PRESS TOURS STATION

Members of the press enjoyed a tour of the Bull Test Station during Press Day.

Bull-Testing Project Underway at Solomon Valley Feedyard

The first test in the new Kansas Bull Testing Station located in the Solomon Valley Feed Yard at Beloit is underway.

Forty progressive minded cattlemen from throughout the state have entered 4 bulls in the test.

Their goal is to identify and produce the kind of bulls demanded of the modern beef industry in Kansas and the nation.

Dr. Keith Zoellner, Extension beef specialist at Kansas State University, and a member of the board of directors for the test, reports that the number of entries shows our cattlemen are interested in self-improvement of their product. With participation like this, the station will soon be making a positive contribution to the Kansas beef industry."

Eight breeds and types of crossbreeds have been entered in the first test. Those entered include 33 Herefords, 25 Angus, 47 Simmental crossbreds, 20 Charolais, 1 Shorthorn, 6 Milking Shorthorns, 1 Limousin crossbred, and 1 Murrey-Grey crossbred.

The number of owners representing each breed or crossbreed are 10 Angus owners, 1 Hereford, 1 Shorthorn, 2 Milking Shorthorn, 5 Charolais, 10 Simmental crossbred, 1 Limousin crossbred, and 1 Murrey-Grey crossbred.

The Bull Test Station is jointly sponsored by the Kansas Cooperative Extension Service at Kansas State University and the Beef Cattle Improvement Committee of the Kansas Livestock Association in Topeka.

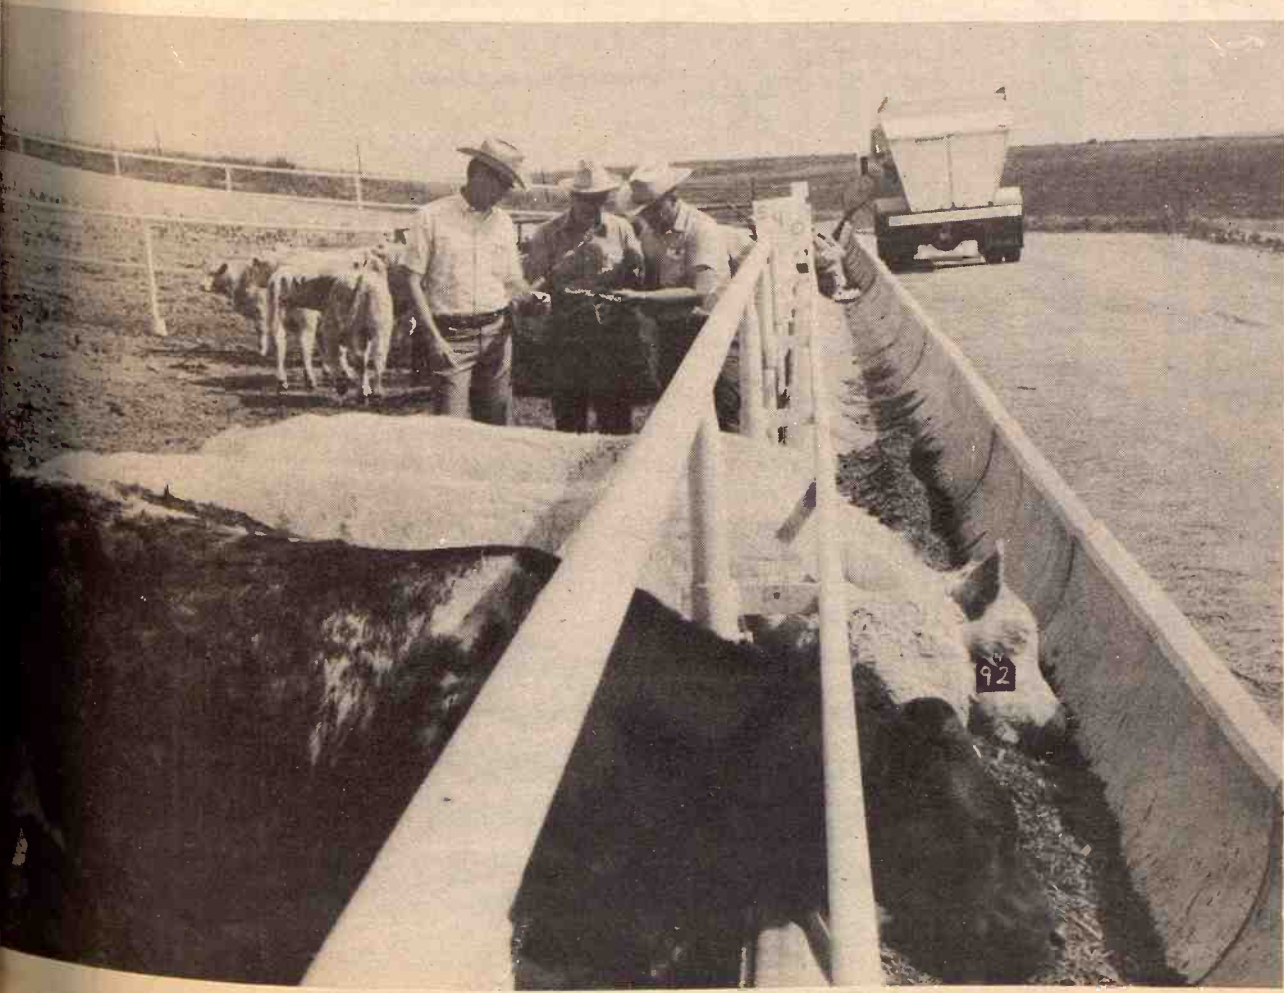

Impetus for establishing the station came from planning sessions of the Kansas Extension Beef Industry Development committee—a group of Extension personnel representing county Extension agents, area livestock specialists, and state Extension specialists.

MEN AT WORK

At top, Virgil Huseman, left, Kansas Livestock Association Feeders Service director, discusses the bull test station with Max Deets, manager of the Solomon Valley Feedyard, where the test is located.

The lower picture shows Herman Westmeyer, left, and Dr. Keith Zoellner, Extension beef specialists at Kansas State University, who are responsible for keeping accurate records and interpreting the results at the new Kansas Bull Test Station in the Solomon Valley Feedyard near Beloit.

FEED FROM FENCE-LINE BUNKS

300 Bulls at the Kansas Bull Test Station are fed from fence-line bunks where they compete with each other for access to feed.

SCENE FROM THE PAST

Herington residents followed an ancient binder to pick up the bundles of wheat and place them in shocks on the John Gehrke, Sr., farm located 4½ miles south of Herington. The bundles are to be used in an old-fashioned threshing bee which will be held at the Tri-County 4-H Fair at Herington, July 28 through 31.

Old Time Threshing Bee At Tri-County 4-H Fair

Motorists passing the John Gehrke, Sr., farm 4½ miles south of Herington, Friday morning June 25, would have seen a sight out of the past, certainly not in the memory of many. Modern cars and trucks lined the shoulders of the highway, while in the wheatfield a large crowd of men, women and children followed an ancient binder picking up the bundles and placing them in shocks. These will be picked up later and used in an "Old-Fashioned Threshing Bee."

This whole picture was strange to see in this highly mechanized age, but stranger still were the people involved. Farmers, railroaders, businessmen, insurancemen, bankers, morticians. All these people were united in a common cause: namely, the Tri-County 4-H Fair, to be held in Herington, Kansas, July 28 through 31, where, without a doubt, one of the most interesting displays and actual operation of antique farm equipment ever shown in this area will be seen.

While all the events are too numerous to mention, the following are a few highlights: An opening day parade beginning at 6:45 p.m.; an old fashioned threshing bee, using all antique equipment; parachute jumpers who will land in the

ballfield at fairgrounds; tractor-pulling contests using everything from steam to diesel engines; a museum housing antiques from this area, dating back before the Civil War; a rodeo; a large carnival. Most important, the young men and women of this Tri-County 4-H area will have on display their many and varied projects that cover practically everything from sewing to beef cattle.

Using the enthusiasm shown in the wheatfield Friday morning as an indication, the Tri-County 4-H Fair of Herington will be well worth driving many miles to see.

Circus To Be In K.C., Mo. July 21

KANSAS CITY, MO.—After an absence of four years, Ringling Bros. and Barnum & Bailey circus returns to Kansas City for a 5-day engagement, starting July 21 in Municipal Auditorium.

More than 200 performers and 150 animals will appear in five evening shows, four matinees, and a Saturday morning performance of this, the circus' 100th anniversary edition. Opening night will be a benefit for an area youth organization.

Matinees begin at 2:30 o'clock and the evening show time is 8:00 o'clock with the exception of the Sunday evening performance, July 25, that starts at 6:30 o'clock. Ticket prices range from \$2.50 to \$5.00 with a

JULY KANSAS WHEAT MONTH

The year of 1971 is a one for wheat in Kansas. Most 100 years ago, hard winter wheat was introduced to Kansas. It was the crop that the hazards of crop production in the semi-arid Plains. July is set aside as Kansas Wheat Month by Proclamation of the Governor, under the sponsorship of the Kansas Wheat Commission, to take note of the contribution made by wheat producers, and the wheat industry to the State of Kansas. . . . This year's "Cinderella crop" is expected to total 266 million bushels, in spite of drought, winds, freeze, and flood. . . . July Kansas Wheat Month takes place around the world. Every loaf contains nutritious elements that are important to your good health. Kansas produces more fine bread-making wheat than any other State in the Union. Find out about it during Kansas Wheat Month. . . . Eat one more slice of bread for good nutrition, for good eating, for better health throughout the year, and for a better economy in Kansas.

FARMERS OUTLOOK

L.H. Simerl

Farmers Will Eye Summer Reports

Many farmers will be studying the USDA reports with unusual interest this summer. They will be watching for effects of the corn blight, and for the turn-around in the hog industry. Here is a list of some of the most important releases scheduled for the next few weeks:

- July 9: Monthly report, Crop Production.
- July 16: Quarterly report, Cattle Feed.
- July 22: Quarterly report, Stocks & Grains.
- Aug. 11: Monthly report, Crop Production.
- The June 24 report on Hogs and pigs showed how fast farmers are getting back on hog production. The previous report, issued in March, revealed that many farmers planned to quit the hog business. Hog producers in ten leading states said that compared with last year, they intended to cut spring farrowings by 15 per cent and summer farrowings by 15 per cent. The June 24 report said whether farmers are following these plans and how many sows they

plan to farrow this fall (September-October). If substantial production cuts are made, this will send hog prices into the high \$20 range again by late 1972.

As usual, the Crop Production reports will be based on conditions as of the first of the month. Hence, those who use them should make allowances for developments after that date.

The report to be released on July 9 will include estimates of planted acreages of small grains, corn, soybeans, and sorghums. It will also include fairly reliable forecasts of average yields per acre and overall production of the small grains, with state-by-state figures as well as national totals. In addition, the report will contain projections of national average yields per acre and total production of corn, soybeans, and sorghums for grain. These figures will be based on the assumptions that the weather, plant diseases, and insects will be no worse than usual. The July report will not include forecasts of yields

and production of these crops for individual states.

The Crop Production report to be available on August 11 will provide the first dependable forecasts about the production of corn, soybeans, and sorghums for grain. Even then, allowances must be made for developments after August 1. This report will include the first official forecasts on these crops for individual states, as well as the

revised forecasts of the national totals.

The next quarterly report of Stocks of Grains will be published on July 22. It will show the farm and commercial supplies of all major grains, including soybeans, on hand as of July 1. These figures can be used to calculate rates of use so far this year as well as the amounts remaining on hand.

The quarterly report of Cattle on

Feed that is to be released on July 16 will provide estimates of the number of cattle and calves in feedlots on July 1 in twenty-three leading feeding states. That publication will also show the number of cattle by the various weights and the number farmers expect to market during the July-September period.

Silt Is Number One Water Pollutant

Silt is the number one water pollutant in Kansas and the United States today. It is estimated that over 4 billion tons of sediment wash into the lakes and streams of the United States each year. Three-fourths of this sediment comes from forested and agricultural lands. Erosion of agricultural lands is still occurring at an alarming rate. Serious erosion is also occurring within towns and cities, resulting in added pollution of bodies of water.

Farmers and urban people alike simply cannot afford the loss of the topsoil by erosion. Once the fertile topsoil has been eroded away, it takes generations to replace. The dark-colored upper layer of the soil called topsoil is high in organic matter. This organic layer is the action area of the soil where root growth takes place and where bacteria convert organic matter into plant nutrients. Phosphorus and potassium are also supplied to the plant from the organic matter.

Erosion thus causes a loss of the chief plant nutrients — nitrogen,

phosphorus, and potassium. Also lost with soil when erosion takes place is valuable water needed for crop production. This is especially true in this part of the country. If pesticides and herbicides have been used on the land, these also are carried along attached to the soil particles, and cause fish kills in lakes and streams.

It is not difficult to see that sediments from erosion, with its load of nutrients, pesticides, and herbicides is the primary hazard to surface water quality. These sediments cause eutrophication of streams and lakes; the increased nutrients in the water increases the growth of algae. The decay of the increased growth of algae robs the streams water of precious oxygen which in turn kills fish and other aquatic life. Erosion sediments in streams and lakes decrease their capacity. Once a lake has lost its capacity to hold water it is a liability rather than an asset. The cost of cleaning silt from a lake or stream is often prohibitive.

POLLUTANT

Silt accumulation in a roadside ditch near Hiawatha occurred during a May storm in which four inches of rain fell in a two-hour period.

Damage caused by silt and erosion to the highway system is also heavy. Silt accumulates in culverts and eventually plugs them. Water eventually goes over the roadbed and cuts it out. The culvert must be replaced and the roadbed repaired.

Conservation practices are the answer to soil erosion. Where cropland is sloping, cross-slope terraces and down-slope grassed waterways will control the erosion. Grass should be planted on steep eroded slopes and it should remain in permanent vegetation. On sloping soils that have already been moderately eroded, closely grown crops such as wheat or sorghum should be planted. Stubble mulching or mulch tillage will control wind erosion and increase the water infiltration into the soil. It will also help maintain organic matter and good porous soil structure in the surface layer.

Little Variance In Growth Despite Castration Age

Calves castrated at various ages showed little difference in growth or carcass characteristics in a trial at Kansas State University's Fort Hays Experiment Station.

KSU researchers wanted to determine if late castration would increase total growth without affecting carcass quality adversely.

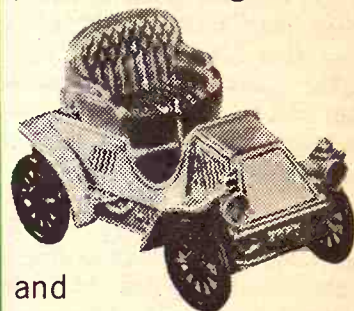

Of the four sets of calves used, one was left as bulls. The bulls grew faster and had more muscling, less fat, and less marbling.

Scientists said bull carcass grade would not have been higher even with more marbling because the meat was dark.

Another group of calves was castrated at birth; a second group at

COW POKES

By Ace Reid

"Now Sheriff, — er you gonna believe us or them lyn' eyes of yores!"

Organization Helps Thousands Of Needy People Obtain Glasses

When you're six years old, the world can be a wonderful place—if you can see it.

Tommy couldn't. He lived in a world of blurred images. School is tough enough when you're six. But it's even worse when your friends are learning to read, and you can't keep up.

To Tommy, letters were merely blurs; so were baseballs and faces. Because Tommy's father had long been out of work, glasses were simply out of the question—until this year.

The boy's glasses were paid for by a volunteer organization hundreds of miles away, called New Eyes for the Needy, Inc., of Short Hills, New Jersey.

New Eyes, as it is familiarly known, has earned the reputation of being one of the most effective sight-saving charities in the world. It has helped many thousands of needy people obtain glasses—here and abroad—and it has never asked for a cent in donations.

Since its inception, almost 40

years ago, New Eyes has asked only for used eyeglasses and precious metal articles such as old watches, jewelry (real, costume and antique), good or damaged silver and dentures.

The eyeglasses and glittering clutter are sent to New Eyes for the Needy, Inc., Short Hills, New Jersey 07078. Thousands of packages from all over the United States arrive in the neat stucco headquarters every year. There, volunteers, mostly housewives, sort out the glasses, separating those in plastic frames from those in metal frames.

Many of the 250 workers have learned to operate complex optical grading and testing equipment. They help fill specific orders from missions and hospitals in foreign countries where plastic framed glasses and sunglasses are sent.

The metal framed glasses have their uses, too. Through refining, they yield precious metals that are sold, along with the jewelry, to finance New Eyes funds in over 100 hospitals and health agencies throughout the United States. The money in these funds buys glasses for people who have nowhere else to turn.

In addition to these funds, arrangements have also been made in 48 states through health and welfare agencies whereby New Eyes purchases glasses for carefully screened persons, to whom no other private or public funds are available.

Last year 8,000 people were helped under this program. Tommy was one of them.

But, as public response has grown throughout the years, so has the volume of requests. Therefore, New Eyes needs more discarded jewelry and eyeglasses to do its job. As one New Eyes volunteer put it:

"The wonderful thing about New Eyes is that we can ask people to send us things they no longer need."

And these gifts can bring vision to a little boy, like Tommy.

5 HOMES IN NEED OF PAINTING

Five homeowners in the Manhattan area will be given the opportunity to have their homes restyled and rebeautified with the all new wood grained, Vydel Vinyl siding, made from Monsanto vinyls. Vydel vinyl can be applied to your home with optional decorative work at a very low cost. This amazing new product has captured the interest of homeowners throughout the United States who are fed up with constant painting and other maintenance costs. It is maintenance free, virtually indestructible, carries a 30 year guarantee, provides full insulation summer and winter as well as fire protection, and will not dent as metal sidings do. Our new product can be applied to every type of home including frame, concrete block and stucco with amazing rebeautifying results. It comes in several colors and is now going to be introduced in the Manhattan market. Your home can be a show place in your vicinity and we will make it worth your while if we can use your home. Home owners who act now will be offered a FREE household gift for helping us introduce this quality product in their area.

Prize winner, Mrs. Willard De Lair, R 1, Marysville: "This is an easy, quick dessert and very tasty."

CHERRY DUMPLINGS

- 2½ cups pie cherries
- ¾ cup sugar
- Dumpling batter

Put undrained cherries in large deep skillet and bring to boil. Drop dumpling batter into boiling fruit from a tablespoon to make 4 to 6 dumplings. Cover and cook gently for 20 minutes. Serve at once.

DUMPLING BATTER

- 1 cup sifted cake flour
- ¼ cup sugar
- 1 teaspoon baking powder
- ¼ teaspoon salt
- One third cup milk
- 2 teaspoons melted margarine

Sift dry ingredients together; add remaining ingredients, mixing quickly and lightly until blended. Do not mix smooth.

+ + + + +

Mrs. James Griffin, R 2, Glasco: "Jellied chicken is inviting for summer lunch."

JELLIED CHICKEN

- 1 envelope unflavored gelatin
- ¼ cup cold chicken stock or bouillon
- ½ cup very hot chicken stock or bouillon
- ¼ teaspoon salt
- 1 tablespoon lemon juice
- ¾ cup mayonnaise or salad dressing
- 1 cup diced cooked chicken
- 3 tablespoons minced green pepper
- ¾ cup diced celery

Sprinkle gelatin on cold chicken stock to soften. Add very hot stock. Stir until gelatin is dissolved. Cool. Add salt, lemon juice and mayonnaise. Stir in chicken, green pepper and celery. Turn into ring mold and chill.

Bake covered at 350 degrees for one hour. Will serve six.

+ + +

Thelma Baldock, Delphos: "I have been enjoying the fresh cherry recipes - but for the G&G area cooks that don't have a cherry tree or perhaps had them damaged by hail as we did, might like to try this cherry pie made with the frozen cherries or canned cherries."

BEST CHERRY PIE

(9-inch)

- 2 No. 303 cans frozen cherries (3 cups) thawed and drained
- Two-thirds cup cherry juice
- 2½ tablespoons cornstarch
- Two-thirds cup sugar
- Pinch salt (¼ teaspoon)
- 1 tablespoon butter
- 4 drops almond extract
- Few drops red food coloring

Blend cornstarch and cherry juice. Cook over high heat, stirring constantly until mixture is thick, smooth and clear. Remove from heat. Add sugar, butter, salt, extract and coloring. Mix and cool. Fold in cherries then pour into 9-inch unbaked pie shell. Arrange pastry strips, lattice fashion, over pie. Bake 15 minutes at 400 degrees then reduce temperature to 350 or 375 degrees and continue baking until crust is well-browned, about 30-40 minutes. If canned (red sour type) cherries are used increase sugar to one and one-third cups. Generally there are only 2½ cups of the canned cherries to a 303 can which won't make enough difference in your pie.

+ + +

**Cork Will Give Life,
Color To Drab Room**

What can you do to give a drab room life and color? Decorators today are suggesting cork as the answer.

Although cork has recently come to the attention of home decorators, professionals have known the versatility of this material for a long time.

Cork costs more than ordinary wallpaper, but it adds a depth and warmth to a room which cannot be duplicated.

The cork provides an excellent background to display photographs, art work and sculpture. The soft color and interesting texture enhance rather than compete with other furnishings and accents.

One manufacturer of wall and floor coverings has introduced a new line of cork wall covering which the homeowner can use in his house.

The line features tissue-thin sheets of natural cork on specially tinted and hand-lacquered background paper. It is available in six designs

and 27 colors to create an interesting accent to any home.

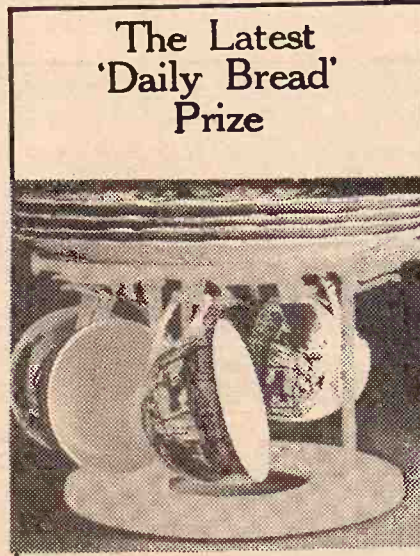

Because the cork is versatile, it can be used in nearly any decor so even the amateur decorator need not be afraid of using it.

**Some Fabrics Need
Strengthening**

Some fabrics must be strengthened before they can be

used. Such materials might be knits or fabrics from a garment are remaking. The fragile material attached or bonded to a foundation fabric. Some materials now available that have been commercially. Choosing the bonding agent is important. Any cotton or synthetic fabric can be used, but the weight factor. The heavier the fabric, the heavier the foundation.

Home Freezer Definitely Money-Saving Appliance

With inflation seeming to go ever upward, more and more housewives are discovering that a large home freezer can definitely save money on food purchases. Although modern refrigerators have a much greater frozen food capacity than those of a few years ago, few are really large enough to enable a family to take maximum advantage of food sales and seasonal goods when they come along. Economists point out that taking all advantage of meat specials can save a family 15 to 20 percent on its

yearly meat bill and that by stocking up on fresh and frozen fruits and vegetables when prices are lower, you can save from 25 to 50 percent. Other advantages of a home freezer are that you don't need to shop as often, there is already a supply of food ready to cook, you can cook and bake in advance, leftovers can be frozen to prevent spoilage and you have space to dabble in the unbelievable array of frozen delicacies that line supermarket showcases.

One upright model has a capacity of 12.6 cubic feet, holds 441 pounds of frozen foods and never needs defrosting. Just 30½ inches wide and 64 inches high, it is about the size of a refrigerator and is equally at home in the kitchen, utility room, garage or basement.

Soap Makes Rug Fringe Lie Flat

If the fringe on your rugs won't lie flat, rub a dampened bar of soap lightly over the strands. This will straighten and stiffen them enough to make them lie flat.

To Keep Crust From Shrinking

To keep a pie crust from shrinking, make the crust rich and do not use too much water. Roll the

crust larger than the pie pan. Place it in the pan loosely and press a small pleat across the center of the pan. Flute the edge, prick with a fork and bake at 450 degrees.

Blot Spills Immediately

Spilled alcohol, other liquids or water rings under glass may mar the furniture finish unless they are blotted dry immediately with an absorbent cloth. Then apply wax or polish over the entire surface — not just over the spot where the spill occurred.

Acrylic Rugs Feature

Jewel-Like Tones

Exploring innovative color ranges, carpet designers have created a collection of eight new rugs made of acrylic fibers and featuring lustrous jewel-like tones.

The rich, deep colors have a shimmering, airy surface because the acrylic yarns are light reflecting. In spite of the vibrant colors, the rugs are all machine washable, bring a new quality to easy-care floor coverings.

The moderately priced rugs feature the same basic shag construction in eight patterns.

A pattern called One Way begins a new direction to graphics in rug design. Two arrows meet in perfect balance for an exciting design. It comes in blue, red, pumpkin and brown shades.

Cozumel, an asymmetrical design, was inspired by an island in

the Carribean and is sunny and spicy in flavor. It comes in three combinations.

Reflection is a basic border rug and comes in six colors — gold, neutral, pumpkin, blue-green, green and red-orange and in four sizes.

Straightaway is a striped rug with a glittering surface. It comes in five sizes and three colors — gold, multicolored and blue-green.

Roulette offers a kinetic experience in three color combinations. Tulum is a fringed, round-cornered rectangular rug. Coins, another style, has brilliant circles on a rich ground. It comes in three unusual sizes in four colors — bronze, blue, red and brown.

The last of the collection is similar to a topographical map, undulating and abstract. It is available in three sizes in blue, gold, white and green.

Wax Frames

A coating of wax applied to wooden picture frames improves their appearance and makes them easier to clean.

Note Of Thanks

A thank-you note was received from Mrs. Gertrude Bayles, Holton, a recent winner of an "Our Daily Bread" contest:

"Thanks so much for the Rubbermaid Twin Turntable — it is used in my cabinet for the spices, etc.

"That was a recipe of my daughter's and we enjoy it so much and thank you for choosing it first."

Iron-On Tape Helpful

When buttonholes begin to fray, use iron-on tape on the inside of the garment where fraying occurs. This will keep the buttonhole area neat and you will get longer wear from the garment.

Use Colder Setting

For best operation, use a colder setting on the refrigerator when the refrigerator is heavily loaded or when the door must be opened frequently.

36 the number of states which have signed a memorandum for a cooperative program with the federal government and industry, as well as a supplement detailing specific precautions for the pesticide, ethyl tarathion.

The states which have signed are California, Colorado, Idaho, Illinois, Maine, Minnesota, Mississippi, Missouri, Nebraska, Nevada, Tennessee, Washington, Wisconsin and Wyoming.
The 14 states that have not entered

the program include Alabama, Alaska, Connecticut, Indiana, Iowa, Kansas, Massachusetts, Michigan, New Jersey, New York, Ohio, Oregon, Texas and Vermont.

from the G&G Area

communistic right here. During the communist revolution the land was taken from the owners and given to the state supposedly for the good of all. I don't see too much difference. Preserve the Flint Hills for future generations! Humbug!! As long as the hardworking, land loving ranch owner exists you will have a beautiful "prairie national park" for anyone who really wishes to enjoy and appreciate. It will be a natural prairie where cattle grow and fatten for market, coyotes fight over dead carcasses, prairie chickens sail in at sunset, bobcats try to snag pigeons under bridges at night, and the deer flag their tails as they sail over the fence. It will remain a beautiful land because those who care for it really love it.

The idea of a Prairie National Park was discouraged for awhile by a rancher and a shotgun. I believe the only dam ever planned by the Army Corps of Engineers and not built was the one on the Current or Jackfork River in Missouri. A federal man had to lose his life before the government understood that those people like things the way they were. It's too bad that a handful of people, who obviously expect to make some money off of this thing, have to wield so much power. But, when the governor uses our tax money to loan the supporters of this a National Guard plane to fly to Washington, what can you expect? I resent my tax money being used that way. Right now this money is urgently needed for better causes.

I believe this to be the ultimate attempt at pork barrel legislation. If you treasure the rights of the individual, and our capitalistic system of private ownership, act now! Write your congressman and oppose the establishment of a Prairie National Park in Kansas. A letter or two is a better way of persuasion than a gun, and I hope as effective.

A concerned citizen,
Donita M. Rogers
CEDAR POINT

Agree To Promote Sage Use Of Pesticides

Fourteen states, have agreed to promote the safe use of all pesticides, reports the United States Department of Agriculture.

The department said this brings to

Guard that investment by giving your cattle the Sunflower brand.

By telephone. It's that easy. A call to Dickens 2-7270 brings you Kansas Soya's custom-mixed cattle feed, carefully prepared in accordance with your formula

and dependably delivered in compliance with your timetable. Just in case you're not completely satisfied with the results you're getting with your present formula, that same telephone call will also give you valuable formula guidance. Free. Before you hang up, you'll have the feedlot-proven formula that will provide maximum gain at lowest cost.

If you mix your own ration, let Kansas Soya supply the best protein supplement you can feed. Sunflower Brand Soybean Meal or Pellets are made from prime soybeans, nature's richest source of

protein. They're specially processed to retain their weight-lifting protein elements and, at the same time, improve their natural palatability and digestibility. That's why Sunflower Brand tastes better, packs on the pounds faster and makes marketing more profitable.

Whether you choose custom-mixing or mix your own, prefer pre-arranged delivery or pick up your own order, Kansas Soya's automated in-and-out truckloading and grain bank facilities are always available. Call Kansas Soya now. And call collect.

KANSAS SOYA PRODUCTS COMPANY, INC.
Dickens 2-7270 • Emporia, Kansas

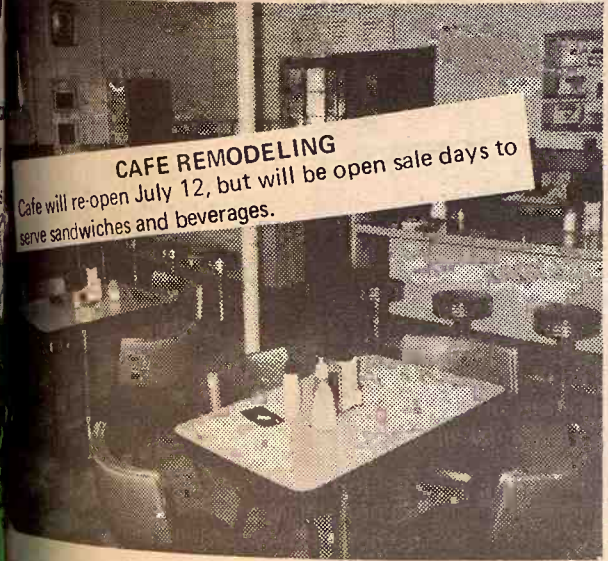

LETTERS—

PROPOSES PRAIRIE PARK

Now is the time for all good ranchers to come to the aid of their grasslands! I am very much against the establishment of a Prairie National Park in Kansas. I believe it would be a terrible waste of money. First, if it were not periodically mowed or sprayed (and it won't be), it would call it the Prairie National Park in about ten years. If you believe this go to Fort Riley Reservation and look at some of the once bluestem pastures that have gone back to their so-called natural state. The brush is so thick it takes a tank to get through it. This is also true of old pastures where there are double fences. Second, the Flint Hills, to those of us who love them, are a beautiful sight a few months out of the year. The rest of the time they look pretty barren. Tourists enjoy seeing the hills as they drive through in their air-conditioned cars on Interstate 70 or the Turnpike. It's a beautiful drive, I personally have seen it. But, outside of an occasional stop at one of our nice rest areas, most of us are going to brave 100 mph plus hot winds to hike around 20,000 acres of land that they can see comfortably from the highway. If you see your so-called wild animals to be on this range, what is natural to us is other than coyotes, a few deer, which are growing in number, and an occasional bobcat? Buffalo? They would have to be fed six to eight months of the year. A critter will starve to death on bluestem in the winter, as it has no winter strength. (Maybe, we should give the government the whole thing and let it feed us.) Third, the people of Kansas have had enough good land taken from them by government. This land would not pay taxes, and you know what that means. A few years ago the government took approximately 50,000 more acres for Fort Riley which about doubled the amount they already had. Adjoining on each side they took 16,189 acres of Millard Reservoir and 15,830 acres of Tuttle Creek. There are about 20 small constructed dams in Kansas, taking approximately 325,000 acres. This was taken from private citizens and the tax rolls, and it certainly does include all of the federally owned land in Kansas. We are supposedly fighting against the ideology of Communism in East Asia. I can't understand why, since we are becoming about as socialistic and

Experiments With High Moisture Wheat For Feed

A different type of wheat harvest was completed recently on the Porter Ranch near Miller which is northeast of Emporia.

This particular wheat yielded about 80 bushels to the acre and is being processed strictly for cattle feed.

Walter Porter, owner and operator of the Lyon County farm, used an experimental machine custom built by a Maize manufacturer, for the harvest. Porter is experimenting in high-moisture wheat as a feed grain.

Porter obtained a variety of seed wheat called "Blue Boy," developed for use on the southeastern seaboard of the United States. This variety is known for its high yield potential but

is not suitable for milling, in contrast to the varieties commonly grown in Kansas.

The machine, called a chopper, harvests and pulverizes the grain, head of the wheat plant, as well as a portion of the stalk, before blowing it into a specially designed trailer towed by the chopper. Every 11 minutes a truck pulls beside the trailer which is equipped with an hydraulic system that enables the operator to tip the trailer's bed, dumping its contents into the truck.

Use of the machine eliminates the need for running the wheat through a hammer mill.

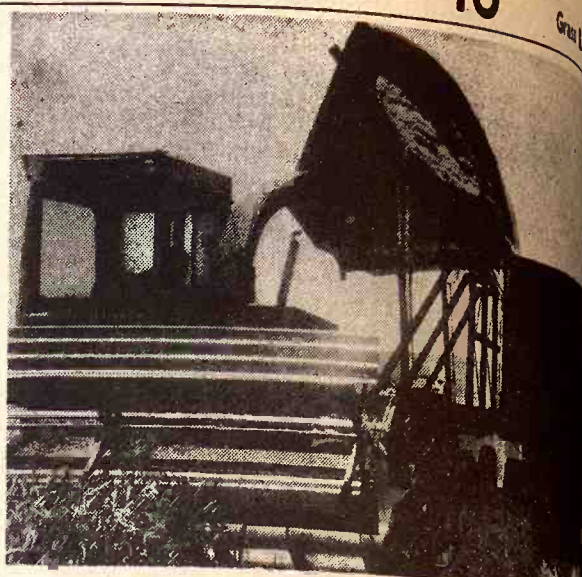

Harvesting begins when the grain contains about 60 per cent moisture, Porter said. Material produced by

the chopper resembles crushed straw, but contains 70 per cent grain by weight. Porter said that efforts were made to keep the moisture content above 45 per cent. To do this it is sometimes necessary to add water to the material near the end of the harvest.

Mashed grain and straw is taken from the field to a trench silo where it is packed to begin the ensiling process.

The high-moisture wheat ensilage will be fed to approximately 3,000 cattle on the Porter ranch while they are on grass pasture later this summer.

One advantage the high-moisture wheat has over wheat harvested at the normal 10 to 14 per cent moisture

UNUSUAL WHEAT HARVEST

Walter Porter, owner-operator of a ranch near Miller, used a machine called a "chopper" to harvest a crop of high-moisture wheat that is to be used for cattle feed.

for use as feed, Porter said, is that the addition of the straw to the grain eliminates the danger of digestive disturbances while increasing bulk.

Porter said this variety of wheat is not suitable as a grain crop and should be used only as a feed grain. He and many animal nutritionists believe wheat as a feed grain holds considerable promise for meat producers.

Nutritionists from Kansas State University, Manhattan, are watching the Porter experiment and have been collecting samples for use in digestibility studies.

Porter said the problem was one of factors in his decision to harvest high-moisture wheat.

Growing corn blight would hike the price of and enhance the value of stute. And because of Blue Boy harvest, a second grain sorghum can be harvested.

He began the use of moisture grain in the harvest last fall and said it will be used again this fall. Porter is taking the chopper taking the place of conventional combines and the mill.

Statute Bans Boosted Car

The state legislature statute last week making "C" misdemeanor for anyone to operate a car with either the back ends elevated more than 10 inches from the axle and in a manner as to be dangerous to operate.

Many young drivers have special springs or parts on the rear or front of their cars with unusually high angles. The elevated entire car by the running gear by using this arrangement, said officials.

Lawmakers believe the elevated car body is hazardous because it affects the principles originally built into cars.

Tox-O-Wik CHEMICAL CO.
 Dept. 10 / Herington, Kansas

Wis., who has charged residues of the hormone are showing up in beef sold to consumers. The Agriculture Department has denied finding any residues in red meat.

Ban Of Hormone May Cause Rise In Beef Prices

Beef prices could rise as much as 3½ cents per pound if the controversial growth hormone, DES, is banned from commercial use in cattle feeding, says the United States Department of Agriculture.

The Ag Department further stated that other meat prices would rise as the demand for them increased while the supply of beef declined.

Food and Drug Administration regulations allow use of the chemical but require cattle to be taken off the drug 48 hours before slaughter to allow their bodies to metabolize the hormone.

The chemical has been found to cause cancer in laboratory animals. Use of the chemical has drawn the fire of Sen. William Proxmire, D-

requirement that a member of a state society also must be a member of the A.M.A.

An estimated 9,000 New York doctors, as well as an undetermined number from Nebraska, Nevada, Montana and Mississippi, have failed to pay dues to the parent organization this year, thus dropping the total ratio to under 50 per cent.

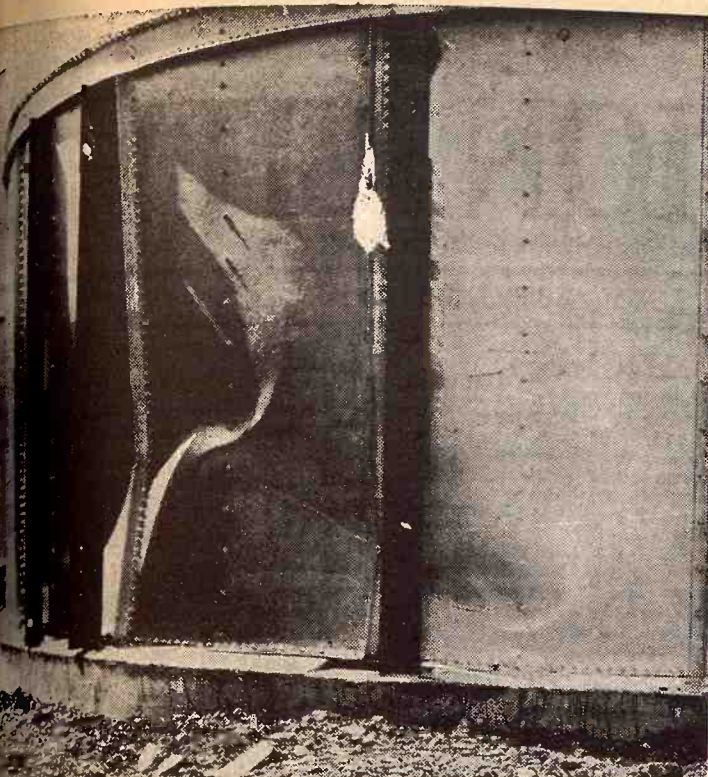

The decline has cut substantially into the A.M.A.'s projected income. The national organization collected about \$12 million in dues last year. A dues increase this year from \$70 to \$110 a year will bring in more money, but the dropping of membership by the 9,000 in New York alone will cost the A.M.A. about \$1 million.

This comes at a time when the A.M.A. is seeking to improve its public image through an advertising campaign. The association's leaders term it an "education campaign" that will cost \$1.5 million over the next two years.

The dues increase and the expanded public relations campaign, which involves a 50 per cent increase in outlays in one year, have generated fierce controversy at recent conventions. Some doctors have expressed fears that the dues increase would constrain more doctors, especially young physicians, from joining the parent organization.

In addition, other doctors have stated that the \$1.5 million advertising campaign is both too costly and unnecessary.

These actions have led the California delegation to submit a resolution to the A.M.A.'s policy-making House of Delegates asking that the parent group poll all A.M.A. members before tackling "critical basic issues" such as increased advertising and dues.

MOVE GRAIN TO PREVENT BIN COLLAPSE

Officials of the Morrison Grain Elevator, Junction City, had to act quickly when this bin began to bulge under the weight of stored wheat. The grain was moved to prevent possible collapse of the 30,000-bushel bin.

Doctors Defecting from AMA Membership

The financial and political power of the American Medical Association is being seriously undermined because of the large number of doctors defecting from membership in that organization. At the A.M.A. convention held in Atlantic City, N.J., statistics showed

that for the first time in at least 50 years less than half the nation's doctors are dues-paying members.

And the percentage of dues-paying members is continuing to decline, although the actual number is rising slightly.

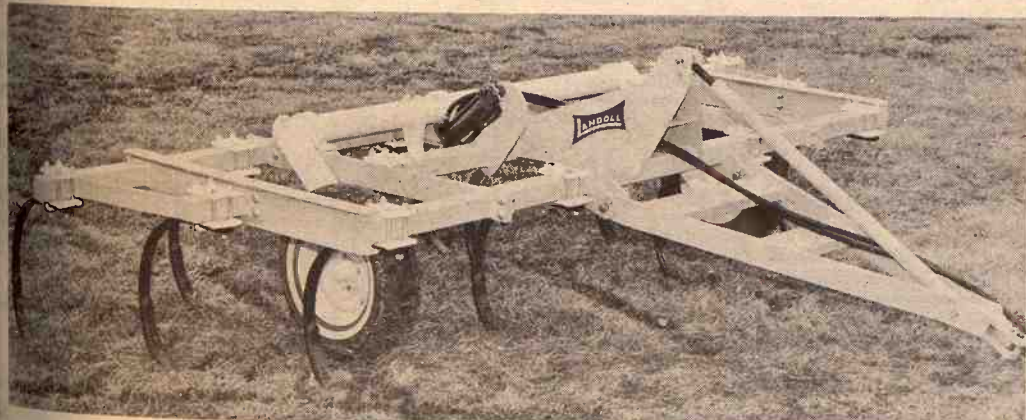

As of the beginning of this year, there were 334,028 doctors of medicine in the United States. Of these, 168,214, or 50.3 per cent, were dues-paying members of the A.M.A.

However, in recent months five state medical societies — including New York — have dropped the

ST. LOUIS, MO.

TRY New PURINA RANGE & PASTURE MINERAL

...the high phosphorus supplement

Phosphorus and calcium make up more than 70 percent of the minerals in cattle. For good body condition and maximum performance, cattle require an adequate supply of both at a ratio near 1:1.

Range and pasture grasses are very low in phosphorus content. Grazing cattle may get only 50 to 60 percent of their phosphorus needs in summer, and as little as 40 percent under drought or winter conditions.

Purina Range & Pasture Mineral, with its 16% phosphorus level, is formulated specifically to supplement mineral deficiencies of pastures and range.

Fed free choice, Purina Range & Pasture Mineral supplies all the known mineral requirements for cattle in amounts exceeding the National Research Council's recommendations. Phosphorus is supplied from three sources to insure availability; all trace minerals are present in readily available form.

Purina Range & Pasture Mineral contains organic iodine to help prevent foot rot and soft tissue lumpy jaw, iron in highly available sulfate form giving it a light instead of red color, cobalt, manganese, zinc and copper.

Stop by at the sign of the Checkerboard to find out what this quality mineral supplement can do for your cattle.

Work On Cantaloupe Harvester At K-State

Cantaloupe, that cool, delightfully delicious orange variety of muskmelon, could become less expensive for consumers and turn into a profitable industry for southwestern counties in Kansas if a mechanical harvester can be perfected.

In Kansas as in most other states, cantaloupe are picked by hand. This can be very expensive even when field workers are available at harvest time. Cantaloupe growers have long hoped for a mechanical harvester to save them time, cut costs to the consumer and increase their own profits.

The case is still out on the extent of consumer savings and increased profits for growers. But it is generally assumed that these benefits will accrue.

Southwestern Kansas, in particular, has climatic, moisture and soil conditions exceptional for the growth of cantaloupe. Yet only a fraction of the potential tonnage is raised.

"This area produces high quality, sweet melons, but the lack of a mechanical harvester has hindered production. In years past, laborers from Mexico were hired to pick melons, but this labor is no longer available.

"A successful alternative must be introduced before production can be expanded," says Prof. G.E. Fairbanks of the agricultural engineering faculty of the Kansas Agricultural Experiment Station at Kansas State University, Manhattan.

In all candor, Fairbanks confesses that there may not "be a sufficient demand for these machines because of the relatively short picking seasons and limited acreage planted annually in Kansas, the U.S., and other countries.

"And a machine can't always pick the melons at the right stage of maturity like a skilled worker can. Melons need to be slightly green. At that stage, stems are hard to sever from vines," he said.

Kansas State University's agricultural engineers are not the only ones in the United States to develop a prototype cantaloupe harvester.

At the University of California, Davis, "a harvester has been developed that lifts the vines. Ripe melons fall off the vine and are

separated by size.

"But, unfortunately, this process results in considerable damage to the plant. When vines are lifted, small roots developing at joints along the vine are torn out of the ground.

"Vines are also easily broken off and pulled up. The Davis harvester apparently has not been successful either since it has not been industrially-produced," Fairbanks pointed out.

K-State's prototype harvester, unfortunately too, needs considerable refinement before it can be used profitably.

"The harvester is not as successful as it should be. It picks up only a fourth to a third of the melons it should and it damages quite a few," Fairbanks said. Many punctures and bruises result from the harvester's projecting fingers designed to pick up the melons.

Why does the K-State-devised harvester pick up so few? Quite simple. Fairbanks says, "we can't seem to get enough gravity fingers on a continuous shaft to pick up all the melons."

Max Fogelman, former horticulture researcher at K-State's Garden City Agricultural Research Experiment Station and now at the University of Kentucky, first thought of the ideas for the fingers. "He and I built the first machine together," Fairbanks said.

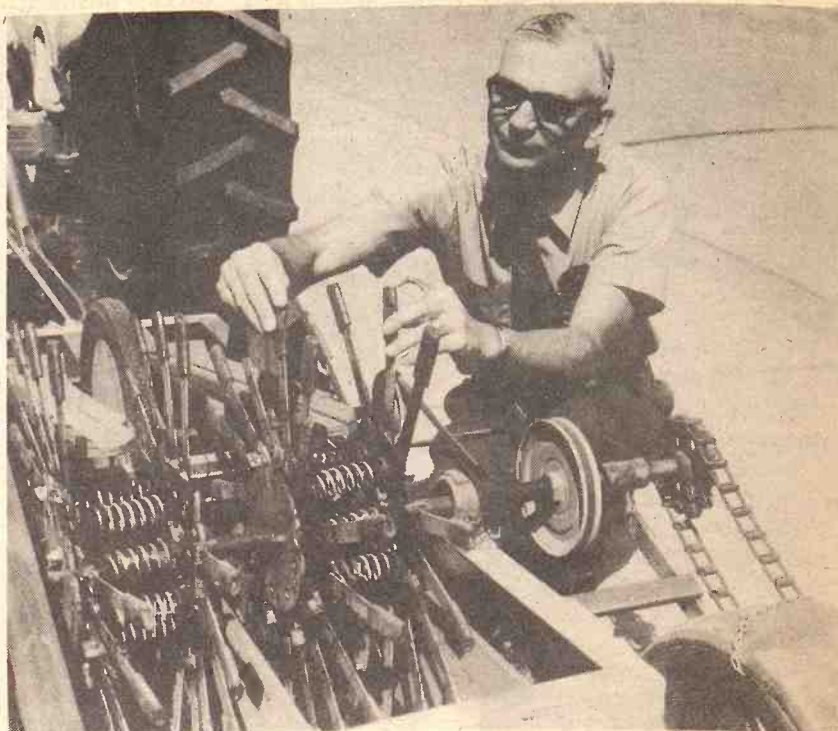

Here is Fairbanks' description of how it works:

"The picking unit consists of a series of projecting 10-inch fingers. There are eight sets of fingers on each of four picking units. These are mounted on discs set on a rotating shaft. The shaft is chain driven from the ground wheels. Fingers are fastened loosely to discs on the shaft.

"Discs are equipped with hubs set at slight angles to orient the fingers inward and outward by means of gravity as the discs rotate. When fingers are coming up, the set of fingers moves downward on the hubs. These angled hubs bring fingers close together.

"This principle allows the fingers to grip melons more securely. As fingers reach the top center and start downward, gravity pulls them forward and downward and spreads them apart," Fairbanks said.

When fingers come down on a

CANTALOUPE HARVESTER PROTOTYPE

Prof. G. E. Fairbanks of the department of agricultural engineering at Kansas State University, Manhattan, demonstrates how gravity-operated fingers work on a prototype cantaloupe harvester. Fairbanks indicates that the harvester potentially could help the Kansas cantaloupe industry, particularly southwestern Kansas.

melon, their open position allows them to envelop the melon. As the fingers start ascending again, gravity and the angled hubs close the gap between the fingers and clasp the melon unless it is too small.

The melon is lifted up by the fingers and, if mature, disjoints from the vine and is carried upward. If immature, it is held firmly by the plant and the vine pulls the melon from between the fingers.

Runners on the bottom of the harvester hold the vines down during the picking process. When the ripe melons reach the top, they are released into a trough.

At the time Fogelman left K-State's staff, "he was trying to develop a dwarf vine with a standard size melon which would mature uniformly so they could all be harvested at the same time," said Fairbanks.

His reasoning: this type vine would make the picking process that much easier for a mechanical harvester. So far as Fairbanks knows, Fogelman did not develop a uniformly maturing cantaloupe.

"The harvester is selective in respect to cantaloupe size and maturity. The mature melon will detach from the vine quite easily. Apparatus on the harvester orients melons in rows to be picked up by the picking unit on the machine.

"If they are the right size and maturity, they can be plucked from the vine relatively easy," Fairbanks explained.

Fairbanks added that a mature melon loses its firm adherence to the plant. "Horticulturists refer to this as slip."

If a person were to spend the time and money, Fairbanks thinks that a successful harvester could be fabricated. If harvesters were manufactured, only growers producing large acreages of melons would be able to afford the machines.

Fairbanks feels that several adaptations can be made to make the K-State prototype more efficient:

— Fingers still do not grip melons firmly enough. Short pieces of rubber hose have been placed over tips of the fingers to aid in their aggressiveness. He suggests that the fingers might be replaced with continuous flexible discs.

— A smooth bed surface is needed to orient melons right ahead of the individual picker units. This would

require a special bed-former for planting melons. Such are already available but have been adapted to a cantaloupe harvester," he said.

— A rubber-padded system is needed to get the machine to a suitable

Right now the K-State department of agricultural engineering has sufficient funds to continue development of the harvester for four years. Fairbanks would like to continue development if money becomes available.

At this point, Fairbanks collected three years of data on use and testing of the harvester.

It is obvious that the future of a mechanical harvester is not bright. Some individual organizations, or associations, knowing the risks and involved, were to take additional research and development, the outlook for harvesters might improve.

Professor Fairbanks is the developmental costs. But he would discuss the prospective sponsors. If cantaloupe harvester becomes perhaps consumers, growers the state of Kansas, and cantaloupe-producing states benefit.

To what extent? It is to determine.

Better Just Say "I Don't Like It"

KALISPELL, Mont. — being struck on the head plate-full of rhubarb pick. Newbury of Whitefish has collect \$125,000.

Mrs. Newbury said she cook in the household of Bernice Dunham of Falls, Mont. in 1970 when she was struck on the back head by a plate-full of pie by Mrs. Dunham.

She said she was doing at the time and the pie broke, causing injury.

Mrs. Newbury is asking \$25,000 in general damages, \$100,000 in other damages.

Angus Assn. Head To Peak At Jr. Angus Show

Cattle will arrive Sunday, July 11, at the Kansas Junior Angus Show & World Day, which is to be held July 11 and 12 at the Wabaunsee County Grounds at Alma. The cattle will be weighed, tattoos registered and registration papers checked. Other events on July 11 will be a picnic at 6 p.m., showmanship demonstration by Andy and Ray Curry at 7 p.m., and special entertainment at 8 p.m. On July 12 from 6:30 to 7:30 a.m., there will be a breakfast, courtesy of the Alma Chamber of Commerce. At 10 a.m. a steer show-heifer contest is being held; Arlo Janssen, Green Acres Farms will be judge. A steak dinner is planned for 12:30 p.m.

Mr. Holbert, president of the American Angus Association, will be the featured speaker at the afternoon program.

Discovers Strange Horse In Garage

EMPORTIA — A woman became a little shocked when she looked out her window and discovered a horse in her garage. She owned two horses but the garage was too small for theirs.

"I called the police," Mrs. Rusoe said, "and a horse was missing a horse there was an extra garage."

The horse was all over bags of oats kept in the but the hungry horse ate half a bag before he was caught. Shortly after the call the owner came in from pasture and picked up the wandering equine.

Richard Robbins, Prominent Kansas Stockman, Is Dead

Richard W. Robbins, 79, well-known Kansas stockman and former executive, died June 29 while on a business trip in Chicago.

Robbins was organizer and first president of Transcontinental Air Line, which later became Transcontinental Airlines.

Robbins home was in Pratt. Along with two sons and several nephews, he ran a stocker cattle operation. It included 150,000 acres of grazing land and land in Oklahoma and Montana.

Robbins Ranch had the Andover brand dating from 1880. Robbins birthplace was Runnede. His father died when Robbins was about 12, leaving the family deeply in debt.

Robbins started plucking chickens for a living and built all of his own said William Robbins, a son. Robbins attended Yale University and graduated in 1913. Later he worked for the Carnegie Institute of Technology before entering business as a manufacturer and industrial engineer in Pittsburgh.

In the late 1920s, Robbins bought six small airlines and put

Poor Place To Cash Stolen Check

CLAYTON, Mo. — Yvonne Beede, a cashier in a men's store here, was handed a check along with two identification cards. The cashier stalled in cashing the check and managed to contact police who came and arrested the woman for forgery. The reason for the arrest was that Miss Beede recognized the check and identification cards as those being stolen a week earlier from her wallet.

Hays Station Tests Shipped Calves

Shipped calves fed Aureo S-700 for seven days and for 28 days responded better to the shorter period in a test at Kansas State University's Fort Hays Branch Experiment Station. The tests were conducted to determine ways to reduce sickness in newly-weaned and shipped cattle.

The calves were shipped to the station from New Mexico and tagged, weighed, and allotted.

Calves fed Aureo S-700 for seven days gained more than those given the drug for 28 days. The average total gain was 209 and 188 pounds, respectively, while a control group averaged only 176.

In another test, 57 heifer calves were divided into two groups in an effort to determine the effects of pen size. One group was put in a .4-acre pen with 630 square feet per calf; the other was placed in a 2,200 square feet area (77 square feet per head). The more confined group started on feed sooner and weighed more throughout the trial.

American Bathrooms Need Extensive Explanation

Americans planning to travel to Asia are forewarned about the water and food being unsafe, however, on the other side of the coin, consider the dilemma of a Thai traveling to this country.

A small publication entitled, "Good Manners Abroad" advises the Thai that the food will, in all likelihood, make him ill, that the noise of flushing toilets echo in American homes and that it is necessary to use eating utensils called knives and forks rather than his hands or chopsticks.

There is a difference in what is considered good manners, also. Picking one's teeth in Thailand is fine—in America, a no-no. It's also necessary to keep one's shoes on when entering an American home, particularly if one's socks are holey.

The booklet further explains: Upon entering the American home, the hostess will take the guest's coat and then "go to the kitchen to see about dinner." Even wealthy people do not have cooks and maids all the time, the book explains. Most Thais who are financially able to travel come from homes with plenty of maids and the food is usually prepared at the back of the house on a charcoal fire.

For the Thais, who as a rule do not like wine, the advice is, "you may sniff at wines, if the host invites you to do so. You must then exclaim, 'what a bouquet!' even if you do not like the odor."

The American bathroom requires a chapter to itself. The book suggests that, "if you don't know how to flush the toilet, ask before you use it the first time." And for the method of using the toilet the booklet suggests that the readers never stand on the toilet seat. "It may break and you'll be blamed for it."

American Bathrooms Need Extensive Explanation

How're They Really Doin' Down On The Farm

A year ago, New Holland — the farm machinery division of Sperry Rand — produced a brochure titled, "How're They Really Doin' Down On the Farm?" The folder was a simple, factual primer for people who think that increasing food prices and news stories of government farm program payouts are evidence that the farmer is doing all right for himself.

The facts are, says the brochure, that the farmer is not doing all right, that he is getting the short end of the stick in the marketplace, that the USDA budget seems to go everywhere else and only incidentally to help the farmer.

New Holland printed 200,000 of the folders, and many farm people used them to show their side.

There has been a reprint of the folder, with new figures, and any farmer who reads a news story, hears a television commentary that he thinks is grossly uninformed of the farm profit picture in this country might want one to hand out.

G&G area New Holland dealers may have them, and the company says you can get them directly by sending a stamped, pre-addressed envelope to Farm Facts, New Holland, Pa. 17557.

The full text of the brochure is printed here.

OVERHEARD ON MAIN STREET, ANYTOWN:

Joe: "Everything's up in price at the supermarket. Boy, the farmers must be getting rich!"

Jim: "They ought to be. With the tax money they're getting not to grow crops, they've got to be sitting pretty."

Heard any conversations like that lately? If so, were you able to jump in with some cold, hard facts and figures to set things straight?

If not, hold on to this little pocket-sized "farm fallacy fighter". Developed from USDA and House of Representative Committee on Agriculture reports, it contains some right-to-the-point data you can use to clear the air of "popular misinformation".

Next time someone starts talking loosely about how farmers are "living off the fat of the consumer-taxpayer", just bring out the facts and watch his expression — and story — change.

WHAT DO WE PAY FOR FOOD IN THE STORES?

FACT

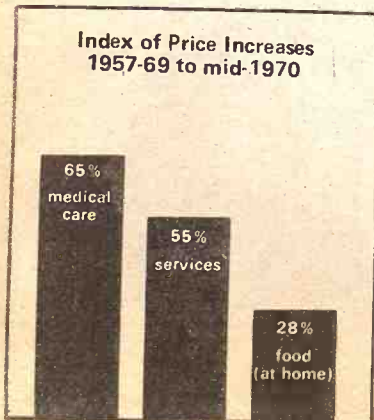

Food costs have risen less than most consumer items in the cost-of-living index since 1957-59. From that period through mid-1970, food costs increased only 28 percent, compared with a 65 percent increase in medical care costs during the same period, and a 55 percent increase in the cost of services.

Look at the record of what it has taken to buy food down through the years. Here's what an hour's work in a factory has been buying in recent years and about 20 and 30 years ago.

	1949	1969	1939
Roundsteak 2.5 lbs.	1.6 lbs.	1.7 lbs.	
Bacon 3.6 lbs.	2.1 lbs.	2.0 lbs.	
Milk 10.2 qts.	6.5 qts.	5.1 qts.	
Oranges 3.8 doz	9.8 doz	2.2 doz.	
Bread 13.9 lvs.	9.8 lvs.	7.9 lvs.	

So why are food bills up at the supermarket? The cost of processing foods is one answer. Many of our popular modern foods are canned, frozen, concentrated, dehydrated, ready-mixed, ready-to-serve or in heat-and-serve form. And costs of transporting and packaging foods is another. Non-food items that enter into the total on the check-out-tape are still another answer.

In other words the cost of marketing food has sent the grocery bills up to a large extent. Marketing agencies and processors received 75 percent of the \$52.5 billion increase in the cost of farm produced foods since 1947-49, while only 25 percent trickled back to the farmers.

WHAT DOES THE FARMER GET FOR HIS PRODUCTS?

FACT

Farmers have not been getting the benefit of higher food prices. The average return from prices received by farmers in 1969 was 3 percent below the comparable 3 year period of 1947-49. However, in this same 20-year period the prices paid by consumers for food at retail level increased by 48 percent.

Here's what the farmer has been averaging in receipts recently:

FOR FOOD

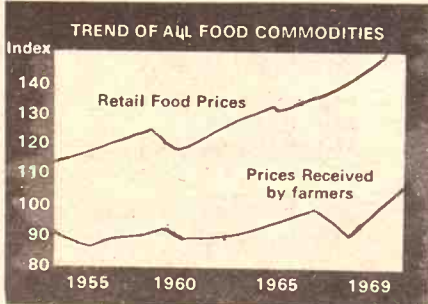

- 2.6 cents for corn in a 31 cent box of cornflakes
- 65 cents for each \$1 spent for choice beef
- 2.5 cents for wheat in a 23 cent loaf of white bread

For Fiber

- 23 cents for cotton in a man's \$4.60 business shirt

For Lumber

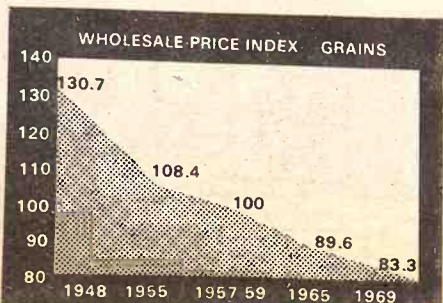

- 25 cents for each \$1 worth of pine grown in his woods

And here's what the farmer has had to live on in recent years, taking average figures for 1969 as an example:

- about \$5,401 per farm net income (a three percent increase above the 1947-49 base period)
- about \$2,375 per farm person in disposable personal income (from farm and nonfarm sources) only 76 percent of the non-farm population's average
- about \$1.57 per hour for farm-work performed — compared with the factory worker's 1969 average of \$3.19 per hour and a food marketing employee's average rate of \$2.83

In spite of the fact that modern North American farmers are the world's most productive and efficient food producers they've been caught in a squeeze between rising operating costs and a declining share of retail food prices. The wholesale price index of some farm products has been steadily decreasing.

WHO GETS GOVERNMENT FUNDS — AND HOW MUCH?

FACT

Farmers received about half of USDA expenditures in the 1970 budget. About 51 percent was for services which are of primary benefit to the general public.

Much of the information the public gets on farm subsidies is deceptive. In fact, non-farmers received a slightly larger share than farmers did. Look at the tables for 1970 to see where the money went.

WHAT DO FARMERS PROVIDE BESIDES FOOD WE BUY IN OUR STORES?

FACT

Farmers are heavy contributors to the health of our economy and are the hope of the world in staving off mass famine. The farmer continues to have a far reaching effect on domestic and world affairs as an employer, a consumer, a taxpayer and a supplier.

Agriculture is still the nation's biggest industry, with assets of better than \$307 billion. That's equal to about two-thirds the value of all current U.S. corporate assets. And farming involves 4.6 million workers — more than the combined work force needed to operate the nation's transportation, public utilities, steel and automobile industries!

Some 2.9 million people are independent agricultural producers. That's the number of farms listed by the USDA for 1969. But three out of every 10 jobs in private enterprises are related to agriculture. Eight million people have jobs just storing, processing and merchandising agricultural products. And six million work at providing the supplies farmers use.

Farmers spend above \$38 billion a year for goods and services just to produce their crops and livestock and another \$12 billion for the things we all use like food, clothes, medicines, furniture, appliances and other goods and services.

Farmers have been using about one third as much steel as the automotive industry does — some 6½ million tons annually in the form of farm machinery, trucks, cars, fencing and building materials. And they've been using 32 billion kilowatt hours of electricity a year — more than the combined amount used annually by the cities of Baltimore, Chicago, Boston, Detroit and Washington, D.C.

The farmer pays his share of the costs of government and public programs. In 1969 alone, farm real estate taxes brought

some \$2.3 billion. And the farm population paid \$446 million in taxes

• \$350 million in income taxes

Besides being the provider of food for domestic markets, American agriculture is the world's largest exporter of food products

of our 300 million barrels producing for export to billion in farm products world markets in 1969

producing for export about the same acreage as that harvested in Kansas and North Dakota

agricultural abundance powerful force for hungry people are other people who are other

disorganized to resist tools of disruptive movements. American products are helping

and promoting economic development as alleviating widespread

We accept foreign countries that need products as well as other terms as payment. And trade farm products for foreign goods and services

WHAT'S IN THE FACT

Production going up farm labor currently nearly seven times the crops as it did in 1960's, productivity of the farm worker has been the average of 6 percent compared to 3 percent annual increase in manhour in nonagricultural industry.

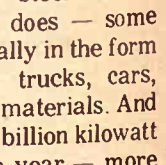

Today, one farm worker enough food, fiber and commodities to supply 44 other people! He's 1957-59.

Farmers going out farmers are dropping retiring with nobody to them — or they're just find more lucrative

The migration away has been going on since turn of the century, so less than half the number today as there were

Even with present efficiency and production number of farms will continue even further. Large corporations will be able to handle future agricultural production the traditional family farm continue to be the backbone of American agriculture.

With the help of the application of ever more and more efficient equipment, the North farmer will become more productive — and better rewarded he is today. New Holland entire farm equipment proud to play a significant development and the future American farming.

Real Estate

PROPERTY FOR SALE

Very nice, improved 40 acre farm 1 1/2 miles from good business town, six room modern home, good outbuildings, all new fences, lots of fruit trees, at \$12,000, with \$1000 down payment, then \$2600 possession date, after that \$500 semiannual payments plus 6% interest. You should see this - you will never regret it.

Almost perfectly level 320A farm, 3-bedroom home, abundant outbuildings in good repair, 272 acres cultivated, balance grass, at \$79,000 on contract. You won't find a better farm for sale.

Improved 160, modern 2-bedroom home, new water system, several good outbuildings, half tillable at only \$26,000.

Would you like to own a 2-bedroom home in a good small town, a good business town. Home has shower, stool, sink, double sink in kitchen, built-ins, wall to wall carpet, all for \$700 with \$100 down. \$200 possession date, then \$25 per month. If you don't look at this, quit complaining about inflation.

Call collect for appointment. Take a look if you want a place for next year.

ANOTHER SMALL CLASSIFIED ADV. — CAN'T WRITE TOO LONG: "GOVERNMENT RESTRICTIONS"

Must sell enough this week to pay our tax
D-19 Allis tractor complete with engine & tires, runs OK. Will put on new 18.4x34 tires all for \$3450. Call Ray Longhofer Still have 440 John Deere backhoe loader tractor for sale \$2999.99

Write Mr. Docking to have Mr. Miller the Atty. to declare the Vietnam war unconstitutional so no more draftees will not have to go. Has been done before. Let's do it here! Write! Write!

J. I. Case No. 1030 tractor, like new condition, new tires. Buy it now. Help save us from big government \$5250
Billy Graham says it's the worst since the Civil War
Manure loader fits 33 Massey \$39.00

Several good old model 4 bottom plows \$149
Several good 3 & 4 bottom IHC quick hitch plows from \$99
See where our state senator Crofoot called Mr. Senator Pearson a "Dummy" on his statement on Prairie Land National Parks. Write Mr. Pearson a letter. Tell him to let the ranchers take care of the grass land.

Astronauts now coming back dead. Andromeda strain. Maybe it's really true.
Used WD Allis tractor .. \$1479
Don't forget to write in: You can now get your Eisenhower dollars.

WD-45 Allis with wide front, new tires, new engine \$1245
300 IHC high wheel tractor, good condition \$649
Penny-gone says we done so badly in Vietnam was because of the terrain. This is sort of what the British said at the outset of the Revolutionary war was "Those damn patriots didn't fight fair." They hid behind trees & shot at us!

Imagine our government not wanting to tell us what really goes on. They didn't want to scare us poor civilians.
Case 500 diesel tractor quite in good condition, needs new axle before ready. Diesel. A big plow tractor \$999.99

See where Mr. Nixon & his broad is going to be in KC Tuesday afternoon for a press conference 1:55 & he's bringing all his press along so he can conference them. Oh yes, Mr. what's his name, the welfare director, coming along too (Richardson). Don't make a dam bit of sense, but what does.

D-19 Allis diesel tractor, a nice big 4 plow tractor at reduced price \$3499 — a repeat

We must go see him & the skinny broad & the secret service!!!
U.S.P.S. is the new postal service — Rates are a bit higher, takes a bit longer, otherwise OK!

New combines now being sold below cost. Some used combines below cost.
IHC M tractor, wide axle, live PTO \$745
IHC M tractor, new engine \$649

**Leaning Silo
Finally Falls**

The leaning silo on the Dick
Wellman ranch near Alden
collapsed last week.

The silo, a 96-foot structure
which could store 2,000 tons of
silage, had been leaning for some
time, but officials felt the danger
of its tumbling was lessened with
most of the silage gone.

But it fell without warning
Saturday morning.

**Current Wheat Harvest May
Break Record Set In 1952**

The current harvest may very
well break the previous wheat
record in the state.

At midpoint in the harvest season,
yields of up to 80 bushels an acre on
dryland farms were not uncommon.
Some irrigated fields may yield
more than 100 bushels per acre.

The record wheat crop for the
state was set in 1952 — 307,629,000
bushels from 14.6 million acres.

Estimates this year indicate that the
1971 harvest will be about 266 million
bushels on just short of 9 million
harvested acres.

Tom Roberts, Manhattan,
president of the Kansas Wheat
Improvement Association, said his
group now sees a harvest of between
295 and 300 million bushels. "But a
record crop easily could be in sight,"
Roberts added.

In order to better the 1952 record,
average yield would have to be
around 35 bushels. The per-acre
yield of 33 bushels was set last year.
In 1952, with much more Kansas
land in wheat, the yield was ap-
proximately 21 bushels to the acre.

Should the total crop be about 300
million bushels, the crop will add a
dividend of approximately \$50
million in Kansas farm income.

**Hanover Celebrates
With Rodeo**

HANOVER — King Bros.
Championship Approved Rodeo, of
Wann, Okla., shouldn't have any
trouble finding Hanover. Ted King,
one of the owners, is married to a
former Hanover girl, Peggy Reedy
King, daughter of Hanover residents
Mr. & Mrs. Elvin Reedy.

The rodeo is the new attraction for
Hanover Days of '49, the 35th an-
nual, July 12, 13, and 14. There will
be no old settlers parade this year,
but the usual carnival will be on the
midway.

Ted King's wife, according to
Banker Nieman, chairman of the
celebration, came up to Hanover
and sold the committee on
scheduling the rodeo. She is
secretary of the outfit.

heavy FFA travel schedule.

According to Harold Shoaf,
Topeka, executive secretary of the
Kansas Association of FFA, around
1000 Kansas Future Farmers of
America are expected to attend the
convention this summer at KSU.
Each of the state's 164 local chapters
will designate two official delegates
to conduct the business of the con-
vention.

State FFA officers who will
preside over the convention this
summer are Doug Deets, Beloit,
president; Phil Stinemitz, Hill City,
vice president; Bob Schrag,
Moundridge, secretary; Rod Rahn
Arkansas City, treasurer; Stanley
Jackson, Smith Center, reporter;
and Ron Roth, Clay Center, sentinel.

**Can't Label Franks,
Bologna 'All-Meat'**

The U.S. Department of
Agriculture has published in the
Federal Register official notice of a
May 5 Federal court ruling banning
the use of the phrase "all meat" and
similar terms on cooked sausage
products, such as frankfurters and
bologna.

The U.S. District Court for the
District of Columbia, which said the
terms are misleading to consumers,
specifically ordered USDA to advise
the packing industry of the ruling as
a preliminary step in carrying out
the order.

The court also ordered USDA to
take necessary action to stop use of
the "all-meat" or "all-beef" labels
on cooked sausage products as soon
as possible — and in any event
within six months from the decision
date or the final action on a USDA
appeal, if one is made. The decision
resulted from a Federation of
Homemakers challenge of federal
meat inspection regulations per-
mitting such labeling. An appeal is
still under consideration.

Q & A On Safety, Health Act

Question — Does the occupational safety and health act of 1970 affect farmers?

Answer — Yes, but it is not known at this time to what extent.

The act authorizes the federal government to set and enforce occupational safety and health standards applicable to businesses involved in interstate commerce.

The purpose is to assure every person in the United States safe and healthful working conditions.

The act provides that each employer must furnish employees — even partimers — a place of employment free from "recognized hazards" that may cause death or serious physical harm.

The secretary of labor is required to publish existing "national consensus standards" and "established federal standards" unless he

determines these will not improve the safety and health of employees.

He may set forth new standards or modify or revoke existing ones, with the assistance of advisory committees. He may also set forth emergency temporary standards if he determines employees are exposed to dangers from toxic or physically-harmful agents or hazards.

Adversely-affected parties may seek judicial review of the secretary's standards.

Inspections and investigations are to be made by the secretary. Employees may request an inspection if they believe working conditions potentially are dangerous. Following the inspection the secretary is authorized to issue a citation to an employer for violations of the act.

The labor secretary also is authorized to grant temporary variance from standards to give an employer time to comply. The act authorizes civil penalties for violations and criminal penalties for willful violations resulting in death.

The secretary is to conduct research, experiments, and demonstrations relating to occupational safety and health standards.

As these standards are developed they will affect Kansas farmers. Just how and to what extent will depend on the standards promulgated by the labor secretary.

As these standards are published farmers will have to give more attention to correcting hazards on their farms.

Johnny Kaw Says:

The surface is important but what is underneath is more important.

Complete Wild Turkey Count

PRATT — The completion of the wild turkey winter flock count showed a total of 1147 turkeys in the state. This is the first year the

Kansas wild turkey population has surpassed the 1000 mark and represents an increase of 256 turkeys by actual count.

There were 55 flocks reported during the survey as compared to 58 reported during 1970. However, another eight flocks which were known to exist but from which no reports on exact numbers could be obtained in this study had a 1970 population of 101 birds. It is reasonable to assume the Kansas wild turkey population might be in the neighborhood of 1,200 birds.

The average flock size increased from 15.2 in 1970 to 20.8 turkeys in the 1971 survey. The sex ratio, as counted by the observers was 104 toms to 100 hens. This is the first time that the ratio has ever been above 75 toms to 100 hens, and the general average has been in the neighborhood of 70 toms 100 hens.

Major flock increases were noted in several areas. The Attica, Feterita, Pierceville and Aetna flocks showed major population increases. This past winter most of the remaining potential habitat for wild turkeys in the southwest region was stocked.

Fully established flocks in the southwest and the majority of the rangestocked point to the increasing likelihood of holding a turkey season in this region in the next few years according to Steve Capel, big game biologist for the Kansas Forestry, Fish and Game Commission.

Urges Caution In Using Insecticides

The use of a respirator while loading and unloading insecticides for field application is recommended by a Kansas State University Extension entomologist.

Dr. H. Leroy Brooks says a respirator is of particular value when some of the more highly toxic insecticides are used, whether in liquid or granular form.

Some of the more commonly used insecticides for which a respirator should be used are carbophenothion, EPN, parathion, demeton, dyfonate, azinphosmethyl, mevinphos, phorate, and disulfoton. Some are in granular form.

ALL THESE, BUT STILL NEEDS SPARES

A truck, filled with worn-out tires is an ironic sight on a highway near Walsenburg, Colo., abandoned because of flat tires.

Brooks says a farmer needs to be selective in purchasing a respirator. For example, some dust respirators offer no protection against insecticides. "This is worse than not having one at all," he observed.

A list of USDA approved respirators for field use may be

obtained by writing Waters Hall, Kansas State University, Manhattan. In most cases the application of moderate insecticides around a plant require use of a respirator. concluded.

Chaff May Be Clue To Higher Wheat Yield

Kansas is winding up another bountiful wheat harvest and undoubtedly all the farmers and combine operators have sworn at the clouds of chaff that irritated their eyes and throat and made their skin itch.

Their town and city cousins have probably not given the entire matter a single thought.

Yet, a Kansas State University plant scientist, Dr. Iwan Teare, has found that anyone who grows wheat treats bread should be thankful for the chaff on the heads of grain and the job it does in producing food for the world and wealth for Kansans. Chaff is the average man's collective term for four separate plant parts which surround wheat kernels. These four plant parts are known scientifically as glumes, lemmas, paleas, and awns.

It has always been thought that the main purpose of chaff is to protect the wheat kernels.

However, Teare, who came from Washington State University in 1969

to join the team of plant, air, water, and soil scientists in KSU's new evapotranspiration Laboratory, has found in his research that the lemmas, paleas, glumes, and awns vary on highly significant amounts of photosynthesis which contribute directly to grain yield.

Photosynthesis is the process by which plants convert sunlight into plant material. During photosynthesis, sunlight energy strikes chlorophyll — the green coloring in plants — which in turn uses the energy to convert water and carbon dioxide into carbohydrates, including grain.

Oxygen for breathing by animals is the by-product of photosynthesis. Oxygen and water are discarded by the plant through stomata which are microscopic openings in the plant face. The number of stomata and chlorophyll containing area in a particular section of the plant gives

a rough indication of the amount of photosynthesis that takes place there.

By using a 150 magnification microscope, Teare carefully counted the stomata in the lemmas, paleas, glumes, and awns of wheat varieties. From these data he determined the resistance of the wheat head to carbon dioxide diffusion per unit of chlorophyll-containing tissue.

He found that the glume and awn areas were 100 percent effective for photosynthesis, the lemma was 63 percent effective, and the palea just 17 percent effective.

After determining the photosynthetic area of the wheat head in 30 wheat varieties, he checked average grain yields for the varieties.

It came as no surprise to him that in most cases varieties with the highest amount of photosynthetic area in the head also were the highest yielding varieties.

The reason is simple. When carbohydrates are manufactured by photosynthesis, they must be transported to a storage area in the plant. In wheat most of this carbohydrate storage is in the grain.

Consequently, carbohydrates manufactured in the leaves must be transported back to the plant stem and then upward to the grain head, a minimum distance of several inches.

When carbohydrates are manufactured in the plant parts immediately surrounding the grain, the transportation distance is only a fraction of an inch, thereby making photosynthesis much more efficient.

Teare's research holds exciting promise for the future. New wheat varieties can perhaps be bred with even higher amounts of photosynthetic area in the heads. Inversely, an approximation of new variety yield can be made by determining

the photosynthetic area of the head. Teare's research could become a vital step toward producing more wealth in Kansas and toward feeding the hungry people of the world.

Henkle Reinstated As Postmaster

GREAT BEND — Joseph W. Henkle has announced that he has been notified the Civil Service Appeals Board at Washington, D.C., had cleared him of two charges of misconduct. The misconduct charges resulted in Henkle's removal as Great Bend postmaster.

Henkle served two terms as lieutenant governor under the late Gov. George Docking. He was appointed as temporary postmaster at Great Bend March 13, 1965, then was confirmed as postmaster about 18 months later.

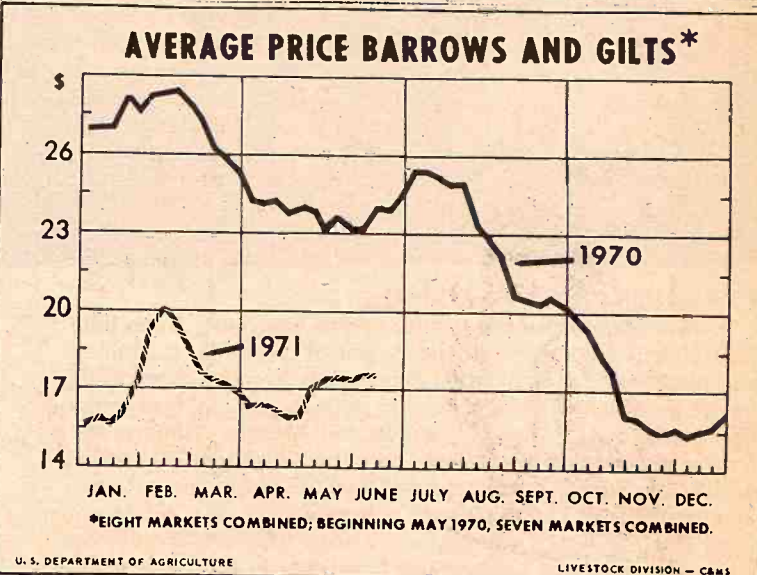

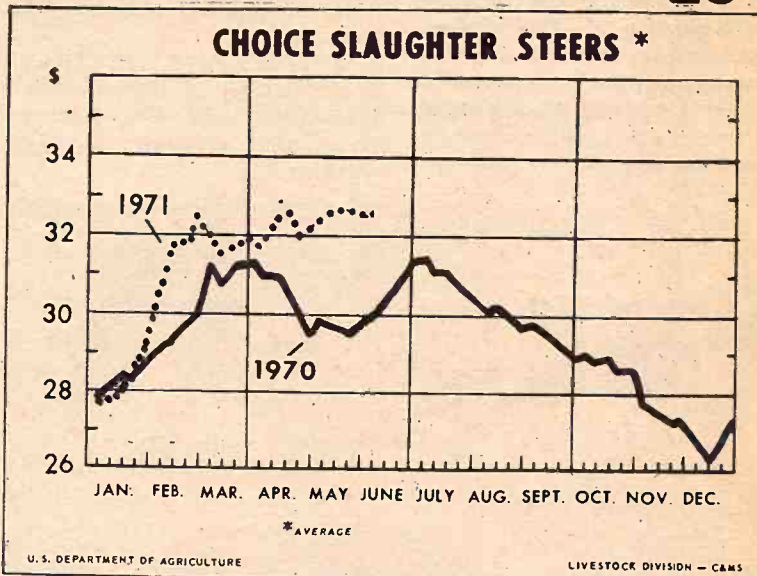

Henkle commented, "as I said at the time this trouble came up, there seemed to be an effort on the part of some of the postal system employees to get me ousted as soon as I was appointed." He added, "but I also said then and I still believe it, that my only crime was being a Democrat — I believe it then and I believe it now."

The government directive from the appeals board said Henkle was to be reinstated in his postmaster position and receive his back salary from the time he was suspended.

Asians Complete Feed Management Course At K-State

Forty-two Far East feed executives from Japan, Korea and Taiwan completed a two-week study tour and feed mill management short course conducted in June by the department of grain science and

industry at Kansas State University, Manhattan.

Participants included representatives of feed manufacturing firms, trade associations and government officials of Asian countries.

EXPLAINS PILOT FEED MILL

Kansas State University quality control specialist, James Baldwin (center), explains the flow and control system for the remodeled pilot feed mill at the KSU department of grain science and industry. Watching are left, to right, Nobuhisa Nasu, feed promotion specialist, U. S. Feed Grains Council; Masanori Kimura, executive director, Taiyo Ryokoku Industry Co.; Kunio Kawamura, deputy chief, development section, feed production department, Zenrakuren; and Tsuneo Takeda, managing director, Chiba Kumiai Feed Co. The Asians attended a two-week tour and feed management short course at Kansas State University in June.

Sponsors of the short course were the U.S. Feed Grains Council, American Soybean Association, National Renderers Association, Japan Feed Council and the Foreign Agricultural Service, U.S. Department of Agriculture.

The feed industry in Japan has progressed rapidly. During 1970 compound feed manufacture there reached 14,851,963 metric tons — a 16.6 percent increase over the previous year. Feed industries in the Republic of Korea and China also are undergoing rapid growth and development.

The KSU short course was designed to provide the Asian feed industry with the latest developments in U.S. feed manufacturing technology and to help expand markets for U.S. agricultural commodities throughout Asia.

Among the procedures presented to the Asian feed executives during the short course were quality of ingredients, processing, mixing, and pelleting. The hydraulic system of the new K-State pilot feed mill was explained. The importance of equipment maintenance, safety, quality control, sanitation, and distribution was stressed along with discussions of special problems relating to the use of drugs and air pollution.

Dr. Robert Schoeff of the Kansas State University grain science and industry department was the coordinator of the short course. It was taught by faculty members of the KSU departments of grain science and industry, agricultural economics, entomology, animal science and industry, dairy and poultry science, and biology. Industry consultants assisted.

While studying at KSU the course

participants were taken on tours to Kansas industry and recreational facilities including a visit to Abilene where they visited the Eisenhower Center which includes the late President Dwight D. Eisenhower's boyhood home, a museum, library, and burial place. Earlier in the month, they attended the annual American Feed Manufacturers' Association convention and feed industry show in Chicago and enroute to Kansas visited Midwest feed mills, feed research farms, grain terminals, and various farms and businesses.

At the close of the short course the visiting Asians were honored at a banquet in the K-State Union

Arrives In Style

SANDSTONE, Minn. — When one of the new prisoners arrived at Sandstone Federal Prison, the warden was quite surprised.

Prisoners brought to Sandstone are usually grouped together in a van, said Warden Loren Daggett. However, one prisoner drove up with a friend in an air-conditioned car.

Drinker Gets Kit That Tells When To Stop Driving

Liquor store customers in Charlotte, N.C., and surrounding Mecklenburg County, can get a party kit free of charge.

The kit contains a plastic bag and a small, glass tube containing chunks of solid chemicals.

Party-goers stick the tube into the bag and blow through the tube until the bag is inflated. Depending upon the amount of liquor consumed, the chunks in the tube change color.

If your corn needs rain

Better see a professional rain maker... O'Ev here at Farmers Union. If you didn't know that O'Ev never tells a lie, you wouldn't believe how much activity we've been having in our irrigation engineering department. How about you coming in some time?

114 To Get Star Farmer Degree

One hundred and fourteen Kansas Future Farmers of America members have been recommended to receive the Star Farmer degree at the 43rd convention of the Kansas Association of FFA, to be held at Kansas State University, Manhattan, July 12-14.

This year, for the first time, the FFA convention is being held in the summer. In the past the event has been held in conjunction with the State Agriculture and Agricultural Judging contests at KSU in late April and early May.

Final action on the Star Farmer degrees will be taken by the FFA House of Delegates Monday evening, July 12, and the boys will receive their awards that evening.

There are rigid requirements for the State Farmer degree, explains C. C. Eustace, Topeka, state advisor to the Kansas Association of FFA. Nearly all youth selected for this honor must have shown leadership ability and have satisfactory scholastic records. State Farmers represent the top two percent of the FFA youth in Kansas.

Recommended to receive the State Farmer degree this year are:

Mike Bohn, Alma
Brent Miller, Alma
Hal Palenske, Alma

Study Muscling, Size, And Profit At Beef Symposium

There is feedlot profit potential in almost every size and shape of beef animal if they are bought and managed correctly, but an advantage nearly always favors larger, faster gaining animals, Dr. Val Brungardt of the University of Wisconsin, told the more than 1,000 persons attending the recent American Beef Cattle Symposium in Madison, Wisconsin. Cattlemen were on hand from 41 states and seven foreign countries.

"We must keep in mind that the most important part of the cattle business is producing a live calf at a high enough rate to be profitable, and this is not measured in this study," Brungardt explained. The Symposium, held at the University of Wisconsin's Arlington Experimental Farms, was sponsored by the American Angus Association, American National Cattlemen's Association, and the University.

Three years of study have shown that there is very little difference between rate of gain or carcass cut-out in animals that were designated as light or moderately muscled at weaning age. "The graders were probably rating the animals on condition rather than muscling," Brungardt concluded.

The larger animals almost always had the highest weight per day of age, and the fastest rate of gain, but in all cases the smaller cattle, regardless of breed, had the best feed conversion record. At slaughter, however, the larger animals netted more total dollars. Brungardt said this was because the larger animals put on more total pounds and thus were able to convert more low cost feed to higher priced beef. The smaller steers also cost more per pound as weaning-age calves. This meant that they had to make up a larger margin between the purchase price and sale price before they could start to show a profit.

This year nearly 100 head of Angus steers, 50 Charolais crossbreds, and 10 Herefords were evaluated. In addition, another 50 head of Angus are on a roughage and deferred feeding program to determine how size and muscling affect feedlot performance and profits under this type of management program. All the steers were born in March, 1970.

Last year some 50 head of Charolais crosses and 50 head of Herefords were tested. Another 50 head of Herefords were fed out and evaluated in 1969. "We are not trying to compare breed against breed,"

Brungardt said. "Instead we are trying to sample a cross section of each breed from its smallest to its largest cattle and evaluate their feedlot performance."

There was not a great difference between breeds when all the cattle were fed to the same end-point. That was when an estimated 80 percent of them would grade USDA Choice. The Angus were fed 153 days and probably should have been fed only 140 days, according to Brungardt. The Herefords were fed 155 days and the Charolais crosses were fed 185 days in 1970 and 194 days on the final test. The sizes ranged from Number 1 through Number 5 for the Angus and Herefords and 3 through 7 for the Charolais crossbreds. Number 1 steers were the smallest and were expected to weigh between 750 and 850 pounds at 14½ to 15 months of age. The final feedlot weights on each group were within a 100 pound heavier range. This made the Number 5's weigh between 1,151 and 1,250 pounds and the Number 7's 1,351 pounds and over at slaughter.

There was no significant USDA grade difference between the large and small cattle when they were handled alike, according to Brungardt. "We must remember to always compare cattle at the same point in life, not at the same size, weight or days on feed. The best time to compare the feedlot performance of steers is when 80 percent of them will grade Choice. This conforms with current market demand," he explained.

Within a particular weight range the two pure breeds and the crossbreds came up with similar results, although the larger crossbreds averaged higher in almost every category. The crossbreds ranged in size from No. 3 through No. 7, while the straightbreds ranged from No. 1 through No. 5.

Average daily gain in all breeds, for example, seemed to peak at the No. 5 body size. Among the individually fed steers the Number 5 Angus gained 3.09 pounds per day, the No. 5 Charolais 3.23 pounds per day and the No. 5 Herefords 3.29 pounds per day. Rate of gain for the past two years has shown either a decline or only a little increase in body sizes above No. 5. This year the No. 6 crossbreds averaged 3.11 pounds per day, and the No. 7's averaged 3.24 pounds. Average daily gain of the No. 3's for example, was almost identical. The averages were: Angus 2.98 pounds; Charolais

crosses, 2.98 pounds and Herefords, 2.96 pounds.

Brungardt also announced the gross income from the cows that produced the No. 3's of the various breeds. Gross for the Angus was \$216; for the Charolais crosses, \$200; and for the Herefords, \$206. The range in gross income for the breeds was \$170 to \$235 for the No. 1 through No. 5 Angus; \$204 through \$239 for the No. 3 through No. 7 Charolais crosses; and \$178 through \$226 for the No. 1 through No. 5 Herefords.

"The tests have shown that we should measure and evaluate beef cows on what they can produce, not how big they are," Brungardt said, and he concluded by saying "What we need to do is stereotype production, rather than size and shape."

In addition to the research reports the Symposium featured a full two-day program covering the main issues of interest to today's beef cattlemen.

"The housewife is not in a position to write beef cattle specifications for the producer," Irv Rinehart, of the Godfrey Company, Waukesha, Wisconsin, told the group. "We have the knowledge and ability to determine what type of beef the housewife likes best. It is up to us to identify and produce more of it," he said. Rinehart, whose firm owns over 70 Sentry Food Stores, said they get better results and fewer complaints by selling only beef that is in the upper one-third of the USDA Choice grade. Sentry pays a premium to the packer, he said, in order to select only the carcasses they want.

Sundays 1 p.m. to 5 p.m.

and then review it every five years," Dr. Ronald H. Nelson, chairman of the animal husbandry department, Michigan State University, told the crowd. "Genetic change is slow and you can't go too far wrong in only five years," he said.

To illustrate his point Nelson said that if all the herds in one breed decided to select cattle exclusively for weight at 12 months of age, and used natural service, it would take until the year 2000 to increase the average of the breed 100 pounds. Selecting for additional traits would decrease even this slow rate of genetic change. Nelson suggested that the goal of all cattle associations should be to produce a breed that can stand alone. Then the cattle can be sold to people who want to breed straightbred cattle or crossbred cattle.

Other panels and speakers on the two-day Symposium investigated federal grading, double muscling in beef cattle, the pros and cons of

using A.I., the future of records, bull test operator preferences, merchandising.

ELEVATOR COLLAPSES
The collapse of the Plevna Co-op Grain and Supply elevator resulted in the spilling of about 25,000 bushels of wheat. Elevator officials attributed the accident to poor workmanship. The elevator was built in 1966 and has been used in only two harvests. Damage was estimated at \$40,000 to \$50,000.

Coors Says Can Collection Up 388 Percent Over 1970
DEN, Colo. — Adolph Coors' cash-for-cans program collected nearly four times as much aluminum in 1971 as in 1970. Coors officials announced that during the first five months of 1971, individuals and organizations turned in 5,241,476 pounds of aluminum — more than 120-million cans — to Coors' 166 distributors, who have been paid \$524,147 for the cans.

For the comparable period last year, aluminum collection in the Coors program totaled 1,073,355 pounds. The program began in January, 1970. Thus the 1971 collection pace is 388 percent ahead of last year. All Coors distributors, pay a dime a pound for aluminum containers. All clean aluminum cans are accepted; the program is not restricted to Coors cans. Of the sharp increase, William K. Coors, president of Adolph Coors Company, said, "We simply feel that many more people now are familiar with aluminum's high salvage value, and also, many more people are conscientiously involved in the total business of trying to keep this nation a good place to live." Coors also noted that customers

have returned more than 5-million bottles since February of this year, when the regional brewery began paying one cent each for its bottles, regardless of size. Through May, that amounts to a 49.28 per cent return of all bottles Coors puts on the market.

"We are pleased with that initial response," Coors said, "and we'll be working hard to improve it. Just as has been true of our aluminum program, it takes a little time to get the word around."

Coors, fourth largest U.S. brewing company, has pioneered the use of aluminum cans. The company began experimentation with aluminum can manufacture in 1955, and began marketing beer in a 7-ounce aluminum can of its own manufacture in 1959. From 1959 to 1966, Coors bought back 85-million of those cans, at a penny each, to help bring about increased litter consciousness, discontinued the program for a time because of handling problems, then launched its current cash-for-cans program 17 months ago.

From 1959 to 1966, Coors bought back 85-million of those cans, at a penny each, to help bring about increased litter consciousness, discontinued the program for a time because of handling problems, then launched its current cash-for-cans program 17 months ago.

Since inception of the current program, aluminum collections by Coors distributors have totaled 11,463,554 pounds or, at an average 23 cans per pound, more than 263-million of the lightweight, seamless cans. Coors' payout for the cans has been \$1,146,355.

Much of the aluminum has been collected by civic and service groups. They use the dime-a-pound proceeds for community causes. Collections in 1971 have averaged more than a million pounds per

month. In only one 1970 month, December, did Coors distributors receive that much aluminum.

The Coors recycling program, for both cans and bottles, operates through all Coors distributors in Colorado, Arizona, Idaho, California, Nevada, Kansas, New Mexico, Texas, Oklahoma, Wyoming and Utah.

Price Index Up A Notch To Mid-June

Grass & Grain

July 6, 1971

Kansas

Prices received by Kansas farmers at mid-June 1971 were up slightly from May this year and moderately above June 1970 according to the Kansas Crop and Livestock Reporting Service. The index of prices received for all farm products was 262 percent of the 1910-14 base period compared with 259 in May and 246 in June last year.

Prices received for wheat, corn, sorghum grain, soybeans and lambs were up moderately from May while prices for hogs were up slightly. Prices for beef cattle, calves, oats and drye were down slightly from the previous month. Compared with a year ago, prices for grains and hogs were considerably higher and hay, beef cattle, milk and milk hogs were up some. However, prices for hogs were considerably below 1970 and eggs were down a

bushel, 6 cents above a month ago and 26 cents above a year ago. Corn was worth 1.40 per bushel, 5 cents above the previous month and 24 cents above June 1970. Barley at 97 cents per bushel was unchanged from a month earlier but 23 cents above a year earlier. Sorghum grain brought \$2.30 per cwt., 12 cents above May and 60 cents above a year ago. Soybeans averaged \$2.88 per bushel, 5 cents above the previous month and 40 cents above June 1970.

The livestock and livestock products price index at mid-June was 363 percent of the 1910-14 base period compared with 365 a month earlier and 367 a year earlier.

The meat animal prices index was 440 percent in June, down 3 points from May and 5 points below June last year. Hog prices averaged \$17.50 per cwt., 20 cents above a month earlier, but \$5.60 below June 1970. All beef cattle brought \$29.20 per cwt., 40 cents below the previous month but \$1.00 above a year ago.

The dairy price index was 331 in June compared with 329 in May and 326 a year earlier. The preliminary

wholesale milk price of \$5.40 was unchanged from last month but 5 cents above last year.

Eggs averaged 22 cents per dozen unchanged from the previous month but 1 cent below a year ago.

beef cattle, calves, sheep milk and eggs.

The index of prices paid by farmers for commodities and services (including interest, taxes and wage rates) was 412, up 2 points from

mid-May and 22 points above a year ago. The parity ratio in June was 70, unchanged from May but down 2 points from June 1970.

LIVESTOCK & COMMISSION CO., MARYSVILLE, KANSAS

Sell At St. Marys

Sell Or Buy Cattle & Hogs By Auction Tuesdays

We had light receipts last week due to harvest being in full swing. We sold 228 cattle and 103 hogs. Our cattle consisted of mostly killing cows, on which the market was 25¢ to 50¢ lower. Not enough to test the market on stocker and feeder cattle but odd lots were steady to weak.

Our stock pigs were selling \$1.00 to \$2.00 lower per head.

Following is a sampling of our consignments:

CERTIFIED

Farmers & Ranchers Livestock Commission Co., Inc

WEST ON OLD HWY. 40 SALINA, KANS.

MONDAY Hogs & Cattle

Hogs sell at 10:30 a.m. followed by our regular cattle sale as they are unloaded.

THURSDAY Cattle Only

Selling starts at 11:00 a.m. Cattle will sell in the order they are consigned on the books.

Monday Sales Only Until After Harvest

Bring Your Hogs & Cattle We'll Have The Buyers

Receipts Monday totaled 501 head of cattle and hogs, with wheat harvest in full swing farmers were extremely busy. Fat hog top was \$20.30, not enough cattle to test market.
