

Green Bavaria

Warren Prose, Bavaria co-op elevator manager, stands beside portable gas tank. He came to Bavaria year ago from McPherson. The Bavaria elevator has 600,000-bushel capacity. Area around Bavaria had one of best looking wheat prospects in the state.

Why Joint Farm Efforts Lag

The problems of farmer strength in the market place and inability of farm organizations to agree with one another was recently discussed by former Kansas congressman Clifford Hope in a newspaper column which he periodically writes.

In recent months a great deal has been said to the effect that farmers should develop more strength in the market place. This is nothing new. It has long been recognized that this is agriculture's greatest weakness.

Hope's suggestions dealing with this situation have been mentioned lately in this column.

Mostly all of them have some merit.

No one, however, should assume that any miracles are going to happen. All such suggestions must assume much more unanimity among farmers than now exists or has existed at anytime in the past.

One of agriculture's problems has always been the inability of farmers to organize themselves effectively. This is particularly true in the field of general farm organizations which ought to be working together but more often are operating at cross purposes. I'm referring now to organizations like the American Farm Bureau Federation, The National Grange, The Farmers Union

A Kansas wheat farmer scanning the horizon for new markets is inclined to favor a reduction in trade barriers. His neighbor across the road whose main interest is in beef cattle wants increased restrictions on imports, especially of beef. If, as is often the case he produces both cattle and wheat he is in grave danger of developing a split personality when foreign trade policies are under discussion.

Farm organizations like all organized groups have a tendency to become involved in politics, not only farm organization politics but on national issues as well. Thus the American Farm Bureau Federation as far as national policies are concerned is now usually found somewhat to the right of the United States Chamber of Commerce, although as a new organization

and the National Farmers Organization (N.F.O.).

One reason for their ineffectiveness arises out of the fact that many of their members are indifferent to the purposes of the organization. In many cases they joined because the organization offered an attractive insurance program or because it has some of the features of a social organization or for other reasons, alien to matters of farm policy.

Another thing which weakens the effectiveness of general farm organizations arises out of conflicts of interest among agricultural producers. A dairy farmer in New York or New England who buys all or most of his feed is interested in lower rather than higher prices for corn, milo or soy beans.

A Kansas wheat farmer scanning the horizon for new markets is inclined to favor a reduction in trade barriers. His neighbor across the road whose main interest is in beef cattle wants increased restrictions on imports, especially of beef. If, as is often the case he produces both cattle and wheat he is in grave danger of developing a split personality when foreign trade policies are under discussion.

Farm organizations like all organized groups have a tendency to become involved in politics, not only farm organization politics but on national issues as well. Thus the American Farm Bureau Federation as far as national policies are concerned is now usually found somewhat to the right of the United States Chamber of Commerce, although as a new organization

Another Expansion Of Cattle Futures Market

The Chicago Mercantile exchange has streamlined its thriving live cattle futures contract in an effort to make it more useful to producers, feeders and processors and a better trading market for speculators.

Everett B. Harris, president, announced that by June, 1968, traders would be able to buy and sell live cattle futures contracts for every month of the year.

Currently, contracts for the future delivery of cattle in June, August, October and December, 1967, and February, April, June and July 1968, are listed on the exchange.

These are the only months cattle producers and feeders

can deliver their cattle on the futures market. This means, for example, that if their cattle are not ready for delivery this month they will have to wait 60 days until they can deliver their cattle on the expiring August contract, even though the cattle might be ready for marketing in July.

By August the cattle might be too heavy to deliver. The exchange contract calls for the delivery of USDA choice live steers weighing between 1,050 and 1,250 pounds each.

By next June, cattle feeders will have to wait only seven to 10 days between the last delivery day of one expiring contract month and the first delivery day of the next expiring contract.

Another change, to become effective with the listing of a new July, 1968, contract sometime next week, will make Tuesday, Wednesday and Thursday of the contract month following the sixth calendar day the only days of the week cattle can be delivered. Mondays and Fridays are heavy marketing days

on the cash cattle market, and it is understood that the Agriculture Department can do a better and faster job of inspecting and grading exchange cattle in the middle of the week.

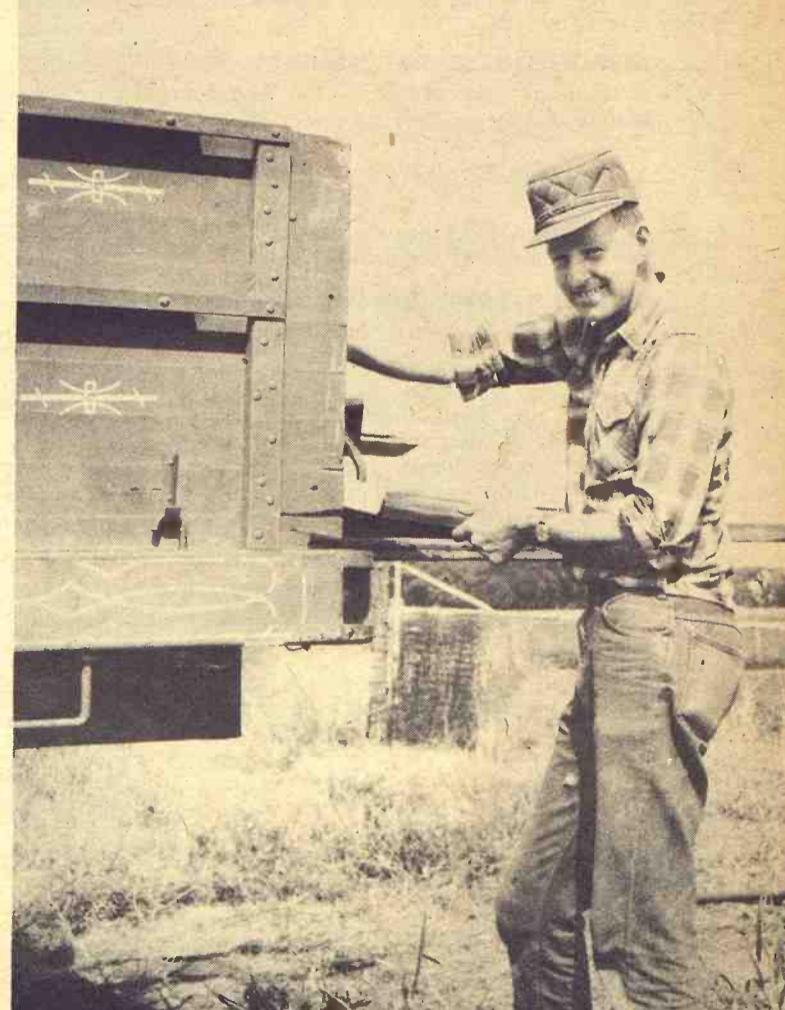

Deliveries will not be permitted on holidays or days preceding holidays.

Harris predicted the new live cattle contract and the availability of contracts for every month of the year would boost the live cattle open interest to 100,000 contracts of 25,000 pounds, or about 25 head each, by 1970.

The open interest, or number of unsettled contracts, has soared to 23,000 contracts from 7,659 a year ago. Trading in live cattle futures started in November, 1964.

MANHATTAN CO-OP VOLUME AT \$2.9 MILLION

MANHATTAN — Volume at the Farmers Cooperative Association the past fiscal year was \$2.945 million with a saving of \$113,269. Cash payments in various forms totaled \$91,628. The co-op added anhydrous facilities at Onaga and Alta Vista branches. James Brown was elected to the board and named Frank Werner to succeed Warren Longren, who resigned. Joe Dockins is manager.

Finds Fossil of Elephant Tusk

McPHERSON — What may be a fossil 100,000 years old has been unearthed in the McPherson county sandpits 13 miles northwest of McPherson.

Dr. R. E. Mohler, former curator of the McPherson College

museum, said he believes the fossil is the tusk of a prehistoric Imperial elephant.

Walter Harms, a bulldozer operator, exposed about a foot of the tusk this week while moving sand.

Thursday he excavated the remainder with a hand shovel.

Harms said originally the tusk was about eight feet long,

but more than half of it chumbed when he picked it up. About three feet of the fossil still remains, broken into three pieces.

The sandpits have yielded fossilized bones and teeth before, but workers there said this is the largest fossil yet recovered.

Dr. Mohler, a biology professor before he retired, said the Imperial elephant lived in the latter Pleiocene and early Pleistocene eras (prehistoric) and stood about 14 feet high, about four times as much as the ordinary African elephant and stood about 14 feet high.

Dr. Mohler said he has found leg bones, tusks, teeth, ribs,

ON GOOCH'S BEST . . . your pigs get ahead during weaning! . . . stay ahead all the way to an early market

CK Processing Co. of Manhattan and Clay Center Alfalfa Mill are headquarters for the feeds that can turn pig weaning into a real headstart towards extra hog raising profits.

GOOCH'S BEST PIG GROWER 250 (contains Aureo SP-250) is the ready-to-use weaning feed. At the Gooch Research Farm, pigs show these double advantages for Pig Grower 250:

- Takes the worry out of weaning by keeping pigs growing a pound or more daily.
- Adds "quick growth" at low cost by trading 2 pounds of feed for each pound of gain.

GOOCH'S BEST PIG MIXER 1000 is the grain balancer to use to take growth slowdowns out of weaning and provide your pigs the full benefits of Aureo SP 250.

GOOCH'S BEST SUPER 40 helps your grain put a market topping finish on hogs fast!

Gooch Super 40 is the low-cost way to hurry your hogs to be ready days earlier. Only $\frac{1}{2}$ to $\frac{3}{4}$ pound Super 40 per head daily is needed to balance a full feed of grain into the meat-building ration to bring out your pig's meat qualities fast.

NOW AVAILABLE! Gooch's Best Swine Guard 300 containing the triple acting Neo-Terramycin combination that has proved so effective in controlling stubborn scours outbreaks.

GOOCH'S BEST PHOS ELEVEN takes the guesswork out of mineral feeding!

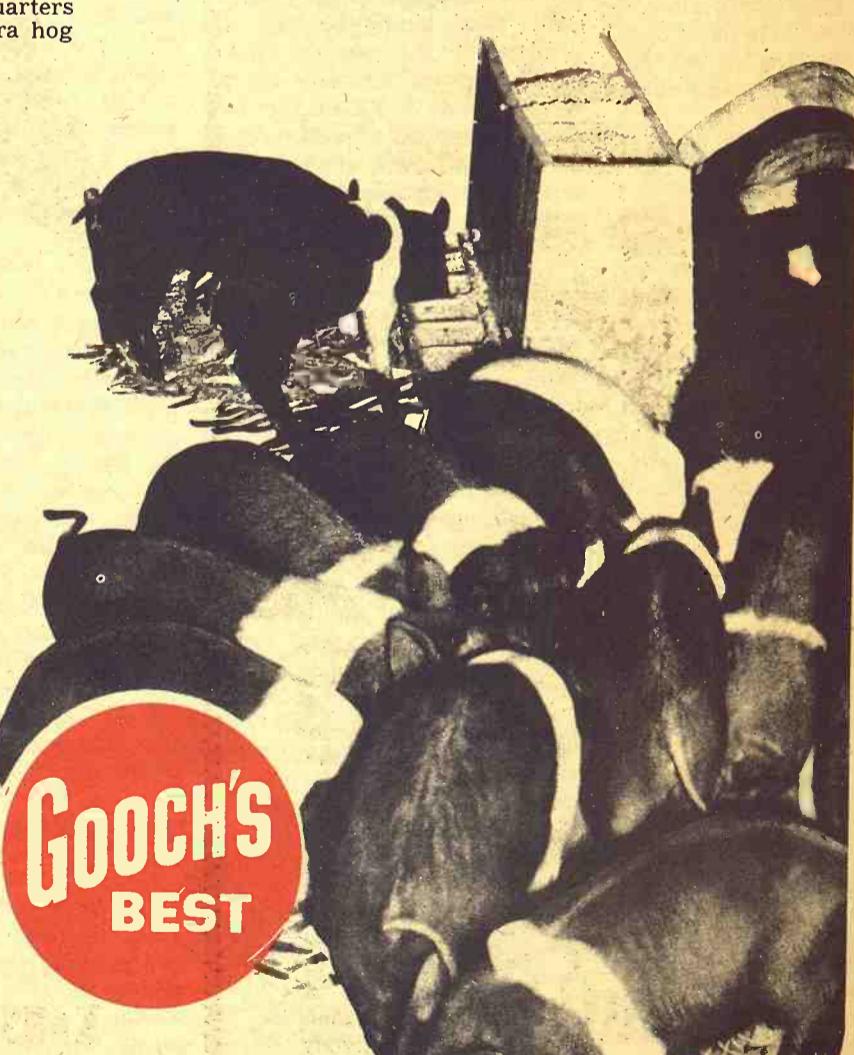

CK Processing Co. and Clay Center Alfalfa Mill can supply you the livestock mineral that's really worth the money. These "plus advantages" built into Gooch's Phos Eleven Mineral enables your feed dollars to buy more real performance boosting mineral nutrition.

- 11% level of nearly 100% available phosphorus (Mono-Calcium Phosphate is the principal phosphorus source in Gooch's Best)
- A complete line-up of essential trace minerals.
- A very favorable calcium to phosphorus ratio.

Kansas Wheat Month

KANSAS WHEAT is more than a crop. When we observe Kansas Wheat Month we take note of . . . an abundance of highly nutritious, economical food . . . international trade . . . Kansas' share of exported wheat and flour has been worth in excess of \$248,600,000 a year . . . more business in Kansas communities . . . every wheat producer dollar generates another \$3 in the State . . . better health . . . high cereal diets result in less heart disease.

KANSAS WHEAT MONTH is the time to learn more about Kansas wheat production, handling, storage, transportation, milling, and baking . . . to recognize the important place of wheat in the economy . . . and to serve bread and other healthful wheat foods.

Kansas, the greatest wheat producing State in the U. S., has a 10-year average wheat crop of 235 million bushels of superior quality bread-making wheat.

TOP OUTPUT LEVEL BY HERKIMER DAIRYMAN

HERKIMER — Merlin Frerking, Marshall county dairyman, has a Holstein cow which for the second time has achieved a 1000-pound butterfat production level in a single lactation.

'Farmers Must Get More If They Feed World'

The House Republican task force on agriculture says the United States cannot play an effective role in feeding the hungry world, and fight a war, unless U. S. agriculture is assured that its efforts will be equitably rewarded.

The task force recommended the establishment of a bipartisan world food study commission.

"Present low farm prices, the alarming increase in agricultural imports, and the extent to which American agriculture was short-changed by the Kennedy round trade agreements at Geneva point up the urgent need for a penetrating inquiry into all aspects of the approaching world food shortage," the task force said.

Its chairman, Rep. Odin Langen of Minnesota, said the U. S. farmer could use this opportunity to flex his productive muscles and improve his financial position if wise plans are made.

"Our proposed commission could well be the catalytic agent that would help provide food to the hungry mouths of the world, while maintaining our food strength during time of war, and bring economic vitality to American agriculture," Langen said.

The task force said the world is rapidly losing the race between an adequate food supply and a growing population.

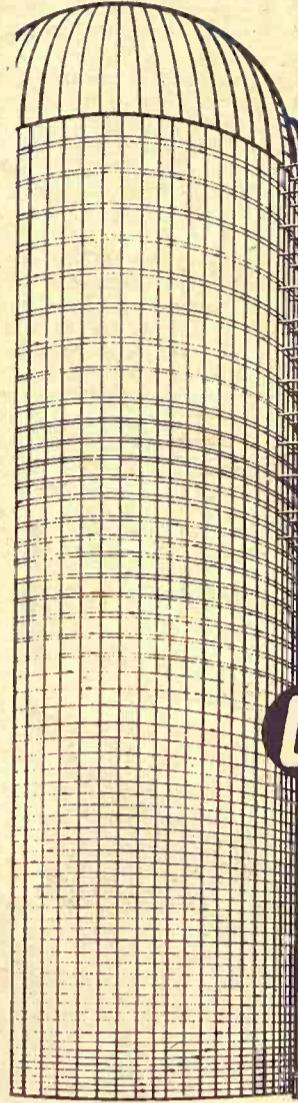

"At the same time," it said, "the American farmer is fast losing out as his production costs and farm debt his record-

breaking highs.

"Today's low farm prices, further aggravated by a deluge of agricultural imports that usurp vital domestic markets, threat-

en the future of our productive capability. Consequently, we can't afford to rush blindly into a gigantic feed-the-hungry-world project."

For capacity...no other blower can match the Gehl Hi-Throw!

The silo hasn't been built that a Gehl Hi-Throw can't easily fill. It lifts over 60 tons an hour! To any silo height. That's more throw-power and capacity than any other blower on the market.

The fan housing outlet is the same width as the blower pipe — 9 inches. The Gehl Hi-Throw blasts a full 9-inch pipeful of forage to the silo . . . at a ton-a-minute. No other blower can beat it!

The Hi-Throw blasts hard-to-blow haylage into the tallest silo without even breathing hard. Does it sun up to sun down, without plugging.

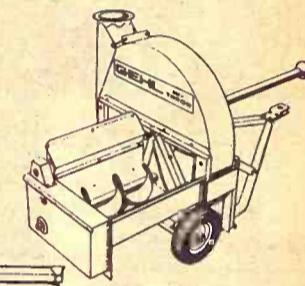

Features include: Quick-touch leveling adjustment. Water hose intake. Adjustable rim sheet and fan. Recessed wheels.

Four models available, including 3-ft. and 10-ft. trough. See us today for a demonstration on your farm. Financing available.

from the G&G Area

Why Does Country Get Most Rain?

Can Grass & Grain supply a good reason why rainfall reports that seem to be the least receptive to substantiation always seem to be the largest reports? That is, they are for the most moisture, the most in total and frequently show records like four or five or six inches of rain in two or three hours.

When one gets closer to the cities, where presumably moisture reports are kept on a more systematic basis, the reports never seem so extreme. Without benefit of study but by intuition and observation, I would bet that a farmer's rain reports for a year will total more than that

of, say, the local radio station or newspaper which may keep some rain gauges and a rudimentary record, which will total more than the records of, say, the Army engineers' report at a federal damsite, which will likely be larger than of the total accumulation as added by the nearby federal weather station.

What is normal rainfall for Kansas anyway? I've always thought that 30 inches was about normal, with western Kansas getting about half that. What do the records say?

Howard McGinnis
TOPEKA

G&G would guess about like reader McGinnis, that rainfall records get more extreme the farther they get from official status, or at least from double-checking. Presumably, many

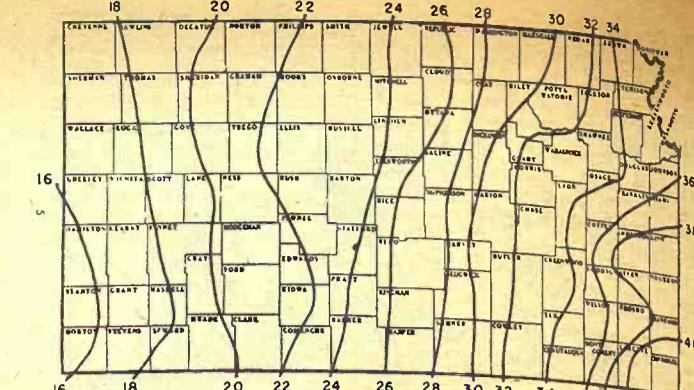

July 4, 1967

gauges are not emptied as often as unofficial readers may remember. Probably many gauges are of poor manufacturing design and are not positioned under the same set of specifications as are official gauges. And, shucks, weathermen are probably just bookkeepers at heart, while the guy with the feedstore raingauge nailed on a post likes a good story.

Rainfall in Kansas varies from an annual average of 16 inches of rain around Elkhart and Johnson in the southwest corner to 40 inches in the Pittsburgh-Columbus-Chanute area.

The accompanying map shows that the average rainfall in Kansas goes up one inch for every 17 miles one travels from west to east.

Here's why, KSU weather expert Dean Bark explaining: "Practically the only source of moisture for Kansas is the Gulf of Mexico. Kansas lies just a

Annual rainfall ranges from 16 to 40 inches in Kansas

little too far west to be under the major portion of the warm, moist flow of air from the Gulf. But the southeastern corner of the state is frequently favored by this flow of air and thus has the highest annual rainfall. The western part of the state is less frequently influenced by this flow of air and therefore receives less precipitation.

"During drought years the flow of moist Gulf air moves far to the east and Kansas gets only the hot, dry air that originates over the plateaus of Mexico.

"In wet years, like this one the warm, moist Gulf air is being pulled into central and eastern Kansas, while cool, dry air moves southward into the northwestern portion of the state from the north.

"The struggle between these two air masses, as they move back and forth across the state set off showers and thunderstorms. They also spawn tornadoes."

lieve they lack good will and faith in one another.

I advanced the idea at a recent statewide ASC meeting to determine wheat allotments that we all work for a common purpose to price our production. There is no sense in producing continually at a loss.

Freeman's slaves couldn't comprehend the idea. I think the entire USDA budget should be drastically cut. I don't believe these men that are supposed to be helping the American farmer should have anymore take-home pay than the farmer. This should also include the county agent. What do you think?

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Clyde Chayer, Palmer, Is Winner Of Prize

The winner this week is Mrs. Clyde Chayer of Palmer. Mrs. Chayer writes, "as I'm such a recipe collector, I love to share my recipes. This is very good this time of year, or any time, and doesn't have many calories for such a good dessert."

SHERBET

$\frac{1}{2}$ cup orange juice
 $\frac{1}{8}$ cup lemon juice
 Rind of lemon and orange (optional)
 1 cup sugar
 Mix above ingredients together and let stand for 15 minutes.

3 cups milk
 $\frac{1}{4}$ teaspoon salt
 1 package plain gelatin
 Soften 1 package of plain gelatin, using $\frac{1}{4}$ cup cold water. Add a little milk if more liquid is needed to dissolve. Add this to milk. Mix with first mixture; freeze in deep freeze, either using ice cube trays or a large flat pan. Freeze until firm. Put in a large mixing bowl and beat well with mixer. Put in freezer containers and return to freezer. (Last time I made this I added a small can of grated pineapple—delicious.)

For something different in a meat loaf, try the following recipe:

CHECKERBOARD MEAT LOAF
 1 package (8 ounce) herb-seasoned ready-mix bread stuffing
 Butter or margarine
 Water
 2 teaspoons grated onion
 2 pounds ground beef
 1 egg
 $\frac{1}{2}$ cup chopped celery
 2 teaspoons seasoned salt
 Prepare stuffing. Mix with butter or margarine and water, following label directions. Stir in grated onion. Blend ground beef with egg, celery and sea-

soned salt in a large bowl. Press one-third of the meat mixture lengthwise into a loaf pan, 9x5x3-inch, to cover half the bottom; press one-third of the stuffing mixture in a strip alongside the meat. Make two more layers of each, alternating strips of meat and stuffing each time; cover. Bake in moderate oven (375 degrees) 45 minutes; uncover. Bake 30 minutes longer or until brown. Turn out; let stand 15 minutes for easier slicing. You may use your own dressing and meat loaf recipe. Serves six.

Upside down cakes are certain to please. How about one made with blackberries?

BLACKBERRY UPSIDE DOWN CAKE

1 quart canned or frozen blackberries
 1 cup sugar
 2 tablespoons flour
 Mix and pour into large greased baking pan. Place in 375-degree oven. Mix the following and drop onto hot fruit:
 1½ cups flour
 1½ teaspoons baking powder
 1 teaspoon salt
 2 tablespoons lard
 Enough milk to moisten to soft biscuit dough (about 1½ cups)
 Drop onto hot fruit; bake until cake is done when tested. Turn out on large platter or serving plate or individual serving dishes. Serve with whipped cream. Yield: six to eight servings.

Try Summer Surprise Clusters For Children's Tea Party

Summer sun means fun for the children. They gather for tea parties or baseball games—and refreshments are always in order. Here's an idea that will win cheers from the youngsters, yet is simple and quick for you to make.

Summer Surprise Clusters are cookies that you don't bake! They're a combination of semi-sweet chocolate pieces, butterscotch pieces and evaporated milk with rolled oats added for delightful chewy texture and subtle flavor. Salted peanuts provide the crunch that kids love.

After the chocolate and butterscotch pieces are melted, just stir in the remaining ingredients and drop in mounds on a cookie sheet. Then refrigerate—no baking! These confections are so easy that big sister can make them for the little folks party.

SUMMER SURPRISE CLUSTERS

1½ cups semi-sweet chocolate pieces
 ½ cup butterscotch pieces
 ¼ cup sugar
 ½ cup evaporated milk
 1 teaspoon vanilla
 1½ cups quick rolled oats, uncooked
 1 cup salted peanuts
 Combine chocolate pieces, butterscotch pieces, sugar and milk in medium-sized saucepan. Cook over very low heat, stirring con-

stantly until chocolate pieces and butterscotch pieces are melted. Remove from heat; add vanilla. Beat in oats. Stir in peanuts. Drop by teaspoonsful onto waxed paper-lined cookie sheets. Press a salted peanut on top of each cookie. Refrigerate. Makes 3½ dozen.

Hand Care

After any painting, scrubbing or gardening job, an application of hand cream is recommended to lubricate the skin. Turpentine, paint removers and detergents are extra hard on hands and follow-up care is important. At bedtime, apply a second coating of hand cream to help counteract roughness, chapping or irritation.

July 4, 1967.

Sports Watch

Now that the sporting season is on its way, what's needed is a watch that's built to take all the ruggedness of active sports. These watches not only give you the time but also have the date (automatic calendar), a 60-minute timer, luminous dial hands. They are waterproof and have a sweep second hand.

The Latest Daily Bread'

Prize Teflon Egg Poacher

NO MORE trouble with poached eggs sticking to pan. This no-stick, no-scour pan may double as a baby food warmer, making it possible to heat three different foods at one time. Finished with Du Pont teflon, this product is manufactured by the Mirro Aluminum Company.

The winner each week is drawn by lot from the readers printed.

Win one by sending us your favorite recipe — this can be main dish, leftover, salad, side dish, dessert or whatever you want.

1. Check your recipe card fully to be sure all ingredients are accurate and accounted for.

2. Be sure your name and address are on the entry.

3. Only one recipe at a time, please.

4. Send it to Woman's Page Editor, Grass & Grain, Box 1009, Manhattan, Kansas.

We're fussy when we fix your watch

Fastest Service In Town. Work done in our shop. All watches electrically timed and guaranteed to be as accurate as new.

Protect Your Beef Cattle From Flies This Summer with a

PURINA STOCK SPRAY

Spray or dip away such bothersome insects as horn flies, ticks, lice, fleas, psoroptic scabies, and sarcoptic mange.

Purina Stock Sprays contain at least two potent insect killers to make them effective against insects which resist a single insecticide.

They're economical and easy to use. So don't neglect your beef cattle—stop in and pick up a bottle soon.

lessly clean.

Not only functional, its decorator colors, as well as wood and other pleasing panelings, would please the most decor conscious kitchen planner.

Truly, no bride ever had it so good.

Cream Off Eye Make-up

Removing stubborn mascara, eye liner and shadow can be painful and irritating to the delicate skin around the eyes and lids. An easy way to remove eye make-up without rubbing is with a rinse-off cold cream and water. The cold cream also lubricates and softens the skin while it works and leaves a light emollient film on the face.

Soft Permanent Best For Fine Hair

If your hair is fine a soft permanent is best. Bronds made especially for hard-to-wave hair should be avoided and if you only want body, milder permanents will usually do the job. If you feel that over-bleaching is the cause of frizzy hair it's best to discontinue coloring until the hair is restored

k Homemaking, formerly called housekeeping, was becoming a breeze. There remained one flaw — dishes.

Beneficent and superior creature that he is, Man promptly invented the dishwasher and predicted that his bride would live happily ever after. She did not. For one thing, the early dishwasher did not wash dishes as well as the bride did. Neither did it scrape dishes nor attend to pots and pans with any efficiency, nor was it pretty. Man strove and succeeded with a superior dishwasher. It does away with scraping and pre-rinsing, because two jet-powered revolving spray arms and a self-cleaning filter continuously collect food particles and flush them away. It washes dishes — and pots and pans — spot-

RIVERSIDE HI-WAY TRACTION

3788*
6.00-16 20 PLY F.T. AND RECAPABLE CASING

Here, Mr. Trucker, is a tire for almost any type of service on or off the road. Rugged nylon cord body protects against bruises, flex fatigue and heat build-up to give you better performance and longer service. Wide flat tread with center king row grips the road more firmly to give the type of traction and better control your drivers demand. And you'll find the tread traction-slots give 9-row tread traction without reducing wear. This tire was made to serve you, Mr. Trucker, so why don't you get that service now!

Wheat Yields Vary In G&G Area

Frost damage, heavy rains, muddy fields all have created problems for farmers in the Grass & Grain area. Yields from three to forty bushels have been reported. Where the frost damage was heaviest in south central Kansas there is a wider variation of yields as well as weight test. Mud as well as additional rain and summer daytime showers are holding back harvesting in some areas.

A Monday morning phone survey by Grass & Grain showed a situation like this:

SALINA reports 50% Harvest completed, yields have varied so widely that it is hard to give an estimate as to average yields. Fields have been muddy and there is some frost damage, as well as from drought. If weather conditions hold the harvest in that area will be completed about the latter part of the week.

MANHATTAN with about 30% of the harvest complete, yields are averaging 25 bushels per acre. Test is running 60 and dry. Muddy fields are hampering the harvest in this area also.

ST. MARYS is just getting started with only 10% cut. Wheat is ready but mud has kept the harvesters out of the fields. Yields are running about 30 bushels per acre. Moisture is low and test are running about 60.

HERKIMER reports about 15% of the wheat cut in this area, with yields of 25 to 30 bushels. Ninety-five percent of the test is running 60. Wheat is dry and field conditions are improving rapidly.

ABILENE has about 25% wheat cut in that area, averages are low with yields only running 18 to 20 bushels per acre. Tests are running 59. Moisture is about thirteen.

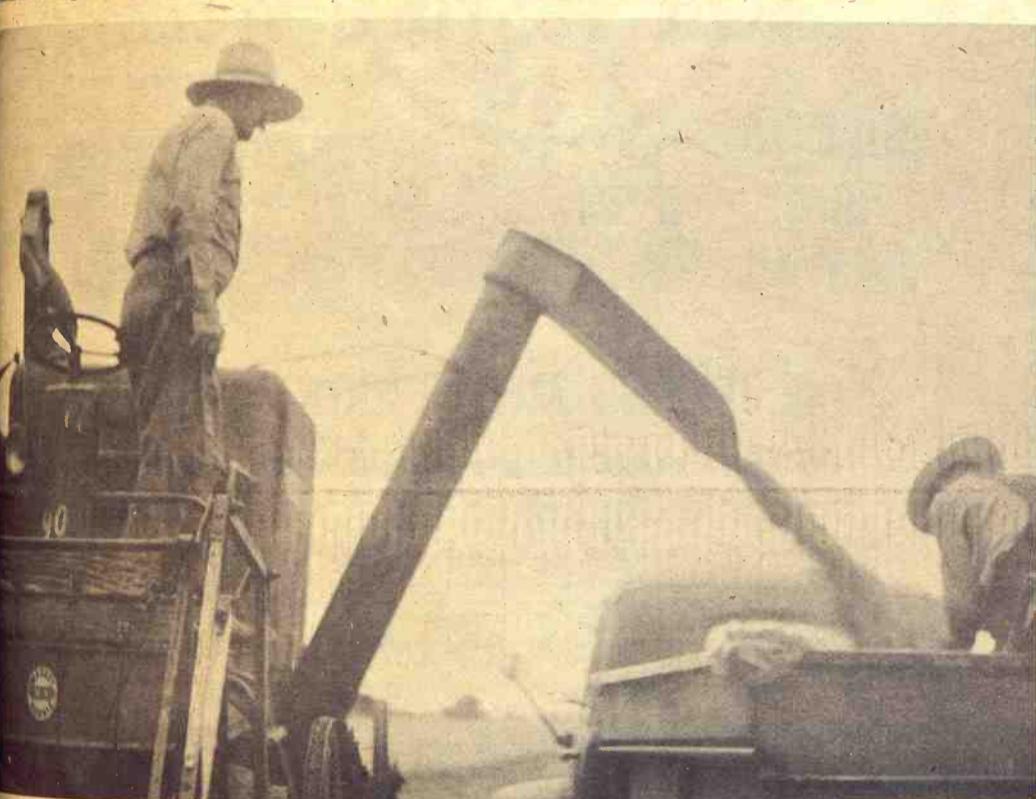

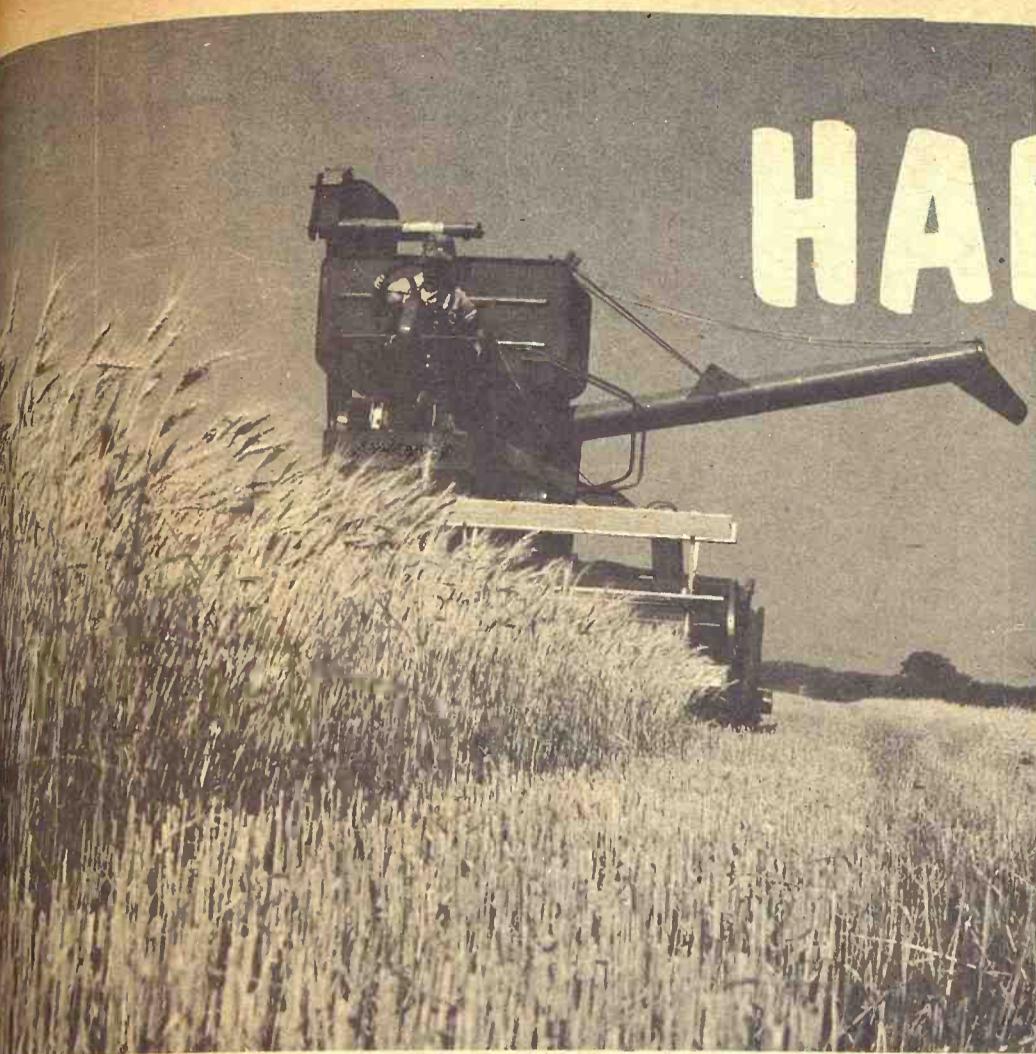

BELLEVILLE is just getting started with 10% harvesting completed, yields are good. A 30 to 40 bushel average is reported so far. Moisture is way down and test is 60.

SENECA reports 20% cut in the area. Mud has been an extreme problem in this area. Wheat is ready with a variation in yields. Some wheat is running 20 to 25 bushels per acre and some is only going 16 to 17.

HILLSBORO probably hardest hit with frost damage, 15% of the wheat cut yields are running from 3 to thirty bushels per acre. Some report cutting all day to fill the combine bin. Fields are very muddy. Test is running from 53 to 60. Moisture is dry.

CLAY CENTER, about 35% harvest complete, wheat is dry, test is running 58, fields are muddy and weeds are beginning to be a problem in some fields.

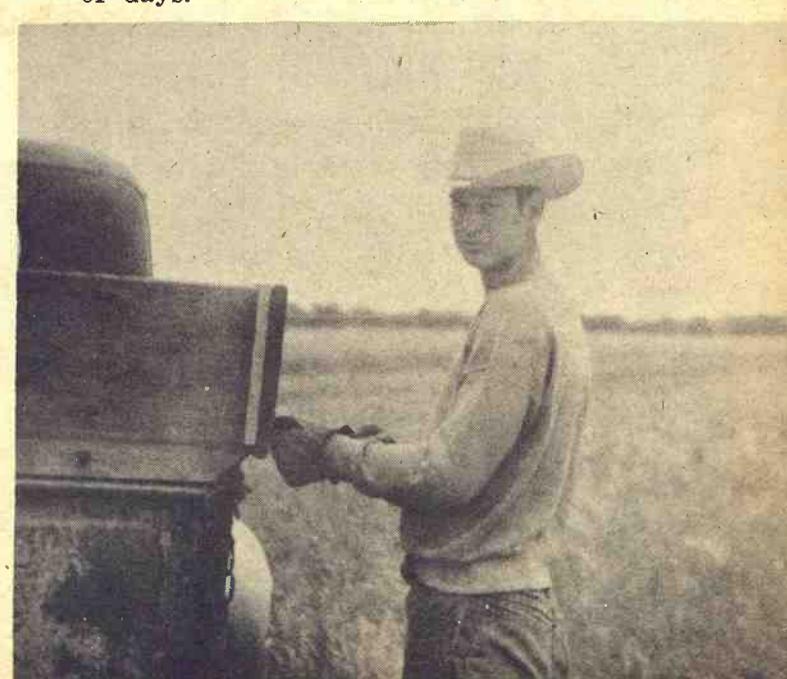

ODELL, NEBRASKA harvest is just beginning, wheat looks good, fields have been muddy, but if weather conditions hold, harvesting will be in full swing the next couple of days.

Sid Vidrickson, New Cambria, and helper dump wheat after a trial cutting early last week.

Clarence Eichem, custom combine operator, unloads at the Floyd Hutchinson farm near Wamego. Muddy fields made it necessary to pull machines out frequently. Eichem said as near as they could tell the wheat was running about 20 bushels.

Lonnie Everhart, New Cambria, prepares to back up a truck to dump from combine.

may be used only in India.

Eight per cent of the rupees will be set aside for U. S. uses, 5 per cent will be for loans to U. S. and Indian business firms, and 87 per cent will be available to finance economic development projects in India.

Involved in the transactions will be about 41.4 million bushels of wheat or equivalent wheat flour, 14.8 million bushels of grain sorghums and 110 million pounds of vegetable oil.

U. S. Agrees To Send Farm Products To India

Washington — The United States has agreed to provide India with 112 million dollars in wheat, grain sorghums and vegetable oil on easy payment terms.

The Agriculture department announced the agreement was signed in New Delhi. It said this is the first agreement under public law 480 which is partly on credit terms.

Of the total, 24.2 million dollars is a loan to be repaid in convertible local currency. The remaining 87.7 million is to be paid for in Indian rupees, which

Don M. Trotter Named Associate Dean At K-State

MANHATTAN — Dr. Don M. Trotter, widely recognized for his outstanding achievements in teaching veterinary medical students has been named associate dean of the College of Veterinary Medicine at Kansas State University, Manhattan.

The appointment was announced by Dr. Charles E. Cornelius, dean of the veterinary college, following approval of the State Board of Regents.

Dr. Trotter will continue as head of the anatomy department at K-State, a position he has held since 1957.

As associate dean, Dr. Trotter

Dr. Don
Trotter

will be responsible for coordinating all undergraduate teaching programs in the veterinary medical college and will develop and supervise undergraduate student activities.

"Dr. Trotter is superbly qualified for his new assignment, having been the first recipient, in 1963, of the Distinguished Teaching Award in our veterinary medical college," Dr. Cornelius said. Dr. Cornelius pointed out that the addition of Dr. Trotter to the veterinary medical administrative staff will greatly strengthen the undergraduate teaching program.

A year ago Dr. Trotter spent a month in Nigeria as a veterinary medical consultant at Ahmadu Bello University located at Zaria where he made suggestions for further developments in teaching and research by the faculty there.

'SOUND OF MUSIC' AS AREA PRODUCTION

MARYSVILLE — The Marysville Community Theatre will present its 1967 production, "The Sound of Music," here July 12-14. James Rowland is director. Actors and singers in the musical are all from the Marysville area.

There's something crooked in the Hog Business

Sure, crooked noses are ugly. But worse, they eat into hog profits. Atrophic rhinitis wastes feed in at least half the herds. And most damage is done long before they show up with crooked noses.

Now you can fight back. There's a new drug combination, Tylan and Sulfamethazine, which keeps weight gains steady

even in the presence of atrophic rhinitis. Plus they control vibrionic dysentery, another costly disease.

We have Tylan and Sulfa in complete pig feed to protect your investment

up to 75 pounds. And we can add Tylan to promote growth all the way to market.

Fight back. We can help.

Sees No Danger Of Wheat Surplus

MANHATTAN — There's no wheat surplus in sight for 1967 even though this year's wheat crop is forecast at a record level, Gilbert W. Egbert, chairman, Agricultural Stabilization and Conservation state committee, said today.

According to the June 1 crop estimate, winter wheat production this year will be about 17 percent above last year and 28 percent above average. Estimated spring wheat production is up about 23 percent above a year ago.

Egbert pointed out that even though production of wheat for 1967 will total about 1.5 million bushels, estimates indicate that domestic and export use will be at about the same level.

Not only does this mean there should be no appreciable buildup of carryover supplies beyond current levels, but there should be no drop in market prices, Egbert emphasized.

The market could break, par-

ticularly for some kinds of wheat, Egbert warned, if instead of withholding wheat and marketing it in an orderly manner farmers flood the markets at harvesttime.

Wheat producers should consider taking advantage of price-support loans on wheat as a means of exercising control over market supplies and prices.

Most producers in the major wheat areas are eligible for price-support loans. Loans give farmers cash at harvest and at the same time permit farmers to retain control of their wheat so they can market it at a later date as they choose, Egbert explained.

He pointed out, however, that there is always a risk in predicting market prices, and that farmers themselves must decide whether it is to their advantage to market their wheat immediately or place it under price-support loan.

Finest And Fastest Quarter
Mile Track In The Country

*Another 1st...
to serve the farmer*

**Hydrostatic
Drive
656 Tractor**
from
**INTERNATIONAL
HARVESTER**

The Farmall 656 Hydrostatic — All-Speed Drive — is the first big farm tractor to give you any speed you want from 9 in reverse to 20 mph forward . . . Change on the go, under load or with no load — no clutch, and without touching the throttle.

Here's how it works

Just push the Speed Ratio (SR) control forward to move forward. The farther you push it, the faster you go — from zero mph to 20 mph. To stop, move the SR control back to zero mph and have smooth, safe, controlled stopping. To back up, move the control rearward into reverse ratio and pick any speed to 9 mph in reverse.

That's it. No clutch to use. You're propelled by smooth IH hydrostatic power! At any speed from "9 below to 20 above."

For plowing or other heavy tillage, just select your speed with the SR control. Check it on the accurate new speedometer and mark that setting with the adjustable "stop" sign on the SR control quadrant. Then, if you hit hard ground and begin to lose headway you can move the speed control rearward to slow down and get more drawbar pull to lug through. As soon as you're through the tough spot you can return to the original speed setting as marked by the adjustable stop. Or you can bypass it if conditions call for faster speed.

As valuable as Hydrostatic All-Speed Drive is to plowing, think of the advantage when baling, chopping, loading, or mowing . . . to be able to make immediate, no-clutch, on-the-go speed changes without touching the throttle. And to always have the exact speed needed for planting or chemical application.

It follows that no matter what the crop or conditions, this Hydrostatic All-Speed Drive provides the ideal speed for getting the most out of both tractor and equipment.

Let us tell you more . . .

Connecticut Cattleman Aids K-State Livestock Facilities

MANHATTAN — A Connecticut cattleman has come to the aid of Kansas State University's tornado-stricken livestock facilities with a major gift to the K-State Endowment Association.

Harry A. Rehnberg, owner of Kent Hollow Farms, New Preston, Conn., has established a Livestock Improvement Fund for the university's department of animal husbandry to help restore and repair the facilities damaged in the June 8, 1966 tornado which hit Manhattan and the K-State campus.

The storm caused more than \$1,200,000 damage to the Kansas Agricultural Experiment Station alone in the form of livestock, equipment, building and research losses.

Rehnberg is not a K-State alumnus. In fact, his primary acquaintance with K-State has been through knowledge of, and respect for, its agricultural research and livestock breeding programs.

However John Kintner, manager of Kent Hollow Farms, pas-

sed through the Manhattan area in October 1966 and saw first hand the extent of the tornado damage. Realizing how seriously university research, development and instruction programs would be delayed, Kintner and Rehnberg decided to "help get K-State's animal industries program back on its feet."

Rehnberg placed no restrictions upon use of the Livestock Improvement Fund. However, department of animal husbandry officials indicate that the Fund will help restore and expand research in the area of cow herd management.

Studies also will be conducted in breeding, nutrition, physiology of reproduction, and live animal and carcass evaluation.

Germans Buying Less Feed Grains

The West Germans are importing less feed grains.

A 23 percent drop in imports is reported for the first quarter of the present season. In that

July 4, 1967

period, slightly more than one million tons of feed grains were imported.

The United States remains the main supplier.

Several reasons are being given for the drop: larger domestic feed grain crops; more domestic feed grade wheat and rye; a smaller pig population; and caution by farmers since introduction of new grain prices in EEC.

Hereford Association Names New Secretary-Manager

E. Dale Mustoe, Jr., of Rexford, has been named secretary-manager of the Kansas Hereford Association. He replaces John Fox, St. John, who recently resigned to become field representative for the American Polled Hereford Association.

Mustoe, former assistant manager of Foster Farms at Rexford, was born and raised

in Northwestern Kansas. His father, E. D. (Doc) Mustoe, was manager of Foster Farms from 1918 until their dispersal in 1965.

Dale and his wife, Virginia, are both Kansas State University graduates and at the University he was a member of the livestock judging teams at Denver, Kansas City and Chi-

cago. He was a member of Alpha Zeta, Farmhouse Fraternity, Block and Bridle and numerous other activities. He will reside in Rexford where he is

E. Dale Mustoe,

January Set For KLA To Move

TOPEKA — Representatives of the Kansas Livestock Association have informed Gov. Robert Docking that private organization can vacate its space in the state office building by next January.

"It's our understanding they will be out by the first of the year," said Paul Pendegast, administrative assistant to the governor.

The association pays \$100 a month for space it shares with the Kansas Livestock Sanitary Commission on the 10th floor of the state office building.

Corner Post Comments

Farmers Holding Wheat

With cash wheat at an unfavorably low price, many farmers will be hanging onto their wheat by storing commercially and hoping for higher prices later on. Others will hold title to their wheat with a government loan or get a bank loan secured by a warehouse receipt.

Many farmers feel that selling wheat on the present cash market will not leave much of a profit considering the expenses of planting and harvesting. Domestic wheat certificate payments on 35 per cent of allotments will help some but still won't adequately offset the higher costs of producing a crop.

The USDA is still expecting a large crop but each rain brings yields down and frost damage is now showing up in some areas. USDA optimism is further indicated by a 13% reduction in next year's acreage allotments but it should be noted that this figure can be revised later on.

Yet, for some reason very little harvest information

GARY W. BECK
Farm Service
Director

has leaked out of Texas and Oklahoma and the pre-harvest tone was a poor crop.

Apparently those who have the information aren't releasing it.

The farmer has always faced many uncertainties but you can be certain that Union State Bank is no fair weather friend. We will continue to provide credit when needed and our competent staff is always ready to serve you.

Deposits insured up to \$15,000.00 for each depositor by the Federal Deposit Insurance Corporation.

"Pigs For Peace" Delivered To Vietnamese Farmers

About 100 cross-bred Landrace-Yorkshire and Duroc hogs have been distributed among several South Vietnamese farmers.

The distribution, the end result of "Pigs For Peace" was made by the Rev. S. Ben Finley, former pastor of the rural Tisdale Methodist Church east of Winfield and of the Downs Methodist Church.

Mr. Finley is a representative of the U.S. Department of State and is with the U.S. AID program at Bien Hoa.

The pigs were purchased in Vietnam with \$8000 raised in the Downs area.

Original plans were to ship hogs collected in the Downs area to Vietnam but transportation plans were upset when the U.S. Air Force officials said they could not ship the hogs by air because of increased traffic of war materials and men to Vietnam. The Downs hogs were sold and funds sent to Mr. Finley.

ley last June 6.

In a letter to Dan Vandersen, Downs, chairman of the project, Mr. Finley said it was impossible to find hogs in Vietnam of the quality of the Downs hogs and those that were purchased cost more than anticipated.

However the project was continued in spite of setbacks.

The Rev. Finley is now in his second year as agriculture advisor in South Vietnam for the Department of Agriculture.

He works hand in hand with the military and goes into many areas of the back-country considered still in the hands of the Viet Cong.

Mr. Finley's job is to inform and advise the South Vietnamese villagers and farmers much as a county agent operates in Kansas.

"I drive quite safely and freely now where I dared not drive six months ago. Wherever I

have gone in these hamlets I have made friends. It is very noisy tonight with mortar and rocket fire over my house but this too one gets used to hearing," he wrote friends in Downs recently.

John O'Leary

JOHN O'LEARY NAMED TO BANK JOB AGAIN

John A. O'Leary of Lury has become state bank commissioner for the second time. Governor Robert Docking made the appointment of the 66-year old G&G area banker to succeed J. O. Wilson of Wichita, whose appointment expired June 30. O'Leary was also bank commissioner under former Governor George Docking, the present governor's late father.

Specialists Issue Warning Of Possible Zinc Shortage

Extension agents have warned that heavy rains and the general heavy application of phosphorus fertilizers may have developed zinc deficiencies in certain soils.

Corn is the most sensitive of the crops to low levels of zinc. It may show a striped appearance on the leaves, be stunted and have short internodes. The

area between the veins in the leaves becomes yellow giving the plant a characteristic yellow-green striped appearance.

The most common areas for zinc deficiency are in irrigated land that has recently been leveled. These areas have lost the organic matter and the top soil. Terrace channels may also show this same deficiency.

There are two types of zinc fertilizer. These types are determined by their carriers. The most common inorganic carrier is zinc sulfate. The organic carriers are called "chelates". Both are effective zinc fertilizers. Research has shown the chelates to be about five times more effective than the sulfates when applied at equal rates of zinc, but they are more expensive.

The amount of zinc required

may vary. Applications in Kansas have been between 2 and 20 pounds per acre. Soils containing free lime require higher rates and the rate depends on the severity of the deficiency.

Applications of zinc have been found to be most effective when applied with the nitrogen, phosphorus and/or potassium. Most efficient use of the zinc is obtained when banded along and below the seed with the other fertilizer.

When phosphorus fertilizers are applied to soils which are on the borderline in available zinc, the phosphorus can cause a very severe zinc deficiency. Soil tests should be obtained especially on soils suspected to be low in zinc or on the borderline before phosphorus and zinc fertilizers are used.

To take a zinc soil sample follow the same procedure as a regular soil sample but avoid using anything that is galvanized or made of rubber as both of these materials will cause contamination.

McPherson Tractor Company

Available Restore Ponds

which have plagued the harvest in Kansas have had beneficial effects over much of the state. Schoonover, chief of the division for the Fish and Game Commission, said that many inquiries have been received regarding availability of fish for stock recently filled ponds, especially in the eastern two-thirds of the state.

Heartburn

David Lambert, Abilene, holds an 18-inch radish he noticed while picking his fish will be available and left it to see how big it would grow.

Lull In Hospital Cost

BC Says

Owners wishing to stock for stocking this year may be obtained by an average increase by an average of about 11% in each of the last two years. After that continue to increase, but

the Fishery Division's Forestry, Fish and Commission, Box 103, was the picture-painted Kansas 67124. Mr. J. McNeerney, president of the Blue Cross Association of charge for stock which are of adequate size and contain no fish population. This includes all new ponds which probably will continue to be dry but are now

dry through 1970. Last year the average day for a hospital patient easily be near \$70, showed. The average day last year was the American Hospital Association estimates, up 10% in 1965.

Cross rates will have to rise since most of services, as opposed to a flat fee, Mr. McNeerney said, however, capital costs are only one percent of Blue Cross rates.

WHEAT DROP
POOR FORECAST
member of the Oklahoma State Commission says the pre-harvest price of wheat dropped 4 to 5 cents a bushel because USDA predicted the crop were too poor. Earl Abernathy said June 9 forecast of 80 bushels for the Oklahoma harvest was about 18 bushels high. "Well, we'll have to take the doctor to use

cross this year also expand benefits to insure coverage of care in doctors' offices, at nursing homes and expensive facility.

DUDE REYNOLDS Abilene, Kans.
CO 3-3394

timated, resulted from increased benefits and the remainder from higher hospital costs.

A rise in hospital costs to near \$70 a day for each patient by 1970 would indicate a rate of increase of about 9% every year. This is somewhat below the rate of increase predicted by the American Hospital Association, which sees costs rising about 15% in each of the next three years. In the past decade costs have risen at a rate of 6% to 7% annually, except for the 10% increase last year.

The Blue Cross study said the major factors resulting in the higher costs include greater use of hospitals by the public and, particularly, by persons over age 65. They are covered by the Federal "Medicare" health program that became effective last July 1.

The greatest cost increases have come from wages, the report said. Nursing personnel in many hospitals around the country have gone on strike during the past year for higher pay. The payroll in hospitals constitutes roughly two-thirds of all operating expense.

Lost Kernels Add Up To Real Money

MANHATTAN — A few kernels of grain scattered around add up to a real money loss in grain that doesn't get to market.

A dozen and a half wheat kernels per square foot equal one bushel per acre. One bushel of soybeans is lost when four or five beans are dropped per square foot.

Combine operators should strive to hold losses under 1½ percent, John True, Extension agricultural engineer at Kansas State University, says.

He says grain can be lost in any of several stages of the combining process. And the amount of loss can be estimated

by counting the number of kernels per square foot on the ground.

Places to check are:

- Cutter bar — Grain can be shattered or heads missed by the cutter bar, and grain shattered or thrown out by the reel.
- Cylinder — Grain may remain in the heads after passing through the combine.
- Rack — Loose grain may

Next Vote In Lyons Creek Is July 13

WOODBINE — A July 13 election has been set by Lyons Creek Watershed Joint District No. 41 on a proposed two-mill tax levy to finance the district's share of a \$5,267,100 watershed development program.

The district encompasses 180,000 acres in Geary, Dickinson, Morris and Marion counties.

Resident landowners in the district forced the election after the board of directors adopted the tax levy for a second time. A similar levy was defeated by 44 votes in an election held Dec. 5, 1966.

The tax levy will be used to help finance construction of 36 dams, which will be built over a 25-year period. Other methods of financing include contributions from cities within the district, pooling of soil conservation agreements and contributions.

The federal government will finance 21 flood water retarding structures and 64.8 per cent of a multi-purpose structure near Herington. Total cost will be \$2,424,200 and the work will be completed within eight years.

The watershed district and local interests will provide \$638,000 for the 36 non-federal structures and \$2,204,900 in land treatment measures. The value of land treatment already applied is \$1,305,300, bringing the district's total participation to \$4,148,200.

The multi-purpose structure near Herington will create a lake with 495 surface acres, including 350 for recreation and 145 for municipal water supply. The city of Herington and the federal government will share the cost of developing a 103-acre, \$45,800 park.

Name Director Of Vo-Tech School

TOPEKA — Ester E. Sanders, 37, has been named director of the Kaw Area Vocational Technical School effective Aug. 1.

Sanders will succeed Perry W. Chamness who is retiring.

Sanders has been an instructor in agricultural engineering at the University of Missouri and is to receive a doctorate in industrial education there in August.

Set Angus Tour For July 28-29

A summer "fact finding" Angus tour sponsored by the Kansas Angus Association will be held July 28-29 in northern Kansas. The tour will cover parts

COW POKE'S

"Naw, I ain't bought this bank, I just borrowed it."

of Russell, Osborne, Phillips and Smith Counties, an area known for its production of Angus cattle.

Henry Gardiner, Ashland; Dale Engler, El Dorado, and Sam Wagner, Harlan, will act as masters of ceremonies at the two day event. Bob Giess, Arnold, will be the moderator of the panel discussion to be held on the 29th. The overnight stop will be at Phillipsburg. Dr. Dave Carnahan, School of Veterinary Medicine, Kansas State University, will be the principal speaker at the evening program.

Members of the panel on the 29th include representatives from several segments of the cattle industry. These include Merlyn Carlson, rancher from Lodgpole, Nebr.; Andy Olson, order buyer from Council Grove; Bob Shattuck, feedlot operator from Hastings, Nebr.

Room reservations for the overnight stop at Phillipsburg can be obtained by contacting John Barton, Kansas Angus Association, 2505 Lundman Drive, Hutchinson, Kansas.

A Growing Market
for Finished Cattle

ED BURT

Barn Phone EA 5-2266 Residence EA 5-2393

Washington, Kans.

With farmers right in the midst of harvest, our sale last Saturday was very small, with not enough cattle to sample the market. Hogs, however, came in pretty fair numbers, and prices continued on the steady to higher swing.

200-240 weights brought \$22.00 to \$22.35; the 185-200 pounders selling at \$21.00 to \$22.00. A few feeder shoats went at \$19.25 per head, the lighter weights bringing mainly \$15.00 to \$17.00 by the head.

With the harvest due to be over in this area by next Saturday, we are expecting a fair sale both of cattle and hogs. We have a few cattle herds to look over, and many of the consignors too busy to bring in their cattle the past week are expected to be on hand Saturday.

Hogs are in demand at the Junction City Barn. We have four major packer buyers who will take all the butcher hogs you can bring in. If you have not tried the Junction City market, we ask you to do so. You will not be disappointed.

wheat indicate FCIC will pay about \$2,956,000 to insured farmers for the 1967 crop, against final damage payments totaling \$1,851,000 a year ago.

"Earlier in the year during the severe drought conditions and after a couple of late freezes, it was thought the insured wheat-loss would be several times greater," the report said. "However, good rains and improved growing conditions have brought up to 15 per cent recovery in heavy drought areas and up to 10 per cent recovery from the freeze."

Bowling said farmers still are in a race with weeds in getting the grain harvested in drought-damaged areas and the full extent of damage by late freezes and recent rains still is largely unknown.

"These factors will play a part in determining final loss payments to farmers and will not be fully realized until after the harvest is completed," he said.

List the Counties

"Counties listed as hardest hit as far as insured wheat is concerned include Greeley, Stanton, Finney, Ford, Harper, Sedgwick and Sumner, where Bowling said loss payments are expected to exceed \$1,500,000. Another half million dollars is expected to be paid in Wallace, Hamilton, Grant, Ness, Edwards, Reno and Kingman Counties.

Bowling said loss claims have been received from each of the 101 wheat counties to date and that about 20 per cent of all insured farmers have reported some damage to their wheat.

He said all Kansas wheat counties have been reopened for sign-up purposes and applications are being accepted from farmers who wish to take part in the federally operated program for the 1968 and succeeding crop years.

More than 16,500 farmers took part in the state program for the 1967 crop, he said.

COUNTIES MAY STILL MISS INTEREST FUNDS

Cities and school districts can now collect interest on idle funds they have deposited in banks, following a bill enacted in the 1967 legislature, but counties apparently will still not get any interest. Attorney General

July 4, 1967

Grass & Grain

23

Robert Londerholm last week gave the opinion that while the bill struck out language in the statutes that formerly prohibited counties from receiving interest, another section of the law has a prohibition on counties receiving interest on time deposits.

320 A LIVESTOCK & GRAIN FARM

Due to other employment, we will sell our farm at Public Auction. Known as the Vernon Reves, farm, SE^{1/4} less .39 acres in 1 for highway easement, 16-7-8; NE^{1/4} of 16-7-8, located in Pottawatomie County, Kansas.

Located near Tuttle Creek Reservoir, 20 miles northeast of Manhattan, Kansas, on NEW highway 13, or 1/4 mile west of Fostoria, or 7 miles west of Westmoreland, or 6 miles east of Olsburg on Highway 16 and 1/4 mile north on K-13. This farm is located on good blacktop highways.

Two sets of modern improvements. Home with 6 rooms, 1 1/2 baths, full basement, propane furnace with tank, and attached two-car garage. Other home being 5-room, modern, with furnace, both places having other necessary buildings.

This farm is a very good livestock and grain farm, lying fairly level, terraced and well-fenced. Consisting of 200 acres native pasture land joining both sets of improvements. 20 acres native mow land, 65 acres of plow land, 40 acres being bottom land, 35 acres of growing alfalfa.

This farm has an abundance of water, consisting of two good wells and spring in pasture. Pond in pasture is fed by spring. Running water never freezes.

POSSESSION: From 60 days to 6 months.
May be inspected anytime prior to sale.

TERMS: 25% day of sale. Balance due when abstract and title are furnished.
