W!

Easy to Heat

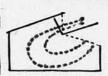

Thick, tight wallskeep cold out. Low roofs keep the heat down where chicks are. Brooder stove keeps it warm on coldest nights.

Sunny

Many windows on South side admit abundant sunshine. Front roof section may be raised for ad-dition al sun-shine.

Fresh Air

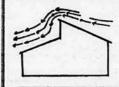

Perfect venti-lation without drafts. Merely open upper win-dows and front roof section. Fresh air, but no chilling.

Convenience

Peak of house is high enough to give caretaker plenty of head room. Easy to work in. Easy to clean. Easy to move.

Withstands Winds

Sloping roof, front and back, with small space, does not catch wind. Stands stronger winds than other types of buildings.

Easier, More Profits

"Raised 400 chicks and didn't work as hard as when I raised 100 with hens. Sold enough young roosters to pay for the KOZY."

—Mrs. M. Crosser (Iowa)

Comfortable as Home

"KOZY is as comfortable as my home. Raised 700 chicks in it. Sure saves work and worry." -Mrs. C. Zell (Minn.)

Easy to Erect

"My wife and daughter put the KOZY up and have not lost a chick, Will order 2 more," —P. C. Wagner (Nebr.)

Avoids Loss

"Raised 400 chicks with practically no loss." -Wirth Bros. (Iowa.)
