372 farms averaged a \$39,297 gross and net (income less expenses and 6% on investment) of \$6267 per farm. Top one-fourth of farms in group netted \$35.33 per \$100 of gross and the low one-fourth netted \$4.88 per \$100. See detailed story of north central association on page 1.

SOUTH CENTRAL, Hutchinson headquarters

512 farms. Net return after expenses and 6% on investment averaged \$6365 per farm. Top one-fourth of farms in group netted \$36.74 per \$100 of income and the low one-fourth netted \$2.49. See detailed story of south central association on page 10.

III.SOUTHWEST, Greensburg headquarters

522 farms averaged \$44,616 gross, but the net was only \$1970. The southwest had serious problems with greenbugs in sorghum and cutworms in wheat in 1968, markedly reducing crop income. The best one-fourth of the farms netted \$27,29 on each \$100 of gross and the lowest one-fourth showed an \$11.85 loss for every \$100 in income. See detailed storyon page 11.

V.NORTHEAST, Warnego headquarters

384 farms averaged \$40,556 gross and a net (income less expenses and 6% on investment return) of \$4914. The top one-fourth of the farms netted \$34.19 on each \$100 of income and the low one-fourth \$5.50. See detailed story of northeast association on page 8.

NORTHWEST, Colby headquarters

348 farms averaged \$39,760 gross income but only a \$2225 net. The top one-fourth averaged \$32.04 net per \$100 income and the low onefourth showed a \$9.22 deficit. See detailed story on page 12.

VI.SOUTHEAST, Chanute headquarters

About 500 farms in the association showed an average gross of \$38,286 with net rising \$1600 higher than in 1967 (but the fieldman did not report the actual gross for the year). The top one-fourth netted \$33.98 on each \$100 of gross income and the low one-fourth \$7.77. See detailed story of southeast association on page 7,

Met Up 45% In North Central Assn.

CLAY CENTER — Despite a per cent increase in expenses, farm income reached an alle for one group of north cen-Kansas farmers last year, ording to the annual Sumy and Analysis Report issued Farm Management Associa-

the report is based on actual wkkeeping records of 372 ms whose operators are memof this Kansas State Uni-Rity Extension program.

Average net income increased per cent on these farms to the ghest level ever. Average gross come was \$39,297. also an all-

more accurate gauge of the ar's results — return for operlor's labor and management — 45 per cent, from \$4,312 to

this figure could be considerthe farmer's salary," says C. Bartlett, Farm Management dman, Clay Center. "It meas a return for the operator's or and management after alwing 6 per cent interest on his pital invested in the farm bus-

ssuming the farmer devoted hours to his operation — or

about 58 hours a week - this figures out to \$2.89 an hour, or about \$522 per month."

Record wheat yields and higher livestock prices were the key to the higher incomes last year, Bartlett says. "Wheat prices were low, but the average yield _ 33 bushels per acre __ was the highest ever in Association

This helped push gross value of crops per acre to \$40.04, up 18 per cent from 1967. Gross income from livestock rose 15 per cent to \$23,470 per farm.

On the other side of the balance sheet, fertilizer and lime expenses jumped 26 per cent. This reflects increased use of fertilizer, Bartlett explains.

Feed expenses soared 18 per cent; taxes, interest and rent were up 15 per cent; and fuel and oil expenses rose 14 per cent.

Some farms were much more profitable than others. For comparison, averages are taken for highest net income and the onefourth with the lowest net in-

Net income on the 'high one ment.

Price Index Shows Another Increase

Prices received by Kansas farmers at mid-May 1969 were up some from the previous month and moderately above last year, according to the Kansas Crop and Livestock Reporting Service.

The index of prices received by farmers for all commodities was 252 per cent of the 1910-14 base period compared with 241 last month and 229 a year ago.

Beef cattle and calf prices were substantially above a month earlier while small price increases were noted for most grain crops, sheep and lambs and milk cows.

Hay and egg prices were moderately lower. Compared with May last year, prices for beef cattle, calves and hogs were up sharply and prices for most other livestock were up moderately, but wheat, sorghum, barley and soybean prices were down mod-

Crop Prices

The erop price index was 149 per cent at mid-May, 1 point above April but 7 points below

Wheat, at \$1.22 per bushel, was 1 cent above April but 7 cents below May 1968. Corn, at \$1.15 per bushel, was 3 cents above a month earlier and 1 cent above May a year ago. Oats averaged 75 cents per bushel, unchanged from April but two cents below a year ago. Barley, at 91 cents per bushel, was up 1 cent from the previous month but 9 cents below last year.

Sorghum grain brought \$1.73 per cwt., up 2 cents from a month earlier but 8 cents less than in May last year. Soybeans

fourth" rose more than \$6,000 per farm. Net on the "low onefourth" increased from only \$79

Expenses per \$100 gross in come were \$64.67 on the "high one-fourth.", \$95.12 on the "low one-fourth". Thus, the high income farms netted \$35.33 and the low income farms \$4.88 for each \$100 gross income.

Farms in Riley county had the ton, and Jewell counties. Other highest average incomes, followed by those in Saline, Washingcounties in Association No. 1 are Clay, Cloud, Dickinson, Ellsworth, Geary, Lincoln, Marion, Mitchell, Marshall, Osborne, Ottawa, Republic, Russell and Smith.

The fieldmen, C. E. Bartlett, Clay Center; and Larry Greene and Ross A. Olson, Concordia, are among 20 who work with approximately 3,500 Kansas farm families enrolled in the Farm Management Association pro-

The program provides on-thefarm counseling, marketing information and farm business anone fourth of the farms with the alysis to the member families. In return, these families provide farm business information for K-State's research in farm manage-

averaged \$2.47 per bushel, up 6 cents from April but 6 cents below last year.

Livestock Prices

Livestock and livestock products price index at mid-May was 370 per cent of the 1910-14 base period, 23 points above April and 58 points above May 1968.

The meat animal price index on May 15 was 451 per cent compared with 412 per cent in April and 372 per cent last year.

Hog prices averaged \$23.00 per cwt.\$3.50 above April and \$4.80 above May 1968.

Beef cattle brought \$28.70 per cwt. compared with \$26.50 per cwt, the previous month and \$23.70 per cwt. in May last year. Steer and heifer prices, at \$30.70 per cwt. were \$2.20 above April and \$5.70 above a year earlier. Calves, at \$33.50 per cwt., were up \$3.50 from the previous month and \$6.30 above May of last year.

The dairy price index was 312 per cent in May compared with 316 in April and 304 per cent last year. The preliminary wholesale milk price of \$5.10 per cwt. was 10 cents below April but 5 cents above May of last

Egg prices averaged 25.0 cents per dozen, down 3 cents from April but well above the 20.3 cents a year ago.

Prices Paid

Prices paid by Kansas farmers for protein supplement were down slightly from a month ago but for mixed feeds they were about steady.

R. STANLEY PARSONS, Mgr.

For The Farmer

ment, said a department spokesman, only when a country asks for it.

Under various government programs, including Food for Peace, about 120 million dollars worth of tobacco was exported last year. Most of it was shipped under barter arrangements, through which the United States trades commodities for materials and services needed by its overseas installations.

Another 30 million a year in federal funds is used to subsidize tobacco exporters to make the product more competitive in the world market.

It's all legal and in line with what the government provides for other farm products, such as wheat, feed grains and dairy items, the Agriculture department says.

Unless Congress decides to change the program there is nothing to prevent a needy country from getting a cargo of burley along with its bread.

on the part of the Department

of Agriculture to say tobacco is a food or that we're slipping in nonfood commodities under Food for Peace," said Hugh C. Kiger, head of the tobacco division for the Foreign Agricultural Service.

"Tobacco is an agricultural commodity, legally grown and sold in this country and abroad. It's price-supported by the government, and Congress has not indicated that tobacco should be excluded from the list of agricultural commodities available for shipment," Kiger said.

The Food for Peace program was signed into law by President Dwight D. Eisenhower July 10, 1954. It was designed primarily to get rid of surplus U.S. commodities without disturbing regular world markets.

Thus it included the humanitarian aspects and intent for which it is largely recognized today - Food for Peace. But to the American farmer - and succeeding administrations - it has been a boon for keeping farm surpluses as manageable as they have been.

Since Food for Peace went into effect nearly 15 years ago, about 18 billion dollars worth of farm products, ranging from wheat and feed grains to dairy products, cattle hides and cotton, have moved into needy areas of the world.

Congress last year extended the program through 1970 and added new provisions aimed at boosting economic development in recipient countries.

Gooch's Best turns pigs into profit! \$27 per head wor

Hog raising is really profitable when you do it the way Gilbert Maddison, Jr., Anthon, Iowa hog raiser does. He uses meat-type boars to breed in extra performancethen matches this bred-in performance with Gooch's Best Feeds and good management.

Mr. Maddison recently marketed 273 head that returned him nearly \$27 profit per head after paying their feed, veterinary and interest costs. From birth to market, here's how Mr. Maddison's pigs did it.

Days to market	180 days
Market weight	257 lbs.
Feed per lb. gain	3.51 lbs.
Average daily gain	1.5 lbs.
Selling price	\$19.85
Feed costs per Cwt. gain	\$ 9.80

GOOCH'S BEST IS THE "EXTRA PERFORMANCE" HOG FEEDING PROGRAM!

This is the Extra Performance Gooch Feed Program Mr. Maddison and hundreds of other successful hog raisers are using to turn pigs into profit.

- Gooch's Best Pig Guard 250 to start pigs fast and healthy
- Gooch's Best Pig Grower 250 to turn weaning days into growing days!
- Gooch 36 Pig Mixer 1000 mixed 1 to 3 with grain to grow frame and muscle!
- Gooch Super 40 mixed with grain to finish hogs fast and meaty!

SEE YOUR NEARBY GOOCH DEALER

He can help you team up Gooch's Best Hog Feeds with grain to make the feeding program that turns pigs into extra dollars and cents of profit. You are assured Gooch's Best Feeds match your hogs' nutrient needs - regular computer review and constant research are the reasons.

makes it easier to be a good hog raiser

Self-Clean Ranges Come In Many Styles, Sizes

No matter what size your kitchen, it is quite probable that you can buy a self-cleaning electric range to meet your

The self-clean oven feature, considered by many homemakers the greatest advance since ranges themselves, is offered in a variety of 30-inch wide freestanding models, as well as on models that slide in between

base cabinets or drop into a counter opening to provide a "built-in" look. These ranges are most suitable for kitchens where space is limited.

For larger kitchens, there are 40-inch-wide cabinet ranges with self-cleaning master ovens, as well as double-oven ranges. featuring removable panels in the eye-level oven which can be cleaned automatically along

with the self-clean lower oven.

Homes with built-ins haven't been overlooked, either. Single and double self-clean wall ovens can be quickly installed in any kitchen with the aid of special trim kits which simplify the replacement of existing equipment of any make or shape. Self-cleaning electric ranges

vary in their features from plain to fancy, but all models are easy to install, easy to operate, and economical to clean. Oven-cleaning costs average just seven cents worth of electricity. That means you can clean your oven every month, automatically, for less than a dollar a year.

Sheer Fabrics At Top Of Fashion Parade

Sheer fabrics are at the top of the fashion parade this spring. As you shop you will find many spring and summer dresses made of crisp and firm or soft and transparent sheer fabric.

Before you buy a sheer fabric consider what pattern will go with it and what construction techniques you should use for a well-made garment.

If you're puzzled about what interfacing, underlining, or lining to use, see how the better constructed ready-to-wear garments are made. Then use your imagination.

To eliminate facings, use backings or linings. You can edge finish with double bias fold to eliminate show-through seams. Tucks or unstitched darts are usually more pleasing than stitched darts.

Some sheers, either plain, printed or both make effective blouses if you use double fabric throughout,

If you do want that "seethrough" look, plan your undergarments carefully. They must act as good foundation for the dress, not detract from it.

When you get home with the selected fabric and pattern, how will you cut and mark the fabric? If the fabric shifts easily, secure it to tissue paper before you lay out the pattern. Cut out the pieces with sharp shears. Transfer marking to tissue, not

Handle tissue paper and fabric together when you pin, stay stitch and join pieces. Use a size nine needle and fine thread as you machine stitch slowly. Use mock French seams or double-stitch seam. Hand roll or machine hem narrow hems and edges. Loops for small buttons usually show less than worked or bound buttonholes. You may also consider small buttonholes.

If a zipper is used, consider putting it in by hand. It will give the garment of sheer fabric a well-made look.

As you sew and when you complete the garment, press it carefully according to the fabric fiber content. Moisture may cause some sheers to pull together.

Dairymen can LOSE up to \$7.25 a month on heifers...

... for each month a heifer goes past 24 months without calving!

Dairymen have long recognized that heifers that are older and larger at first calving will, on the average, produce more milk during the first lactation. As a result, many dairymen have been breeding their heifers to calve from between 29 to as much as 36 months.

Such delay is both unnecessary and unprofitable and can cost dairymen about \$7.25 per month for each heifer.

One of the main reasons given for delaying calving past 24 months is that heifers are not big enough to breed at 13 or 15 months. This reasoning is costly.

We'll show you why-and we'll show you how we, as your Purina dealer, can help cut that cost:

A Holstein heifer calving at 24 months and weighing 1,100 lbs., says Fred Knott of North Carolina State University, would produce about 11,000 lbs. of milk during her first lactation. If the same heifers' growth was retarded and breeding delayed so that she would calve at 30 months weighing 1,100 lbs., she could be expected to produce approximately 11,390 lbs. of milk in her first lactation

MID-CONTINENT ELEVATOR CE 8-4177 Junction City AMERICUS GRAIN CO. 884-3465 Americus

GORDEN MARK ELEVATOR ME 2-3381 Clay Center

WESTERN GRAIN MILL

(attributed to the 6 months additional

Total costs for this period, including feed. labor and interest on investment would be about \$65.00. Therefore:

Extra costs from 24 to 30 months \$65.00 Return for extra milk (390 lbs.) \$43.55

or \$7.25 per month!

So where does Purina enter the picture? When the heifer is exactly 3 days old, that's where. At that time, she comes off her dam's colostrum and goes on Purina's high energy, fast growth calf growing program until she is six months old.

The six month program is brand new. Featuring Purina Nursing Chow, Purina Calf Startena, and brand new Purina Calf Growena, this all-new program is tailormade to help you grow herd replacements fast, breed them early, and freshen them between 22 and 24 months-and in some cases even sooner!

See us today. Let us show you how this new Program may help get your heifers producing sooner.

stock prices were the key to higher incomes last year," says William D. Guy, Farm Management fieldman from Chanute. "Crop yields reached an all-time high in Despite a continual increase in most counties, and farmers made more money on livestock."

Gross receipts from crops averaged \$11,258, up from \$10,003 the previous year. Wheat averaged 36 bushels, grain sorghums 68 bushels, corn 70 bushels and soybeans 25 bushels per acre.

Gross income from livestock averaged \$27,028 per farm. This includes \$13,713 for cattle and \$5,741 for hogs.

On the other side of the balance sheet, taxes and interest also reached an all-time high. Property in most counties was re-assessed last year. Taxes were up on every farm.

"Farmers are paying between 7 and 8 percent interest from banks and other agencies," Guy says. "Real estate money is going for about 712 percent."

Fertilizer expenses were up sharply, despite a drop in prices. Farms simply used more fertilizer last year, Guy explains.

Some farms were much more profitable than others. Net income on one-fourth of the farms with the highest incomes rose 14 percent. Net income on the onefourth with the lowest incomes was up 100 percent, but still reached only \$1,947 per farm. Some of the low income farms operated at a deficit in 1968.

Expenses for \$100 gross income were \$66.02 on the "high onefourth" and \$92.23 on the "low one-fourth." Thus, farmers on the high income farms netted \$33.98 for each \$100 gross income thefore allowing for interest on investment), compared to only \$7.77 on the low income farms.

The top one-fourth of the those making an acceptable return for labor and management - would total only 2 to 3 percent of all farms in southeastern Kansas, Guy explains.

When interest on net investment is deducted from the net farm income on the average farm, nothing is left for labor and management, Guy says.

He believes only about 5 or 6 percent of all farms in Kansas

are making enough income to pay an adequate return for labor and management plus the going interest rate for the operator's investment in the farm business.

Fieldmen for Association No. 6, Gale Mullen, Erie; Frederick De-Lano, El Dorado; Tom Appleby, Garnett; and William Guy, Chanute, are among 20 who work with approximately 3500 Kansas

farm families enrolled in the Farm Management Association program.

The program provides on the farm counseling, marketing information and farm business analysis to the member families. In return, these families provide farm business information for K State's research in farm management.

exceeded only by the all-time high in 1966. Average gross income was a record \$40,556, up 14 per cent from a year earlier.

A more accurate gauge of the year's results - return for operator's labor and management jumped to \$4,914, more than The report is based on actual double the \$2,232 of the previous

> "This figure could be considered the farmer's salary," says Leonard C. Parker, Farm Management fieldman, Wamego, "It measures a return for the operator's labor and management af

ter allowing 6 per cent interest on his capital invested in the farm business.

Assuming the farmer devoted 3,000 hours to his operation -or about 58 hours a week - this figures out to \$1.64 an hour, or about \$410 a month compared to 74 cents an hour and \$186 a month in 1967.

Better crop yields and higher beef prices were the key to the higher incomes last year, Parker says. Wheat yields were up 13 bushels, corn 5 bushels, grain sorghums 14 bushels, and soybeans 6 bushels.

Grain prices were generally lower, but this was more than offset by the higher yields, Parker explains. Gross value of crops per acre was \$73.07, up \$8.50 from 1967.

Gross income from livestock was up 6 per cent to \$24,066 per

On the other side of the balance sheet, seed and crop expenses were up 26 per cent. Fertilizer and lime expenses jumped 18 per cent, despite a drop in prices. This reflects greater use of fertilizer and lime expensuse of fertilizer and an 8 per cent expansion in crop acres per

farm, Parker explains.

Taxes, cash rent, interest and insurance soared 17 per cent. "Interest rates were ½ to 1 per cent higher than the previous year," Parker says.

One expense item, cost of feed purchased, was down 7 per cent, reflecting last year's excellent feed crop.

Some farms were much more profitable than others. For comparison, averages are taken for the one-fourth of the farms with the highest net income and the one-fourth with the lowest net income.

Net income on the "high onefourth" rose 19 per cent last year. Net on the "low onefourth" soared 180 per cent. However, many of these farms still operated at a net loss in

Expenses per \$100 gross income were \$65.81 on the "high one-fourth" and \$94.50 on the "low one-fourth." Thus, the high income farms netted \$34.19 and the low income farms \$5.50 for each \$100 gross income.

Farms in Brown county had

the highest average incomes lowed by those in Donipha Shawnee and Atchison Other counties in Association No. 4 Nemaha, Pottawatomie, W baunsee, Morris, Chase, L Jackson, Leavenworth, Do Johnson and Wyandotte,

South Central Net At \$6365

HUTCHINSON - Even though farm income was up in southcentral Kansas last year, a good many farmers in this area are having a rough row to hoe.

Average net income last year was the third highest on record for more than 400 south-central Kansas farmers enrolled in Farm Management Association No. 2.

On the other side of the coin, many of these farmers had little to show for their year's labor and management after deducting 6 percent interest on their capital invested in the farm business.

These facts are revealed in the Association's annual Farm Management Summary and Analysis Report. This report is based on records of farmers who are members of this K-State Extension program.

Despite an increase in return for labor and management, net income did not keep pace with costs of farming on these farms last year, says HoBart Frederick, farm management fieldman from Hutchinson.

Return to labor and management is one of the most meaningful measures economists have devised to calculate the year's results for the farmer.

"It is a return for the operator's labor and management after allowing 6 percent interest on his capital invested in the farm business," Frederick says. "You might call it the farmer's salary."

This labor and management return increased from an average of \$2410 per farm in 1967 to \$6365 last year. Assuming the average farmer devoted 3000 hours to his operation — or about 58 hours per week - this figures out to \$2.12 per hour, or about \$530 a month for his labor and management.

Return for labor and management averaged only \$1418 on the least profitable half of the farms in the Association. This would be only 47 cents an hour or \$118 a month for the farmer.

Prederick points out that labor and management return is figured for each farm. Some of these vice." farms are partnerships, and must provide a living for two or more families.

A tremendous wheat crop helped boost farm income last year, Frederick says. "As our wheat crop goes, so goes our net income, in spite of the low prices."

"It was a better year for livestock, especially toward the end of the year."

All in all, the report shows that farming is getting more expensive each year. Seed and crop expenses per farm were up 36 percent, fertilizer and lime expenses rose 23 percent, and taxes, cash rent, interest and insurance jumped 19 percent.

Fertilizer expenses were up despite a drop in fertilizer prices. This reflects greater use of fertilizer and an expansion in crop acres per farm, Frederick says.

Expenses per crop acre reached an all-time high. "Farmers spent an average of \$23.33 to farm one acre of cropland," the fieldman explains. "This is up from \$20.56 only two years ago.

"On the average, our farmers are spending 75 cents to get back

Some farms were much more profitable than others. Net income on the one-fourth of the farms with the highest incomes rose almost \$7000. Net income on the one-fourth with the lowest incomes increased by more than \$3500, but still reached only \$632 per farm. Many of the low income farms operated at a net loss in 1968.

Expenses for \$100 gross inocme were \$63.26 on the "high one-fourth" and \$97.51 on the "low one-fourth." Thus, farmers on the high income farms netted \$36.74 for each 100 gross income compared to only \$2.49 on the low income farms.

Frederick points to manage. ment as the big difference between the high and low income operators. "The top one-fourth have the ability to get the job done year after year. They are alent as to what is going on in farming and will make changes own luck."

when needed. They have good luck, but seem to make their

How do Farm Management members compare with the average south-central Kansas farmer? "On the whole, our members are bigger farmers,"Frederick says. "In all measures - gross income, net income, acres, number of men employed - they are above average.

"Average net income for our members is substantially higher than the state-wide average for all Kansas farmers as reported each year by the Kansas Crop and Livestock Reporting Ser-

The fieldmen, Bill D. Collins, Larry R. Kepley and HoBart Frederick, all of Hutchinson, work with approximately 512 farm families in the following counties: Barton, Stafford, Pratt, Rice, Reno, Kingman, Harper, McPherson, Harvey, Sedgwick and Sumner.

The Farm Management program provides on-the-farm counseling, marketing information and farm business analysis to the member families. In return, these families provide farm business information for K-State's research in farm management.

Lyon Co. Board Won't OK Welfare Budget

EMPORIA - Lyon County commissioners, who also sit as the county welfare board, have refused to approve the proposed 1970 county welfare budget.

The budget proposal of \$1.4 million represents an 8.8 per cent increase over the 1969 budget.

The board said it refused to approve the proposal because the 8.8 per cent increase would exceed the cost of living increase for the same period by about 3.8 per cent.

The refusal by commissioners to approve the budget probably will have no effect, because the Kansas attorney general is empowered to sign it and direct the assessment on the county's 1969 personal property taxes.

PERRY DAM FILLING UP

Spring rains caught by Perry Dam have boosted the reservoir level in the Northeast Kansas lake to within 111/2 feet of the nor. mal pool. This view looks upstream from the dam on the Delaware river between Lawrence and Topeka shows the reservoir at 881 fee The normal level will be 891 feet, giving 12,200 surface acres, In this view the lake covers 8200 acres, so it will be a third larger at conservation level. When full, Perry will have a shore line of 159

Model B trail-type rotary hoe for 6 rows, is also available in 2, 3 and 4-row sizes. Row sections are 42 inches wide.

Cultivate up to 15 acres an hour—first time over!

These hoes fit any size of farm or tractor, Eagle, Category I or II hitch. Wheel-type, trail-type or mounted. Widths are from 2 to 6 rows. Best working speeds at 7 or 8 mph, but speeds up to 10 mph are possible. Cultivates up to 15 acres an hour, 150 acres a day the first time over!

Huskily built with high-carbon, self-sharpening fingers with chisel points for easy penetration, effective spading

duty center hub. Besides killing weeds, these hoes break up hard crusts,

promote soil warm-up and moisture soak-in. Pulled backwards, they pack seedbeds and crumble surface clods.

Where else can you get such high capacity and low crop loss for a medium price?

The International 205 combine makes it easy to decide what combine you should buy. Because, in the medium to low price range, you won't find another combine that gives you such big capacity—with full harvesting efficiency in all your crops!

The 205 gives you full 42-inch-wide threshing-separating-cleaning—and the power to do it with a six cylinder, 61 hp International engine. Twin side-mounted grain tanks ride low over each drive wheel for maximum stability, added traction in soft fields.

Exclusive deep-ledge platforms put the cutterbar 4 to 6 inches ahead of the

auger to reduce cutterbar shattering loss. Eliminate the cost of a cutterbar extension. Choice of 101/2 or 13-foot

In corn, you get all the capacity you need to combine a full three rows at top efficiency at good ground speed. Ground-skimming low-profile cornheads won't whip off ears. Full-length stripper plates prevent butt-end shelling. Choice of two-row wide or threerow narrow corn heads.

See the bargain-priced 205 at your International dealer and arrange for a revealing demonstration. His IHCC financing is geared to fit your income.

Average gross income on these farms last year was \$44,616, the second highest on record and up 3 percent from 1967. However, expenses increased 6 percent. This pushed net farm income down 13 percent from a year ear-

A more accurate gauge of the year's results - return for operator's labor and management plunged 38 percent, from \$3160 to \$1970.

This figure is the closest we can come to calculating a salary for the farmer, says John F. Smerchek, Farm Management fieldman from Greensburg. "It measures a return for the operator's labor and management after allowing 6 percent interest on his capital investment in the farm business."

Assuming the operator had devoted 3000 hours to his business or about 58 hours a week his "salary" would be about 66 cents an hour or \$164 per month.

"Last year will be remembered as the year of greenbug infestations in grain sorghum fields," Smerchek says. "Another insect the pale western cutworm hurt our wheat crop."

Damage by these pests helped push average wheat yields down 4 bushels and grain sorghum yields nearly 18 bushels from the previous five-year average.

"Cash grain prices were lower," says Danny D. Trayer, fieldman from Garden City. "Livestock prices were up, but short feed supplies kept livestock numbers down in the western half of the association.

"Farmers did a pretty good job of holding expenses in line. Most of the 6 percent increase in total expenses can be blamed on inflation."

However, seed and crop expenses soared 44 percent, the biggest jump among expense items. "Spraying for greenbugs and cutworms accounted for most of this increase," Trayer explains. "Farmers purchased more herbicides and insecticides as irrigated corn production continued to increase."

Interest expenses were up 26 percent, due partly to higher interest rates and the larger amounts of capital required for farming these days, the fieldman

Some farms in the association were much more profitable than others. For comparison, averages are taken for the one-fourth of

學《學《學》《學《學》《學《學》《學》《學》《學》《學》

The report is based on actual the farms with the highest incomes and the one-fourth with the lowest incomes.

Net income on the "high onefourth" dropped 7 percent last year. Net income on the "low one-fourth" fell almost 50 percent to a minus \$3,727.

Expenses per \$100 gross income were \$72.41 on the "high one-fourth" and \$111.85 on the "low one-fourth." Thus, the high income farms netted \$27.59 and the low income farms had a \$11.85 deficit for each \$100 gross.

Farms in Haskell County had the highest average incomes, followed by those in Kearny, Stanton, Finney and Wichita. Other counties in Association No. 3. are Greeley, Scott, Grant, Hodgeman, Pawnee, Barber, Comanche, Clark, Lane, Hamilton, Ford, Edwards, Kiowa, Meade, Gray, Seward, Stevens and MorGrass & Grain

JUNE IS DAIRY MONTH

The dairy business can be a rewarding one for the good manager, especially if he stays with it. The dairy business isn't one that you can get in and out of easily but must be developed

over a long pull. Overproduction of dairy products seems unlikely in the near fu-ture as reliable sources indicate a sharp decline in replacement dairy stock. Many dairymen have been using beef bulls and selling calves and yearlings to be fed for slaughter. Consequently, demand

for dairy heifers is rapidly increasing.

The Union State Bank salutes the dairy indus-

Northwest Group Has Lower Return

COLBY - Net farm income was down for the second year in these farms operated at a deficit. a row for one group of northwestern Kansas farmers, according to the Annual Summary and Analysis Report issued by Farm Management Association No. 5

The report is based on actual bookkeeping records of 348 northwestern Kansas farms whose operators are members of this Kansas State University Extension program.

Average gross income on these farms last year was \$39,760, the second highest on record and up 2 percent from 1967. However, total expenses increased 31/2 percent. This reduced net farm income almost 5½ percent from a year earlier.

A more accurate gauge of the year's results - return for operator's labor and management plunged 45 percent, from \$4086 to \$2225.

"This figure is the closest we can come to calculating a salary for the farmer," says Kenneth E. Urban, Colby, Farm Management fieldman. "It measures a return for the farmer's labor and management after allowing 6 percent interest on his capital invested in the farm business."

Assuming the operator had devoted 3000 hours to his business or about 58 hours a week his "salary" would be about 74 cents an hour or \$185 per month.

"A combination of poor grain prices and low average yields hurt us last year," Urban says. "Wheat prices ranged from \$1.15 to \$1.25.

Wheat yielded 17 bushels and milo 31 bushels, both down about 3 bushels an acre. "Greenbug damage held milo yields down," he says. "Wheat and mile suffered from lack of moisture."

Gross livestock income was up 18 percent per farm — the result of higher livestock prices.

Feed expenses took the biggest jump among purchased items. Some spots in almost every county were short or feed, Urban points out.

Fertilizer expenses were up sharply, despite a drop in prices. This reflects an increase in irrigation, and in fertilizer use per acre, Urban says.

Some farms in the Association were much more profitable than others. For comparison, averages are taken for the one-fourth of the farms with the highest incomes and the one-fourth with the lowest incomes.

Net income on the "high onefourth" dropped 5 percent last year. Net on the"low one-fourth"

Suprise Help For Corn Prices

The corn market this year has been much stronger than most eople expected. Prices for July futures, for example, have climbed nearly 30 cents a bushel from their low point last fall. prices for cash corn have risen by a comparable amount.

There are several reasons for nese increases in corn prices: 1. In central Illinois and some other areas, the yields per acre were smaller than dad been expected.

2. In Minnesota and northern

3802

Iowa, wet weather at harvest time caused some field losses.

Farmers locked up large amounts of corn under pricesupport loans.

4. More corn has been used for feed than had been expect-

5. The weather this spring has not been favorable for the planting and growth of the new crop.

Large disappearance. The USDA estimate of stocks of corn on hand April 1 was 3011 million bushels - 6 percent less

The following storage and handling charges (in cents per bushel) will be assessed against all liability grain handled by this firm for the period of June 1, 1969 to May 31, 1970.

Approved by The Kansas State Grain Inspection Department. Schedule A: To be used only for grain received for handling and/or storage that is not under CCC loan or purchase agreement and does not become CCC support grain. (In cents per bushel.)

than the supply on hand one year before. Thus, the indicated disappearance of corn during the first half of the marketing year was 2511 million bushels -132 million bushels more than the disappearance one year be-

Exports were very slow during the six-month period. They totaled only 222 million bushels -100 million less than a year earlier. Domestic disappearance, then, was 2289 million bushels, or 242 million bushels more than in the first half of the previous marketing year. Most of the increased domestic use must have been for feed, since other uses are neither large nor variable.

More "free" corn needed. The domestic use and exports of corn during the last half of this marketing year will surely equal (or exceed) the 2060 million bushels used during this period a year ago. In addition, at least 140 million bushels will be needed for working stocks - at mills and elevators and in transit. Hence, the need for free corn probably will exceed 2200 million bushels.

The apparent supply of "free" corn on April 1 was only about 1940 million bushels - making a shortage of free corn at least 250 million bushels, probably more. The shortage may be nearly equal to the 360 million bushels of 1968 corn that farmers had under loan on May 1. Therefore, most of the 1968 crop that is under loan will probably be redeemed rather than delivered to the CCC

(Other corn in the "lock up" on May 1 included 440 million bushels of old corn - some more than four years old - under reseal programs, and 225 million bushels owned by the CCC.)

1969 crop may fall short. Some of the recent strength in the corn market was caused by prospects that production this year will again fall below the level of domestic use and exports. There will be no real shortage of corn, since the carryover of old corn on October 1 promises to be somewhere around 900 million bushels far more than what will likely be needed.

A USDA survey in March showed that farmers expected to cut acreage about 1 percent from the 1968 level. If the yields per acre average 78.5 bushels, the same as in the past two years, total production would be about 4.3 billion bushels. Such an amount would be about 300 million bushels less than

the expected use this year. It might be 400 million bushels short of needs for 1969-1970. Thus, prices may have to be high enough to draw some corn from reseal programs and CCC stocks.

L. H. Simerl Univ. of Illinois

Suspend Some Work Camps At State Parks

Joseph Noble, Kansas reformatory superintendent, has temporarily suspended work by reformatory inmates at Cheney and Kanopolis state parks.

Noble says he wants a meeting with Lynn Burris, state park director, to discuss problems connected with the special work as-

The superintendent said much of the difficulty stems from contraband returned to the state reformatory in Hutchinson when the inmates return each night from their work assignments.

There also is a lack of supervision at the parks and his staff has been able to spare only one guard to accompany the 10-man work detail, Noble added.

Noble said his action is not a direct result of the escape last week of three inmates from an honor detail at Kanopolis. The inmates are still at large.

Similar work programs at Tuttle Creek, Toronto and Pomona reservoirs do not present the same problem because the inmates remain in special reservoir camps and are not returned each night to the institutions.

FIVE WEEKS LATE

Bill Brunin of St. Marys said he was five weeks late planting corn because of spring rains. Part of the field Bill was working had corn five inches high from a planting before the rains.

301 Farmers In State Got Over \$20,000 Subsidy

301 Kansas farmers would have been affected had there been a limitation of \$20,000 per farmer placed on commodity program payments for calendar 1968, according to Secretary of Agriculture Clifford Hardin.

On the basis of legislation passed by the House which exempts sugar producers from the ceiling limitation, only an estimated 251 Kansas farmers would have been affeoted, department figures indicated.

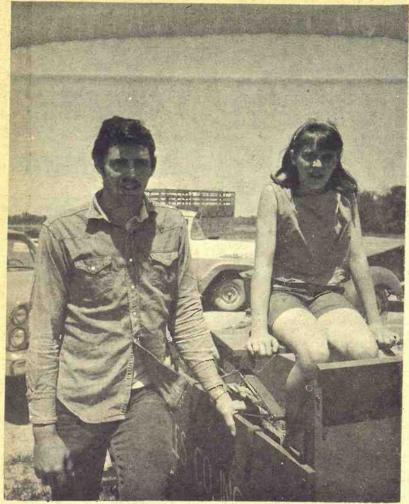

In 1968, 50 Kansas farmers had payments which swelled to more than \$20,000 by participating in the sugar program. In Kansas, 31 feed grain grow-

ers received at least \$20,000 while 69 wheat farmers and six other farmers who exceeded the \$20,000 ceiling by taking part in all programs were included in receiving some funds under the wool program.

There were 145 Kansas farmers who received in excess of \$20.000 in 1968 from participating in both the wheat and feed grains programs. Total payments to Kansans under the two programs were \$7.4 million.

Had the \$20,000 ceiling been in effect, this amount would have been reduced by \$2.3 million or approximately \$2000 average for the 251.

The \$7.4 million averaged \$28,700 per Kansas farmer of those receiving \$20,000 or more.

HELPING ON THE FARM

Verl and Lois Evert of Simpson have been helping their father, Clint Evert, on his farm 21/2 miles out of Simpson, in Mitchell

Stop Shipping 'Live' Hog Cholera Vaccines

The USDA has announced it will discontinue the interstate shipment of modified live virus hog cholera vaccines effective July 1. The action stems from a meeting in Washington April 15 with various segments of the swine industry, and reflects the progress of hog cholera eradication to date.

"This is a necessary step in the national state-federal hog cholera eradication program," said Dr. R. J. Anderson, associate administrator of USDA's agricultural research service. The Department is committed to the success of this effort and will continue to carry out its share of the cooperative eradication program."

Anderson pointed out that along with the action on vaccines, the Department is intensifying all aspects of the eradication program in order to wipe out hog cholera as quickly as possible.

The action referred to by Anderson involves changes in Federal regulations affecting interstate shipment of hogs and hog cholera vaccines, a proposal published on Nov. 20, 1968, and again on April 3, 1969. The changes in the rules, published in the Federal Register May 24 by USDA's Agricultural Research Service, become effective July 1.

The changes in the regulations not only prohibit the interstate shipment of all modified live virus vaccines, but prohibit the interstate shipment of inactivated hog cholera vaccines into the 43 states and Puerto Rico which have reached the "stamping out" phases of the eradication program. However, the inactivated vaccines can still be shipped into the 7 states which are still in the "control" phases of the program.

The "stamping out" phases -

phases three and four of the four-phase eradication program involve prompt and complete disposal of all infected herds, with cooperative state-federal indemnity payments to help re-

imburse farmers whose hogs must be destroyed because of hog cholera. Indemnities are not available in phases one and two.

The inactivated vaccines are retained in states in the control phases so that farmers will have a method of protecting their pigs against hog cholera. Eventually, these vaccines will have to be eliminated, possibly by the end of this year.

Several considerations were involved in the decision to discontinue use of modified live virus vaccines. The USDA recognized that vaccines help control hog cholera; but, since it is also possible for them to cause the Meetz is a coming sophomore at disease, they must be eliminated Kansas State University. He is where the risks outweigh the

A further consideration was the need for federal action to reinforce individual state actions against vaccines. By May, 34 states and Puerto Rico had already stopped using modified live virus vaccines; eight of these and Puerto Rico had discontinued use of all vaccines.

The change in interstate shipping rules does not affect use of anti-hog cholera serum. There are an estimated 41/2 to 5 million doses of serum now available. Neither will the change affect production of hog cholera vaccines for the export market, estimated at up to five million doses yearly.

Area Conference For Veterinarians At K-State

State University will be host to two major conferences for veterinarians of the 10-state North Central Region of the United States June 10 through June 12.

Dr. Harry D. Anthony, director of the KSU veterinary diagnostic laboratory, who is coordinator for both conferences, said registrants for the two events include several from outside the 10-state area, including some from Canada.

The first conference, primarily for veterinary laboratory diagnosticians, will get underway Tuesday morning, June 10, and will close with a business session Wednesday noon, June 11.

The second conference which will attract veterinarians principally interested in poultry disease, begins Wednesday noon and continues through Thursday noon, July 12. Both conferences. will be at the University Ramada

New diagnostic, preventive and treatment methods for diseases of cattle, swine and dogs will be discussed during the meeting of the veterinary laboratory diagnosticians. Twenty scientific talks will be given by veterinarians from Michigan, Iowa, Missouri, Nebraska and Kansas, including Dr. W. C. Stewart, Dr. D. C. Gigstad and Dr. G. M. Brown of the National Animal Disease Laboratory in Ames, Iowa.

LATER THAN USUAL

Albert Grieshaber of St. Marys was back in the fields last week planting milo. Grieshaber said this was the latest planting he had made for several years.

JD TERRITORY JOB FOR YOUNG JOE BOWMAN

Joe

Bowman

The son of the Junction City John Deere dealer has been appointed industrial territory sales manager for JD in the Los An-

geles area. Joe M. Bowman, 26, has been industrial territory manager for John Deere in Oklahoma and Texas panhandle areas. He is the son of M. D. Bowman, Junction City.

Ersatz Milk Gets Poor Mark From Doctors

A doctor's group has advised that the use of imitation milk in undesirable and should be dis-

tion of the American Medical As- council spokesman said.

sociation gave the advice in a report on imitation and "filled" milk in the association's journal.

Imitation milk is a combination of water, sugar and vegetable fat. The report says it is low in protein, minerals and vitamins compared with whole milk.

Filled milk, unlike imitation milk, is a milk-based product. It is a combination of skim milk and vegetable oil to replace the butterfat. The council said the protein content of filled milk generally compares well with fluid whole milk and both have about the same number of calo-

The council said, "Imitation milks usually provide about the same number of calories as whole cows' milk with a greater percentage of calories derived from carbohydrates. Such products may not supply the other nutrients for which milk is not-

The council did not condemn either imitation or filled milk but advised physicians to ascertain the contents of these substitutes before recommending them to patients.

Mothers in the United States the diets of infants "is generally often buy milk substitutes for their children because they are cheaper, not realizing that these The council on foods and nutri- are not nutritionally adequate, a

TRADITIONAL 4-H ROUNDUP PICTURE

The more than 1,100 young Kansas men and women who were delegates to the 1969 Kansas 4-H Roundup at Kansas State University, Manhattan, last week assembled on the lawn east of Anderson Hall to form four large "H's" and a giant "4" for their traditional Roundup picture. Design for this year's photo was by Ken Locke of the KSU Office of Photographic Services. The office will process enough prints so every youngster attending Roundup may have one. The traditional picture is taken from the bell tower of Anderson Hall.

Nearly 5% Of State Income Goes To Education

Kansas ranks below the U.S. average in financial support of its public schools, a new national study indicates, but has improved its position slightly in 10 years.

A National Committee for Support of the Public Schools study shows the state ranks 27th in expenditure per pupil, \$596, based on 1967-68 figures.

This is above its ranking of 29th on the survey for 1957-58, when per pupil expenditure was \$330. National average now is \$634 per pupil.

Missouri ranks 29th and Oklahoma 44th on the per pupil expenditure scale, the committee reported. While Missouri gained three positions in the national rankings since 1957, Oklahoma dropped further behind by six positions.

Lowest on the scale of amount spent per pupil is Mississippi, which spends \$364 per pupil. New York, ranked highest in the survey, spends \$1024 per student.

Kansas ranks 24th in the tion in per capita personal come, the report says, with average income of \$3060.

June 10, 1969

Grass & Grain

The state ranks 16th in personal income spent for cation through state and personal revenues — 4.9 percent. To years ago the figure was 39

Kansas has 9.7 percent of cent. Missouri ranks 43rd, 0 homa 33rd on the scale, students in non-public sche compared with 15.5 percent Missouri and 3.6 percent in 0 homa private schools. There 500,000 public and private amentary and secondary students in Kansas.

Only eight states now allo less than 4 percent of per income to public schools, report says. Four of these shave more than 20 percent non-public schools.

States with the highest capita income, the commission study shows, tend to spend per pupil on elementary and secondary public education.

TOO WET TO MOVE HAY IN

This empty hay shed stands waiting in a field of swathed hay near Brookville. This is indicative of much of the G&G area, where rain and wet weather have kept hay from curing out.

Greenbug Attack Spreads

hum aphids, continue their atack on seedling sorghum plants cross the state. Positive identiication has now been made in counties, reports Dr. H. Leroy oks, Extension entomologist Kansas State University.

1 the

sonal

rcent

0.

Probably there are infestations at least two-thirds of the couns, Brooks estimates. The only rea where greenbugs have not. een detected is in the north-

Greenbugs, also known as sor- western portion of the state, and this is possibly due to the fact that sorghum is planted later in that section.

> There is some confusion about identifying sorghum aphids which are similar to the corn leaf aphids that do not cause damage. Corn leaf aphids are darker green with a purple cast to the body, while sorghum aphids are pale green.

It now appears that a large

number of fields in many portions of the state will need some chemical treatment in the near future to prevent serious damage to growing sorghums.

In other cases, fields are just beginning to show signs of infestation. When this is the situation, farmers will want to delay any control measures until the majority of seedling sorghum plants have colonies of greenbugs on them.

As plants get above 6 inches tall they will be able to withstand higher greenbug populations before control measures are necessary. Within the next two weeks natural enemies will also be building up to help eliminate the aphid populations.

Weather conditions probably will not have too much of a direct effect on this strain of aphid, Brooks indicates. The true wheat greenbug, on the other hand, becomes much less of a problem when the temperature goes above 90 degrees.

In areas where sorghum seedlings are just emerging, growers should make frequent inspections to see if a majority of the plants are going to be infested. If such a possibility appears likely, plans should be quickly made regarding the type and quantity of chemical that will be needed, and whether the spray operation will be handled by the farmer or by a commercial applicator.

Malathion and diazinon are

considered safe for use in ground equipment. Experienced commercial applicators may use parathion, Systox, or phosdrin. Additional information about application rates is available from county Extension agents.

None of the chemicals are designed to provide residual control beyond a few days. Even with the systemic insecticide Systox this is probably also true at this early stage of the sorghum plant growth.

S&L Guarantee On Interest Rate OKd By Feds

The government has given savings and loan associations a go ahead to compete more vigorously for savings by guaranteeing fixed rates of interest on funds held up to five years.

Preston Martin, chairman of the Federal Home Loan Bank board, announced adoption of new regulations on savings instruments that had been submitted to the industry for comment in recent months. They will give the S&L's greater flexibility and should help stem the flow of savings out of the mortgage lending field, Martin said.

The new rules will permit S&L's, on accounts of \$1000 and up, to offer savings instruments ranging from six months to five years on which a guaranteed rate of interest will be paid. This is a departure from conventional S&L practice. The typical S&L passbook interest rate, for instance, is technically a thing of the moment carrying no guarantee whether it will be the same or

less a year hence.

Martin stressed that the use of new savings instruments must be within the framework of existing interest and dividend rate ceilings.

The new regulations will also permit associations to pay a dual rate of interest on a single account. Thus, if part of a depositor's savings has been in his account long enough, it will be entitled to a more favorable yield than other amounts he has deposited more recently.

Mexico Top Beef Cattle Importer

Mexico was the leading importer of U.S. Beef cattle in 1968, with nearly 6500 head going there. U.S. beef exports were up 17% in 1968 from the previous year, with the total at

Venezuela and Canada ranked 2-3 in receiving U.S. beef cattle.

Herefords were the most popılar exports, with 7339 head shipped. Brahmas ranked next with 2930, Angus 3rd with 2824. There were 1900 head of Charolais exported and close to 1500 Santa Gertrudis.

Thompson Role In Farm Bureau Feeder Program

George W. Thompson, 50, Abilene, has been named to a temporary position in the market development program of the Kansas Agricultural Marketing Association, an affiliate of Kansas Farm Bureau.

Ray Frisbie, president of Kansas Farm Bureau, in announcing the appointment explained that Thompson will be working with

George Thompson

Kansas feedlot operators and feed grain producers in the development of a feed acquisition program. He will also be involved in further development of the KAMA feeder cattle acquisition

For the past four years Thompson has been a public relations representative of the Kansas City Stockyards Company. Since moving to Kansas from Jacksonville, Illinois, in 1946, he has been employed by Welsh Ranches of Abilene, Medicine Lodge and Longford and the Goetz Farms, St. Joseph, Missouri. In 1960 Thompson built the Abilene feedlots which he operated until 1965.

search teams and equipment have been moving into the field from CSU's Fort Collins campus and from the ESSA and NCAR facilities in Boulder. Field operations will begin around June 10.

Project headquarters will be at Greeley, where the Colorado Air techniques that may eventually National Guard has made radar be used to reduce their destruct facilities available for the hail ive power, continues in the high project. Field operations will be centered around the town of Raymer, at the edge of the Pawnee National Grassland in the northeast corner of Colorado.

The researchers will probe hailstorms with radar to study their growth and structure. Research aircraft will fly around the storms to measure updrafts and to map the hailswath, the band of hail left on the ground.

A network of rain and hail gauges on the ground will measure the precipitation that falls Helmut Weickmann, who heads crews, in radio-dispatched trucks, will follow the storms to map hailswaths and to collect hailstones for laboratory analysis.

The most intensive field reentist for atmospheric physics at search will be conducted in a circular area with a radius of about 30 miles, centered on Raymer.

TERMS: CASH

More general information on hailstorms will be gathered from a much larger region, extending west to the Rockies, east into Kansas, north into Nebraska and Wyoming, and south to the Denver area.

The hail researchers have sent packets of postcards to residents of this area, asking them to use the cards to report hailstorm information. People living in the area may also receive telephone calls from project scientists, asking for information about hailstorms that the radar has detected in their neighborhood.

According to NCAR's Dr. Goyer, who will serve as one of the field directors for the Joint Hail Research Project, the people who live in the area will make one of the most important contributions to the project.

"We do not have enough people and equipment to gather all the information that we need on hailstorms that pass over this

India's agricultural progress of the last two years has convinced the most cautious observers that it is well within the bounds of technological feasibility for her to feed her swelling population, even if it passes the one billion mark by the end of the century, as now seems likely, India need never experience another famine, they say.

But the fact of hunger remains painfully real, for the gap between promise and achievement has only begun to narrow. Representing the progress and the hopes is Mahinderpal Singh, an enterprising and well-to-do farmer who has been in the vanguard of India's "green revolu-

A man who looks ahead, he read once of a Soviet experiment in push-button farming in which fields were plowed by remote-controlled tractors. When electricity was installed on his well-tended 300 acres just outside New Delhi, he made sure the utility poles were set at the edge of his fields and not in the hold middle, where they might get in the way of his tractors the mold; day he started to run them by remote control.

S

n ket

ons,

iron

stero.

large

and

That day may be years off, but it is 11 years since a team of bullocks — the immemorial mainstays of farming in India -Rand have worked Singh's fields. He Aes as gone as far as any Indian farmer can go on the road to modernization, shaping his land of Just the right incline and watering it and draining it in accord with the latest theories

footed in agronomy. pristoi Hs harvests of the spectacupitch far new high-yielding varieties glass of dwarf wheat and his profits at better than \$200 an acre,

tax-free — would impress any Kansan. "It just shows what can be done in this country," he says.

Few Indian farmers are as advanced as Singh, but hundreds of thousands are hastening down the road he has traveled. Especially in the northern wheat belt, which came up with a gaudy 40 percent increase in production last year and now seems to be harvesting an even bigger crop; the incomes of many farmers have more than quadrupled. Land values have soared.

In Ludhiana, in the most advanced area of the Punjab, the local Massey-Ferguson dealer has so many orders and down payments on tractors that it will take him 12 years, at the present rate of delivery, to fill

That is a small part of the situation, For every would-be Mahinderpal Singh, there still are hundreds of farmers like Tej Singh, the debt-ridden owner of a paltry two acres, at Abupur, 30 miles east of New Delhi.

Tej Singh had heard of the new seeds and fertilizer, but said, "Those things are for the rich landowners, not me." Too poor to qualify for a low interest loan from the local credit cooperative, he has to rely on the moneylender, to whom he pays an interest rate of 24 per cent a year on life-long debts that exceed his annual income.

He farms the way Indians farmed 1000 years ago. His only dream, he said as he reclined in front of his jerry-built shack, is to gain release from his debts, the origins of which he can no longer recall.

It is apparent that sustaining

the green revolution and extending it to such farmers as Tej Singh will require tremendous resources, farsighted planning and social reforms. The technology is increasingly plentiful, but resources, decisions and reforms remain scarce, and the euphoria that accompanied the bumper crop last year - which came after a disastrous twoyear drought - is starting to

In part, the more sober view has been elicited by production estimates for this year. The agriculture ministry now talks in terms of an output of 96 million to 98 million tons of food grains - about seven million tons less than earlier official estimates, which had assumed that the momentum of the green revolution could not be broken.

The ministry blames the rains for the gap between promise and performance, but in most parts of the country the rains have been normal. The gap could widen further: The recently published fourth 5-year plan promises a 30 million ton gain by the end of 1974, without allowing for even one bad year.

'Watch Your Tongue' Gripe Cattlemen Over Beef Price Quote

The American National Cattle- speech, for the last 20 years men's Association has taken to task a Labor Department official ord beef tonnages each year to for charging that high retail prices of beef are being caused by "deliberate withholding actions by farmers."

Bill House of Cedar Vale, Ks., president of the group, said in Columbus, Ohio, that "the gentleman from the Bureau of Labor Statistics is completely misinformed."

Actually, House said in a

Herington Livestock Auction Co. Sale Every

Operating under Federal Supervision & Bonded for your protection.

Tuesday

With nearly all cattle out on grass, our cattle run will be small for the next 4 to 6 weeks. However we sold 361 head of cattle on a market that was very active on feeder steers. Not enough feeder heifers to test market. Butcher cows sold mostly from \$20 to \$23, a few straight barrel cows up to \$24, 2 light weight bulk at \$25.10. Here are a few representative sales that were made:

STOCKER & FEEDER STEERS

of more spaces becomes the

producers have turned out recsatisfy rising consumer demand. So far in 1969, he said production is about 2 percent larger than a year ago. The official referred to is Arnold Chase, BLS deputy commissioner, who helps keep track of consumer trends and the government's consumer price index.

Chase told a newsman that he had received considerable criticism about the statement.

It Stops Kitchen Smells

British military researchers disclosed yesterday a revolutionary new defense weapon for use by housewives, armies.

The discovery is a thin cloth designed to cut the smell of boiling cabbage, raw onions and other odiferous foods.

Developed by scientists at the top-secret Portion Anti-Gas Warfare laboratory, it is said to soak up household smells for months when hung in the kitchen.

The cloth is made by passing rayon through an oven at a controlled heat. What comes out, say the scientists, is a filter far more effective than charcoal or other smell filters.

Chase said he was not ready to retract his view because he believed no one knows for certain at this time all the factors in the cattle production system.

The Agriculture Department has indicated generally that cattle prices are expected to be strong at least during the next few months.

But there is no substantial evidence that cattle have been held back to create an artificial shortage, officials said.

Livestock economists indicate that the reverse is happening: producers are marketing slaughter cattle at lighter weights than they were a couple of years ago. Last summer, choice steers averaged 1100 pounds each or 11 pounds less than they did during July September 1967, and market prices have been gaining steadily ever since.

Moreover, producers seem to be continuing to sell cattle when they reach market weights. Average weights were less than a year earlier all during the winter and have been lighter thus far this spring, surveys indicate. Officials say they expect the lighter trend to continue through the summer.

Also, one official pointed out, the department has been a party to the move toward lighter cattle weights. Last year Orville L. Freeman, agriculture secre-

\$202-\$20 Tains Vs.

Or a con Cor to

Thanks to a surprising increase in the nation's horse population, oats may be heading tond Ray ward a comeback as a major U.S. farm commodity.

Farmers just completed plantng 23.3 million acres of the rain, a modest 1% gain from 968 but 13% above the 20.6 milion acres seeded in 1967, a low for the century.

The Government is predicting ion bushels, but Dallas Western, director of grain research at maker Oats Co., thinks the crop could equal or slightly exceed last year's crop of 930 million

bushels, despite planting delays this spring caused by muddy fields.

Moreover, the oat-boosting experts say, there is at least a slight growth in demand for oats now, and this might be accelerated in several years with the development of high-protein varieties.

The grain has a long way to go to recapture its prominence 1969 oat harvest of 910 mil- of former years. This year's plantings are far below the over 40 million acre average between 1930 and 1955. And oat consumption in the crop year beginning July 1, 1967, was a puny 792 million bushels, the lowest since the Depression and far less than the record 1.5 billion bushels consumed in the 1946 crop year.

A major factor in the decline in oat farming was the steep plunge in the horse and mule population between 1920 and 1960. In that 40 year span, the number of these oat-eating animals in the U.S. fell from an estimated 25 million to four million as farmers shifted to tractor power. "The crop would be in much better shape today if tractors ate oats," says Nelson Cornelius, a grain analyst with Merrill Lynch, Pierce, Fenner & Smith Inc.

Now it appears that the horse trend has changed direction. Since 1960, horsemen say, the horse population has climbed from about four million to nearly seven million. They say the boost is coming from more show, riding and race horses being bred to satisfy growing leisuretime demand.

And, like their ancestors, the modern horses eat oats. An official of Early & Daniel Co., a Cincinnati-based grain dealer, says the company's sales of oats to Kentucky horse breeders has climbed 10% a year since 1966.

But oats still are out of favor as a feed for other livestock. Between 1940 and 1958, livestock gobbled more than one billion bushels of oats annually. In the current crop year, which ends this month, grain experts say livestock consumption will total about 720 million bushels, the second lowest rate since 1934. The major consumers, besides horses, are dairy cows, breeding chickens, young hogs and calves.

For cattle, hogs and chickens being readied for market however, oats haven't been able to compete with corn, which is richer in carbohydrates, and soybean meal, which is richer in protein. "We know a lot more about animal nutrition than we did 20 years ago," says an official of a large Midwestern feed company, "and feeders now realize that oats can't put weight and muscle on animals as fast as corn and soybeans."

However, oats may become nutritionally competitive as a protein feed supplement with soybeans and high-lysine corn, a newly developed variety with improved protein content that's expected to be widely marketed in several years.

Plant breeders at the Universityty of Wisconsin and Iowa State University say they may have a high-protein oat ready for commercial distribution by 1975 if several technical problems can be solved. The new strain, a cross between leading domestic oats and a wild Palestinian variety called the avena steriis, would have a protein content of 25% to 30%, compared to 15% to 18% in present U.S. commercial varieties.

The new oat may also ease the economic disadvantage of oats to farmers. Presently, oats don't bring farmers as high a return as corn and soybeans. Though oats are from 15% to 20% cheaper to produce, they command an average farm price of only 62 cents a bushel, compared to about \$1.19 for corn and \$2.56 for soybeans.

Last year, oats yielded a national average of 53.5 bushels an acre, lower than corn (78.5 bushels) but higher than soybeans, (26.6 bushels). The soybean return to farmers was greater, however, because of the higher

High-protein oats could also spur human consumption of the grain, which is already increasing slowly but steadily. Although human use, primarily in breakfast foods, accounts for only about 5% of oat consumption, it will rise to an estimated 48 million bushels in the year ending June 30, up from 38 million bushels in 1955.

Russell County Backs Off On Land Values

RUSSELL - Russell County commissioners have announced a reduction in land values of between 20 and 30 percent and a drop of 15 percent in values of all property located in cities in the county.

The commission met the entire month of May as a board of tax

The board developed the new values after hearing 338 complaints on assessments

While most of the property in Russell County is to be reduced in value, the commission "did not adopt a blanket reduction," according to commission chairman Floyd Truan.

Truan said it would be some time before the final valuation figures are ready.

The reduction is similar to one made in value scales a year ago. At that time, the county board threw out the 3-zone schedule and replaced it with a one-zone schedule with reductions in val-

Each scale has 10 values or grades of land.

After the commissioners made the reduction a year ago, hearings were ordered in Topeka before the state board of tax appeals. The state board ordered the original 3-zone schedule and value reinstated. Those values were then used as a basis for

Grass & Grain

June 10, 1969

taxes which became due last November.

As a result of the valuations, 193 tax protest cases were filed in district court. Combined into one suit challenging the legality of appraisal and assessment methods, the cases have a pretrial hearing scheduled July 28.

More than \$117,000 of 3 million dollars collected in taxes at the courthouse this year was paid under protest and is being held in a suspense account pending the outcome of tax protests.

415 Acres Geary County, Kans.

To settle the estate of the late Val Hartung we will sell at public auction the following farms located in Geary County, Kansas.

Monday, June 16

Starts at 10:00 a.m. all land to be sold on Tract No. 1 location

Tract No. 1 is an improved farm. This farm is located 11/2
miles south of Humboldt Road interchange 1-70 east of June tion City on Humboldt Creek road. To sell at 10:00 a.m. Legal Description will be given sale day; is in Section I & II, Twp. 12, Range 6

96A broke, balance grass, timber. 20A growing alfalfa, approximately 16A meadow, 29.4 wheat allotment, feed grain base is 28A; 4½A diverted wheat acreage; 40A growing milo. Never failing well and spring; lays along Humboldt Creek. Possession wheat ground 10 days after harvest. Possession milo ground 1st March 1970. Possession grass 1st March, 1970. Possession meadow sale day. Diverted acres 1st Sept. His 8 room frame house with REA. Also other outbuildings. Buyer to get 1/3 of growing milo delivered to town. Sellers to make the growing wheat a government, wheat certificates retain growing wheat & government wheat certificates. Sold with present tenant's rights.

TRACT NO. II is an improved farm located 1½ south of the Clark Creek & 1.70 interchange east of Junction City or 2 miles north of Intersection of Clark Creek road & Highway 57. Sells 10:30 am 58 acres, more or less, with 48 acres broke, balance is lots and timber.

Legal Description given sale day, is located in Section II, Township 12, Range 6. Wheat allotment is 13.1 acres. Feed grain base 20 acres; 11 acres conserving base; 7 acres growing alfalfa. Possession of wheat ground 10 days after harvest. Possession growing alfalfa, milo, building, lots, 1 March 1970. Buyer gets 1/3 of milo delivered to town; also 1/3 growing

alfalfa. Sellers to retain growing wheat & government cer-Farm lays along Clark Creek. Never failing well. Has 5 room frame house with REA and other outbuildings. Sold with

present tenant's rights. TRACT NO. III — Unimproved Farm

This farm is located 6 miles southeast of Junction City on
Highway 57, then 1½ north on county road.

197 acres, more or less, with 34 acres broke, Balance is

grass & timber. Has well in pasture. Legal description given sale day. Located in Sec. 11 & 12, Two 12, Range 6. Sells 11 am. Has 16 acre feed grain base, 10.3 wheat allotment, 4 acres

wheat diverted, 9 acres conserving base, 6A growing alfalfa. Possession of grass sale day, alfalfa 1 Sept., wheat & milo ground 10 days after harvest. Seller to retain growing wheat and government certificates. Buyer to get ½ of growing milo delivered in town. Lays along Clark Creek. Sold with present tenant's rights.

Your inspection of these farms invited. For further information contact executors, attorney or auctioneers.

Cloud County Livestock

Radio KNCK '1390' 6:45 T. T. S.

Cattle were selling steady here this past Saturday on a moderately active market. Cows were selling 50¢ higher, feeder pigs were steady. Butchers were 25¢ lower. We had quite a few light weight calves that sold by the head here Saturday. We have 3 regular buyers for these calves that weight 150 to 300 lbs. if you have any for sale, give us a try.

We're planning on selling sheep Saturdya, June 14 with over 150 sheep of all classes already consigned. If you have sheep to sell or are looking for lambs or ewes to buy, stop in this coming Saturday, we'll have a good selection for you.

If you have livestock to sell or are looking for livesrock to buy, consider the Cloud County Livestock Commission Co., Inc. as the place to do business. Each customer is

OLD MILL MUSEUM AT LINDSBORG

Many items of antique farm machinery are on display at the Mc-Pherson County Old Mill Museum and Park in Lindsborg. Tib Anderon (right), curator of the museum, discusses some of the items with Mogenson of Lindsborg. Mogenson contributed some of the mach-

The museum was opened to the public in May of 1968. There are over 10,000 items on display and there is about 10,000 square feet of its floor space under roof.

lity, at The mill was last used in 1955 and is now open to the public. A in late new building is now in use. There is an old school house in the park. vorkers With new additions soon to be made this may be one of the outstanda pay ing museums in the state. The Swedish Pavilion, originally at the St. ant has Louis World's Fair, then at Bethany College will be moved here. Also to be moved in soon is the Academy, the first building of higher learnofitable ing in McPherson County, and the original courthouse. There are 30 acres in the park.

Manhattan Buys **Junior High Site**

MANHATTAN - The Manhat-In School Board has completed Mans to buy a 28-acre site from Kansas State University for construction of a new junior high school.

Purchase price is \$105,000. Construction is at least three years away, Supt. W. C. Robinson said. The site is west of the corner of Claflin and Browning on the city's northwest side.

Is Time Ripe For Changes In Farm Program?

Secretary of Agriculture Clifford M. Hardin parries many questions about Nixon administration farm plans with a refrain such

"We're considering numerous alternatives and hope to reach some kind of consensus later on this year."

Hardin believes he has time. Existing farm programs do not expire until the end of 1970.

But impatience is growing in some quarters. And there are rumbles that Congress may take the lead and begin hearings on a farm program for the 1970s long before the administration is ready to move.

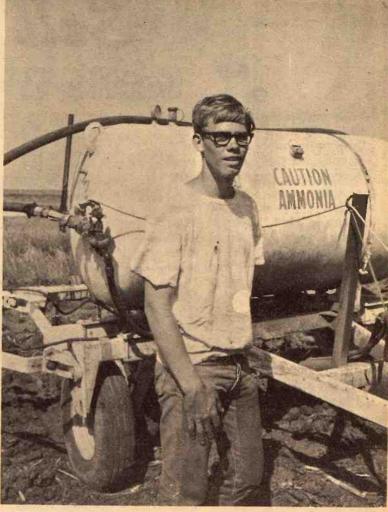

If so, Hardin shrugs, he will be available to the congressional

In the meantime, he is committed to a thorough study and review of all possible avenues. Massive land retirement? Possibly, Hardin says. But there are many problems to consider. .

The administration says it senses considerable dissatisfaction among leading farm organizations and congressional power centers over the inability of federal programs the past 36 years to solve the problems.

Therefore, the Nixon farm team says, some middle route must be found through which huge surpluses can be avoided and farm income boosted if pos-

What specific proposals ultimately will be unveiled are not clear at this point. But there is a growing expression of doubt among Nixon farm officials that the nation can forever be wedded to what some consider highly restrictive and expensive farm subsidy and production control

FERTILIZER TIME

Vinton Visser of Riley said he had about 12 acres to cover with ammonia fertilizer. Vinton was working east of Riley.

This doubt is not new nor has it been confined to the Nixon administration. It was summed up last week in Kansas City by Assistant Secretary Clarence D. Palmby at a meeting of the American Feed Manufacturers Association.

"It is time," Palmby said, "to deliver farm policy out of the gross partisanship and ideology that have made it so difficult in the past to view farm problems realistically. And I believe we have a rare opportunity to re-

align the farm programs in the years immediately ahead."

"Whenever price supports are unrealistically high, they tend for some commodities to discourage utilization," Palmby said. "This has happened, at times, in the past."

The balance of supply with effective demand is the crux of most farm problems. This elusive balance and the role of government programs also had been debated long before Palmby made his talk.

Reynolds Sale Barn

ABILENE, KANS.

Selling Every

FRIDAY

NIGHT SALES START FRIDAY, JUNE 13 AT 8 P.M.

The Reynolds Sale Barn will start their regular night sales Friday night, June 13 at 8:00 p.m. The night sales have been very successful for many years.
