## *Heartland Rhythm*

**I**n the spring of 1980 an area radio station released its new theme song, "Kansas I'm Coming Home."

When the melody swept across campus, it created an awareness of the state's amber waves, beautiful Flint Hills and friendly people. Through the tune, a link of brotherhood was also formed.

So we, the 1981 Royal Purple Staff, decided to demonstrate that this heartland bond was evident on the K-State campus. We wanted to show that from March 1980 to March 1981 our collegiate world was affected by the heartland rhythm.

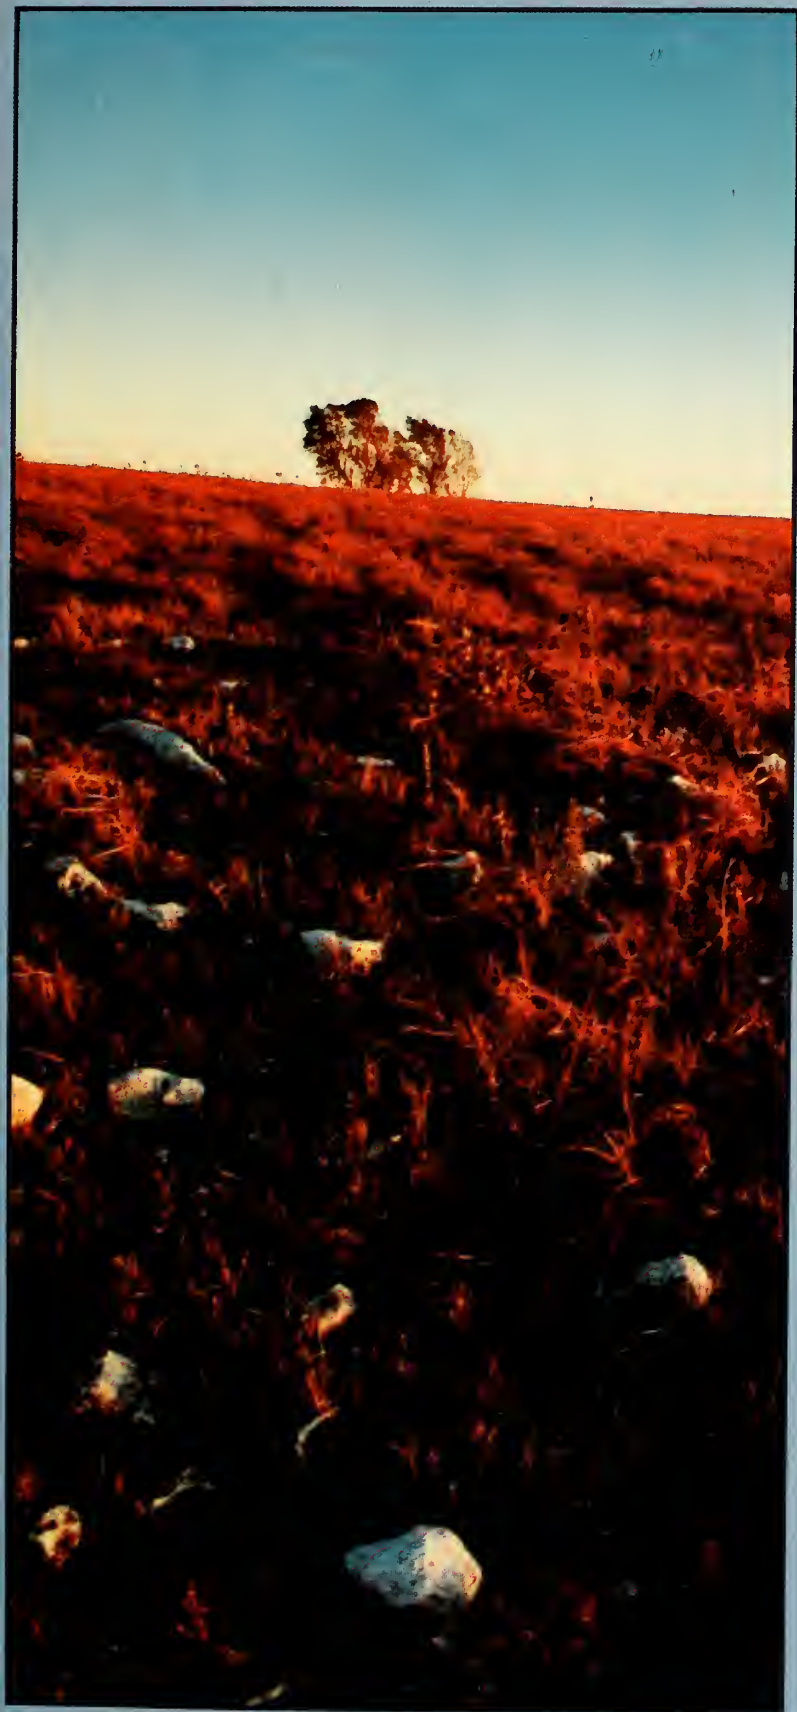

*Kansas Sunshine- The sun glissens on the state flower and rolling hills south of Manhattan, which symbolize the heartland rhythm.*

Manhattan, Kansas

# Heartland rhythm bonds K-State students together

**W**hether a confused freshman, wandering through the ivy-covered maze; an older student, attempting to relearn the steps to the college hustle; or the confident, yet reluctant upperclassman, approaching the end of the academic tunnel; K-State students are linked together by a common bond. Σ⇒

---

*Heartland Sunset- South of  
Manhattan the evening light  
reflects on the Kansas hills.*

## Heartland

Almost as strong as super glue, this enduring bond is the unique brotherhood of the “heartland.” ➡

---

**Practicing Pride-** Robin Wilson, junior in education-business, stays in step with fellow flag team members as they practice their routine. The team rehearses with K-State’s Marching Band four times a week.

Bo Rader

Bo Rader

## Heartland

To K-State students, the Kansas heartland may represent a friendly, “back to basics” view of life. Yet, others might summarize the Flint Hill region as advanced and progressive. ⇨

---

*Open Classroom* - In the shade east of Justin Hall a drawing instructor discusses the surroundings with one of his art students.

Craig Chandler

## Heartland

Whatever the philosophy, the common thread still exists. The link of brotherhood has created a durable cohesion between the rolling hills and the knowledge-seeking students. Σ⇒

---

*Gotcha-* During an intramural football game, a Goodnow 6 player attempts to outrun his opponents from Haymaker.

Bo Rader

## Heartland

**For those students who have stopped to listen, the heartland strikes a steady and recurring beat.**

**The constant musical melody rings throughout the campus valley. The beat, which binds the diverse students, echoes the simple heartland rhythm. ✨**

## *Student Life*

**F**rom the coastal beaches, the urban boulevards and the rural farming areas, over 19,000 students filter into the Manhattan community.

But, the geographic backgrounds are not the only differing characteristics. Each K-State collegiate varies in attitudes, activities and even attire.

Some students dress in izod sweaters, blazers or skirts, while others can be found in everyday blue jeans.

Whatever the difference, K-State students are bound together by the heartland rhythm. ❁

**12:20 Rush-** *Between lecture courses, the halls and sidewalks are flooded with students. Some leisurely stroll while other students hurry to make it from the Union to Ackert in ten minutes.*

**FTD Florist?-** *Capped by the increasingly popular winged hat, a student listens to the live entertainment at the fall festival, held on the lawn west of Weber Hall. The Oct. 3 event featured Southern Comfort, Celebration and The Clocks.*

# Boots & buckles back

Wherever John Travolta goes, the nation seems to follow.

From the staccato beat of disco in the film "Saturday Night Fever," he has led us also to the alternative sound of country and western in the movie "Urban Cowboy."

Though he may not have been a success in some of his movie ventures, he can be credited for influencing our tastes in sound, step and style.

Finally, there is an alternative to disco where everyone can just be themselves, whether they aspire to be the Urban Cowboy or not. It's now "cool" to be in a bar wearing something (most likely denim), probably held up by an oakleaf engraved leather belt with a name on the back, sporting a big, shiny, silver buckle.

And the feet can finally relax — replacing the spike heels with something flat and heel-stomping solid.

"A few years ago, I wouldn't have been caught dead wearing a pair of cowboy boots. But I found out that they're some of the most comfortable and practical things you can put on your feet," Denise Gatzoulis, junior in business administration said.

Even if a person doesn't plan to break bucking broncs wearing elephant- or ostrich- hide boots, one can probably find another suitable way to put them to use. Like spikes found their home in the hustle, boots can glide into the two-step or Texas swing.

With hair flying and boots shuffling,

couples can twist their bodies into strange contortions such as the pretzel or windmill.

Even without the urge to swing, one can sit and pretend to cool off with a couple of beers. As one sips, the tunes of Waylon and Willie, Kenny Rogers, Crystal Gayle, Red Steagall, and the Oakridge Boys vibrate from the jukebox. Bands in Manhattan please the crowds with the country and western beat, getting whoops and hollers, replacing snapping fingers.

The "homier" atmospheres have been more popular places for these activities. Rockin' K and Cowboy Palace draw the crowd demanding more than just a little bit of country. Brother's Non-Disco isn't always country and western, but is certainly what it advertises. Another bar sporting country notes is Enoch's Tavern, "where the beer's cheap and the atmosphere's different than Aggie," Dale Richardson, senior in electrical engineering technology, said.

As the night wears on, cowboys, their dress inspired by the movie "Urban Cowboy," still come through the bar-room doors to try the swinging thrill or just to relax. Nevertheless, they defy the words of Willie Nelson, as he sings and advises their mammas, "don't let your babies grow up to be cowboys." ❁

photos by Craig Chandler

*Bar room bronco— A bull-riding daredevil takes a spin on El Toro, the mechanical bull at Cowboy Palace.*

## Manhattan taverns choose the bullish approach

The small, wiry contestant threw a leg over the bull's back, scooted himself into place, and gripped the rigging with a gloved hand. He jerked his right arm into the air — signaling that he was ready to take on El Toro — the mechanical bull performing at one of Manhattan's clubs.

With a sudden twisting writhe, El Toro, operated by a rodeo professional, attempted to knock off its rider. But 21-year-old Randy Powell, Fort Riley, knew what he had to do to win the contest. Years of rodeo experience had given him a feel for the unpredictable contortions of an angry bull. Arching with the bull's jumps and jolts, Powell rode for the 8-second duration — the time required to score. His score of 77 gave him some satisfaction, as he topped the other contestants' scores by at least 8 points.

Powell, who hopes to ride in the Pro Rodeo Association, "but not for a few more years," he said, "This is harder than a real bull. A real one has a neck you can watch so you know which way you want to go."

An increasing number of bars are

placing a bucking machine in their midst. Enoch's and Cowboy Palace in Manhattan have ventured to add this to their line of entertainment. And the crowds go — curious after seeing this machine that was featured in the movie "Urban Cowboy."

El Toro was introduced in Cowboy Palace on Sept. 28 and 30. "I've been thinking of having it here for a year, but I was worried about its liabilities, and because it takes up so much room it's a prohibitive factor," John Gilman, co-owner of Cowboy Palace, said.

The bull used the entire area of the Palace's dance floor. Placed dead center on the floor it was surrounded by wall to wall piles of cushy foam to comfort riders who were thrown. The bull itself, made from a hard rubber substance, was covered with foam along its backside, cushioning some of the jolts.

"I'll probably have blisters," Lana Hinton, Manhattan, said. Hinton, 4 feet 11 inches, rode the bull seven times in one day. One of those rides won her the girls' bull-riding contest. The rides were scored on a point basis from 25-100

points. Hinton scored a 57 on her winning ride. Because of her small size, she has an advantage over most contestants.

"It helps when you're smaller. There's not as much weight to throw around. The ideal cowboy is 5 feet 5 inches to 5 feet, 6 inches and around 145 pounds. And small people are really just as strong as big people," Chuck Elliott, one of the professionals controlling the bull's kicks and spins, said.

But whether a contestant was large or small, these bull-riding daredevils kept hopping up one after the other.

"I'm enjoying the enthusiasm of the participants; I think it's a great idea. It's exciting. It's the closest thing you can find to a rodeo in a bar," Don Paustian, former employee of Cowboy Palace, said.

As Gilman said, "This thing is tougher than any bull that ever lived. It's the meanest; it's El Toro! Git on!," another pseudo-cowboy bit the dust. ☼

**Carl Cavassa**

**A**ll tied up? Plagued by endless forms, red tape engulfs students who are forced to fill out form after form after form: in triplicate.

The most common are the ominous lines for registration. But even preparing for registration is a sticky situation in itself, especially if for some reason one didn't pre-enroll.

The hassles begin when students search for an appointment with a faculty adviser. Without his signature, enrollment forms are useless.

Reaching registration, students must attend the specific time slot. Many attempt to disregard the alphabetized signs, but the I.D. checker, who has heard all the excuses, forces the disobedient student back into the proper time period.

Now the lines begin. Approaching table one, students pick up their class schedules. For those collegiates who are handed an incomplete form, the entangled drop-add system is a must.

Filling out the master cards, K-Staters blacken in the ovals with a number two pencil. The toughest situation at table two is remembering one's new phone number.

At table three, the student must register their automobile, so security and traffic can trace the permit number when parked in a restricted area.

After surviving registration, the red

tape continues to ravel. Both full and part time students undertake the process of changing course line numbers.

Thus, once again, a visit to the adviser, who is becoming quite familiar, is necessary for the class alterations. Grasping their appointment card, thousands of collegiates go to the basement of Farrell Library. Each student must stand in a separate line for each class added. The drop-add entanglement increases when a student accidentally drops a class before adding the new one. Invariably the course is full, so the frustrated student must wait in line again to add the very same class he just dropped.

Another of the knotted procedures at K-State is in financial aid. Though obtaining the form isn't too difficult, the process becomes more complicated with each step.

Before receiving any aid from the government, one must fill out an ACT family financial statement packet and send it to Iowa. Next, a notarized affidavit must be received by the university financial aid office before one can pick up any money.

This red tape was exemplified in the fall of 1980, when 450 students waited for their work-study checks. While the K-State students struggled with their offices, the departments waited for the work-study

authorization forms. The forms, available at financial aid, involved another line.

In some cases the correctly completed forms were returned to the department for processing. These forms were forwarded to financial aid, who in turn forwarded them to the University payroll office.

Somewhere along the organization of K-State, the paperwork was misplaced, thus delaying the checks by as much as two months.

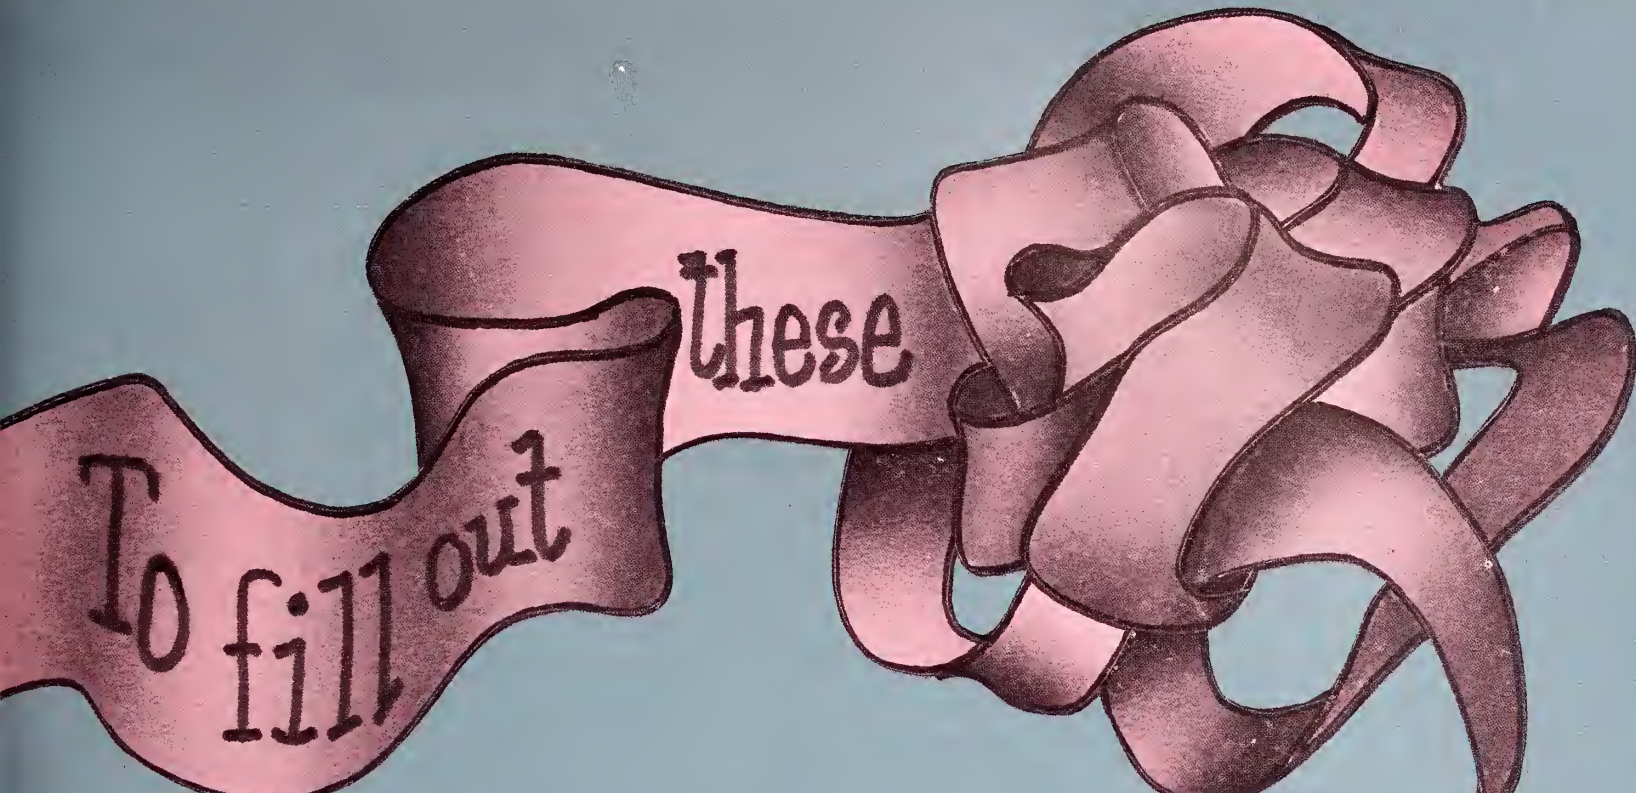

The entanglement continues. At K-State there are certain students who are chosen to receive a key, which will unlock an office door or building on campus.

Of course, these "fortunate" students must have a legitimate reason for needing the key and the department head's authorization.

After meeting the requirements, these students complete key request cards, in triplicate. When finished, the secretary signs and initials the department head's signature.

After a 10-minute hike to Dykstra and another 10-minute wait in line for keys, some of these students may be surprised to learn that they are still entangled in the adhesive situation.

Due to a policy change, many of these students left Dykstra with the same green form, instead of the gold key.

Like other complicated university systems, in the new key policy the department head must annually verify that he has authorized someone to sign his name and then initial it.

Even simple things are caught up in the policies of this institution. Students will find it impossible to cash a check at the Union without their plastic K-State I.D. Now, even the fee card won't work.

Some consider this ironic, as the only way to get ones I.D. validated is to present the current fee card. Yet, the fee card won't fit into those little machines used to validate the checks written.

The fee card also won't serve as one's pass into buildings. For without the I.D., students can't use the library, get into Lafene or enjoy the new recreation complex.

Replacing those cards isn't too bad though. If a student loses his I.D., he must jog over to Farrell and have his mug shot taken. Maybe in three weeks or so the new I.D. will get replaced ... that is, if it doesn't get misplaced in a stack of red tape. \*

## Students feel the bite

# Books only minor expense

**A** check here, a check there ... does it ever stop? Students enrolled in architecture, interior design, apparel design and multi-equipment related majors often wonder.

Every student pays for tuition, books and housing, but some curriculums involve additional expense. Consider the architects' situation.

Architecture students are generally required to produce three projects a semester. Projects generally run from \$10 to \$100 a piece. The average model runs about \$30.

Pre-design students also feel the bite of the added costs of materials and equipment. Pre-design classes require the student to experiment with water colors, markers, pencils, charcoal, rapidograph pens, prisma colors and pastels.

The initial cost of these supplies runs high. If the student finds that he only likes, or is good at only one or two different medias, he is stuck with supplies he has used only once or twice. Then he must invest to upgrade his final media choice.

---

*A special thanks to Alex Poorman, fifth-year student in interior architecture.*

Art students must also invest in a long list of supplies. The list might include: drawing boards, T-squares, triangles, pencils, leads, drawing paper, matte board, magic markers, tackle boxes, rapidograph pen sets, colored pencils, drafting sets, portfolios, brushes, templates, tracing paper, acrylics, water colors and paints. The list, according to art students, is endless.

"The biggest investment is at the beginning of each semester when you have to buy all the basics," Valerie Mills, fifth-year student in interior design, said. "But my parents have been real good about helping me pay for my stuff," she added.

"I bought an \$11 adjustable triangle that I've used twice, and some acrylic paints for my Design II class which I've hardly used at all," Mills admitted.

Students that have been in the program longer learn the ropes.

"When an instructor gives me a lot of supplies, I usually wait until they are needed. This way I know what I'm going to need and how much I'm going to use,"

Dan Engler, junior in interior architecture, said.

Another field in the area of design which strains the pocketbook is apparel design.

"When I began here at K-State, they did not inform us as to the equipment and time involved," Nancy Shelley, senior in apparel design, said. It is unfortunate that students with limited finances don't have a chance to make it through the course, Shelly said.

"If money is a barrier," Shelley said, "There's no way one can go on."

In addition to the list of drawing and sketching supplies also required of architect and interior design students, apparel design majors must also supply themselves with the designers' equipment (shoulder slope, hip curve, etc.), industrial scissors, dress forms, muslin, fabric, and an endless assortment of notions.

Extra supplies required of architecture, art and design majors may help to further their education, nevertheless still drain the checkbook. ☼

# Dallas:

**T**hey call him the man people love to hate.

J.R. Ewing will go down in time with such villain greats as the Klingons, the Godfather and Raven in "the Edge of Night."

The only difference between these characters and the one and only J.R. is people love to hate him.

Larry Hagman, who plays J.R., is quoted in *People* magazine as saying "people come up to me and say 'I hate you so much', then they ask if they can kiss me." Now, it would seem that this should be all wrong. Fans should be throwing eggs and onions at the terrible villain who becomes nastier by each

art by Mel Westmeyer

# J. R. Ewing's city of fate

"Dallas" episode.

So, why this irony? One theory is that people love to take their frustrations out on something. What could be better than to watch the "evening soap opera" and take all those frustrations out on a man who deserves to be hated.

The United States and Great Britain were hit with "Dallas fever." K-State has been affected, too. 'Who Shot J.R.' t-shirts, bumper stickers, Dallas books and anticipation filled the campus as some students waited for the actors' strike to end, so they can find out who shot J.R.

The Central Broadcasting System (CBS), being very careful to protect their new found rage, had even filmed several different episodes of different characters being arrested for the shooting. This was done so that even the actors in the show

would not know who got the "treat" of gunning down J.R.

Larry Hagman stated on the Today Show that he didn't even know who shot J.R. The cast filmed several versions of the show, but the last 15-20 pages from every script was missing, keeping the cast in suspense, Hagman said. The shooting of these episodes began before the actors strike put a halt to the continued filming of the show.

Theories, of course, ran wild.

There's pretty Pamela. If anyone had a reason, she did. J.R. caused her miscarriage, hounded her brother, Cliff, and forced her and her husband to leave Southfork.

Miss Ellie was a suspect. So far J.R. had lied to her, mortgaged her ranch without her permission and caused her

family embarrassment.

Kristin, J.R.'s mistress, was a prime candidate. He gave her packing papers when she tried to blackmail him. He told her he would spread it all over Dallas.

Some people even speculated that J.R. did it to himself for sympathy.

So K-State students are waiting patiently for the answer. Since there are such things as trials, police investigations and other delay tacts, during the whole season many viewers are asking "Who shot J.R.?"

**On Nov. 21, CBS finally revealed that Kristin pulled the trigger.** ✪

Glenna Menard

## "I'm a soap opera junkie"

**W**arning: The Surgeon General should determine that watching soap operas is hazardous to your mental health.

With all the cancer research studies being done on laboratory rats, I would think that the Surgeon General could take time to have the above warning emblazoned on every television that is sold.

A few years ago, I was reasonably normal, but now I'm a soap opera junkie. It's an obsession. I find myself arranging my schedule so that I can be home in time to watch my favorite soaps; passing up dates so I can watch "Dallas"; and eating quickly so I won't miss "Guiding Light".

Soap operas have a quality that is able to draw in even the most intelligent person. Similar to a mystery, a soap opera gives one just enough information about each tiny plot variation to gain interest, before going on to the next mini-plot. To add to this technique, a soap opera will invariably end at the most suspenseful moment to insure that the viewer will tune in the next day. It doesn't take long for a person to be hooked.

Who could pass up a program with such lifelike drama? Eve loves her ex-husband Ben. Ben loves Eve but is married to Amanda (having given up on Eve), Ross wants to marry Amanda (because of her mysterious inheritance) and is dating Eve to make Ben jealous so

he will meet with Eve, be caught by Amanda, and Ben and Amanda will break up.

Of course the plan is foiled by wellmeaning Jennifer who convinces Amanda that Ben is truly faithful to her, so Ross must devise another devious plan before he falls in love with Eve. It makes my head spin but I love it.

I thrive on the fact that Draper Scott (Edge of Night), who is believed by his loved ones to be dead, has amnesia and is falling in love with a woman who believes him to be her long lost husband. This woman's father knew the truth but died on his way to tell Draper.

The wonderful twist is that Draper and his woman have moved into what was Draper's town and into the same house that he lived in with his real wife, April. To make matters worse, or better for the writers, the woman who Draper believes to be his wife has become good friends with April.

I've often wanted to quit watching soaps but I always go back. A few minutes with Lance, Laurie, Luke and Cris (another amnesia victim) and the rest of the cast of the "Young and the Restless", and I am convinced that my thoughts of ending the daily rendezvous are ridiculous. Sometimes I feel like I can't live if I don't find out what happens with the newly introduced cult on the "Young and the Restless."

I began as a social soap opera watcher.

The girls and I would gather around the television after lunch to watch our soaps. It was just harmless fun-it couldn't hurt to watch once in a while.

But soon a half hour a day wasn't enough. I had to see more, to go deeper into daytime drama. I began sneaking off to watch a soap opera, skipping class, hiding from my friends, from my parents, from reality.

I tried to quit. I heard about a sort of shock treatment that had been successful in less serious cases. I tied myself to a chair and forced myself to watch reruns of 60 Minutes. It was a painful trip back to reality but I made it. I was a recovering soapaholic.

I had been warned that watching even a few minutes of a soap opera would drive me back into hopeless addiction, but when I turned the television on that Friday night I thought I was safe. I watched Dallas and was lost in a sea of drama once again.

There ought to be a law against soap operas. A warning to unsuspecting people to avoid programs disguised under the innocent name of "daytime drama" before they too are hooked.

Thousands of housewives and students are hooked. Thousands just like me. Maybe not just like me. I can quit anytime I want to. I've done it hundreds of times. ✪

Alice Sky

# HEAT WAVE SCORCHES KANSAS

**P**arched lips, dry throats and sweaty bodies were a portion of the suffering during the red-hot summer of 1980.

From mid-June to mid-August the heat wave set record high temperatures throughout the nation. In Dallas, Texas the temperature was over 100 degrees every day from June 23 to August 3.

People tried to escape the heat by diving in swimming pools, or sitting under air conditioners. And those using air conditioners set a new record for electrical energy used. During the week ending July 19, 52,635 million kilowatt hours were used, six percent over the old record according to an article in *Newsweek*.

People not fortunate enough to own an air conditioner were offered aid in heat relief centers which opened nationwide. These heat relief centers were typically church and school buildings open during the daylight hours, enabling people to seek shelter from the exhausting temperatures.

Even with air conditioners, the heat wave caused 1,265 deaths and almost \$20 billion in damage, according to the National Oceanic and Atmospheric Administration.

The highest death rate, 311, was in Missouri. The majority of those who died lived in non-air conditioned homes. The victims were usually elderly, afraid to

open doors or windows because of theft; or persons of low-income.

These deaths were caused by heat exhaustion and heat stroke. High temperatures and humidity during a heat wave reduce evaporation in humans resulting in dehydration. In turn, dehydration increases the chance of sunstroke.

Nevertheless, a middle-aged Atlanta man, lived with a 116.7 degree body temperature, according to an article in *Newsweek*. Hospital officials said this was the highest body temperature ever recorded.

People weren't the only element hurt by the diverse affects of the heat. K-State's agricultural department felt the impact of the drought.

This year's soybean yield was expected to be about 40 to 50 percent lower than the normal yield, according to Carl Overley, associate professor of agronomy. Nevertheless, Overley believes the crop will yield enough seed for the 1981 crop.

The department remained concerned about the soybean supply for Kansas farmers.

"The drought has caused our department to have increased costs of feed grains and roughages to feed our teaching and research herds and flocks," Don Good, Department of Animal Sciences and Industry head, said.

Farmers in the states were devastated. Even with the prospect of higher prices; hard, shriveled corn and burnt wheat fields caused the farmers' outlooks to be, at best, dismayed.

The government's Basic Educational Opportunity Grant program was extended because of such losses. Special grant allotments were given to students whose parent's farms suffered.

Ironically, the searing heat helped research on crops during extreme conditions. Tom Fritz, head of the Department of Horticulture, said the temperatures gave a good indication of the hardiness of plants in stress-related tests. ☼

## Jill McAntee

**Waves a blaze-** Wheat stubble, too thick to plow, burns as Clarence Minton plows in the background.

**Warm Wind 'n Water-** Maarten Van Swaay, associate professor of chemistry, finds the Kansas wind and warm water ideal for wind surfing at Tuttle.

## Take the Tuttle Creek plunge

Clad in string bikinis, with a 6-pak in hand, students flocked to Tuttle Creek Reservoir in order to escape the blistering hot sun during the summer of 1980.

Tuttle offered a variety of choices to cool a body when no other means of relief were in sight.

One of the more popular locations during the summer months was the rocks. One of the surrounding flint hills forms a cliff of rocks which students lay out on. The water is just a few feet from the rocks, as inner tubes, rafts and styrofoam devices supporting K-Staters specked the area.

A floating dock at Tuttle Cove provided a cool place for students to catch some rays. At the cove, frisbees fly as the sand beach joined by a grass field provided an excellent area for sports amateurs.

"One time last summer, we were out on the dock — it started raining, but it was so hot, we just stayed in the water," Ann Masoner, graduate in education, said.

For the fortunate few having access to ski boats, meeting at the marina for a day of water skiing was preferred.

"One of the best ways I found to cool off during the summer was skiing. We'd go out to the marina in the morning

around 10 a.m., load up, and ski all day," Terri Garrett, summer resident, said.

For those preferring a slower more relaxing pace, sailing across the cool blue water aided in the relief from the broiling sun.

"I didn't have to be at work until 5 p.m. everyday, so about 11 a.m. I'd take my sailboat out to Tuttle. Even the wind was hot this summer. When it got unbearable, I'd just tip over on purpose," Randy Dunn, senior in journalism and mass communications, said.

With a bottle of wine in one hand, toting a canoe on their shoulders, students found still another water activity at Tuttle. And for those who put a little more effort forward, paddle boats were available.

In the cover of darkness, students sneaked to the beach below the dam to take a dip — naked. Yes, students even skinny dipped at Tuttle. Just a few or in a group, skinny dipping not only eased the sweltering bodies, but also added zest to dodging the high humidity. ☼

### Jill McAntee

**Weekend Water-** Lesa Miller, senior in horticulture, creates a wake at Tuttle as she skis.

# K-State . . . A place for

**F**rom both eastern and western Kansas, all the way to California, students have found "heartland" at K-State.

Students transfer to K-State from junior colleges and major universities all over the United States. Their reasons vary, but almost all agree, K-State is a place for everyone.

Brenda Sinclair, senior in speech education from Garden City, Kansas transferred to K-State from the local junior college.

"I'm very glad I came to K-State, it's been a real learning experience, not just educationally, but psychologically," she said.

Sinclair said adjusting to K-State was difficult for her because it was her first

time away from home and K-State is so much larger than the junior college where she knew everybody.

Aggieville is what Sinclair says she likes best about K-State.

"Besides Aggieville, hmmm . . . I like all the activities people can get involved in. I think it's neat that there are so many (activities) so that everyone can do their own thing," she said.

The University of Kansas (KU) lost a student when Julie Miller, sophomore in business finance, transferred to K-State.

According to Miller, she transferred because students at KU aren't as friendly and personable as K-Staters.

"People at KU seem to have their noses in the air all the time," she said.

Miller said she misses the hills of Lawrence but believes K-State's campus is pretty with its trees and old buildings.

"I like the smallness of it, too," Miller said, "I like the campus because it's not as spread out as KU, it's more concentrated and convenient here."

K-State's campus is beautiful and the old buildings give it a lot of character, according to Becky Oliver, junior in journalism and mass communications from San Dimas, California.

**Tic-Talk**-In the center of campus, amid the trees and limestone buildings, "the clock" is a common meeting place for students.

**Stateroom Affairs** - K-State students find the stateroom of the Union a place for everybody to eat, to study, and to socialize between classes.

Photos by John Greer

# everyone

"I like Anderson Hall," she said, "I love that building because it is so unique. I remember seeing that building when they sent me literature on K-State and I thought it was the coolest."

Oliver transferred to K-State from California State Polytechnic University in Pomona, California.

"I came to K-State because I had a great uncle who set up a trust fund so that when he died any descendants could go to K-State free," she said.

Oliver was anxious to come to K-State because she knew she could get involved in campus activities. One of the things she likes most about K-State is that it is easy to get involved on campus.

According to Oliver, K-State is not well recognized academically in California, but she does believe that the Manhattan university has a good reputation in Kansas.

Even though Oliver misses the cultural events of big cities, she says she likes K-State because it offers plenty to do and her social life couldn't be fuller.

"It's easy to meet people and they are very friendly here ... there are a lot of different ways to meet them — through priorities and fraternities, activities, and Aggieville," she said, "A lot of schools don't have Aggievilles!"

Since K-State is smaller than Cal Poly., students can get to know their advisors and instructors very well, and Oliver says she believes they really care about the students.

"In big schools the instructors are more interested in doing research and publishing than teaching. They don't give a two-hoot about the students," she said.

K-State is a place for everybody, according to Oliver. Students don't have to be just an average person to fit in, she said, because K-State offers such diverse areas to major in and activities and organizations to join, she said, and added, "I definitely think anyone can fit in at K-State!" ❁

## Andrea Carver

*K-State's Steeple - Anderson Hall, one of the oldest buildings on campus is a symbol of K-State as a place for everyone.*

# Pack up, we're going to London

**Country Representatives-** *Phil Hewett exchanges greetings with the leader of the Royal Military Band before the two bands took the field at Wembley.*

**Where Next?-** *Band members contemplate their next sightseeing spot. In addition to touring, members also spent free time napping, sending postcards and studying for finals.*

**Bus Lag-** *Kathy Schmidt will testify that buses were a familiar second home to the traveling Kansans. The group spent fifteen hours in buses between Manhattan and Chicago's O'Hare International airport. Group tours of London were executed by bus travel.*

After 18 months of raising funds, the outside of McCain Auditorium resembled a three-ring circus. On May 4, 1980 members of K-State's Marching Band gathered and shortly after midnight the 350-plus members departed for a 10-day concert tour of London, England.

After long hours of bus travel and waiting during airport layovers, the members' tired eyes widened as they boarded the British Airways 747 jet. Flying at 500 miles per hour over Greenland and the North Atlantic, it took eight hours of flight to reach London. Nevertheless, drink, dinner and a movie helped to pass the time. After 30 hours of travel, the Pride of Wildcat Land had finally reached London.

The first real glimpse of London was seen from the busses, called coaches. Driving down the crowded streets, on what seemed like the wrong side of the road, the guide explained life in London. The lessons included: the hamburgers contain horse meat, pedestrians don't have the right of way and everyone takes baths instead of showers.

Since this was a once-in-a-lifetime experience, the itinerary provided plenty of free time for sight-seeing. Scheduled tours included visiting Oxford University and Shakespeare's home.

Band members were also encouraged to "strike out" on their own to see such sights as Big Ben, Westminster Abbey, the changing of the guards at Buckingham Palace, Piccadilly Circus and London's tube, the subway.

Even with the sightseeing, the band practiced their show everyday in an attempt to strive for perfection.

After a breakfast of hard rolls, orange marmalade and tea, on May 10, the band headed for Wembley. Before a sellout crowd of over 100,000 and a television viewing audience of over 600 million, the K-State Marching Band stepped on the field at Wembley to perform for the 1980 World Cup Soccer Championship. This performance marked the first time women were allowed to step on the soccer field at Wembley.

The soccer field seemed large and alien without the familiar football yard lines. The crowd noise steadily increased and reached fever pitch.

"Take a KU-K-State game in Ahearn Field House and magnify it about ten times and you can get an idea of the enthusiasm," Phil Hewitt, bandmaster, said.

The field conductors' whistles were almost useless against the noise of the

**Taking It To the Streets-** Not only did the marching band perform at Wembley, they also took the rhythm of the heartland to the city routes of London.

photos by David Von Riesen

fans. The voice of the band announcer filled the stadium, momentarily quieting the crowd. The 27 minute show started with "London Bridges Falling Down". Song after song, the music poured forth against the roar of the crowd.

Over 3,000 "Bobbies" were in charge of security at the performance. Crowds surged towards the girls "throwing sticks" and the band in "grape outfits".

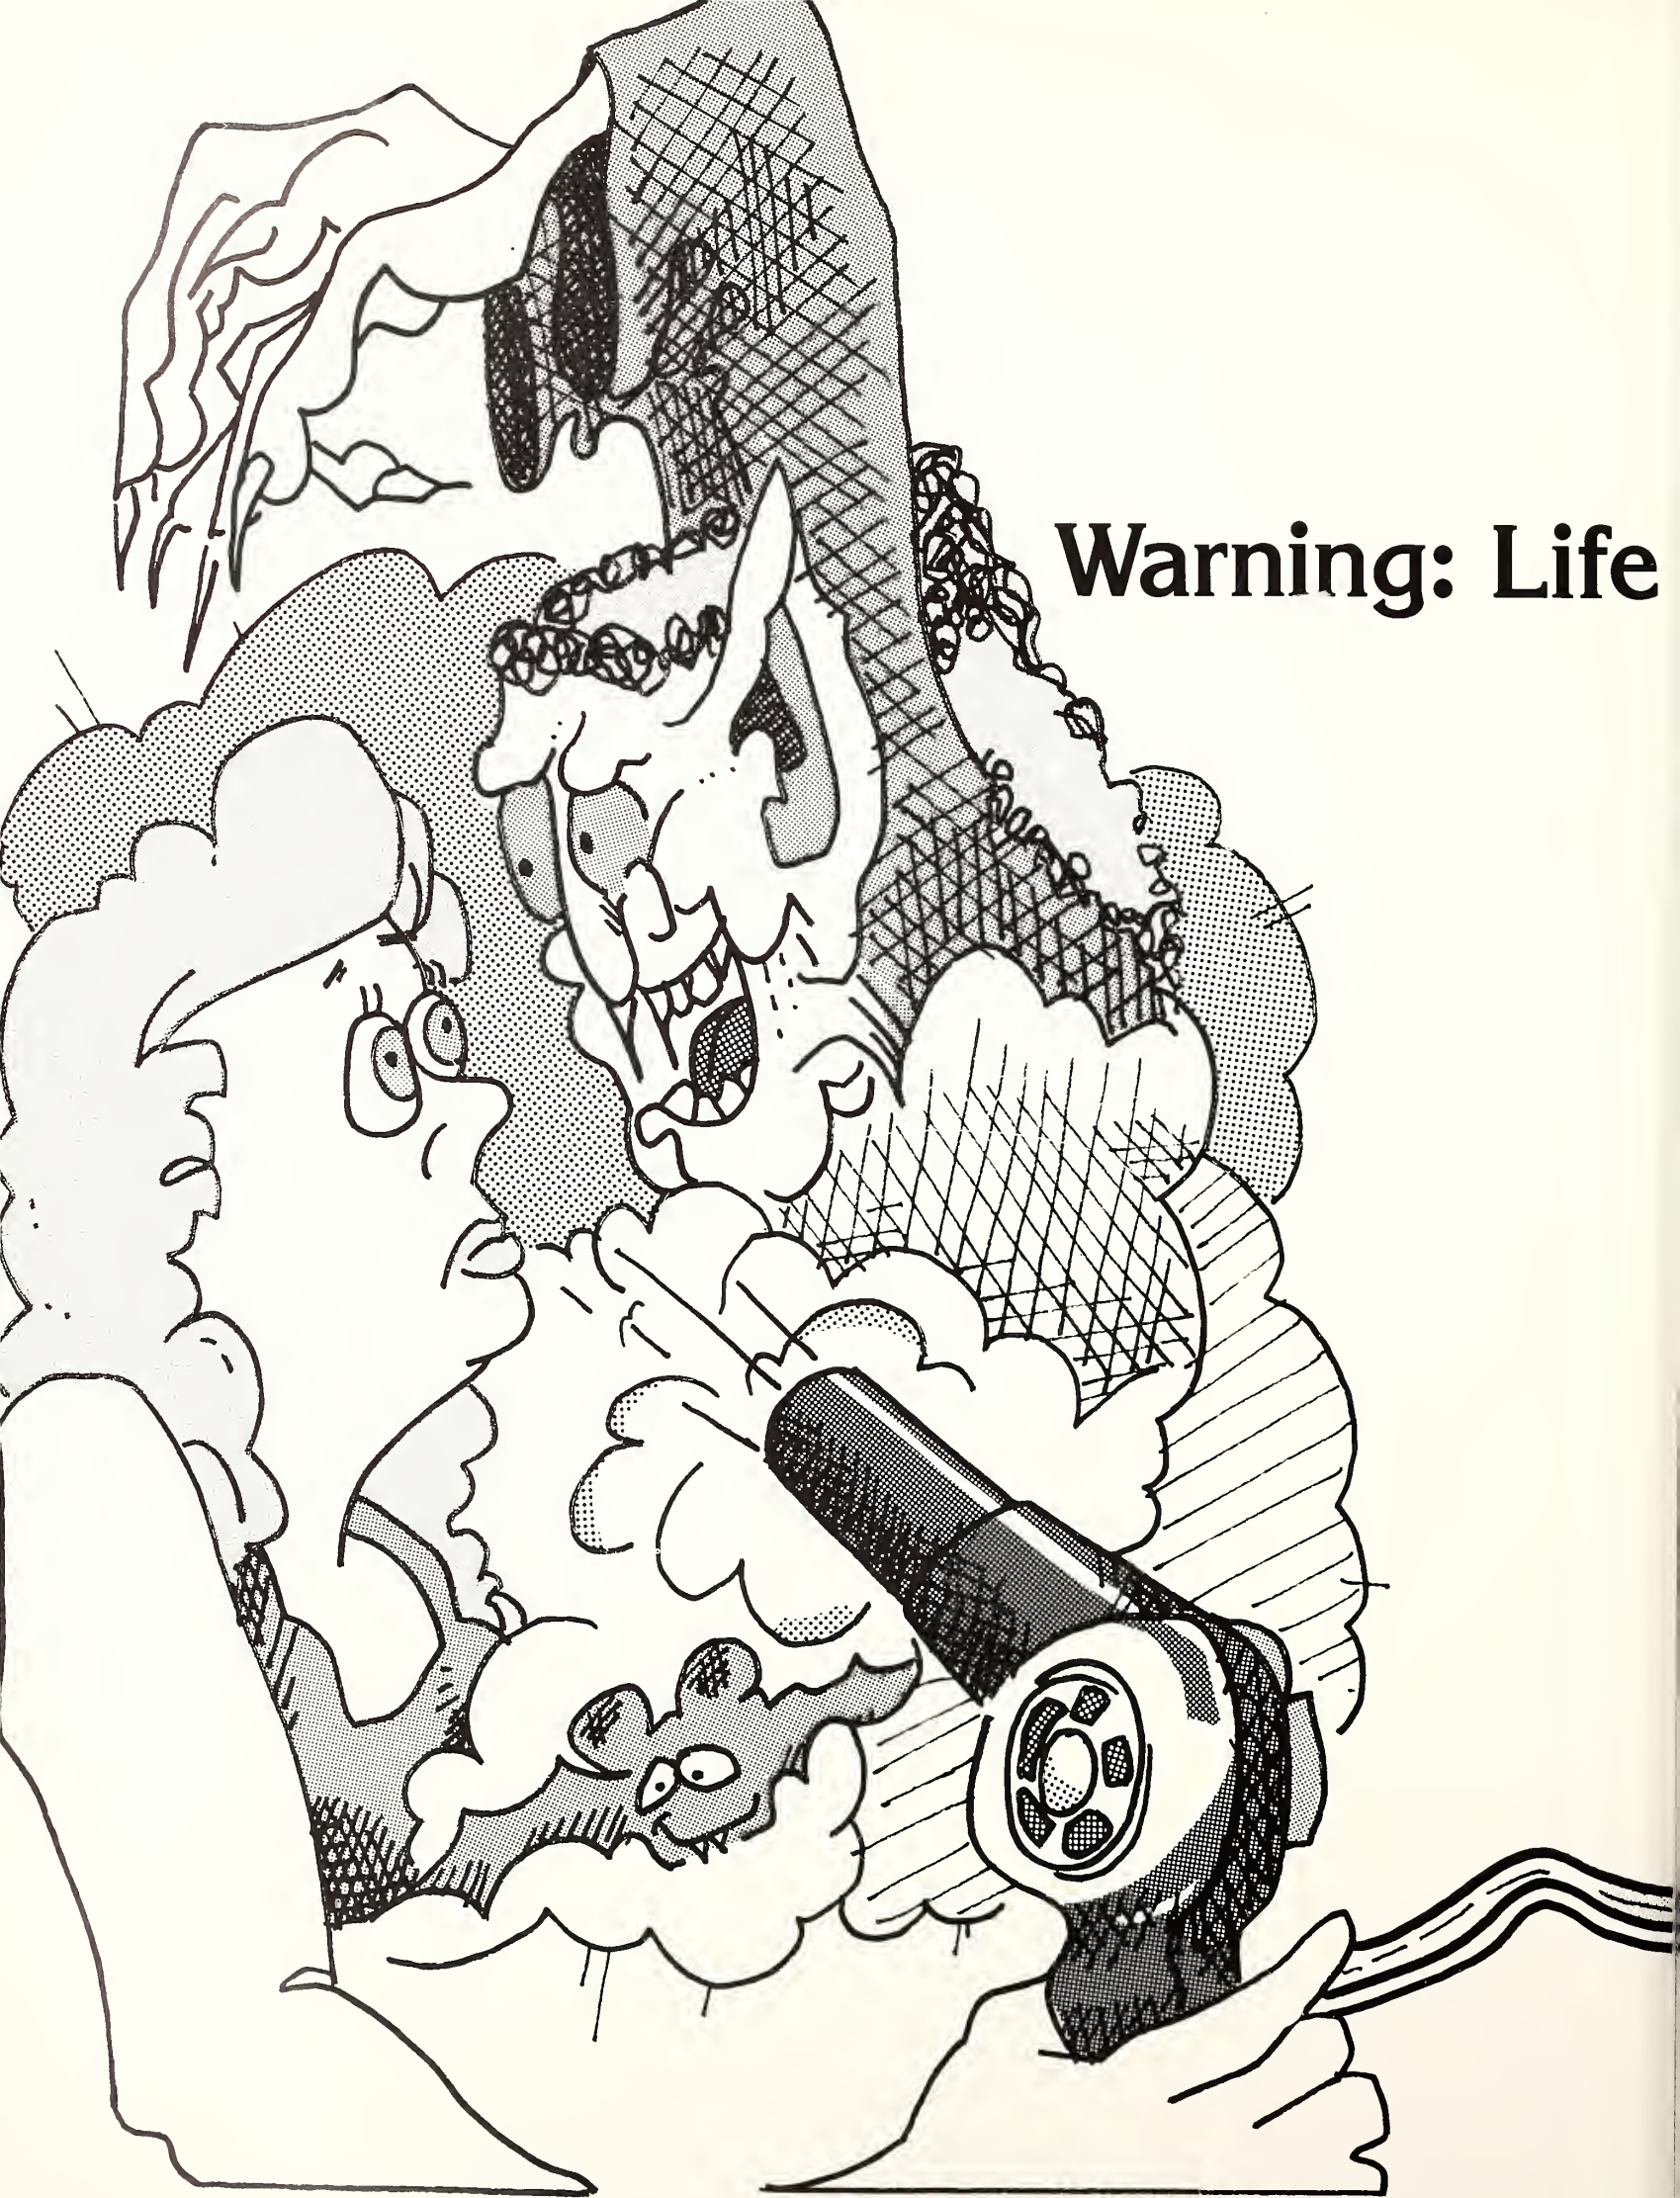

This attention was especially true at the opening of Hyde Park's summer series on May 11. Hewett said students were so popular at the Hyde Park concert that departure was delayed over an hour.

Almost every band member was asked for an autograph or to pose for a family photo. K-State band albums sold well to the English concert-goers.

The Jazz Ensemble gave three performances while in London. The first was at Oxford in the city auditorium. The other two were before sell-out crowds at Ronnie Scott's Jazz Club, a night club in London. Three encores were demanded from the second show audience, which consisted predominately of professional musicians. ✪

**Warning: Life**

# may be hazardous to your health

I've come to the conclusion that the safest way to live the rest of my life is to sit in a dark corner and mind my own business. Nothing is safe anymore — everything is hazardous to your health.

I realized this the other week when I was reading an issue of *People* magazine. The magazine contained an article about the newest scare disease, toxic shock syndrome (TSS).

Dr. James Todd, chief of the infectious disease department at the Children's Hospital in Denver said, "You run a greater risk of dying in your car on the way to the store to buy tampons than you do from toxic shock."

As I fell asleep I questioned what Dr. Todd said. Then my thoughts turned to dreams.

There I was — in the consumer product graveyard with cans and bottles as tombstones. The epitaphs said things like: "Use of this product may be hazardous to your health;" "This product contains saccharin which has been determined to cause cancer in laboratory animals;" "Warning: The Surgeon General has determined that cigarette smoking is dangerous to your health;" etc.

Then I pictured myself surrounded by a hazy cloud. My cemetery tour guide told me the fog was the ozone layer coming down to haunt me since I had been polluting it by using aerosols containing fluorocarbons.

When the mist finally cleared there I was holding a hair dryer. Before I knew it the drier had been turned on and millions of asbestos particles were traveling to my lungs. Suddenly someone was cramming cigarettes in my mouth and trying to make me inhale the nicotine.

When the fog rose I was lying out on a sunny beach with the intense sun rays penetrating my body. I was being bombarded by ultraviolet rays!

The rest of my dream was an assortment of things to sketchy for me to remember. I do recall people selling me a plot of land which turned out to be at the base of Mt. St. Helen's. And, on my way to view my new purchase, a real-estate agent made me believe the ash was actually a cure for cancer.

My agent told me that I was fortunate to receive such a great plot of land. "Someday it might even be a part of the San Andreas fault," he encouraged.

Then I started running. I ran and ran stepping over cans which said: "do not puncture, incinerate, or expose to heat;" "Keep out of the reach of children;" "do not inhale;" "use in a well ventilated room;" "do not take internally".

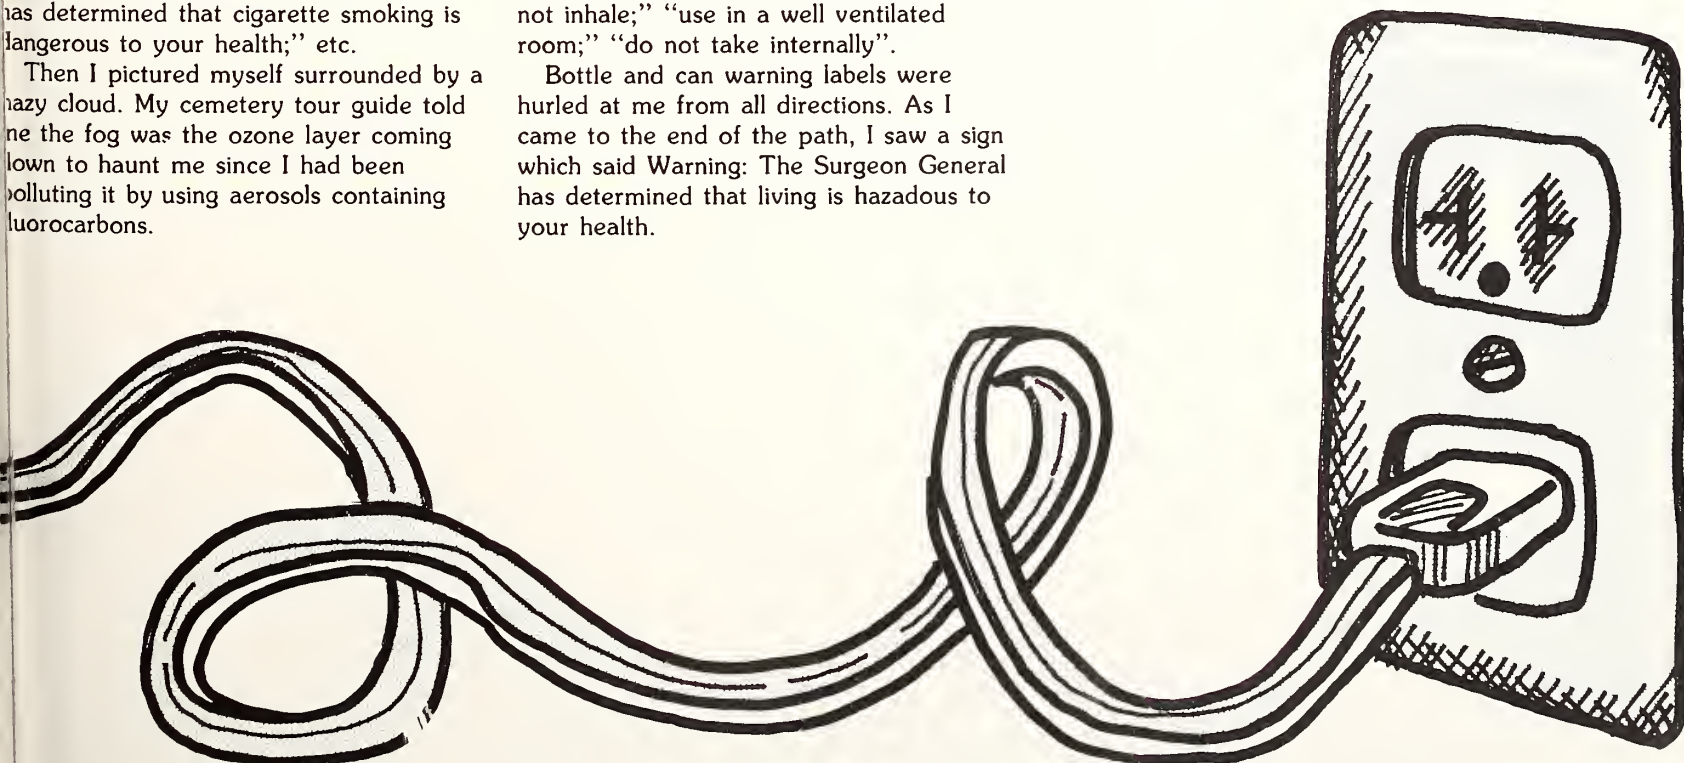

Bottle and can warning labels were hurled at me from all directions. As I came to the end of the path, I saw a sign which said Warning: The Surgeon General has determined that living is hazardous to your health.

I woke up that morning exhausted from my nightmare, but realized how true it was. Practically everything was hazardous to my health.

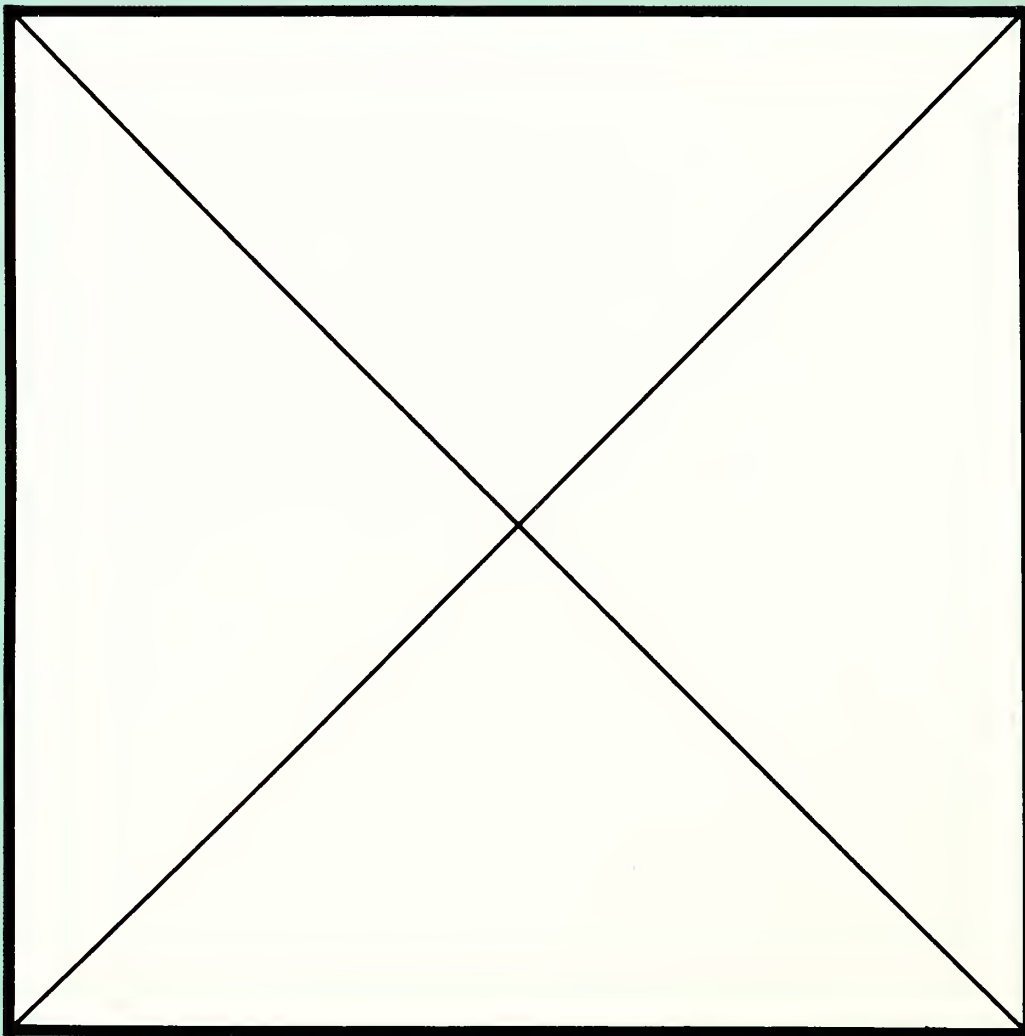

I went shopping later and every label seemed to jump at me with its warning message. I went through the rest of the day wondering if I could even rely on Rely. ☼

# “Me lazy? No, I procrastinate”

I've always admired people who work hard at their studies and make straight A's.

Even more, I admire those people who get straight A's and don't do any work at all, because I like the idea of getting a lot for a little.

Some call it lazy, but I prefer the term procrastination. It sounds scholarly.

I've had a case of the "I'll-do-it-later" syndrome ever since I can remember and I have never gotten around to changing that behavior; yet.

I've got a list of excuses a mile long. At the top of my procrastination list is: "But I do my best work at the last minute." This excuse is followed closely by: "I like to work under pressure."

When I finally got around to figuring out why I put everything off to the last minute I went to the dictionary and looked up the definition of procrastination. According to Webster, to procrastinate is to postpone habitually.

The only cure for procrastination would be organization and hard work—a slow painful death for me.

I blame my severe case of procrastination on my second grade teacher (after all, I've got to blame it on someone). After missing two weeks of school, because of the German measles, I turned in about half of the accumulated homework. Once I returned to school, I failed to finish the work and eventually the teacher forgot it.

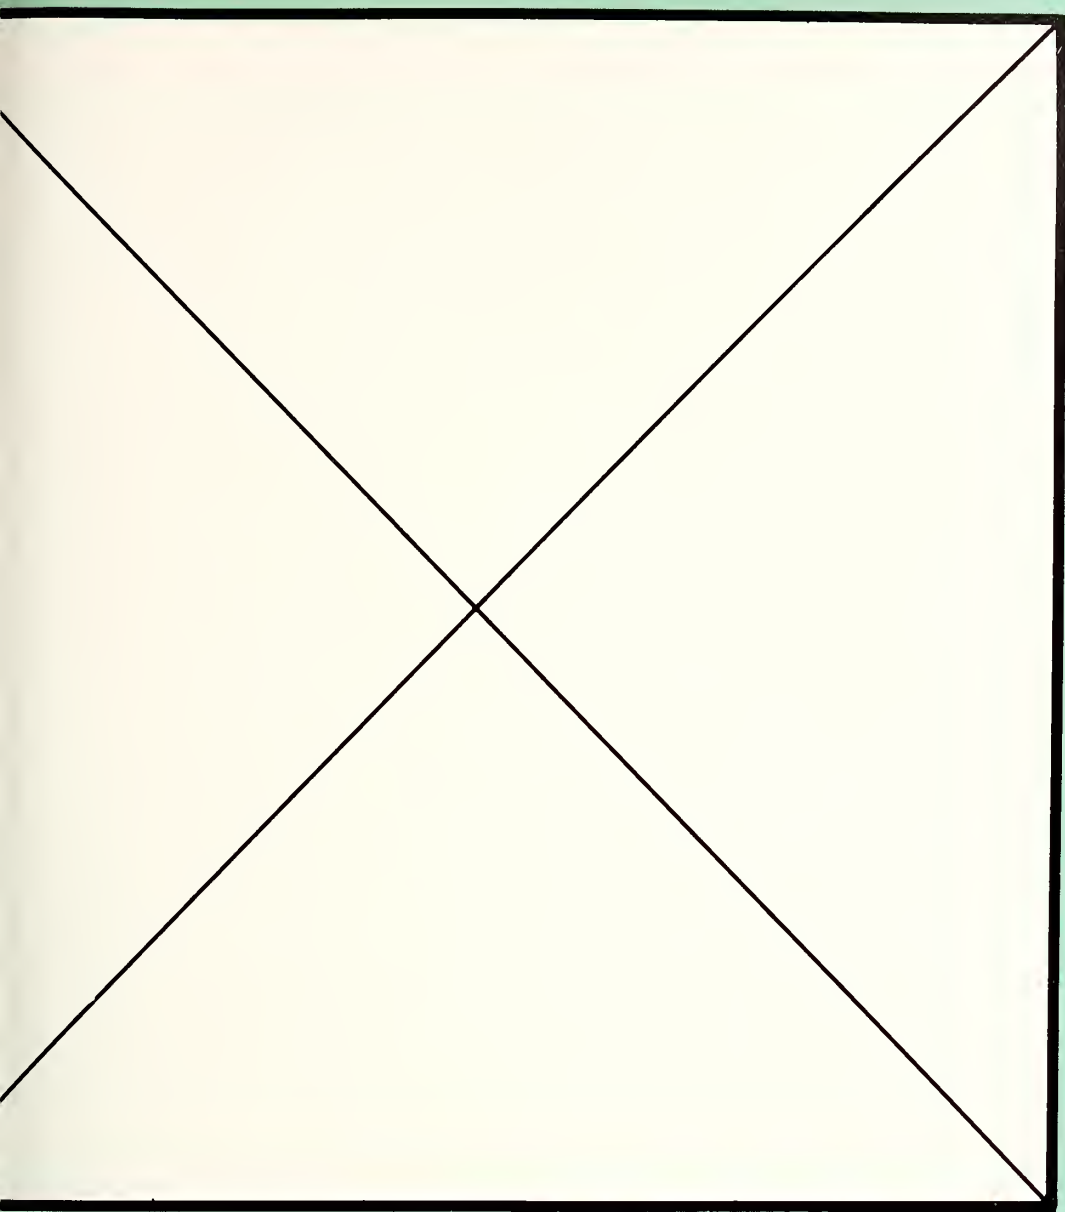

That's one habit I've kept until now. Unfortunately, now they give incompletes for work not received. I'm sure I have the record for the most incompletes.

My mom has tried to cure my habitual laziness by quoting an old proverb: "Never put off until tomorrow what you can do today."

Today in the world of posters and t-shirts they have made that old proverb suit my situation: "Never do today what you can put off until tomorrow."

In college I have found that my procrastination is forever prevalent. Take reading assignments for example. Usually,

I put off reading until the week of the test. By this time I figure it is too late to benefit me so I punt the entire assignment.

I always tell myself that "next semester I'm going to do better . . . I'm going to do all my homework and I'll study in advance for each test."

I'm a senior now and I'm still putting those goals off until another semester.

I was off to a bad start this semester already. I vowed I would study for my psychology test because I was positive I could ace the course if I put a little effort into the class. I marked my test date on the calendar and began to psych myself up for the big test.

The week before the test I began my reading assignment but it was just too boring to read. So I studied class notes but I always found something I would rather do than study.

Finally, the evening before my test I decided I would stay up as long as I had to study for the test . . . I ended up in Aggieville that evening and when I got home I told myself I was too tired to study and I would get up at 6 a.m. and do

some heavy last-minute cramming.

I did wake up early (6:30 - only half an hour late) and read over the class notes again, decided I could probably fake a decent answer, rolled over and went back to sleep.

I woke up in time to comb my hair, throw on some sweats and make it to my test.

After that I decided I was a procrastinolic. Anything that was displeasurable or had a hint of work I put off until the last minute.

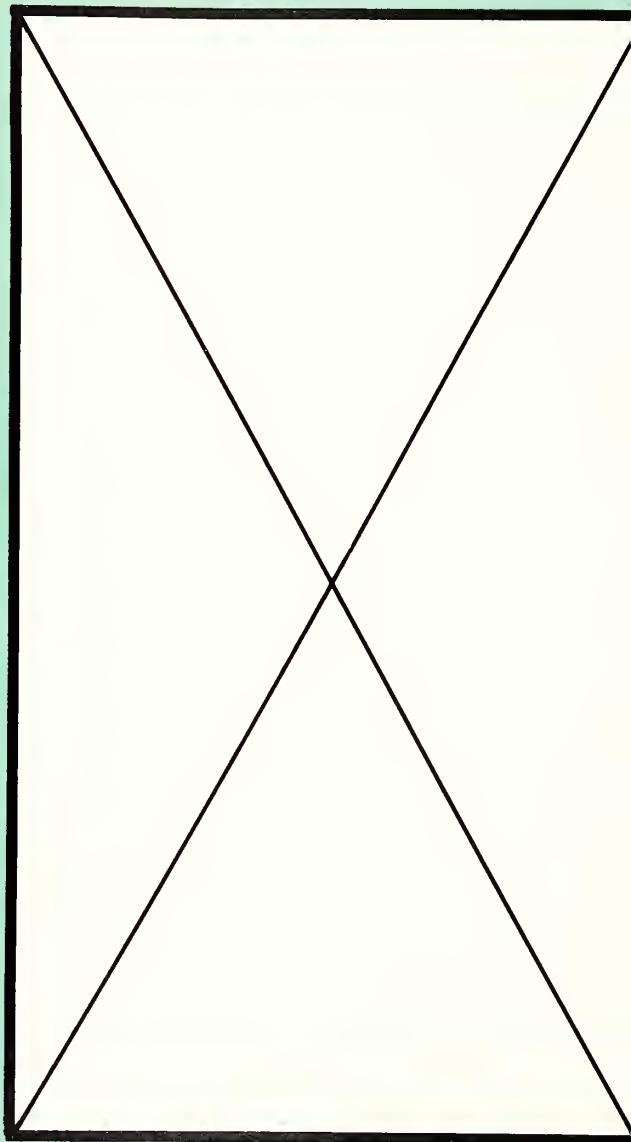

Since I'm in the job market now, I figure it is time to cure my procrastination.

At the present I've been doing a fair job. I've gotten everything done on time, a small wonder in itself.

But I know I'll go down in the Guinness Book of World Records as the greatest procrastinator — provided I get the proper forms filled out and sent in on time.

What the heck, I'll do it tomorrow. ☼

**Nancy Reese**

***Note: The editor regrets that the photos on this page are missing. Due to uncontrollable student laziness they were never taken. In fact, the photo assignment was completely forgotten.***

## Those embarrassing dates

# “You got caught doing what last night?”

“How was your date last night?” I said glancing up from my typewriter.

“You wouldn’t believe what happened,” John said. “I knew Lisa was a nice girl, but not how nice. When I picked her up she brought a Bible along.”

“What a great chaperon!” I said.

“Yeah all the plans I made for the evening were shot, so I asked her what she would like to do.” “Let’s go to the park and read scriptures,” she said.

“So your date was a drag,” I said.

“No it was one of the best dates I’ve ever had. She’s really a nice girl. She’s really easy to talk to and besides after the scriptures, we went out for a few beers. Everything worked out fine,” John said.

By the time John finished his story several people had gathered around. Just the mention of a date, especially an unusual one catches attention almost as much as mentioning E. F. Hutton.

What a way to rub in my having to stay home on a Saturday night typing a philosophy paper. Soon many stories were being exchanged about what had happened on their dates last night.

Jeff began telling his story in a slow monotone voice. He looked like he had been through the ringer.

“I was out north of town trying to find a special, out of the way place. You know, the place where I knew there would be no interruptions.”

“I put my Bronco in four wheel drive and took off speeding across the field to find a perfect spot to romance my girl.” Jeff paused, glanced around the room. Then added, “I got out about half way through the field and I had a flat tire. I

got out and changed the tire and proceeded on.

“I hadn’t gone 150 yards when another tire had gone flat. I found out that the tire wasn’t the only thing deflated, by now my date’s mood had also. We ended up having to walk all the way back to a blacktop road and hitch a ride into town,” he said.

“You think you had a rough night” Steve said. “Michelle and I drove out to Tuttle to watch the submarine races. I had the Royals playing on the radio. Just after the last inning of overtime I tried to start my car and the battery was dead.”

“We had to walk in from Tuttle to the doughnut shop before we found a telephone, I tried to call you guys but no answer. At last resort, I called home. My mom came and picked us up. After we dropped off Michelle, my mom asked me why my shirt was inside out,” Steve said, shaking his head.

As the conversation continued, Jim brought up the lady and the tramp party held last year. Everyone told his date that it was a formal occasion. Boy were they surprised when we picked them up.

“You should have seen Debbie’s face when she opened the door. I could tell she was not impressed with my ragged old blue jeans and the shirt I wore last summer painting houses.”

“When I handed her the rose that wasn’t de-thorned, I could sense I had some explaining to do.”

“This was our first date and it took some choice words before she would even listen to my explanation. I told her that lady and the tramp was the theme of the party.”

“I could tell I finally had reached her heart when she saw the menu of a hamburger, an order of fries and an apple turnover. She just loved the young wine I served.”

Then Fred walked in. We all knew that he had a date last night with his dream girl. Yesterday he was on cloud nine and now he looked like his wings had been clipped. Fred was heart broken.

“What’s wrong”, I said.

“I thought the date was going great. She seemed to enjoy the stories I was telling her about my Doberman named Lassie. But when I got to the part of how Lassie can play dead, roll over, sit and shake hands she said she wasn’t feeling very well.”

Soon all the experiences had been confided and the room cleared. Recalling all the unusual happenings my friends had experienced, I began to think about the people who really take chances.

Like the guy who purchased a personal in the Collegian.

“Looking for a typical egotistical male? Don’t answer this ad. Super nice guy, gentle and bashful, seeks sincere female, 19 to 22 for evening dinner, conversation, and a good time.”

After realizing the trials and tribulations of dating, I decided sitting home typing wasn’t so bad after all. Then I thought again.

“Hello Kim, this is Randy. Do you have plans for tonight?”

## Only a \$5 date?

# The thought's what really counts

**\$**4.97, \$4.98, \$4.99, \$5.00. Not much cash for a night out — but to take a date out on it too?

"In Meriden, (Kansas) you'd save the \$5," Paul Brown, junior in electrical engineering, said.

But in Manhattan, land of flashing lights and romance, surely a \$5 bill can be the key to some excitement with a date.

"We'd eat dinner at McDonald's, buy beer and go to Tuttle," said Edwin Cuevas, junior in pre-vet, as he described his ideal date for \$5.

"It's not the money you spend, but the company you keep," Dana Davidson, senior in agricultural economics, said, then laughed.

For one adventuresome couple, the \$5 stayed in the bank as Tuttle cove provides a secluded place for skinny dipping (saves on buying suits).

Davidson described a good date as taking his wife to a show at the Union: \$3. The gas to get there would be another dollar and the other dollar would buy them each a medium pop — as long as the drinks were less than 50 cents each.

"I couldn't take her to the show and have a dollar left over," Davidson said. "I

may be broke, but I'm not cheap."

"Ideal for me would be to go to Rockin' K's and dance ... every song. You wouldn't have to worry about buying beer," Sue Henry, junior in dairy production, said.

"We'd go on Thursday; 50 cents would get us both in," Henry said. "Then we'd probably go raid Vern's."

Cynthia Carper, sophomore in wildlife biology, said that in her hometown of WaKeeney, "after six o'clock you can't even spend \$5."

But Carper has more romantic plans for a date in Manhattan.

"I'd buy a bottle of wine, that'd cost about \$3 and go to Tuttle with my date until the sun goes down," she said.

Jeff Gillispie, junior in geophysics, also likes watching the sky with a date.

"I'd take a picnic dinner, go to Hackberry Glenn and watch the sun set," he said.

One couple stated fishing at Pott County Lake after midnight would suffice as a \$5 date with certain added advantages.

Then there's always snipe hunting at Pillsbury Crossing or admiring the lights of Manhattan from Top of the World.

Rita Weaver, senior in family life and human development, adds her ideal situation for a \$5 date:

"We could go roller skating or go to McDonald's. Or go to A&W ... and have a root beer float. We could also play racquetball or go swimming. In the winter we could go sledding," she said.

An ideal \$5 date for Charlene Trachsel, senior in music education, would be a trip to the ice cream parlor for single dip ice cream cones, a ten minute drive around Tuttle and a trip to the bakery for one doughnut.

If you go for the \$5 date, there are some rules to the game:

DO NOT pick her flowers on campus — no matter how romantic the moment may seem.

DO NOT order two \$2.50 dinners unless you're sure the service is going to be lousy.

DO NOT take a taxi to Sunset Zoo and expect to take the taxi back home.

DO NOT make a \$6 bet with your date. ☼

## Dimming the lights

# Energy costs

**D**id you ever have to walk around the apartment and turn off all the lights your roommate leaves on? If that was frustrating, think of how Gene Cross must feel.

Gene Cross, vice president for university facilities, has the job of overseeing energy conservation on campus. That job has taken on special importance in a time when the consumer's problem is paying for energy — not getting it.

Energy conservation at K-State encompasses several different areas, according to Cross. One of the more obvious is campus lighting around buildings and walkways.

"A few years back — I can't tell you exactly how many — the lighting was drastically reduced," said Cross. "Then there was some requests to raise the level back up in some areas."

Requests for changes come from individuals or groups and are evaluated through Cross's office each year.

"Where there is a safety problem or some other justifiable reason we will raise the lighting."

"Obviously we could just shut off all the lights and save a lot of money. We are trying to provide the minimal acceptable level. The key words are minimal and acceptable."

The same philosophy applies to temperature control in campus buildings. The temperature is kept at 65 degrees in the winter and 78 in the summer, according to Cross.

"That is our standard. From there people may request exceptions, but they have to be justified. There are cases such as labs where animals are kept which require higher temperatures," said Cross.

The standards are just that, Cross pointed out. They do not guarantee that every building is the same temperature.

"With some of the older buildings it just isn't possible to have that degree of control," he said.

The state legislature funded several special conservation projects for the campus this year.

One campus-wide project involved the replacement of inefficient wooden sills and clearglass windows with metal sill frames and "thermo-pane" windows.

The metal frames provide better seals than some of the cracked old frames and the tinted glass panes are more thermally efficient. Several buildings on campus recieved similar replacements for their doors and doorframes.

"The state has given us the money for the windows and additional attic insulation. This was done purely for conservation. There are also funds for the upgrading to the heating plant and line insulations to make the use of steam on

# spawn conservation projects

campus more efficient," said Cross.

One university project arose from students' efforts to conserve energy. In response to increased numbers of bicycles on campus, bike racks have been added to numerous areas. Larry Wilson, director of landscaping and campus planning, was coordinator for the project. Wilson said the increase was due at least in part to the cost of gasoline and efforts by students to conserve.

The decision to provide the bike racks was based on an informal study of his own, observations by campus police, and complaints by people through his office, said Wilson.

Wilson compared the number of bicycles parked between the Union and Seaton Hall over a two month period in 1979 to bicycle use in the fall of 1980.

"I did an informal survey- not a scientific one- but I counted the number of bicycles over by the Union every time I was over there. There is certainly an increase (in bicycle use)."

Wilson hoped to provide 300 additional bike stalls on campus, of which 280 would be portable.

"We've hired a consultant to study pedestrian and bike traffic on campus. That's one of the reasons most of the bike racks are portable. We will proceed on the findings from that study," said Wilson.

The bike racks were placed according to a priority list of congested areas on campus.

"We have a lot longer list than we have money for so we're just going down the list as we get the money," Wilson said.

Funds for the project have come from an auction of surplus university goods such as desks and office equipment held in the spring of 1980. Money was also

received from the sale of unclaimed bicycles and other items by Security and Traffic.

K-State also has an energy conservation committee comprised of faculty and administration which acts as a coordination committee for campus conservation.

Robert Dahl, head of the department of architectural engineering and chairman of the committee, outlined four objectives of the energy conservation committee.

The goals included determining the need for conservation on campus and to call attention to that need, to serve as a central coordinating group and sounding board for the campus community. The goals are also to direct an on-going awareness campaign that may include choosing an energy slogan and logo to be used on university vehicles and stationery, and to recommend actions and programs for energy conservation and to communicate and publicize results of such actions to the campus community.

The committee is waiting for the results of two separate energy surveys on campus before it takes concrete actions, Dahl said. One survey is the State Energy Audit which audits energy use in all state buildings. The other is being done by Flack & Kurtz Consulting Engineers, a New York firm.

"It is possible that past energy projects on campus have been more fragmented than it could be. The committee could become the coordinating device for conservation by the university," Dahl said. ☼

## Anton Arnoldy

**A real turn on-** Campus lighting was just one area of conservation examined by university facilities in recent years.

**Rack'em up-** New bike racks were placed in several congested areas of campus as more students turned to pedal-power over their cars or walking.

Rob Clark

# From Hollywood to Washington . . .

**N**ovember the 4th, 1980. The day the land slid over President Jimmy Carter and a large percentage of the Democratic candidates. It was a sound victory for the Republicans — not only did they gain the top spot in the nation's White House, they captured the majority rule in the Senate — a control not enjoyed by the elephant's party since 1954.

Although the Republicans did not take control of the House of Representatives, they did gain 33 seats thus making 242 Democrat and 192 Republican members in the House.

The Republican landslide was not expected. In the presidential election the polls declared the race a virtual tie the week before the election — a slight edge, is any, went to President Carter.

Carter was leading the race 42% to 41% — with 12% leaning towards Anderson and 5% undecided. However, Carter's lead was such a narrow one, that in the range of a sampling error the lead was virtually meaningless, according to a *Time* poll.

But the polls couldn't change the fact that Carter had been haunted by inflation and unemployment, or that Reagan was trying to overcome a reputation for right-wing extremism and simplistic thinking. Nor could the polls alter the fact that Anderson was accused by some Democratic party members of trying to wreck the two party system.

Because of these public attitudes the debates became extremely important to each man's campaign because "a mere swing of 3% of popular vote could switch states with 200 electoral votes," as estimated by Republican pollster Bob Teeter — a remarkable number as only 270 electoral votes are required to win the election.

With this in mind the candidates carefully prepared for the debates, which were broadcast on national television.

The first debate was sponsored by the League of Women Voters. All three candidates were invited to the debates, but Carter turned the invitation down in protest of Anderson's third party affiliation.

In the second debate, also sponsored by the League of Women Voters, Anderson was not invited. Thus a Carter-Reagan square-off was held Oct. 28, 1980.

With the elections only a week away, both Carter and Reagan placed their political future on the line by debating. Any damage made by either of the candidates would be far to difficult to overcome in the time remaining before Election Day.

So, in the week before elections a

circus of mudslinging and political maneuvers took place.

Carter had been accused of being weak in the area of foreign policy, of having an insufficient economic policy, and of not taking a firm stand on the issues which confronted him.

Realizing the American voters were afraid of war, Carter plotted his strategy around what his aides termed the "Tolstoy" issue — an issue of war and peace. Carter charged that Reagan lacked the judgement to keep the U.S. out of war. In a radio speech from the Oval Office Carter said: "Peace is my passion . . . peace is my pledge."

On the other hand, Reagan was dealing with charges of being a warmonger and

"trigger happy." To counter Carter's attack, Reagan told his supporters while he was campaigning in Cincinnati: "The President seems determined to have me start a nuclear war. Well, I'm just as determined not to."

The 52 hostages in Iran also became a major campaign issue because prior to Election Day new hope was shed on the release of the captives, and on Carter's campaign.

There was a possibility the hostages could be released perhaps before Election Day—a maneuver which would give the Carter administration a powerful boost in his bid for re-election.

Thus the hostages became a heated issue between Carter and Reagan. Reagan

## Issues

### Carter

1. **A \$12 billion anti-recession jobs program and a "guaranteed job for every American able to work."**
2. **Upgrading combat readiness of armed forces and set new wage standards for military forces.**
3. **To continue trade restriction against U.S.S.R. and to deter further Soviet "adventurism."**
4. **Increase level of support for farm prices with no future embargos on agricultural products.**

### Reagan

1. **Spending limits on federal government and to have a balanced budget.**
2. **Support production of B-1 bomber and deployment of MX missiles and increased naval power.**
3. **Deregulation of energy industries and expansion of energy production through oil, coal, and nuclear energy.**
4. **Opposed to peace-time draft and registration but favors strengthening National Guard.**

### Anderson

1. **Opposed to general tax cut unless accompanied by large cuts in government spending.**
2. **Low interest rates to industry and 10 percent tax credit for innovative research and development.**
3. **50¢ per gallon gas tax coupled with a 50 percent cut in social security taxes.**
4. **Opposed to American intervention into the troubled Middle East and other areas.**

**Ronald Reagan**-Representing the Republican party, Reagan had a landslide victory over incumbent Jimmy Carter in the race to the Oval Office. Reagan was finally successful after 12 years of campaigning.

**Jimmy Carter**-39th president of the United States conceded his loss to winner Ronald Reagan even before the last polls were closed. Several Democrats blame their loss on Carter's early concession.

**John Anderson**-Independent candidate was called a spoiler because some felt he was trying to wreck the two-party system. Anderson received enough of the popular vote to earn federal campaign funds.

## Reagan succeeds by defeating Carter

responded to a Carter statement that he did not understand foreign policy by saying: "I don't understand why 52 Americans have been held hostage for almost a year now . . . the fact they have been there that long is a humiliation and a disgrace to this country."

Reagan also said he had some ideas on how to free the hostages, but refused to comment.

Carter hit back hard, accusing Reagan of breaking a pledge to keep the hostage issue out of the campaign.

"I notice that Governor Reagan announced a secret plan to get the hostages back," Carter said and added later, "The Republicans have a habit of spreading a lot of horse manure around right before election. Lately it's been getting pretty deep all over the country."

After the bitter exchange, the candidates silenced themselves to prepare for the Oct. 28 debate.

In the final hours before Election Day, Carter did not deny he made mistakes in office but claimed he had grown with the presidency and strongly believed he had a workable platform for the future. It was on these issues that Carter based his election platform: inflation, taxation, and the economy.

The Carter platform called for the enactment of a \$12 billion anti-recession jobs program providing at least 800,000 jobs and "guaranteeing a job for every American who is able to work." The platform called the job plank "our single

highest domestic priority."

Included in the platform was a plan to keep American military strength "unsurpassed" by the deployment of the new missile, Trident submarines, and cruise missiles — along with upgrading the combat readiness of armed forces, new wage standards for military forces

---

**"The President seems determined to have me start a nuclear war. Well, I'm just as determined not to."**

---

and opposition to the peace-time draft.

Also called for was the use of both diplomacy and military power to deter further Soviet "adventurism."

Carter also supported affirmative action passage of the Equal Rights Amendment and an "increase in the level of support of farm price," with a promise to protect farm families and no future embargos on agricultural products, except in war situations.

Like Carter, Reagan believed that national defense should not be compromised. Reagan's platform also supported the production of the B-1 bomber, and the deployment of the MX and cruise missiles, and an increase of naval power.

Reagan's basic philosophy was one of growth. The platform encouraged

continued growth of industry and stunting growth of big government.

Reagan did not favor the ratification of the Equal Rights Amendment but did favor equal rights for women and minorities.

The zealot without a chance was a charge John Anderson faced, but in a 317-page platform Anderson detailed plans and goals for the future of America.

Overall, Anderson was opposed to a large tax cut unless it was accompanied by a large cut in government spending.

With these platforms made public, the American voter took the ideas to the voting booths, with astounding results.

In the outcome, 483 or 51% of the electoral votes were awarded to challenger Ronald Reagan. Carter received only 49 or 41% of the electoral votes needed to retain his White House position. The defeat made Carter the first Democrat since Grover Cleveland, in 1888, to be voted out of the Oval Office.

The defeat was so sound that Carter offered his concession to Reagan at 5:30 Eastern Standard Time, or about an hour and a half before the last polls in America were closed. ☼

**Nancy Reese**

# Dole is re-elected for a 3rd term

**T**hanks to the outcome of the Nov. 4th election, Kansas has gained more recognition in the Senate.

Senior Bob Dole, Republican, easily won the U.S. Senate contest against John Simpson, a Salina lawyer.

Dole's victory means a promotion to chairman of the Finance Committee, where he was previously a ranking minority member. Sen. Dole is also a member of the Agricultural Committee.

Simpson was appointed as a Republican to fill a vacancy in the Kansas Senate in 1971, and retained that position until 1979 when he changed parties and resigned his office to make a bid in the senatorial race.

As part of his election pitch, Simpson attacked Dole, saying that Dole had used his senatorial position to gain national prominence, rather than working for the benefit of Kansas.

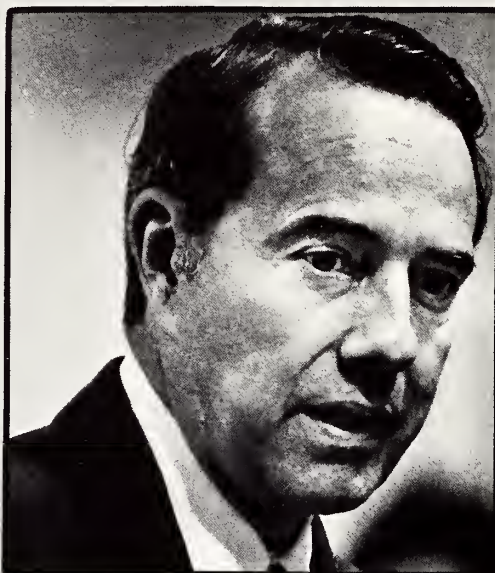

Defending these charges Dole said: "I had the choice last year of either serving as ranking Republican on the Agriculture Committee or on the Finance Committee. I sent about 600 letters to my constituents asking for their opinions. A total of five were against my taking the Finance Committee position. I'm still on the Agriculture Committee. My opponent

makes it sound as though I abandoned agriculture altogether."

In the Kansas Senate, Simpson had worked as chairman of the Committee of Tax Legislation, and as a member of the Committees on Agriculture, Judiciary, Energy and National Resource, and Education.

Where Simpson's experience had come at a state level, Dole's experience was on the national level as he has been a member of Congress for 20 years, the last 12 as a U.S. Senator.

On Election Day, Sen. Dole was an easy winner, capturing 63% of the vote to Simpson's 37%. ❁

**Bob Dole**- Incumbent Republican Senator was re-elected.

**John Simpson**-Salina lawyer lost decisively to Dole.

## Despite tactical errors, Jeffries wins election

**S**am Keys, former professor of administration and foundation at K-State, was looking for an upset against incumbent Jem Jeffries in the 2nd District Congressional race, and almost had it.

Two and a half weeks before election in a critical part of the campaign, a Jeffries' staff member was caught trying to get

semi-private files from the College of Education at K-State.

"I had no knowledge of the incident until I was told a few minutes ago . . . I have issued orders that they (Van Slyke and Woodruff) be suspended from the campaign," Jeffries said in the wake of the incident.

James Van Slyke, campaign staff member for Jeffries went to the College of Education, identifying himself as a graduate student from University of Kansas, and asked to see the records when Keys served as the dean of the college.

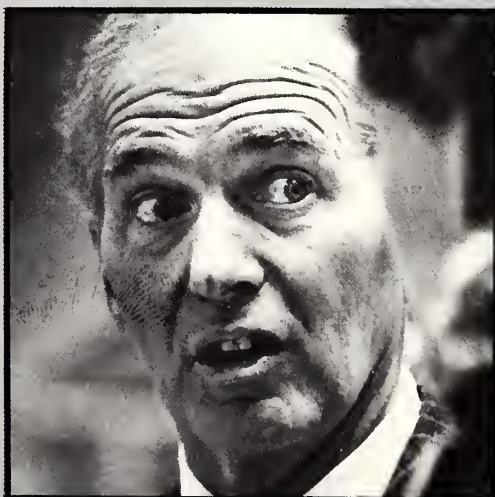

In order to get permission to see and copy the files, Van Slyke was required to sign a form attesting that the information needed was for a research paper and that Jerry Woodruff, paid member with Jeffries' campaign, was his adviser for the paper.

Later, following inquiries, both men were caught and their positions were revealed; meaning disaster for a hopeful Jeffries re-election bid.

However, in a close battle, Jeffries emerged victorious by a slim yet decisive margin. About 9:30 p.m. on Election eve following a see-saw lead for Jeffries, the incumbent congressman pulled ahead and kept his slim margin until all votes were tallied. ❁

# Concerts stray from K-State

**K**-State is missing something. Concerts — especially big name performers.

In past years K-State has hosted Billy Joel, Chicago, America and various other bands. But now the bands are gone and the walls of Ahearn Field House no longer resound with musical notes.

"It's not just K-State. Other colleges are experiencing the same thing (lack of concerts)," said Margaret Cieslicki, program director of Union Program Council (UPC).

The National Entertainment and Campus Activities Association (NECAA) met in November to discuss the future of concerts on college campuses. Representing some of the Big 8 schools, Colorado, Nebraska, Missouri and Kansas attended the conference, along with a Chris Fritz representative from New West Presentations.

The consensus of the meeting was that the major concert market on the college campus is not what it used to be. The availability of acts is low and the situation holds a dismal outlook, according to Cieslicki.

"Gross potential is involved. The band looks at how much more money they could make in percentages," Cieslicki said, "and if they can make more somewhere else, they'll go somewhere else."

Because of this, concerts are getting more expensive. It may cost \$25,000 to \$30,000 for a "big name act" and \$25,000 more to open the doors of Ahearn Field House, Cieslicki explained. On several occasions in the past, UPC has suffered monetary loss when bringing the acts to K-State.

"If you have \$50,000 or \$60,000 on the line, there is no space to hope to break even. It needs to be a sure thing," Cieslicki said.

"The best results have been with artists with a track record, such as Chicago, Doobie Brothers and America," she said. "We lost money on the Marshall Tucker Band and that surprised us. In the last six years, there has been only two sell-outs; Bob Hope and Red Skelton. Neither were rock concerts and that surprised us, too."

Last year, Doc Severinson's performance was cancelled due to lack of ticket sales. UPC could not have funded the appearance without the support of ticket sales, she added.

One of the barriers to having concerts at K-State is that during the 1980-81 school year no one filled the position that handles live entertainment.

Cieslicki speculated that the position would not be filled any sooner than the summer of '81.

"I would anticipate that the position will be filled, if the idea of concerts is a reality," said Walt Smith, Union director.

UPC's plans include working with McCain Auditorium to bring "young, up-and-coming acts" to K-State. Whether

---

**"If I can find a vacant slot and a group that is touring through here, you bet we will indeed have a performance."**

---

people are willing to take a chance and see someone "without a track record" is a question both UPC and McCain director, Doreen Bauman, are trying to answer.

"My principle need right now is to know what students want. We'll start with what they like and then see if they'll take risks with unknowns," Bauman said.

"If I can find a vacant slot and a group that is touring through here, you bet we will indeed have a performance," Bauman said.

Some students have volunteered to gather information and put together priority lists for Bauman to use when making plans to bring groups to McCain.

"I'm certainly welcoming student input, not that it's a guarantee, but we can try," Bauman said.

Most students do not want concerts to die out.

"We've had a petition turned in with about 400 signatures on it. We've had students concerned about the concerts come in and talk to us. We've even had students do persuasive speeches in their

oral communications class in defense of concerts," Cieslicki said.

According to Cieslicki, UPC also does not want concerts to die out.

"If a big one (concert act) comes along, we'll certainly try and get it if we can afford it," Smith said. "It's quite a production when we do anything at Ahearn."

Most big name acts in the past have performed in Ahearn, but due to acoustics, McCain is better for concerts. However, the seating in McCain is limited to 1,800. Ahearn seats 8,000-11,000.

"Ahearn is bigger by a long shot but it is still a gym. The facility itself is there, but everything else is created. The sounds, the lights, even the dressing rooms. It will never be like McCain," Cieslicki said.

Future dates for big name acts lean toward busy university weekends.

"I think a direction we will look in will be Parents' Day, Homecoming and some of the major university weekends. We feel especially responsible to insulate those weekends," Smith said.

University for Man (UFM) has been filling some of the emptiness due to lack of major concerts. Through their Java Jive coffeehouses they sponsor local entertainers to perform, asking for small donations of approximately one dollar. The coffeehouse committee was responsible for the Parents' Day entertainment on Saturday evening, Nov. 15, when Kimberlite, a Manhattan group, performed in the Catskeller.

"We had the place packed. The Catskeller is a great place for live entertainment. We used a local band and they worked out great. I think too many people close their eyes to local entertainment and that's too bad because they are the ones that give the community a chance to hear some really good music and will perform for an affordable price," Lori Bergen, graduate student and member of the Coffeehouse committee, said. ☼

Craig Chandler

**Memory from the past** — The chairs haven't had to have been set up for over a year now as a lack of concerts have left the students concertless.

## Shooting the breeze

# College jargon fits lifestyles

“**W**hat’s the hap?”

“Not much going on, how ‘bout you?”

“Oh just hanging out waiting for Friday and a chance to party.”

“Me too. I’m bummed out from hitting the books all week. I’m ready to catch a buzz.”

“No doubt. I could use a good drunk.”

“Well, let’s do it. What time’s your last class on Friday?”

“11:30, should I meet you somewhere for an Aggieville run?”

“Yeah, sounds good. Front of the Union at 12:30.”

“Good deal. Hey, what went on with that girl you met in Aggie the other night?”

“Oh, she was the pits. Airhead to the max. When I saw her I was so psyched, then she opened her mouth. You’re talking space.”

“Life is hard.”

“By the way, how’d that test in Calc II go?”

“It was a bite. Course I didn’t put a whole lot of effort into it. In fact I fell asleep reading chapter four. When I woke up it was too late to study so I blew it off.”

“That’s a bad deal, catching Z’s when you should’ve been cramming. My problem is getting away from the stereo. My roommates crank the tunes all the time.”

“I can relate. A guy that lives down the hall is into punk rock. That gets old in a hurry.”

“Really! I tell ‘ya, this cold weather is getting me down. I can’t wait for warm weather.”

“For sure. Tuttle Creek Boulevard, Spring time and the tubes. They’re great. Nothing better than catching some rays and watching the women drive by.”

“Listen, I’ve got to take off. One more class and I’m done for the day.”

“Okay, we’ll catch ya later.”

This conversation could be heard almost any day on the K-State campus.

College jargon used across the nation sets students in a social class of their own.

Students at K-State in 1980 conversed daily using terms and definitions specific to their lifestyles. The uniqueness of college students was best demonstrated through their language. ❄

## Bands tune to K-State

**D**uring half-time of the Arkansas State football game at KSU Stadium Sept. 27, every seat in the end zone was empty. No, the empty seats weren't caused by a record low attendance but by K-State's traditional band day.

The 1980 edition of band day had approximately 6,500 high school students from all over Kansas, some of them driving since 4 a.m. to arrive in time for the 9 a.m. parade down Poyntz.

Beginning at fourth and Poyntz, band members marched to the city park where they loaded their buses to head for KSU Stadium to practice.

A crowd of over 32,000 watched as Phil Hewitt, K-State marching band director, conducted the mass of students from his perch in the cherry picker. The band members, wearing uniforms in every color of the rainbow, formed the letters

K-S-U to play Wildcat Victory.

Having practiced before the game, the band exhibited three other special selections.

As a particular tribute to Gordon Jump, a K-State graduate and star of WKRP in Cincinnati, the mass band played the theme from WKRP.

After a quick change in formation, the bands played God Bless America, while spelling out U-S-A.

The tradition of playing the 1812 Overture was given a new look when the bands formed 1-8-1-2, stretching from sideline to sideline. As in past years, the Howitzer cannons from Fort Riley added a realistic volley of fire for grand finale. ✪

# K-State Kazoos 80's

The buzzing of red, blue, yellow and green plastic kazoos started off the 1980 "Roaring Eighties" Homecoming celebration.

Plans to "Kazoo Mizzou" were aided by the distribution of nearly twenty-thousand kazoos. Kazoos were given away by merchants during Homecoming week before the Oct. 25 Homecoming game against the University of Missouri Tigers.

An award for the best kazoo band at the pep rally competition was given to Delta Delta Delta and Alpha Tau Omega.

Tuesday's College Day competition was won by the College of Agriculture. Students in the eight colleges were encouraged to wear their college or major T-shirts. Each college constructed a banner to hang on the outside of their home academic building. Teams comprised of three students and three professors from each college competed in relay games in the Union Courtyard.

Union Day was Thursday with continuous student entertainment throughout the day. Football coach Jim Dickey and the K-State cheerleaders made a special appearance at noon.

Friday evening was the annual alumni dance with special music provided by Matt Betton's Palace Jazz Band. The traditional pep rally and bonfire was held at Memorial Stadium at 11 p.m. The K-State marching band, twirlers, pridettes and cheerleaders were on hand to provide plenty of pep and spirit.

Homecoming parade on Saturday morning featured floats constructed by K-State living groups to show their homecoming spirit. Bands from Manhattan and Junction City high schools also marched in the parade on Poyntz.

A special Homecoming surprise was the

**Grass roots** — Members of the K-State Alumni Band play some tunes in the parade.

**Ballooning reflections** — A student clown from Van Zile Hall makes tours on his moped through the crowd during Homecoming.

televising of the football game against Missouri. ABC broadcast the game which K-State lost, 13-3.

Among special activities at the game was the naming of the K-State Ambassadors. Since 1977, ambassadors have been chosen to represent the student body at official university functions. Selected as the 1981 Ambassadors were Beverly Biggs, junior in accounting, and David Lehman, junior in agricultural economics and political science. They received a \$100 scholarship from Blue Key senior honorary. \*

# Parents shine in student life

To the theme of "Parents are the Sunshine of our Lives," thousands of moms and dads flooded K-State's campus Nov. 15 for Parent's Day.

The 1980 Parent's Day was sponsored once again by Chimes Honorary with the help of the Parent Programming Committee, a committee formed just this year for the purpose of making Parent's Day more special.

The parent programming committee is responsible for the introduction of mini-classroom sessions — featuring four faculty members who received the 1980 Outstanding Faculty Awards.

The purpose of the sessions was to expose parents to a typical classroom situation. Civil Engineering was taught by Edwin Lindley, associate professor of civil engineering; journalism was instructed by Harold Shaver, associate professor of journalism and mass communications. Edward DeVilbiss, associate professor of architecture, gave a session on

architecture. Finance was taught by Verlyn Richards, head of the Department of Finance.

Chimes also sponsored guided tours around campus for parents. Until noon, the tours left from the Union every half hour.

Another tour was given by the University for Man through its newly completed solar greenhouse.

For many, the main event of the afternoon was the K-State vs. Oklahoma State game. The event was highlighted with pre-game ceremonies, including presentations of awards to show how "parents can be the sunshine of our lives."

Cindy Bray, junior in fashion marketing, was the winner of the annual essay contest. She received a \$200 scholarship for her essay which explained how her parents have been the sunshine of her life.

Mr. and Mrs. Herb Bowman of Larned

were selected as honorary parents for the day. The Bownmans were selected for the honor as a result of an application submitted by their daughter, Shelly Bowman, senior in home economics extension. The award was based on the parents' contributions to K-State, their community, and their son or daughter.

After-game activities encompassed special programs sponsored by several living groups. Residents of Ford Hall provided their parents with buttons that stated "My daughter goes to K-State," and Boyd Hall residents sponsored an evening talent show with refreshments following.

In addition, Java Jive, the coffeehouse staff, sponsored a special performance in the Catskeller. A full house of mostly parents were entertained by two K-State students, Skip Brod and Fred Schmidt, and by Kimberlite, a group that specializes in folk and bluegrass music. ❄

# Homosexuals reveal identity

There are a myriad of emotions and reactions that surface when the homosexual male or the lesbian female take the step towards an honest relationship with their family or friends.

For some Manhattan gays, male or female, the decision to reveal their homosexuality comes only after a traumatic and painful process for them.

"The first step in the coming out process is that of moving towards a recognition and acceptance of one's gayness. Some people become aware of the lesbianism or gayness early in life. Others do not reach that awareness for a long time because of the many social pressures which demand heterosexuality," according to a booklet published by the National Gay Task Force.

Ron, an architecture student, was married for five years. He has been in the military and told his wife about his homosexuality over three years ago.

"I'd known I had homosexual feelings since I was 15 or 16 years old. I considered myself to be very confused. During high school I didn't know how I wanted to be. I was a space case," Ron said.

"I was brought up in a family with a strong religious background. I didn't come to terms with myself until about a year ago. Sue, (Ron's ex-wife) helped me through the rough stages. She probably knew before I did," Ron said.

After revealing his homosexual tendencies to his wife, Ron informed his parents.

"I wrote a letter to my parents. It was very intense. I followed it up with a phone call. They were very disappointed. They don't accept it," Ron said.

"They tend to be the type of people who keep things hush-hush. But my goal was to finally tell my mom and dad, and I have. I wanted to tell them about 5 or 6 months ago before I came out. I'm glad I didn't, they would have rejected me, and that would have set me back," he said. "I'm just now in the beginning stages of adjustment with my parents," Ron said.

Mary, an art major, is a lesbian feminist.

"The wonderful thing about being a lesbian feminist is that we are very supportive of the individual. Not to base the relationship on two people, but on a one to one level, where equality is of

primary importance. You end up with an abundance of support and not criticism," Mary said.

"Women have been victimized by the whole idea of love. Women live in a fantasy world in regards to love. Love puts you into a submissive position. It puts men in the dominant role. It's not a relationship based on equality. It's like for a woman to be satisfied or fulfilled in her life she has to please the male. Even when she makes a decision it's to please a male. A woman justifies her place in society through the illusion of romantic love," Mary said.

Even with Mary's beliefs she has not yet come to terms with her sexuality enough to tell her mother about it. She fears the loss of her mother's love and support.

---

**"Society tells you that you're wrong to have 'those' feelings. It's wrong. It's sick. You're a deviate. You're perverted. You're disgusted with yourself so you go through a whole period of self hatred."**

---

"It bothers me that I can't be open with her. I think it's because I fear my mother would reject me. Not so much that she personally wouldn't try to understand, in a way that's me classifying her into a stereotype. It becomes a question of duality, a contradiction. I want to tell her very much, but I don't want to lose her."

"It's hard not to be able to share the fact that I love women with my mother. It's real hard for me to think that my lover will never know my mother as deeply as I can," Mary said.

Jim is a student at K-State. The signs and feeling for the gay lifestyle have been with him for as long as he remembers.

"I had no attraction to women, I remember wondering about it. During my senior year in high school I dated one girl, and it was a nice relationship, but it wasn't what I truly wanted. When I was finally in a relationship that I could truly feel comfortable in, it was one that I couldn't tell my parents about. I wanted to tell them 'Mom! Dad! I'm happy! I'm carrying on a relationship that I love!' but

unfortunately I couldn't."

According to Jim when he told his parents about his life choice it was very emotionally draining.

"My mother and father sat down on the couch, she did the talking, they were clear across the room. My mother told me that they were aware of my 'identity problem', and they felt it was necessary to discuss it; discuss what could be done about it. I told them I was gay. My father was sitting holding a book in his hands, smoking a pipe. He bit his pipe and broke the book in two. My mother was wringing her hankchief," Jim said.

To satisfy his parents wishes, Jim went to a psychiatrist. The psychiatrist pronounced him to be healthy, sane and fully aware of what his choice entailed, he said.

"My parents were furious when they found out that the psychiatrist wanted to see them. He thought the root of my homosexuality was environmental.

"It broke my parents apart as far as talking about my homosexuality. But things have started to fall into place. I have gained the respect of my mother and father. My father tries to listen now. My mother is a good friend. I know she will be a confidant in the coming years," Jim said.

"All through my adolescence the square peg didn't fit. But now I find that in this community that acceptance is there," Ron said.

The fact that Manhattan is a small university town has, according to the homosexual group, helped them to find a more stable and accepting atmosphere in which to live.

"Manhattan has the type of community where gays are able to establish couple relationships. You see a lot of stable homosexual relationships. What you would expect to find in any relationship. The university and the Manhattan community have been very responsive in listening to the gay community," Lisa said.

"I've become really strong since coming out. My door is always open to anyone who wants to talk. People may ask, 'Why do you need to be open? Why do you need to talk about it?', The answer to that is, it's so much harder by yourself." Jim said. \*

Denise Harvey

Drink and drown . . .

# Bar specials yield beer wars

**W**ar. There is always some type of war going on. In the 1960s it was the gas war. Oh, those wonderful years of cheap gas. Then, in the 1970s it was Star Wars invading the galaxies.

Now in the exciting decade of the 1980s the war which is being fought right here in Manhattan is the great beer war.

That's right folks, beer wars. This wonderful battle is the result of specials which are offered by the local bars.

Although wars are not usually welcomed with opened arms, this type of war is welcomed with opened mouths.

Perhaps the term bar specials should be defined. Specials are cheap beer drinks. Examples would be 3-fers, happy hour and drink and drown.

The reason bars have specials is to attract more business, hoping to increase profit.

"We have specials to draw the people in," said one bartender. "And that's usually what happens."

I would seem that no student could pass up a bargain. With the cost of higher education rising and the pressure college students are going through, a cheap outlet is needed.

"Bar specials are the best. I couldn't afford to get drunk unless it was during a special. I'm on a budget, you know," commented a budget-minded student.

Money or the lack of it is what attracts many students to the specials. Yes, the pinch of inflation has hit the beer drinkers of Manhattan.

"I don't want to stop going to bars,"

admits one avid beer drinker, "so I wait until a special comes around. My favorite special is drink and drown."

The concept of drink and drown includes paying only a cover charge and downing as much beer as is possible. The price of drink and drown is higher for the guys, assuming that they drink more. This is a real bargain for the gals who are heavy drinkers.

Another favorite special is the T-shirt special. This is when a T-shirt is given to a person buying a certain number of

---

**"I couldn't afford to get drunk unless it was during a special."**

---

pitchers of drinks.

"I have every T-shirt you can get from specials," said a well-dressed student.

"Give me any day and I can name the specials going on. Let's take Thursday. After chem lab I go and get cheap fish bowls. Then on Friday, ah those TGIF specials are everywhere," claims one student.

Unannounced specials are common at one bar. These range from a free keg to quarter fishbowls. Although they do not occur on a regular basis, they are warmly received by the customers.

With the exceptions of TGIF specials, most of the cheap rates are during the week, and students take advantage of the discounts — classes the next day or not.

"You condition yourself to drink on weeknights. It doesn't affect my classes.

Well, maybe just a little, but I can't resist a special," one student said.

Since the price of beer has gone up in the bars it would seem logical and cheaper to buy beer in the grocery stores. But the social disadvantages seem to outweigh the cheaper price.

"Sure I buy beer at a store, but how often do you meet girls in a grocery store?" confessed one male. "That's why I like the bar scene."

"Every Tuesday I see the same kids in here for the same specials," a bartender said.

The basic reason bar specials are so popular with students is because it saves them a few bucks. They are able to go to a bar and have a good time on a cheap drunk.

While the majority of students do enjoy the specials, there are those who disagree.

"Nope, I don't like bar specials. You're supposed to save money, right? Well, every time I go I lose control of my senses and spend more on a special night than I would on a weekend," one student said.

While a few of the local bars claim they are temporarily out of the beer battle, there are those that are still going strong. This is one war that no one wants to see come to an end.

To the brave soldiers who are fighting this battle, this beer is for you. ☼

# Landon Lecture Series

Craig Chandler

“Mr. President, students, faculty, ladies and gentlemen, please help me to welcome ” The audience politely applauds and the 1980-81 Landon Lecture series begins.

The Alfred M. Landon Lecture Series on Public Issues began in 1966 to honor Alf Landon, one of Kansas’ most notable statesmen.

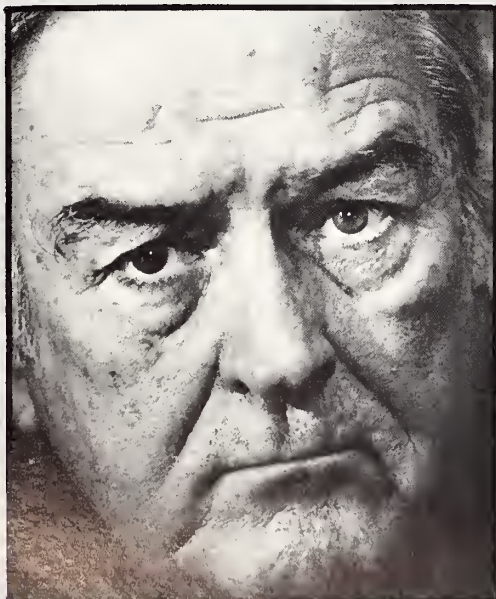

The Landon Lectures, held in McCain Auditorium, became the center of statewide controversy when Ian Smith, former Rhodesian Prime Minister, was scheduled to speak.

Some students and faculty objected to Smith’s appearance stating that he headed a racist government in Rhodesia which violated human rights.

K-State officials allowed Smith to speak, but the Landon Lecture designation was withdrawn. Therefore Smith appeared as a convocation speaker.

All-University Convocations are held in addition to the Landon Lectures throughout the year. Convocation speakers do not hold the distinctions of Landon Lectures, and the events are typically not as well attended. Consequently, other locations besides McCain Auditorium such as the Union Little Theatre are utilized for convocations. ❁

## John Connally

**March 20, 1980** — The “unrealistic attitude” of Americans and their leaders needs to be changed if the United States is to survive the decade, John Connally, former Texas Governor, said.

With a campaign-style speech that could have been used on the trail of his unsuccessful bid for the GOP presidential nomination, Connally called the '80s a

“decade of danger and decision.” He was interrupted several times by the applause from a near-capacity crowd in the 1800-seat auditorium.

“The Federal Reserve is going to force a depression on the country,” Connally said, and added that its policies are going to have a disastrous effect on home building, auto makers and savings and loan associations.

The government’s policies restricting financial incentives for business have reduced U.S. production capacity, resulting in “outmoded” industry, Connally said.

While the rest of the world changes production techniques every 10 years, the United States changes only every 30 years.

“Of the 24 modern blast furnaces producing steel in the world today, 14 are in Japan. There’s not a single one in the United States,” Connally said.

“We are the only nation in the world which taxes capital gains. We need to be giving incentives instead of penalizing the industrial sector of the economy.”

Personal savings are another area that need incentives and Connally suggested the removal of tax on savings under \$10,000 and a change in the depreciation schedule. At present, he said, the United States has the lowest level of national

saving of any industrial nation.

Americans should be realistic in their assessment of the nation’s position as a world power, Connally said.

“In the past, our allies were time and distance, but that has changed since we split the atom and sowed the seeds of vulnerability.”

The deterioration of the nation’s civil

---

**“We have to recognize the reality of the times in which we live. We have lost the prestige and influence we once had around the world because of our loss of military strength.”**

---

defense program and the lack of support for it from the leaders could help lead to our downfall, Connally said.

“By 1983, the Soviets first strike capability will be enough to knock out 95 percent of all our land-based missiles. Our first strike directed at Soviet cities, would kill 15 million Soviets because they have shelters to protect them. Their second strike will kill over 150 million Americans because we do not have any shelters.” ❁

**Gregg Coonrod**

# Edmund Muskie

**Dec. 4, 1980** — Edmund Muskie, Secretary of State, appealed to the incoming Reagan administration to conduct its foreign affairs with moderation.

"In short, we face a period in which nationalistic impulses will be strong. The great challenge — for us and for others — will be to resist short-term expedients that only mortgage our future security and well-being . . . to take an enlightened, longer-term view of our national interests."

Muskie examined "some of the longer-term social, economic and technological forces at work in our world that will help define, not just the next few years, but the next decade or more . . . To engage in such a look ahead is not to escape the present choices we face, but to help illuminate them," he said.

As for future energy sources, Muskie said, "We have made a good beginning in recent years . . . It is just a beginning, but it is grounded in an emerging international awareness that the end of the oil era is pressing upon us."

"But we are by no means out of the woods," he added. "The entire world faces the difficult transition out of the era of bountiful and inexpensive oil."

Muskie's speech was interrupted by a small deluge on the speaker's stand. He had inadvertently spilled a glass of water. "I thought Kansas was a dry state," he quipped.

"For the nations of the world to shape their own national futures will require an unprecedented degree of international cooperation," he said. "But the very challenges and strains which make that cooperation essential also make it intensely difficult."

A healthy international economy, a secure environment, and controlling the strategic arms race—"all of these essential efforts require a commitment to negotiation and to compromise," he said.

"We must invest in the economic

progress of developing nations—because it will contribute to our own progress and because hopelessness and frustration are the combustible ingredients for violence and extremism," Muskie said.

"These efforts are not 'give-away' programs," he added. "They are not international charity. They are investments we make in our own future no less than the futures of others."\*

**Deanna Hutchinson**

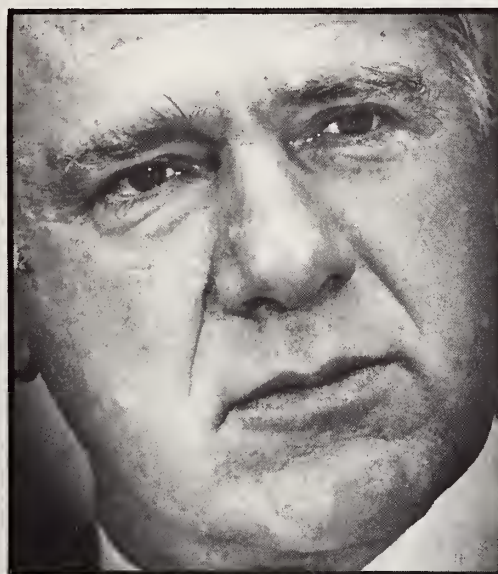

# James Schlesinger

**April 28, 1980** — Declaring that the United States is in its most perilous position since World War II, James Schlesinger, former secretary of energy and defense, presented a five-part plan to re-establish America as a force to be reckoned with.

To an audience of about 1,800 in McCain Auditorium the former CIA director called for a permanent military force in the Persian Gulf area, reinforcement of CIA information gathering and analysis systems, increased U.S. military spending, increased military assistance to Persian Gulf nations, and development of a firm foreign policy.

The United States has "no alternative but to be the protector of world peace," he said, adding that an imbalance of power exists between the United States and the Soviet Union.

"I submit it is time for emergency action. We must face the issue of power in the Indian Ocean. Our survival will

depend on our ability to maintain a balance of power," he said.

The U.S. Marines and Navy must "be there and must seem to remain there. Our allies don't want to look up and see the fleet sailing over the horizon."

To ensure the United States has the ability to "be there," Schlesinger said military spending must be increased "if

the U.S. is to compete in the 1980s and '90s with the USSR."

"History has shown that the weak normally perish. As long as there are aggressors we will need a military balance. As long as rivalries exist in the world there will remain fear. Those who protect freedom should be feared, not regarded as people to be manipulated or forced back by impudence," Schlesinger said.

Although he cited current manpower shortages in the armed forces, Schlesinger admitted the all-volunteer Army has worked better than expected.

"But I didn't expect it to work very well," he said. "I am prepared to see the higher taxes, deficit spending and higher inflation to get a balance of power."

Schlesinger said the only thing resting between the United States and the balance is the American people.

"It's all of us. It's the American people," he said. "We didn't see the problem until all of a sudden, it's there and too big."\*

**Roger Aeschliman**

## Hugh Sidey

**March 27, 1980** — In a candid analysis of the news media, Hugh Sidey, contributing editor and political columnist for *Time* magazine, criticized the effects of their coverage on election campaigns and voters.

As the 50th speaker in the Landon Lecture series, Sidey told a McCain Auditorium audience of about 1,100, the media have become enormously powerful during recent presidential election years.

"I am still puzzled whether Richard Nixon lost the first debate to John Kennedy in 1960 because he had sweat on his upper lip and looked nervous. I am not at all chagrined at the outcome of that election. But if some analysts truly believe the first debate tipped the process in Kennedy's favor, we must wonder if

that is any way to go about selecting a president," Sidey said.

In a humorous example, Sidey described how Gerald Ford's reputation as a "klutz" dominated public opinion during his re-election campaign.

"He repeatedly bumped his head on the helicopter door ... he swam into the side of the White House swimming pool. Down in El Paso (he) ate an entire tamale with the husk still on it. An accumulation of those incidents may have sunk his second-term ambitions," Sidey said.

Had the media not covered these events they wouldn't have become issues and different results could have occurred, Sidey said.

Sidey expressed concern about changes occurring in what he called the "trade and craft" of journalism.

He said he didn't like to see the wave of young journalists looking for a

"Watergate behind every corner" and seeing only the bad news.

"If you detect a slight prejudice on my part, for the print and against television, you are correct," Sidey said.

Sidey called television news a combination of TV and show business. To survive, the networks need to find and sustain viewers. The viewers want to see all the news, done in an entertaining way. This means sacrificing detail, Sidey said.

Sidey said although he didn't want to "inhibit the media" that they often presented a "distorted view."

"Television fills your world for two or three minutes with screaming people and streets in Tehran ... and that's the only thing you see that night," he said. ✻

**Roger Aeschliman**

# Convocations

## Ian Smith

**Nov. 2, 1980** — What's a Landon Lecturer? Those may have been the thoughts of Ian Smith, former Rhodesia Prime Minister, when he arrived at K-State. Smith was greeted with little encouragement, as the Landon Lecture title was withdrawn from his appearance.

Smith's lecture called for strengthened communication ties between people and their governments, yet Smith dealt with a few communication problems of his own during the convocation.

Smith's lecture required an hour and 15 minutes to complete, due to outbursts by an overflow crowd in McCain Auditorium of nearly 2,000.

During the convocation, Smith said that although the country (Rhodesia) is now under a democratic rule, the people of Zimbabwe resented this system forced upon them, and that a meritocratic system was more appropriate and acceptable for Rhodesia.

Smith defined meritocracy as giving

citizens voting privileges and other liberties in accordance to their ability to handle those situations.

In further support of meritocracy, Smith said it was an "acceptable fact" that the average intelligence of people in the country was "below the desirable intelligence quotient."

Smith suggested that the white government was necessary to "keep the wheels going," and said he is not satisfied with the weak democratic system that has been developed in Zimbabwe.

**Kyle Bryson**

**Smith go home!**— Pam Lewis, a student from KU, screams human rights slogans as students protest the visit of Ian Smith, former Rhodesian Prime Minister, to the K-State Campus.

Bo Rader

## William Webster

**April 24, 1980** — Calling the proposed charter to set down guidelines for the FBI one of two "vital topics of the day," William Webster, FBI Director, said he "wholeheartedly supports" the charter currently being considered by Congress.

The charter will be the first formalized set of guidelines for the bureau, he said.

The FBI has been acting since 1908 under a law which gives the U.S.

Attorney General the right to have an investigative organization.

"Today we are seeking to put out on the table the mission of the FBI. The bill will affirmatively state the mission of the FBI; what the American people expect of this dynamic organization," Webster said.

Webster defended the use of informants and special undercover agents as a means of "reaching beyond the streets" and said undercover operations are the second vital topic.

"The informant is the single most important tool in law enforcement.

Without the informant we cannot function."

Webster said some critics believe the bill sanctions excesses of the past and doesn't provide enough controls on informants.

The principles incorporate full respect for the First Amendment, Webster said under the charter, all investigations would be focused on criminal law and not on what someone is "thinking or saying."

**Kathy Murry**

## Julian Bond

**Sept. 10, 1980** — "Great gains were won at lunch counters, movie theaters, polling places and the fabric of legal apartheid in the United States began to be destroyed. While our general condition has improved a great deal, our relative condition has actually managed to get worse," Julian Bond, Georgia state senator, said.

Bond called the history of civil rights achievements "a tale of two decades."

"It is clear that the greatest advances for black and poor people was the period of our most purposeful non-violent militancy—the decade of the '60s," he said.

But then came the disillusionment of Vietnam and the mood turned to one of "cynicism and narcissism."

Bond criticized the so-called me-decade, saying that many teenagers, especially blacks, didn't care enough to vote.

"A re-creation of the movement is needed in all communities in order for

there to be further human progress and economic justice," he said. And reading from the goals of the NAACP, he added, "We must complain, yes, plain, blunt complaint, ceaseless agitation, unflinching exposure of dishonesty in the law. This is the ancient unerring way to liberty and we must follow it. We must urge Negroes to vote intelligently and effectively."

Deanna Hutchison

## Germaine Greer

**Oct. 22, 1980** — "Art has ceased to fulfill its function," Germaine Greer, author-feminist, said. "Art has become a sort of postage stamp, a small repository of tremendous value."

The modern attitude that "if it's not Rembrandt, it's not worth seeing" has "condemned minor artists to death, and most women artists are in this category," Greer said.

Greer, author of best seller *The Female Eunuch* and *The Obstacle*

*Race*, set up a study of women's literature at the University of Tulsa.

"When they think about what is a work of art, many people decide that it must be an object which claims no ulterior purpose," she said.

But she disagreed with this notion, giving a teacup as an example. A teacup can be a work of art even though it has an ulterior purpose—to drink tea from. No matter that the handle is too small to hold. It still can serve that function, Greer said.

"Fine art declares its discontinuity

with the real world. A painting is separated by its frame, a poem by its meter. This is what dutiful parents grit their teeth and take their children to see," Greer said.

Greer labeled this type of art as cold, useless, self-explanatory and oppressive. Further, she blamed this conflict on the masculine world of self-contained art.

Deanna Hutchison

## Howard Bird

**Nov. 20, 1980** — Oil companies have desperately tried to warn us that the energy crisis is real, while journalists have perpetuated a myth that there is no crisis, said Howard Bird, Jr. former vice president of Mobil Oil Company's international marketing division.

According to Bird, oil industry giants like Mobil have tried to warn the American public of an impending oil shortage since the early 1970s.

News coverage about energy has been "pretty dreadful," he said. Mobil has been trying to persuade the press that a severe oil shortage is just around the corner. However, newspapers and television have treated these attempts as thinly disguised excuses covering up a profit-making maneuver.

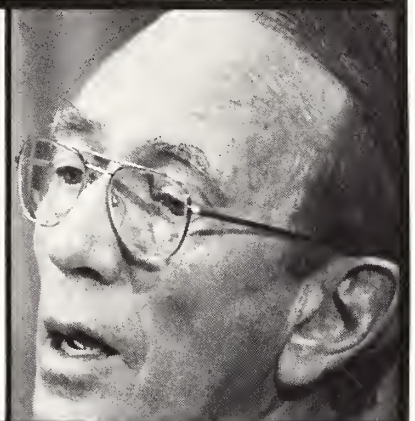

To make up for this, Mobil has run advertisements in the *New York Times* editorial section every week for nearly a decade.

One of the reasons public opinion has turned against the oil industry is

because energy corporations are garnering high profits, he said. This idea is played up by the press. However, when compared to exploration and development costs, the take isn't large at all, he said.

"For every dollar made in the oil business over the past 25 years we have, on the average, reinvested \$1.75," Bird said.

Stephen Hoffman

## Barry Blechman

**Feb. 2, 1981** — A senior associate for the Carnegie Endowment for International Peace warned K-State students in vivid prose that "the temptation to turn again to nuclear threats" as a part of U.S. foreign policy could have horrible consequences.

After describing the devastating effects of nuclear war, Barry Blechman said "the most important technological fact is that there's no effective defense against missiles armed with nuclear

warheads.

Blechman, the former assistant director of the U.S. Arms Control and Disarmament Agency, said some government officials argue that the threat of nuclear retaliation should be given a central place in foreign policy. But, he said, such a policy "implements greater risk of nuclear war and when the bluff is called and the card is tarnished, it loses credibility."

He said he believes that generally nuclear threats aren't credible because

risks associated with nuclear war are so great that no country will believe the United States is willing to risk a nuclear war.

Blechman also warned students that they had grown up in an age of nuclear weapons and that the weapon might not seem awesome to them anymore. He cautioned concern and consideration about nuclear activity.

Debra Graber

## John Slaughter

**Feb. 26, 1981** — The United States is facing, and from all indications, will continue to face during the next decade, a "crisis" in the education of engineers and computer scientists.

This point, the thesis of a presentation by John Slaughter, director of the National Science Foundation (NSF), has forced the United States from its once lofty position as a leader in scientific research and development in the

world, into a position behind other countries such as Japan and the Soviet Union. These countries place a greater emphasis on science and mathematics at the secondary and post-secondary levels of education, Slaughter said.

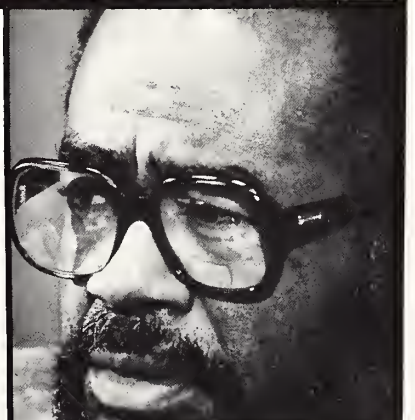

Slaughter alluded to a report, prepared by the NSF and the Department of Education, which said the scientific and mathematical requirements placed on students at the secondary level in other countries far exceeds that of the United States.

Most students in the Soviet Union have a minimum of 10 years of

education, and about 60 percent of those complete secondary school which "surpasses that of any other country including the U.S." according to a report prepared by the SRI International for the NSF.

Slaughter received a bachelor of science degree in electrical engineering from K-State in 1956 and a Ph.D in engineering physics from the University of California at San Diego.

Damien Semanitzky

# Cultist declares K-Staters headed for fire

Rob Clark

Sue Pfannmuller

Rob Clark

**False prophet-** Cindy Lasseter, commanding K-Staters to repent, draws criticism from pastor Gary Roellchen while visiting campus.

**Anonymous message-** Giving no information besides his name, Paul Franklin, an evangelist from the West Coast picketed at K-State with a sign stating, "Jesus saves from Hell."

**I** was a disco fanatic," proclaimed Cindy Lasseter during a six-hour oration in front of the Union, Sept. 22, 1980, "until I was born again. Now I'm dancing with the Holy Ghost."

Lasseter spent a week preaching at K-State Sept. 22 through 26, declaring K-State to be "a stronghold of the devil" where most students are "headed for the lake of fire."

A follower of Jed Smock, a leader who she said has traveled to over 150 campuses in 29 states garnering new disciples to spread what he calls "the word," Lasseter left the University of Florida in May 1980, and by September of that year, claimed to have visited 36 universities in 19 states.

Lasseter's visit created some controversy, not only among students but also among area clergymen.

Some preachers warn their searching students and congregations to avoid "soul-winning" tactics — promises of perpetual happiness in exchange for commitment received from cult groups. This commitment often starts with a promise to "love" the other members of the group and the leader and is followed by a promise to help fund the group by giving time, money, sleep, thought, and eventually health.

When a member of a religious group is losing rather than finding himself, while at the same time helping to financially support group leaders, the member is involved in what many theologians define as a "cult."

There is no set definition for a cult, but they can be dangerous. At the beginning of the last decade, a discussion about cults would have prompted only mild interest or polite boredom from most listeners. Headlines like, "Parents rescue

child from religious leader," and "Child sues parent for kidnapping," would have left most Americans feeling apathetic.

In one grizzly 24-hour period in November 1978, all this was changed. That was the grim night when 900 followers of Jim Jones agreed to go beyond spiritual food and voluntarily swallowed cyanide-laced, grape Kool-aid.

Lasseter's message, too, was not a true representation of the Gospel, but was instead the tirade of a "false prophet," according to Gary Roellchen, pastor of the Alta Vista Methodist Church.

"The Gospel is a gospel of love and

---

**"Turn away all perverts and fornicators or you will die among the worms in the lake of fire."**

---

not a doctrine of bloody hatred," Roellchen said. "She took messages out of context and was speaking only the condemnation of God and said nothing of God's love."

Clad in a floor-length, calico dress and brimmed hat and pointing at specific students, Lasseter shouted commands of, "repent you wicked wretch," "put away your vile vices and be saved," "turn away all perverts and fornicators or you will die among the worms in the lake of fire."

In addition to preaching against drug abuse, murder, pre-marital sex and homosexuality, Lasseter's speech included condemnations for those who dance, belong to fraternities or sororities, drink beer or kiss, saying that pre-marital kissing is forbidden in Proverbs 22:14; "The mouth of a strange woman is a deep pit."

Lasseter said she did not believe in

"the word" until she had listened to Smock's preaching many times.

"As he preached," she said, "he drew close to me, pointed me out of the crowd and shouted, 'Repent of your sins you wicked woman.'"

"He took me out to eat," she stated in a brochure she distributed to students, "and after about an hour with him I could see that he was different from any man that I had ever met. He had a certain air of love about him; a special joy and peace."

When asked how the disciples' journeys were funded, Lasseter said only, "No church gives money. We get money from people who are called to give." When asked for specific names of contributors, she cried, "Depart from me satan. Money is the root of all evil."

Roellchen said he "didn't want to judge Lasseter," but "wanted to point out to those who were listening seriously that Lasseter taught only condemnations and left out the part of the Gospel about God's love." He also said that he didn't believe Lasseter should be judged by her actions.

"I would consider this a cult movement," Roellchen said. "You can see how much he (Smock) has controlled her mind."

To prevent becoming involved with a cult, the Ecumenical Christian Ministries in Manhattan puts out a pamphlet advising:

"Don't be foolish! Protect yourself! Don't go away for a day, a weekend, or longer with a stranger or a strange group. Sudden, drastic changes in environment lead to heightened suggestibility and to drastic changes in attitudes and beliefs."\*

**Deb Neff**

---

# Organizations stand strong despite cult

In response to the growing cult controversy at K-State in 1980, ministers and students clung to their traditional religions. These religious organizations on campus have maintained their status for 70 years.

One of the 29 organizations registered with the Activities Board was Crusade for Christ.

Kerry Relihan, senior in horticulture therapy and president of Campus

---

**"I liked the people who were real fun and cordial and I just kept going."**

---

Crusade, and ten other members make up a Central Action Group which leads the activities of Crusade. Four of the members are trained staff who work full-time for the organization, which is located on 400 major universities in 110 countries.

A leadership training class was held in Justin Hall where a group of 85 people

gathered weekly. Other small Bible study groups were hosted by members of Crusade in various living groups.

Jenny Pierce, senior in speech-pathology-audiology is also a member of Campus Crusade.

Pierce got involved over three years ago, after attending a meeting with a friend.

Before finding Crusade Pierce felt frustrated with life and studies, and contemplated suicide.

Pierce feels a person is made up of five dimensions: emotional, intellectual, physical, spiritual and social, which all must balance.

"Often we do not consider the spiritual side and our lives are unbalanced. All must work together in order to maintain a balance," she said.

Pierce devoted more than 20 hours weekly working with small Bible groups she helped to start.

Still another large group on campus is the KSU Bible Study. As a member of KSU Bible Study, Andy Ainslie, junior in life science, feels that the group helped him grow as a Christian, "KSU Bible

Study is for anybody and everybody, no matter what church they are affiliated with."

"Bible studies are helpful and are a growing experience. Good Bible studies

---

**"I may be going through problems and the Bible Study gives me answers to my questions."**

---

relate the Bible to what one learns at the University, affirms our humanistic nature in life and gives a legalistic approach, not religious do's and don'ts" Don Fallon, Lutheran Campus Minister and coordinator of the religious groups on campus, said.

They teach that we are all human, it is okay to fail, take risks, enjoy our bodies and have feelings," Fallon said.

Fallon divided religious groups into two categories; one which students join to acquire friends and share their lives, and another group that teaches members more about the Christian way of life.

photos by Richie Bergen

# movement

"Some are not as helpful as others to the growth of the student, they smother the student, and consequently the student drops his studies and escapes from school by closing himself off. The group is a hideout from the pressures of the world," Fallon said.

However most religious groups at K-State benefit from leaders who are trained to support students and offer explanations on how the Bible effects their lives, Fallon said.

Furthermore, according to Fallon the majority of people who join a Bible study group were usually dependent people.

"Freshmen and younger people looking for a support group are likely to become members," Fallon said.

Rod Saunders, the minister of Ecumenical Christian Ministries, was one of the trained leaders Fallon expressed a need for on campus.

Saunders, a soft spoken man wearing a large cross emblem, said he helped to

---

**"Without a doubt Campus Crusade is the most important part of my education at K-State. Through it my spiritual life has grown and everything else is worthwhile. I see a plan and a purpose for my life that I never saw before."**

---

sponsor activities during the school year such as: weekly Sunday suppers, retreats, Brown Bag Forums, Biblical Reflections and a Bible study group.

For students searching for an informal and a smaller (about 40 members) group Cowboys for Christ was established at K-State.

"No dues or membership role, most of the members come from farm-oriented backgrounds but you don't have to have a horse to join," Scott Crain, junior in pre-veterinary medicine and president of Cowboys for Christ, said

The main concern was to have a good time in fellowship Crain said. ☼

## Vibes hit audience

**Sept. 5, 1980-** Gary Burton proved to be the foremost vibraphonist of time in McCain Auditorium.

In his opening number Burton and his band captivated the audience with "Open Your Eyes You Can Fly," by Chick Corea.

Thundering applause assured the quartet that the audience was ready to sit back and enjoy the talents of the jazz musicians.

Although Burton did songs by other artists, such as Keith Jarrett, Jim Hall and the late Duke Ellington, he focused on songs by Corea, Jazz pianist.

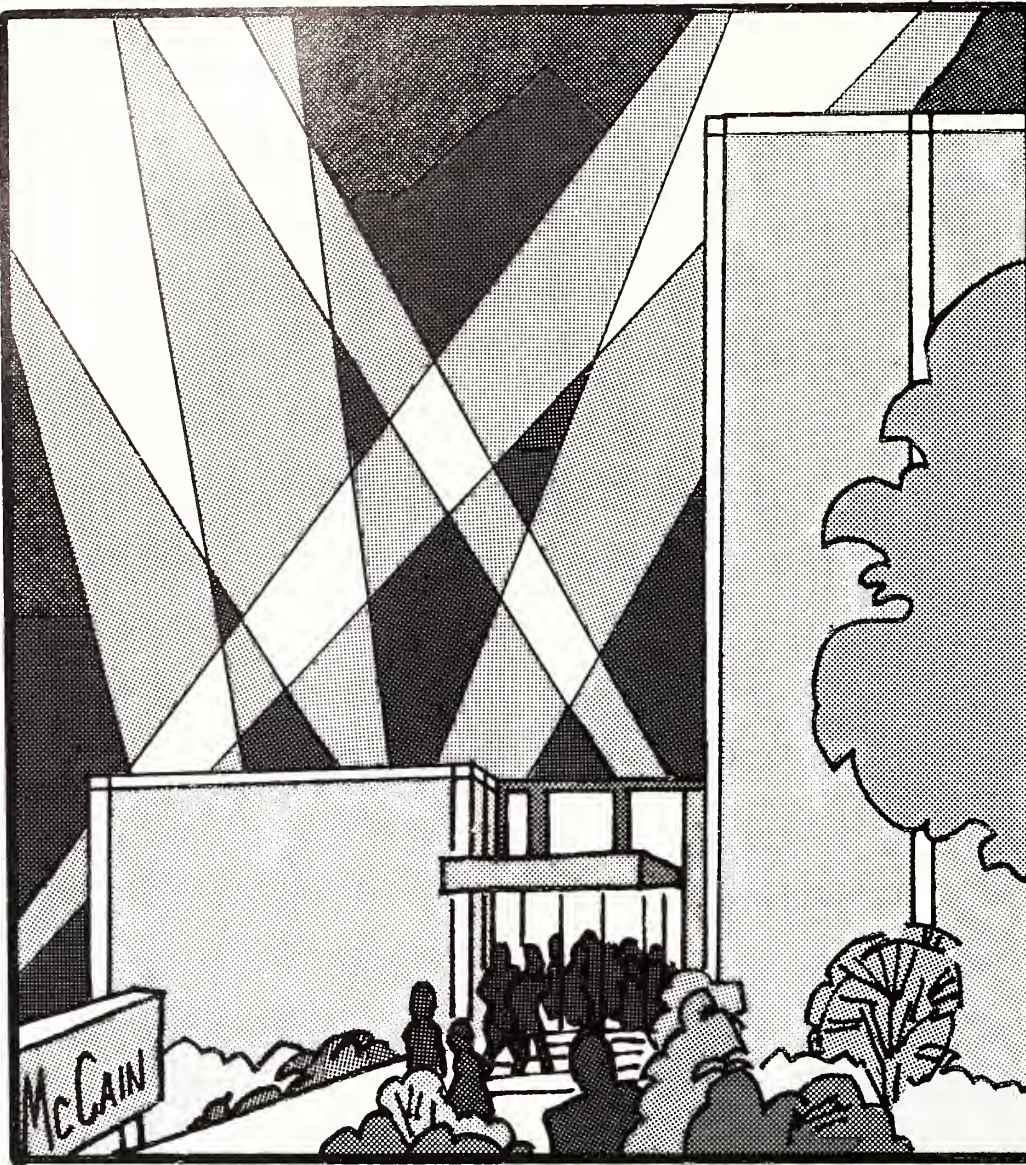

The second song was also by Corea. Burton started the "Song to Gale" very softly on his vibraphone and the others blended in.

Swallow performed an excellent solo on the bass in "Careful" written by Jim Hall, guitarist. Even though he was seated behind Burton, his intense melodies were just as important.

During a ten minute solo Burton created a dreamy atmosphere with his gentle ringing sound and refined lyricism.

After receiving a standing ovation, Burton exclaimed, "Wow, you folks are alright."\*

Sue Pfannmuller

## Ballet combines color, technique, elegance

**Feb. 29 and March 1, 1980-** The San Francisco Ballet Company blended dance with music, movement with imagination and razor-sharp technique with effortless execution in McCain Auditorium.

The evening began with the prelude from the second act of William Shakespeare's "The Tempest." The beautifully trained dancers performed in practice clothes but still brought color and a buoyant elegance to the stage.

The full-length production of "The Tempest" with costumes by Willa Kim and scenery by Tony Walton made its world premiere on May 13, 1980 at the War Memorial Open House in San Francisco.

A superb performance by Robert Sund as a drunk in "Bacchus, God of Wine" captivated the crowd. His well-defined facial expressions enhanced his tremendous body control.

In another performance, Iris, the spirit of the rainbow and performed by Betsy

Erickson, swirled a long blue ribbon while the rainbow consisting of six other ballerinas, swirled red ribbons in perfect unison.

The second and third selections differed on Friday and Saturday.

On Saturday, the second selection was "Scarlatti Portfolio." Sandra Woodal designed the magnificent costumes for this performance. Going from "The Tempest" to the "Scarlatti Portfolio" was like going from Dorothy's Kansas farm to the Emerald City. The colorful costumes enhanced the beauty of the dancer's movements.

Marcos Paredes designed the costumes for the third selection, Mozart's "C Minor Mass." Taped music was substituted for the orchestra.

The San Francisco Ballet Company serves as a showcase for graduates of the ballet school on the same premises. As the oldest classical ballet company in the United States, it began in 1933 as the

San Francisco Opera Ballet, providing dancers for San Francisco Opera performances. It was the first American dance company to tour the Far East in 1957 and the first to perform the full-length "Nutcracker" in the U.S. in 1944.

The dancers saved the San Francisco Ballet in 1975. The deficit had the ballet on the edge of bankruptcy. They took their plight to the streets and organized a campaign to gain the attention of the community. In an unprecedented show of support, money was collected.

Directors of the company are Lew Christensen and Michael Smuin.

"The San Francisco Ballet is entering a Golden Age," Smuin said. "It now has the creative force, leadership and talent to become a company of international status, a company that will set trends, not follow them."\*

**Kathe Rusnak**

# Dancers attend K-State classes

**Sept. 19 and 20, 1980-** The Oakland Ballet, incorporated in 1965, is a unique company because it takes every color, size and shape, according to Ronn Guidi, artistic director.

Friday's dances in McCain Auditorium were revivals of works from 1910 to 1919, whereas most of Saturday's dances were less than four years old. The only exception was "Billy the Kid."

Choreographed by Eugene Loring and accompanied by a score by Aaron Dopeland, "Billy the Kid" demonstrated the control and imagination of Lance James in the title role and Ron Thiele as Pat Garret. Mario Urena, the Cowboy in Red, amused the audience when he galloped across stage.

"Gallops and Kisses" by Guidi changed the mood of the stage to a vibrant and bouncy one. Dressed in orange, nine

dancers performed to selections from Lanner, Schubert and Strauss.

Ponchos and sombreros dominated the stage in "El Salon Mexico." This 1980 festive piece used talent from 15 dancers.

The dancers extended their personal expressions from the stage to the K-State campus by attending ballet classes and offering a lecture-demonstration session on the day of their first performance.

Guidi wants to preserve the Serge Diaghilev ballets. Diaghilev's company toured Western Europe and the America's for 20 years after 1909.

Most important, Guidi said he wants to present the art of ballet with dancers who are people. ❁

**Kathe Rusnak**

**Frozen charm** Members of the Oakland Ballet seem to freeze in position as they perform in McCain Auditorium. The ballet, from California, was at K-State on Sept. 19 and 20, 1980.

photos by Sue Pfannmuller

**Leaping Motif-** A member of the Oakland Ballet glides through the air while other dancers await the moment to begin their portion of the dance.

# Heeere's Johnny, no Jim, no . . .

**Oct. 25, 1980-** "And now ladies and gentle men, we are proud to present the President of the United States, Jimmy Carter . . . or is it former President Richard M. Nixon . . . or columnist William F. Buckley . . . Kirk Douglas maybe Howard Cosell?"

How about the many faces and voices of David Frye?

Homecoming Week celebrations included the popular political satirist and impressionist who changed faces at least 30 times before an audience in McCain Auditorium.

Dressed in a brown suit and wide collar white shirt, Frye made sharp satirical pokes at politicians and personalities including Fidel Castro, George Wallace, Clark Gable, Dustin Hoffman, Mister Rogers and even Morris the Cat. The audience's favorites were Jimmy Stewart, Tony Curtis and Sylvester Stallone.

It was as if George C. Scott was actually on stage when General Patton said, "I am going to go into Iran and ring the Ayatollah by his Khomeini."

Frye became HHHenry FFFonda for GGGAAFFF as he recalled about the big movie stars in his day like Jack Nicholson,

Gregory Peck, cheek sucker Robert Mitchum and chin sucker Kirk Douglas.

Frye had Howard Cosell doing his first interview from inside his mother's womb where it was "hot and gooey" He was there interviewing Sammy Sperm.

Midway through his performance, Frye showed a black and white film entitled "I Did it My Way" which focused on the political career of former President Nixon. The taped narration was of Nixon's voice. The repeated phrase in the film "and let me make it perfectly clear, I did it my way," echoed chuckles throughout the auditorium.

Frye followed the film with the Great Debate 1980 featuring Anderson, Carter and Reagan.

Walter Cronkite, who was filling in for Roger Mudd, introduced the contenders after he commented, "I am tired of mud. I've got mud in my eyes, mud in my nose . . ."

One of the highlights of Frye's performance was a wheelchair comedy during the debate.

Frye once again used his satirical knife, this time on Reagan. After Cronkite spoke to Carter and Anderson, he asked for

Reagan's wheelchair to be brought to the debate floor.

"Can you hear me Governor Reagan?" Cronkite asked. "You can hear me but you can't see me."

Carter offer his help in getting Reagan's wheelchair to the floor and said, "I've always believed in helping senior citizens."

Henry Kissinger offered Vicks nasal spray to Reagan but when Cronkite told him to spray Reagan he refused.

Kissinger shouted in his thick German accent, "I can't spray Governor Reagan. He has a boogey up the nose."

The hysterical lines flowed from Frye's mouth with not a hint of difficulty.

Frye wrote the wheelchair comedy scene on his plane flight to Manhattan. He said he was quite pleased that it went over well with the audience and that he would perfect it for future shows.

Giving the peace sign, the many faces and voices of David Frye walked off stage. ✻

**Kathe Rusnak**

photos by Richie Bergen

**Courtesy-** Two actors in "The Rivals" dance during a practice session.

**I Spy-** Deb Neff, senior in journalism and mass communications, and Ed Schiappa, graduate in speech, play the two main characters in "The Rivals." "The Rivals" was directed by Lew Shelton and presented in 13 scenes.

## Comedy is fast paced

**Nov. 20 and 22, 1980-** Combining a romantic dime store novel with a fast paced British comedy, the product would be close to "The Rivals."

The K-State players and the Department of Speech presented the comedy by Richard Brinsley Sheridan.

Centered around the early British aristocracy, the characters spent most of their time in hysterical romantic schemes.

Deb Neff, senior in journalism and mass communications, was brilliant as Mrs. Malaprop, a busy body woman whose words were even more elaborate than her costumes.

The audience never stopped laughing at Bob Acres, played by Thomas Paden, junior in speech. His hair was an absolute mess and his nervous croaking vocal characterizations eased the atmosphere among the other more proper characters.

The rotating stage, capable of representing four different sets, proved to be quite effective in eliminating the between act chaos for instant location changes. ❄

**Kathe Rusnak**

## Funny

**Oct. 29, 1980-** "One, one, two, two, three, three, four, four . . . and 11 for you," Weller Martin said as he kept time with his foot. But the evening at McCain Auditorium was more than just a gin rummy game.

Weller, played by Larry Gates, posed as a retired businessman who constantly talked of lost fortunes through the dishonesty of business partners. While Weller's card partner, Fonsia Dorsey, played by Phyllis Thaxter, attempted to conceal that her son no longer cared for her.

Fonsia had only been a resident of the elderly home for three weeks when she

**"Half the ones that do talk make you appreciate the one that don't. But they're not half as sick as those that put them there and not one-third as sick as those that work here."**

met Weller on the dilapidated front porch.

In an attempt to relax his new acquaintance, Weller said, "I'll amuse you immediately, and at our age that could only mean one thing . . . I'll get the cards."

After much persuasion, Fonsia was convinced to participate in the new form of entertainment, the same recreation which her father had always condoned a

# rummy

evil. The card game provided a nice break from the musical presentations brought into the home. Weller summarized those church groups by saying, "half the audience is shaking so goddamn much that they can't look at the other half that's asleep."

After being severely defeated in cards by his novice opponent, Weller shouted "beginner's luck!"

Yet, the initial gin game lead to a series of daily occurrences, with the outcome always being the same. The predictable victory by Fonsia repeatedly caused Weller to enter a state of outrage.

This 1978 Pulitzer Prize winning play, written by D.L. Coburn, confronted the topic of "homes for the aged." Through the two characters, the stereotypic messages became apparent.

"The food gives you diarrhea," Weller said. "Dietitians are not noted for their imaginations."

But, the meals were not the only complaints. While playing cards the topic shifted to the verbal grievances uttered by fellow residents.

"Half the ones that do talk make you appreciate the ones that don't," Weller said. "But they're not half as sick as those that put them there and not one-third as sick as those that work here."\*

## The worst films ever made

# “I slept through ‘Reefer Madness’”

“Semi-Proudly” presenting seven of the worst, abominable, repugnant, abhorrent, disgusting films ever made ... Admission-\$2.25 for all seven.

K-State saw its first “bad” version of the Cannes European Films Festival on Feb. 6 and 7, 1981. The Union Program Council (UPC) presented The Golden Turkey Awards coinciding with the first annual Bad Films Festival at Forum Hall.

Michael Medved, author of “What really Happened to the Class of ‘65?” collaborated with his brother inventing and writing “The Golden Turkey Awards.” Medved visited K-State to give the first reverse awards ceremony to honor the all-time bad films and performances in Hollywood history.

Medved said he believes comedy is more effective when it is not intended and believes people have more fun laughing at bad films than arguing the quality of good films.

“Part of comedy is if you watch a comedian who pretends he is slipping on a banana peel, that is suppose to be funny. It’s even more funny if you see one of your professors slipping on a banana peel in real life. By the same token, a film like ‘Airplane’ is funny because it is a satire of bad films, but real bad films where people are trying to be serious are even funnier. The stupidity is sincere and the humor is even better because it is unintentional,” Medved said.

“We, my brother and I, noticed that people have more fun laughing about bad films than arguing the artisitc merits of the

few good films that come out. There is plenty of attention given to good films and we feel that achievements on the other end of the spectrum deserve their own moment in the sun,” Medved said.

During the awards ceremony, Medved said “They Saved Hitler’s Brain” was one of the films nominated for The Golden Turkey Awards. Medved said the movie was “the most brainless brain movie of all time,” and announced “Plan Nine From Outer Speace” as the winner of The Golden Turkey Awards.

Pete Manfredo, senior in fisheries and wildlife biology and UPC chairperson, said other universities have held bad film festivals with successful results. UPC decided to have the festival and call it the first annual because if successful, UPC will continue to have it in future years, Manfredo said.

The Bad Films Festival was inexpensive in more ways than one. Not only was it inexpensive because of its poor production, but also because UPC only spent \$90 per film as compared to the average price of \$650 to \$700 for a more popular film.

Students, along with other Manhattan residents, had a variety of reasons to see the Bad Films Festival. Many said they were motivated to see the movies just to find out how bad they really were, while others were motivated by their bizzare sense of humor.

“I like English humor and warped, bad humor,” (Monty Python’s Flying Circus, Benny Hill), explained Paul Kaiser,

sophomore in animal science and industry.

“It’s good to know Hollywood is still putting out low grade movies,” Kaiser said.

Freda Love, Manhattan resident, said she probably wouldn’t have gone to the Bad Films Festival had the movies been advertised as good. After seeing three of the seven movies, Love decided to take a short nap. Love thought “Terror of Tiny Town” was an appropriate time to take the short nap since the movie dealt with 3’8” midgets who rode shetland ponies instead of horses.

Eric Swegle, sophomore in pre-design professions, said he went to the film festival “to see just how bad the films really were.”

“‘Beach Blanket Bingo’ definately the worst movie I have ever seen because it was so corny and wholesome,” Swegle said.

Swegle reached his own philosophy as to why such cheaply made movies were still able to remain funny.

“Because societal opinions have changed so much since the movies were made, what was serious at one time is now hysterical,” Swegle said.

Alicia Smither, sophomore in pre-design professions, said she enjoyed the movies because of the audience participation and believed the movies were entertaining because they were done so poorly that they were funny. ✻

## Roadtrips provide a break

**“H**ey, let’s go on a road trip,” echoed down the hall and the next thing I knew I was crammed into the back of an orange Volkswagon on my way down I-70.

“Wait a minute,” I mumbled through the bodies, snacks and “refreshments.”

“I have a huge Chemistry test on Monday.”

“That has been taken care of,” someone in the front announced, “We called your instructor and told him that your great aunt died.” With that I saw the sign that announced our final destination: Russell, KS 129 miles.

Road trips can be anything from a short drive to a nearby community to a full-sized trip to Daytona, Padre or the Rockies. Almost every college student has substituted a road trip for a mild case of insanity. The college pressures lead normal, sophisticated students into crazed derelicts on their way to the get-away-from-it-all vacation spots.

Russell turned out to be quite the experience. I figured we would sit at a bar, probably the only one in town, and tip a few suds. But to my utter amazement, there was more to it than that.

Everyone in the town was out on Saturday night cruising mainstreet. “Cruising mainstreet,” I thought was some Hollywood configuration resulting from American Graffiti, but people really drive

up and down the mainstreet (all seven blocks). “Flagging someone around” was a new term I learned. “Flagging” is signaling someone my native Russellites knew, which was everyone, to a side street. Then we exchanged the latest gossip, contributed to someone who was low on Coors Light, or switch around passengers to change scenery. Then it was back onto the mainstreet for a couple more rounds.

In contrast, road trips can also be more than an overnight trip into a town. One Saturday afternoon as the Wide World of sports was featuring the downhill skiing championships, one member of the crowd, who was watching the television mentioned, “Wouldn’t it be great to be in Colorado right now skiing down the mountains?”

“It sure would,” someone answered half-heartedly.

Suddenly from the back of the room, a loud voice bellowed, “Road trip.” I thought John Belushi from Animal House had just walked in the door.

Again, before I knew it, I was in the back of a black and silver Camero on the way across Kansas. This time it was my car and I was assured not to worry about my test on Monday.

My roommate told me that my Psychology teacher sent her regards about the tragic death of my second cousin.

We had only one problem to face on

the beginning of this trip and that was money: the lack of it. But again the Belushi voice came through the immortal words “Zip card.” It was then when we went to an automatic teller to withdraw funds from one of my friend’s room and board savings account.

The trip turned out to be an exhausting ten hour drive filled with plenty of beer, snacks and “rest stops” and conversation to keep the driver awake. However, the sight of the Rockies gave us our second wind.

We drove into Winter Park and found out that all lodging was full. (Advice one: secure lodging before leaving Manhattan). So even though the skiing was great, the accommodations left something to be desired. Cameros just weren’t designed for sleeping, especially with four people.

The two and half day trip ended and we were back in time for classes on Tuesday. I still don’t think my teacher ever bought the story about my second cousin. I’m sure my sunburned face didn’t help either.

I think I need to cut back completely on my road trips. Let’s face it, my studies are beginning to suffer and I don’t think I could take another death in the family . . . . . well, I guess it depends on where we are going. ☼

**Jerry Katlin**

Susan Truogman

## Windmills symbolize Kansans attitudes

**A** lone.  
Single, solitary, isolation.

Just as the windmills scattered across Kansas stand secluded from the busy rat race of the cities, college life offers its own form of solitude.

Like the windmills, which have been abandoned for more sophisticated forms of energy, the freshman must learn to abandon his previous lifestyle. Personal problems, previously solved by sharing them with an older sister, must now be resolved in a letter or long distance phone call.

As students progress through college, the liveness transforms into one of the few forms of privacy. To escape the busy chatter of roommates, blaring stereos and dry lectures, students quickly become acquainted with Tuttle Creek. The surrounding Flint Hills set a quiet mood perfect for reading the eight chapters of psychology required for the next exam.

Even though the windmills work alone, they catch the omnipresent Kansas wind effectively. The windmills are a symbol of progress that most Kansans welcomed. The easy-going attitude of Kansans is demonstrated through those windmills standing untouched, despite the fact their usefulness has long disappeared.

That attitude persists at K-State, for living in the heartland is a distinct way of life. It's a life of learning to be alone. Whether combining rows of wheat in the summer or studying in the back of the stacks at Farrell Library, the seclusion of Kansas exists.

So the windmills stand. Alone. And the K-State student learns that being alone is part of being in the heartland. \*

Jill McAntee

# New Grass, Russell, "revive" McCain

Something wonderful happened in McCain Auditorium Feb. 6, 1980. It was a miracle of sound that accomplished something that is becoming less and less frequent in this trouble stricken world.

The New Grass Revival, Leon Russell concert made people happy. Not kind of happy. Not sort of happy. Not a little happy, but down home, footstomping, hand clapping, gut feeling, love the world, kiss your dog, hurray I got an A, I love you happy.

And they did it by playing music. Lots of music—two hours and 15 minutes of non-stop music. They called it "Bluegrass."

It's sort of like purple passion. You don't know exactly what it is, but it sure tastes good. It was a gravy-like mixture of blues, jazz, and rock, with a pinch of gospel and a dash of soul, all ladled over a steaming hot platter of bluegrass.

New Grass Revival stepped on stage and took a moment to strap on their instruments. The crowd applause died down. That was the last quiet moment of the evening. They started playing and didn't stop until they had belted out eight rocking Bluegrass tunes.

The high power fiddling of Sam Bush during the song "The Lee Highway Blues" was one of the outstanding features of the New Grass Revival. Bush played the mandolin most of the performance, but when he picked up the fiddle he gave good reason why he was indeed a national champion.

"Lee Highway" was a long solo piece. Just when it started to drag, and had some wondering, "When will this end?," it took off. Everybody joined in. The sounds grew and swelled. It accelerated at a frantic pace. Everytime it seemed as though it would end, it started again only twice as fast. It was the "Bolero" of the bluegrass world.

New Grass got a standing ovation as they left the stage.

Leon Russell strolled out, sat down to

his electric piano, looked at the audience as if to say "Are you ready" and proceeded to mellow out.

His fingers tap danced on the keys as he sang. Russell's version of "Somewhere over the Rainbow" was musical poetry. His voice, rougher than sandpaper, had a gravel tone, but it had that Leon quality, that special something that bounced off the ceiling and floated down to the seats.

When Russell's solo ended, the New Grass Revival came back to share the stage with him.

The last set was "Bluegrass." It was 11 songs that logically should not have fit into the same show. But through remarkable rewriting and incredible showmanship they did.

They played and played and played. They didn't stop to breathe. They went from song to song, with the last note of the one before blending into the first note of the next one.

Tight harmonies and sharp entrances and exits by instruments and voices were the staple of such songs as "Yesterday" and "Stranger in a Strange Land." The three-way vocals of Bush, John Cowan, bass player and lead vocalist of the New Grass Revival, and Russell were every bit as good as the Beach Boys or the Statler Brothers.

They managed to squeeze in several of Russell's best sellers between the rest. But even "Up on a Tight Wire" and "Wild Horses" had a slight bluegrass flavor.

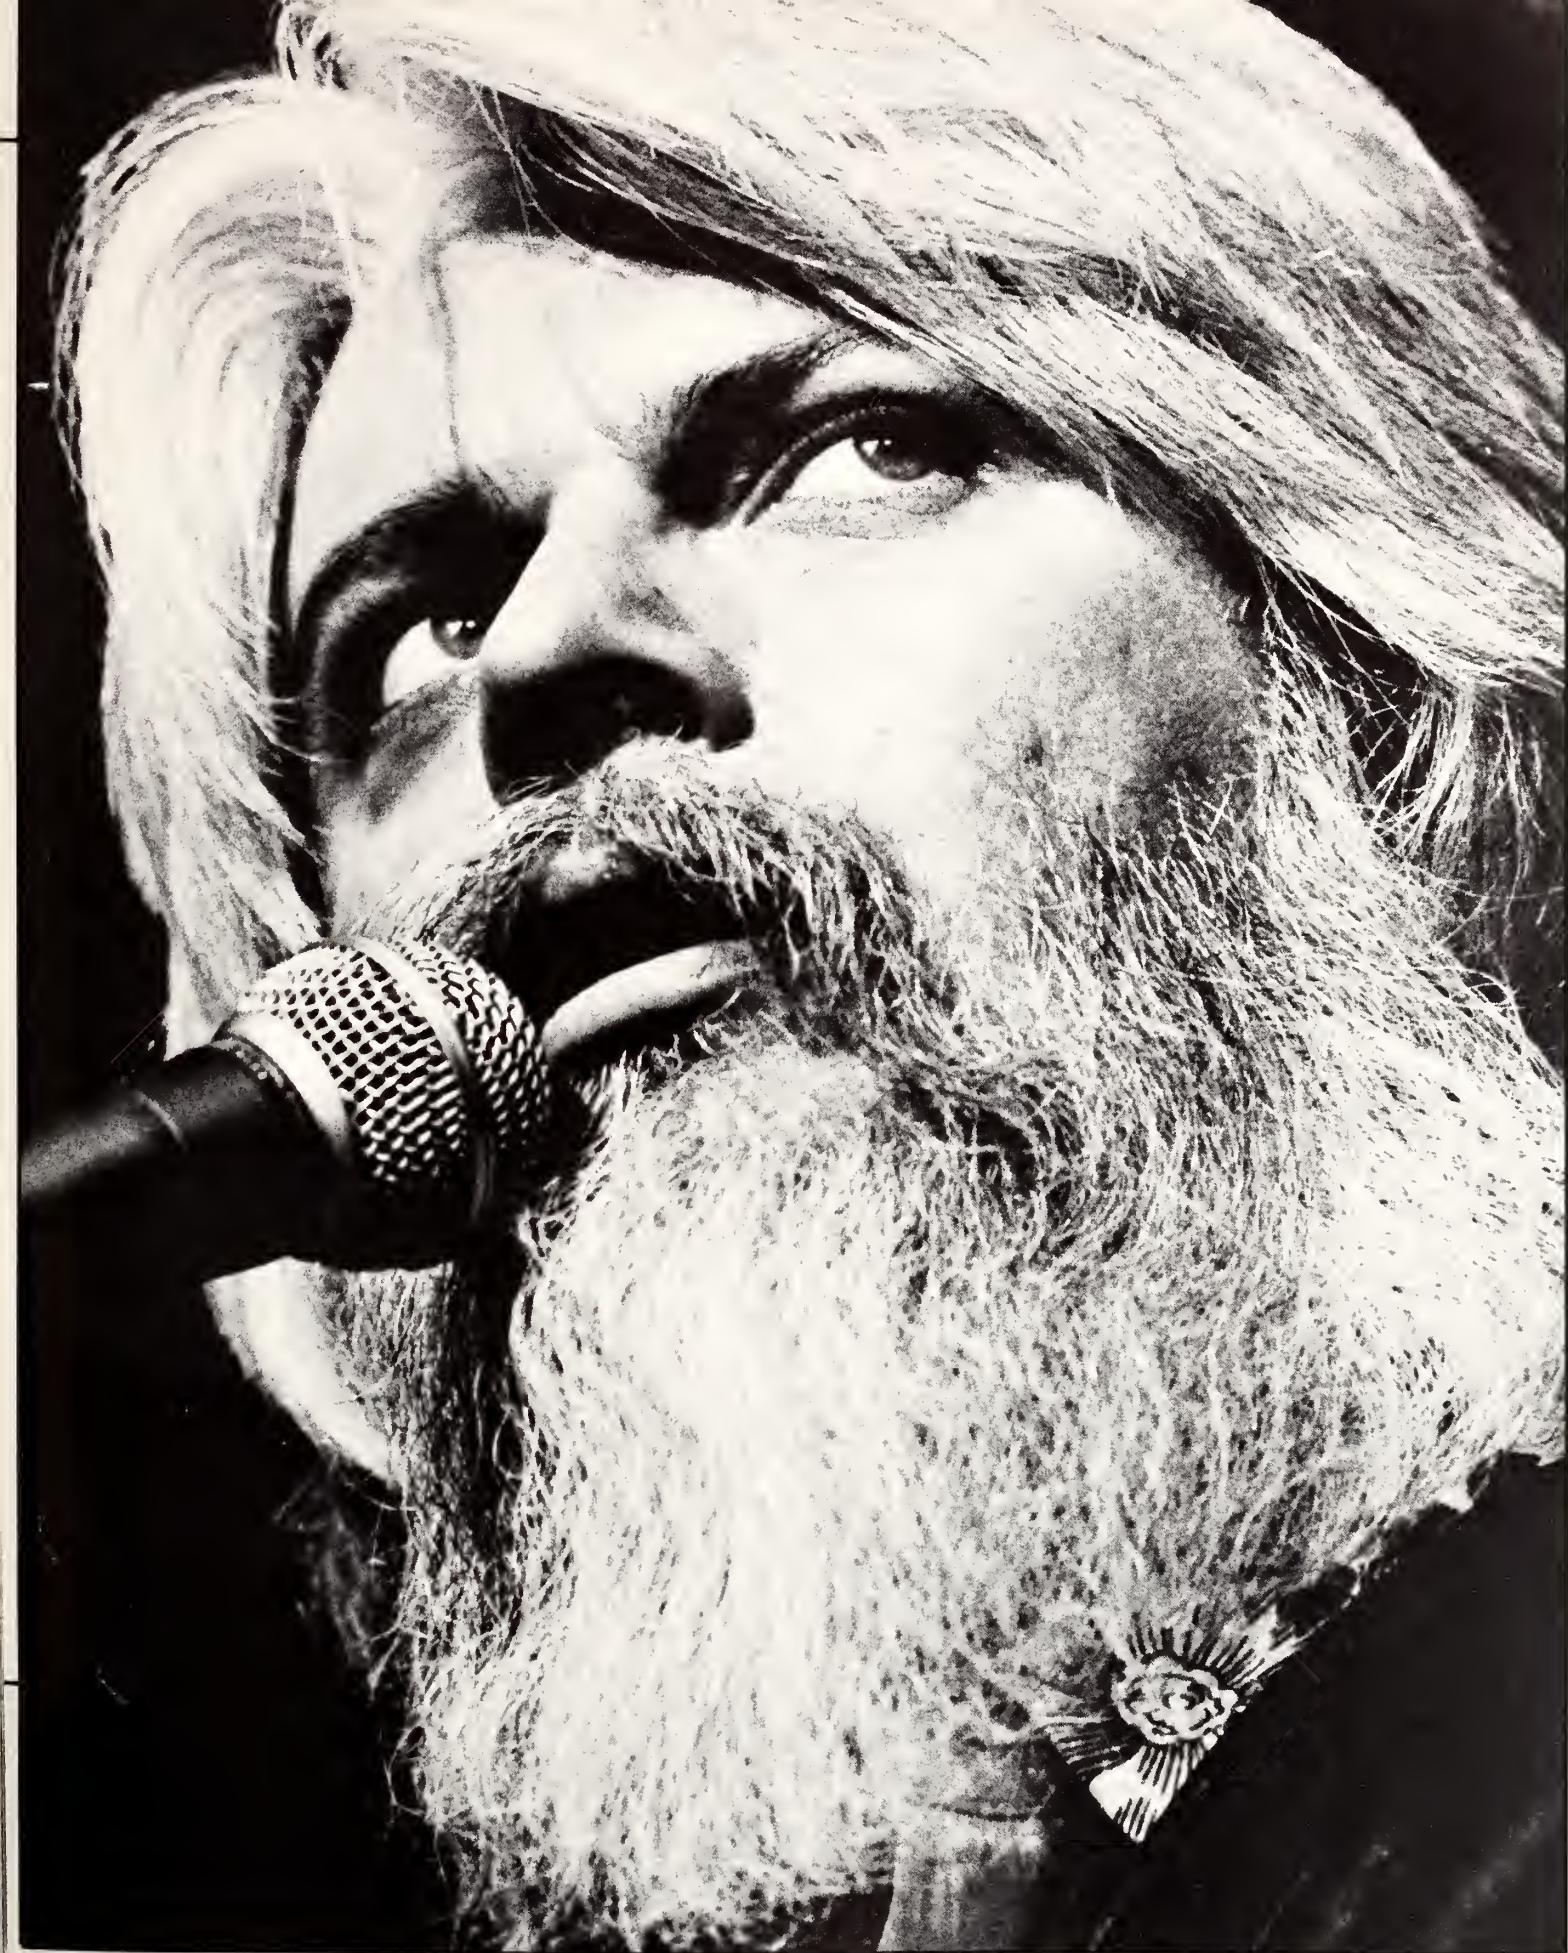

The final number of the set was the most rocking and rolling version of the bluegrass classic "Rolling in my Sweet Babies Arms" conceivable. They blasted it out and brought people up dancing on the seats.

Three standing ovations and two encores later it was over. And the audience was happy. ❁

**Roger Aeschliman**

*To all a good night - Leon Russell waves good night to a sell-out crowd in McCain Auditorium as Sam Bush, playing mandolin, and John Cowan, playing bass, of New Grass Revival provide background music.*

photos by Cort Anderson

**Crowd gazing** - Leon Russell looks out across the audience between songs during his concert in McCain Auditorium.

## Peace walks the land

Peace Pilgram is a silver-haired lady, dressed in navy blue slacks and shirt. She wears a short tunic with pockets all around the bottom in which she carries all her worldly possessions.

She has walked more than 25,000 miles, in travels around the United States, without a penny in her pocket.

Her mission is to spread peace to the world.

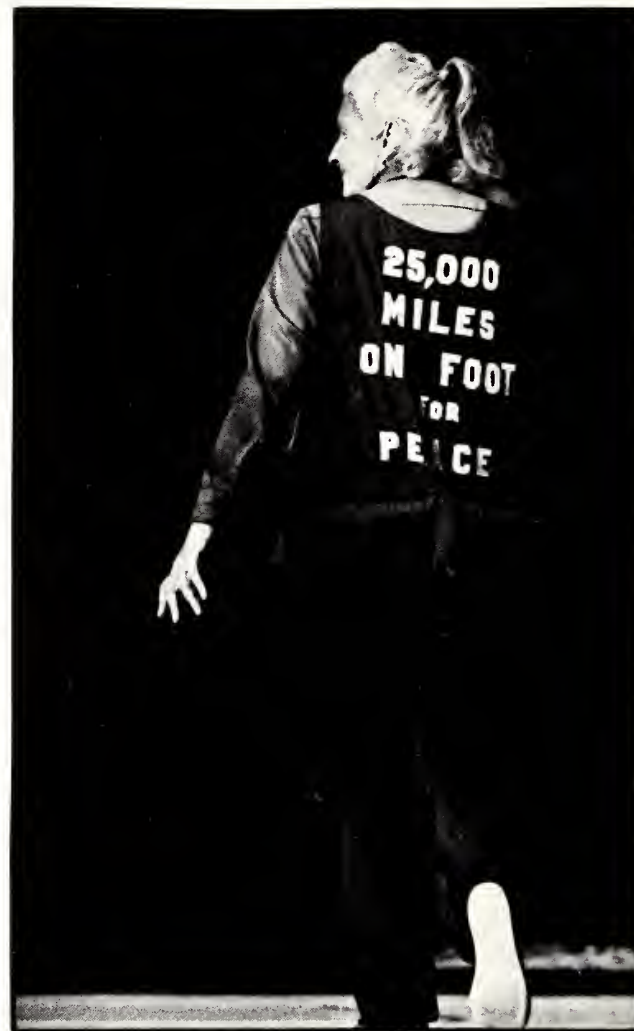

"I shall remain a wanderer until mankind has learned the way of peace, walking until I am given shelter and fasting until I am given food," Pilgram said, in an interview as she passed through Manhattan.

Pilgram said she has been walking since 1953, covering 50 states, 10 Canadian provinces and parts of Mexico.

She encounters and works with troubled people as her service, she said. The problems of the universe are not capable of being solved without the proper attitude, which she said is learning and growing through solving.

She said she only had trouble communicating with the Mexicans on her journey, but she smiled and had a translator, an interpreter for the United Nations, give them her message.

Her stay in Manhattan was brief, she spoke her message, and walked out of town as silently as she had walked in. ✽

Craig Chandler

## World silent over death

Monday, Dec. 8 was not a happy day for Beatles fans. John Lennon, band member, was shot outside his luxury Dakota apartment in New York.

The following day Mark David Chapman, a 25-year-old former mental patient and "devout Beatles fan" was arraigned on second-degree murder charges in the slaying of the legendary singer-songwriter.

Chapman entered no plea at his arraignment in court. Yet his attorney, who was appointed by the court, said his client had attempted suicide twice. The attorney also said that Chapman could not understand the charges.

During Chapman's arraignment, the 40-year-old Len-

non's death was mourned by the music world. Sales of his latest album "Double Fantasy" soared in record stores throughout the nation.

Yoko Ono, Lennon's widow, asked fans to take part in a silent vigil "to pray for his soul", instead of participating in his funeral.

Paul McCartney, Beatles co-founder, said "John was a great guy. He is going to be missed by the whole world."

Outside his apartment near Central Park on 72nd Street, a crowd fluctuating from 100 to 500 people sang Beatle songs, prayed, lit candles and demanded justice for Lennon's death. ✽

# Reagan brazen by shot

President Ronald Reagan was wounded in the chest by a blaze of .22-caliber pistol fire Monday, March 30, 1981. The same fire critically wounded White House Press Secretary James Brady. Two others, a secret service agent and a Washington policeman were also wounded.

John Warnock Hinckley, 25, of Evergreen Colo. was arrested for the attempted assassination.

Pushed into the limousine after the first shots, it was not apparent that the President had been wounded until he "collapsed" in the hospital. The limousine had been redirected to the hospital after the President began to complain of chest pains.

Hours later, after surgery, Reagan was pronounced in good and stable condition. A bullet had been removed that had entered his left side and penetrated his left lung about three inches. The President had walked into the hospital, "alert and awake" if a bit light-headed, according to Dr. Dennis O'Leary, spokesman for

the George Washington University Hospital.

Press Secretary Brady wasn't as fortunate. A bullet entered his forehead and passed through his brain. O'Leary said that Brady, 40, will likely suffer brain damage if he survives. The extent of the damage is not known.

An in-house investigation was conducted by the Secret Service to try to answer how the President could be shot on home turf, barely a mile from the White House.

"After reviewing the video tapes a dozen times, we believe the presidential protection was as effective as it possibly be," Jack Warner of the Secret Service said, "These guys were competing with a bullet. They moved as quickly as they could."

By Tuesday, President Reagan resumed command of the country by signing a major economic bill. Meanwhile, Vice-President Bush took over the day-to-day White House schedule.

## Glimpses

### *Atlanta murders' Postal increases*

Twenty-one black children were murdered between August 1979 and February 1981 in Atlanta, Ga. Two remained missing. Thousands have helped search vacant buildings, sewers and brush thickets looking for the children. Police thought they had a suspect but he soon died, from suicide. All of the black children, except two, were boys and many of the victims knew each other. The search continued for the killer while Atlanta carefully guarded its children.

The Postal Service received an okay from the federal government to raise the postal rate, from 15¢ for a first class letter, to 18¢. Post cards required 12¢ stamps instead of 10¢ stamps to be delivered effective Mar. 22, 1981.

### *Peanut shortage*

Peanut butter, the staple of children and college students, became a scarce commodity this winter. The extreme heat and drought of last summer had peanut products in short supply, and prices soared.

### *Taxes cut back*

As Ronald Reagan, 69, became the next president of the United States in January 1981, his first duty in office was to put a freeze on all federal hiring unless necessary to "maintain vital services."

Reagan declared that the government must make dramatic cuts in taxes and spending. He started cutting the budget by two percent. One of the programs losing some funding was the Basic Educational Opportunity Grant, affecting college students across the country.

### *Las Vegas fire*

Fires plagued hotels in Las Vegas. The first and largest fire was at the MGM Grand Hotel on November 21. Over 8000 people were in the 26 story hotel, 83 died and more than 500 were injured.

### *Actors strike*

Members of the screen Actor's Guild and the American Federation of Radio and Television Artists went on strike in July. Almost all movies and production on prime-time shows stopped for almost three months. The prime-time fall season did not start until November.

### *Riots in Miami*

Over 3,000 members of the Florida National Guard were called to Liberty City on May 1. During the three days of rioting, 18 people were killed, 1,267 were arrested and there was an estimated \$100 million in damage. The riots started when blacks became upset by the exoneration of four white policemen in the death of a black businessman.

The rioting was concentrated in the downtown area and curfews were put into effect to protect the citizens in the downtown Miami area.

## *Middle East creates headaches*

### *Hostages released*

Day 444 - The 52 American hostages were flown to West Germany and to freedom. The previous day, Warren Christopher, Deputy Secretary of State, had signed an agreement to unfreeze Iranian assets in the U.S. for the return of the hostages, who were held captive at the Algerian Foreign Ministry.

The release came two days after Ronald Reagan was sworn in as the new president. Jimmy Carter flew to West Germany as special envoy of the president to welcome the hostages back to freedom.

Over 14 months earlier, the militant students wanted the return of the exiled Shah of Iran for trial in their country. The U.S. refused to deport the shah, who was being treated for cancer in the U.S.

Then in March of 1980, the Shah Mohammed Reza Pahlavi flew to Egypt, where he died July 28.

President Carter broke off all relations with Iran on April 8. He ordered all the Iranian diplomats out of the country and many Iranian students were deported

back to their country. Trade was all but cut off between Iran and the U.S.

A secret mission to rescue the hostages ended in tragedy when the mission was called off April 25 because of equipment failure. During the withdrawal from the Iranian desert, two of the helicopters collided, leaving eight crewmen dead.

### *Iran, Iraq Dispute*

A "holy war" broke out between Iran and Iraq. Iraq bombed the oil center of Abadan, Iran, killing four Americans. The U.S. tried to remain neutral as the Iranians bombed Iraq with American made planes. The world watched to see if the fighting would stop oil trade through the Persian Gulf.

In late September, Iraq agreed to a U.N. requested ceasefire, if Iran agreed; the fighting persisted.

On Oct. 1, the U.S. rushed radar planes to oil-rich Saudi Arabia, the number one producer of oil, to help strengthen their air defenses. The U.S. was trying to avoid a possible spread of the war and contradicted its previous neutral stance.

## Zoning issue resolved

Manhattan city commissioners approved the first reading of an ordinance for a rezoning plan that would allow fraternities and sororities located in the 1700 and 1800 blocks of Fairchild and those on the west side of Denison between Fairchild and Leavenworth "conditional use" of the property within R-II residential districts.

The commission's action was initiated because of requests made in September 1980 by homeowners in that area who were concerned about local traffic and parking congestion and the conversion of single-family homes on the 1800 block of Fairchild Avenue into fraternities and sororities.

Included in the proposal is a provision that would allow the greek houses to have parking in areas not adjacent to them.

"Before, parking had to be within 600 feet of the residence. (Under the proposal) if a fraternity or sorority cannot provide parking on their own property, and if

they can show . . . the parking is for university use, they may designate a place . . ." Joe Gerdom, senior city planner, said.

Fraternities and sororities are normally prohibited from R-II residential districts, but have been allowed in the disputed area because it is within the boundaries of the university overlay.

However, the commission expressed tentative approval for a plan to lift the overlay designation from the area by amending the text of the Manhattan zoning code to conditionally allow fraternities and sororities to be established in an R-II area, Dan Gibson, city planner said.

"In the past, fraternities and sororities were prohibited in the R-II district. We changed that to a conditional use (in their recommendation to the commission)," Gerdom said.

The university overlay consists of areas outside the campus designated for university-related uses. ❁

## Fire cripples Poyntz shop

Seven businesses and offices were destroyed when the building in which they were located was severely damaged in a fire in the 600 block of Poyntz Avenue.

Firefighters were at the scene for several hours before extinguishing the blaze and spent much time keeping it from spreading to an adjacent floral shop. No one was injured in the blaze.

The fire apparently started in the rear of the building, according to Jim Morris, associate professor of journalism, an owner of the building.

Apparently the fire started in Yeo and Truby Electric Co., Morris said.

Morris said he "conservatively estimated" the loss of the building at \$150,000.

Scott Lieble

## Glimpses

### Controversial Waste Sites

Six hazardous waste sites were found in Kansas City, Ks. The sites were found to obtain waste material from a metal recycling company.

Some people from the nearby neighborhoods cited problems they had contracted from the wastes. Yet, others said they had children who had been playing at one of the sites for a year and had not had any problems.

### No level drop

The Corps of Engineers proposed to draw down Tuttle Creek six feet to encourage growth of vegetation for more fish and wildlife habitats. The proposal was met with hostile jeers at a public meeting July 28. The Blue Valley Yacht Club would have to make costly renovations if the water level was lowered. It also would cause the loss of 100 boating acres leaving 500 acres.

After much debate, the Corps left the water level unchanged.

### Holidome to open

The Manhattan Holiday Inn and Holidome, a new convention and recreation center, is scheduled to open November 1, 1981.

The inn will have 190 sleeping rooms, five executive suites with bar and meeting accommodations for 10

to 20 persons, and four sico rooms, Nancy Denning, director of sales for the Holidome, said.

The 11,000 square foot Holidome indoor recreation center will house an indoor swimming pool, heat lamps, miniature golf course, whirlpool, exercise room, electric games, ping pong and pocket billiards.

Ten thousands room nights have been booked already, she said.

"I feel Manhattan is the city in Kansas that has tremendous things to offer conventioners like super restaurants, Kansas State University, shopping and Tuttle Creek Lake," Denning said.

### Punishment Vetoed

The capital punishment bill was again brought before the state senate. It passed less than 30 minutes after introduced. Governor Carlin then vetoed it, for the third year in a row.

### Nuclear Concern

Kansas's first nuclear power plant, Wolf Creek Generating Station, generated some concern with the Kansas Corporation Commission.

The KCC investigated the construction delays and price increases of the \$1.5 billion structure. Wolf Creek was scheduled to be in operation within the decade, but construction was delayed another year.

Scott Liebler

**Sorrowful drought** - July 1980 brought Kansas and the Midwest temperatures in the high 90's through the 120's. Kansas crops were severely crippled by the drought and some Kansas farmers lost up to 85 per cent of their crops.

Scott Williams

**Hanging on-** Riley County ambulance attendant Erik Maher attends to Kelly McGuirk, former K-State student, after the plane he was piloting, crashed Saturday near the K-State crew boat house on the east side of

Tuttle Creek Reservoir. McGuirk and a passenger of the plane, Blake Debord, junior in marketing, were taken to a Topeka hospital following the crash.

Craig Chandler

**Dressed to kill** - Not wishing her identity to be known, Lisa Luck, junior in business administration, sits well-hidden to fellow assassins at the organizational meeting for the kick-off of the ASSASSIN.

## Glimpses Union celebrates 25th

The K-State Union was 25 years old March 8 and many celebration activities were sponsored by the Union Programming Council (UPC), bookstore, food service and the recreation center.

The festivities began with tours of the union and campus, a reception, banquet and dance.

A large replica of a birthday cake was on display during the entire week. On Friday, the birthday cake along with punch was available to students.

There were also discounts on bowling, billiard and table tennis. The bookstore offered discounts ranging from 5 to 25 per cent, and the copy center offered discounted services.

## Student deaths

Two K-State students died last year of "natural causes," Gary Fairbanks, 21, and William Marquette, 20. Three other students died in car accidents, Tony Fountain, Gregory Herard, and Rebecca Titus.

Craig Chandler

**Congratulatory hug** - Suze Brink, senior in journalism and mass communications, embraces Angela Scanlon, junior in agricultural journalism, after the student body presidential elections. Scanlan was the first woman elected to the top position in the history of Kansas State student government. She gained 60 percent of the votes cast.

# Assassin: A 'friendly' killing

Students are killing one another on campuses throughout the United States. They're "bumping off" each other, much like the way the Mafia makes a hit, only in this game, no one dies.

The popular student game, called "Killer" at the University of Michigan, where it started in the early 1960's, and "Assassin" at Colorado State University is a game played with \$.79 dart guns.

The rules of the game are simple. Everyone is a hit man with an assigned victim, while at the same time being the intended victim of someone else.

"You have to be totally alone," Jim Wall, junior in chemistry at CSU, said. "There can be no witnesses because it's just like real life. If you were in a crowd and someone saw you kill someone then you're caught. If you're caught, you're eliminated."

After a killer makes a hit, he has to report the death to a coroner who is in charge of making the assignments. The successful killer is then assigned another victim.

The game continues until there are only two people left who must try to kill each other. The last living person, the winner, has to commit suicide. Then the game starts over. It takes anywhere from three to five weeks for a round to be completed.

Most of the hits are made in rooms but there are some made on campus late at night or during the day.

The game has met some opposition. There are signs

up in some residence halls saying "You Shouldn't Make a Game Out of Violence," but the complaints are mostly made in silent protest.

Locally at K-State the game has blossomed, but has also met some opposition.

ASSASSIN was sponsored by the Union Programming Council (UPC) Ideas and Issues Committee and Feature Films Committee as a promotion to a lecture, "The Embryo of an American Police State" by Peter James, former CIA spy.

The first meeting was postponed because of questions concerning the objectives of the game raised by Chet Peters, vice president of student affairs.

Peters said he was concerned about the game because it is "non-productive to an educational environment."

He also said that his main concern was for people who don't know about the game, who "might see a suspicious person in a bush, misread it, and endanger someone's life."

A similar game was played by a fraternity and sorority as an idea for a function. Each person was assigned someone to kill with a stick dart. It lasted throughout a week and ended with a function.

"It is a good outlet to vent your hostilities," Chris Dring, senior in pre-design professions, said. "But I could see where it might get out of hand-otherwise I think it's good." ❁

## Fines Increase

In 1980-81 it cost more to park on university lawns. It also cost more to park illegally in a loading zone.

Security and Traffic increased the cost of traffic tickets to conform with the fines set by other Kansas universities, Art Stone, director of Security and Traffic said. He added that certain tickets now can be voided if a violation is corrected.

Last year, a vehicle, with a valid parking sticker parked on the lawn or in a loading zone was ticketed and fined \$3.

This year, the same violation will cost \$7.50 if paid in 14 days, and \$12.50 if paid after the 14 day period.

"Certain things, like failure to remove your old permit, was a \$3 fine last year," he said. "This year if you remove the permit (within 7 days) and have it verified by a campus officer, we'll cancel the ticket."

"We're hoping that if you pay \$7.50 versus \$3, you'll say 'Hey, I haven't got \$7.50' and you'll park legally," Stone said.

**Violation #157-** Rick Bailey, senior in political science, places a ticket on the windshield of a car illegally parked in the lot north of the Derby Complex. Bailey is one of several students working as ticket writers for Security and Traffic. The student "parking control checkers" received some controversy from their peers over their newly-formed positions.

Scott Williams

# Aggieville:

**A**-G-G-I E-V-I-L-L-E spells release.

At least it does to students, who wanting a break from the pressures of classes, studying, tests and writing papers, take a journey to this mecca located on Moro, between 11th and 13th streets.

This city within a city, with its variety of taverns and bars (distinguishable from each other by the criteria of age), seems to attract certain personality types that can be observed in abundance at the various bars.

One personality that is considered typical of the bar scene is Peter Prowl. He may be Johnny Study on campus, but when he hits the bar scene with his half-buttoned shirt and gold medalion glittering, he's out for a choice cut of a one-night stand. He travels from one end of the bar to the other looking for the selection that will fall for his line. Besides the "macho" attire, a girl can be warned of this wolf type by the odor of Hai-Karate that reaches the senses before he does.

The object of Peter Prowl's charms is often a personality type labeled, Evelyn

# A welcome mat to Manhattan

Easy. She's the one with a jello chest from not wearing a bra and has perfected the game of shake, rattle and roll. She loves to be the center of attention and goes out of her way to be noticed.

Being able to combine a favorite drink and a favorite game is what brings the type Pat Pinball to the Aggieville bars. He is easily identified by the bulges in his pockets from all the change he carries. One can also hear him approach from a distance, with his change pocket rattling his arrival. Bartender and cashiers get to know him pretty well, as he is continually replenishing his supply of quarters. His best friends are the Space invaders, and his favorite song is the one the machine plays when he wins another game. He has also perfected the art of moving the machine in such a way that it doesn't retaliate with a "TILT".

Calvin Cowboy is a personality that usually only frequents certain bars. Dressed in hand-tooled boots and wide belt, he enjoys the boot stompin' fast pace of the swing dance. His name is no problem, for when he spins around, it is

tooled on the back of his belt. Often his back jean's pocket has a worn circle from the Skoal can that often occupies it.

Polly Purebred can be found in a few select bars. She's the one with her nose scrapping the ceiling and making frequent trips to the bathroom. She only associates with a select few. Her frequent trips to the bathroom are to check the mirror to assure every hair is in place and her Mabelline beauty is secure.

The nicest guy in the bar is the Freddy Friendly type. He's the one, who on any given night, can be seen with a beer in his hand and overjoyed to see anybody with which he is even only midly acquainted. He knows all the latest jokes, and makes sure everyone else hears them too. At the beginning of the night, he's a great guy but later in the evening he becomes unbearable. His good mood changes with his consumption of alcohol to depression and must constantly be reassured that everyone is his friend.

A pair of types are Disco Dan and Doris. Oddly enough, they are usually found in the bars offering disco music and

are on the dance floor every time the music takes up that staccato rhythm.

Doris just can't keep her eyes off the mirror on the dance floor, for she loves the way she moves. The couple appear at times to think that they are the only ones on the dance floor, for they have been known to prance, bump and dip, having more contact with everyone else on the dance floor than themselves.

But then there are the John and Jane Doe types. The name, commonly associated with the majority, rings true here. Although these 'other' types can be found in the various bars in Aggieville, the majority of 'types' are those who just come down to relax, talk to friends, release some frustrations on the dance floor or with an uncooperative pinball machine, and have a good time while they forget the frustrations and pressures of college. ☼

## Randy Dunn

**YeeHaw**-Tanya Carlson, sophomore in animal science and industry, stands under a drawing of a true cowpoke. The drawing demonstrates the contrast between a cowboy's duds of yesteryear and the western attire of 1980.

**Cheers**-Toasting to the completion of their class projects, David Patterson, senior in electrical engineering, and Jean Harter, junior in interior architecture, enjoy a relaxing beer.

## *Academics & Organizations*

**L**ike circus clowns juggling brightly colored balls, thousands of K-Staters annually go through their own juggling act. But instead of balls and fruit, the collegiates are balancing huge loads of classes, extra-curricular events and organizational functions.

For some, the careful rhythmic control even allows part-time jobs or a second address in the bars of Aggieville.

But whether the student is earning just over the probation limit or is a consistent performer appearing on the Dean's Honor Roll, K-Staters move in the rhythmic, though hectic pace of a heartland university. ❄

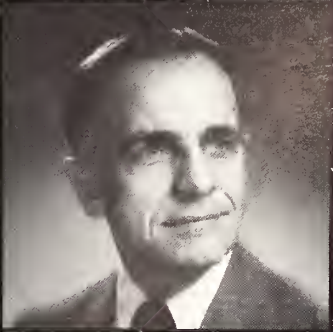

**Brushing Up-** Harold Carter, senior in landscape architecture, seem to blend with his own creation. Carter painted the mural, representing more than 200 years of minority history, on the fourth floor of Farrell Library.

**When's the test?-** Working in pairs through the student tutor program, some students may receive individual guidance. These tutors are giving aide in physics.

**Duane Acker**  
President

"From the nation's heartland have come those human characteristics of individualism, uncommon persistence and hard work that have permitted men and women to improve themselves and their ways of life. In full concert with this heritage of the heartland, Kansas State University is dedicated to providing its students with high quality teaching, to sharing with Kansans the fruits of its research, and to extending its resources to all citizens of the state."

**Owen J. Koeppe**  
Provost

"KSU reflects the best of the Kansas heartland by offering high quality academic programs in an environment characterized by friendship, pride without snobbery, respect for the past along with willingness to change, appreciation for conservative and liberal views and an abiding concern for students."

**Chester E. Peters**  
V.P. For Student Affairs

"When walking the prairie and woodlands in the Kansas heartland, one grasp the majestic power of the intellectual being. Aesthetics is a most critical factor in learning as the environment and the wisdom of the people come together through beauty. The Flint Hills around Kansas State University allow the vision and the freedom of search to discover and achieve, which is not available in a concrete maze of tall buildings and crisscrossed streets."

**Gene Cross**  
V.P. For University Facilities

"The Kansas heartland has much to offer the future university student in the form of opportunity, challenge, growth, and a total preparation for the future. This offering is available to those students that are willing to involve and give of themselves that they might receive the richness of life that they eagerly anticipate and expect from their efforts as they prepare for their adult future."

**Daniel D. Beatty**  
V.P. For Business Affairs

"The Kansas heartland does and will provide university students a place to live and attend a university that provides rural openness and country beauty and peacefulness close to a large metropolitan center without the disadvantages of blight, crowding, traffic snarls and urban sprawl. The climate is moderate but with four distinct seasons that provide stimulation and variety. In short, they can live in an ideal environment while attending a first-rate university."

**Roger L. Mitchell**  
V.P. For Agriculture

"A university exists first of all to help each student who enters its doors develop himself or herself to the fullest of their capacity. The Kansas heartland has proven to be a stimulating setting where the accumulation of humanity's past experience and the search for new knowledge can be shared by the wonderfully diverse people who are attracted here. The rigorous environment of the Flint Hills and the Great Plains set a tone of directness and a willingness to openly search together for ways of using knowledge to better serve our fellow human beings."

**Robert Kruh**  
Dean Of Graduate School

"Kansans have a strong tradition of self-reliance, and they value education as a means of improving their lives. They are fortunate that Kansas State University provides rich opportunities for study at all levels in an atmosphere where students and faculty members can work closely together in preparing a better future for the next generation."

# Turmoiled

**W**ithin the ivory tower of Anderson Hall, several alterations were made in K-State's administrative structure.

Deleting the positions of Vice President for Academic Affairs and Vice President for Agriculture, President Duane Acker reorganized his administrative cabinet.

In August 1980, Owen Koeppe filled the position of Provost. According to Acker, the new office was created for more efficient administrative communication. Under the new framework, all deans will report directly to Koeppe, instead of two positions as in the past.

A second reorganizational program began in the Spring of 1980, when Vice President Roger Mitchell of the College of Agriculture announced that he wanted to reorganize the college. Controversy arose and the project was immediately shelved by Acker.

Acker, under pressure to decide whether the college needed reorganization, set up a committee to oversee the problem.

Under the reorganization plan, the titles of vice president, dean and director of the Agriculture Experiment Station would fall

---

# college experiences change

under the executive in the administration of the College of Agriculture.

The 1980 fall semester brought changes to the College of Agriculture, as John Dunbar, previously dean of the Cooperative Extension Service, was chosen as the college's new dean and director.

Dunbar said he was "overjoyed" to learn he had been selected as the new dean.

"I hope to make K-State's College of Agriculture second to none and to increase its enrollment immediately," he said.

Under Acker's guidance, Dunbar was responsible for selecting candidates to fill the three associate dean positions.

Numerous applications were received by

---

**"There has been too much turmoil in the College of Agriculture."**

---

the search and screening committees. The committees were headed by Don Good, head of Animal Science and Industry, Charles Deyoe, head of Grain Science and

Charles Marr, associate professor in horticulture.

One faculty member said the appointment of Dunbar would mark the end of months of controversy within the department.

"There has been too much turmoil in the College of Agriculture. The old organization was wrong, very wrong," Erle Bartley, professor of animal science and industry and member of the screening committee, said. "It's going to hurt people like Dean Hess and Floyd Smith (director of Agricultural Experiment Station), but if there's going to be a reorganization in the College of Agriculture, people are going to be hurt."

In November, Fred Sobering, previously associate director of the Cooperative Extension Service, was chosen to become associate agricultural dean and director of the Cooperative Extension Service.

Sobering had been at K-State for more than three years and had also been director of the Cooperative Extension Service at North Dakota State University, Fargo.

Dunbar said he was extremely pleased with the committee's selection.

"K-State is lucky to get such a qualified individual as Fred Sobering. I have known Fred for some time and I was the one that encouraged Fred to apply for the associate director of the Cooperative Extension Ser-

---

**"Having one man to make decisions will make the College of Agriculture run more efficiently."**

---

vice in 1977," Dunbar said.

"Dr. Sobering is among one of the most highly respected cooperative extension people in the United States. He is extremely knowledgeable of people in the field and is a leader in agricultural economics as well as cooperative extension," he added.

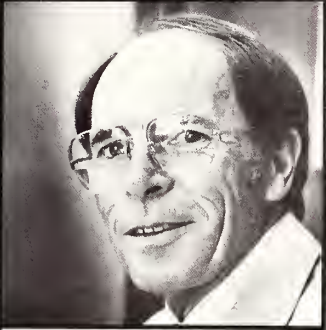

The reorganization plans began to take more shape as David Mugler, previously associate dean in the College of Agriculture, was appointed the new associate agricultural dean and director of resident instruction. He was selected unanimously ➤➤

**Bernard Foerster**  
**Dean Of Architecture And Design**

"An opportunity to:

- \* have contact with friendly, caring people
- \* be exposed to the world and to provincialism
- \* have excellent faculty and leaking roofs
- \* get vocational training and a genuine education
- \* study the past and dream for the future
- \* love the gentle hills
- \* discover that only the unquantifiable has value"

**William Stamey**  
**Dean Of Arts And Science**

"In accordance with our best traditions and because our region is blessed with natural wealth, we can offer students an opportunity to study and to learn in an environment which welcomes new ideas, encourages creativity, and nourishes the intellect."

**Robert Lynn**  
**Dean Of Business Administration**

"Having just returned from visiting an urban university in an area with a major smog problem, the advantages of fresh air and lack of extreme congestion are keenly felt. We have a good setting for intellectual work. Our human environment is equally important and it is good to work among those who have earned a reputation for reliability and high productivity."

**Jorden Utsey**  
**Dean Of Education**

"Through the professional programs provided by the College of Education, students can seek certification in kindergarten and elementary education, middle school teaching, secondary education and junior college teaching. The honors program, and opportunities to gain experience in rural, small town and urban settings, provide students of the College rich and challenging learning opportunities."

**Donald Rathbone**  
**Dean Of Engineering**

"I believe the Kansas heartland offers the advantages of a friendly, tranquil and stable environment. It provides an excellent opportunity for the individual to participate in the many cultural and intellectual activities of a progressive university such as Kansas State."

**Ruth Hoeflin**  
**Dean Of Home Economics**

"Home Economics is at the heart of the family with its 108-year-old history of having a widespread impact on families and communities around the world. The service, knowledge, compassion, friendliness and the expertise of our home economics students and faculty blossom in the heartland of Kansas."

**Donald M. Trotter**  
**Dean Of Veterinary Medicine**

"Beautiful variable scenery, fresh air and sunshine, a growing economy with a balance of agricultural and industry, ever developing cultural opportunities, good educational programs, overall good quality of living."

**Reorganization**

"Dave Mugler was unquestionably the unanimous choice to become the Associate Dean and Director of Resident Instruction," Dunbar said. In his new position, Mugler will be responsible for providing guidance to faculty members in the college. He will also coordinate classes within the College of Agriculture.

"My support for Dave Mugler came because he was highly supported by the Ag students and faculty alike," Randy Tosh, student body president and member of the screening committee, said.

"Being chosen to become Associate Dean and Director of Resident Instruction is a very humbling and gratifying experience," Mugler said.

Mugler said his first responsibility was to the students of K-State.

"My primary interest to to work closely with the student body and to serve in the capacity where I can make the greatest contribution to agricultural students, the College of Ag and to the Agriculture Industry," Mugler said.

President Acker was also pleased by the selection of Mugler.

"I think that Dr. Mugler has the rich experience that will help him in his new responsibility that will serve K-State,"

Craig Chandler

Acker said.

The final step in completing the reorganization was made as Jim Ozburn, previously head of Horticulture Science and Landscape Architecture at the University of Minnesota, Deluth, was selected as the Associate Agricultural Dean and Director of Research.

"Dr Ozburn was recommended highly by Cornell University officials and also by the University of Minnesota and he has the experience as an administrator to do a good job for K-State," Dunbar said.

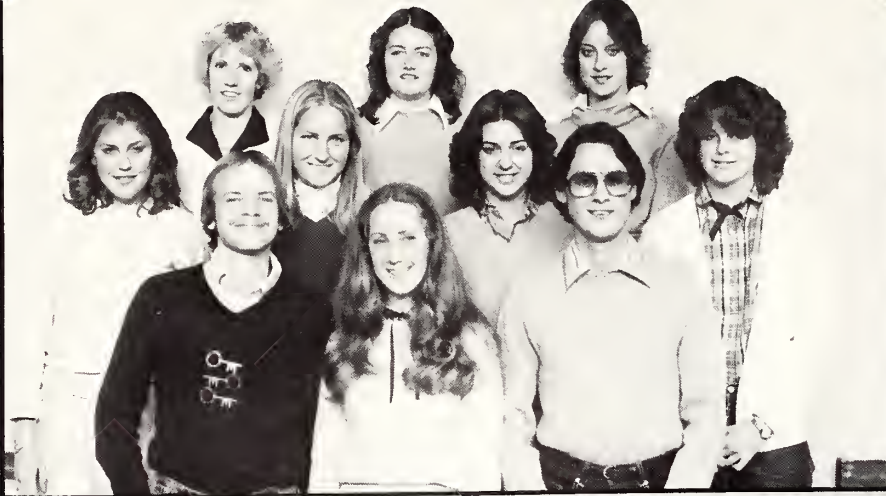

Dunbar, Mugler, and Sobering took their new positions on Jan. 1, 1981. Ozburn took his new position on Mar. 1, 1981.

"Having one man (Dunbar) to make decisions will make the College of Agriculture run more efficiently than having two men responsible as in the old organizational pattern in the College of Agriculture," Acker said. \*

#### **Doug Putnam**

# provide “homey” atmosphere

**T**hey're a dedicated group, an altogether different breed of students. They work through the night, finishing projects, preparing for exams, or editing stories for the newspaper. They're the architecture, veterinary medicine, journalism and art students.

Many of these students have found a home away from home, not in residence halls, fraternity or sorority houses but in buildings such as the Veterinary Medicine complex, the Art Building, Seaton Hall and Kedzie Hall.

"It's a second home!" Kimber Williams, junior in home economics and mass communications, said.

While working on the Collegian, Williams sometimes puts in more than a days work. She added that there are other students on the staff that spend a lot more time on the paper than she does.

"There've been people who have spent 24 hours here," she said.

Holly Grey, junior in art education and graphic design, said that the Art Building seems home-like to her.

"It's kind of junky and cluttered, but there's a secure feeling here. This is the place I go when I want to draw," she said.

Chris Miles, first year student in veterinary medicine, agreed with Grey and Williams.

"It's secure here," she said, referring to the Veterinary Medicine Complex. "It's like going home, almost."

"I made it a point to do all of my studying at school," Miles explained. She spends approximately 53 hours a week in the complex.

Miles said that the whole building is designed for students. Each student has his own desk, with a microscope and other accessories. There is also a locker room where students can go to take showers to relax.

According to Gene Lukow, fifth year student in landscape architecture, students must adapt their life styles in order to spend so much time in one building.

"When I first started here, it was a real pain. I didn't have a free weekend eight weeks in a row!" Lukow said. He explained that architecture students often adapt by "decorating" their studios.

"Everyone can do their own thing," he added. "You can give your studio a 'personal identity.'" ⇨

**“When students become upperclassmen they tend to spend more time in certain buildings on campus.”**

*Laid Back*—Scott Gray, freshman in veterinary medicine, is studying in the Veterinary Medicine Complex during a break in a lecture class.

## Halls become homes

Students use radios, crazy posters, family pictures and even a basketball hoop, to personalize their space, he said.

Like the studios, the newsroom, is personalized with various posters, sayings, and cartoon clippings.

Even though the surroundings have been personalized, Williams and Lukow both agreed that working long hours in one location can get tiresome.

"There are days when you wake up and don't want to get involved," Williams said. "I've almost reached a point of fixed stress, just like a junkie."

"It's kind of neat because it's always the same people. You get to meet and know everybody in your department and everybody's really friendly," she said.

Most of the veterinary medicine students spend a lot of time together, not only during classes, but other things, too, according to Miles.

"We have intramurals together, we play together, we study together. We do a lot of things together," she said.

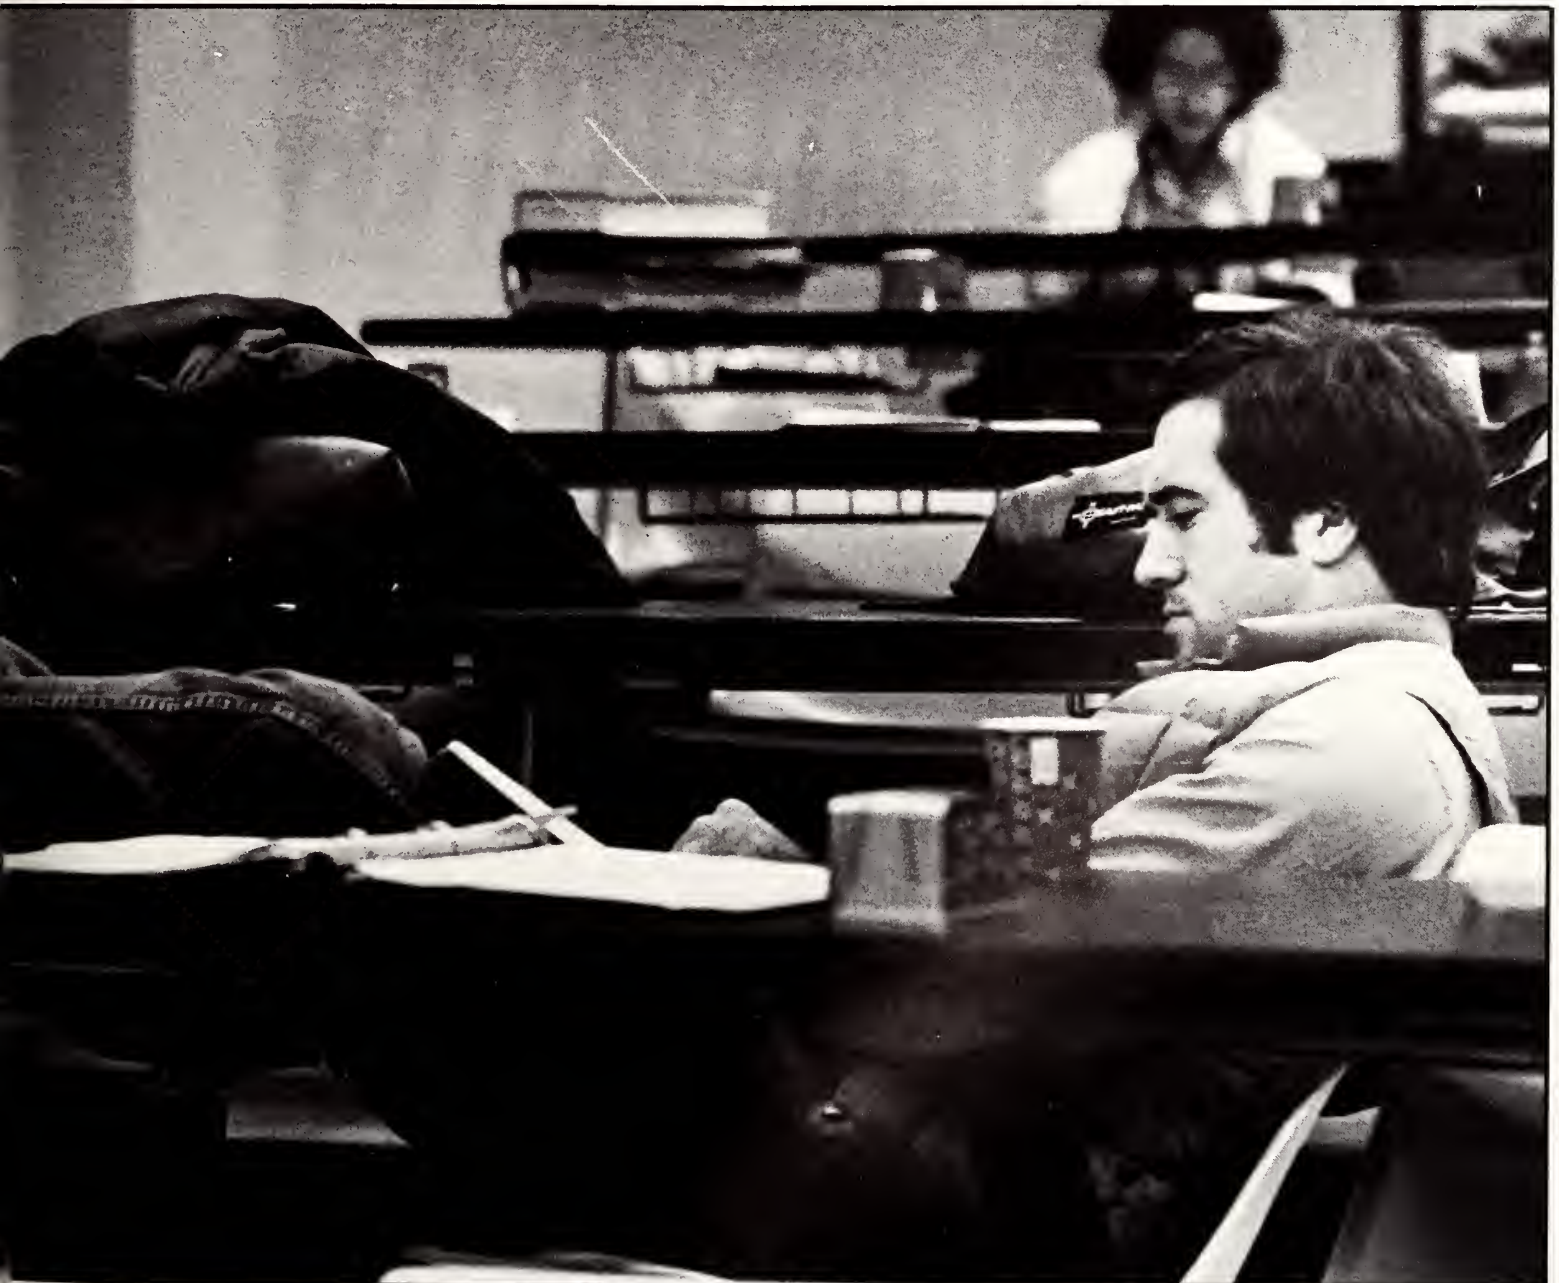

Architecture students also spend a lot of time together, according to Lukow. All-nighters in Seaton Hall are common

among architecture students.

"We take breaks every couple of hours, maybe go to Vern's or Swannie's," he said. "You get real spacey — especially after two or three all-nighters in a row."

For most people, "home is where the heart is." For some students, however, home is where the work is, in Seaton, Kedzie, or any of the other halls on campus. ☼

GTA's  
receive  
additional  
funding

Like many of their undergraduate colleagues, this year some K-State graduate students were eligible to receive financial aid. Through a new monetary program, financial benefits were provided for graduate students.

"Graduate students have only been eligible for regular hourly work study jobs for the past two years," Mike Flores, administrative assistant for student financial aid, said.

According to Flores, the two-year old project was created when the financial aid funds received an increase in federal government allocations.

The \$170,000 increase was designed to benefit the graduate work study program, he said. The new program should benefit both graduate students and the University, Flores added.

Under the new project, Flores said, 65 percent of the salaries for graduate teaching assistants were paid by the financial aid office. The remaining 35 percent was paid by the specific department.

In the past, funds for the full salary were the burden of the departments, he said. The new financial assistance program was initiated by William Feyerharm,

assistant vice president for academic affairs.

According to Feyerharm, the program was a way of "opening a new area of savings for the university, by using federal dollars to supplement state funds."

With the new method, the program has created a savings at the departmental level, Flores added.

Currently the program is channeled into other graduate educational areas.

According to Flores, the extra money is expected to allow departments to create additional graduate teaching positions. This addition of funds should be available for graduate programs and projects within the departments, he added.

"The extra funds must be spent on graduate student orientation costs," Flores said. "It can't be used to buy new office furniture or to add a clerical position."

Graduate students taking advantage of this new program must meet the financial guidelines for work study, Lorene Dahm, administrative officer for student financial assistance, said.

Students must submit the past year's family financial statement in order to qualify for the work study program, Dahm said. The results of this statement are studied by the financial aid office. The office then determines the salary of each assistant, based upon need, he said.

According to Flores, it is not difficult for most graduate assistants to qualify for the new financial aid program. Usually graduate students are not claimed as exemptions on their parent's tax returns. Therefore, with their own income listed upon the statement, they commonly receive the financial assistance, Flores said.

In addition to work study, most graduate students qualify for other financial aid as well, Flores said.

"The majority of graduates in the work study program also take advantage of other financial aid programs, like loans or grants," he added. ➤

**Scoping-** Ming-Chih Lee, second year graduate student in physics, focuses on his experiment while Atilla Aydinli, post-doctoral in physics assists.

## Additional funding

The financial aid for graduate students was not only a recent addition to K-State, but also a new procedure, compared to other universities.

"K-State is unique in its participation in the graduate work study program, because only 12 schools in the country do participate," Flores said.

According to Flores, many schools including the University of Kansas have not tried a graduate student financial program. It is not commonly used because

it places an additional work load on the financial aid offices, he said.

Despite K-State's financial aid office being understaffed, Flores said they handle the extra work load very well.

"The program is definitely on an experimental basis this year," Flores said. "If not run properly, the program could cut into undergraduate work study funds."

If funds were discontinued, Flores said the financial aid office would be forced to terminate undergraduate work study pay

and the departments would return to paying the full salaries until new funds were made available or the positions were discontinued.

"I don't see this sort of thing happening here, but it is a remote possibility," Flores added. \*

## 'The computer lost my grades'

The beginning of each semester usually brings new experiences for undergraduates and graduate students. These occurrences are often found while enrolling, looking over personal transcripts or receiving grades in the mail.

It's one of those experiences that can drive a student's mind to the limit, with the often heard remark 'that damn computer messed up again.'

Computer mess-ups are not new. In fact, when K-State started using computers to handle such administrative functions as transcripts, grades and course schedules, mistakes were commonly made.

"Computer's are almost foolproof and very seldom make mistakes. It is the people that make mistakes by entering the wrong information into the material or entering the material correctly that was given to them. But it might have been the wrong information," Mick Atteberry, junior in computer science, said.

Computers are sophisticated machinery that perform functions by electronics, magnetic tape, or key punched cards.

"The only way computers will make mistakes is if there is a power surge in the electrical circuit. But really it is still a mistake on human error because the power plant should have notified the programming (computer) department

before increasing the power in the electrical circuits," Atteberry said.

The data processing center in Anderson Hall, handles all student records, financial accounts, and other administrative functions. Many people suggest that if student records were handled in the old way, there would be less chance of a mistake.

"Computers have been scheduling

---

**"It's a fact that computers do not make mistakes, people do."**

---

classes for students since 1967," Melvin Kepple, director of data processing said.

Computers handle the process of scheduling class, balancing classes and recording grades.

"The computer is given a line schedule of classes submitted by the administration (Admissions and Records). It then will balance the number of students between the hours of a class," Kepple said. "If a student's schedule has two classes that are being held the same hour, it will reject both classes. The adviser of the student or the student should check his scheduling of classes and be sure the classes are not

the same hour on the same day."

K-State began using the 371-145 computer system in the late 1960's. This system, now 12 to 13 years old, is becoming outdated and the data processing center hopes to go to a new S.I.S. 4341, I.B.M. system, Kepple said.

"The computers we are now using handled student records sufficiently and adequately but we hope to go to this new system because it is an on-line disk programming computer. It will also be able to be used by administration staff and by Admissions and Records beside being used by ourselves (data processing)," Kepple said. "The computer will be in Anderson Hall, but it will have terminals in Fairchild, Farrell, Cardwell and possibly other locations."

According to Kepple, the new system will feature discs and electronic tape, which is relatively inexpensive and can be used several times.

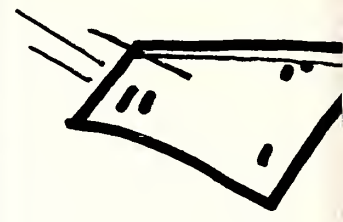

"The computer system 4341, will be able to use electronic tape that costs only \$8 for 2400 feet. We can use this tape several times and it can be edited by writing on it. The computer will also feature 5 megcores that will make the computer processing faster," Kepple said.

## Computer mess ups

"The records of students are tremendous and some of the space that Administration had used to store student records has been filled.

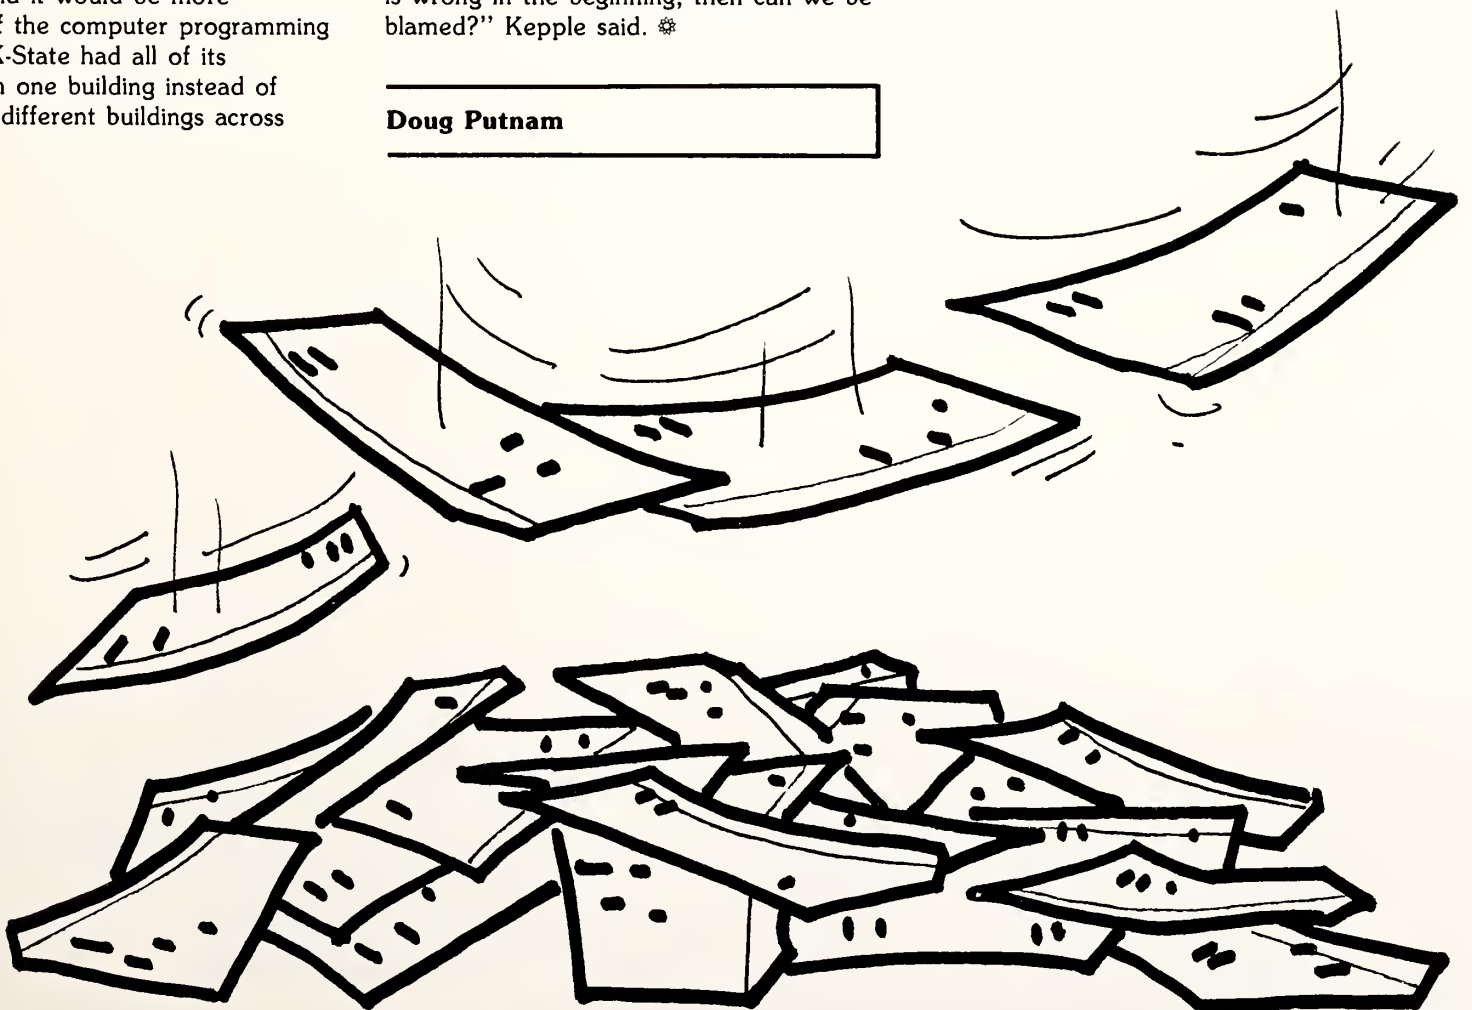

The electronic tape that is used for back-up or (extra copies of transcripts) are being stored in the salt mines near Hutchinson, Kansas. The reason for this is that electronic tape has to be stored in a humidity controlled environment and the salt mines are the best method of controlling humidity that we have," he said.

Kepple said it would be more convenient if the computer programming systems at K-State had all of its operations in one building instead of scattered in different buildings across campus.

If the students at K-State have trouble with their records being in disarray, Kepple said it most likely is not the computer's fault.

"The computer is just a big black dumb box that can use only the information that it is given. The operators of K-State's computers are skilled civil employees. If they make a mistake, they will usually catch it. That is the reason for our back-up systems. I guess you could say, that we are just the tools being used to record information given to us. If this information is wrong in the beginning, then can we be blamed?" Kepple said. \*

# Campus construction provides needed space

**W**hile K-State's enrollment is steadily increasing, new facilities and building additions are being constructed to accommodate student and faculty needs.

The construction of the Recreation Complex, a \$3.5 million sports arena, was completed Oct. 3, 1980.

In February 1979, a record number of students voted in favor of increasing fees to cover the construction of the complex, according to Raydon Robel, Director of Recreation Services.

Full-time students pay \$12 a semester towards the 30-year construction bonds, and \$3 for operation expenses. Part-time students pay \$7.50 a semester, he said.

The complex is used for intramurals, and for sports and recreational activities for students, faculty, and staff.

The Recreation Complex houses a

weight room, 16 racquetball courts, two gyms, a multi-purpose room, men's and women's locker rooms and administrative offices.

In addition to the complex, temporary fences surrounded the site of the general classroom building, located between Dickens and Justin Halls.

The contract for the six story general classroom building was signed in September 1978. The \$6.5 million construction was to be completed in January 1981, but due to delays in construction, the completion date was changed to later in the spring, according to Vincent Cool, university architect.

The general classroom building houses the Departments of Education and Psychology. In addition, it provides laboratory facilities, classrooms, and lecture halls for other university courses.

Like the classroom building, students were able to witness the erection of another structure, a plant sciences building. The building, named Throckmorton Hall after a previous dean of agriculture, was divided into three phases.

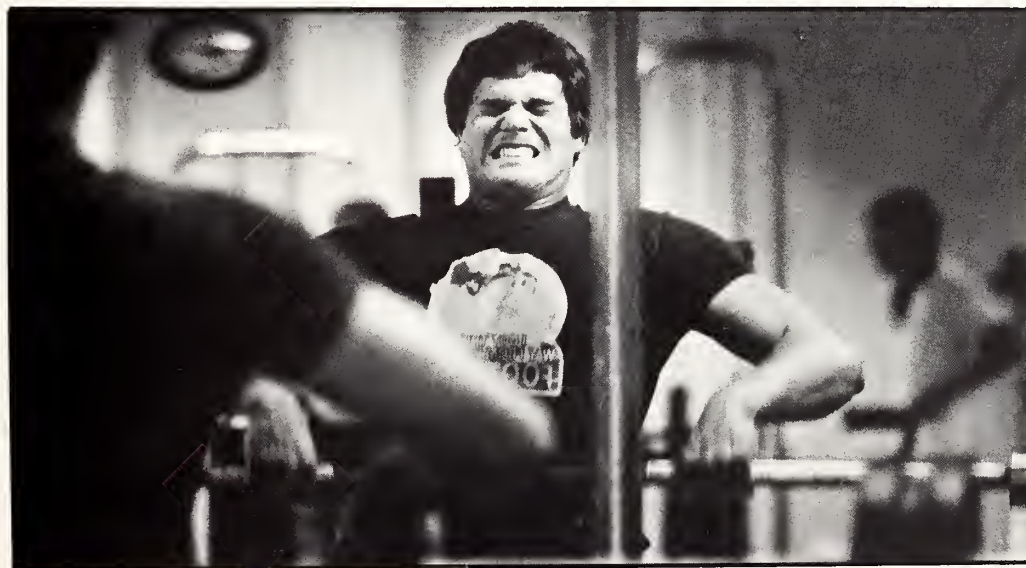

In May 1979, the university signed a contract to construct the \$8.5 million 

**Zigging the Zag** — A student gains additional exercise as he runs down the complex steps.

## Campus construction

facility, according to Cool, which was to be completed by mid-1981 and available for use in the fall.

The plant sciences building houses plant pathology and agronomy offices, teaching laboratories, and some research laboratories. The greenhouses directly behind the main building are used for teaching and research, he said.

"A large percent is research space because as a land-grant university, we have the responsibility to increase productivity of Kansas crops," Cool said.

According to administrators, the main reason for construction of more buildings on campus is because K-State has never caught up with its enrollment. This information, based on the present enrollment indicates a need for 400,000 square feet of additional space in comparison to other regent schools, Cool

said.

As well as keeping up with student enrollment, K-State has to keep up with modern laboratory space, so modern technology can be taught. Modern facilities are important in attracting the best possible faculty to teach and research at K-State, according to Cool.

"The process of planning and acquiring space usually takes approximately five years, requiring check-offs all the way down the line," he said.

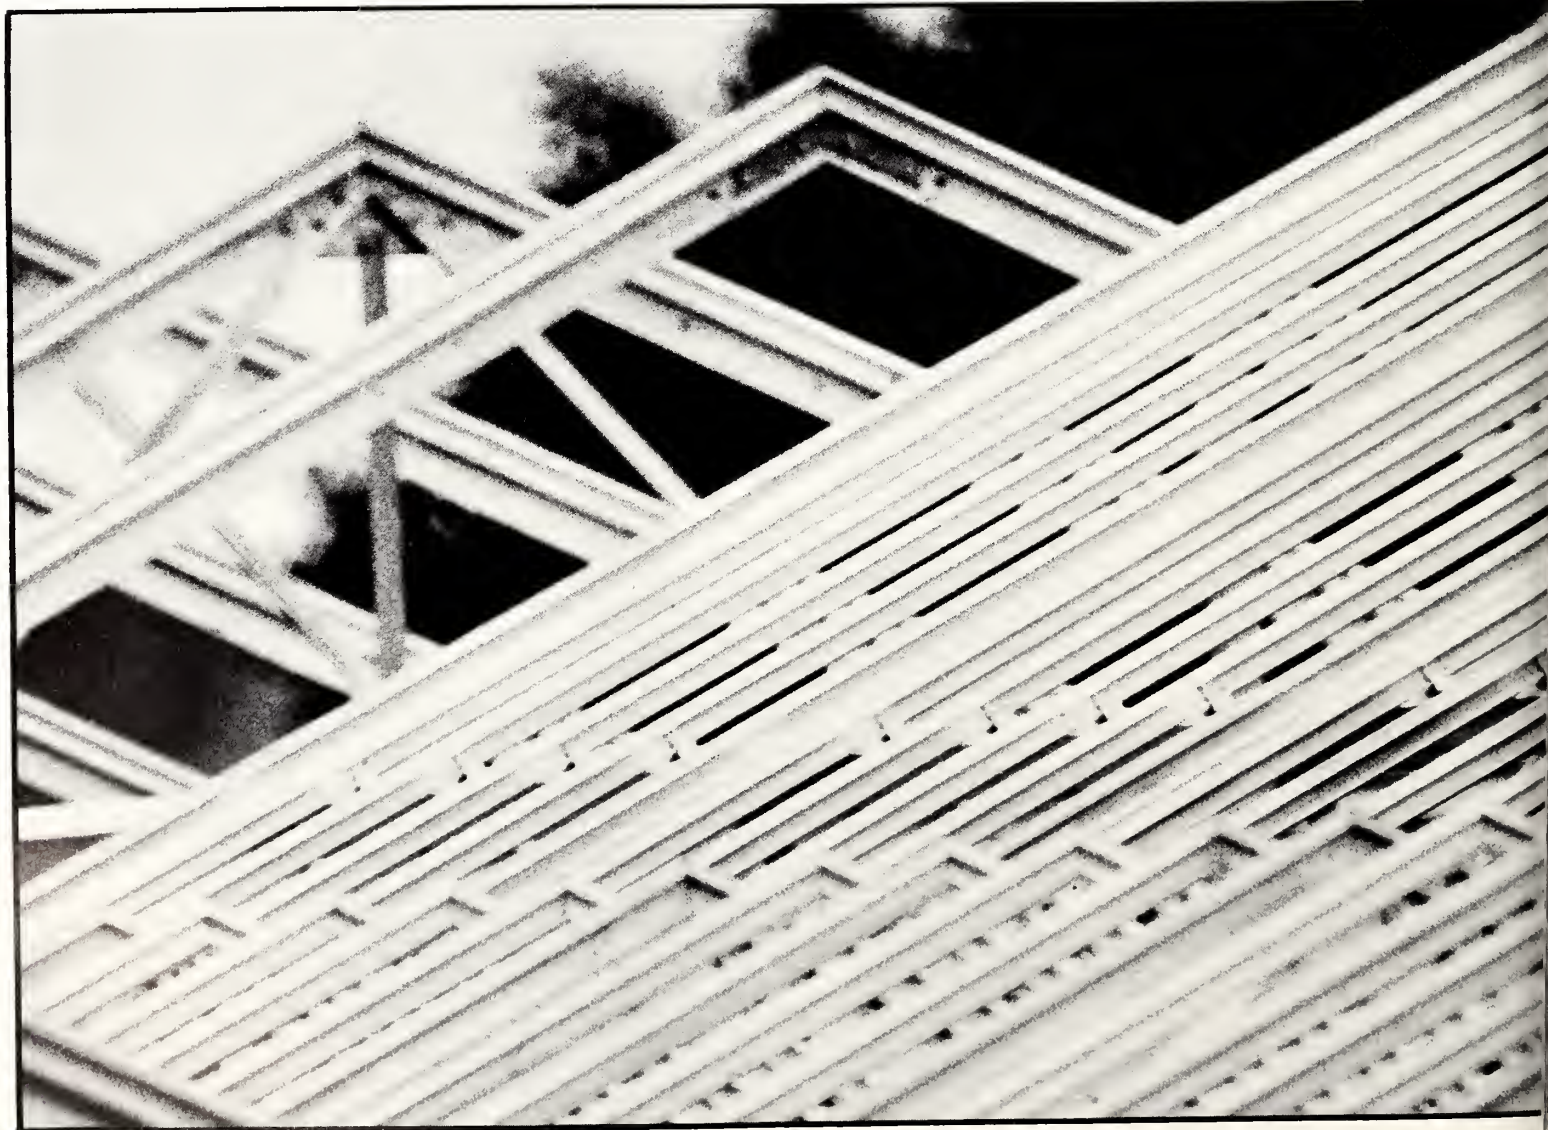

The "check-offs" include brainstorming sessions and meetings of the university long-range planning committee, the university president's approval, and the Board of Regents and State Legislature's approval. Funding for the constructions are provided through state funds.

In addition to the three major construction sites, university architects are

completing plans for additional structures. Future plans for expanding the classroom and research space at K-State include Phase Two of Durland Hall with its construction beginning in March 1981. The addition to Durland Hall provides more space for the Departments of Electrical and Mechanical Engineering, Cool said.

Also in the spring of 1981, according to Cool, a third floor addition will be added to Shellenberger Hall to increase the space for research in milling and baking science. Burt Hall will be remodeled for additional space for the Biochemistry Department. ☼

# Work means more than money

**W**orking in school doesn't just mean studying, for many students it means making money.

To many students, a part time job is a necessity in order to pay for living expenses and education. Many jobs are available on and off campus which offer students flexibility in working hours and the opportunity to make enough money to support themselves and go to school at the same time. Some jobs are unusual and accommodate the student's schedule.

John Duensing, senior in accounting, is a campus firefighter. He lives on the third floor of the University Power Plant in the firemans' quarters provided for him in return for his services.

"Not having to pay for room really helps me cut expenses," he said. "The job works great because I don't go on duty until 5 p.m. two nights a week, and I work a 24 or 36 hour shift on the weekends.

"The only time it interferes with school

is when I have to be on duty and I need to do some research for a paper in the library," he added.

Most students usually work for the money, but the experience is also an important element. Students can gain experience and develop a working style that can carry over until after they graduate.

Scott Darby, senior in journalism and mass communications, has worked on the Collegian  $\Sigma\rightarrow$

Rob Clark

## More than money

advertising staff for five semesters. He sells advertising space to Manhattan merchants and also does layouts.

"Of course I work for the money, but I also work for the experience of it. The job allows me to meet many people that I hope will be important contacts now and later," he said.

Nitinai Bhanganando, senior in fine arts, is employed by a sorority as a house boy serving meals and working in the kitchen.

"I wanted to get experience here at K-State because it's much easier to work here than it is in Thailand," Bhanganando said.

"I work because I wanted to know what it's like to go out and work and make money instead of getting money from home," he added.

Debbie Fisher, senior in marketing, and local shoe store employee said, "I enjoy working and meeting people. I think this experience is very valuable and rewarding."

Many students find that working part time to help themselves get through

school allows them to enjoy the experience of earning their own money. They find that they appreciate and are more proud of something they have worked for. Some students say earning their own money gives them a sense of independence because they have a say in how they spend their money.

"I enjoy the independence I have with my own money," said Lisa Griffith, senior in journalism and mass communications. "I would much rather use my own money to buy things instead of asking my parents."

Some students believe work can also be a method to fill spare time. There are many jobs that offer students the opportunity to meet people and make new friends.

Tom Buckley, senior in correctional administration, works at a local tavern checking ID's and serving refreshments to the patrons of the establishment.

"I'd be in Aggieville at least twice a week anyway, so I figured I might as well work and get paid for it," Buckley said.

Mike Flores, Student Financial

Assistance administrative assistant, said that more students are working part time this year as compared to the past.

"This year employment services has almost doubled the work force from last year," he said.

"We have filled 89.3 percent of work study jobs," he added.

Flores said he believed the reason fewer students were employed last year is because low interest rates were attracting students to take out loans instead of working.

This year students seem to want to work for their money and cut down on the amount of money borrowed. Student loans are still popular among students, but the trend now seems that the students would rather work, he said.

"The student can really gain some good experience and application skills by working," Flores added. \*

# Surgeon keeps perspective

**D**r. Eugene Schneider's folded legs rested against the side of his cluttered desk. He slouched back in the swivel chair. He'd put in a long day.

His office was in a state of disarray—medical manuals, x-ray charts, bandages and rumpled clothing were strewn aimlessly about the room. Baskets, buckets and boxes spilled over with unsorted materials, and file cabinets and bookcases pressed Schneider closely on two sides.

"I'm only a procrastinator with my office," he said, grinning broadly. "Every time I make an effort to clean it up, a student stops by."

Schneider has been head surgeon in the equine department at K-State's Veterinary Hospital since 1972, and he presently teaches more than 400 students.

Some of his teaching takes place in a normal classroom situation, but the sterile

environment of an operating room is where Schneider spends most of his time, guiding delicate surgical procedures.

When he pulls those thin, skintight gloves over his fingers with a quickness that indicates his years of experience, Schneider begins to instruct the students who will be assisting him.

Under the glare of bright lights, he operates and teaches at the same time, asking questions of students without breaking his rapid, surgical stride.

"We don't joke around like the guys of 'MASH,'" he said. "All conversation is directed towards the surgery, and no  $\Sigma \Rightarrow$

**“They’re exposed to the best equipment and they should be equal to the task. Competition is keen here, and we don’t want second best.”**

## Surgeon

monkey business is tolerated. There's a lot of sterility with my presence in the operating room."

It can be a nerve-racking experience when a student first takes up the scalpel alongside Schneider. By his own admission, Schneider is a perfectionist who demands the utmost from each of his students.

"With him, there's no room for error. Everything's gotta be just right," Brad Walker, senior in veterinary medicine, said. "Right now, almost everything in surgery is a challenge, so we sometimes

feel uncomfortable. But a year from now, we'll be hummin' right along."

"They're exposed to the best equipment, and they should be equal to the task," Schneider said. "Competition is keen here, and we don't want second best."

Although he is a stern disciplinarian in the operating room, without his cap and mask Schneider is known to students and associates as a jovial, easy-going man.

"He's a big guy, and he can be real gruff, but actually he's a mellow, soft-hearted kind of guy," Jack Easley, a

surgical associate, said.

"I really do love my students," Schneider said. "They're energetic and their minds are fertile. I try to instill confidence in them with constant encouragement.

"My desire is that every one of them be a better surgeon than I am."

As a surgeon, Schneider has had many accomplishments, although he doesn't like to talk about them.

He hesitates to mention that a type of bone joint fusion he developed for curing lameness in horses is now a recognized surgical procedure around the world.

In 1967, he helped establish a veterinary school in Kenya, where he operated on lions, leopards, elephants, camels, antelopes, zebras and many species of birds before leaving in 1970.

Schneider also spent some time as a surgeon in England and France before coming to K-State in 1972.

In addition to his work here, Schneider frequently travels to other Midwestern states at the request of horse owners who need surgical assistance.

Schneider attributes his skill to a driving dedication to be the best.

"As a student at Colorado State University, I was an angry young man wanting to work my way to the top. It didn't matter who I kicked along the way.

"I also wanted to treat as many animals as I possibly could in one day, and cure every one of them. In the process, I tried to do many things that hadn't been done previously.

"When I first went into practice, I shirked almost all of my family responsibilities. It's not that way now, though. Jesus Christ comes first, then my family and others, and then my job.

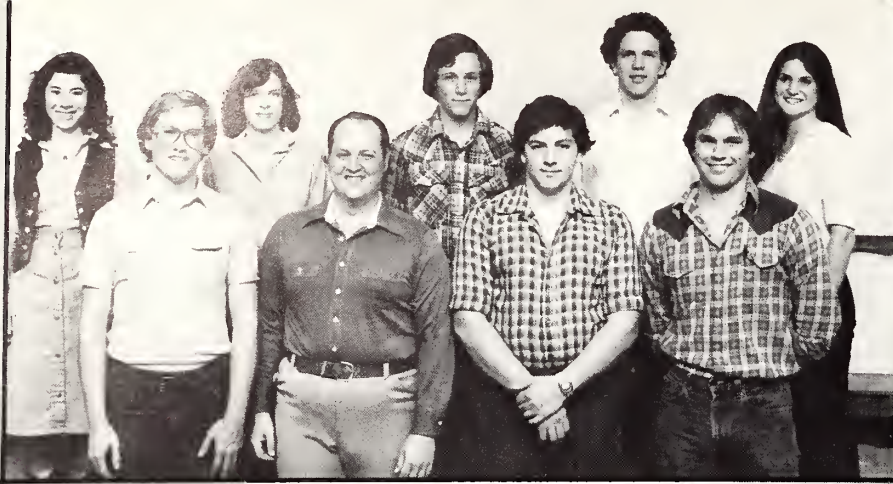

"Besides the teaching and surgery, a big part of my job is encouraging others. People spend too much time tearing each other down. I guess my philosophy is that we're here to bless and serve each other, and I'll do what I can to help strengthen another person." ❁

# The Advisor is

**S**ometimes things go wrong. Some K-State students who think they are on their way toward commencement, receive a graduation check stating they are lacking credit hours or course requirements toward their degree program.

Unnecessary delays in graduation and incorrect credit hours can be remedied if students would familiarize themselves with their degree requirements outlined in the K-State Bulletin and not rely so heavily on an advisor, according to Jack Carpenter, associate dean of the College of Arts and Sciences.

"In a University this size, misadvising could happen, but it doesn't happen as often as people say it does," Lillian Bajich, arts and sciences general student

advisor, said.

"If there is a problem in advising, an advisor should first admit they misadvised a student. They should then write a letter and talk to the head of the department or to the dean of that college to see if a course can be waived, if there are any substitutions, or set up an independent study course," Bajich said.

Bajich said sometimes students don't try to work out their advising problems with their colleges. They play a very passive role which results in them staying an extra semester.

"They take the burden upon themselves because they don't know something might be worked out," Bajich said. "But sometimes things can be worked out."

"Students and advisors should know what can be done. It's a student's responsibility to know requirements as well as an advisor's," Bajich said.

"If a student comes to me and says he was misadvised, first I would contact his advisor to see if he was in fact misadvised and if there really was a mistake," Carpenter said. "Then there are various things we can do."

Carpenter said they can set up a problems course, arrange to take an extra course, or if a student is trying to graduate that semester we would carefully reevaluate his transcript. Carpenter said sometimes a course might be listed as an elective on a student's transcript that might satisfy a course requirement.

"K-State degree programs are very

## Misadvice

flexible. A student can pick up additional hours toward their degree with programs such as intersession and correspondence courses," he said.

According to Carpenter, sometimes students take courses that they think satisfy a requirement and sometimes they don't.

"Students can petition a course so it does count toward their graduation requirements," he said.

"If students were really careful about their own progress toward graduation they should start periodic checks to see where they stand. They should ask themselves, 'Have I satisfied my requirements so I won't have any problems graduating?' Carpenter said.

"Everybody wants the students to graduate on time and with cooperation between the student and advisor the system will work. But the student must take the responsibility," Carpenter said.

Bajich said sometimes mistakes come in when students call the Registrars Office in Anderson Hall and ask for their total number of hours. "That's exactly what they get. It includes: hours of 'F,' remedial classes, in fact everything they have taken at K-State."

It is up to the colleges to know a student's hours which satisfy the requirements in order for him to receive a degree.

Bajich said each college grants students' degrees so they are responsible for applying the hours to that degree program.

"I have been working with one advisor during my whole duration at K-State and she advised me on the classes that I needed to fulfill the requirements for my degree," Erwin Lax, senior in social sciences, said.

"After a graduation check I found that I needed more hours than I had been led to believe by my advisor. I thought I

needed 11 hours to graduate this semester (fall) and after this graduation check — I needed 40 hours," Lax said.

Lax said after this happened he went to see his advisor about the matter.

"My advisor refigured my hours and they came out the same as the graduation check," Lax said.

"What she had done was figured in some hours twice that were retakes. She said she wasn't aware of my anticipated graduation and claimed she had not told me I was supposed to graduate in December as a means to cover up her mistake," Lax said.

---

**"After a graduation check I found that I needed more hours than I had been lead to believe by my advisor. I thought I needed 11 hours to graduate this semester(fall) and after this graduation check — I needed 40 hours."**

---

"I couldn't prove what had happened because there was nothing in writing and therefore I was a victim of misadvising. I had to rearrange my class schedule so that I could at least graduate in May," he said.

"I would advise a freshman entering K-State to make sure they keep copies of their own records and make sure they get all forms of advising in writing," according to Lax.

Lax said he thought he had a very concerned advisor who was interested in his future and career.

"I put all of my faith in her and as it turned out I ended up getting screwed," he said.

"Sometimes mistakes come in when a

student talks to his advisor and they set up a long range graduation plan. The student might withdraw, drop a course and they still think they can graduate on time," Bajich said.

"I did my own long range planning toward graduation without the aid of a faculty advisor and it created problems," Lee Willis, senior in mechanical engineering and business administration, said.

"As a result of not taking the prerequisites that were needed for some of the more important courses, I have to come back an additional semester to complete degree requirements," Willis said.

"I had a lot of advisors, actually too many, trying to tell me what to do. I was being juggled around so I took it upon myself to limit my advisors to one and consult her on class scheduling for future semesters," Willis said.

Planning to graduate in May of 1981, Willis found when enrolling for the spring semester that one required course was only offered during the fall semester. Therefore he will have to return in the fall of 1981 to complete graduation requirements.

"I lightened my semester load to 13 hours a semester so that I could expand the time required for graduation to carry an even course load," Willis said.

"I would recommend that all in-coming freshmen get one advisor they can trust and outline the courses they need to take for four years and stick with that schedule."

"Make sure they are advised about dropping courses," Willis said.

"Because the advisor and student are busy, they can overlook almost anything," Bajich said. ✪

# Colloquium course summons experts

**F**ishing, hunting, law suits, film production, teenage drug abuse and "big-name" journalists share common ground in the National Affairs Colloquium class. The class, offered through the journalism department, is "taught" by David Hacker, visiting professor in journalism.

The class meets weekly from 1-4 p.m. in the K-State Union, and gives students the chance to talk on a personal level with big-name journalists.

Through personal contact, Hacker invites writers, editors, producers, advertising professionals and lawyers to visit the colloquium.

Students must have special permission from Hacker to enroll in the class and are selected by Hacker for effective two-way communications between the guests and the students.

The class structure is very informal and students are free to get up and serve themselves coffee or iced tea furnished by the Union at any point.

Hacker was a founding editor of the *National Observer*, a Washington D.C. weekly newspaper founded in 1962,

which folded in 1977.

"When I first came to K-State, I wondered what I could do to take advantage of my experiences to help the K-State students," Hacker said.

"When I was going to Harvard, I took an International Affairs Program which was a 4-5 hour seminar meeting with the people who made decisions, who ran government and ran the country. We learned how these people made the decisions which were being made," Hacker said.

According to Hacker the students of the International Affairs Program met on an equal level with these ranking officials, and were not intimidated for asking silly questions.

"Most of the people we met with were secretaries or assistant secretaries of government, and I always thought that sometime I would have my own version of the class."

To start the class, Hacker sent a memorandum proposing the class to then head of the journalism department Walter Bunge.

Outlined in Hacker's proposal were a Σ⇒

# Colloquium

list of possible guest speakers and a description of how the class was to be structured.

"He (Bunge) seemed enthusiastic about the whole idea and took the proposal to the curriculum committee," Hacker said.

The committee liked the proposal and gave Hacker the go-ahead. Thus, the class was added to the class schedule.

However, there was one important thing lacking from the proposal, and that was how the class was to be funded.

"I had heard that certain foundations granted money for this type of project," Hacker said.

So Hacker sent a memo similar to the one presented at K-State to the Gannett Foundation in Rochester, New York.

Three months later, the foundation responded positively to the proposal and granted \$5,000 for the first year's class, in 1978.

The Gannett Foundation is still contributing money for the class, increasing its gift in 1980 to \$6,000 to allow for inflation.

The grant is used for the speakers' plane fares, and for any food and lodging on the trip to Manhattan.

As the class is operated, students can ask the speaker anything about any subject. There is no lecture, it is strictly

informal, and journalism isn't always one of the topics discussed.

For example Grant Sanborn, K-State graduate and copy editor for a South Dakota newspaper, commented about a house of ill repute in a town called Deadwood. The point was argued whether the women had an occupation or a profession.

In a serious legal discussion where an editor of a paper was accused of hounding a city judge to death, the discussion was interrupted with: "Do you like duck hunting?" "Have you been yet this year?"

Sometimes if the speaker stays in town the class reconvenes later at one of Manhattan's private clubs.

Students like the class because it enables them to learn in a relaxed atmosphere.

"You learn a lot from professional people because they've been there and have been through more than I have at this point. I might not be able to use everything they say now but I will be able to in the future," Kathy Witherspoon, senior in journalism, said.

"Most students will never realize in their K-State life what they have learned. It's an inspirational learning which pays dividends later," Hacker said.

There are no exams in the class, and Hacker stresses that spontaneity is crucial.

The class is unique because it is built entirely around the 15 guests.

The success of the class lies with how much the students get out of the class.

"You could tell that the speakers were really interested in what we thought because they were always asking us our opinions," Mike Wilson, senior in journalism and political science, said.

"You see people who have been there and it tends to sober you up," he said.

"It's a good class because it lets you talk to professionals in the field of journalism from radio and T.V., film producers, and people on special assignments," Greg Coonrod, senior in journalism and business, said.

"It shows you how tough competition is in the real world and emphasizes how little journalists get paid," Coonrod added.

"It ought to be called the Colloquium in Discouraging Would-be Journalists," Coonrod said. ✽

# Relaxing the stress away

**T**ests, homework, the car won't run, we'll be late for the game, interruptions and deadlines. Though college is a learning institution, it is also filled with stress. According to statistics, stress related disorders are the leading killer in our society.

Stress related problems interrupt our daily lives constantly. However, individuals can now deal with stress through biofeedback training that is offered through K-State's counseling services.

"We can now deal with stress through relaxation that biofeedback offers an individual," David Danskin, professor in student development, said.

Biofeedback is a technique of seeking to control one's emotions by using devices to train oneself to modify involuntary body functions, according to Jon Lewis, assistant professor at the University Counseling Center.

K-State's biofeedback training has been offered to students since 1973. Danskin began the program because he thought it would help the students improve their grades and also deal with stress related problems.

"Biofeedback is a method that allows the individual to get some signals back from the body. It lets us know what state we are in," Lewis added.

According to the two professors, biofeedback can help students in two ways.

"It helps them relax and release tension that causes stress and also helps the student do better on exams," Danskin said. "Through biofeedback, we learn to voluntarily control our bodily functions, both in the mind and the body."

In Holtz Hall, K-State students can use the various biofeedback machines.

"We now offer biofeedback techniques that allow students to actually see the tension in their body," Danskin said.

"Biofeedback training is on machines like the skin temperature machine or muscle relaxation machine. These machines actually measure the tension in our bodies," he said.

The skin temperature machine is attached to the finger and measures the temperature in the hands.

"The idea being, the more tense you are the lower the temperature is going to be. The more relaxed you become the blood vessels in the extremities tend to open up and they get warmer. This can monitor the degree of tension or relaxation you have," Lewis added.

"The optimum temperature in the hands is 95.5 degrees or more," Danskin said. "A person can learn how to get the  $\Rightarrow$

Pohlman.

hands this warm by utilizing biofeedback practice."

Another technique employed by Danskin is placing electrodes on the individual's forehead and measuring the tension of the muscles of the individual.

"Many of us who think we are in a relaxed state are really very tense. Through the use of this technique, it allows us to really see how tense we are and then we can employ relaxation techniques that will reduce the stress levels of the body," Danskin said.

"Our daily lives are more complicated because we go from one situation to another. We don't give our bodies a chance to come down to a point of relaxation," Lewis said. "Instead of the

level going up and then coming back down, they stay at a high level."

According to Lewis, the biofeedback exercises break that pattern of tension levels going up. Through the exercises, they allow the tension level to fluctuate.

"A person should build times during the day where he can close his eyes and sit, relax and daydream about a place that is very comfortable, to let some of the tension out," he said.

Danskin agreed that the majority of K-State students could benefit from using biofeedback techniques.

"Biofeedback can help us become more relaxed and to still our minds and also to become relaxed in our body, so that we may actually be able to visualize events in

our mind," Danskin said.

Biofeedback training could help many students with stress related disorders like high blood pressure, asthma, migraine headaches and even heart attacks.

"Biofeedback training is directed at helping students manage their own stress. K-State has many students who will have high blood pressure," he said. "I figure that out of the 20,000 students at K-State, 3,000 will end up having high blood pressure, 2,000 with migraine headaches and 800 to 1,000 with ulcers. They will also spend 40 to 50,000 dollars on medication to deal with these stress related problems."

"With biofeedback training many of these individuals would be able to relinquish the medication and also be healthier," Danskin said.

Biofeedback is not a medication, but a self-controlling process that the student develops and helps themselves deal with everyday problems, he said.

"Biofeedback is as good as the individual wants to make it. With continual practice, biofeedback is very effective," Danskin said. "What biofeedback does is increase the blood flow through an individual's body and relaxing him."

Biofeedback helps the person voluntarily control his mind. The person unconsciously does control his mind and it is the mind that causes the stress.

"Biofeedback is really getting a physiological feeling on how to relax and regulate your mind and body," Danskin concluded. \*

# Student involvement

Some students feel that University involvement may be an asset in obtaining certain positions in the job market.

"I am involved in extracurricular activities because I need to stay active, I like to be involved, and I enjoy being involved because it makes me feel at home in the university," David Hogeboom, junior in radio and TV, said.

"My overall campus involvement is not geared toward my major but more toward self-fulfillment," Hogeboom said. "It is important to me to know where I am, to be comfortable and to be very involved — it will be just as important when I get a job — becoming an important part of that job," he said.

"I am involved because it makes me feel like I have more of a reason for being in school other than class work,"

Marjorie Boyd, sophomore in radio and TV, said.

"I enjoy working with people. It enhances my leadership abilities and it helped my four years as an undergraduate pass quickly," Billy Williams, graduate student in counseling, said.

"Being involved with Union Governing Board (UGB) has given me a definite insight on how the university functions as a whole," Philip Atkins, senior in food science, said. "Also, UGB has given me a chance in dealing with the administration, to make policy decisions concerning the university and in dealing with other students."

Agreeing with students, administrators feel that employers seem to be interested in students who take an active role in the university or community and show leadership ability.

photos by Craig Chandler

# avored

"Outside school work activities are very important," Bruce Laughlin, director of the career planning and placement center, said. "All employers ask about college activities."

"We suggest that all students get involved in the university because employers see involvement in extracurricular activities as an asset," David Kraus, assistant director of the center, said.

"Not only do employers want to see involvement, they also want to see evidence of leadership ability," Kraus said.

"Nearly all jobs require a lot of communication and human relationships," Laughlin said. "A student's extracurricular activities have become more important to employers in identifying those students that are capable and interested in working with other people."

"Outside activities are used as a measuring stick for leadership potential, unselfishness, and a student's ability to work with others," Laughlin said. "Also, it is an index to measuring a student's work capacity and productivity."

According to Laughlin, extracurricular activities usually indicate to an employer, motivation, involvement and good work traits. It can be beneficial if activities that a student is involved in are relevant to his professional career objective. Leadership positions, fraternity and sorority affiliation, campus wide activities, academic awards, and community programs paint a picture of a good student. Σ⇒

## Involvement

"For many types of jobs, outside activities are as important as academic work," Laughlin said. "For example, those students seeking sales positions will be evaluated more carefully by employers. They usually are more interested in the students' involvement in extracurricular activities than academic work. Usually a satisfactory level of classroom performance is sufficient."

"The absence of extracurricular activities can sometimes be discarded if students work while attending school," Laughlin said.

"Students with low grade point averages sometimes have to raise a family or work to put themselves through school; sometimes these can be an asset when students apply for a job," Kraus said.

"Large well-organized companies have not changed their recruiting tactics over the years, but they do seek stars (students) that are well-rounded," Laughlin said.

"There is no single answer to which is more important — extracurricular activities, grade point averages or work experience," Laughlin said.

"We cannot generalize on just which of the three is more important, but related to the students' field of study, all of them are important depending on the nature of the job," Kraus said. "As a matter of fact all three are important and employers usually look for students with a balance of all of them."

"Sometimes it depends on the type of

work whether or not an employer will put heavy emphasis on extracurricular activities."

"Most of the time research jobs do not stress a lot of extracurricular activities."

"A position with a major research firm — grades are most important," Laughlin said. "A sales job with a retail organization — activities are most important."

"Students should sell what they have the most of. In an interview situation an employer will look at a student's qualification: jobs, grades, special training, hobbies, and extracurricular activities. They want to see how well-rounded they are."

"Employers are interested in potential leaders with organizational talent, communication skills and the ability to work with others, these are the necessary ingredients to being successful," Kraus said.

"As long as a student has excelled in something and show they are good at it, businesses translate this ability into their particular company," Laughlin said.

"Some students are offered jobs before they graduate because they show that they can be successful," Kraus said.

"We encourage freshmen to get involved with the career symposium service that we offer in the center.

"In this service we bring speakers who have successfully excelled in their careers. They tell them what they had to do to get where they are now, how they did it, what their salaries are and the necessary skills that are essential in their field," Kraus said. ❁

# Union reflects on 25

**“R**eferendum Question #1: To impose a student fee increase of \$5 per semester, \$2 for summer school. Proceeds of fee will not directly benefit anyone for at least fifteen years.”

Sounds ridiculous? It happened. In a sense, anyway. And it happened with the largest percentage of student body voter turnout in K-State history.

Of course, the 1938 referendum for a fee increase to raise money for a student union did not include the fifteen-year waiting period.

When 72.2 percent of the student body turned out to vote more than three to one in favor of funding a student union, most expected construction within a few weeks. But due to World War II, the construction had to be postponed and again by the time they had a building committee formed and plans under way in the late 1940's the Korean War delayed construction.

In 1947 a temporary barracks was brought to campus, located in what is now the Union parking lot area. The barracks consisted mainly of a snack bar, an area to play cards and one table tennis table,

according to a history written by Walt Smith, director of the K-State Union.

Progress toward obtaining a student union was given a boost in 1951 when President McCain appointed five students and five faculty members to a student union planning committee.

Two years later the Union Governing Board was established and in 1954 semester fees for the as yet non-existent building were increased.

Finally, on March 8, 1956, fifteen years after the first student fees for it were collected, the K-State Union officially opened for business. Overall costs for the original building amounted to \$1,650,000.

The Union's grand opening was covered extensively by the K-State Collegian and the K-Stater, an alumni publication, as well as being noted in papers across Kansas.

The Union Governing Board approved "The K-State Union" as the official name of the building to convey the feeling that it was a building for the entire university family — not just students.

In 1961, the first addition was started. Because of the tremendous increase in

# year existence, looks to the future

enrollment, 40,000 square feet of space was added without an increase in fees. The addition consisted of the southeast portion of the present building at a cost of \$900,000.

The final addition was began in 1968 at a cost of 2.88 million dollars. Completed in 1970, the addition was just slightly less than the size of the original building.

Total construction costs of the Union amounted to 5.4 million dollars. In 1978 the value of the building was placed at 14 million dollars. According to Smith, it would be impossible to build additions of large size due to the high costs of construction.

The Union operates self-sufficiently and depends on sales and student fees as its only income. Students currently pay \$23 per semester toward the Union.

Non-income areas make up almost one-half of the total square footage of the Union and are supported by the income areas in a break-even operation, according to Smith.

Smith has been with the Union for 24 of its 25-year existence. Starting as an accountant in 1957, Smith was named

director in 1973 after serving both as an assistant and associate director.

"The goals (of the Union) today are basically the same as it was 25 years ago, only we are serving more people," Smith said.

"If there has been a change I would say it is in the attitude of the students toward the Union. We don't have quite as much student involvement in Union programs. Today's students are perhaps goal orientated toward their degree and more career minded. It's probably a matter of time (that the student has)," Smith said.

Looking toward the future, Smith did not foresee major physical changes in the Union, but talked about three smaller project ideas.

"I would envision a kind of mall area between the Union and Seaton," Smith said. "We have talked about an ice cream parlor. Certainly the information desk needs expanding and I could envision this idea with the mall area. We have the possibility there for a beautiful area."

"I don't know if we can do this out of our operational budget. If we want it done

we'll probably have to do it ourself. The university is going to be tight for money."

An outdoor amphitheatre on the east side of the Union was also in the idea stage, Smith said.

"The idea is to keep it as rustic as possible — perhaps a raised stage area. We could move some of the entertainment from the Catskellar, or speakers from Issues and Ideas, outside during the spring, summer and fall. Certainly, with the shade on the east side it would be comfortable. We usually get a cool breeze on that side of the building also."

Overcrowding in the cafeteria area has sparked discussion of expansion there.

"We don't know what we are going to do yet. Short of building on, we are kind of limited. It's been mentioned that we could put stairs up through the ceiling to the KSU room but we really haven't sat down and studied it out", Smith said. ❄

# Magic is key to degree

The power of illusion and sleight of hand is helping one K-State student through college. A majority of K-State students take out loans, receive scholarships and apply for grants but for Nicholas de Saint-Erne freshman in veterinary medicine, magic is the key to a degree.

Because of his magical abilities, de Saint-Erne decided to put them to use to finance his college education.

"I pay my full load through school on the magic shows I do. I pay for books, tuition and living expenses through performing magic shows and teaching it. A professional magician is someone who does magic for a living and it is his only source of income. A semi-professional magician does magic for money, but it is not his only source of income," he said.

"I seem to fall in between those two descriptions because I am paying my way through school and it's my only source of income. When I get out of school I will be semi-professional because I'll do it in my spare time, de Saint-Erne said.

An interest in magic was formed early

in life for de Saint-Erne, one that he began to cultivate in the first grade. This interest has carried him through most of his teen and adult years.

"My first encounter using magic was when I was in first grade. My sister gave me a magic kit. I did my first show for some of my friends and class mates," he said.

Even at an early age de Saint-Erne was able to use his magic abilities to further his education. He often incorporated magic into a number of his classes while in secondary school to add interest to the often mundane assignments given by his teachers.

"When I was in 8th grade I read a magic book that showed me how to put on a magic show with a few things around the house. I was suppose to do a book report on this book, but instead I did a magic show in place of the book report. My teacher liked it so well that she had me put on this same show for a class of first and second graders," he said.

"My first big show was in 1973 at The Coca Cola Bottling Plant in Wichita, at a Christmas party. In the spring of 1974 I joined a magic club called 'Wizards of Wichita.' Today, there are 39 professional, semi-professional and amateur members. I've been doing magic for more than nine years," de Saint-Erne said.

De Saint-Erne works Fridays and Saturdays at a local club, and does his studying during the week. "I can walk around and get to know them (the audience) instead of just performing on stage," he said.

"Working with children is probably the hardest thing to do in magic because they are harder to fool. They don't have a long attention span," he said.

De Saint-Erne is not always alone when he performs his magic tricks. Like most magicians he has an assistant, Jocelyn Jenab, junior in biology who has been working with him for about a year.

"I enjoy working as an assistant to Nicholas. I am learning how to perform magic tricks. I am not as skilled at it as Nicholas but hopefully I will be able to perform a magic show as skillfully as he does. I get a big kick out of waiting for the show to start, and watching the audience reactions and responses. I have been working with him for about a year," Jenab said.

De Saint-Erne and Jenab incorporate the traditional magician's trick of making a rabbit appear into their act in a non-traditional manner.

"In this trick de Saint-Erne has a black scarf that he forms into the shape of a rabbit. He takes this black scarf and puts it into a big doll house and makes a black rabbit appear. He then puts this black rabbit back into the doll house and I appear in its place in a black bunny outfit

with ears," Jenab said.

De Saint-Erne has performed all around the country at various T.V. shows, seminars and conventions to keep his repertoire of magic acts up-to-date and to exchange ideas with other magicians.

"I travel around the Midwest going to magic conventions and performing shows," he said.

Along with learning new tricks as a magician, de Saint-Erne also, invents different magic tricks that are introduced to other magicians.

"I invent tricks and sometimes sell them to other magicians at conventions. I invented a magic trick called the IBM

photos by Scott Williams

Cardputer. It is in Japan and a couple other countries," he said.

Even with the notoriety of television and appearing before audiences de Saint-Erne does not want to be a professional magician as a way of life.

"I would not like to do magic as a profession because it would be a serious occupation for me, rather than something that is fun. To do it as a profession it would become more of a pressure and it would take some of the pleasure and satisfaction out of it," de Saint-Erne said. ✨

# Students paid with job training

*Double decker - Lisa Kriese, sophomore in pre-veterinary medicine, hands an ice cream cone to a customer while working at the dairy bar in Call Hall.*

**J**obs are a financial necessity for many students, but there are other reasons for working besides money.

Some students at Call, Shellenberger, and Weber Halls, are using their jobs to gain practical experience in their majors. Call Hall works with students in the dairy areas, Shellenberger with the students in the grain science areas, and Weber with the students in the animal sciences areas. Each campus location produces its specialties and sells them to the public in different ways, but all have one main purpose — to provide experience for the students.

Under the supervision of four full-time employees, students assist in all phases of processing milk and milk products sold at Call Hall. Between 20 to 25 students each semester work at the dairy sales counter and processing plants.

The main objective of the dairy producers at Call Hall is to produce an item that involves teaching, research and extension, Harold Roberts, professor of animal sciences and industry said. Roberts said it is more important for students to learn to make high quality products

instead of competing with the prices at local grocery stores.

"We try to keep prices competitive to outside, but we don't try to undersell it," Roberts said.

Student employees help sell dairy products at the sales counter and process the dairy products in the plant at Call Hall.

"Anybody who wants to get more practical experience, it's for their benefit," Roberts said.

"I'm in food sciences and it works along with my major," Lynn Kessler, sophomore in animal sciences and industry, said. "It gives me a lot of background knowledge to work here. If I go towards dairy, it will help out a lot."

The sales counter in Call Hall is operated by the Department of Animal Sciences and Industry. Dairy products, including ice cream, cheese, milk, and butter are also sold at the counter. The counter also has a fountain service, sells eggs from the department, and sells coffee and doughnuts.

The milk is also delivered to the residence hall food centers. The dairy

processing plant supplies all the milk for the residence halls on campus. Students deliver an average of 500 to 600 gallons a day of milk to the halls, Roberts said. The other dairy products are sold only at Call Hall.

What began two years ago as an idea for "something different" for All-University Open House, has turned into a profitable business for the Bakery Science Club, according to Greg Kobs, senior in bakery science and management and president of the club.

The club had operated the bakery once a year to make doughnuts to hand out at open house. Two years ago, club members tried making bread and found it was extremely profitable, Kobs said. That's when the students decided to try it on a weekly basis. They opened the once-a-week bakery in August 1979.

The members of the club worked through the Department of Grain Sciences and Industry but the department let the students set up the plans.

"Experience is the big thing," Kobs said. "We learn how to run a business, how to market, streamline our processes."

Every Wednesday, the club sells raisin, whole wheat, rye and french breads. It also sells doughnuts, and specialties such as danish pumpernickel bread and pound cakes.

The bread and doughnuts are made in a small experimental lab in Shellenberger. They are kneaded by hand to give students experience in handling dough.

The money the club earns is used to finance club field trips and to replace equipment for the lab.

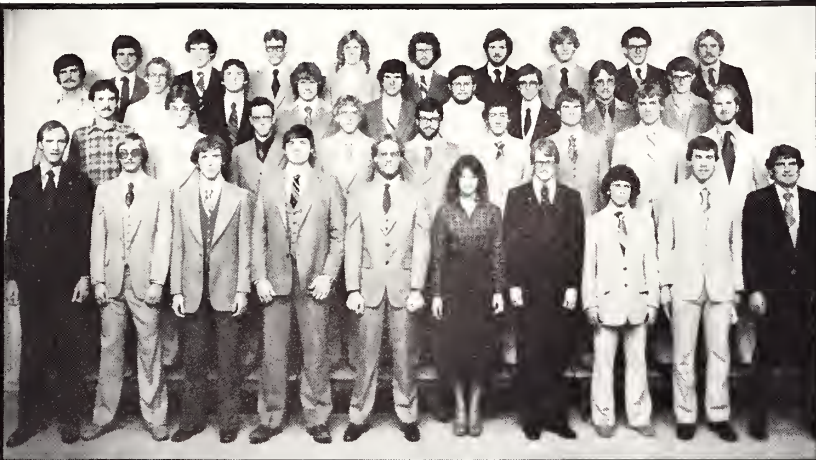

Although most of the 19 student workers are in the Bakery Science Club, membership isn't a requirement to work in the bakery, Kobs said. By enrolling in a one hour course, Grain Science Problems, a student can bake bread three hours a week, he said. Students work for experience and credit — not money.

Cattle, sheep and pigs are killed, processed, cut, packaged and sold weekly in the meat lab in Weber Hall. Ten students process and sell the meat under the supervision of two full-time assistants.

"It's a good learning experience," Mary Lyon, assistant in the meat lab and graduate student in animal sciences and industry, said. "It's the only position you'll ever have where you work from the slaughter to slicing bacon. In an industry, you are just on a line doing one thing." →

*Doughboys- Greg Kobs, senior in bakery science, watches as Jeff Bilyeu, sophomore in milling science, and Ed Reinwald, junior in bakery science, remove danish pumpernickel dough from the mixing bowl in Shellenberger Hall.*

## Experience

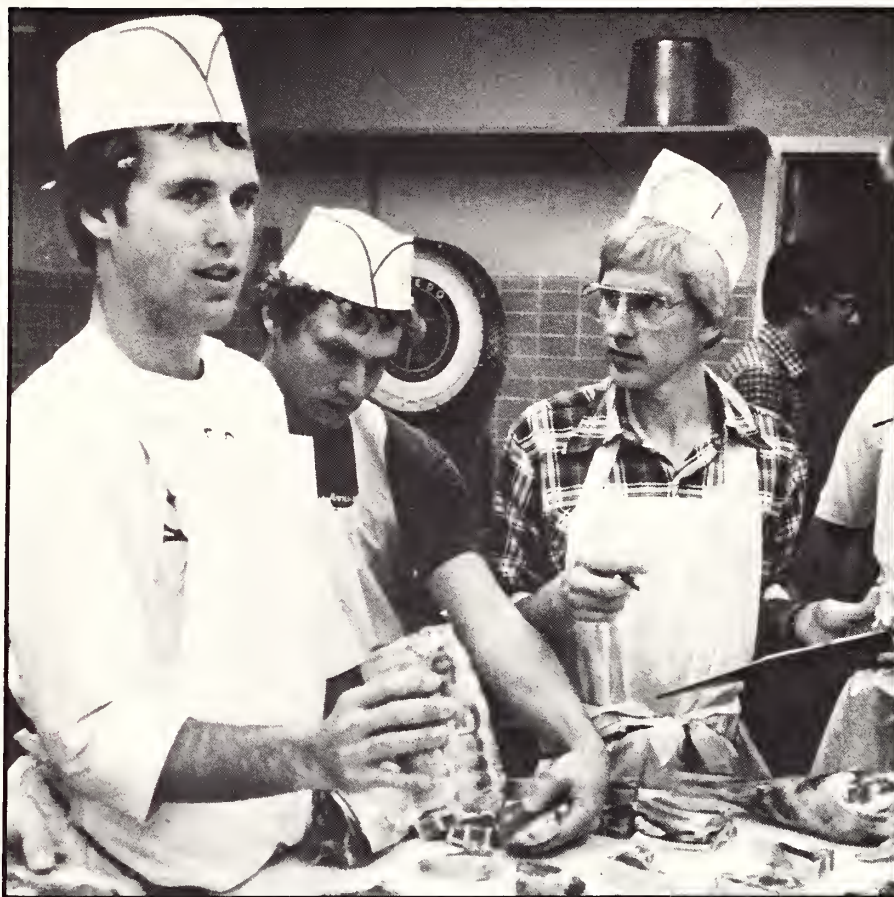

"This is the best experience because they (the students) have to work behind the counter," Lyon said. "They have to represent the school and work with the public. You learn quickly by answering questions and learn about what's going on."

"Originally I came here for the money," Anita Cowley, freshman in animal sciences and industry, said. "But I see how much experience you gain. I'm getting experience working with something related to my major."

The amount of meat sold each week is determined by the amount of research done by faculty members and the lab work done by students in the Department of Animal Sciences and Industry. Annually, an average of 10,000 pounds of lamb, 120,000 pounds of beef, and 30,000 pounds of pork is sold.

"The main thing we have here," Lyon said, "is an outlet for our product and the benefit of teaching students." ❁

What  
job  
interview?

An employment interview is one of the most important events in a person's life. Those 20 or 30 minutes that a student spends with the interviewer can shape the course of his life.

As a result, there is a certain key to help the student in job interviewing.

In going in for an interview, the student should find out the exact place and time of the interview. Being late for an interview is never considered excusable.

"Schedule time to get there and don't schedule yourself too tightly in case the interview runs longer than you expected," Jim Akin, associate director of Career Planning and Placement Center, said.

It is a good idea to research the company that is doing the interviewing.

It is helpful to know how old the company is, what type of services they offer, where it is located, the growth of

the company and their future, Akin said,

It is also essential to be neat and clean. It is imperative that the student dress for the interview with good taste.

In regard to clothes, one must remember that he is applying for a job — not a ball game.

After a student has prepared for the interview, he must concentrate on the interview itself.

Feeling nervous during an interview is a normal emotion. As a matter of fact, a student is expected to be a little nervous.

In combatting nervousness, it is a good idea to remember that the interviewer is there to hire people and not to embarrass them.

"The best way to be in an interview is to be as natural as possible," Akin said.

"The general mode of operation is the interviewer determines how the interview

is to be handled," he said.

Most of the time interviewers follow a simple question and answer routine.

"There is no particular kind of answer that the interviewer looks for. It is the evidence of thought being given to the questions, whether it is technical or general," Akin said.

Akin said the quality of the answer is most important.

"Sometimes it is all right to admit a failure especially if you can show you learned something from it," he said.

The Career Planning and Placement Center offers workshops throughout the semester that teach students how to prepare resumes and offer films that show how an interview is conducted. ❁

# Next . . .

## "Maybe he'll overlook the ketchup on my resume"

**G**ulp!

In exactly five minutes and 32 seconds Claude Clump would be going through his first job interview.

Pacing impatiently and looking at his watch every 25 seconds, Claude finally sat down.

"Oh hell," Claude thought as he sat. "I have one brown sock and one black sock on. But if I shuffle in and keep moving my feet, maybe they won't notice," he reasoned.

Unfortunately, Claude should have been more concerned with things other than the color of his socks.

His hair could have been an advertisement for cooking oil, and his face could have been an ad for facial tissues.

Because of a quick shaving job, Claude's face looked like Custer's last stand, cuts and nicks everywhere. So he tore squares of tissue off to stop the bleeding, but had forgot to take them off.

His physical appearance wasn't enhanced by his choice of clothing either.

The scarlet shirt didn't match the burgundy polka dotted tie, or the orange nylon pants, let alone the plaid yellow and red blazer which looked like it had been slept in for three months.

Nevertheless, our hero was confident.

Mentally he went over and over responses to anticipated questions. He also reviewed the history of the company, which he read over his morning breakfast of chocolate cake and left-over pizza.

He was positive, he knew everything about ACME Co. that he needed to know.

"I'm going to breeze right through this," he told himself and he wrung his clammy, shaky hands.

As he worried, he saw one of his competitors step out of the interviewing office. He was immaculately dressed, cleanly and carefully shaven, and not a hair out of place in his wind-blown look hair style. ➤➤

# ACME EXECUTIVE PLACEMENT SERVICE

I AGREE.  
HE'S A STANDOUT.  
THAT'S OUR MAN!

OK; I'LL TELL  
THE TWO SLOBS ON  
EITHER END, "DON'T CALL  
US; WE'LL CALL YOU."

## Ketchup resumé

"Claude Clump?" the interviewer stepped out and yelled.

Claude jumped to his feet and went over to shake the interviewer's hand.

He should have looked before he walked because not only did he trip over his untied shoe laces, he tripped over the footstool as well.

"What a klutz!" the interviewer thought to himself, but instead of laughing out loud, he offered to help Claude to his feet.

"My name is Ivegot Acne, that was quite a spill you took, let me help you up." As he extended his hand he continued. "I'm assistant vice-president of the ACNE company and I'll be interviewing you for the position of assistant manager of our new ACNE Co. branch in Manhattan."

Claude panicked silently. "I'm in real trouble if they ask me any questions about company history. I read about ACME Co., not ACNE."

"Well Claude, I assumed you've read all about our company," Ivegot said. "do you have any questions you'd like to ask about ACNE?"

"Uh, well, uh, I guess not, I think I understand everything," Claude said.

"Good! Let's get started then. By the way what religion are you?"

"Religion? Sometimes I'm Lutheran, sometimes I'm Catholic . . . depends on what kind of mood I'm in."

"I see. Tell me Claude, how are you and your wife getting along?"

Claude paused, wondering: "He did it again . . . he asked me another illegal question . . . but I don't want to make him mad, so I guess I'll go ahead and answer his question."

"Well sir, I don't have a wife yet."

"Oh ho, I see. Hmmmmm, I see you live in an interesting part of town. That's a Greek area isn't it?" Ivegot asked.

"Yes there are several fraternities and sororities around where I used to live, ha ha ha ha ha ha!!" Claude said, proud of his attempted humor.

Fifteen minutes into the interview, Ivegot kept thinking to himself: "Is this guy for real? He's got real nerve coming in and looking like that . . . I wonder what those white specks all over his face are . . . and the way he's answering these questions!! Sheesh! He must be trying to fake me out or something."

"Well Claude, do you have any questions you'd like to ask about our company now?"

"Yeah, come to think of it I do. When I start to work for you guys, can we be pals or something? I mean like, well, I don't really know anybody, and I really would like to get to know all the hot-shots in the company. You're a hot-shot ain't ya?"

"Uh, well, we'll have to see about that." Ivegot answered hesitantly. "By the way, did you bring a copy of your resume along? I'd like to take a look at it."

Claude stood up, and pulled the mangled resume from his back pocket. The paper looked like Claude had been using it as a paper plate. "I hope he overlooks the ketchup stain on my resume," Claude said to himself.

As he handed the resume to Ivegot, Claude made a last-ditch effort to straighten the crumpled piece of paper.

Ivegot grabbed the paper between his index finger and thumb, not knowing what miracle cure for what disease would be growing on the paper.

"This is quite a resume you've got here Claude. I see your grade point average is a 3.887. That's very impressive."

"Well actually, it's not quite that. Right now I've got a 2.005 grade point, but I'm expecting a good semester, since it's my last one," Claude said.

"Let me ask you this Clyde . . . I mean Claude . . . what do you expect to be doing five years from now? What are you're goals in life?"

"Gee that's a toughie! Let's see . . . well I plan to start out small . . . you know, like being an executive vice-president or something. Then I'll plan to work up from there. I realize that everyone has to start from the bottom, and then work their way up."

Coughing spasmodically, Ivegot concluded the interview. "Well thanks for thinking of us Claude. Don't call us, we'll call you."

Immediately following the interview, Ivegot called the new president of the board of directors.

"Listen to this boss. This real loser of a guy came in and wanted the manager job at our Manhattan branch. He handed me a resume covered with chocolate, ketchup, and God knows what else. Get worse than that! Can you even believe it? And get a load of the name . . . Claude Clump!"

"Excuse me uh, Ivegot . . . are you trying to tell me you won't hire this young man?"

"You've got to be kidding. The only thing he's got going for him is his nose . . . and it's so long he could open a ski resort on it."

"I think you should reconsider . . ."

What do ya mean reconsider? I'm telling you this guy is a loser," Ivegot said.

"And I'm telling you, he's my nephew."

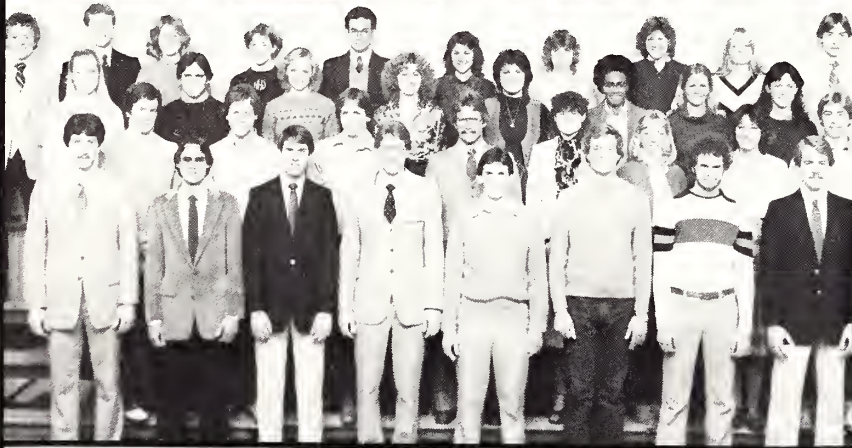

"Like I said . . . The guy has a lot of good qualities . . . I think we could really use him as part of our company . . ."

*Out of line-* During aerobic exercise, the class tries to move in unison. Shelly McMillen, sophomore in journalism and mass communications, and others in the class lose their rhythm during one of the class' first meetings.

## Dance breaks traditional mold

**A** traditional classroom situation: teacher at the head of the class, students taking notes and the occasional class clown napping during lectures.

However, one program at K-State, Rhythmic Aerobics, varies from the traditional norm of the classroom situation.

The program, offered to all students and faculty use card holders, improves the cardiovascular system. The word aerobic means promoting the supply and use of oxygen. The better the supply of oxygen, the more efficiently it can be delivered, helping the body burn fuel (food) to produce energy.

Aerobic exercises are those activities which improve one's ability to take in and deliver oxygen to the body tissues.

"Aerobics got underway (at K-State) in about 1973. There was an aerobics clinic here, we did some reading about it and we thought it was something people would enjoy," Raydon Robel, director of Recreational Services, said.

"It first started with a small tape recorder and 15 to 20 participants. Now we have a big P.A. (public address) system, so it has really grown," Robel said. In its seventh year the class had over 500 members which were mostly female.

"We have to go to a clinic, then we become certified before we can teach the aerobics class," Robbi Beeman, senior in health, physical education and recreation (H.P.E.R.), said.

Many of the girls in the aerobics class said they enjoy the class.

"I like aerobics because it is relaxing, it really keeps me in shape and it gives me a break from the books," Cindy Wilson, sophomore in journalism and mass communications, said.

"It's sort of exercise and dance that makes you feel you are doing something to better yourself," Wilson said.

"I like aerobics for the exercise. I feel I need some type of exercise rather than walking back and forth to class," Laren Messersmith, junior in psychology, said.

The routines are meant to improve coordination, flexibility, balance and agility. ➡

## Aerobics

The class at first was all women but in past semesters there have been a number of males participating. Two seniors in landscape architecture, Rick Barrett and Kurt Kuhlmann, joined the class last spring.

"There's nothing I would rather do than exercise with 500 girls. It's hard to keep your mind on aerobics," Barrett said.

"The reason I went to the class was because Barrett wanted to attend, and because of all the girls. Plus we needed a break from the evening. It's a great way to meet girls," Kuhlmann said.

"I encourage anybody who enjoys the fellowship of a group, wants fantastic body benefits and likes to dance to neat music, to come to aerobics," Leah Hennigh, junior in life science, said. ❁

### Kim Hanzlicek

**Stretch, 1, 2, 3-** Leah Hennigh, junior in life science and course instructor, leads students through aerobic exercises.

**Pulsating Experience-** Mary Ann Anderson, an employee at Student Financial Assistance, checks her pulse after exercising.

Shea. **BOTTOM ROW:** Glenda S. Kersenbrock, Susan K. Linder, Valerie L. Oltman, Brett A. Wolgast, Todd Westgate.

“Get involved” echoed across the Union from all directions. As I stepped through the doors into the magical world of the activities carnival, I was overwhelmed with an atmosphere filled with bright colors, people and balloons. A rainbow colored clown and other costumed characters roamed among the booths and displays.

I was struck, just like a child at a candy counter, not knowing what choice to make. There were so many tables and booths that a childish urge to join everything overcame me.

My varied interests were in turmoil. Which of the 100 clubs represented should I join? As I dodged the crowd of over 1500; organization members, playing the part of carnival barkers, rallied for my attention to come and join their clubs. The daring side of me headed to the KSU Flying club. Σ⇒

## “I think I’ll join . . . . .”

“The purpose of the flying club is to promote flying. The club owns and operates six different aircraft and a simulator,” Andy Kiorpes, vice president, said boastfully.

I could picture myself flying out into the wild blue yonder or better yet leaping from an airplane with the KSU Parachute Club, another organization represented at the carnival.

As I continued, my cultural interests shined through as I passed the Le Cercle Francais and Russian clubs. Or maybe the Hunger Project committee of Manhattan or Big Brothers/Big Sisters was the answer for me.

Walking further, the intellectual side of me was impressed with the number of honorary societies.

“Mortar board is a senior honorary whose purpose is to serve K-State and the surrounding community,” Lynda Hecklemann president said, as I passed the decorated table. Angel Flight was still another possibility.

“Angel Flight is a service organization which also acts as a little sister group to support Arnold Air,” Jennifer Sisney, treasurer, informed the group that had congregated around her table. Ranging from marketing to poultry science, there were curriculum clubs galore.

As I passed the Public Relations

Student Society of America (PRSSA) table, Mary Jacobson, president, pulled me aside.

“PRSSA’s goal is to educate public relations students about new events through speakers and practical experience,” Jacobson said. Then out of the corner of my eye, I saw a whirlwind of body movement. The K-Laires were demonstrating the art of square dancing. A combination of swing your partner left then right, do-si-do and a promande right then left, exhausted me just watching.

I collected my thoughts as I passed the KSU Wildlife Society. It must have been my “roaring wildness” that attracted me here.

“We are a group of students working to promote wildlife through projects and speakers,” Laura Bareiss, president, said.

At least 10 different religious organizations were represented from Cowboys for Christ to B’nai B’rith Hillel Foundation. With all the possible clubs to join, my head was spinning.

Ranging from feature films to travel, the Union Programming Council (UPC) had a variety of committees to join.

“One project of the council is to host this activities carnival, so clubs and organizations can recruit members and educate people of their existence,” Marlesa Roney, UPC president, stated.

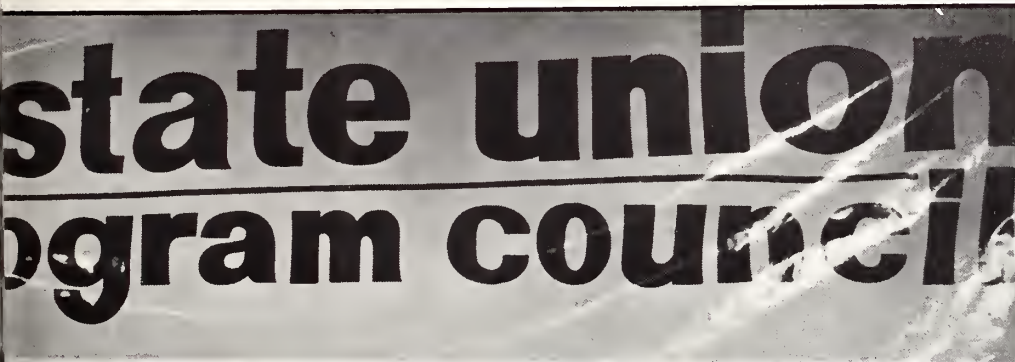

After touring the entire carnival, my thoughts raced over what seemed like millions of clubs that I had heard about.

“Get involved,” but there are only so many hours to a day, I thought. “Broaden your horizons,” but what about my GPA? I debated.

Then with the pop of a UPC balloon I drifted back into reality. I had to decide which clubs I would best excel in. The KSU Horsemen’s Association or Castle Crusade; Flint Hills Equestrian or Fone?

Since the choices were broad I determined the key to the dilemma was to find a median for myself. I should choose something that included study time, plus the fun and involvement that clubs provide.

After evaluating all the clubs, I finally narrowed it down to two . . . flipped a coin and it came up heads. ✪

### Karen Barancik

*Up in the air*-Bart Wingert, junior in pre-vet, awaits a potential member for the Union Programming Council.

*The main event*-Students roam the booths provided by campus organizations at the activities carnival.

# The “singing ambassadors”

“There’s a lot more involved than just singing and dancing,” Marla Neelly, senior in elementary education and member of the university’s traveling vocal group said. “One thing I’ve learned is to budget my time.”

The K-State Singers devote anywhere from 12 to 40 hours per week to the organization, according to Mike Ronen, senior in business education. The amount of time each week varies according to how many trips they take. In addition, they manage to attend classes, belong to other organizations, and keep up their grades.

According to Gerald Polich, assistant professor of music and director of the group, the K-State Singers averaged above a 3.0 GPA last year.

Time budget begins with the selection process for K-State Singers. Each April, auditions are held for the twelve vocal and four accompanist positions. This year there were 135 applicants.

Membership is open to non-music majors only. The reason, according to Polich is that music majors don’t have enough time to devote to the organization.

Auditions consist of singing and dancing before 20 former K-State Singers and Polich. Σ⇒

# Ambassadors

Written applications and personal interviews are conducted in the secondary stages. Even students who have been in the group before must go through the selection process.

Practice for the Singers begins the week before school starts in August. During the week the group spends nine hours each day learning music and choreography.

"We try to get as much music learned as soon as possible, because the later in the semester it gets, the busier the Singers get with other activities," Polich said. "We usually have a 30-minute program in four weeks," he said.

All of the music performed by the group is chosen by Polich. Sharron Washington arranges choreography.

The group puts a variety of music into their show. It includes jazz, Broadway, classical, pop, and 40's music.

"We perform for audiences that range from 35-60 years old, so we have a big variety," Polich said.

According to members, the group works up an hour's worth of performance, but the length depends on who the show is for. The average show is 20 to 30 minutes.

When classes start, the Singers meet every day for an hour and a half. During August and September, they work to perfect their show.

From October to May, the group performs at least once, and as many as four times per week. Most performances are throughout Kansas. These include K-State Alumni Association meetings, banquets, conventions, civic and church

---

**"The people who are in Singers are the type who like to be active. We're all in other organizations and most of us work."**

---

meetings, and annual meetings for various groups. During spring break the group tours out-of-state.

"We usually pick a big city that has a large number of K-State alumni," Polich said.

When traveling in Kansas the average trip usually takes eight hours, according to members.

The group must allow time to load equipment, travel, unload equipment, and set up. The Singers then have to rehearse at the new location, dress, and allow time to eat before the show.

"We always like to be there early enough in case something goes wrong," Neelly said.

After each show the Singers mingle with the audience to answer any questions

about the group or K-State. Since the Singers represent the K-State campus, they are often referred to as the "singing ambassadors."

"Being a K-State Singer, representing your school is just a good feeling," Sharon Brown, junior in family and child development said. "You get to meet a lot of people, and you get so close to the others in the group."

"When we travel some place for a show, it's like taking K-State off-campus. People think everyone at K-State looks and acts like the K-State Singers," Polich said.

According to some of the members, there are many benefits of belonging to the group. The Singers said the advantages include traveling to cities, meeting new people every week, belonging to a small, close-knit group, and being able to entertain crowds.

"I enjoy singing, entertaining, and people," Scott Schulte, junior in general business administration said. "It's a good time. School would be boring if I didn't have something extra to do."

"I think one of the biggest things I've learned is to budget your time, especially if you have a test the day after a trip," Cindy Shaft, sophomore in radio and television said. "To me, all the work is worth it. I really enjoy performing and being in front of people."

Although the K-State Singers are a self-supporting group, they do accept contributions. The funds help defray costumes, equipment, travel and office expenses. Money left over goes toward the Music Service Guild, a music scholarship at K-State. ☼

UFM. University for Man. This organization, funded by student senate allocations, is not directly related to the university. UFM hires its own instructors, conducts its own enrollment, and teaches separate courses. However, UFM does involve a large number of K-State students. Many persons use UFM classes to broaden their cultural interests beyond the textbook learning. Instructors of UFM courses occasionally teach university sponsored classes.

*Soaking up sun - The UFM solar house was on display November 9 for the interested community. The open house included tours and demonstrations.*

photos by Scott Williams

## the rays for the house that UFM built

**U**niversity for Man culminated a major project Nov. 9 with the dedication of a new solar structure at 1221 Thurston. The project was a collective effort of UFM, several K-State colleges, and the community.

The solar building is comprised of a greenhouse, public lounge, a workshop which will house the UFM tool co-op, kitchenette and restroom.

A large percent of the building's energy supply comes from the passive energy of the sun, Bruce Snead, construction supervisor, said. In this instance, "passive" does not mean inactive, but rather that the building is receptive to an external force — the sun.

Sunlight heats the building in a fashion similar to the heat build-up in a parked car with the windows rolled up. The radiant heat is trapped inside the building, after passing through the double-paned wall and ceiling panels. Convection of the warmed air keeps the room temperature even.

Rigid insulating shutters in the building's ceiling can be opened when there is a heat build-up, but the shutters will remain closed on most winter days, Snead said.

"When you see a forecast of lots of cloudy and cold weather in the winter, you allow some heat to build up," Snead said.

The building is fitted with a wood stove

and unit ventilators, which are tapped in from the UFM boiler as a back-up heat source.

"The wood stove is mostly for atmosphere for various groups holding meetings in the community lounge," said Doug Walter, assistant to the project.

"The unit ventilators are really what we plan to rely on for back-up heat."

"The boiler in the UFM building has a greater capacity to heat than the building needs," he said. "By tapping in the solar building, we increase our conservation by using the full capacity of the boiler."

The solar building is equipped with a mobile beadwall insulating system. At night, the double-paned panels are filled with small styrofoam beads which are stored in the floor during the day. Vacuum motors are used to suck the beads into place.

A system composed of earth tubes is used to cool the building in the summer. The tubes will cool the building's interior as much as twenty degrees lower than the outside temperature.

The earth tubes are made of clay flue liners laid end-to-end five feet beneath the surface of the ground. The tubes join at the surface and are directed into a ventilator. Fans draw air through the tubes and the cooled air is exhausted into the building. Outside, bench seats protect the tubes from the weather. ⇨

## House UFM built

Community uses for the solar greenhouse at present include projects for the elderly and for clients of the Big Lakes Developmental Center, said Ginny Patterson, community greenhouse coordinator.

"We will be growing vegetables such as lettuce, peas, spinach, and tomatoes," she said. "We will also have some plants and flowers housed in the greenhouse."

"We are presently planning a project for the elderly which would consist of them helping us with volunteer work and UFM helping them by letting them have some of the produce," Patterson said.

UFM also will coordinate a program for Big Lakes clients, who will visit the greenhouse twice a week for therapeutic education and plant identification.

"For now, we will only have organized sessions with the elderly and Big Lakes," said Patterson. "We want to start small and build, based upon what we ascertain about the potential of the building. We will be doing a lot of experimentation because we are not sure what the building can do in Kansas." ❁

# New math for older students

Rob Clark

**T**here is an organization on campus that has no minimum GPA, specific major, or religious background necessary for membership. The Fenix organization has one basic requirement — to be over 25 years of age.

Fenix gets its name from a mythical bird with the power to renew its own life and is sponsored by the Center for Student Development.

"The concept of Fenix is the renewal, regeneration and reaching out for new opportunities," said Margaret Nordin, associate director of student development and coordinator of the program.

Fenix opens the doors for older students to meet, share interests, problems, and achievements.

"The Fenix program is designed to show the adult student that K-State cares about them," Nordin stated. "Over 120 students are over the age of 40."

There are over 1,500 undergraduate students attending K-State who are over 25, according to Nordin. Seventy-five percent of these students are full-time students, and 34 percent also hold full-time jobs or maintain a home and family.

Fenix addresses the problems of combining a job and family responsibilities with an education. The program also helps older students through their first registration, scheduling classes, making

career decisions and developing good study habits.

Fenix also conducts a pre-enrollment and orientation program in the summer much like the program offered to incoming freshmen.

Older students often seek the help of the Fenix program to coordinate their classes around work and family obligations. In addition, counselors at Fenix help older students decide what field of study they should choose.

"Some of the older students are at the point that they know they want to make a change but don't know what kind of change they want," Nordin said.

"I really hadn't thought about going to college, but now that I am, I'm like a kid in a candy store. Now that I have a taste of college, I have an insatiable appetite for it. There are too many classes I'd like to take," Dee Locker, a 54-year-old freshman said.

Most of the emphasis is placed on getting the older student started again in school, even though Fenix provides programs for the students through-out the school year.

"The older student faces the problem of having no one to study with, no roommate, no boyfriend, and no sorority sister," Locker said. "At least this is a problem to me. I have no one to kick

ideas around with."

Fenix meets weekly throughout the semester. Most of the meetings feature speakers on subjects like pre-enrollment procedures, stress management and financial aid. There are also open meetings where Fenix students have an opportunity to exchange ideas on topics such as preparation for finals.

Fenix also assists students who are still considering whether or not to attend college. The group's advisors help the prospective student cut through the red-tape of applying for admission to the university.

Joan Fye is working toward a degree in restaurant management and dietetics. She feels that students don't care about the age difference.

"I have noticed nothing as far as younger students singling me out," Fye mentioned. "I have found almost without exception, everyone to be very kind and helpful. I just think K-State is great."

Her husband, Stanley, 51, is back in college after 20 years.

"Even though I'm retired, I'm not retired from life." ☼

# Elephant vs Donkey: Election '80

**E**lection year 1980. The battles of Jimmy Carter and Ronald Reagan; Bob Dole and John Simpson; Jim Jefferies and Sam Keys highlighted the pre-election fever for the organizations of College Republicans and Young Democrats.

These K-State groups provided the fanfare that was present at election day. Booths in the union, rallies at city hall and guest candidate speakers were a few of the events planned by the two groups.

Kansas' traditional Republican dominance was also present on the campus. College Republicans had an edge over the Young Democrats in the categories of membership, events and publicity.

"We are a group of 175 students whose purpose is to foster the Republican parties' views on campus and help out on campaigns when needed," Nancy Reese,

senior in journalism and mass communication, said.

The College Republicans spread the word of the Grand Old Party (GOP) by taking leaflets door-to-door, putting up signs in the community and placing telephone calls to various voters. Post election plans included inviting guest speakers to express their view on different topics.

"Our national office urges us to sponsor service projects in the community during the off-election years to keep College Republican's name strong," Alan Stetson, fifth-year student in pre-law, said.

The Young Democrats also had their share of publicity for the "donkey" party. Pro-Democratic bumperstickers, buttons, posters and brochures were passed out to interested students.

"In the past, Young Democrats was an organization that seemed to come and go

with the elections. However, with our district chairman on campus, Phil Wiltz, we hope to reorganize and remain a strong group locally," Susan Price, president and a sophomore in computer science, said.

The Young Democrats sponsored a lecture given by Sam Keys. Also, each year a state convention is held at a chapter who receives the bid for the year.

Jointly, the two groups set up a voter information booth.

So in election year 1980 the never ending battle of the donkey and elephant continued. The domination of the elephant in Kansas remained consistent with the returns. \*

**Jerry T. Katlin**

# Students bullish on club activities

Organizational clubs come in all sizes, from the smaller groups with a handful of members to the largest club, Block and Bridle with over 250 paid memberships.

Block and Bridle is one of the departmental clubs for the animal science and industry department.

"Most of the students join because they want to learn more about animal science and they want to meet other people involved in the livestock industry," Lyle Shipley, senior in animal science and industry and club president, said.

According to Calvin Drake, professor of animal science and industry and Block and Bridle faculty advisor, the livestock industry is of great interest to many students at K-State.

"In Kansas, livestock is the major industry. The beef cattle industry is the largest in the state, the meat industry is second, and swine is also in the top ten," Drake said.

"We are the club in the department that represents beef cattle, swine, sheep and horses, therefore, we represent a major interest group in Kansas and in our department," he added.

"Not only is the Block and Bridle Club recognized on our own campus by the services we provide but its achievements are notable within the National Block and Bridle organization, which is made up of 60 local chapters," Drake said.

The club has consistently done well in national competition in such areas as activities, club yearbook and scrapbook.

"Our club was number two in membership in the nation last year. In fact, five of the top seven Block and Bridle clubs were in the Big Eight," he added.

The club has many activities to keep all of its members involved. According to Drake, the activities of the K-State chapter are not just "dead wood" activities to produce student interest. Some of these activities include guest speakers, meetings, catered "feeds" and horse shows.

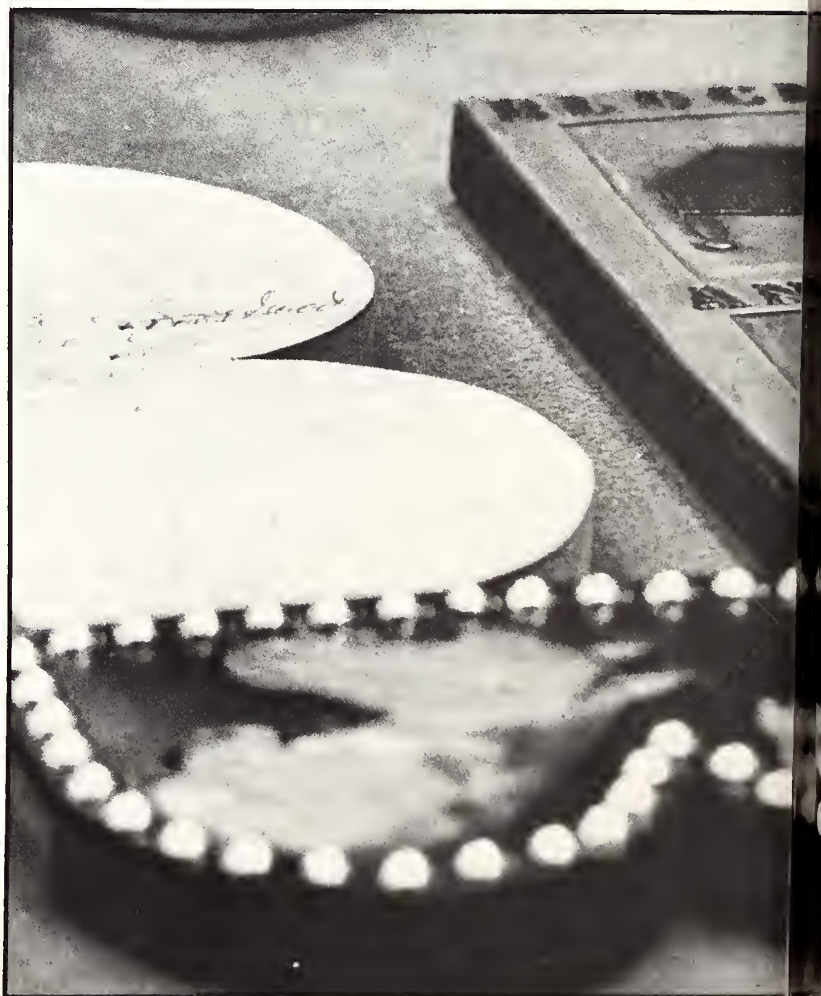

"I have been in many clubs where the officers and advisors have to think up activities to keep it's members involved, but that's just not true for this club.

Instead of dreaming up new activities, I often have to remind the members not to undertake too many," Drake answered.

The club works on projects that not only help the student grow, but gives them experience that can later be used on the job.

The main money projects undertaken by the members are serving "feeds." Feeds are meals that the club caters to its members and the community. The club serves more than 3,000 people during the school year. Some events that the members serve at are K-State Cattleman's Day and Swine Days, K-State livestock sales and the Midwest Training School.

"The department invites people from all over the state to these events and the club is expected to serve a good meal, which we have done consistently," Drake said. 

**Watching eyes** — Francy George, freshman in pre-design, and Karen Chrisler, Steve Roth and Ellen Wasserman, all in animal science and industry, seem to find some humor in the meeting as they listen to the presentation.

photos by Scott Liebler

**Predictions** — Jim Buchanan, a Manhattan commodity broker, speaks to the club on the future of the economy under the Reagan presidency. Throughout the year the club hosts speakers from across the nation.

**B-b-b-b** — In addition to selling advertisements and assisting with "feeds," new Block and Bridle members must obtain signatures for their "B." The individually decorated wooden emblems requires signatures from 10 faculty and 25 club members.

**Royal Show** — While the clowns and spectators look on, K-Staters participate in the Little American Royal, a competitive livestock showmanship contest. The March 30 show was co-sponsored by Block and Brid and the Dairy Science Club.

## Bullish

Some of the activities done by the Block and Bridle Club are a part of its 62 year-old tradition such as the Block and Bridle Horse show, Little American Royal and an annual judging contest.

The club has either sponsored or co-sponsored the Little American Royal livestock show since its beginnings.

"It takes a lot of manpower to pull the show off, we have to have people in charge of the livestock, the arena, the program, ticket sales and so on. Further more, many of our own members are showing livestock in the show, so they are unable to help," Shipley said.

To many K-State students, the Little American Royal is something to look forward to and work for.

"The Little American Royal is the highlight of the year. I enjoy participating in the show and helping with the feeds because it's a good chance to get away from your books and studies. Anyway, you can always be sure you'll have a good time," said Dave Mackintosh, senior in animal science and industry and club member.

The Block and Bridle Club also sponsors a collegiate Horse Show in the spring. Horsemen from all over Kansas, as well as neighboring states compete in this annual show. Noted country and western singers such as Red Stegall, have traditionally entertained during the show.

According to Drake, the Block and Bridle Club is well respected by people involved in the livestock industry throughout the state of Kansas.

To return this respect, an Honorary Member and Outstanding Stockman are named each year at the Annual Block and Bridle Banquet. The Outstanding Stockman is based upon the person's contribution to the livestock industry. Their portraits are hung in the Portrait Gallery in Weber Hall Library.

Even with Block and Bridle's large membership all of its members are involved in various club functions and the club is active on campus. The organizations reputation and strong involvement is what keeps the group thriving with a large membership.

**May your night  
be truly wild**

**Happy 21st**

# made me a celebrity?

Who are these  
birthday beauties?

Could it be  
JoAnn and Karen

**S**omehow I just couldn't get up the nerve to say hello to her. She was a gorgeous blonde studying economics in the basement of Farrell. The next day I knew I just had to meet her.

One solution to my problem would be to take out a personal in the K-State Collegian.

Those tiny messages on the last page of the newspaper may be the answer for those men or women who can't seem to get out the first hello or those mysterious messengers looking for someone with whom to share those "pina coladas" and "walks in the rain."

"Everybody I know reads the personals so if I want to say hello to a special someone that's the cheapest way to go," Amy Sargent, junior in criminology, said.

For many K-State students personals and birthday ads have become as much of a tradition as jiffin' in Aggieville and Swannie runs. With them, students have an open forum to announce anniversaries,

parties, say a special hello, try to meet a recent acquaintance or just send crazy messages.

According to Randy Dunn, spring semester advertising manager, not only are they very popular with students but they also bring in quite a bit of money to the Collegian advertising department.

"They're a big source of revenue and there is usually never a day when we don't have some personals to put in the paper," he said.

Dunn said the policy for such advertising has changed from previous years, because the Collegian can be held libel for any pictures or personals they print.

Therefore students putting in picture birthday ads must sign a photo release and must obtain the signature of the person they are putting the picture in of.

"This is just a precautionary measure so that the Collegian can't be held libel for something we put in," he said. Σ⇒

# Ads make celebrities

Dunn said this is usually not a problem as most of the birthday ads and personals they receive are morally acceptable.

"Sure we've had to turn down some that have been questionable," he said. "We try to take each ad at a time."

According to Dunn the student rate for personal and birthday advertising is \$2 a column inch — a small price to pay for some good natured vengeance, according to some students.

"When it was my birthday, my roommates put in a picture of me that was, well, let's say not to flattering," Kim Sykes,

sophomore in speech pathology and audiology said. "It was one of those mornings after a long night in Aggieville and I looked pretty sad, raccoon eyes and everything. But I got them back when their birthdays rolled around," she said.

Another student, Theresa Brown, said she was surprised when she opened the paper on her birthday to see her picture, but in spite of the teasing she received during the day she thought the idea was funny.

"My roommates hinted around that they were going to do something but I wasn't sure what it was," Brown, sophomore in industrial engineering said.

"I have to admit I thought it was pretty funny and you can't really get mad when it's all in fun," she said.

"The personals and the weather are the first things I read in the paper," Michelle Arnold, sophomore in home economics said. "I like to see what other people have written, it wakes me up in the morning."

Dunn said the advertising department has had few problems with angry students over embarrassing pictures mainly because all are screened before being put in.

"We haven't had too many problems," he said. "Basically students realize they're all in fun."

With the help of a personal, one K-State student had friends that took it upon themselves themselves to help him find a mate, in fun.

"It all started when a friend asked me what I wanted for Christmas and I had jokingly said 'well a wife would be nice'." Dave Mackintosh, senior in animal science and industry said.

According to Mackintosh that lead to the personal which read: Attention females of all ages, sizes and species! December graduate desires female

# Matrix class sparks creativity

The "real world" can be a shock to new graduates and the more exposure received before the jump into the working world helps in this transition.

Students majoring in Graphic Design are getting a taste of the real world.

The real world is a class called Matrix.

Matrix is a final course offered to students who have the required prerequisite classes, Lettering, Graphic Design Techniques and two classes of Graphic Design and Illustration. The class is selective and students take it simultaneously with their regular class load.

A former K-State professor assistant, Dennis Kuronen started the class in the spring of 1979 in the art department because of the need to experience students with the graphics profession.

The course gives the students experience working with the outside," said Karol Winegardner, assistant professor of art. Winegardner has taught the Matrix class for the past year.

"This class is a work shop rather than a real class situation," Winegardner said. The class is held in the attic of the Art Building.

"We are limited on space for the class," Winegardner said. "The room is very small and we can only let nine or ten in the class each semester."

If a student does meet the requirements, he must submit a portfolio.

"David Harms, assistant professor of art, and myself look at the portfolios and then the student may be accepted," Winegardner said.

"In the portfolio we look at their drawing talents, how they work with a design problem. They have to be motivated and self disciplined," Winegardner said.

"Not all of the students have been graphic majors. A couple have been from the journalism department," she said.

"We do like to get a mix of majors. It makes no difference if they are a graphics major, just as long as they have taken the other classes before submitting."

Most of the jobs have been for on campus groups or departments," Winegardner said. Σ⇒

## Matrix

"If a department decides they need a poster made, the head of the department usually comes to the class and presents the problem and when they need the project finished."

"From there it is a voluntary decision between the Matrix students. Usually four or five students work individually on the assignment."

"We have a few jobs for the Matrix that were off campus but primarily the jobs are on campus," Winegardner said.

After the projects are finished the client will return to class and tell them their decision. The clients give their point of view which is important for the students to know why some of the ideas would be more successful than the next," Winegardner said.

Barb Pihl, senior in graphic design, learned the ropes of Matrix during the spring semester.

"This was my first time to apply. The reason I wanted to take the class was to get some professional experience for my graphics major," Pihl said.

Students do the have the opportunity

to reapply, but many do not.

"Once a student has been in Matrix for a semester they can reapply. They do have to submit another portfolio so that everyone has an equal opportunity. The seniors are the only ones with a little advantage, especially if they are graduating the semester that they have applied. But juniors are not discouraged from applying," Winegardner said.

# Senior

*Wildcat- Amidst the greek letters and decorations, a purple wildcat can be detected in the mobile donation in the Union courtyard.*

# class reinstates gift tradition

Scott Liebler

In addition to parties and t-shirts, the 1981 senior class focused on more involvement and more participation.

The most popular aspects of college life some might recall are social gatherings.

"We have had two parties this semester (fall) — one at Tuttle Creek and one at Kites for the last home football game," said Steve Holloway, senior in marketing and senior class president.

"We plan to give a few more parties and we'll be looking for a class gift," said Greg Trempy, senior in biology and senior class vice president. "We are also trying to set up an interviewing seminar for graduating seniors."

According to Holloway, the main fundraising events were the selling of senior class t-shirts and senior class activity cards. These two fund-raisers make up the senior class budget for the year.

The seniors, like any other organization, wear their t-shirts to be identified.

"One thing we have done differently this year than other classes was at the beginning of the fall semester we sent letters to the living groups. We asked them to select one liaison to represent them (the living group) at the senior class meetings. It was successful and it did create more awareness of the senior class activities and it did generate more involvement," Holloway said.

After abandoning the tradition of giving gifts to the University for five years, the senior class of 1981 has planned to reinstate that tradition.

"There hasn't been a senior class gift donated to the University for a few years but we hope to donate something this year," Holloway said.

"There is a tree that stands a few yards from All-Faiths Chapel that was donated by the class of 1886. This donation started the tradition of senior classes giving gifts to the University," said Amy Button, senior class advisor and assistant director of the alumni association.

"One gift that was suppose to be donated to the university by the class of 1969 and 1971, but for some reason it never developed, was an outdoor classroom(amphitheatre)," Button said. "It was suppose to be made out of three layers of poured cement and be located outside McCain Auditorium."

Some of the past senior class gifts include the four-sided clock at central campus (between Holtz, Denison, and Seaton Halls) which was donated by the classes of 1968, 1971, 1973 and 1974, according to Button.

"The senior class of 1972 donated the Landon Lecture podium," she said.

"The purple cat and the learning tree mobile located in the Union courtyard was donated by the class of 1970," she said. "Also the seating area made of brick by Anderson Hall was donated by the class of 1969."

According to Button the senior classes from 1975 through 1980 have combined funds to give a gift to the University. But nothing has been determined. They wanted to donate something that would be functional and lasting. Several ideas are being explored to see what gift could be donated to the University. ❁

**Dale Blanchard**

# Chalmers honored with graduates

Almost a month of near-drought weather in Manhattan and the day before K-State's 1980 Commencement many students feared a repeat performance of the previous year when rain soaked spectators and graduates at the 1979 commencement exercises.

But the overcast skies and slight fog proved to be only small threats and on the morning of May 17, approximately 3,500 K-State graduates prepared themselves for their long-awaited degrees and congratulations on completing their college studies.

"Commencement is a long and complicated event that requires a lot of advance planning," Bob Bruce, director of information and member of the commencement committee, said. "We naturally had alternative plans in case of rain, but we were glad we didn't have to use them," he said.

As in the past, K-State's 117th annual commencement consisted of an all-university exercise followed by individual college exercises where degree candidates received their diplomas.

"I think it all went off quite well," Bruce said. "There was a little congestion at the stadium because there was a track meet going on while students were trying on their robes, but we worked it all out and everything went about as expected."

Bruce helped organize arrangements for commencement and said there were many behind-the-scenes preparations that were important to the success of the event.

"For instance, separate programs had to be printed up for spectators and the platform party," Bruce said.

*Cum laude* — an honor student stands to be recognized for her accomplishments.

He said one of the main reasons for this concerned the honorary degree received by John Chalmers, vice president of academic affairs.

"We wanted it to come as a surprise to him, so the platform party had programs which only listed Fred J. Benson as a recipient. We managed to keep it pretty hush and it worked well because he was genuinely surprised about receiving the degree," he said.

In addition to the honorary degrees received by Chalmers and Benson,

---

**One of the more significant events during graduation, was a degree awarded in the College of Home Economics ceremony. After a 40-year wait, 63-year-old Harry Eugene Martin received his undergraduate degree in home economics.**

---

citations for excellence in undergraduate teaching were awarded to Harold Shaver, assistant professor of journalism and mass communications; Edward Devilbiss, associate professor of architecture; Verlyn Richards, professor of business administration and Edwin Lindly, associate professor of civil engineering.

Governor John Carlin and Sandra McMullen of the Kansas Board of Regents greeted and gave best wishes to the class and after the all-university program the individual colleges held their own ceremonies for graduates. ☼

*Smile! — One of the thousands of black robed graduates decorates her cap in an attempt to be recognized.*

**A**t 63-years-old Harry Eugene Martin did what many K-State male graduates would love to do — make the pages of Playboy.

But Harry didn't stop there.

He was also written about in the New York Times, the Los Angeles Times, the International Herald Tribune, The Washington Star, and a variety of other newspapers and magazines nation-wide.

"It was sure a surprise. Some reporters told me to expect quite a bit of publicity but I didn't know there would be this much," Martin said.

The incident that brought Martin to nation-wide attention was K-State's 1980 commencement exercises.

After having been denied a Home Economics degree in 1940 because he was a male, Martin was invited back to K-State by Home Economics Dean Ruth Hoeflin to receive his diploma 40 years after the fact.

"I never expected anything like this," Martin said of Hoeflin's invitation. "The wife and I were really surprised because we hadn't heard anything about it before we were called," he said.

Hoeflin said the circumstances that led to the invitation were coincidental and stemmed from a conversation she had with two former faculty members visiting K-State that year.

"They were reminiscing about a male student who couldn't get a Home Economics degree," Hoeflin said referring to Bessie West, former head of the institutional management department and Levelle Wood, a 1940 home economics faculty member.

"The administration had some rule — if they didn't then they made one up — that no male could get a degree in Home Economics," she said.

Determined to right the injustice, Hoeflin proceeded to go through the necessary channels for Martin to return to K-State and receive his degree.

"I can't just go around giving out degrees you know," she said at the time. But in Martin's case, approval came during commencement week and when the media caught wind of it, Martin's degree became a national interest story.

As a student in the late 30's Martin came to K-State for chemical engineering but later decided to switch his major to dietetics, nutrition and food management in the College of Home Economics.

"Many males took courses in the department but I was the only one who attempted to complete the program," he said.

His problem came when upon completing all the requirements for a home economics degree he was told he would not receive one.

"At the time I wasn't exactly sure why I couldn't receive the degree," he said. "But I figured it was because they didn't want to give a home economics degree to a man."

According to Hoeflin decisions made at that time were usually never questioned which probably accounts for Martin's acceptance of the injustice.

"I just knew I'd have to get a degree in something else," Martin said.

Martin did get a degree in 1940 but only after going to summer school to take nine hours needed for a Bachelor of Science in general science.

"The poor man was discriminated against by other men," Hoeflin said when she discovered the circumstances that kept Martin from receiving his degree.

According to Hoeflin, in 1940 President F.D. Farrell made the decision to withhold Martin's diploma over the objections of Home Economics Dean, Margaret Justin and Bessie Brooks West.

"I think it's fun that a woman rescues a man for once," Hoeflin said.

The national media obviously agreed and when the first story about Martin's trip to Manhattan appeared in the Nashville Banner under "Food Pro Conquers Degree of Injustice," publicity increased with a snowball effect.

Martin received calls from People Magazine and To Tell The Truth, in addition to having spots on ABC news and local radio stations.

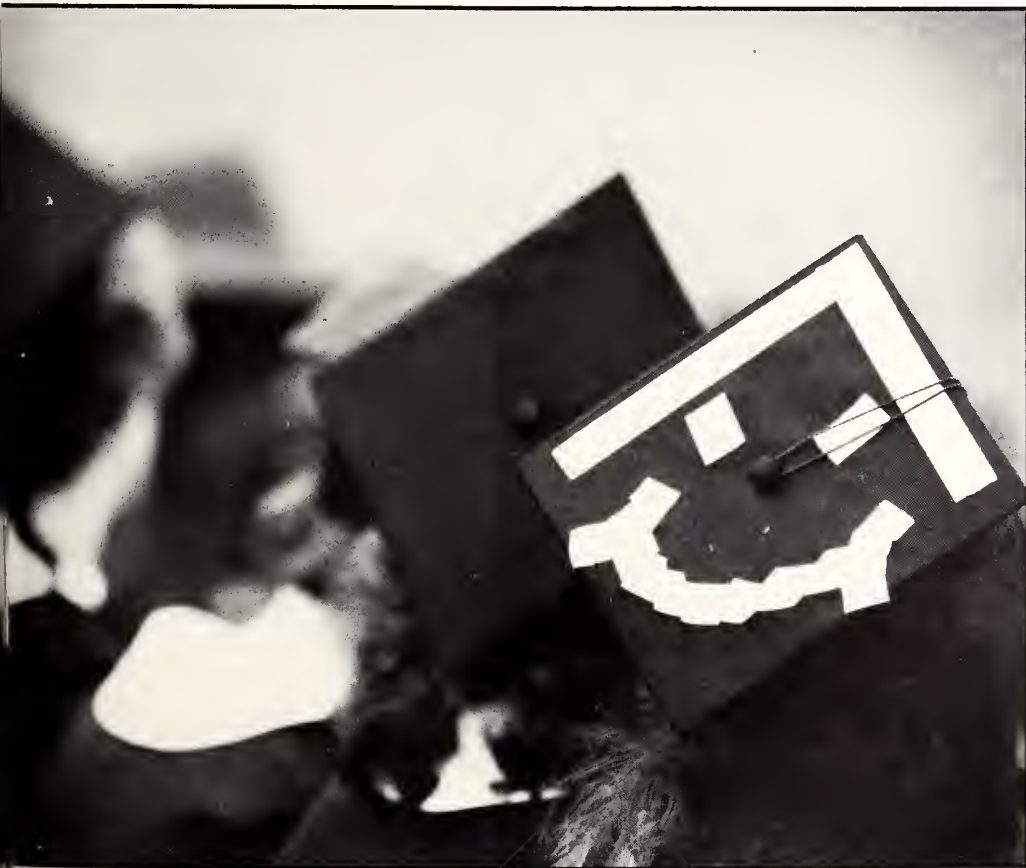

Martin now lives on a farm outside Nashville, Tennessee where he raises horses and cattle, sells real estate and does occasional food service consulting.

During his career he managed a restaurant in Manhattan called the New Pine, a country club in Kansas City and finally retired after holding an executive food management position with Holiday Inns, Inc.

Martin said the lack of a degree in 1940 did affect his career, some. "It made it impossible for me to get a dietetics internship and kept me out of certain kinds of work, like teaching.

Martin said he holds no grudges, however, and said the weekend he spent at K-State was one he'll never forget.

"The campus had changed a lot since I'd seen it last. It looked very fine. Of course K-State's always been my favorite. It's a place somebody can really be proud to be from." ❁

## *Sports*

**W**hether sweating out the lottery system for basketball tickets or huddling three-to-a-blanket on a cold day at the football stadium, thousands of K-Staters support the athletic programs.

Some, in complete purple attire, skip classes and punt tests to help cheer on the 'Cats, while others are drawn by the countless tailgate parties. Even the action of an intramural battle can bring out enthusiastic fans.

Even if the Wildcats aren't playing their crimson and blue rivals from down the river, K-State fans are brought closer together by the heartland bond. ❁

***It's good!**- Stephanie Sparkes, Manhattan resident, jumps above other cheering fans after K-State scored during the Missouri game on Oct. 25.*

***Refugee camp?**- Amidst the old mattresses and canvas tents Dave Anderson, sophomore in agricultural economics and Mariann Poss, freshman in agricultural economics await the next roll call for individual basketball tickets.*

# Practice makes perfect

**I**t's the only class he wouldn't dare skip. While walking to his car, Tom's mind prepares for his next class — varsity football. He's not thinking about the test he just took or his assignment that's due tomorrow, he's thinking about football.

Tom arrives at the stadium fieldhouse at 2:00 in the training room to work his bad knee, an injury from the previous season. A student trainer assists him in wrapping his knee.

Later, Tom joins other players to see the videotape of last Saturday's game. Good and bad plays are pointed out by the coaching staff at the team meeting. Tom knows what he needs to work on in practice and sets some personal goals.

By 4:15 the players move out to the practice field. Stretching and running come first. He concentrates on the drills so he won't make the same mistakes he made in the last game. The 24 periods of drills at five minutes each must be executed with precision so when the groups get together the plays will run smoothly.

Six already. Practice is over. Tom feels fatigue, hunger pains and sore muscles as he heads home. Despite his pains, he feels he has reached his goals set that day and that's an accomplishment.

Athletes in all varsity sports also experience the aches, pains and fatigue of practice

five to seven days a week during the season and up to four days a week on off-season. The time these students spend practicing could be used for studying or social life. Athletes must sometimes sacrifice those things that practice time takes away from.

"It is stressed that the players graduate in four years, so we understand that they may be carrying a heavy class load as well as some having a job and these pressures can get them down," Lynn Hickey, women's basketball coach, said.

"During the season, concentrate more on football than classes. I try to catch up on my studying on the off-season. Football is more important to me, especially since it's my last year to play," Monte Bennett, varsity football player, said.

"The biggest (sacrifice to practice) is probably studying. Tuesday and Wednesday are longer practices and it's sometimes hard to find time to study. Friday and Saturday are pretty well shot for studying," John Liebe, varsity football player, said.

Not only time for studying is sacrificed because of practice but social life also suffers.

"When you're in training it hurts you not to get sleep on the weekend," Dee Weinreis, women's varsity basketball player, said. Alcohol doesn't mix with conditioning, she said.

Tim Costello

"Sometimes when there are a lot of social activities, it's hard to get involved in them because we're gone so much on weekends when most activities are going on," Janelle LeValley, cross country and track runner, said.

Be it football, basketball, tennis, volleyball, crosscountry, track, baseball or softball; the time spent practicing exceeds the time that is spent at the game, meet or tournament.

In women's volleyball for two and a half hours a day, four days a week, ten hours a week and 13 weeks of season play there's close to 150 hours of practice, Scott Nelson, women's volleyball coach, said.

With all the time put into the sport, varsity athletes get only one hour of credit.

"There was a theory proposed by Dr. John Syler that in order to get rid of hypo-

**The cruncher**-John Liebe (18) stretches out before a football practice.

**Do what?**-Rolando Blackman intently watches Coach Jack Hartman at a basketball practice.

Rob Clark

## Practice

crisy, fraudulent transcripts, pud classes and easy grades that degrees be granted in tennis, basketball, football, etc.," David Hacker, women's tennis coach, said.

"A football or basketball player has to practice five or more hours a day, learning more than 150 plays, so why not grant him the same credit as a student in economics who has to learn economic theories. This would be a helluva lot more useful if he's going into coaching," he said.

"It (practice) takes up a lot more time than it gives you credit for," Les Craft, varsity basketball player, said.

"It's like I go to classes Monday, Wednesday and Friday three hours a day and don't really have to think about those classes. I go out on the court seven days a week. Minimum practice time is two and a half hours. I come home and don't even feel like studying. I just want to lie down and sleep. It's not only the physical work, it's a lot of mental exhaustion, too," Craft said.

According to all varsity coaches, the player's preparation for practice is important in any sport.

"They (the players) have to go out there and be into practice or it's no good," Gary Coble, football student trainer, said.

Scott Nelson, women's volleyball coach, coaches on a contract basis.

"I agree to be prepared for practice and

the players agree to be prepared for practice, games or any other team function," Nelson said.

Being prepared involves being on time, coming in with a positive attitude and setting some individual goals in the drills for practice that day, he said.

"It makes for a healthy environment. Just showing up and going through the motions doesn't help them (the players) or the team," Nelson said.

Practice is important for the success of individual and team performances at any game, meet or tournament.

Organization and work habits that have developed are the most important reasons for practices, Lon Kruger, assistant basketball coach, said.

With the long hours of practice and the time a varsity sport takes away from other aspects of college life, an athlete has reasons why he/she is dedicated to a varsity sport.

"I get an inner satisfaction from running," LeValley said.

"I have the rest of my life for social life but only four years to play college basketball," Weinreis said.

"It's just rewarding when you win and I just love the sport," Brenda Bennett, varsity tennis player, said. ♀

# There's someplace like home

**R**anging from a compact, muscular model to a long, lean edition with extra height, Manhattan families can have the option of adopting a K-State student. Athletic skills include the ability to play football, basketball and tennis.

K-State's foster parent program may sound unusual. But for the students involved, having a foster family home is a comfort when home is two or three states away or when trips home are once or twice a year, according to basketball player Les Craft, sophomore in computer management.

"Because it's someplace to go like home, it makes being away a lot easier," said John Marx, sophomore in accounting and member of K-State's basketball team.

Those athletes included in the program are football players, men and women basketball players, and men's tennis team members. Dedicated to their work, some of these athletes spend 11 months of the year at school (including Thanksgiving and Christmas vacations). They attend classes, then practice three to four hours — seven days a week — the sport for which they were recruited.

Vince Gibson, who came to K-State to coach football in 1967, started the foster parent program for the football players.

---

**"Because it's someplace like home, it makes being away a lot easier."**

---

"He (Gibson) was a firm believer that when you come a long way from home you need a little more support," said Warren Pray, a foster parent for the football program.

"It started by trying to room athletes from out of state with kids from in state, so that the out of state kids could go home with their roommates during the holidays. But then the foster parent deal was set up so they could have a homelife away from home, and the family gives them someone to support them academically as well as athletically," Pray said.

When they came up for the games, his wife would give home-baked cookies to the guys.

Liking the involvement, the Prays had five foster sons one year. "It was a very fun time," said Pray. Some of their sons in the past years include slotback Kerwin Cox, quarterback Joe Hatcher, and linebacker Ray Sprinkle, and currently, Jeff Koyl,

freshman in general and junior varsity offensive tackle from Carlsbad, California.

According to Pray, all the football players except the walk-ons and those who live within 20-30 miles of the school have foster parents. There are about 80 foster families involved in the football program here.

The athletes don't actually live at the foster home, but use it as a place of refuge from the dorm to just relax or find a good meal to eat. But the "adoptees" put in their own part, too, even washing dishes, Pray said.

"They really pitch in and help out — just like you'd want your own kids to," Pray said.

He included some of the other benefits for the foster family as getting to know the players and the player's family, becoming involved in K-State's athletic program, and watching the students mature.

"The real fun is watching them grow up," Pray said. For example, when Ray Sprinkle was their son, they saw his relationship with a girl grow from date to wife. "He brought her to our house on the first date they ever had. In this case, we ended up getting a daughter, too," he said.

As Mike Kopsky discovered, the family grows for the foster kids, too. Kopsky, football defensive back and sophomore in general, found three new brothers and sisters in the family of Jerry and Mary Vestweber.

"Coming from a family of 11 kids, it helps to have them around, and when my family comes up for the games everybody stays there at the Vestwebers and as a result become good friends," said Kopsky.

"She's a great cook," he said.

The foster parent program for men is regulated by the National Collegiate Athletic Association (NCAA). The women's program, regulated under an organization titled Association for Intercollegiate Athletics for Women (AIAW), follows the same guidelines proposed by the men's program.

Abiding under the NCAA rules, the people involved may not provide anything to an athlete not generally provided other students at the University, nor may they in any way defray expenses including such things as providing a restaurant meal, purchase of anything, provide transportation to or from the student's home or even transportation on errands around town.

"We go by the rules. We don't want to give them any illegal inducement — like letting them use their phone for extra long distances," said Coach Donnan, football offensive backfield coach and coordinator of the football foster parent program.

According to a letter which women's basketball coach Lynn Hickey sent out to the

parents involved in her program, the NCAA permits parents to have the athlete come into the home to be treated in the same manner that any other student would be treated. Inviting the athlete to dinner is acceptable. The letter states that the purpose of this program is to provide a "family type atmosphere" away from the institution, in which a feeling of trust and friendship can be fostered.

The program for the women's basketball players was coordinated in the fall of 1971 by Doug King, instructor for Continuing Education, and his wife Eileen.

Though there are usually more people wanting to be foster parents for the men's program than there are athletes, the women's program has trouble finding enough volunteers. Thus, the scholarship people get foster parents first, then the ones further from home, according to Hickey.

"One lady has three kids. Finding the foster parents is kind of hard. It's more prestigious to have a men's football player than a women's basketball player," said Hickey.

An incident where the foster parents re-

**Home-cooked goodness** — Joe Hatcher, assistant football coach, and Jeff Koyl, junior varsity football player and freshman in general, share a meal in the home of foster parents Warren and Bea Pray.

**Mother's helper** — Jeff Koyl helps clean up dishes after dinner.

Photos by Rob Clark

ly came in handy was in the 1980 women's playing season when forward Eileen Feeney's father died. Feeney, from New Jersey, was able to turn to her second family during that crisis. "It just made the whole situation easier to have the foster parent there," Hickey said.

The support of the foster family is also appreciated at the games. "It means a lot to the players to know that there's some added personal support out there," said foster parent Pray.

"It helps to have a group of people that are always at the games, to hang around after the game is over. A lot of times, these kids' (natural) parents don't ever get to see them play," said Hickey.

Also a success, the men's basketball foster parent program has been active for about six years, according to assistant basketball coach Lon Kruger.

"We're proud of the people that have acted with our program. We've had very good luck with it," he said. "Finding families that are interested is not a big problem; we usually have a lot that are. It tells us that the

program is a success," Kruger said.

In order to become a foster parent family, the couple would indicate to the coaches an interest in the program, and if an opening comes up, the players are matched to the family as best as possible.

"They really screen the foster parents; they really check 'em out to find the right ones," said basketball player Eddie Nealy, junior in engineering technology.

One of the families involved in the men's basketball program is that of Joe and Sheila Mills.

"We just enjoy athletics. It's one way of getting that much closer and makes the games even more fun. It's one thing to recognize the players, and another thing for them to recognize you," said Joe Mills, his third year in the program.

Their foster player at present is John Marx. This last summer, both Marx and teammate Les Craft stayed with the Mills during summer practice.

"They're real nice kids and I enjoy having them around. They're very quick for thanks," said Sheila Mills.

The relationship to the family becomes a strong one, and in the Mills' case, Marx and Craft are treated just like members of the family, and vice-versa.

"I have to tell John when to get his hair cut, so sometimes I even end up making his hair appointment for him," Sheila said.

"You become very close to them," said Sheila. Both the Mills and the Prays still have their past foster sons come back and visit them, often during game weekends and holidays.

"Our door's open to all of them all of the time," said Pray. "It's the personal contact that makes it interesting."

"It's a good deal for both sides. The parents get to interact with the school more, and it gets the kids away from school to a home-life where they can talk to people other than the players and coaches," said Coach Donnan. ✨

In a never ending battle of wit, K-State and KU students struggle with an annual supremacy rite. This battle has taken place on and off the playing field and seems to have occurred for as long as baseball, hot-dogs, and apple pie have been America's favorite.

Occasionally the teasing gets out of hand and a few punches are thrown. But, for the most part, the battle is all in fun often sparked by cheerleaders, alumni and students, each university gets in their pokes and jabs. Yet, no one ever seems to have the last word.

Every year there are the typical pranks — the one's which are met with "don't you dare" threats but still creep into the lime-light. For example, the red and blue chickens thrown onto the basketball courts — or KU painted on "KS" hill.

In the t-shirt combat a KU shirt says: "Stuff the Wildcats," depicting a Jayhawk stuffing a bruised Wildcat down a basketball goal. The hot-off-the-press K-State shirts say "Another 'Hawk bites the dust" with a picture of a Wildcat tromping a bandaged Jayhawk.

Once KU cheerleaders came dressed for a game in over-alls, straw hats and cowboy boots — a low blow.

But K-State cheerleaders retaliated by holding their heads and their noses high — way high.

Prize possessions from the K-State - KU war are either purple cowboy hats for KU'ers or red and blue hats for K-Stater's.

And so it goes: on and on, game after game, year after year. The score is never tied although someone is always trying.

But I wonder if KU students realize that their Jayhawk red and blue makes our royal Purple

K-State, score one! ♯

Party time is game time and . . .

# . . . Game time is party time

**Y**ou are cordially invited to a game warming party to be held at KSU Stadium, Manhattan Kansas, Saturday afternoon.

Football game will follow.  
B.Y.O.B.

Although invitations aren't sent out for K-State home football games, they are social events. People are always showing up for the game and the parties, and in fact, the pre-game parties are probably the main attraction to the football season. It is a time when friends can meet friends and alumni can talk about the good 'ole days at K-State.

On usual game days the crowd starts rolling into the stadium parking lot as early as 11:30. As soon as the cars are parked, anxious fans open their trunks — thus beginning the "trunk party".

In the typical trunk-party, food is always involved. Sandwiches, chips, vegetables, pies and cakes all form a delicatessen.

There are trunk parties which there are no alcoholic beverages — just good friends and good food. But of course there are trunk parties with alcohol — good friends, good

---

**My turn** — Jim Litz steps up to the keg for another beer.

**Peace** — K-State fans party it up before the annual K-State - KU clash.

photos by John Greg

food, and good booze.

Throughout the course of the pre-game party, students wander through the parking lot searching for parents — looking for a red scarf tied to the car antenna; a means parents use to help their children find them in the parking lot.

Fans from all over the state congregate in the stadium parking lot — vehicles ranging from VW's to mobil homes file into the parking lot and host their own parties.

Pre-game parties continue right into the stands. Students cart coolers, wine skins, and thermos bottles to the game filled with "spirits" to enjoy the game.

Game day becomes a time when people can get together and socialize after a rough week, see old friends, and re-hash last week's game.

In ever popular section 24, students can

be seen wandering around visiting with other students and old high school buddies. A few "privileged" girls can see an over-head view of the game as they are pssed up hand-to-hand above the crowd.

Parties at the stadium aren't the only pre-game gatherings. Several Aggieville bars open at 10 a.m. on game days and offer shuttle bus service to and from the game. Groups have pre-game functions to "get psyched" for a Wildcat victory.

In fact to some, the word "party" has almost become synonymous with football games; and no R.S.V.P.'s are required. ✪

**Nancy Reese**

**Gulp** — Rick Fry enjoys a drink during the homecoming game against Missouri.

Penalties lifted,  
**'Cats  
 begin  
 anew . . .**

**T**hanks to the athletic directors of the Big 8 Conference schools, the 1980-81 Wildcat football season opened on a brighter note. In a surprise move taken on May 22, 1980, the directors lifted the K-State football probation — an infringement which had taken away certain scholarship privileges, and television and bowl appearances.

Conrad Colbert, associate athletic director for K-State said the Big 8 officials were "impressed" with the way K-State had responded to the probation by concentrating efforts to upgrade the football program.

Coming off the 1979-80 season with a 3-8 record, Coach Jim Dickey had high hopes for his young team.

"I think we'll be competitive against LSU and everyone else," Coach Dickey said prior to the Louisiana State game.

K-State	0
Louisiana State	21

**T**he K-State Wildcats opened their 1980 season on the road at Baton Rouge, La. against the fighting Tigers of Louisiana State.

Before the game, Coach Jim Dickey said, "I can't sleep before all games the first or last. We have put in some new things but I'm sure LSU will make some adjustments, too, after last week."

Dickey must have been referring to the Tigers season opening loss to Florida State, which was also Jerry Stovall's debut as the LSU head coach. Stovall and the Tigers didn't have to worry about a two-game losing streak, though. Before a noisy crowd of 75,405 at Tiger Stadium, K-State lost its third straight opener under Dickey. In fact, the Wildcats were shutout 21-0 and in the process were held to just 160 yards of total offense.

Three lost fumbles and a running game that could only pro

***Mighty fine!**-Jim Morris defensive safety signals approval after stopping an OSU drive.*

Craig Chandler

duce 19 yards on 31 rushing attempts were the main factor that hurt the Wildcats in their first meeting ever with LSU.

"I was disappointed in the LSU game because anytime we have an opportunity to play well against a good team, we'd like to leave with them thinking that we are on their level," Dickey said.

On the second play of the game, running back Pete Brown fumbled the ball over to LSU on the 31-yard line. Four plays later, Tiger quarterback Alan Risher threw a 12-yard scoring strike to Tracy Porter and LSU had all the points they needed with only two minutes gone in the game.

Nancy Zogleman

**Move over**-Ernie Coleman plows past the goal line during third quarter action.

Darrell Ray Dickey started at quarterback for the Wildcats and played all but two series of the game. Dickey finished with 136 yards on 11 of 21 passes. \*

<b>K-State</b>	<b>24</b>
<b>S. Dakota</b>	<b>3</b>

**K**-State evened its record at 1-1, with a 24-3 win over South Dakota. The Division II Coyotes threatened until K-State blocked a punt halfway into the third quarter.

Defensive tackle Mike Simeta was cred-

ited with the block and set up the Wildcats at the 5-yard line. Three plays later, Ernie Coleman scored to give K-State a 17-3 lead as the Wildcats coasted the rest of the way.

"I'm always happy with a win. In an 11 game season, you have to appreciate all the victories you come by. Even though we didn't do some things offensively very well, there were encouraging aspects of the game besides the one which shows up in the win column," Dickey said.

Dickey felt that some of the players were not mentally prepared for playing against the Coyotes.

L.J. Brown paced the offense with 115 yards on 18 carries. The Wildcats ended up with 183 yards on the ground, in addition to 102 yards in the air on 10-of-14 passing yards by Darrell Ray Dickey.

Defensive end James Walker led the defense with 10 tackles including five for 24 yards in losses. K-State's defense held the Coyotes to 187 yards of offense.

"We feel our Big 8 players are on defense. They have more experience than our offense," Dickey said, who specifically singled out the playing of linebacker Will Cokeley, safety Stan Weber, cornerback Steve Schuster, Simeta and Walker.

"We made some inexcusable errors, especially on kickoffs. We have an amazing ability to make the score close. They are going to make an old man out of me before too long," Dickey said. \*

<b>K-State</b>	<b>31</b>
<b>Arkansas St.</b>	<b>7</b>

**J**im Dickey and Larry Lacewell were old buddies when they coached together at the University of Oklahoma in the early 1970's. They met up again but this time on opposite sides of the field.

Lacewell brought his Arkansas State team into KSU Stadium before a Band Day crowd of 32,580 and lost the coaching reunion to Dickey 31-7.

"I know they (Arkansas St.) aren't as good a team as we'll play this year but I feel we played with more confidence, especially

in our offensive line," Dickey said.

A balanced running attack was the key to the Wildcats offense. They ran for 237 yards plus threw for 107 for a total of 344.

"I was happy that we showed some improvement. Our offensive linemen appear to be coming off the ball better, and they are getting a little confidence in blocking people," Dickey said.

"Our backs ran hard for the first time. That's important because the reason we work so hard on the running game is that we know our quarterbacks aren't going to have great days every time out."

"Perhaps the two things that pleased me most about the game were: we played with good intensity and concentration, and we were able to play a lot of people."

James Walker was awarded the game ball after leading the Wildcats defense with 15 tackles including three for 30 yards in losses.

"The next three weeks are crucial ones for us. We have three tough road games against Tulsa, Iowa State and Oklahoma," Dickey said. \*

<b>K-State</b>	<b>0</b>
<b>Tulsa</b>	<b>3</b>

**F**or the second year in a row, the foot of Stu Crum decided the final outcome in K State's game with Tulsa Golden Hurricane.

A second quarter 27 yard field goal by Crum were the lone points scored in the game, as Tulsa came away with its second straight win over the Wildcats.

The year before, Crum kicked a 50-yarder with no time left on the clock to beat the Wildcats 0-3 in Manhattan.

The Wildcats defense continued to play well as they held Tulsa to 11 first downs and 180 yards of total offense.

"We've got to do a lot of things better to be playing in the league we're in. It doesn't do anything for our confidence. We've worked with our players to make them believe they're better than they are," Dickey said.

"Right now, what this team needs is some leadership and we're going to try to provide it. It would be easy to get down but that's not the answer. I'm disappointed in our ineffectiveness on offense but we'll just work to improve."

"The reason, I suppose, that our offensive failures bother me so much is because we have worked so hard in that area — particularly with our running game."

"Defensively, it's hard to ask a heckava lot more from our players. It's always impressive when you can hold a team (Tulsa) to only a field goal." \*

K-State 7

Iowa State 31

**K**-State continued to flounder downwards as they dropped their second straight road game. The 'Cats lost to the Iowa State Cyclones 31-7 in Ames before a sell-out homecoming crowd of 50,163 at ISU Stadium.

Just when the Wildcats' offense showed some life, the defense let down, which made it a frustrating afternoon for Coach Dickey.

The Cyclones held a 10-0 lead at the half and stretched it to 17-0 in the third quarter.

Then K-State's offense went to work and preceded to drive 80 yards in 11 plays capped by a 7-yard touchdown pass from Darrell Dickey to Roman Bates.

Iowa State countered with a scoring drive of their own, aided by the play of quarterback John Quinn, who finished with 116 yards rushing on only 10 carries.

Junior college transfer Dwayne Crutchfield paced the Cyclones running attack with 165 yards on 31 carries.

K-State finished the day with 263 yards of offense, led by fullback Jeff Meyers 55 yards on the ground.

"Iowa State is a much improved team from last year. I hate to see their program improve that much more than ours. Both phases of our game left a lot to be desired today and we're a long way from being a good team," Dickey said.

"Our players and coaches are both disappointed. We've had better talent since I've been here, but if we keep working, some good things are going to happen to us before the end of the year."

Starting defensive end Wade Wentling and reserve linebacker Rick Lewis both sustained torn knee ligaments putting them out for the season. \*

K-State 21

Oklahoma 35

**T**he Wildcats offense finally got on track, except they picked the wrong team to do it against. In wide-open fashion, K-State dropped a 35-21 decision to the Oklahoma Sooners in Norman.

After going into the half down 28-7, the Wildcats made a game of it early in the fourth quarter and narrowed the OU lead to 28-21.

The Sooners added an insurance touchdown and K-State went home with a sample of a moral victory.

Darrel Dickey directed K-State's offense

Craig Chandler

**Let go!!** — An OU player rushes to assist quarter back J.C. Watts, while the K-State defense combines to make the stop.

with a total of 311 yards, including 178 in the air on 13-of-22 passes and three touchdown passes.

John Liebe was the receiving star with three catches for 68 yards and two touchdowns.

Darryl Black was the running leader

### "Oklahoma doesn't rebuild, they reload"

— Darrell Dickey K-State QB said after OU game.

with 56 yards on just three carries, including a 41-yard end around which set the Wildcats third touchdown.

OU finished with 548 offensive yards as its wishbone attack pounded out 469 yards on the ground.

Two first-time starters on defense made an impression on Coach Dickey. Sophomore Stu McKinnon replaced the injured James Walker at defensive end and freshman Stan Weber filled in for Mike Kopsky at safety.

"Stu played as hard as I've ever seen a guy play in his life. He was hurt, but he kept on playing. I just wish you'd go look at him," Dickey said in reference to McKinnon's severely cut nose.

OU Coach Barry Switzer was not very impressed with his squad's performance against K-State, as he said, "We are not a very good football team right now. If we play next week at Iowa State the way we played today against K-State we'll be in trouble." \*

K-State 3

Missouri 13

**T**he Wildcats moved closer to victory but still came up short in their homecoming clash with the Missouri Tigers before 30,610 chilly fans at KSU Stadium, and an ABC regional television audience.

A second quarter fumble at the 2-yard line by fullback Jeff Meyers proved to be costly to K-State as they fell to MU 13-3.

The Tigers first score was set up by the Wildcats first fumble, at the 10-yard line by Ernie Coleman. Ron Verrilli kicked a 22-yard field goal to give MU a 3-0 lead which held up until Jim Jackson tied the score with a 23-yard field goal in the third quarter.

Another Verrilli 3-pointer and 1-yard sneak by quarterback Mike Hyde were the finishing touches to the Wildcats third straight conference loss.

"I think Missouri is a better football team than we are. Not getting the ball in from the two hurt our chances of winning. It could have been a much more interesting game if we could have gotten a score at that point of the game," Dickey said.

"Basically, our players gave a good effort. Missouri dominated both lines of scrimmage. But I have to admire us for competing and fighting. It gets disappointing to play good and lose, but I have no complaints about our preparation and effort."

MU Coach Warren Powers was pleased with his team's hard-earned win.

"It was a good win for us. At this point in the Big 8, any win is a good win. It was a hard fought win and I think we deserved it. K-State is a tough team and Jimmy Dickey always has a good game-plan. I didn't feel comfortable until we had a 13-3 lead late in the game," Powers said.

One player who may have hurt the Wildcats the most was running back James Wilder, who rushed for 119 yards on 23 carries. Terry Hill added another 80 yards on 22 rushes, for the Tigers.

Darrell Dickey lead the Wildcats on offense both on the ground and in the air. He threw for 100 yards on 6-of-13 passes and ran for 44 yards on 13 carries. \*

**K-State** 18  
**Kansas** 20

The Kansas-K-State rivalry in football dates back to 1902 when KU beat the Wildcats in Lawrence 16-0.

Since then, the Jayhawks have had a stranglehold on the series and the score didn't change this year except for the one on the scoreboard.

Taking advantage of an inconsistent Wildcat attack, KU held on for a 20-18 victory before the fourth largest crowd (43,276) in K-State history.

The final score was not a very good indication of how the 'Hawks dominated the game.

"They whipped us. They knocked us off the line of scrimmage like they did last year," Coach Dickey said.

"I didn't see much difference in this game from last year's (against KU). It looked to me like a replay. KU is an improved team over last year."

The only thing that saved the 'Cats from total embarrassment were three KU fumbles in the third quarter when the 'Hawks led 17-7.

K-State made the game interesting in the final minutes when Monte Bennett blocked a KU punt to set up a K-State touchdown and two-point conversion to put the 'Cats within two points with 2:15 left in the game.

The only chance of victory for K-State was thwarted on the ensuing kickoff when KU recovered an onside kick by Jim Jackson.

"The onside kick is a high risk and we have to hope it takes a crazy bounce for us. We practice it every week but we shouldn't have to depend on it to win the game," Dickey said.

KU freshman running back Kerwin Bell was the offensive star of the game. He rushed for 216 yards on 38 carries. \*

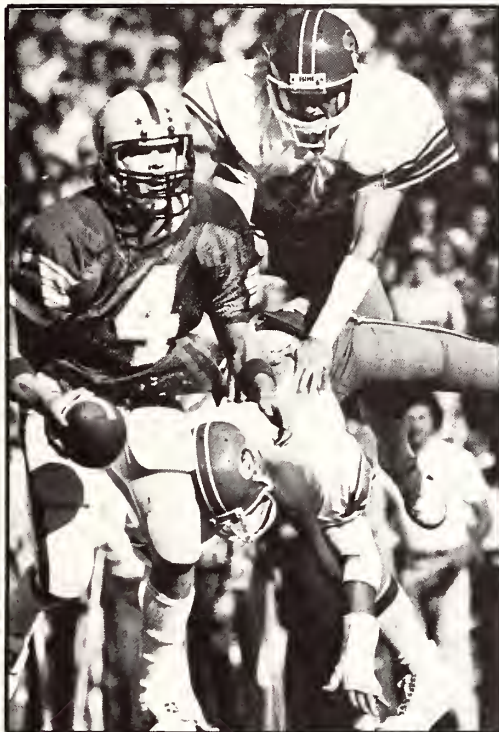

**K-State** 8  
**Nebraska** 55

The Big Red were ready for the Wildcats' visit to Lincoln. The 'Huskers led 34-0 at the half and rolled to a 55-8 victory over the Wildcats before 76,121 fans at Nebraska's Memorial Stadium.

"No question about it, Nebraska is the best team that we've faced this year. They were stronger and more dominant than I have ever seen them in all the time I've coached against them," Coach Dickey said.

Quarterback Jeff Quinn directed the 'Husker attack in the first half, when they struck for three quick touchdowns.

K-State quarterback Darrell Dickey only saw action in the first half after he was hit by

Bo Rader

**Up and over-**A KU defensive man hurdles another KU player in an attempt to sack Dickey. KU won the annual clash 20-18.

defensive end, Jimmy Williams and left the game with bruised ribs.

Doug Bogue came in for Dickey and suffered much of the same bad luck as his predecessor.

'Husker I-back Roger Craig, who rushed for 183 yards on just nine carries, made the play of the day when he ran for 69 yards while breaking six or seven tackles in the process.

"They have more speed on both offense and defense than I have ever seen. I doubt if anyone would be better than them if they play like they did against us. I can't remember all of their I-back's names but they all have a lot of speed," coach Dickey said.

Don Birdsey was the lone star of the day for the 'Cats. He boomed a school-record 93-yard punt, which was only one-yard off the Big 8 record by Kansas' John Hadl.

Nebraska finished with 692 yards of total offense to the 'Cats 193 yards. \*

**K-State** 0  
**Okla. St.** 10

The Wildcats suffered their third shutout of the season at the hands of the Oklahoma State Cowboys before a Parent's Day crowd of 22,370 at KSU Stadium, losing 10-0.

Doug Bogue started in place of the injured Darrell Dickey at quarterback and was harassed by the Cowboys defense all afternoon.

He was sacked for 85 yards in losses and finished with minus 87 yards on the ground. His total put the 'Cats rushing game in the red with minus 33 yards.

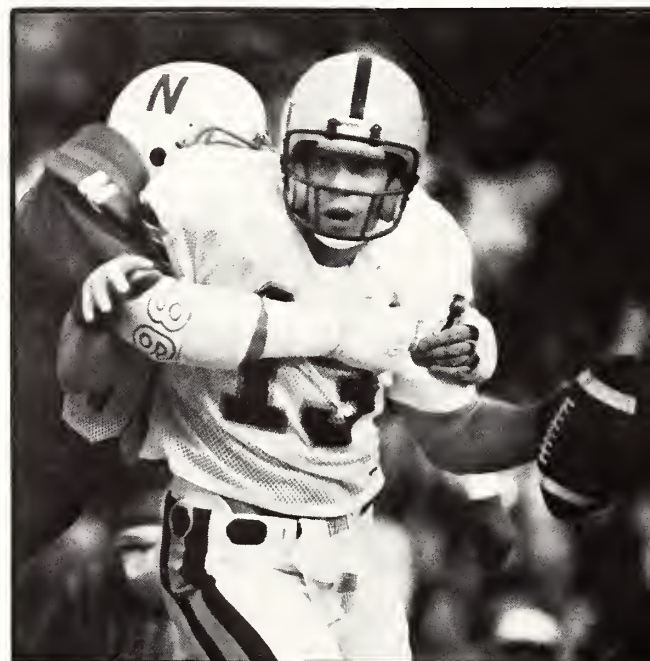

"I thought we played a good defensive game, but it's hard to play when you don't get any points," Coach Dickey said.

"It's not a case where the offense didn't play hard, we're just not a good offensive team. This shows our inability to get anything going offensively."

Dickey made sure to not put the blame of the 'Cats offense on Bogue.

"From where I stood, the quarterback was not the problem. He was running for his life. We tried to sprint out early, but then went to a drop back pass later. I know I sound like a broken record, but we don't have any backs who can break through," Coach Dickey said.

"We have some down linemen on defense that I wouldn't trade for anybody in the league. We're going to need to recruit some offensive linemen in order to play with the best teams." \*

Craig Chandler

**Let go of me!** Substitute quarterback Doug Bogue tries to escape a Nebraska defender in front of a crowd of 76,121 in Lincoln, Neb.

**K-State** 17  
**Colorado** 14

**I**t was a battle for last place in the Big 8 and the outcome wasn't decided until the last second.

Jim Jackson split the uprights from 17 yards out with a second to spare to give the 'Cats a 17-14 win over the Colorado Buffaloes in the season finale at KSU Stadium.

An interception by cornerback Gary Morrill helped set up the game winning kick with 2:45 left in the game.

L.J. Brown, who finished his career at K-State with a 148-yard day on 36 carries, had a chance to score from the one-yard line with 28 seconds left but was stopped short of the goal line.

"I'm really happy we at least finished up with a win. I thought we did a lot of good things, and we made a lot of mistakes," Coach Dickey said.

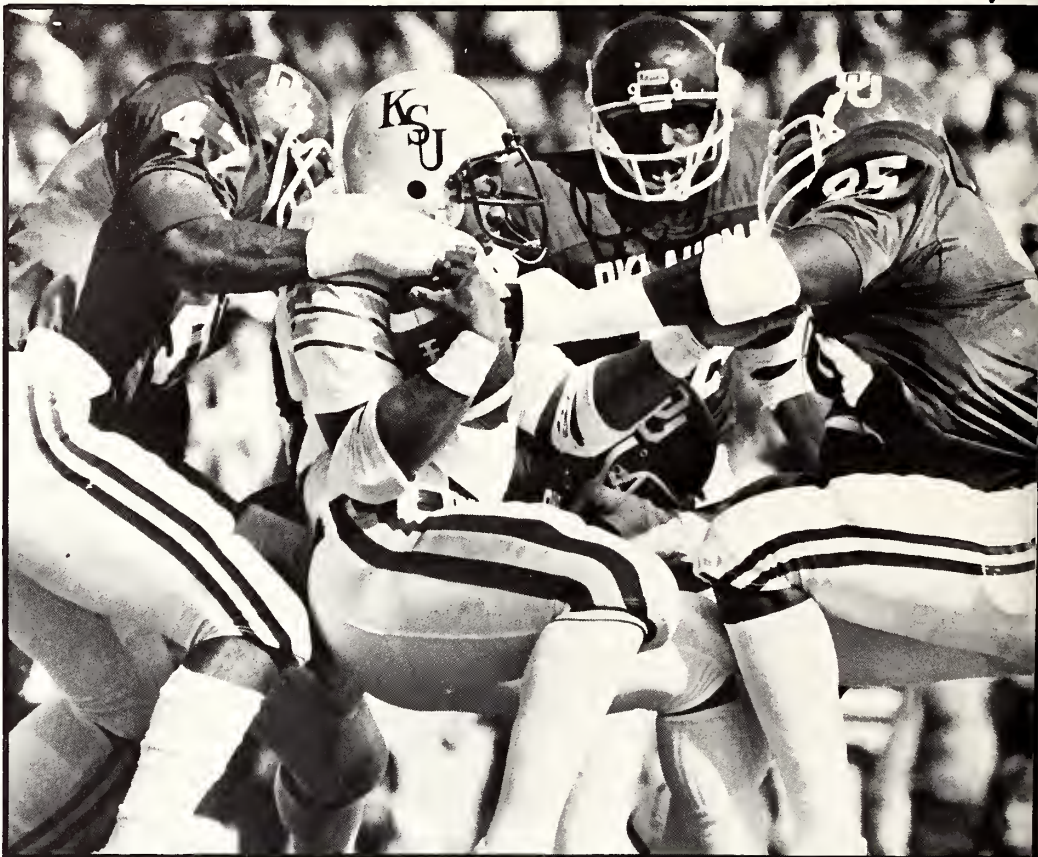

The 'Cats had numerous opportunities to win the game earlier. Twice they ran out of downs while in Colorado's territory in the fourth quarter.

Both teams traded touchdowns in the first half. K-State went ahead 14-7 in the third quarter on L.J. Brown's second short touchdown run of the game.

But the Buffs refused to die, tying the score early in the fourth quarter on a long screen pass for a score.

On setting up the winning kick, the 'Cats' coaches were prepared for getting the kicking team on the field in time, as there were no more timeouts for K-State after the Buffs stopped Brown at the one.

"We set up the final play real well. They (CU) didn't want a tie and we didn't want one. On the last timeout, our coaches did a good job of telling the kids to be ready to get on the field for a field goal," Coach Dickey said. \*

Craig Chandler

**I want it!** — K-State running back Kenny Smith is grabbed by two Oklahoma payers at a game in Norman. K-State lost 21-35.

## ... but finish last

Even though the 'Cats started the season on a brighter note, the season was a disappointment for K-State, winning only one conference game.

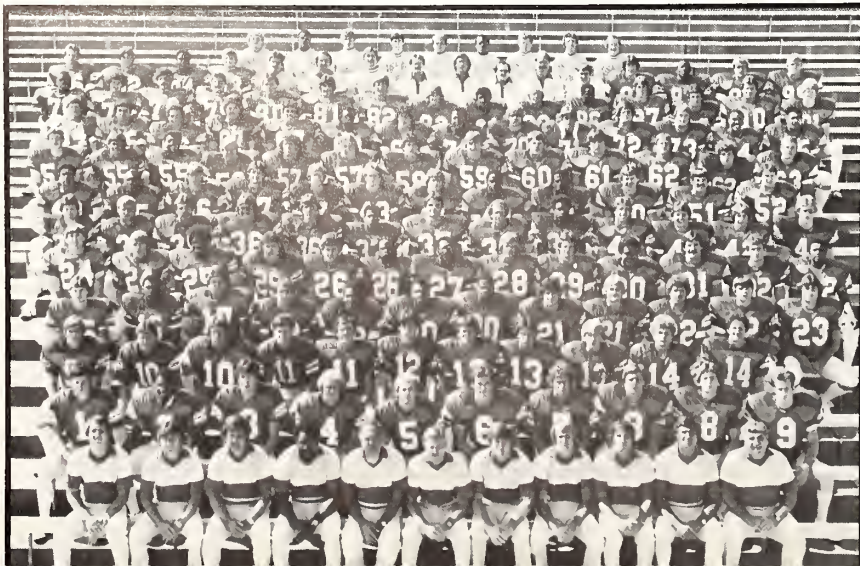

The team repeated last year's 3-8 season, with the team's biggest problem in the offensive area.

James Walker was the only player on the team to be honored on the All-Big 8 team and Jim Morris, safety and Don Birdsey, punter made second team All-Big 8.

Defensively, the 'Cats equalled a school record by holding five teams (South Dakota, Arkansas State, Tulsa, Missouri, and Oklahoma State) to one or fewer touchdowns. \*

# Barbells

The harsh clang of metal against metal, sounds of quick breaths, grunts the low rumble of conversation bounces across the room. A radio sits by the wall and pours out a stream of "doo-wahs" that mingle with the other sounds.

This is not the description of some sort of 20th century torture chamber. It's K-State's Recreational Complex weight room. It is the site of future weight-lifting championship contenders, competition body-builders and individuals trying to keep their minds and bodies sound.

Reasons for straining over weights, pushing their muscles to their maximum capacity and grimacing as they lift a bar above their heads vary.

"If I don't lift (weights) everyday I feel bad it's kind of addictive," Laura Ward, sophomore in pre-law, said.

Ward is an unusual case, not because she is a female weight-lifter, but because she lifts every day.

"Most people lift every other day," she said, "but I feel awful if I don't lift daily. Besides, I love to eat and weight lifting is my main way of controlling my waistline."

Not every person in the weight room is lifting for the same reason as Ward. In fact, most men don't even think of lifting as a form of weight control, according to Steve Cox, sophomore in electrical engineering and second year powerlifter.

"There are powerlifters, bodybuilders and weightlifters. I like to compete in powerlifting. It (lifting) makes you feel good knowing you're stronger than other people," Cox said, "I lift to get stronger."

Cox works out five days a week.

"It's not good to seriously lift every day," he said. "Since I am a powerlifter I work towards lifting in competition meets. This means concentrating my workouts on three major lifts — the squat, bench press and dead lift. The first two I do twice a week, the last one once a week."

Cox works with a partner powerlifter Mike Stein, senior in electrical engineering and a weight lifter for seven years.

"We know each other's capabilities and limits. We always 'spot' each other when working out. That way we can encourage ourselves without passing our limitations," Stein said.

Stein has been lifting weights since high school and is looking forward to his first competition meet in January, whereas Cox has competed in three major powerlifting meets, placing second in the most recent meet.

"The competition gets stronger every meet, but then I am getting stronger every time," Cox said.

# build bodies

Weight lifting does have its drawbacks. "A back injury could be the worst thing to happen to a lifter since his back is used in every form of lifting," Stein said.

Wide leather belts are strapped around the waists of weight lifters to help prevent such injuries.

Other than the possibility of a serious back injury, soreness is the main discomfort a lifter experiences, Stein said.

"Unless I have my clothes custom made I have to wear industrial pants or else sweat-pants. In order to fit my shoulders I have to buy big shirts that are huge around my waist. I also gained 30 pounds since I started lifting two years ago," Cox said.

Weight lifting is becoming more and more popular at K-State. Over 30 people can be found in the weight room at the Recreation Complex, every afternoon and on into the night.

"It's a new form of working out for a lot of girls. They've found out it doesn't turn you into a muscle-bound woman unless you work on developing those sort of muscles," Ward said.

"It's a routine for me. I would work it into my day regardless of my school schedule," she stated. \*

*Sailing,*

*To mariners it's way of life.  
To the Commodores and  
Christopher Cross, by way of  
songs "Sail On" and "Sailing", it's  
music.*

*And to sail boat enthusiasts, it's  
a chance to be close to nature  
imagine sailing. Gliding over  
water, answering to no one but  
the wind. The breeze becomes the  
master, the driving force.*

*Skimming the water in Tuttle  
Creek down with dexterity and in a  
sudden gale, the sails become  
captivated once again. The sails  
whip faster and faster pulling the  
boat over the water.*

*Then, unpredictably, the wind  
dies, the sails collapse, and the  
boat gently drifts with the waves  
of the water.*

“Volleyball is undergoing some major changes at other universities. K-State is behind. Other universities are going (practicing) year round. K-State has been losing ground over past years so now we’re going year round. We need to put in hours that other teams put in,” Scott Nelson, women’s volleyball coach, said.

The year round season began this year with the collegian season in the fall. A ten-day break followed, then open season started in the spring with practice three or four times a week, according to Nelson.

This new coach has brought changes to the women’s volleyball program.

Scott Nelson, a former United States Volleyball Association (USVBA) All-American player at Ball State, took over K-State’s volleyball coaching Aug. 1.

“The program is in a transition period by hiring a new coach with a different philosophy and different ideas on techniques,” Nelson said.

Nelson emphasized the fundamental techniques of volleyball. In the fall he emphasized forearm passing when receiving the serve, and serving. In the spring Nelson concentrated on defense and spiking.

“I spent most of this year teaching my techniques. It’s really hard on the older players. They’ve had three coaches in as many years,” Nelson said.

Of the 12-member squad, five were freshmen. The five freshmen included Gloria Blount, Annell McKee, Cathy Sittenauer, Beth Wiseman and Sharon Ridley. The team closed out the season with a 12-23 record.

Coach Nelson did have high aspirations of winning all out when the season started but said he realized it wasn’t realistic because of the jump other universities had on them with their year-round programs.

For the collegian season, the award for

the team’s most valuable player and best server went to Holly Sinderson, senior.

“I think there’s a real good outlook for the future with a good coach. I think he’ll get good recruits,” Sinderson said. “There is potential to have a nationally ranked team,” she said.

Susan Drews, the Wildcats’ best blocker, was named to the region VI sub-regional all-star team.

“The overall effect of the program will turn upward in the next two years and become nationally competitive,” Drews said.

Beth Wiseman, freshman, was named most-improved player.

Nelson plans to build a strong Wildcat program that can compete nationwide.

“The grass roots exist for a quality program. I expect our program to blossom more in the next two years,” he said.

Because of the experience the younger players have gotten and will be getting, Nelson predicts that their record will definitely improve.

“Since the team is so young I would like to take them to the junior national this summer. It would be a real positive experience and build confidence for them to know how good they are in comparison to other players the same age,” Nelson said.

Starters for the upcoming season will be made up of mostly sophomores and juniors, he said.

“We have laid down a good foundation of the type of volleyball system I’d like to run at Kansas State,” Nelson said. “Our record doesn’t reflect what we’ve learned, and now I can move away from teaching basic fundamentals into teaching higher skills.”

# Regionals

Cross country, one of K-State's smaller sports, doesn't have the funds to recruit heavily. But the team doesn't seem to need any help in this area.

When it comes to recruiting track and cross country athletes, K-State has not had to chase after foreign runners. Instead, foreign athletes have come to K-State on their own.

"We don't go out looking for foreign runners, they come to us," Jerome Howe, men's cross country coach, said.

"It is just coincidental that we have the foreign runners that we have now. We make no big attempts to find them. They just find us."

One of these new foreign athletes who is running on the cross country team is Sammy Rotich. He is from Kenya and transferred to K-State this year from Colby Community College.

Rotich came to K-State because of the persuasion of his track coach at Colby and the academic environment.

"In my home country, the track season lasts only one month each year. But here in the United States, you have the season last year round. Plus, the cross country season keeps me in condition for the track season," Rotich said.

Rotich said he has only one dislike in the American culture—the food.

"There is no one special food I hate the most. I don't care for any of it. I used to prepare my own meals which wasn't too bad, but now the food is fixed for me and I don't care for a lot of the American food."

Another runner also came to K-State in his own unique way.

John Holliday is from Toronto, Canada and has been running on the varsity cross country team. He decided to come to K-State for almost the same reason as Rotich—his education.

"I visited a few other agriculture schools and talked to people at each school. I looked at each athletic program and then decided on K-State. Another reason was because I felt most comfortable after visiting K-State," Holliday said.

The men's cross country team ended the

# dead-end for teams

season at the NCAA regionals at Ames, Iowa, with a seventh place finish. Dan Schlicher finished 23rd followed by Rick McKean at 30th.

Overall in the Big 8, the team finished fifth, six points behind Kansas and seven points behind third-place Missouri.

The women's cross country team opened their season without the presence of nationally-ranked Cathy Saxon. In 1979, she placed second in the Big 8 cross country championships.

"My attitude was not as good as it should have been. It wouldn't have been fair to everybody else on the team if there was someone with a bad attitude. If you can't give 100 percent, why do it at all?" Saxon said.

Saxon returned to the team with a second place finish in the K-State, Missouri and Dodge City Community College triangular. In this race, Janel LeValley tied the course record set by Debbie Veeter in 1977.

Barry Anderson, women's cross country coach, believes the key to the success of his

program was the support of Athletic Director DeLoss Dodds, who was K-State's men men's track and cross country coach from 1963 to 1979.

"DeLoss sincerely believes that the women should have the opportunity to compete, as he has special interest in track and cross country. He's been behind us 100 percent and I think we get all the support we need from the top," Anderson said.

LeValley had a string of first place finishes broken at five in the Big 8 championships in Columbia, Mo. She finished fifteenth with a time almost one minute off her regular 5,000 meter time. However, LeValley came back strong in the Region VI championships in Ames, Iowa, with a fifth place finish as Saxon ran in one second later in sixth.

Both the men's and women's teams have potential for successful seasons next year because of their depth of returning lettermen. \*

## Racing to win

# Finish line in sight

“Last year it was always like a 100-yard race,” said K-State women’s tennis team coach David Hacker, summing up the ’79-80 tennis season in the words of one of his players.

“When the race finished, we were always at the 50-yard line when the other team was at the 100-yard line. But this year we seemed to be at the 90-yard line at the end of the race,” he said.

Although the ’79-80 record of 13-11 was an improvement over the 5-15 record of the year before, Coach Hacker attributed the team’s fall season improvement to patience.

“The team was a year older; they had developed, but mostly they showed signs of patience. That’s the key to the top flight in tennis,” Hacker said.

The coach predicts that the women will continue to improve over time, with the help of “an entirely different schedule.”

“I decided that this year, the only way to get better is to play upward. So we’ve been playing better schools this fall,” Hacker said.

Competing against more out-of-state schools in the 1981 spring season, the coach expects the season record to be dismal with the tougher competition.

“All the schools we’re playing are fielding players from California and Florida — everything’s just a matter of money,” Hacker said.

However, maybe next year the women’s tennis team will reach the 100-yard line at the same time as the rest of the schools, with continued practice and patience, according to Hacker.

The K-State men’s tennis team also faced the toughest schedule ever faced in the spring of 1980, according to coach Steve Snodgrass. The team finished the season with a 9-12 record overall and a 1-6 mark in the Big 8.

The Wildcats placed seventh in the conference at the Big 8 Championships, but played shorthanded.

Greg Last, the regular No. 3 singles and No. 2 doubles player, was injured in a freak accident the night before the championships. Mike Goss was injured in second round action and was forced to forfeit his final round matches.

“We didn’t reach our goal of placing fourth in the Big 8,” said coach Snodgrass, “but we lost a lot of close matches; not only in the championships, but in the entire season.”

Playing just four of five duals during the 1980 fall season, Snodgrass said, “We had an excellent fall practice and fall schedule. Although the No. 1 man, Jeff Henderson quit the team, I think we’ll do okay.”

“Gary Hassenflu has shown a vast improvement over last season, and Matt Westfall is now playing singles as well as doubles since his accident in 1978,” Snodgrass said. “And freshman David Berg could possibly make the top six with some strength conditioning and become a good asset to the team.”

## Wildcat teams not

**B**ehind the scenes at every athletic event are a number of people insuring a smooth performance for the Wildcat fans. These are the athletic trainers and equipment managers.

"Trying to coordinate 12 coaches and 120 football players can cause big headaches," Jim Kleinau, equipment manager, said.

"But without trainers and managers, you just can't put a team on the field," Doug Hanlon, student equipment manager said.

During the week, these people do what ever must be done to make practice sessions as interruption-free as possible.

The 11 equipment managers, headed by Kleinau, are responsible for the purchase, maintenance, repair and inventory of all equipment.

They put freshly-laundered practice clothes in each locker, set out all the equipment — balls and dummies, repair or replace anything broken and time the practices.

The athletic department is staffed by five trainers certified by the National Athletic Trainers Association and thirteen student trainers.

Head trainer Jim Rudd has two assistant trainers — Richard Ray and Chris Neuman. Rudd travels with the football squad, Ray accompanies the men's basketball team and Neuman attends to the women basketball

players. All the student trainers work with the football program in the fall then are divided among basketball, baseball, softball track and spring football during the spring.

The end goal of the hours and days of practice is game day.

A typical football game day begins at 6 a.m. for the athletic trainers. At this early hour, Jim Rudd, head trainer and two of the other trainers start wrapping players' ankles. About 60 percent of the players get preventive taping, Rudd said.

Other trainers prepare sideline and halftime drinks and special supports and taping supplies. They help the Red Cross set up sideline emergency equipment, such as stretchers and splints. The trainers also order the 15,000 pounds of ice used at each game.

The equipment managers have done most of the setting-up the night before.

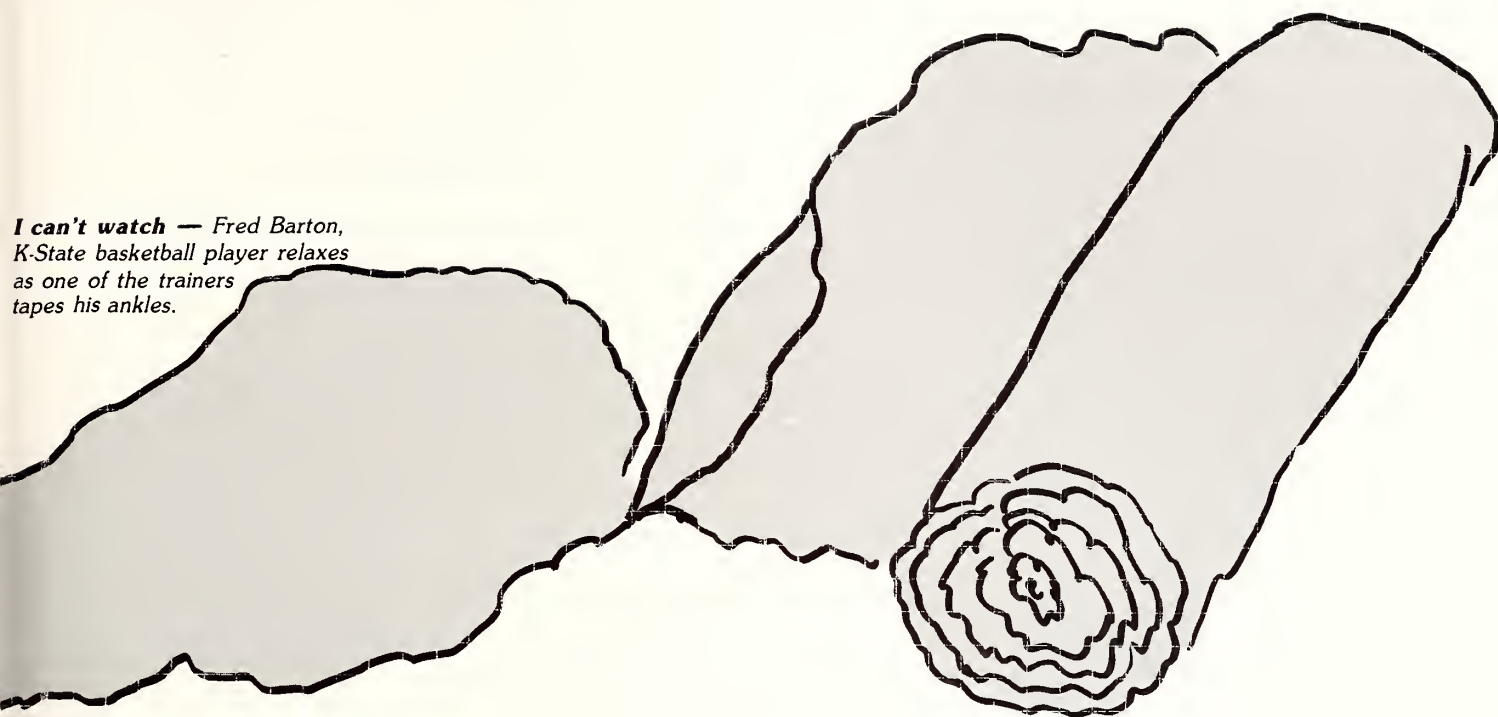

"For the last two seasons now, we have taken everything out of each player's bag, set it out and checked it over the night before a game. We have gotten more professional in our procedure," Hanlon said.

While the players are dressing for the game, the managers replace missing socks and broken shoestrings.

Because the team now has a separate set of game helmets which can be checked and repaired throughout the week, helmet breakage during the game is not as common

**SPADES  
BANDAGE**

**I can't watch** — Fred Barton, K-State basketball player relaxes as one of the trainers tapes his ankles.

# always on the playing field

as it used to be. In addition, the team has an extra set of helmets, one of each size, so if one does break, the player does not miss any of the action while waiting for it to be fixed.

During the game the trainers take care of injuries as they occur.

"It would be great if all we did was watch from the sidelines (during the game)," Rudd said, "but unfortunately, injuries do happen."

If a player gets hurt during the game, a doctor examines him and the trainers administer immediate first aid. If the injury is not serious, the trainers do whatever is necessary for him to return to the game.

After the game, the doctor holds a clinic where he examines all the injuries sustained by the players and the trainers begin treatment procedures while the equipment managers pack up all the equipment.

"Athletic trainers are concerned with prevention, care, and rehabilitation of athletic injuries," David Witter, student athletic trainer, said.

Like football trainers, the responsibilities of trainers in other sports are much the same.

Neuman, who travels with the women's basketball team begins taping about one and a half hours before a game, depending on the numbers and types of wraps needed.

"I generally tape almost the whole team

each individual is done just a little differently," she said.

Taping ankles is the most common for basketball players, and knees are the most time-consuming. She also tapes calves, thumbs, and fingers, she said.

Neuman's interest in being an athletic trainer was sparked by her next-door neighbor of her childhood in Ohio, a trainer for the Cleveland Cavaliers.

"I became seriously interested in the field during tenth grade," she said.

Several of K-State's trainers and managers began their field experience around that same age.

"I was the smallest guy in my high school sophomore class when the football coach asked me to be a trainer which I did for three years," Witter said. "Then I was a trainer for a year at junior college. A K-State coach came down to Juco as a recruiter. He didn't end up with any football players, but he came back with me."

Kleinau used his experience as a high school student trainer to help finance his college education, first at a junior college, then at Oklahoma State University.

"It just comes easy to me and it's very rewarding. I enjoy traveling and meeting people," he said.

Rudd too was a trainer in college. He then went on to be an assistant trainer for the Philadelphia Eagles, head trainer for a junior

college, assistant trainer at the University of North Dakota, then assistant at K-State until his promotion last April to the position of head trainer.

"I have worked in most every level of school and have learned a lot from each experience," he said.

After playing football in high school, both Hanlon and Jeff Thorson, student equipment manager, wanted something to do to stay around football teams.

"Managing is almost like going out there, being a part of it all," Thorson said. "We travel with the team, get to know the coaches — it's a good time."

Kleinau agrees that despite the headaches involved, the job is rewarding and enjoyable.

"In a way it's kind of like coaching. There is camaraderie between the managers in the league," he said.

Although vital to the athletic program, the jobs can also be thankless ones. Many times the work of the managers and trainers is taken for granted.

"What it amounts to is that we all have just got to work together to put it all together on game day," Hanlon said. ☼

**Teresa Larson**

# Bench players

**L**ike an evergreen in a Christmas tree lot, a player on the football or basketball bench waits to be chosen.

Similar to Charlie Brown's Christmas tree, a bench player experiences the pain of being chosen last, while others take the spotlight. But given the chance to step on the court or gridiron, he too might sparkle and glitter — ornamented with the driving desire to excel.

Football player Doug Bogue is K-State's own example of the bench to field story. Bogue, sophomore in pre-veterinary medicine and Wildcat quarterback, didn't get the opportunity to play a great deal until the Nebraska game this year when he replaced the injured Darrell Dickey. Prior to that time, he had played in two junior varsity games and one varsity game his freshman year.

"Nobody likes to sit on the bench much," Bogue said. You feel like you're taking a shower without getting wet."

"The hardest thing about sitting out is you don't feel like you're part of the game. It's

hard to celebrate a victory and hard to be sad when you lose. But you've got to suffer and celebrate right along with them (those who did play)," Bogue said.

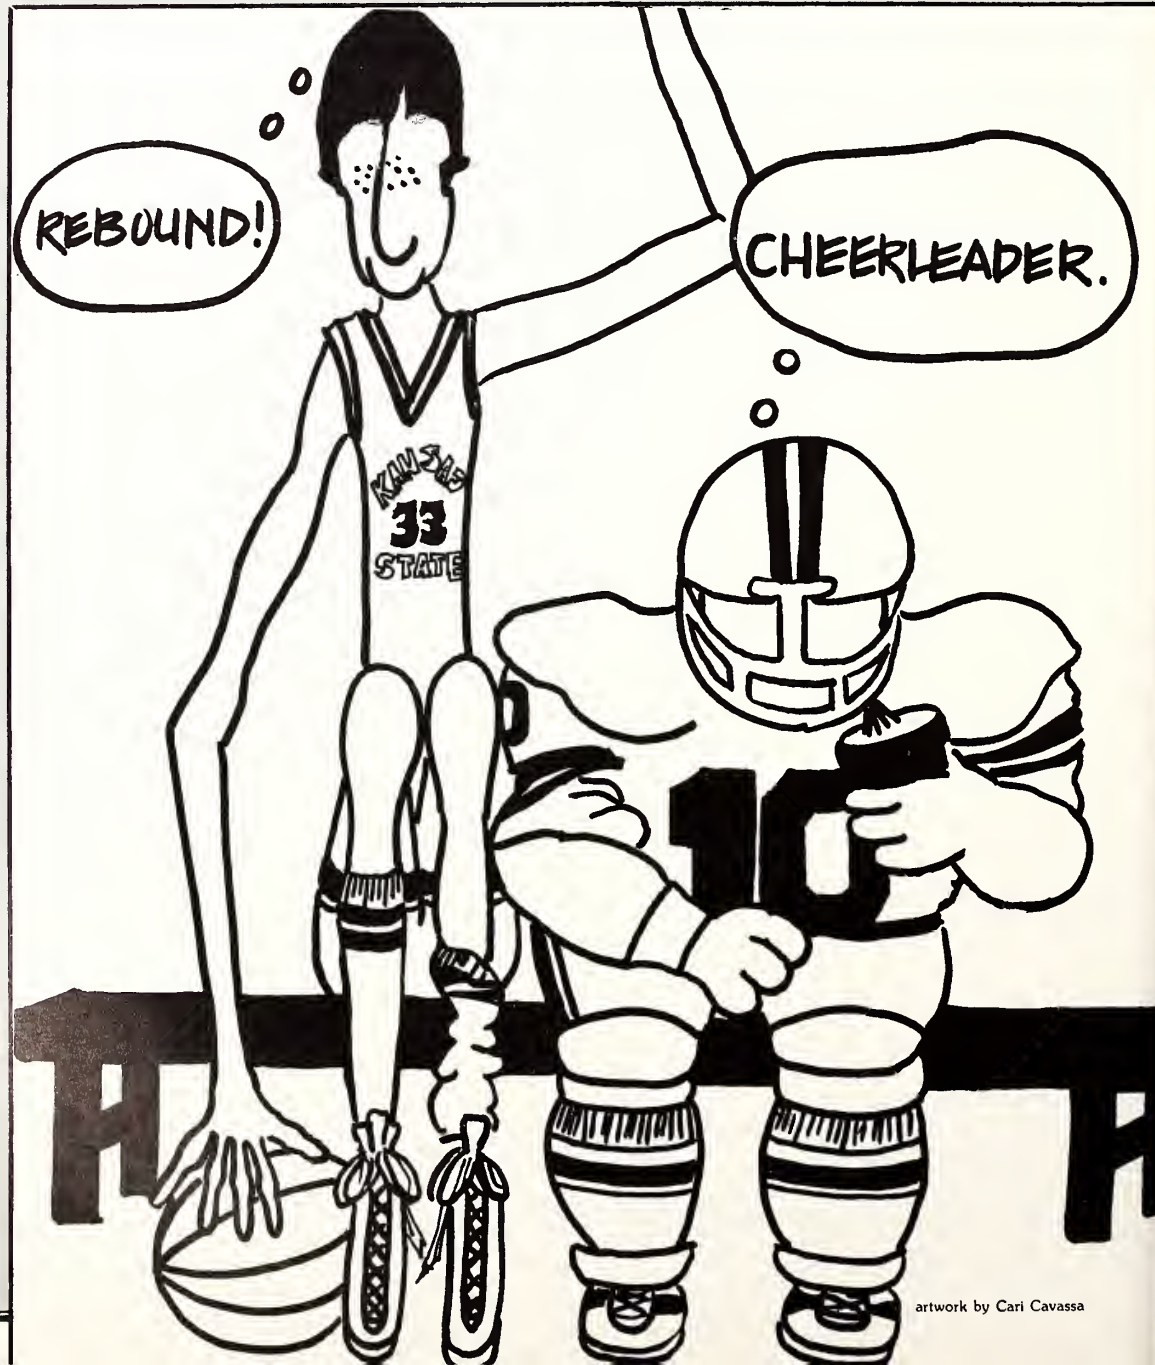

A K-State football player has to expect to sit out a year or two, though, Bogue said.

"You've got to adapt to the crowd, the excitement and the whole college game," he said. "You've got to mature and adjust to things, and sitting on the bench is just part of it."

When a player is sitting on the bench, he sometimes feels that he would do things differently than the other player out there in his position, according to Bogue.

"There are times when I felt like I would have done better, but I respected Darrell's judgement because of the extra experience he'd had," Bogue said.

An athlete has a lot to think about while waiting for the chance to show what he's learned. Applying to both football and basketball, a player has to keep his mind on the

# await chance to glitter

**Bench talk** — Bill Mosier, freshman in business management, gets the game instructions from K-State coaches Lon Kruger and Jack Hartman during the Dec. 13 game against Wisconsin-Parkside.

Rob Clark

defensive and offensive plays being made, learning from the mistakes, understanding the reasons for losses, and just staying involved, according to Bogue.

"A player's got to be mentally alert as well as physically ready," Bogue said. "You have to keep your mind on the game. While I was sitting on the bench I thought about the situation that Darrell was in and what I would do. It's kind of like a back seat driver."

"You've got to be ready all the time, because you might get thrown in there. If you're not ready you might not get another chance," Greg Prudhoe, junior in business administration and reserve basketball center, said.

Prudhoe, redshirted two years ago in order to increase his mobility, agility and strength, is an experienced bench player. But according to Coach Jack Hartman, Prudhoe has made "a lot of physical and mechanical progress, and could be a factor" in future Wildcat action.

John Marx, another basketball player who's seen a lot of the varsity bench, said that a player always has to think about what's going on.

"You know that your chance will come and you wait for it," Marx, sophomore in accounting, said.

"Everyone's going to get to play. It's just a matter of time," Bogue said, "We (the football team) don't have that much depth, so everyone's going to play sometime. But like on the Oklahoma or Nebraska teams, there's a lot of good players sitting on the bench. Some of these players might be starting here, whereas they're just wasting away at those schools."

Of course the coach is the deciding factor

concerning who plays or not.

"I'd like for all of my players to be able to play, but there's no way they can in a varsity game," Joe Hatcher, assistant football coach, said.

Most of the freshman football players are relegated to the ranks of junior varsity (JV) football or else they sit on the bench during varsity games, according to Bogue.

---

## **"You feel like you're taking a shower without getting wet."**

---

"Coach Dickey won't play freshmen unless he has to," Bogue said. "It can really ruin a guy's confidence if he goes out his freshman year and doesn't play up to expectation."

After playing two JV games his freshman year, Bogue warmed the varsity bench the rest of the year.

"I was glad to be able to be there for the varsity games at first because I thought it was pretty neat. But then I wished I'd been able to get the experience through the JV games," Bogue said. "But during the spring practices, everything evened out as far as getting the experience."

Also being primed for the right place and time to exhibit their talent, some of K-State's basketball players play JV basketball, and then suit up again for the varsity game in case their skills can be utilized.

Marx and Eric Salter, both forwards, have been following this pattern for the last two years, as Eduardo Galvao, K-State guard, had been last year as a freshman.

JV coach Dean Danner feels that JV basketball is important to the players because,

"it's a good time to develop the things they've learned," he said. "As far as the varsity players playing JV, it's good for them to play against other players. It's a different situation to learn under."

"The difference between JV and varsity games is that most of the JV teams come from in-state and the competition is always easier," Marx said.

"We try to get everybody to play in the JV games, but the guys that come down from varsity get the most playing time, so the others may wait a while," Danner said.

Danner, a fifth year student in engineering technology and business management, played varsity basketball for K-State for four years. Ineligible to play a fifth year, he missed being a part of the team and snatched the opportunity to coach the JV team when coach Darryl Winston left, he said.

Potential JV basketball members audition for the team through the all-university try-out in October. Thus, members of this team are walk-ons, with the exception of varsity members, who sometimes participate in the games for the experience, as with Marx and Salter.

Another example is that of Les Craft, forward-center. After sitting out with a stress fracture for ten straight games, Craft himself decided that the JV game experience could be beneficial in tuning up for the remaining varsity season.

"JV is still a part of K-State basketball," Danner said. "It's quite a big deal to be on the team, whether it's JV or varsity. JV gives some of the kids that like to play ball and who want to work hard a chance to play for K-State. It's just a thrill to be part of the program." Σ⇒

## Bench to glitter

However, as in the varsity games, there are still members of the bench during each game. It's not an easy decision to make as to who will play or sit on the bench, according to Danner.

Sometimes the athletes do have differences with the coach as to whether they should get to play or not, Gary Bogue assistant football coach, said.

"But you just talk to them, and help them understand your reasons. There are certain situations that they should get to play in. You're always making minor adjustments

with the players — maybe they'll be better in one spot than another player," Bogue said.

"It's tough for me being put in the position of authority since I played with these guys last year — I'm just one or two years older than they are. But generally, everybody's been really good about it," Danner said.

Though unusual, a player may desire to be benched.

"I might want to be redshirted next year," Bogue said. "Since Darrell Dickey and I are

the same age, I'd have an extra year to play after he graduates."

A redshirt player still practices with the team, but there's no pressure to know the plays. It's also a time where the athlete can catch up on his grade point average, according to Bogue.

"If you think positively about it, it could be beneficial," Bogue said. "Patience and bench can be the key to success." ❁

## 'Cats no surprise

**T**he 1980-81 Wildcats started the basketball season recognized as a highly competitive team not only in the Big 8 but also on the national level.

"It's going to be difficult to sneak up on anybody with this ball club," Jack Hartman, Wildcat coach said.

Hartman, ranked third nationally for major college wins (.681), coached the 'Cats in the NCAA post-season tournament last year against the eventual national champions, Louisville.

Returning for the Wildcat team were Rolando Blackman, starter on the U.S. Olympic Team, and picked by pre-season polls as an All-American; forwards Tyrone Adams and Ed Nealey, and point guards Tim J. and Fred Barton. ➤

Bo Rader

**"Ro"-lling the ball-** Rolando Blackman fights for the ball against a South Dakota player during the second home game of the basketball season.

# Nebraska Cornhuskers

**Jan. 14, Lincoln, Neb.**- K-State opened their Big 8 schedule on the road, battling a tough Nebraska team. The 'Huskies paced by Andre Smith came out on top, 59-49, following two unsuccessful surges from the Wildcat offense. Smith had 20 points for Nebraska.

"We'd work up to a point where we'd catch up, and then we couldn't hold the lead," guard Rolando Blackman said.

It was the fourth consecutive loss for K-State in Lincoln, and gave the 'Cats a 0-1 conference record, 10-3 overall.

"It didn't bother me so much that we lost," coach Jack Hartman said, "but the way we lost. After we showed poise and maturity to get back in it, we didn't show it at the end when the game was on the line. We didn't attack."

Blackman led K-State scorers with 15 points, scoring in double figures for the 38th straight game. Randy Reed and Tim Jankovich added 12 each.

Craig Chandler

**Miss it!** Tyrone Adams attempts to block a shot by a Nebraska player. The biggest crowd (11,520) since 1971 saw the 'Cats roll to a 66-49 victory.

**Feb. 14, Manhattan, Ks**-It was a sweet victory for a standing room only Valentine's Day crowd of 11,520. K-State won the second meeting with Nebraska convincingly 66-49.

Reed sizzled the nets with 70 percent shooting, and all five K-State starters scored in double figures.

The win put K-State in a tie for first place with the Cornhuskers, both supporting 7-3 records.

Although the game promised to be intense, several members of the pre-game crowd appeared bored-reading newspapers while the Nebraska players were being introduced.

The intensity of the game came to the surface with a near confrontation between Tyrone Adams and Nebraska's Andre Smith.

"He was trying to get to a position I didn't want him to get to," Adams said. "He pushed me and so I pushed him back. If you let him get away with pushing you once, he'll push you the entire game. It was nothing big, both of us were at fault."\*

# Colorado Buffaloes

**Jan. 17, Boulder, Colo.**- Coming off a loss from Nebraska, K-State was out to even their Big 8 record at 1-1. Though the 'Cats didn't play up to par; the mission was accomplished. The Wildcats brought home a 63-62 overtime win against the Colorado Buffaloes.

"That was enough to give you indigestion," Hartman said of the overtime victory.

Jo Jo Hunter had a chance to win the game for the Buffs both at the end of regulation, and in the overtime, but both shots fell short.

The difference in the game was on the free throw line. K-State hit 23 of 34 free throws, while Colorado only hit on eight of 15.

Key plays by Blackman aided K-State to victory, and Blackman ended the afternoon with 21 points. Nealy added 15 points and 13 rebounds.

Cort Anderson

**Listen to what I tell ya**-Coach Hartman gives directions to his team during the annual K-State — KU clash.

**Feb. 7, Manhattan, Ks**- "I thought we opened the game playing about as well as we can play," Hartman said. "The defense was really doing the job."

The defense Hartman spoke of, the famous 3-2 zone the K-State defense frequently implements, was a major factor in the 82-62 victory for the Wildcats in Ahearn. The Wildcat defense held Colorado to nine points in the first 16 minutes of play, and took a 36-15 lead at the half.

"Everybody has a responsibility in the zone," Blackman said. "Everybody covers for each other and we try to keep the zone sealed."

The game was well balanced with a poised patient offense who shot 50 percent from the field.

"The offensive movement was good," Hartman said. "They had good timing, passing, shot selection and movement."

Nealy led the K-State scorers with 14 points, and hauled down 13 rebounds.

The win gave K-State a 5-3 conference mark, and a three way tie for second place with Kansas and Missouri.\*

# Oklahoma St. Cowboys

**Jan. 21, Manhattan, Ks.**-The home opener against Oklahoma State ended up disastrous for K-State, as they lost 90-83.

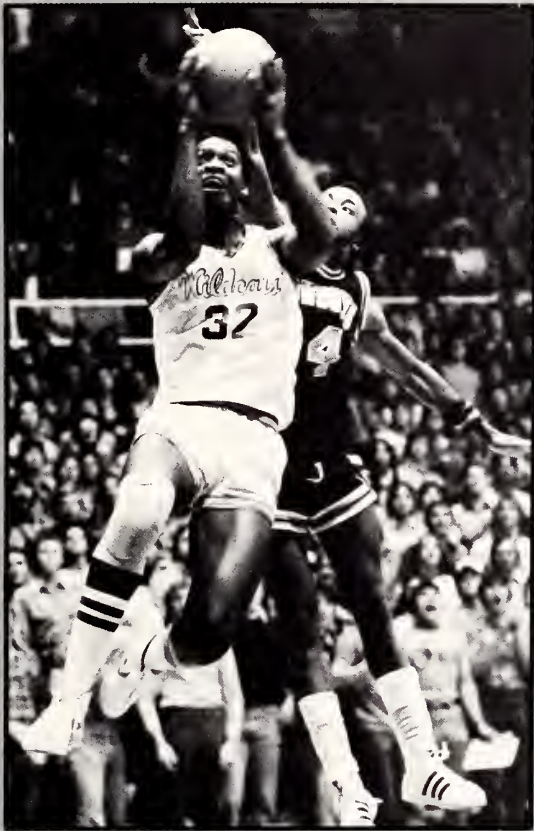

"We didn't play very smart. We were too impatient on offense. The trend was set early when we started putting our shots up too early. We didn't make them play any defense. We got into their rhythm," Hartman said.

Although Randy Reed had a career high of 26 points (and only played 25 minutes), it wasn't enough for the 'Cats to overcome the Cowboys.

Adams returned to the K-State line-up after missing the four games previously because of a knee injury, and scored 15 points for the 'Cats.

Hartman was forced to use Adams more than he wanted because Nealy was suffering from the flu.

K-State's biggest lead of the night came in the first half when the 'Cats went ahead by five with 6:57 left in the first half, 32-27

Scott Williams

**Determination-** Tyrone Adams completes a lay-up for K-State despite the O. State defense.

**Feb. 11, Stillwater, Okla.**-Oklahoma State, suffering illness and injuries, bowed to K-State their second meeting of the conference 73-70.

The win for K-State put them one game out of first place in the Big 8 race with a 6-3 record behind league-leading Nebraska.

Poor free-throw shooting plagued the Oklahoma State team all evening, while K-State hit 75 percent of their charity shots.

Blackman scored 14 points in the match, moving him into second place on the career scoring charts, with 1686 points beside his name.

Nealy had 11 points and 12 rebounds.

"Our kids did a good job fighting off Oklahoma State at the end," Hartman said. "That's the most impressive thing about the game. Their pressure got to us a time or two coming up the court at the end."\*

# Oklahoma Sooners

**Jan. 24, Norman, Okla.**-"You're looking at a man who doesn't have any answers," Hartman said after a 65-63 loss to the Oklahoma Sooners.

Whatever the answers to Hartman's dilemma, it doesn't change the fact the game marked the seventh consecutive loss for the 'Cats to Oklahoma.

Results of the loss were a 1-3 Big 8 record and a tie for last place in the conference with the Sooners. A K-State team hadn't started with as poor of record as this since 1965 under the coaching of Tex Winter.

The lead of the game switched hands 18 times, and in the late stages of the ball game, K-State built an eight point lead, but poor shooting gave Oklahoma the chance to close the gap and take the lead.

"We had absolutely no poise. The things we did after we got the eight-point lead almost defy understanding. Turning the ball over against the press ... it's unbelievable," Hartman said.

**Feb. 21, Manhattan, Ks.**-It's hard to beat a team that shoots 62.3 percent for the entire game as Oklahoma found out, bowing to the 'Cats 108-71.

The 108 points tied the Ahearn Field House record set in 1959 against Missouri and in 1975 against Iowa State.

Randy Reed was among the record breakers as he scored a career-high of 28 points.

K-State led at the half by a margin of 16 points, 51-35.

Bringing only seven players to Manhattan proved to be a problem for Oklahoma as one player was injured during the course of the game, and three players played with four fouls in the remainder of the game.

The win put K-State in a three way tie for first place with Missouri and Nebraska, all supporting 8-4 conference records.\*

Bo Rader

**Sit down Coach-** Oklahoma Coach Billy Tubb's is told to return to his seat by a Big 8 official. Tubb's received two technicals during the game.

# Kansas Jayhawks

**Jan. 28, Manhattan, Ks-** It's always tough facing the intra-state rival down the Kaw, but it's also something that fans, coaches and players look forward to every year. This year the K-State team carried their enthusiasm and implemented basketball skills to a 54-43 victory over the Jayhawks.

Patience was the key to the game.

"K-State played a fine game," KU coach Ted Owens said. "They executed a great deal of patience, more than we did."

Rolando Blackman was held to just one point, but Jankovich, Nealy and Adams came through, all scoring in double figures.

"They won without Blackman scoring. That just goes to show that when K-State wants to play its game, it can, whether Blackman scores or not," John Crawford, KU reserve said.

"This just exemplifies that he (Blackman) can contribute without scoring. I think it goes to show the kind of team player he is." Hartman said.

The win gave K-State a 2-3 conference mark, and 12-5 overall.

**Feb. 18, Lawrence, Ks-** K-State's winning streak of six games was broken by the same team which was responsible for the beginning of the hot streak for the 'Cats.

Before 16,000 fans in Allen Fieldhouse, the Wildcats dropped a 58-50 decision to the Kansas Jayhawks.

"They controlled the boards and that was a big factor," Hartman said.

That 'Cats had been ranked 19th nationally in the polls prior to the game, and the defeat gave the 'Cats a 17-6 overall and a 7-4 conference record.

"We felt real good after the first five minutes," guard Tim Jankovich said. "But then we lost our aggressiveness. I don't know if it was something they were doing or if it was just us."

Blackman, who for the second time was sealed off from the nets by the KU defense, scored only four points.

"It really burns me up. We felt if we'd win tonight, we'd be in good position the rest of the way. But now, it looks like it's going to go down to the wire," Blackman said. \*

# Iowa State Cyclones

**Jan. 31, Ames, Iowa-** Just when K-State was on the verge of being buried deep in the Big 8 loss column, the 'Cats started putting together a balanced offense and defense and put themselves in the thick of the Big 8 race by thrashing the Cyclones 75-62. All five starters scored in double figures, paced by Blackman's 18 points.

K-State won the battle on the boards, getting 28 rebounds to Iowa State's 21.

Not only was K-State vicious on the boards, they were tough on the nets, hitting 72 percent of their shots in the second half.

The win evened the K-State conference record at 3-3, and put the 'Cats two games out of first place, behind Oklahoma State.

Besides Blackman's 18 points, Reed added 15, Adams had 14, Nealy 13, and Jankovich contributed 11.

K-State, back in the Big 8 race returned home to face a tough Missouri team—a team predicted to win the Big 8 title for the second consecutive year.

**Feb. 25, Manhattan, Ks-** "We're just glad to get this game out of the way. We're totally refreshed now. Iowa State wasn't having a very good year and they could have spoiled everything for us," All-American candidate Rolando Blackman said, after the 67-60 defeat of Iowa State.

The win for K-State set up a confrontation with Missouri which would determine who would win the Big 8 crown.

However, the win for K-State was no easy one. A one point in the second half of play, Iowa State led 52-51 with 9:17 left.

"I thought Iowa State played exceptionally well," Hartman said. "They moved the ball quickly and they got it inside quickly."

Blackman led K-State scorers with 18 points. Randy Reed added 16 and Nealy had 13. The win gave the 'Cats a 9-4 conference record, and the loss assured Iowa State of a last place finish in the Big 8 conference. \*

Hurriyet Aydogan

**We're number one!**—K-State fans chant after a victory over Iowa State to move into first place with Missouri

## Missouri Tigers

**Feb. 4, Manhattan, Ks.**-Tyrone Adams pumped in career-high of 25 points to lead K-State to a 75-56 victory over the Missouri Tigers.

Adams had to take charge when Rolando Blackman picked up his fourth foul with 14:31 left to play.

"Me and Ed (Nealy) knew we had to take over when Ro went out," Adams said. "We're next year's senior class, and we've got to provide some leadership."

The game was especially exciting for junior Randy Reed, as he is from Missouri originally. Reed had 21 points and seven rebounds.

"I wanted to play extra hard. I knew my family and friends would be watching," Reed said.

Blackman fouled out for his second time in his four-year career with 4:43 left in regulation time.

**Feb. 28, Columbia, Mo.**-Following a surprise stall with 7:44 left in the game and the score tied at 43, the Tigers won the Big 8 title in the last seconds of the game with an off-balance shot by Ricky Frazier. Frazier, who was fouled on the play by Tyrone Adams, converted the three point play and giving Mizzou a 46-43 loss.

"I didn't foul him. I didn't touch him with anything. I don't know why they called it," Adams said of the last second call.

Frazier agreed. "He didn't hit me with his hand, and he barely touched the ball. On the way down he might have touched me with his body, but not when I was shooting," Frazier said.

The loss dropped K-State to a 9-5 conference mark, and a three way tie for second with Nebraska and Kansas.

The win enabled Missouri to win the Big 8 title for the second consecutive year. ☼

*Let go of my leg-ol-Randy Reed and Steve Stipanovich tangle trying to get the basketball. K-State won 75-56.*

Cort Anderson

# Nation discovers 'Cats

As some pessimistic K-State fans were putting away their purple and groaning "Aw, not again," Olympian Rolando Blackman fired a shot heard 'round the NCAA tournament. Playing for a team that barely got its foot on an NCAA berth, Blackman hit a shot from the baseline with two seconds remaining to beat 2nd ranked Oregon State. The win provided the momentum to continue the team in the western regionals.

Suffering from a loss in the post season Big 8 tournament to Kansas, the 'Cats experienced some doubt of obtaining an NCAA tournament invitation. However, K-State, along with Missouri and Kansas, were invited of the Big 8. Another Kansas team, Wichita State was also invited. (Kansas was beat in the Midwest regional by Wichita State, who was later eliminated by Louisiana State University).

In the western regional, K-State beat San Francisco 64-60, second ranked Oregon State 50-48 and Illinois 57-52. North Carolina eliminated K-State 68-82 in the western regional championship.

As a result of their most successful tournament bid the 'Cats received national attention. The March 25 *Sports Illustrated* featured the winning jumpshot against Oregon State on the cover. *Sports Illustrated* writer, Curry Kilpatrick described Hartman as being "a friendly hardware dealer camouflaging the mind of a crafty terrorist."

In another sports magazine, Hartman was named as the second most under-rated coach in the nation. Hartman along with the Oregon State coach were named by NCAA as co-coaches of the year and Rolando Blackman named to the NCAA tournament all-star team.

The team retired the season with a 24-9 record.

# Injuries create inconsistency

Whether the task is governing the university's student body or baking cookies as part of a fraternity's little sister organization, almost every group effort requires a leader to start and keep the ball rolling.

And as playing basketball is certainly a team effort, there's usually a captain on the team or at least one outstanding player to boost the team to victory.

But the ball's momentum slowed down during the 1980-81 season for the K-State women's basketball team when Tammie Romstad, center, sustained a knee injury and was benched for most of the season.

Major losses during the season included three losses to the University of Kansas out of three games played, and the team fell two out of three times to Wichita State University.

"The year didn't measure up to our expectations," Coach Lynn Hickey said. "We did have a 22-11 win-loss record, but the key to the season was our injuries.

"When we lost Tammie Romstad, it was

impossible to fill her shoes. There was just no consistency we really just played flat."

However, the Wildcats finished second in the Big 8 conference, won the Thanksgiving tournament at K-State, and were in the Top 20 (AP) rating three-fourths of the season. The team was also invited to the Region VI tournament. The 'Cats faced fourth-seeded Drake, which beat K-State 94-74 in Des Moines, Iowa on Feb. 13.

"What we need to be thankful for is we got into the tournament. I didn't want this to be the first year the women didn't go the regionals."

According to Hickey, one of the problems during the year was lack of one player who gave the team a lot of help.

"I thought Taryn Bachis started the year off well, and Kim Price is playing better. Gayla Williams started well, went into a slump, and is playing better. Shelly Hughes is probably our most consistent player. She performed well above what I expected of her.

"The four or five that we have contributed a lot to the things we have accomplished. It's been a team effort. We didn't have any one superstar."

"The kids have worked awfully hard," Hickey said. "They've had bad breaks, but there's been no team turmoils. I feel very good about that."

During the 1981-82 season the women lose two important people, according to Hickey. For both Gayla Williams and Taryn Bachis, guards, the 1980-81 season was their last.

However, Hickey believes next year is the year for the Wildcats.

"We're in about the same situation as KU was last year," she said. "They had mostly seniors this year and one key addition.

"I don't think anyone's going to be close to us. I really feel if we have a decent recruiting year we'll be one of the powers in the Midwest."\*

## Key to smaller sports success

# Football, basketball support the

**R**iddle: Which comes first — selling more K-State football tickets so the university can recruit better football players or recruit better football players so more tickets can be sold?

Even the athletic directors at K-State can't seem to solve this problem, but if they could, the answer could lead the way to improving the smaller sports other than football and basketball at the university.

"It's a chicken and egg proposition," said Robert Snell, faculty representative for the Intercollegiate Athletic Council.

"We need to make more money by selling more football tickets, and we need to invest in our football program to get the return."

"We have the smallest budget for any of our sports of any school in our conference," Snell said. "We're at the bottom of the heap."

According to Snell, the council's goal is to obtain funding for all of the sports, but the road to doing so can only be opened by making more money in the athletic programs.

However, even in this age of "inflation," the university has done better than stay even, Athletic Council chairperson Veryl

Switzer said.

"A few years ago we were in the red up to \$500,000 but now we've shown income for the last two to three years," Switzer said. "Eventually we'll increase so we can become competitive with our non-revenue net producing sports."

But presently, the sports that provide a deficit in the respective budgets don't hold impressive standings in the Big 8 conference.

For example, K-State's men's tennis team placed seventh in the Big 8, while the women's tennis team placed eighth. The men's cross country team finished with fifth place in the conference and the men's and women's golf team completed the year at the bottom of the Big 8.

Although the accomplishments may not be stunning, the budgets for the smaller sports have been increasing over the years — allowing for the addition of more scholarship players. For instance, in 1977, the women's tennis budget was \$1200 and has increased to \$6900 since women's coach David Hacker has been at K-State.

"I'm appreciative of the increase; however, it's still woefully inadequate for a competitive basis out-of-state and even in-state," Hacker said. "We're being beaten by smaller schools such as Fort Hays."

According to Switzer, there are several keys to continue to increase competitively in any of the sports at K-State.

"We need to develop our football program to where we can increase our attendance record at home. That's where our potential is," he said.

"What we really need to do is rally our sport," Switzer added. "If we could be competitive with Oklahoma State in game attendance — where they have 50,000 in the stadium in almost every game, whereas we have 45,000 during one game a year — then we can start thinking about increasing the budgets."

However, K-State does have one sport that makes more money than any other school in conference.

In contrast to the University of Colorado, who spends more than they make on their basketball program with quite a large deficit, according to K-State athletic director DeLoss Dodds, K-State's basketball program made over a million dollars in 1980 for the first time in the university's history.

"We're proud of our traditional basketball program," Switzer said. "We have very few things to feel part of a winning program. We relish and cherish it."

"But another sport at K-State where there's real potential is women's basketball," he said.

Increasing in attendance by 1,000 at the K-State-KU game this year over 1980's attendance, Snell agreed that women's basketball is a sport which more people need to get acquainted with.

"Most of the people that do go to the games enjoy it (women's basketball) and would like to support it," Snell said. "We have the seating capacity for quite a few more."

"We've done a lot more individual game advertising and have been making more attractive brochures. We've also been sending out ticket applications for the women's games along with the ones for the men's — hoping we'll build the income."

art by Mel Westmeyer

# family

Another key to building the income is through contributions. Since DeLoss Dodds came to K-State in 1978, the revenues have increased by more than 200 percent — from \$250,000 to \$683,000.

Also, since the introduction of Title IX, there's little chance any of the sports dropped in the last 10 years, such as swimming, wrestling and gymnastics will be brought back, according to Dodds. And sports like soccer and rugby are destined to remain in club status.

"My main goal is to fund what we've got," Dodds said. "Tennis and golf aren't in a high priority, but if we can get football to where we're selling out every seat in the stadium every weekend, then we'll work on it."

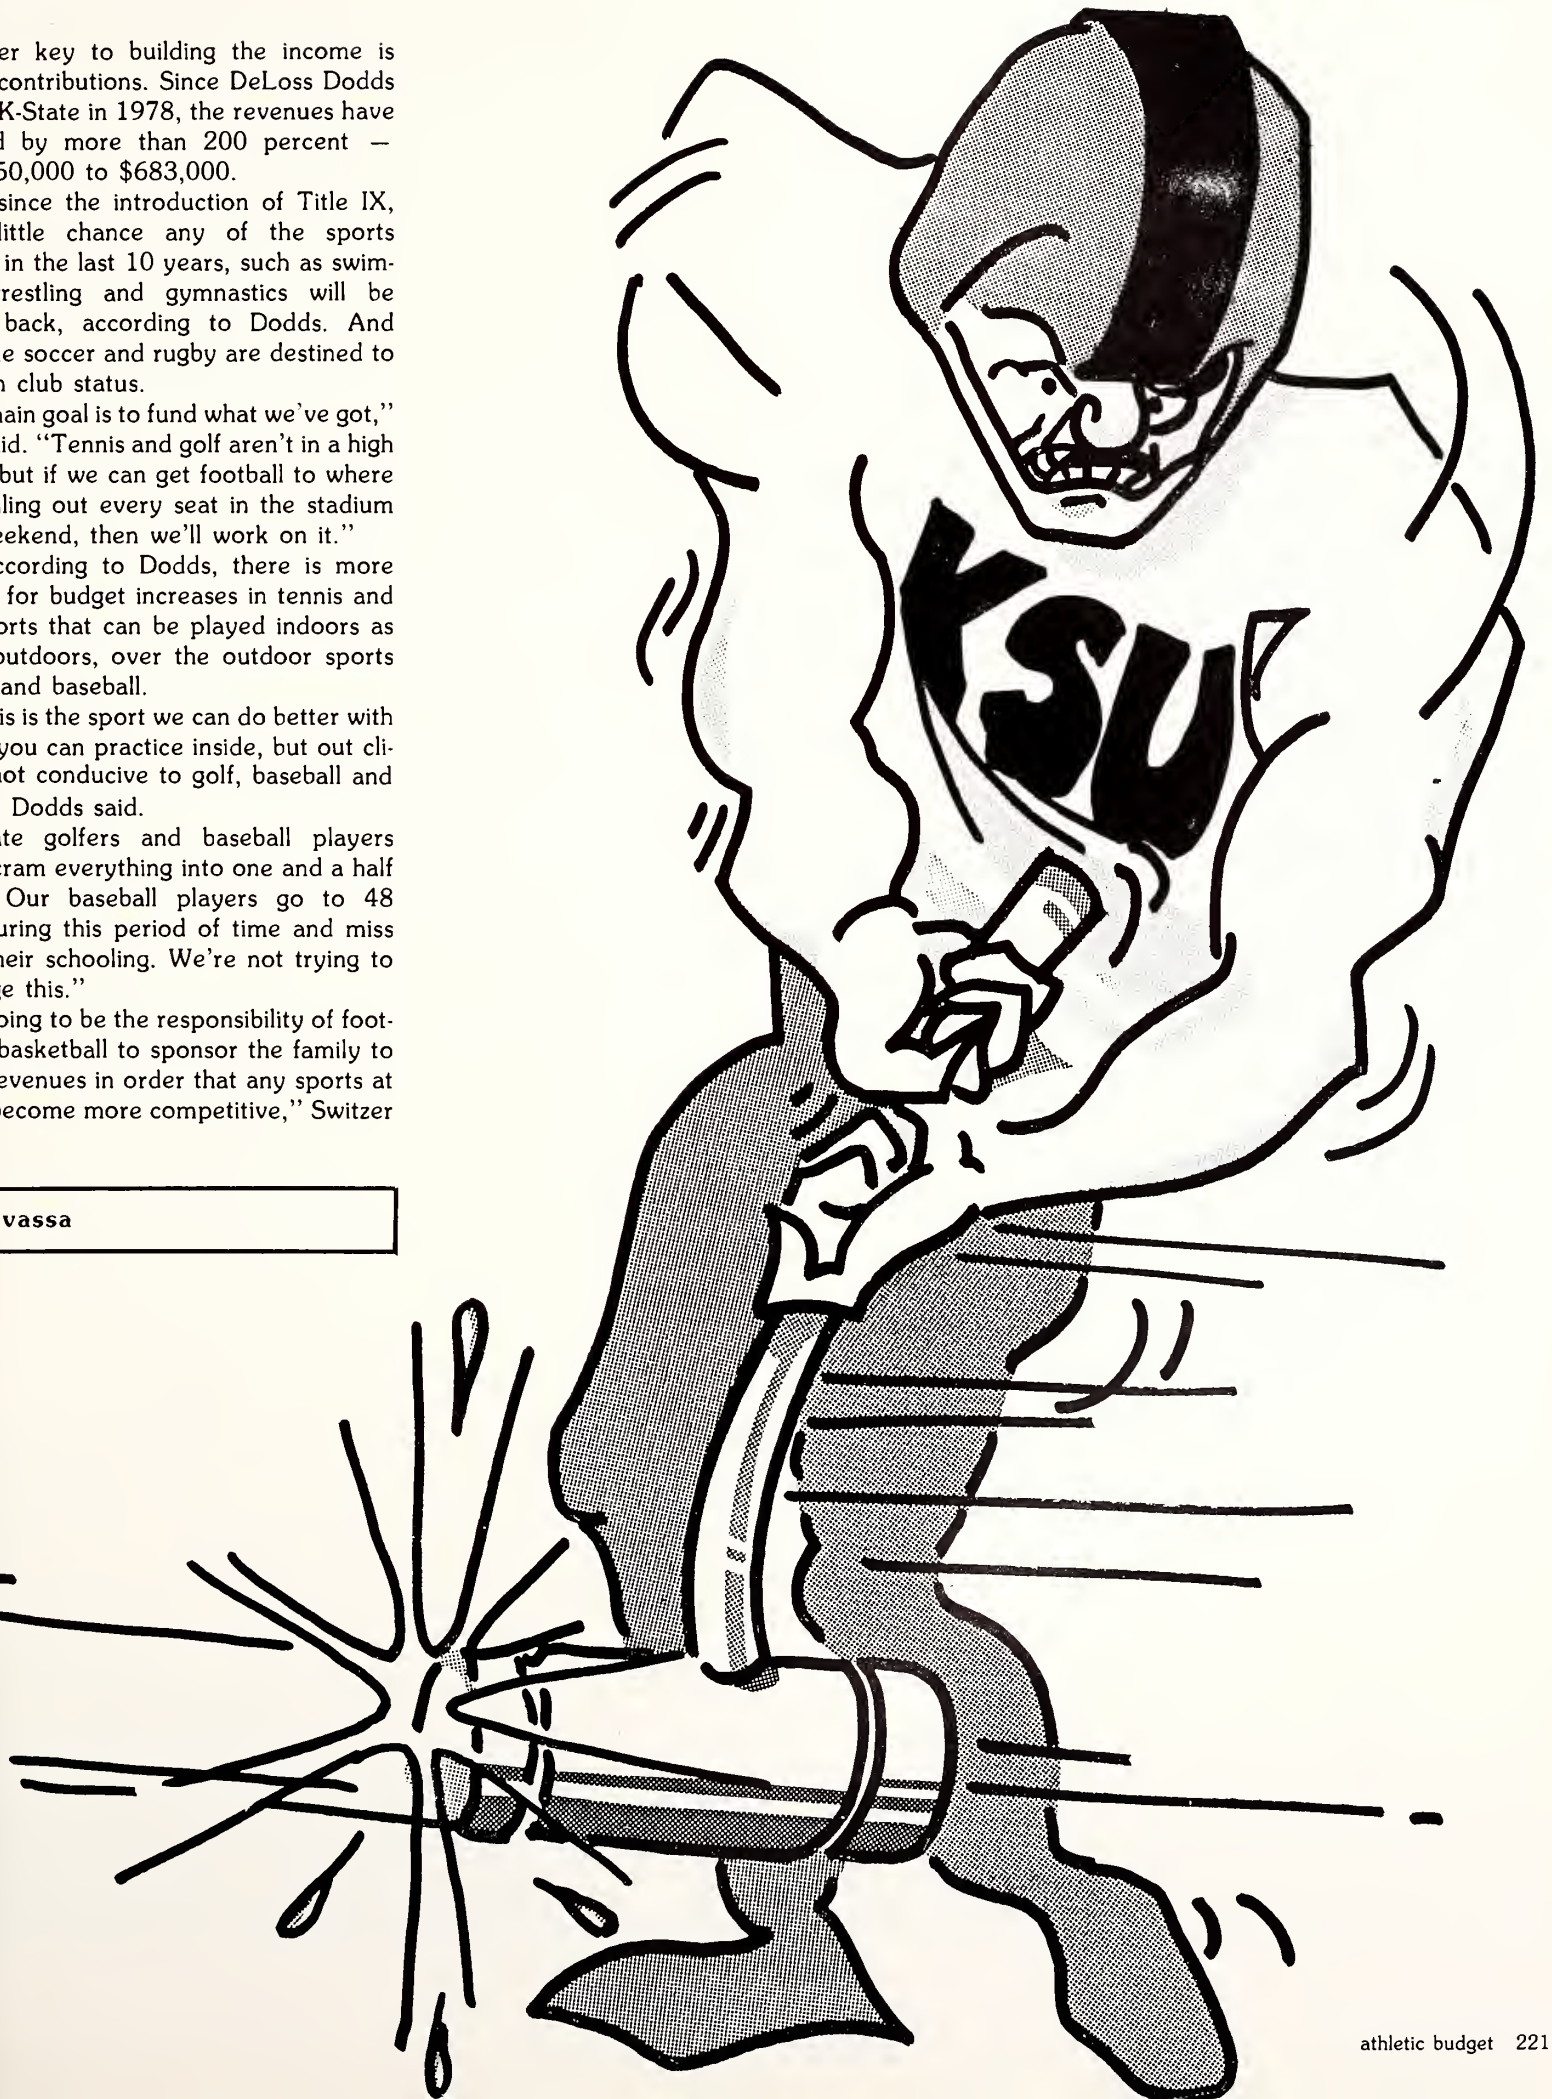

But according to Dodds, there is more potential for budget increases in tennis and other sports that can be played indoors as well as outdoors, over the outdoor sports like golf and baseball.

"Tennis is the sport we can do better with because you can practice inside, but our climate is not conducive to golf, baseball and softball," Dodds said.

"K-State golfers and baseball players have to cram everything into one and a half months. Our baseball players go to 48 games during this period of time and miss half of their schooling. We're not trying to encourage this."

"It's going to be the responsibility of football and basketball to sponsor the family to get the revenues in order that any sports at K-State become more competitive," Switzer said. ☼

Carl Cavassa

**Sink or swim-** Mike Buchanan, junior in recreation, gasps for air while working out in the natatorium. Pool hours were unaffected by changes in free time use of Ahearn facilities.

Scott Liebler

## Student free time in Ahearn is cut

The fall transfer of Recreational Services to the new Recreation Complex sparked an interdepartmental struggle for use and administrative duties of Ahearn Field House.

Before the completion of the Recreation Complex, Rec Services was housed in Ahearn Field House along with the Department of Health, Physical Education and Recreation (HPER), Continuing Education, and the Athletic Department.

However, in November it was announced by Gene Cross, vice-president for facilities, that the administrative duties of Ahearn Field House would be the responsibility of HPER. The change was to occur on or before July 1, 1981. Rec Services had been responsible for the administrative duties prior to the announcement.

With much of Rec Services's programs moved out and a new administrative department in charge, requests for changes in programming by the Athletic Department, Continuing Education, and HPER were in the making. If program expansions were approved, it would be at the cost of time Rec Services had at the fieldhouse.

According to Cross, the other departments believed that since Rec Services had expanded its program capabilities, they should also have the same opportunity.

The other departments were suggesting that Rec Services conduct its programs strictly in the Recreation Complex and the natatorium.

"The initial plan was for continued use of Ahearn (by Rec Services) after the complex was completed," Raydon Robel, Rec Services director, said. "The building of the complex was to take pressure off of Ahearn and to program recreation in both areas."

Robel said if the Rec Services programs

were restricted to the Recreation Complex, the \$3.5 million building would be too small within six months. In November, about 1,000 students used the fieldhouse per week and 1,200 students used the Recreation Complex per day. Without the use of Ahearn facilities, intramural basketball was played on 4 courts, the same number of courts used before the complex was opened. The Recreation Complex afforded expanded hours for intramurals plus two free activity courts. Previously, no courts were open for free activity during intramurals.

---

**"Since 1970, there has been five pounds of activities in a three-pound building."**

---

"Since 1970, there has been five pounds of activities conducted in a three-pound building," Kirkendall said.

There is no desire to shove anyone out of the fieldhouse or cut anyone's programs, he said. The other departments just want a chance to expand their programs, too.

In December, Rec Services and HPER reached an agreement for HPER to take over the administrative duties of the fieldhouse and manage free-time recreation on Jan. 1, 1981 instead of waiting until July 1, 1981.

This meant that free recreation time in the fieldhouse would be divided between Continuing Education, the Athletic Department, and HPER. Rec Services would manage only the Recreation Complex and the natatorium.

With HPER in charge of Ahearn administrative duties, Kirkendall said many changes would be made over Christmas vacation but he wasn't sure of what they would be.

"Changes will happen rather quickly but

there won't be any changes made without consulting the student leaders," he said.

However, after the Christmas vacation, it was announced that Ahearn Field House would remain available to students on almost the same basis as in the fall. Student free time at the fieldhouse would remain virtually unchanged for the spring semester to avoid confusion, Kirkendall said. The other departments would have to wait to expand.

The only exception was the use of the weight training and gymnastics rooms, Kirkendall said.

"We in the department became quite concerned when the gymnastics room was open for free play," he said. "It was like having the pool open without lifeguards. The gymnastics room will never be open for free play. That is definitely over."

The weight room was set aside nightly for faculty, staff, and alumni, Kirkendall said. For students, weight training classes are offered and facilities are also available at the Recreational Complex, he said.

No further changes were made until February, when the night hours for free recreational time were reduced from 8 to 10 p.m. to 8:30 to 10 p.m. The two and one hour reduction per week was the result of request by the Athletic Department for extra time. Because of the lack of student opposition it was approved, Kirkendall said.

All of the changes concerning student use of Ahearn Field House had been made for the semester, Kirkendall said, but many changes will occur before the fall 1981 semester begins. He didn't know for sure what the changes may entail, Kirkendall said.

# Money problems and damaged crafts don't sink crew

It was a good year for crew if you don't count the fact that they lost their two best racing shells and were again underfinanced.

Not three miles out of Manhattan the Blazer, pulling the trailer carrying three eight-man and two four-man racing shells, lost control and overturned. As it flipped, the rear tires caught the ends of crew's two best racing shells and smashed them.

Crew members went on to the regatta in Lawrence and captured the Big-8 title for both the men and women's varsity eights, using borrowed shells.

"Since the wreck our best eight-man shell which we will be racing is 12 to 15 years old," Dave Knoll, new head coach, said.

"we wrecked our two best eights, and they will not start repairing until we tell them we have the money to get them repaired," Knoll said.

Most of the shells the crew uses were purchased between 1963 and 1972.

"And they were not all new then," Knoll said.

"We are working on possible donations" to repair the two eights and possibly for new racing shells, he said.

Crew has not been funded by the university since 1974, when student senate decided to no longer fund club sports.

In Spring 1980, the club formally changed its name from K-State Crew to the Kansas

State Rowing Association. The name change allows the association to generate their own funds without clearing it through the K-State Foundation, Knoll said.

Knoll believes there is no other source of funding besides donations available to crew which would provide sufficient money for crew's needs.

However, neither financial problems nor having to borrow shells kept crew from having a successful season.

At the Midwest Sprints in Madison, Wisc., the novice men's team brought home third-place medals, while the women's varsity lightweight-eight took second.

In the dual with the University of Kansas, at Shawnee Mission Park, K-State was victorious in all the races.

The women's varsity lightweight-eight ended their season by winning the women's regionals in Grand Rapids, Mich.

Training is the biggest contributing factor to crew's success, according to Knoll.

Off-the-water training usually begins in February. The winter training includes distance running, running steps, and individual weight training, Knoll said.

"The most important thing about off-the-water practice is establishing as great level of endurance as (we) can. Because when we do get out on the water, rowing is the most energy consuming sport per time there is,"

he said.

Depending on the winter, the team doesn't usually start rowing until around spring break.

During 1980 spring break, crew went to Austin, Texas, for more water time.

"We go strictly for practice. The water as well as the lake we row on is just perfect for rowing," Knoll said.

If they have this level of endurance established when they get out on the water they will be able to work on technique first, according to Knoll.

"We will straighten out the problems, then do some distance rowing with interval sprints to build up conditioning," he said.

Then as the racing season draws closer the crew does more short pieces which are closer to the length of a race.

A course is 2,000 meters, approximately 1 and 1/4 miles, which takes six to eight minutes at racing speed, Knoll said. ☼

## Gail Garey

*Getting their feet wet- The women's crew prepare to launch an eight-man shell while the men wait on shore for their turn. On-water training usually begins around spring break in early March for the crew teams.*

# K-State colors red and black?

**Line Out** — K-State's scrum wins the line out as a player jumps to tip the ball to a fellow rucker. A line out is used when the ball is knocked out of bounds.

photos by Craig Cha  
**The Great Escape**- A K-State Player grabs the ball while playing Pittsburg on Sept. 15.

**Soggy Scenery**- Spectators flee to a tent as rain fell during the Sunflower Tournament.

**R**ed and black may not be well known colors to K-State, but to any rugby fanatic a flash of red with a black stripe hopefully means a K-State rucker dashing for a tri.

The red and black jerseys vary from K-State's purple and white because rugby wasn't solely a K-State activity when it began, according to Don Harris, a rugby club member.

The rugby club has legitimately been termed the Kansas State University Rugby Football Club. Its club status prohibits the team from receiving any funding from the University. Without this funding, rugby has become an expensive sport to the individual player.

Those expenses begin with \$25 dues to the club. Scott Bertrand, president of the club, said the largest portion of that \$25 goes towards the purchase of kegs the home team provides after each game. Besides the partying expense, the rugby club pays dues to the Heartland of America Rugby Union, the referees receive pay for officiating the game and field alignment requires a fee.

A uniform including jersey, shorts and socks costs about \$40, Harris said. Shoes may range from \$14 to \$26 at any area sporting goods store. Another expense arises with road trips. An in-state road trip usually runs about \$15, depending on the various circumstances, Harris said.

Harris said during the fall season the club

had five in-state trips and one out-of-state trip, a tournament in Houston, Texas. Only 15 of the 35 members traveled to Houston and those were the 15 who could afford it, Harris said.

"I was on a tight budget so I only spent \$105," Roger Aeschliman, rugby club member, said.

One of the most unusual aspects of rugby is that it is not unusual for one member of a club, to join a different club for a road trip. And this is especially the case with tours.

Harris traveled with the University of Kansas to England and Wales during Christmas break. Harris said the entire tour cost him about \$1,500.

According to Harris, playing with another club doesn't create any problems.

"You have to get used to playing with someone else. As long as you have good knowledge of the game and the different aspects, you can adapt your play toward different styles of play," Harris said.

The contrast between K-State and KU styles of play lies in that KU relies on a running game and K-State's power is in the scrum, Harris said. K-State depends on ball control, winning scrum outs and wearing down the other team.

Harris said the K-State club suffered a lot from inconsistency. K-State beat the University of Missouri 48-0, yet lost to KU 16-6. K-State met KU three times in the fall season, but lost each game. K-State's record for the

season was seven wins and eight losses.

The K-State club also had difficulty with the availability of fields. The regular field on Ft. Riley Boulevard was not available since it was chosen as the new site of a Holidome and construction was underway during the season.

The fields at Tuttle Creek Reservoir were too far away to be convenient for both the players and spectators, Harris said. The club received permission to use the intramural fields for games.

Besides the practices and games during the seasons, the rugby club also has meetings throughout the year and a banquet at the end of each season. The club chooses outstanding players and the awards are given during the banquet.

In the fall season the outstanding player was Harris, the outstanding back-Bertrand, the outstanding scrummie-Mike Quinn and the rookie of the year was Barry Brunning.

According to Bertrand the biggest single factor which distinguishes rugby from other sports is the comradeship between the teams after the games.

"There are three halves in rugby; the two on the field and one at the party after the game," Bertrand said. ☼

**Jill McAntee**

# Manhattan bike racing picks up speed

**“W**hen you get exhausted, it hurts — and it’s scary. Cyclists call the condition bonking. It’s when you run out of energy. Runners are protected because they can feel the fatigue in their knees and other joints, but bikers can go on and on.”

Rick Summerhill, associate professor of mathematics, referred to his own experiences as an avid bicyclist.

“A bicycle is very smooth, so it becomes easy to run out of energy. You have nothing left to burn. It happened to me one time when I was 30 miles away from home, but I just had to keep riding.” Summerhill said.

The professor took up bike riding a few years earlier as a means of transportation

from his home seven miles from his job on campus. He found it not only saved him money, but was a great way to stay fit, he said. “I used to run to stay in shape but biking is just as effective.”

“I got involved in racing because it’s fun,” Summerhill said. “I like to train for the races.”

Summerhill says he’s totaled about 10,000 miles this year. He booked some of his miles through involvement in the Blue-mont Bicycle Club of Manhattan. The club sponsors activities related to bicycling throughout the entire year — road races, long-distance tours, casual fun rides, and other events.

As a member of the club, Summerhill gets involved most in the road races, riding in the veteran age group (35- plus). He likes the long races, usually 65 miles, he said. Usually when he trains, he does it on the way home from work. Training by himself, he usually rides about 20 mph.

“With other people it’s faster — about 23 mph. The really good guys can ride 28-29 mph,” said Summerhill.

According to Summerhill, there are no rules in bike racing. The only stipulation that riders have to follow is that they are not allowed to touch anybody else in the race. But Summerhill says that it happens all the time.

“During the big million dollar races, if it happens, they’ll give them time penalties maybe adding five minutes to the total time of a rider,” Summerhill said. “But around here it’s too low class to add penalties if anyone’s touched.”

Theresa Fleming, senior in textile science at K-State, is another bicycle fanatic. Although she doesn’t race, she says she would like to get involved in racing. “I’m always really competitive, and I think I’d like it,” she said.

Instead of racing, Fleming and a cycling partner hit the road on their bikes around six o’clock in the morning. They usually ride about 40 miles every time out.

“The time of the year doesn’t stop me,” she said. “We’ve ridden when it’s cold — just so it’s nice.”

“My ultimate goal is to make a long-distance ride — maybe to K.C. I figure it would take about five hours to ride there.”

Whether they finish to win or just finish, Fleming summed up the joy of bike riding for them all.

“I use it (riding) as a way to venture out and enjoy the countryside so much. And I love to feel the air against my body.” she said. \*

Hurriyet Aydogan

## Rec. Services, ORC aid canoers

Whether in search of whitewater in Missouri, a gut-wrenching race on the Kaw, or a few quiet hours of fishing at Tuttle, canoeing provides diversion for numerous K-Staters.

Recreational services maintain twelve canoes for student and faculty rental at the L. P. Washburn complex. Pam Johnson, free time recreation coordinator for recreational services, says use of the canoes is not just restricted to the summer.

"In the fall and spring, the canoes pretty much go out every weekend," Johnson said.

The peak demand for the canoes occur in the fall and spring just before the K-State-KU Kaw river races.

"We only take reservations up to two weeks in advance, though," Johnson said.

Part of the popularity of the canoes can be attributed to the rental price.

"I'm sure that our rates are lower than a commercial rental operation. We're competitive with other universities in our prices," Johnson said.

Students or faculty can rent a canoe for the weekend for \$10. The price includes the canoe, a carrier bracket to mount on a car, vests, and oars.

Although current demand is good, Johnson said there are no plans to buy more canoes.

"It's a pretty substantial investment and since we have a lot of things going on with the new rec complex, we'll pretty much

maintain the status quo with what we've got for now," Johnson said.

Recreational services is not the only canoeing enterprise on campus. Outdoor Recreation Committee (ORC), a group sponsored by the Union Programming Council, organizes several canoe trips each year along with other outdoor activities.

"Usually the trips are filled the same day they become open," Bruce Loyd, ORC member and junior in mechanical engineering, said.

Outdoor Recreation Committee organized a trip on the Current River, Missouri, in the fall semester and planned two for the spring; one on the Buffalo River in Arkansas and one on the Boundary Water River near the Canadian border in Wisconsin.

"We try to vary our difficulties as far as choosing the rivers. We try to do the rivers we haven't done in a while," Loyd said.

ORC does all the publicity on campus, makes the reservations, and preparations for food on each trip.

"We get allocations from Student Senate but we figure up trips at cost and we try to charge the participant exactly what it costs UPC,"

"Usually we have different people on each trip. The range is always pretty good," Loyd said. ☼

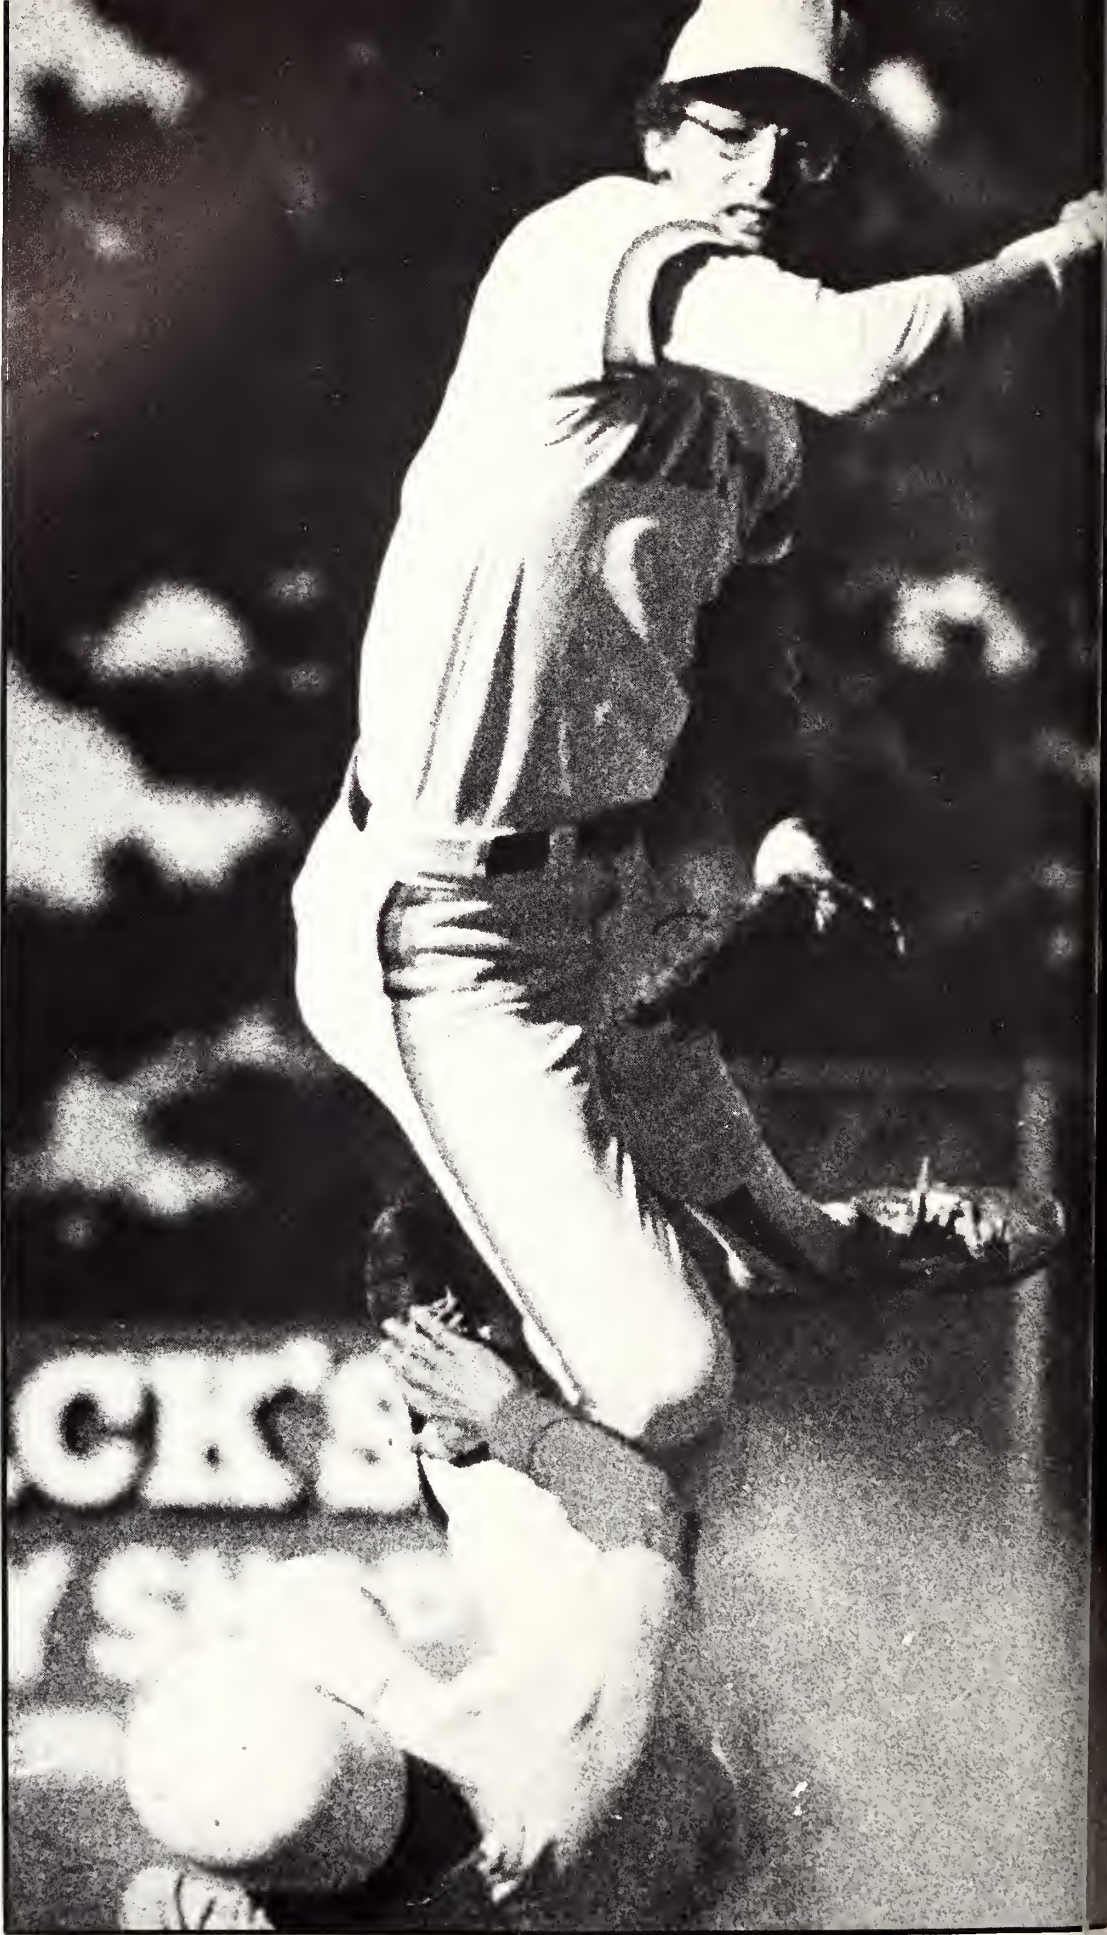

**Anton Arnoldy**

Hurriyet Aydogan

**Where's the whitewater?** The Kaw is not particularly noted as a fast flowing river but it attracts canoers anyway — especially for the K-State/K-U canoe races in the fall and spring.

**Traffic Jam** Downtown Manhattan is not the only place to get bogged down in traffic. Sometimes it's hard to find the passing lane when it isn't marked with white lines.

Bo Rader

**Double duty-** In an attempt to make a double play, a Barton Community College second baseman goes airborne while a K-State player slides in underneath

**Safe at Second-** Kent Schwartz shortstop for Cloud County Community College, misses the tag at second as K-State's Mark Nordyke slides in untouched.

# Fever fails to reach K-State

While the plague of "Royalmania" was lurking around the state of Kansas, K-State never caught any of the symptoms of the craze. The fever was never apparent in the men's baseball team or the women's softball team during the 1979-80 season.

The women's softball team finished with a 12-24 record overall and a 3-8 record in the Big 8.

"We had a lack of consistency, a lot of potential was there but we couldn't quite get it together," Janel Anderson, pitcher, said.

Julie Hershey, an outfielder, said that K-State coach, Susan Norton, emphasized teamwork.

"We played as a team, not as a group of individuals," Hershey said.

Winning against Kansas University and the University of Nebraska gave the team their 3-8 Big 8 record.

"We got beat by a lot of close games," Hershey said.

Never getting the offense and defense together was cited as a team problem by Anderson. The defense was there but the lack

of hitting lost a lot of close games, she said.

Leslie McGinnis, infielder and Hershey led the team in RBIs with 14 each as the team finished with a total of 89 RBIs.

Pitching her first season of college ball, Janel Anderson gave the team a 6-14 pitching record.

"It was quite a challenge," the rookie said of her first pitching season.

Simultaneously, the similiar attitude was present in the men's baseball team which ended with a 15-29 record.

By defeating Colorado and Oklahoma the 'Cats finished 2-18 in Big 8 play and finished 4th place in the Western division of the Big 8.

High points of the season were baseman Rob Holder's homerun record of hitting 14 in the season. While batting a .377, Holder also lead the team with 45 RBIs.

"We had a good defensive ball club. We scored a lot of runs but were ineffective on the mound," Dave Baker, head baseball coach said.

"The pitching was not consistent," Baker,

coach at K-State for three years added.

In pre-conference games the Wildcats were 13-10. Entering Big 8 race, the team lost the first nine games, beat Oklahoma, at home, and lost the next five consecutive games. Beating Colorado gave the 'Cats their second conference win and then finished the season losing the remaining five games.

On the offense, four teammates batted over .300, Jeff Sherrer, second baseman, Greg Kaifes, designated hitter, Glynn Perry, shortstop and Robin Golder, center fielder.

The weather didn't cooperate with the teams during the beginning of the season as rain forced the cancellation of approximately 15 games.

"That's something you expect. You schedule enough games because you know you're going to lose some to the weather," Baker said.

## Teams encounter hurdles

**A**lthough injuries hindered men and women tracksters, both teams had consistent showings at meets throughout the season.

"Field events were a strong basis for our upper division finish in the Big 8 outdoor track championships," Mike Ross, head men's track coach, said. The men's team finished fourth in the Big 8.

Consistently performing well for the Wildcats throughout the season were Vince Parrette, triple jumper; Ray Bradley, shot-put-

ter; and Kevin Swane, long jumper.

"We did very well on the circuit because of these men," Ross said.

According to Barry Anderson, head women's track coach, it was a down year for the women, particularly at the Big 8 meet.

"Due to injuries the women didn't do too well, It was one of those years where things didn't go right," Anderson said.

Despite the injuries contributing to the outcome of the season, the women's team stuck it out together.

**Feet don't fail me now-** Steve Cotton seems to do a backbend as he high jumps at the Big 8 meet.

NTS=no team standing

Bo Rader

**Givin' it all he's got-** Vince Parrette triple jumps 54'-8" at the Big 8 outdoor track meet taking first the Big 8 outdoor track meet taking first place. He holds the second best jump record in the world of 55'-10 1/2" which he set at the Big 8 indoor meet.

"We are a very close team with a lot of unity and team spirit," Anderson said.

Both Ross and Anderson geared their training programs so the athlete would reach his peak during the outdoor season.

"Each athlete must have a strong background of training by March when outdoor meets begin," Ross said.

Coach Anderson considers the indoor meets a chance to get in quality workouts.

"We use these early indoor meets as training," Anderson said.

However, training doesn't begin then. Some tracksters begin training in September, Ross said. Now distance runners are beginning to train year-round.

It is very common for distance runners to run cross-country because it is a good developmental time to prepare for track, Anderson said.

"If we were just training, it would get boring. Being able to race in the fall makes it fun and more interesting," Heidi Bright, women's trackster, said.

Anderson and Ross have a similar goal which is to re-establish K-State's position in the Big 8. Both agree that the Big 8 conference is definitely one of the toughest, and nowhere is there finer individuals assembled at one place.

"Other conferences may seem better on the surface, but they don't nearly approach what depth advantage we have in the Big 8," Anderson said. ☼

# Co-rec sports gain acceptance

**R**emember when it was “unfeminine” for a girl to play sports, much less play sports against (heaven forbid!) men?

If you still believe in that idea, a trip out to the Recreation Complex would be enough to frazzle your knickers and pop your suspenders.

Women and men playing sports together is not only allowed but has been encouraged since 1971 when volleyball became the first official intramural co-rec sport.

“It’s (co-rec sports) growing. I’ve been taking a look at past years’ records and it’s definitely growing,” Steve Martini, intramural director, said.

“Co-rec is a real wholesome situation. It’s great. Of course the movement now is toward physical activity and co-rec is a way to do that,” Martini said.

“It’s a great way to be competitive with women and vice versa for the girls. Students respect each other for their ability. It’s a very social thing.

“Men are no longer embarrassed to get on a court with a woman. The talent differential is not like it was years ago. It’s one

thing for a man to shoot hoop with other guys but it’s great to be competitive against women. The same goes for the women,” Martini said.

Martini is in his first year as intramural director at K-State. He moved to Kansas after serving as an instructor and intramural director at California State University at Chico.

Co-rec sports bring out the social aspect of sports, according to Martini.

“I’m not cutting competitive elements of sports — we want to keep them. It’s just that the recreational aspects are important. I see them in co-rec sports. The social aspect is there.”

There are approximately 30 categories of co-rec sports, ranging from waterbasketball to doubles horseshoes, according to Martini. Addition of a sport is dependent on the demand for that sport.

Linda Gordon, senior in industrial engineering, said that co-rec sports seemed less competitive than separated sports.

“It’s more social. The rules are different than regular for many sports, like basketball

and football. Not everybody is real familiar with the rules so it’s hard to be competitive. It’s more for fun,” Gordon said.

Brad Taylor, senior in agricultural economics, thought the competitive and social aspects were balanced.

“I can see that a lot of people take it both ways. We always were competitive. We always went out and tried to go just as hard. The girls on our teams are competitive and want to win — it just makes you work that much harder. We always had fun though,” Taylor said.

Joan Stammer, senior in industrial engineering, agreed that it could be either competitive or social.

“It’s both. It depends on the sport and the team you are on. Most that I’ve been on were competitive, especially in basketball,” Stammer said.

“But I’ve been on teams that were only there for fun. That is a part of it.” ❄

## Ro bypasses Moscow

## Cheerleaders place second

Performing amidst a star-studded cast of celebrities, the K-State cheerleaders achieved a certain amount of fame and glory as they took second place in the International Cheerleading Foundation's national cheerleading competition.

Held in Miami at the Fontaine Bleu Hilton on April 4 and 5, the cheerleaders' performance was taped for national television appearance in which they competed against five other schools, including Ohio State University, which placed first in the competition.

At the taping, the cheerleaders made appearances with celebrities such as Victoria Principal, who plays Pam Ewing on "Dallas," and singer Andy Gibb. Appearances were also made by the Beach Boys, dancer Julia Prowse and performer John Davidson.

Hurriyet Aydogan

**Rolando power-** During the Iowa State game, Roland Blackman cheers on a teammate. Rolando spent most of the summer touring the country as part of the Olympic basketball team.

Rolando Blackman didn't get to go to Moscow, so he went to Seattle, Los Angeles, Phoenix, New York and Indianapolis instead.

"It was a very, very exciting summer doing all that traveling a summer of freedom. It will be hard being around school for 10 months," K-State's All-Big 8, third team all-American guard said.

Blackman's summer started almost the minute school was out with the Olympic basketball tryouts May 19 through the 22nd in Lexington, Ky.

With the United States boycotting the 1980 Olympics in Moscow, the U.S. Olympic Committee put together an international track meet in Philadelphia and a number of games to be played between National Basketball Association (NBA) players and the national team.

Another player on the Olympic team was University of Kansas star Darnell Valentine, Blackman's long time adversary.

"It was a great experience playing with Darnell, throwing out the Wildcat and Jayhawk and getting to know each other as people," Blackman said. Missouri players Steve Stipanovich and Larry Drew were also invited to try out, but turned down the invitation.

## Infants take the plunge

Mark Spitz would be proud.

Although they're not Olympic swimmers, the six to 18-month-old infants in the Water Babies class, offered by the University for Man (UFM), could have earned gold medals in good clean fun.

The purpose of the class is so that babies can "get to enjoy the water," Charmine Mazzia, instructor of the class said.

Concern for their children prompted the parents to take the class.

"I want her to learn how to float and know what to do in the water," Lyn Stoecker said of her daughter, Amanda.

"I've always wanted my child not to be afraid of water," Jenne Andrews, another parent in the class said.

In fact, babies have no in-born fear of water, but can learn the fear from a parent, Mazzia said.

The Water Babies class began when Mazzia first moved to Manhattan. Having taught the class before coming here, she noticed there was nothing like it offered in Manhattan.

UFM was receptive to the idea, she said. They helped set up a Water Babies (six to 18 months) and a Tiny Tots (18 months to three years) class, she said. Mazzia taught both classes.

Scott Liebler

**Refreshing swim-** Lynn Sloan, junior in horticulture therapy, and eight month old son, Jacob, take their first swim during the University for Man Water Babies class held in the Natatorium in Ahearn Field House complex.

## Glimpses

### *Brett misses .400*

George Brett, third baseman for the Kansas City Royals, attempted to be the first major league player to bat .400 in 39 years. On Aug. 26, he had a batting average of .407, but fell below .400 by the end of the season.

### *Women go pro*

Two Wildcat women basketball players were drafted to play professionally. Eileen Feeney was drafted in the third round by the New Orleans Pride and LeeAnn Wilcox was drafted in the ninth round by the Milwaukee Express.

### *Royals miss the top*

The Kansas City Royals won the American League layoffs by defeating the New York Yankees. However, the Royals came up short in their first attempt of gaining the World Series crown. They were beaten by the Philadelphia Phillies, four games to two. George Brett was voted the American League Player of the year following the games.

### *'Cats get NCAA bid*

Even though the K-State basketball team finished second in both the Big 8 league race and the post-season tournament at Kemper Arena in Kansas City, the season was not over. The Wildcats were asked to play in the NCAA tournament with their impressive 21-8 record.

Cort Anderson

**Take it off-** Willie the Wildcat, K-State's mascot, performs his traditional stripping routine along with the University of Missouri mascot during a time-out. The stripper routine was one of many of the new routines performed by Willie during the 1980-81 season.

## ABC televises 'Cats

Local taverns welcomed them on their marquees, sororities moved their homecoming brunches back and improvements were made at KSU Stadium as Glen Stone, K-State sports information director, worked long hours in preparing for what hasn't happened to K-State since 1968.

The American Broadcasting Company (ABC) was the cause for all the commotion in Manhattan when K-State was chosen to be one of the regional televised college games of the week. K-State football was last televised 12 years ago, when they played host to the University of Kansas.

The game which was scheduled

to start at 1:30, was moved back to 11:35 a.m., to accommodate ABC's first game of a regional telecast in a doubleheader package.

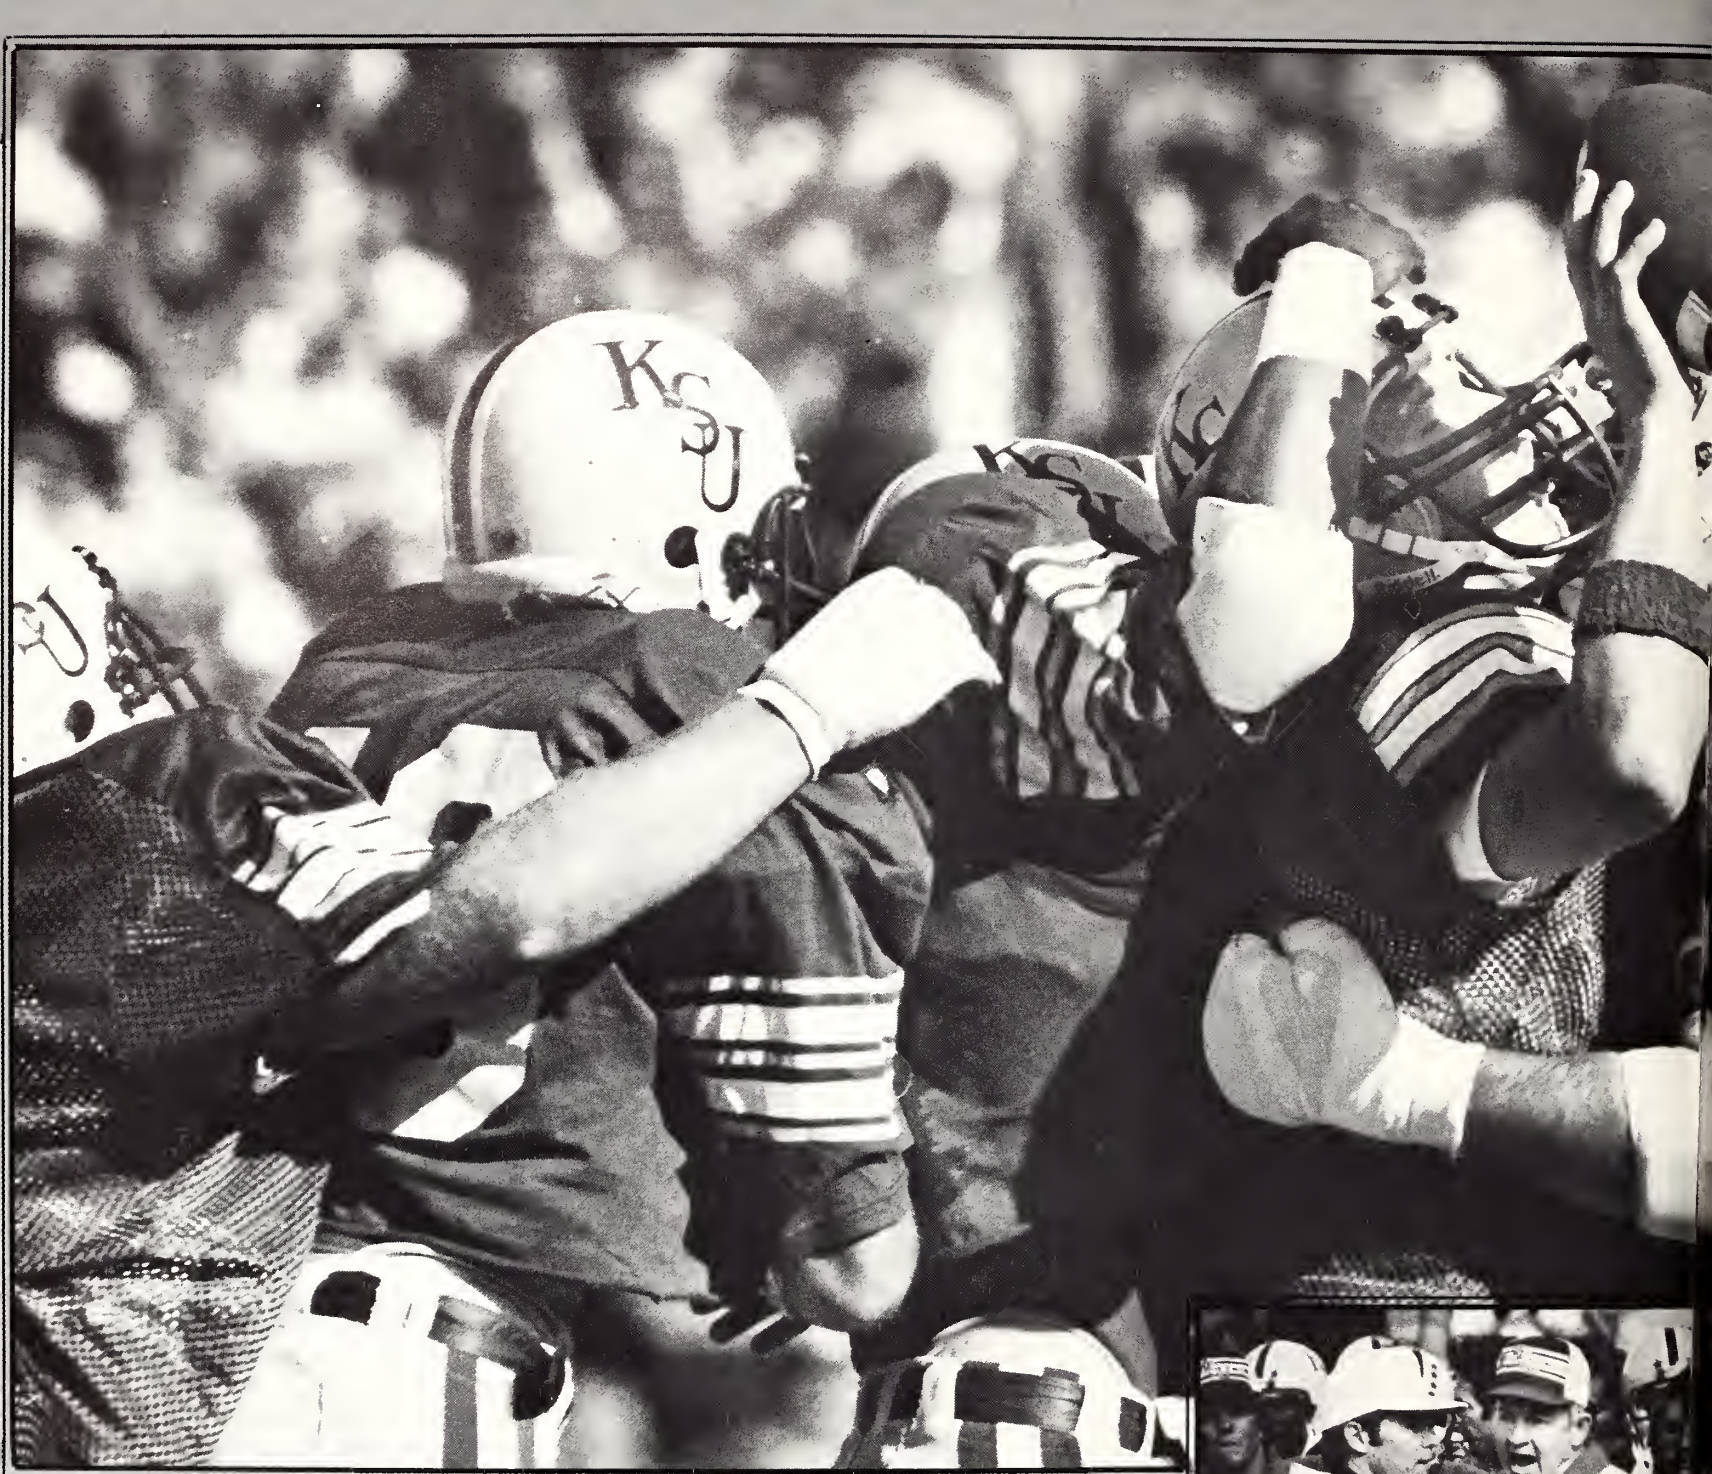

Before the television crew of 35 arrived, the athletic department was busy making improvements at KSU Stadium, so it would accommodate a television broadcast.

Yard lines were re-painted, a pick-up truck was modified for use as a sideline camera truck and an announcers booth had to be built on the photo deck in the pressbox.

The Missouri Tigers got revenge on K-State's homecoming, cashing in on the Wildcat's two second quarter fumbles for a 13-3 win before 30,610 chilly fans.

Nancy Zogleman

**B**eing an athletic-minded society, we've always been told to believe that "it doesn't matter whether you win or lose, it's how you play the game."

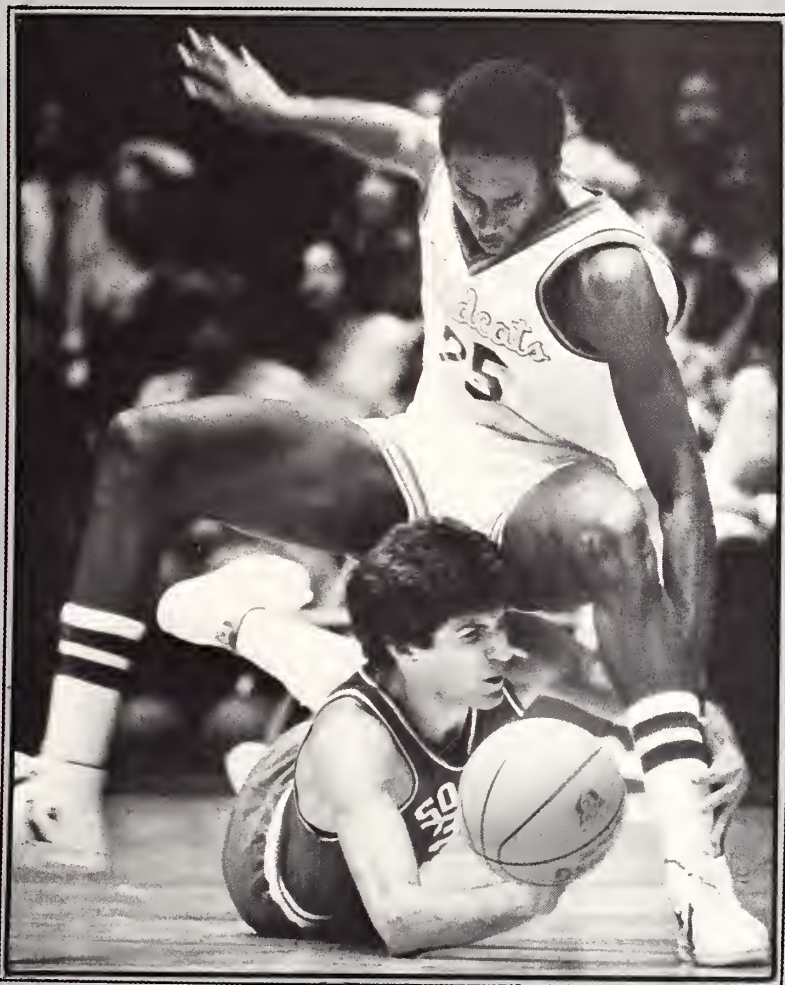

Unfortunately, that doesn't console anyone when that heartbreaking moment occurs. And accepting that defeat is just as inevitable as living and dying.

However, a team can come "back to life." Coaches pick up their teams and psychologically and physically prepare them for the next confrontation. The loss is soon forgotten, and often the wounds are healed with a healthy dose of victory.

"Victory" is a vitamin that instantly boosts the morale of the team, and restores faith and confidence of the fans. The vitamin of victory cannot be taken before or after the game, because no team is immune to defeat. ➤

**Bear hug** - (opposite, top) Quarterback Darryl Dicky is swamped by fellow players after a touchdown during the annual K-State-KU clash.

**Whadda ya mean?!** - (opposite, bottom) Coach Dickey argues with a referee over a questionable call.

Curt Anderson

John Greer

**Ten gallon hats?** - Denise Esparza and Cathy Fuchs show their Wildcat spirit in a "big" way during a K-State football game.

**First come, first served** - K-State tries to outleap Missouri for possession of the fumble. The K-State Homecoming game was televised on national television.

**Agony of De-feat** - (Opposite) Brenda Bennet examines her blisters after beating a Fort Hays State player following an hour long match.

Hurriyet N. Aydoğan

**Accepting defeat-** Kim Price and Shelly Hughes express post tournament sorrows after losing to 85-60 in the final round.

**Sweet victory-** A member of the "Front-Row Fanatics" rejoices after the opening night Wildcat victory in Ahearn.

The many faces of K-State athletics. Not always happy, not always sad.

Given any moment during a game, a variety of expressions can be seen; depending on whether it's a spectacular play by the purple pride, or a bad call against them. It's the thrill of being nationally ranked one week, and the agony of being defeated the next game by a cellar dweller.

Indeed it does become a matter of "how you play the game." A loss doesn't hurt as much when you play a powerhouse team down to the wire. Likewise, a victory won't be as sweet winning on a last minute shot to a team who should have lost by 20 points.

The win/loss column doesn't always reflect the personality of the game. Dejected and elated fans shuffle out of the stadium, filing the game in the sports section of their memory bank.\*

# Chariot races unit greeks

The Chariot Relays live for another year. Lambda Chi Alpha fraternity decided to continue a past greek tradition for the first time in 1979 and the second in October, 1980.

"The relays are an event that every greek house is invited to participate. They bring greeks together working for one goal, promote the greek system and promote competition," Dan Chase junior in fine arts and chairman of the 1980 relays, said.

According to Chase, one of the main goals of the Chariot Relays is to bring the greek system together.

"One of the reasons we decided to have the relays again is because there isn't any competitive sport or activity that is 'greek only.' We thought it would be good for the greek system to have a competitive activity that is only for greeks," Chase said.

The relays involve fraternity men, who pull the chariots and sorority women who are the riders.

According to Chase, the fraternities and sororities are randomly paired, drawn out of a hat, to determine who will race together.

"We do it this way so no politics are involved and no one will think the races are set up," Chase said. "The fraternities and sororities that are paired spend a lot of time practicing for the relays, and get to know each other better," he said.

In addition to the races a queen is chosen for the relays.

"Each sorority nominates a member to be their candidate. That girl then writes an essay on 'What it Means to be Greek,'" Chase said. "The members of our house, (Lambda Chi Alpha) read the essays, with the names covered, and vote on the queen," he said.

According to Chase, the queen is crowned the day of the relays, between the preliminary and semi-final races.

"We sponsor a 'kegger' the night of the relays for members of the houses who participated," Chase said.

The goal that the greeks are working toward is the scholarship which results from the proceeds.

"Each fraternity pays an entry fee of \$15 for two runners, and each sorority pays \$10 for the first rider and \$5 for each second (rider)," Chase said. "Since there are more fraternities than sororities, there are two riders from some sororities. This is determined on a first-come, first-serve basis," he said.

According to Chase the scholarship money comes from the entry fees only. "The scholarship is awarded to one male and one female who are members in good standing with their greek house. They must be sophomores with a cumulative grade-point average of 3.5 or higher, have the recommendation of their house, and their house must have participated in the relays," Chase said.

"The names are submitted to the KSU Endowment Association who selects the winners by guidelines we set (Lambda Chi Alpha)," Chase said.

According to Chase, each scholarship is

a minimum of \$150. If the profits from the relays are higher, the scholarship is divided equally. If the relays don't raise the necessary \$300, Lambda Chi Alpha makes up the difference.

"The relays originally began in 1954. They were stopped in 1970 because of a decrease in enrollment, the Vietnam War, and they had become too competitive," Chase said.

According to Chase, the relays were started again in 1979 when Larry Frank, who was then vice-president of Lambda Chi Alpha, now a K-State alumnus, developed an interest in the history of the races.

"He wanted to see the races started again to promote the greek system and provide the scholarship," Chase said.

The relays provide a way to promote the greek system, and held the greeks unite for a good cause," Chase said. \*

# Residents

**“K**iss a frog:”

The theme of Kansas State University Association of Residence Halls (ARH) comes from the fairy tale about a frog who is turned into a handsome prince by a kiss from a princess. Students who are already involved with ARH “kiss frogs,” by offering other students the chance to achieve their greatest growth potential through involvement and interaction in ARH.

The Association of Residence Halls sponsors all-hall events throughout the year, besides fundraisers including the annual canoe race with the University of Kansas and Oktoberfest, a three-day event which offers residence-hall dwellers Aggieville discounts, free evening movies and competition between the halls with the annual keg roll through the streets of Aggieville.

ARH events are culminated in the spring when, after several months of planning, Spring Fling begins. During the week of Spring Fling residents may participate in the annual carnival, dance, picnic, games and numerous other events. In addition to these activities, residence hall leaders are

# kiss frogs

honored during the week of Spring Fling with the ARH Leadership Banquet.

The Mabel Strong Memorial Scholarship is presented during the banquet as well. The scholarship, in memory of the late Mabel Strong, former director of Putnam Hall, is given in the form of two awards. One is a recognition award and the other a monetary scholarship. The recipients of the awards are determined on the basis of academic achievement and involvement in the residence hall system. A committee consisting of Tom Frith, director of housing, Mike Pezza, ARH president, one hall director and one hall president chooses the scholarship recipients.

ARH is based on the philosophy that a college education involves more than what a student learns in the classroom. This idea stems from the belief that students who are involved in the residence hall system will have added to their total education by interaction with others. That's where the theme "Kiss a Frog" comes from - helping each person to become the best he can be. \*

Suze Brink

Bo Rader

**Paddle for your life-** The teams for the annual canoe race against KU line up for the start. The two day race was won by the Van Zile team.

**Roll out the keg-** The keg rolling race is just one of the many activities that residence hall dwellers participate in throughout the year.

**Bedtime Scurry-** Residence hall dwellers compete in the annual bed race that occurs during Spring Fling.

**No mail again-** One of the daily rituals for most Moore Hall residents is to check their mail only to find there is none. The view is a little different for the mailroom clerk who sees the mailboxes from the backside.

**Winter orphan-** Bicycles are the primary means of transportation for many college students but are often neglected when winter's snow immobilizes them. This bicycle chained outside of Moore Hall becomes a snow sculpture in the first major snow of the year.

# Fledging

**L**ike most new organizations, the Off-Campus Council (OCC) continues to suffer from growing pains, according to Eugene Russell, president.

"The Off-Campus Council was set up to help off-campus students get more involved in student elections and to provide extra-curricular activities for those students," Russell said.

The OCC, which began in 1979, was instituted by Sam Brownback, 1978 student body president. Brownback organized a commission which surveyed off-campus students and found that they felt there were three major areas in which there was room for improvement. Those areas included under-representation in campus activities, lack of organized social activities and difficulty in obtaining basketball tickets.

The commission created an off-campus student association and off-campus students then elect the seven-member OCC.

According to Russell, OCC provides a social outlet. The group has a lot of parties, in addition to trying to help people who want to get involved in student government, clubs, organizations, intramurals, etc.

"The biggest problem that the group

# group endures pains

has had since it was founded was communication. That means letting everybody know what's going on. That's one problem the new council will have to work on," Russell said.

Rob Atland, senior in marketing, was the council's first president. Like Russell, Atland believes communication has been the major problem facing the OCC since it was founded. He also cites transportation and landlord-tenant relations as areas the council could help improve.

"Another problem we've had is that once a person has been on the council, they leave. They get the leadership experience and the experience of working through student government services and then they move on to like student senate," Russell said.

According to Russell, there are always new people on the council, which means more people get involved. But it also means that OCC is continually starting over with inexperienced individuals.

Another problem Russell has had to confront is the lack of involvement by the majority of off-campus students.

"The thing a lot of people don't understand is that if they live off-campus they belong to Off-Campus Student

Association. A lot of them think they don't belong because it's a club or something. A lot of them don't come (to the meetings) because they don't want to get involved," Russell said.

With the problems the council has had in trying to grow, Russell is not sure whether the council represents the majority of off-campus students since only 60 to 80 people regularly attend the meetings.

"My first guess would be no because of the small group of students we have there (at the meetings). But I think the group that it represents is the off-campus student who wants to get involved. That's the person who comes to the meetings and that's the person we work for," he said.

Although there has been problems in establishing the staples of the organization, the OCC has had its accomplishments. Those accomplishments include formals, Judicial representation for off-campus students, participation in homecoming festivities, Student Governing Association funding, and representation on the Union Activities Board. ❄

*Who else?- The day after the Jackson Browne concert in Kansas City, Meg Stewart, Buffy Carau, sophomores in fashion design, Donna Stovall, sophomore in fashion marketing and Shirley Lefever, sophomore in family and child development, buy plants at the Panhellenic Plant Sale.*

Rob Clark

## Heartland beat unites K-State

**W**hether you purchased the Royal Purple as a blind date pictorial reference or actually wanted to read the slaved-over features, we hope these almost 500 pages will bring you a smile or a memory as you view them now and in the future. Σ⇒

---

***Raising Dust**• Kicking up dust on the motorcycle trail near Tuttle Creek Dam, Steve Erichsen, a Manhattan resident, takes his dirt bike over a jump.*

John Greer

## Heartland

Your memories might recall the Kansas windmills and wheat fields or the hilly alma mater bearing the label of "Purple Pride." ➤

---

*Abandon-* Surrounded by a grove of trees, an old school house stands deserted east of the airport.

Craig Chandler

## Heartland

**But, it has been more than the link of the “Heartland” which binds these pages. Through 12 months of effort, sacrifices and persistence, a devoted staff has attempted to capture the heartland rhythm of the year’s personality. ✨**

---

*Harvest Moon- Beyond the border of the city dwellings, the full moon casts beams of light on the rolling heartland hills.*

Craig Chandler

**HEREFORD**

RACQUETBALL ANYONE?

HOW MANY TIMES DO I HAVE TO DO THIS AIRBRUSH?

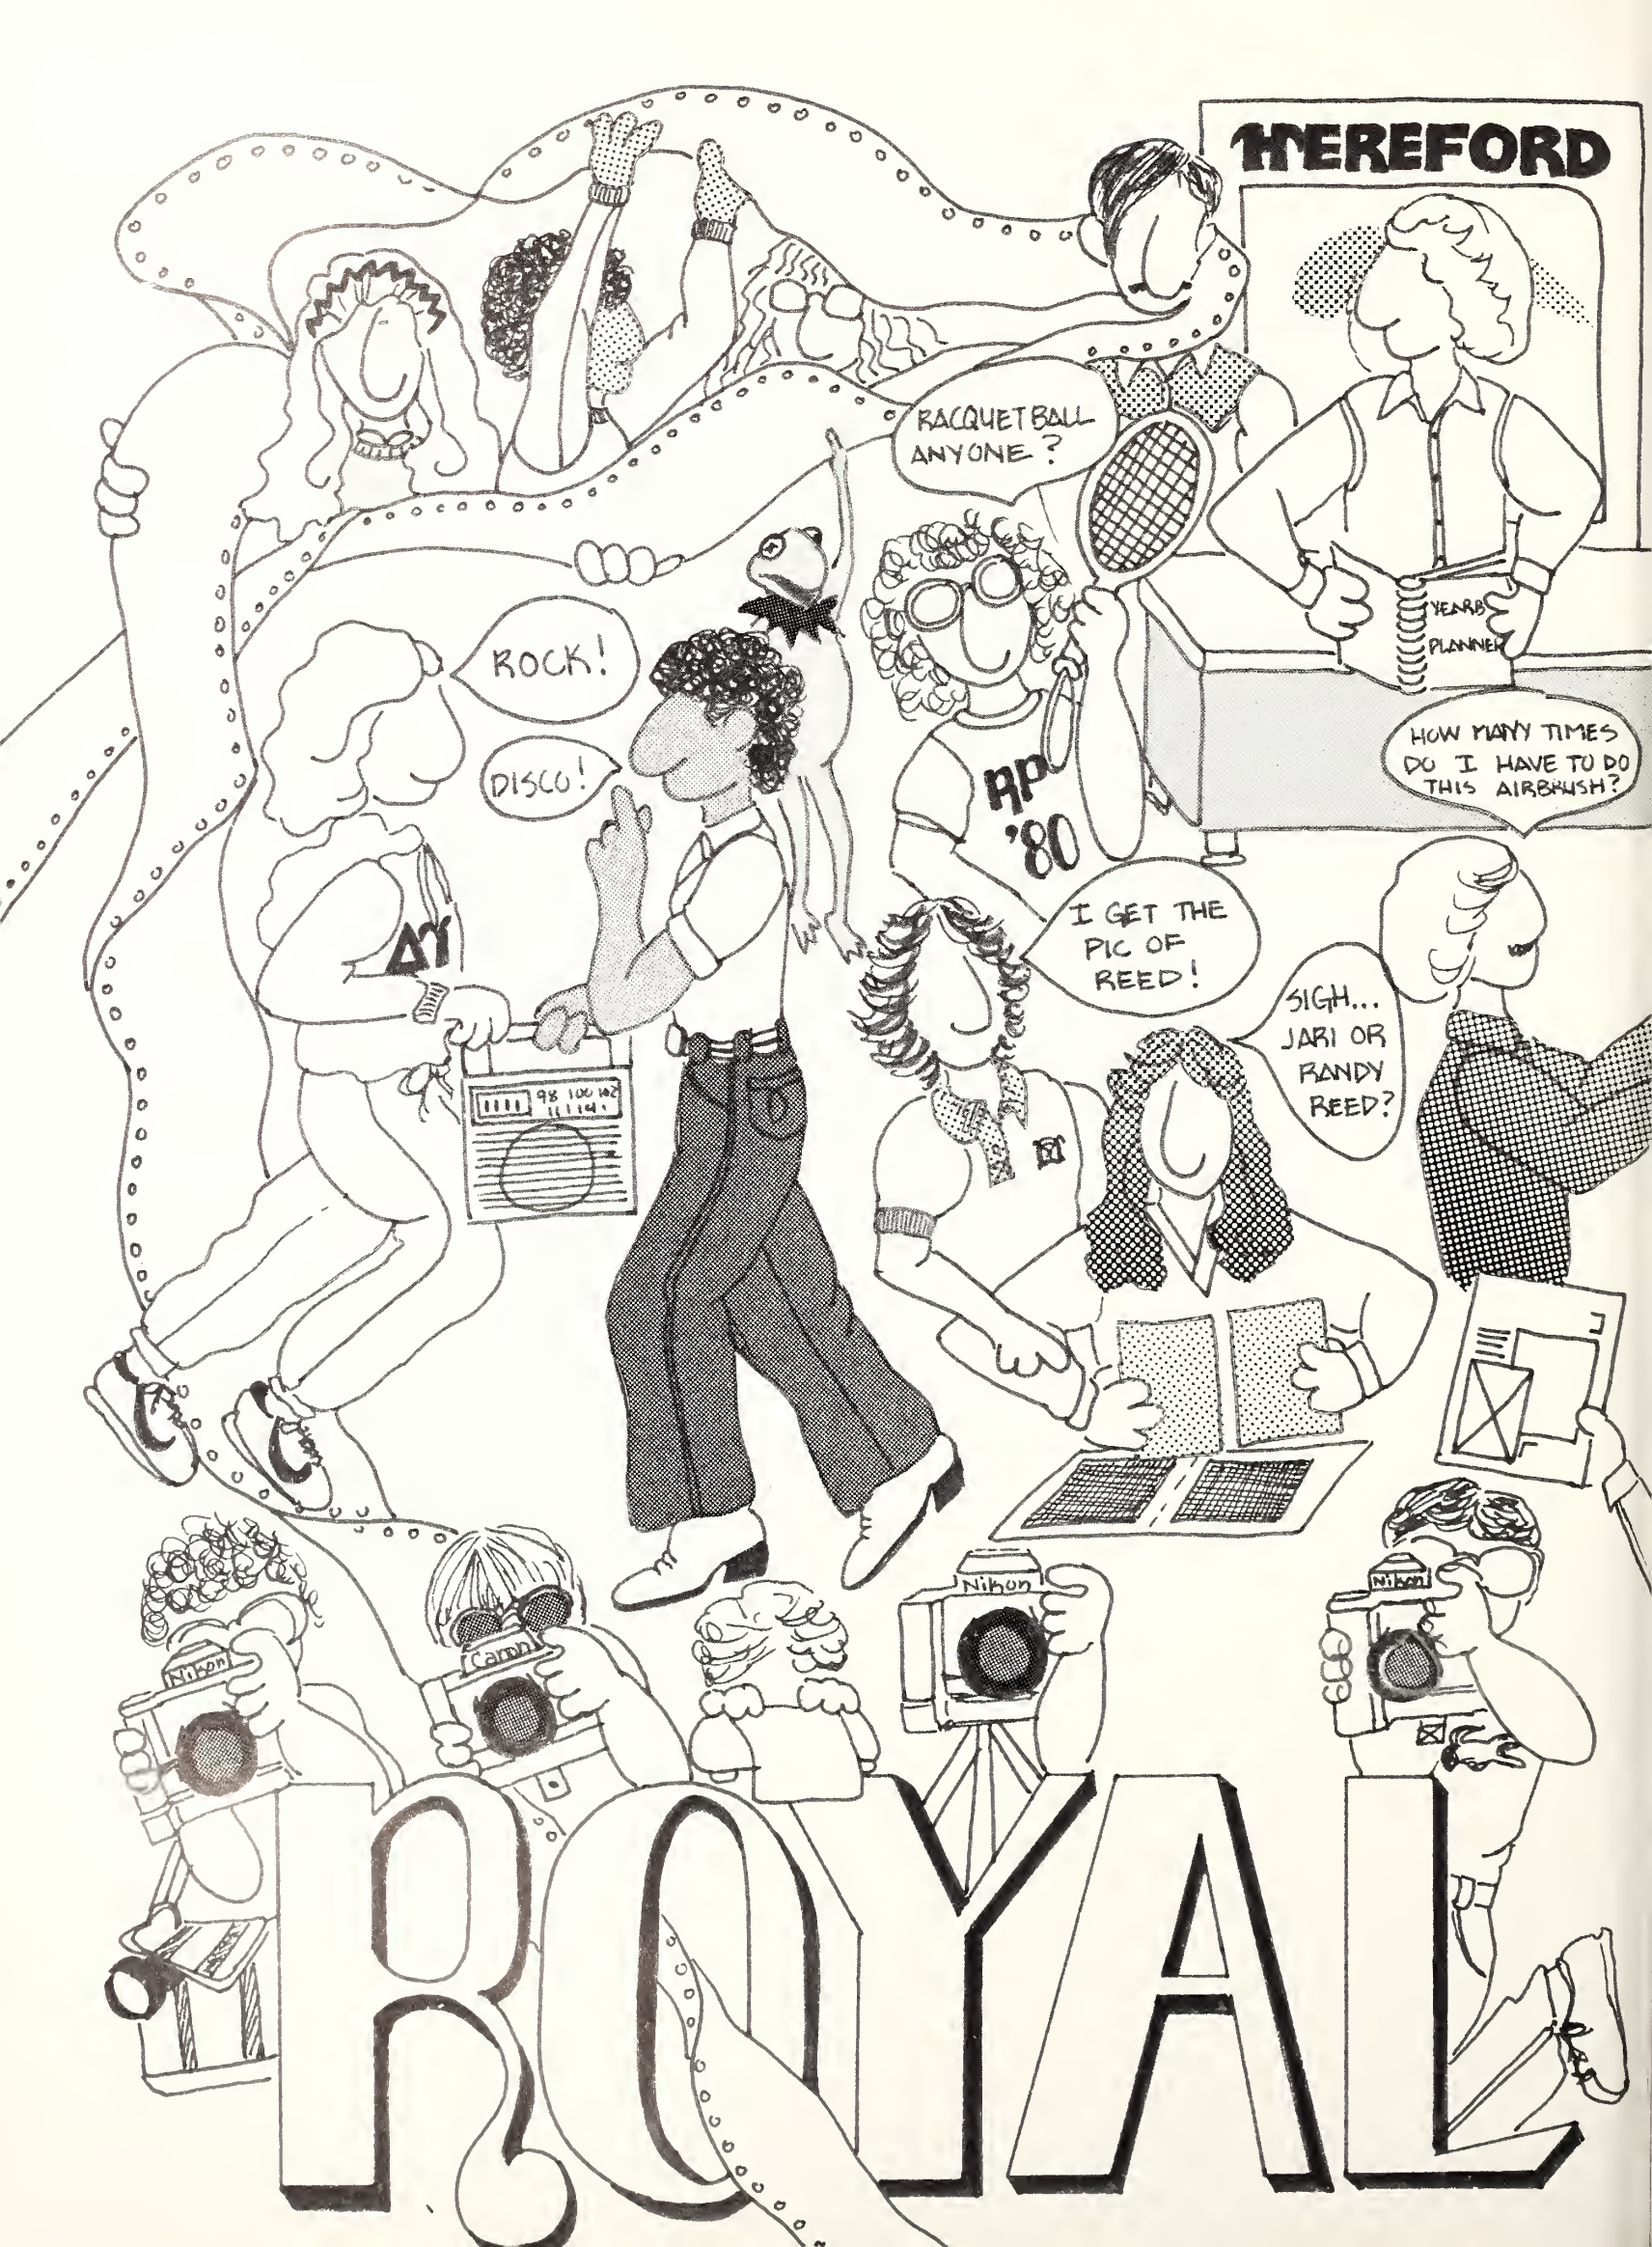

ROCK!

DISCO!

I GET THE PIC OF REED!

SIGH... JARI OR RANDY REED?

# ROYAL

# Prison provides memories

After 14 months, the sentence has been lifted. While some were pronounced as free, the verdict for other staff members was only temporary parole.

Actually the journalistic situation did not merit a judge or jury, but instead time removed the ball and chain.

The charges included using a new computer system for housing, attempting to combine and alphabetize all organizations and setting the index on the Kedzie terminals. Following the reading of rights, a guilty plea was entered.

But, completing the Royal Purple was actually more than serving an unpleasant sentence. The year provided opportunities and memories.

There was never a dull moment, as Jill's tales and expressions spiced up life in Kedzie cell block #120. Her demands for pizza and attendance at hog roast bashes were the primary cause for her conviction. And her melting dance not only broke the monotony of completing layouts, but admitted her into the crazy ward.

As a third year prisoner, Nancy completed her sentence as sports editor. She kept her fellow convicts up to date on the basketball action through her ever changing Jari Wills — Randy Reed craze.

Returning to the scene of the crime is a frequent occurrence among convicts, but Tony was just unable to adjust to the outside world. Armed with his calculator, he returned to prison life second semester. Tony pitched in to help with deadlines even before his name appeared on the warden's attendance list.

Cari was charged with burning up the radio and loaning out money. Being followed by photographers, Cari's sweet smile and artistic talents were used as cover-ups.

Novice criminals were given the same sentence as the hardened convicts, thus Jerry joined the cell block. His preppy look and business major added some social class, but his habit of dropping courses influenced the academic attendance record.

Though serving the sentence, Dale was permitted to make and receive more than

just one phone call. In addition to his numerous telephone messages, Dale almost experienced a jail break to perform at Mother's Worry.

A controversy arose over the type of music played in the pen. Jan, usually attired in her sweats instead of the prison garb, insisted on hearing rock 'n roll. She claimed that this background music would keep her awake while preparing the housing "mug" shots.

Mel's sentence was extended when the plant jury announced that he must re-do the airbrushing artwork for the third and fourth times.

Andrea, Paige, Yvette, Roschelle and Pat were each given a lighter sentence, as they reported to the warden for only one semester.

In almost every prison situation, visitation practices are a common occurrence. But Curt was quickly transformed from a visitor into a hardened criminal. He was charged with committing crimes such as proofreading, typing and indexing.

Though belonging to a different ward, the photographers were also sentenced to the Kedzie prison. Armed with their Nikon and Canon artillery, these basement convicts occasionally put IDs on the back of their pictures.

Janet, assisted by her cellmate Kermit, attempted to keep the pen out of legal hot water. Her stereo and furniture provided the Royal Purple ward with a homey atmosphere.

Dan, the Plant Attorney General in Topeka, kept in constant touch with the Kedzie jail. Through production memos and weekly phone conversations, he attempted to dissolve all major conflicts. Warden Brown also helped assure that all systems were running smoothly.

The final sentenced criminal was the Hereford lady, who was only known to her fellow convicts by her initials. Though plagued by headaches, she and the rest of the pen survived the year. \*

# *1981 Royal Purple Staff*

**T**he 1981 Royal Purple is the official yearbook of Kansas State University. It was printed by Josten's American Yearbook Company, Topeka, Kansas. The press run for the 1981 book was 7,000 copies with a 9 x 12 trim size on 80 pound gloss paper. The cover is a custom lithograph photograph with a combination of processed colors. Body copy is set in 10 point souvenir, with captions in 9 point souvenir italic. Headlines are set in 30 - 48 point Korinna Bold. The student portraits were taken by Blakers Studio Royal of Manhattan, Kansas. Group pictures were taken by Photoservices and staff photographers. The Royal Purple business office is Student Publications Inc., 103 Kedzie Hall, Kansas State University, Manhattan, Kansas 66506.
