

Agricultural Aviation Security

Robert E. Wolf

Extension Agricultural Engineer Kansas State University Dennis R. Gardisser

Extension Agricultural Engineer University of Arkansas

☐ Provide automatic proximity sensor activated security

Aircraft, facilities, support equipment, and chemicals represent an enormous investment that must be safeguarded. Safeguards should provide resistance to theft, vandalism, fire, weather, and now terroristic manipulations. The events of September 11, 2001 have heightened our awareness for the need to enhance security measures. Proper planning may also help address all general security needs.

Good security measures are your best insurance against problems resulting from accidental or intentional damage by unauthorized personnel at your facility. A modest investment of resources and effort can prevent a substantial loss to your operation. Common sense and a general heightened awareness about security should allow you to implement these and other ideas to enhance safety and security.

Facilities

contaminants.

racinties
☐ Post contact numbers: Police, Fire, Emergency, Poison
Control, Management, and others.
☐ Make sure that there is an accessible phone in case of emergencies.
☐ Install a security fence, locked storage building, and other means of preventing unauthorized public access to your property.
☐ The main entrance to the facility should have a sign indicating that all persons must check in at the main office immediately upon arrival. This will allow you to know who is on the site and proper assistance can be provided.
☐ Lock all gates and doors when your facility is unattended.
☐ All valves on bulk product tanks should be secured with locks.
☐ Equip sight gauges on bulk storage tanks with bottom valves that are normally turned off and locked.
☐ Lock all sump pumps from containment areas.
☐ Application equipment containing product that is stored overnight should be parked on a rinse pad, secured and equipped with locked discharge valves.
☐ Install adequate lighting in all product storage and handling areas.
☐ Seal or eliminate containment drain lines. Septic systems with leach fields should never be used for disposal of any liquid that may contain agri-chemical

	lights for worker protection and to minimize
	vandalism at containment and mix-load facilities.
	These proximity sensors may also be used to trigger
	some type of alarm in needed.
	Utilize security alarms for facilities, equipment, and
	offices.
	Utilize local law enforcement
	Periodic patrols of airport
⊐	List of activity times and people involved
	Provide list of employees and associates
	Transient (non-based) pilots register aircraft with
	airport/Fixed Base Operator (FBO) upon arrival and
	notify at departure.
	Post contact information to report suspicious activity
	and/or emergencies.
	Limit keys and document who has each key with
	accurate and up to date accounting.
	Airports with combination lock access points will help
	control who is allowed on the property during all
	hours. Combinations should be changed often and
_	access given on to those with a real need.
_	Post all signs and emergency instructions in dual
	languages as appropriate.
Ai	ircraft
	Use of anti-theft devices and lockable control surface
	devices.
	Utilize prop and/or tail wheel locks.
	Lock hopper gate or hopper door in the open position.
	Locks on hangars to prevent unauthorized entry.
	Secure aircraft — remove keys when unattended.
	Encourage pilots to escort visitors at all times.
	Block passages with trucks or other items.
٦.	Aircraft departing for an extended period of time

should notify airport manager/FBO.

☐ Use key lock boxes with limited access and

☐ Aircraft should remain locked and secure when

☐ Utilize photo ID to identify.

Kansas State University Agricultural Experiment Station and Cooperative Extension Service

EP-111 March 2002

It is the policy of Kansas State University Agricultural Experiment Station and Cooperative Extension Service that all persons shall have equal opportunity and access to its educational programs, services, activities, and materials without regard to race, color, religion, national origin, sex, age or disability. Kansas State University is an equal opportunity organization. Issued in furtherance of Cooperative Extension Work, Acts of May 8 and June 30, 1914, as amended. Kansas State University, County Extension Councils, Extension Districts, and United States Department of Agriculture Cooperating, Marc A. Johnson, Director.
