**INTRODUCTION**

The fact sheet MF-2351 Protect Your Family from Secondhand Smoke has information on the health problems caused by secondhand cigarette smoke. The focus of this lesson is on reducing exposure: It is not on trying to get people to stop smoking or to keep young people from smoking. Those are both laudable goals, but beyond the scope of this lesson. The objectives of this lesson are to:

- Increase participants’ awareness of the health risks associated with exposure to secondhand smoke.
- Help them to identify situations in which they and members of their family are exposed to secondhand smoke.
- Identify strategies they can use to reduce exposure to secondhand smoke.

Most people are aware that smoking causes cancer and have probably heard that secondhand smoke—that is, cigarette smoke breathed by a nonsmoker—also can cause cancer. However, they may not know of the other health risks associated with breathing other people’s cigarette smoke, or they may not have thought about how those risks could affect them or their family members. Adults often shrug off risks to themselves for a number of reasons: They may feel they’ve always been exposed to the risk and have never suffered any harm, or they justify the risk on some other grounds. However, they are often less inclined to place their children or grandchildren at risk. Putting the issue of secondhand smoke in the context of protecting children from health risks often makes a greater impact.

**PRESENTING THE LESSON**

Go over the facts about the health risks associated with secondhand smoke. If your audience includes people who take care of children, focus on the risks to children. If your audience includes people who have health problems, particularly breathing problems, focus on the increased risks associated with secondhand smoke. Ask the participants to identify situations where people smoke around them or around children. Make a list of these situations and places on the newsprint. Then make a list of ways to avoid these situations. You could ask the following questions and discuss them:

1. Are there other places of business we can use to avoid secondhand smoke?
2. Can we request that a restaurant manager reserve part of the restaurant for nonsmoking patrons? Or even ban smoking throughout the restaurant? What are some restaurants that do this? (Example: fast-food chains)
3. If smoking is allowed in the workplace, what can we do about it? Are there other employees who would also prefer a nonsmoking environment and would be willing to go with you to visit with your employer about limiting smoking?
4. How can we get family members to agree to a no-smoking policy in our homes and in our cars?
5. How can we tactfully ask guests and extended family members to refrain from smoking in our homes and in our cars?
6. How can we ask our family members who smoke to refrain from smoking in other people’s houses?
7. How can we let our children’s school administrators, teachers and leaders know that we do not want smoking to be allowed when our children are present?

Discussion questions 3 through 7 may elicit some discussion about how to ask for what we want without angering others. Have the group members choose one of these discussion questions and role-play a situation. Question numbers 5 or 6 may be especially interesting for this activity. Is there information in the fact sheet that could be used to persuade someone that smoking can be harmful to others?
This lesson contains a checklist for assessing exposure to secondhand smoke for both adults and children, a contract to sign, and a contract for parents to sign to reduce exposure to secondhand smoke. Ask the participants at your program first to assess their exposure, and ask parents to assess their children’s exposure to secondhand smoke. Next, ask if they would be willing to sign one or both of the contracts, as appropriate, for reducing exposure to secondhand smoke. Ask them to sign the contract, keep the top for themselves and give one copy to you.

COMMUNITY ACTIVITIES
Participants at a group lesson could decide to staff a display on the health risks of secondhand smoke at one of the events listed below. Or they could decide to make a list of restaurants and other businesses in town that do not allow smoking and circulate this list.

These checklists and contracts can be used with a display on the risks of secondhand smoke and with the fact sheet MF-2351 Protect Your Family From Secondhand Smoke at health fairs, school enrollment events, school open houses, health clinics, PTA meetings, regularly scheduled club meetings, employee groups, and other places where adults who care about their health and their children’s health gather. You can ask people if they would be willing to assess their or their child’s exposure to secondhand smoke, and then sign a contract, turn one copy back to you, and keep a signed copy for themselves. Keep track of the number of signed contracts you receive.

LESSON LEADER: Send the following back to your county extension office.

- The number of people who assessed their exposure to secondhand smoke.
- The number of people who signed a contract agreeing to protect their own health by reducing their exposure to secondhand smoke.
- The number of parents who assessed their children’s exposure to secondhand smoke.
- The number of parents who signed a contract agreeing to protect their children’s health by reducing their exposure to secondhand smoke.
- Other actions taken by a group

There were people present at a meeting on secondhand smoke.
