ACKNOWLEDGEMENTS

Many people helped in gathering the information for the Marysville Energy Demand Assessment, particularly Alan Edgar for work on the design of survey's and preliminary analysis. Jim Dubois made contributions in the information analysis phases, in review and comments on the draft and final versions of the report and preparation of most of the graphics for the figures. Brant Gaul ran the computer program for the cohort survival population projection and helped in the use of the 'Script' word processing program to run.

Professor John Selfridge played a key role early in my graduate work in motivating my interest in the subject and as a technical advisor in a similar earlier project. Professor Gary Coates was also an important technical advisor and whose work played an important inspirational role for me in completing this report.
