HEAD AGRIBUSINESS STUDENTS ASSN.

These young men are the officers of the Kansas Agribusiness Students Assn., which recently held its second annual convention at Arkansas City.

The association was organized a year ago and involves post-high school students studying agriculture in Kansas Area Vocational-Technical schools and junior colleges.

Here, from left, are president Ted Williams, Salina; vice president Kent Nulik, Ark City; secretary Tony Pochop, Atwood; treasurer Jim McCauley, Mayetta; reporter Mike Harding, Hoyt; parliamentarian Keith Nulik, Ark City.

The Nuliks are twins.

Executive secretary of the group is Earl Wineinger of the vocational division of the State Department of Education.

8 Counties At Alma Judging School, Show

ALMA — Vernon Bohn of Wabaunsee county and Steve McDonald of Topeka led the individual judges at a livestock judging school and contest held here.

Bohn led the 4H judges and McDonald topped the FFA competition.

Best in an adult judging division was June Talkington of Matfield Green.

Runnersup in the 4H division were Judy Hatfield, Wabaunsee; Greg Grensign, Wabaunsee; David Gardner, Lyon Co.; Joe Haffener, Wabaunsee; and Bill Howard, Pottawatomie.

Ranking behind McDonald in the FFA competition were Brent Miller, Alma; Randy Snider, Topeka; Frank Sinker, Topeka; Gerald Maike, Alma; and Earl Steuwe, Alma.

Kayla McDiffett of the Blue Ridge 4H club, Wabaunsee county, topped 4H steer show results and the 4H showmanship contest.

The contest attracted 26 4H clubs from eight counties and four FFA chapters.

Auctioneers At Dodge City This Week

The 16th annual Kansas [illegible] tioneers Assn. convention [illegible] held at Dodge City May 1-2.

John C. Collins, Garden [illegible] president of the association, said [illegible] Silver Spur Motel at Dodge City [illegible] be the headquarters for the [illegible] vention.

TRIPLET CALVES FROM CARL SCHWARZ HEREFORD

MARYSVILLE — Carl Schwarz recently got triplet calves — heifers and one bull — from [illegible] his Hereford cows. The [illegible] weighed about 30 pounds each.

Angus Shows To Try New Judging System

A new approach to judging Angus breeding classes will be tested at several major shows in 1972, pending approval of the shows involved, Lloyd D. Miller, executive secretary of the American Angus Assn. has announced. The new system utilizes three experts. Two act as judges and the third is a referee. A drawing preceeding each class determines which of the three will be judges or referee.

"Committee judging is not new," Lloyd Miller explained, "however, the new approach specifies that the judges act independently in their evaluation of each class. No conversation between the three insures independent evaluation without influence from the other judge or referee."

"This new system may be an innovation in beef cattle shows but horse fanciers have used it successfully for years," said Miller. "Some horse shows have had entries in excess of 2000 head with little slowdown in the judging."

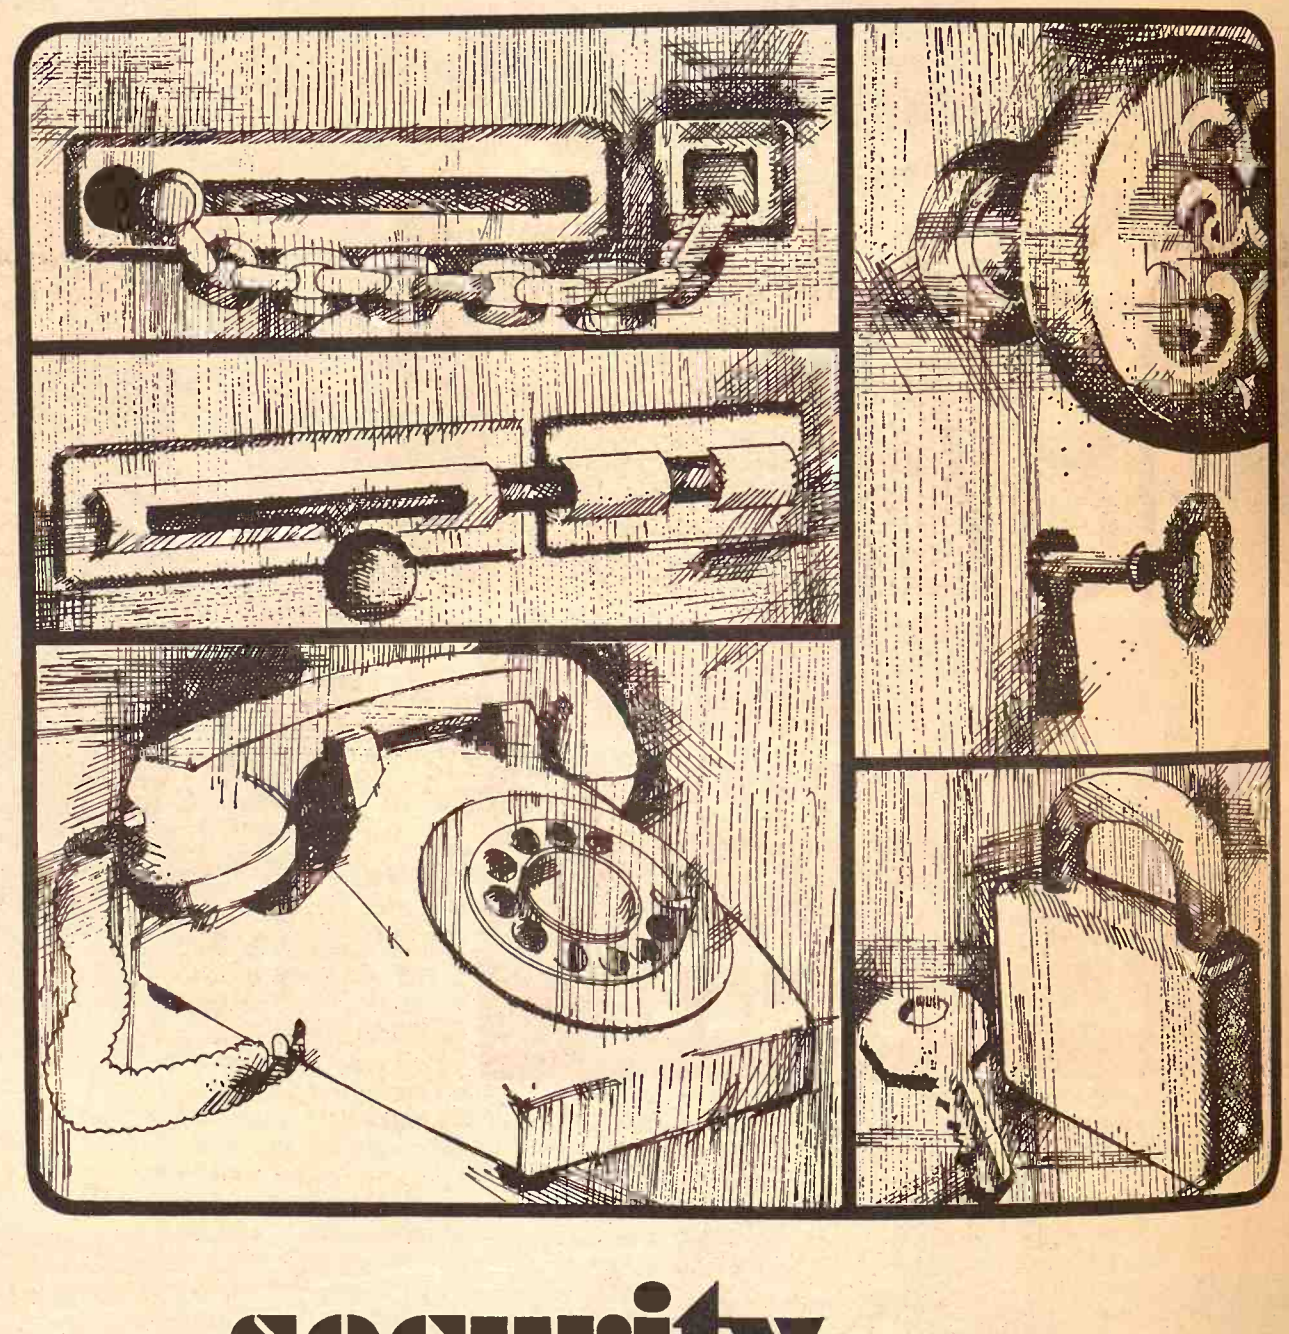

Both judges and referee prepare a list in entry number order, of the cattle they desire to see paraded independently of the remainder of cattle in the class. The three lists are delivered to the ringmaster who then calls out the entry numbers, in numerical order, to parade. The "call-out" doesn't begin until all cards are turned in to the ringmaster. Independent action of the judges and referee is preserved as no one, including the judges or referee, is aware of which animals were selected by any individual.

I USE GOOCH FEED FOR BOTH CATTLE & HOGS

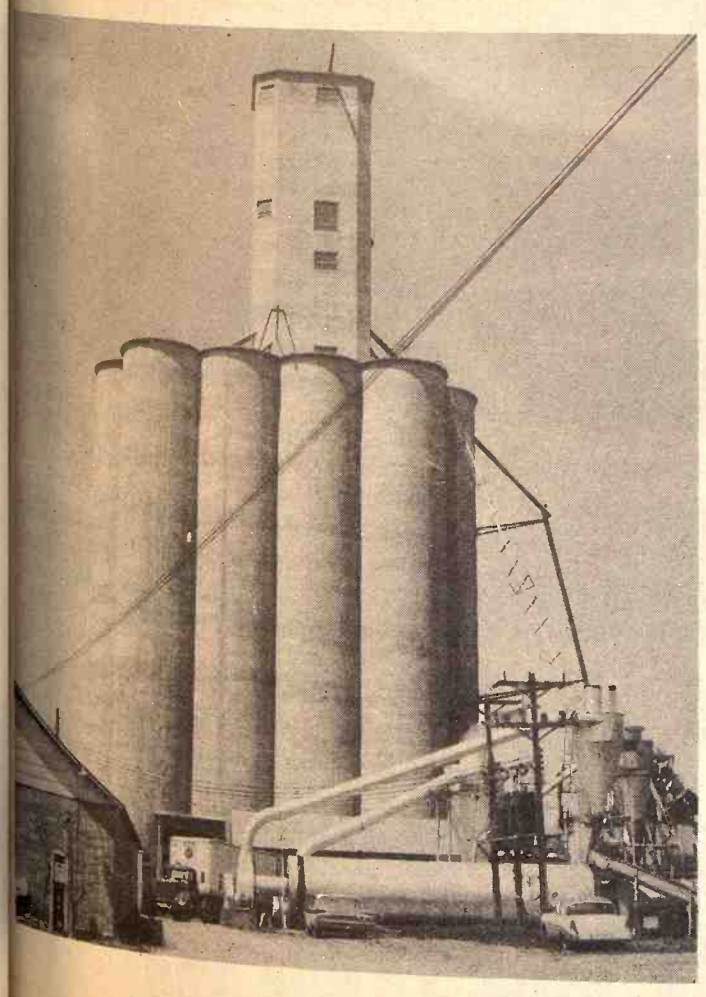

"I've been using Gooch supplements for both cattle & hogs for about 8 years. I'm getting excellent results on both. I know I could buy higher priced ones that they say are better but I know I'm getting the best results. I have 125 head of cattle now with 63 ready for market. I raise about 250 head of hogs now but plan to increase to 400. I plan to use Gooch feed on these."

Newton E. Jennings Jr.

KEEPING PACE WITH AGRICULTURE AND THE COMMUNITIES WE SERVE...

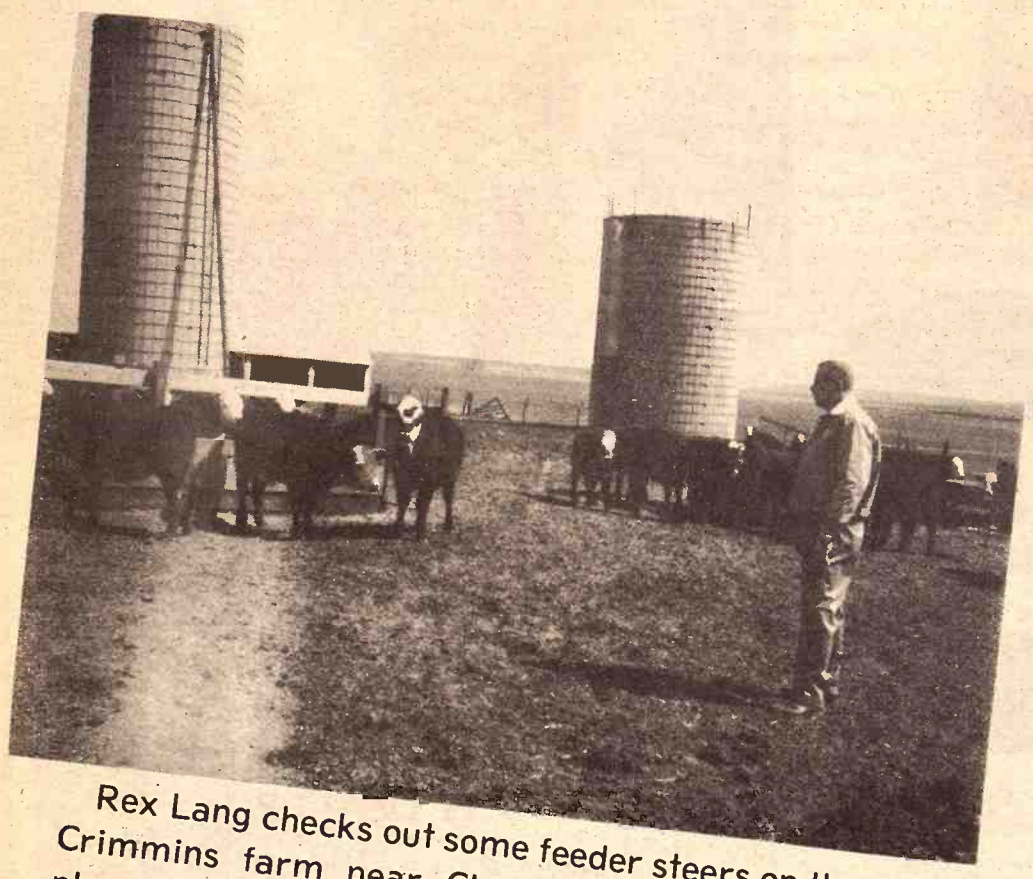

That is our pledge

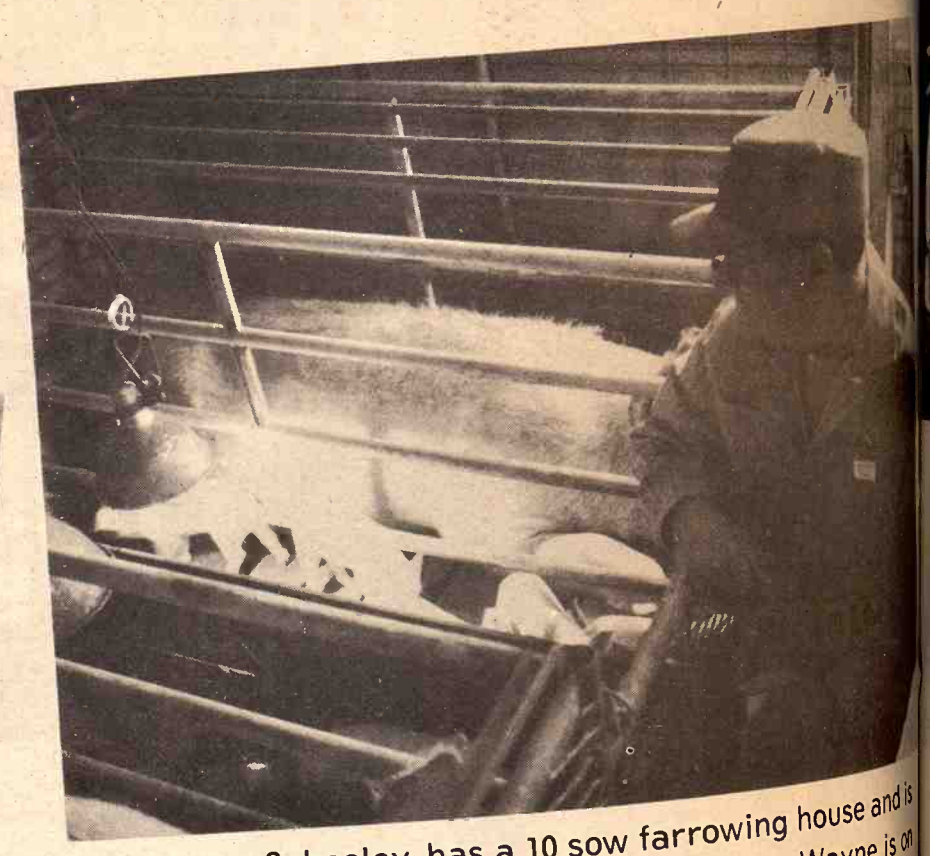

Rex Lang of the Farmers Union Cooperative talks with Gene Martin of rural Clay Center about his feeder steers and Co-op feed. Gene had just shipped 36 head weighing 1123 to St. Joseph, Missouri.

Bozo, Gene Martin's dog, takes good care of the steers. They like for him to lick their ears while they eat.

Rex Lang checks out some feeder steers on the D. T. Crimmins farm near Clay Center. Mr. Crimmins plans to go to grass with these steers this summer.

Wayne Schooley has a 10 sow farrowing house and is checking out one of his sows with 14 pigs. Wayne is on the Co-op Quality Pork Program and is very happy with his results.

Feedlots Empty Out From January - But Over A Year Ago

Cattle on grain feed for the slaughter market in Kansas on April 1 this year totaled 780,000, three per cent more than a year ago and record high for the date according to the Kansas Crop and Livestock Reporting Service.

However, numbers were 15 per cent less than on January 1 this year.

In large feedlots of 1,000 head or more capacity there were a record 590,000 cattle on feed, 14 per cent more than a year earlier.

In smaller sized feedlots 190,000 head were on feed, 21 per cent less than on April 1, 1970.

Marketings of grain-fed cattle during the January-March quarter totaled 537,000 head, up 7 per cent from a year earlier.

Placements during the quarter totaled 401,000, some 9 per cent more than the previous year.

Feeder's intentions to market indicated 468,000 of the cattle on feed April 1 would move during the April-June quarter, 4 per cent less than last year.

Some 400,000 cattle on feed April 1 had been **in feedlots less than 3** months, about 10 per cent more than last year, while 380,000 had been on feed longer, 4 per cent less than last year.

Steers on feed April 1 totaled 586,000, up 9 per cent but the 194,000 heifers on feed was down 12 per cent.

Light cattle on feed April 1 weighing less than 700 pounds numbered 250,000 some 26 per cent more than last year.

On the other hand cattle above 900 pounds totaled only 216,000, down 11 per cent from a year earlier.

Major Feeding States

The April 1, 9171 number of cattle and calves on grain feed for the slaughter market in 23 major feeding states was 11,731,000 head, 1 per cent more than on the same date of 1970.

Number on feed in the North Central Region was 6,983,000, down 7 per cent from a year ago, while that in the 10 Western states was 4,748,000, up 16 per cent.

The number **placed on feed** during the previous quarter totaled 5,722,000 head, 12 per cent more than a year earlier.

Marketings during the January-March quarter totaled 6,188,000, some 1 per cent more than the previous year.

Expected marketings of cattle on feed April 1 during the April-June quarter was 6,238,000, which if realized, would be 5 per cent more than in 1970.

Cattle and calves on feed **less than 3 months** totaled 5,512,000 in the 23 major states, up 12 per cent from April 1, 1970.

Numbers on feed 3 to 6 months totaled 5,396,000 down 8 per cent from last year and those on feed more than 6 months totaled 823,000, virtually unchanged.

Steers on feed on April 1, numbered 8,226,000 up 2 per cent from last year. The 3,467,000 heifers on feed was down a shade from a year earlier.

Cattle in the light **weight groups** was about the same as a year earlier with those weighing less than 700 pounds totaling 4,859,000.

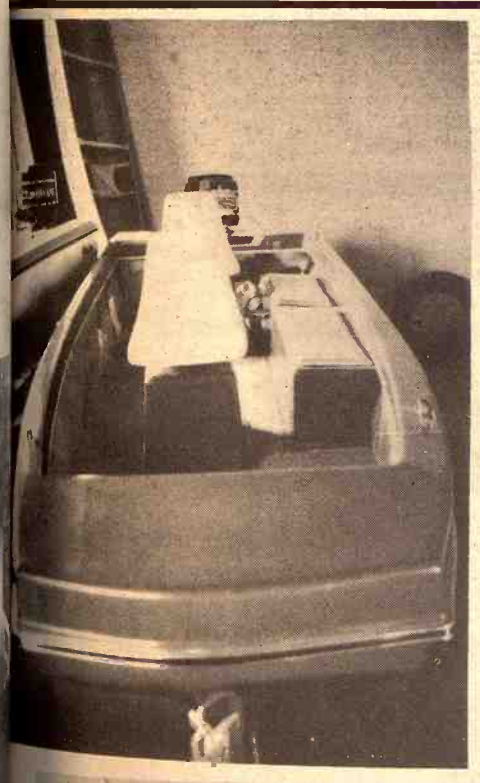

Number of medium sized cattle between 700 and 900 pounds was 3,669,000, up 7 per cent.

In the weight groups above 900 pounds there were 3,173,000 cattle on feed April 1, a decrease of 4 per cent from April 1970.

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Walter Stoebener Of Baldwin City Is Winner

Mrs. Walter J. Stoebener, R 1, Baldwin City, is this week's prize winner. She writes, "I am enclosing a recipe for a delicious broccoli casserole. My husband and I enjoy the Grass & Grain very much. The first page I turn to when the paper comes is the recipe page."

ELEGANT BROCCOLI CASSEROLE

Saute ½ onion in a big chunk of butter. Melt 1 small jar of Cheese Whiz and 1 roll of garlic cheese and mix with 1 can of mushroom soup. Cook 2 packages of frozen chopped broccoli according to directions on package. Drain and add 1½ cups cooked rice. Combine all ingredients, add dash of tabasco sauce and a dash of pepper. Pour into casserole. Crisp bacon may be crumbled over the top or a can of onion rings sprinkled over the top. Bake in a 350-degree oven for about 35 minutes.

+++++

This recipe was sent by Sarah Kissick, R 1, Beverly:

SELF-FILLED CUPCAKES

Prepare two-layer chocolate cake mix according to package directions. Fill paper baking cups two-thirds full.

FILLING

Combine 8-ounce package cream cheese, one-third cup sugar, 1 egg, dash of salt and 1 6-ounce package chocolate chips. Drop 1 rounding teaspoon of this mixture in center of each cupcake. Bake according to directions on cake mix box.

+++

Mrs. Fred Kilian, R 1, Wamego: "This is different, but exceptionally moist and good."

COCOA COLA CAKE

2 cups flour
2 cups sugar
1 cup oleo
2 tablespoons unsweetened cocoa
1 cup carbonated cola beverage (not diet)
½ cup buttermilk
2 eggs beaten
1 teaspoon baking soda
1 teaspoon vanilla
1½ cups minature marshmallows

Preheat oven to 350 degrees. Grease and flour a 13" x 9" x 2⅝" pan. Combine flour and sugar in large mixing bowl. Melt butter, add coca and cola; heat to boiling point. Cool slightly. Pour over flour and sugar mixture; stir until well blended. Add buttermilk, beaten eggs, soda and vanilla; Mix well. Stir in marshmallows. Pour into prepared pan and bake for 40 minutes or until cake tests done. Remove cake from oven and frost in pan while still hot.

COCOA COLA FROSTING

2 tablespoons oleo
2 tablespoons cocoa (unsweetened)
6 to 8 tablespoons carbonated cola
1 pound powdered sugar
1 cup chopped nuts

Combine butter, cocoa and cola in saucepan. Heat to boiling; pour over powdered sugar and mix well. Stir in nuts and frost cake. +++

The next recipe is from Mrs. H. Allen Miller, R 1, Sylvia:

EASY SWEET-SOUR SAUCE

1 cup sugar
1 cup white vinegar
1 cup catsup
1 cup water

Mix together ingredients in a saucepan. Cook over low heat until thick and bubbly, about one hour. (Mixture will be even thicker when cool.) Makes about 2 cups. Sauce keeps indefinitely in the refrigerator.

+++

To Freshen Artificial Flowers

Artificial flowers may be freshened by brushing each petal with a sponge dipped in plastic starch. Trim the frayed edges with scissors and press each petal with a warm iron while still damp, shaping the petals as you press.

Stops Dampness

Loose rice placed in the bottom of a lunch box before the napkin is placed in it will keep the box from becoming damp.

To Remove Grease From Suede

To remove grease spots from suede shoes or bags, apply vinegar with an old toothbrush. When dry, apply suede cleaner and brush the shoes.

Crisp Lace

Since nylon is not starched, it is a problem to have cotton lace crisp on a nylon blouse. Solve this problem by placing waxed paper under the lace, then press with a warm iron.

Rejuvenate Polish

To rejuvenate paste polish that has become dried and cracked, allow the polish to melt in the box over very low heat.

Dwarf Fruit Trees Provide Large Crop In Small Garden

"Easy pickin's" the word among some gardeners who have dwarf fruit trees. These small trees grow only five to eight feet high and produce two to three bushels of normal size fruit each year.

Apple trees on Malling IX rootstock, for example, rarely grow taller than five to six feet. This means you can set one in even the smallest backyard. Gardeners can also plant a few along a trellis or wall. To add variety and color yellow-fruited varieties such as

Golden Delicious may be alternated with red-fruited varieties such as Red Delicious or Jonathan.

Trees on dwarfing rootstock need protection against droughts and strong winds. Because of their shallow root systems, they need water often and a good layer of mulch to conserve moisture. A couple of stakes, piece of old garden hose and wire will stabilize the tree against winds. The garden hose will keep the wire from cutting into the tree.

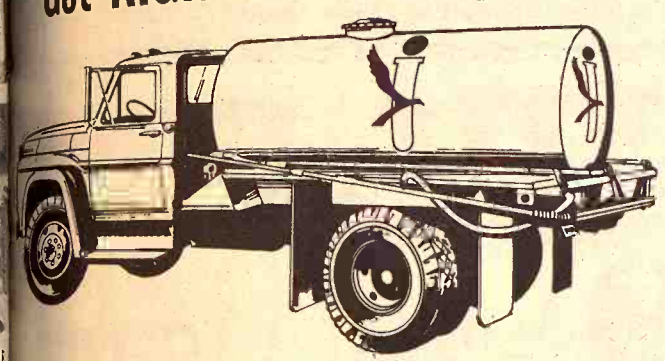

Dwarf fruit tees will add beauty to your yard in spring when they are in full bloom. Then in late summer and fall, rich fruit colors brighten the garden.

Nearly care-free, too, they can be included in the regular spray schedule of flower and vegetable gardens. Since these trees present no height problems, the same sprayer used in the garden is adequate for spraying dwarf fruit trees. And most major insects and diseases can be controlled with the same combination insecticide-fungicide spray used in flower and vegetable gardens.

Pear, plum, cherry and peach trees are also grown on dwarf rootstocks. Most nurserymen are familiar with rootstocks and their dwarfing abilities.

So plant a variety of dwarf fruit trees. They are interesting, beautiful flowering trees and provide nutritious fruit for the family. Spring is the best time to plant them.

FROM HAWKEYE
LIQUID
MIXED FERTILIZER

Hawkeye Liquid Mixed Fertilizer goes right to work – FAST! No waiting around for rain to dissolve it. Has many other advantages working for you, too –

- Correct NPK content and balance for highest crop yield and quality
- Low cost per unit of plant food on the field
- Easy to put on herbicides and insecticides at the same time
- Fast, easy application at proper time for highest yield
- Proven outstanding performance with every crop because plant food materials are readily available

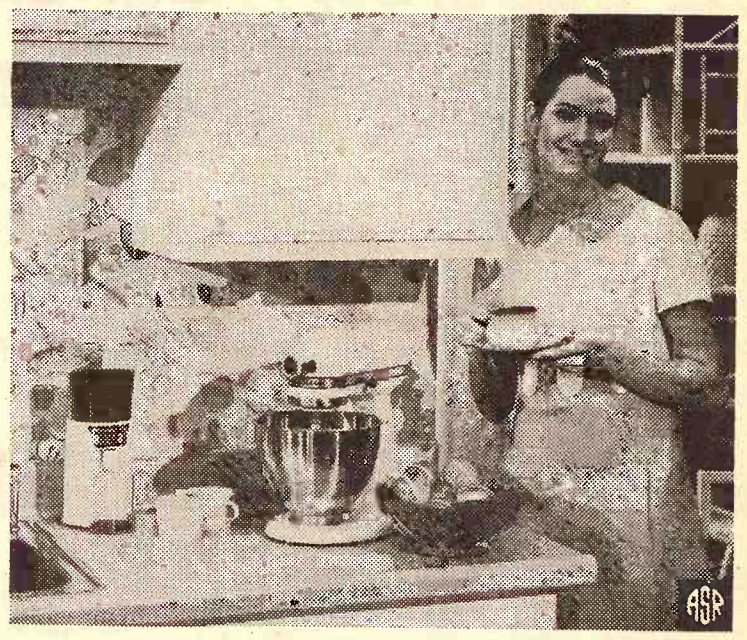

On top of all these advantages, we can give you prompt, efficient service locally and in nearby areas. Plus all the other crop-boosting services you need – soil testing, fertilizer selection and crop-protection chemicals.

Don't fool around with slow-poke plant food materials – get Hawkeye Liquid Mixed, the fertilizer with the RIGHT NOW response!

HAWKEYE Certified NITROGEN

Add Special Touches By Using All - Occasion Mixer

The greatest adventure in the kitchen is making those little extras that add the perfect touch to special occassions like birthdays, anniversaries, holidays or even the family meal. Tasty cakes, pastries, homemade bread and dinner or breakfast rolls win praises and help to make you the good cook you are. . .or want to be.

One company promises an easiest in delighting family and friends with a versatile all purpose mixer. A great performer in the kitchen, this food preparer has the power to handle greater volume and do it quickly and thoroughly.

Utilizing planetary action and a stationary bowl, the beater turns in one direction while revolving around the bowl in the opposite direction, resulting in a complete mixing action that removes the need for continuous scraping and turning. It's a mixer that is designed with the same principles used by the professionals and achieves the same results.

In addition to its primary mixing functions the good preparer can perform a host of other operations like chopping meat or slicing vegetables with the many attachments that can be connected to the power hub. These varied applications make the food preparer one of the most useful appliances in the kitchen and the most fun to use.

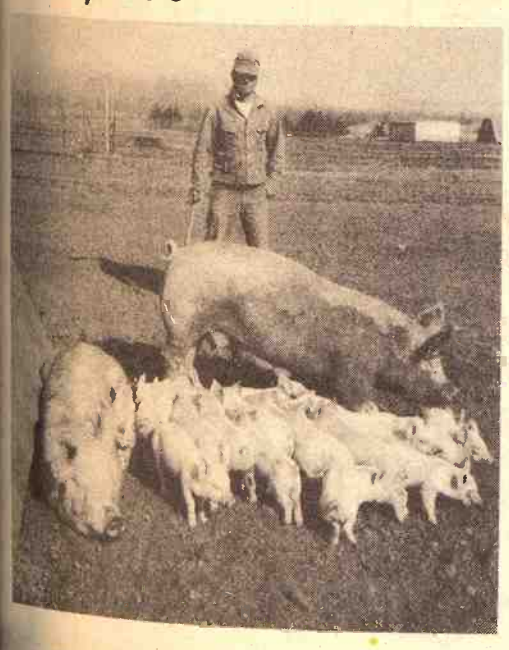

This dependable electric mixer can make every day a special occasion by making food preparation easier and allowing you to try things you wouldn't attempt before.

P.S. The electric Coffee Mill adds special accent to every meal with a fresh cup of coffee.

K.C. Suburbs, Manhattan Have Highest Average Home Cost

The most expensive homes in the G&G area are in Johnson county.

Away from suburban Kansas City, cost of homes is greatest in Manhattan and Lawrence and lowest in southeast Kansas.

That's the information in a study from the U.S. Census Bureau on housing in Kansas cities of population of 10,000 or more.

The average cost of a house in Manhattan is $18,300; in Lawrence, it's $16,600. At the bottom end of the scale is Coffeyville, where homes average $7600. For the state, the average is $12,300.

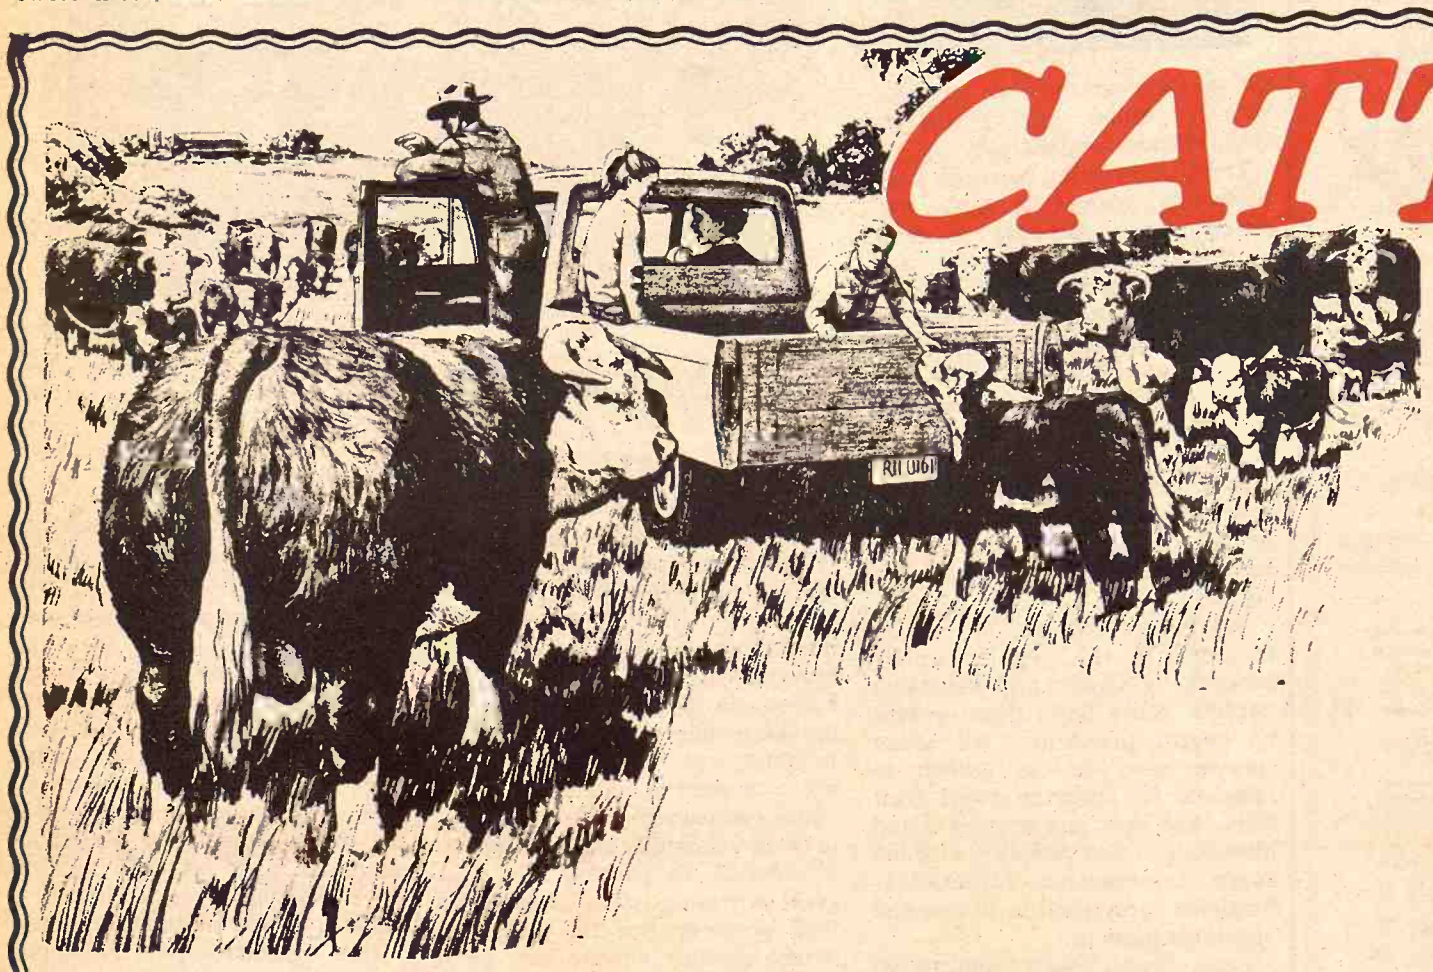

Presumably, the average home cost reflects median incomes, frequency of luxury homes, and building costs.

The five Johnson county suburban areas easily topped the list. A $35,000 home is only an average cost home in Leawood. An average rental there is $230 a month. The Census Bureau figured 528 homes in Leawood cost over $50,000 each. That's about one in six.

The average home in Leawood was valued at close to triple the cost of an average home in Kansas. The average in Overland Park was about double the state average. Prairie Villiage, Meriam and Shawnee also had home averages greater than other larger cities in Kansas. In fact, Olathe was the only Johnson county town which was exceeded in median home cost by any city away from the Kansas City area.

Olathe's average home price was surpassed by both Manhattan and Lawrence. Hays, Junction City, Garden City, Topeka, Great Bend and McPherson followed in that order.

of the seven cities in which ... average home was valued at ... $10,000, all but one were ... theast Kansas, where ... nomy generally trails the rest ... state. The only outsider in ... dom group was Atchison. ... Rents also averaged lowest in ... theast. Aside from the Joh ... nsas City area, highest rents were ... rence. ... Lawrence also ranked high in ... mber of homes valued at $5 ... more. The number there was

IT TAKES BIG MONEY
IT TAKES READY MONEY

To support the large-scale livestock operations in these eight areas. That's where the regional PRODUCTION CREDIT ASSOCIATION comes in in each area. There's no shortage of money thru these eight area PCA's. There's never a stoppage due to "tight" money. If your problem is getting enough credit . . . or credit at the right time . . . or organizing a sound long-range program . . . Production Credit offices in these eight areas can help you.

At The Area PCA's You're Not Just A Borrower, But Part Owner.

Of the seven cities in which an average home was valued at less than $10,000, all but one were in southeast Kansas, where the economy generally trails the rest of the state. The only outsider in the bottom group was Atchison.

Rents also averaged lowest in the southeast. Aside from the Johnson county area, highest rents were in Lawrence.

Lawrence also ranked high in the number of homes valued at $50,000 or more. The number there was 124, roughly one per cent of all the homes in the city.

The prevalence of the high-cost homes was again most noted in Johnson county. About one home out of six in that suburb is figured to have a value of $50,000 or more. In Prairie Village the rate was one out of 20. In Overland Park the rate was one out of 80.

Across the state, about one house out of every 160 to 175 is valued at over $50,000. Manhattan, Topeka, McPherson, Wichita, Hays, Great Bend, Dodge City, Salina, Hutchinson and Pittsburg all had averages close to that figure.

The percentage of luxury homes in Junction City, Garden City, Emporia, Liberal, Newton, Kansas City, Leavenworth, El Dorado and Winfield was lower than the rest, as were of course the southeast Kansas cities, with the exception of Pittsburg.

The survey also listed racial breakdowns for the various cities.

About one person in 20 in the state is a Negro. with heaviest populations in Kansas City, Junction City, Coffeyville, Wichita, and Leavenworth. In Kansas City the ratio is one in five, in Junction City one in seven, in Coffeyville, Wichita and Leavenworth about one in 10.

The statistics also dealt with home ownership by Negroes. In one case, in Lawrence, the percentage of Negro homeowners is greater than the percentage of Negro population, indicating that home ownership is greater among Blacks than among Whites.

In other cities, the percentage of home ownership was smaller among Negroes than Whites but there were no marked disparities.

The table below is based on statistics from the 1970 federal census. The state's 33 cities of more than 10,000 population are ranked in declining order according to the median cost of homes. The second column shows the median rents for housing. The third column show the number of homes valued at more than $50,000. The last two columns show, in percentages, the proportion of Negro population and proportion of homes owned by Negroes.

City	House Cost	Rent Cost	Home at $50,000 or More	Negro Pop.	Negro Home-Owners

Tractor Pull For Saddle Club Funds

MARYSVILLE — A tractor pulling contest here raised funds for the Blue Valley Saddle clubs.

In the contest for the largest machines — 15,000 pounds and over — Fred Kupfersmith of Home City used his Oliver to pull the limit some 216 feet.

Other class winners: C&C Auto Sales, Marysville; Jerry Hedke, Waterville; Larry Christener, Home City; Wesley Johnson, Home City.

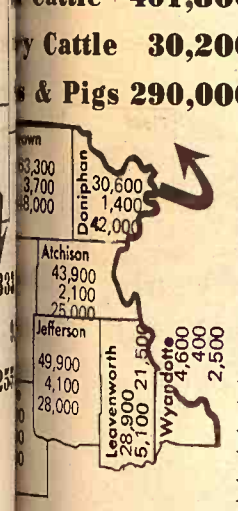

In a special event Carl Schulte of Marysville pulled 192 per cent of his own tractor's weight in the small tractor competition, while Wesley Johnson of Home City pulled 192 per cent of his large tractor's weight to win that contest.

FRONTIER FACTS

FRONTIER HIDAN 35 IS REALLY DIFFERENT! IT IS unexcelled for pasture or grazing, for greenchop, bundle feed and makes good silage.

Hidan 35 has a very sweet, juicy stalk. Its palatability is unexcelled. Leaves are more numerous, and stalks slender. Its seed is smaller and takes less per acre when planting. Is one of the earliest in maturity, starts quick and vigorously. Highly resistant to leaf diseases.

Mr. W. K. of Kansas planted Hidan 35 following wheat harvest. He got 15 tons per acre of top quality ensilage, 10% protein. At $7 per ton this is an extra $105 per acre.

For pasture it has two of the most important features. It is very low in HCN (prussic acid), as proven in tests, and it has exceptionally high protein.

In Wisconsin sheep were turned on several varieties of sorghum-sudangrass hybrids. The sheep went to Hidan 35 eating it to the ground, and would go to nothing else.

Mr. F. J. C. of Dodge City, Kan., put 400 head of 550 pound steers on 130 acres of Hidan 35 June 20th , at 12 inch height. He took these steers off at an average of 747 pounds Nov. 8th. He reports steers were in top condition, no bloat or diarrhea, hair in excellent condition, and they RECEIVED NO SUPPLEMENT. He recommends cattle be turned in early when 12 to 15 in. high, and not allowed to get over 30 in. high, otherwise it gets ahead of them. Best feed value of Hidan is in the grass stage, for pasture purposes. He uses half his acreage and when pastured down to about 6 inches, moves them to other half, allowing first land to regrow to around 15 in. before turning them back.

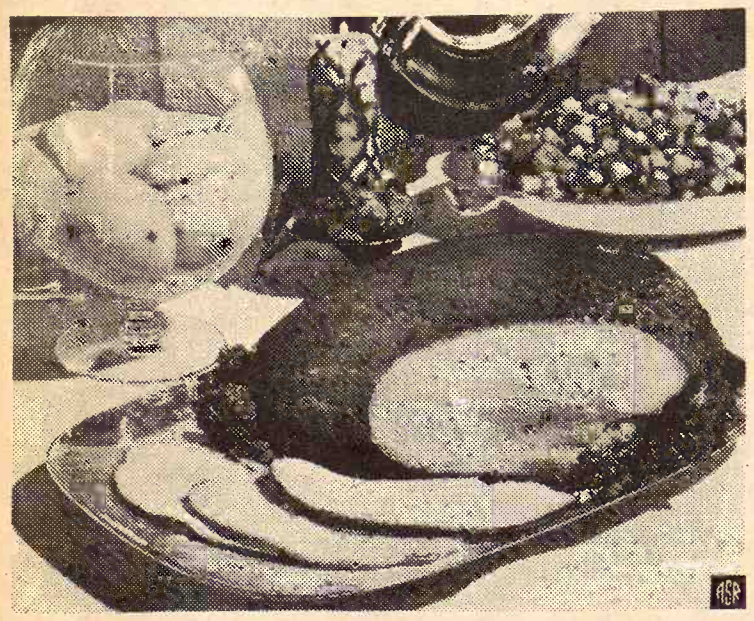

TRY NEW HIDAN 35. YOU'LL BE IMPRESSED AND SO WILL YOUR LIVESTOCK.

Change Spring Meals By Serving Turkey

Spring is the time for change and menus are not excluded. The family will welcome your efforts to vary daily and special occasion meals. For a dinner party sometime soon you will be a winning hostess if you serve tender, juicy deep basted breast of turkey along with crunch almond stuffing, spiced peaches and a green vegetable.

The whole turkey breast, deep basted to assure juiciness and tenderness, is fresh frozen and may be stored in the home freezer. To cook, thaw in the wrapper on a tray in the refrigerator. Place the thawed roast on a rack in a shallow open pan. Brush with melted fat. Roast in a 325-degree oven to an internal temperature of 170 degrees F. as indicated by a roast meat thermometer.

Prepared the stuffing as usual with seasoned bread cubes and make it crunchy by adding toasted slivered almonds. For convenience, bake the stuffing in an uncovered casserole in the 325-degree oven right along with the turkey.

Treat Polish With Vinegar

After white shoe polish has been used frequently and a heavy film has accumulated, remove it by rubbing with a damp cloth.

Space Saver

To save space when packing for a trip, stuff shoes with handkerchiefs, socks and other small items enclosed in plastic bags.

Trace Scallops From Saucer

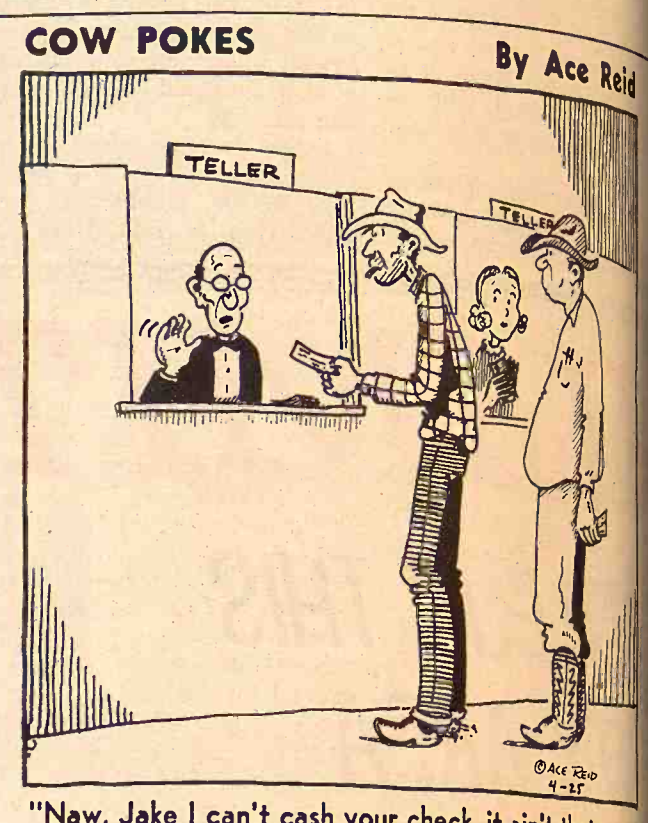

To make scallops at the bottom edge of cafe curtains or on an apron, trace halfway around a saucer for perfect scallops.

Funds For Osage Co. Rural Water

Rep. Joe Skubitz, R-Kan., has announced a $90,000 loan and a $76,000 development grant to Rural Water District No. 5, in Osage County, to extend water lines in the rural water system.

The funds, approved by the Farmers Home Administration, will enable the water district to add 43 miles of additional water lines and service to 76 additional families now living adjacent to the existing system. The Extension will bring the total number of families serviced by the district to 384.

Construction of the extended lines will require about $3,000 man-hours of labor including engineers, machinery operators, inspectors and laborers, Skubitz said.

"Naw, Jake I can't cash your check, it ain't that youre overdrawn, it's yere jist under deposited!"

SORGHUM GRAIN - TOP RANKING COUNTIES IN KANSAS - 1970 CROP

Rank	Acreage Harvested for Grain (000 Acres)		Yield per Harvested Acre (Bushels)		Sorghum Grain Produced (Mil. Bushels)	
1	Stevens	127	Haskell	90.2	Stevens	6.3
2	Washington	110	Gray	85.9	Finney	4.7
3	Marshall	96	Stanton	83.5	Gray	4.4
4	Marion	93	Wallace	74.3	Washington	4.3
5	Reno	72	Meade	73.0	Haskell	4.3
6	Dickinson	74	Finney	68.5	Marshall	3.8
7	Nemaha	72	Doniphan	68.0	Nemaha	3.8
8	Butler	71	Wichita	67.2	Morton	3.6
9	Morton	69	Grant	63.8	Grant	3.3
10	Finney	68	Sheridan	60.8	Reno	2.7

Stevens County led all other Kansas counties in sorghum grain production in 1970 with 6,262,000 bushels, according to the Kansas Crop and Livestock Reporting Service.

Finney County ranked second with 4,728,000 bushels and Gray County was third with 4,380,000 bushels.

Washington County, last year's leader, ranked fourth, and other counties in the top ten were Haskell, Marshall, Nemaha, Morton, Grant and Reno.

In nine Kansas counties, sorghum grain production was over 3 million bushels in 1970 and in 14 additional counties more than 2 million bushels.

The State's 1970 sorghum grain crop of 145,960,000 bushels was below output in the last 3 years, but still the sixth largest in 40 years of record.

Sorghum grain grown under irrigation, mainly in western Kansas, represented 30 per cent of the State's 1970 total production, compared with 22 per cent in 1969.

Leading counties in production on irrigated land were Haskell with 4.2 million bushels, Gray with 4.1 million, Stevens with 4.0 million and Finney with 3.9 million. Counties ranking high in production of sorghum grain on non-irrigated land included Washington with 4.3 million bushels, Marshall with 3.8 million and Nemaha with 3.8 million. The State's total production included 44 million bushels under irrigation and 102 million bushels on dryland.

Southwestern High in Yield

Highest sorghum grain yields per acre were in the western one-third of Kansas with three southwestern counties topping the State. Haskell had the highest grain yield of 90.2 bushels per acre, Gray County ranked second with 85.9 bushels and Stanton County third with 83.5 bushels. Wallace and Meade counties also had yields above 70 bushels.

The State's yield per acre averaged 41 bushels, 15 bushels below last year and the lowest since 1964. Yield per acre on irrigated fields averaged 87.2 bushels and on non-irrigated fields 33.4 bushels.

Stevens Acreage Leader

Stevens County ranked first among all Kansas counties in acreage of sorghum with 139,000 acres planted and 127,000 acres harvested for grain in 1970. Other ranking counties in sorghum acreage planted for all purposes were Washington, Reno, Marion and Marshall, each with more than 100,000 acres.

In acreage harvested for grain Washington County's 110,000 acres was second, followed by Marshall's 96,000 acres and Marion's 93,000 acres.

One-half million acres of sorghum grain was harvested from irrigated land, 14 per cent of the State's 3.6 million acre total.

Reno County produced 110,200 tons of sorghum silage in 1970, tops in the State, followed by Kingman County with 74,500 tons and Marion County with 68,300 tons.

In sorghum forage production, Gove County led with 39,100 tons, Graham was second with 32,900 and Trego third with 31,200 tons.

The 1970 State totals were 2,112,000 tons of sorghum silage harvested from 264,000 acres and 997,000 tons of sorghum forage harvested from 453,000 acres.

Sorghum planting started in early May and moved along ahead of normal to virtual completion by July 1. Irrigated sorghums made good seasonal progress. However, an extremely hot, dry summer hurt most non-irrigated sorghums, with the crop in many eastern and central counties rolling and firing badly.

Late August rains helped some later planted dryland sorghums. Wet weather limited early harvested progress but drier weather followed and most combining was completed before December 1.

1969	88	95	25.10	28.60
1970	78	89	30.10	36.00
1971	82	91	29.40	34.50

The percentage of available pasture leased by April 1 in the 14-county Bluestem area was the second smallest in 10 years, according to the Kansas Crop and Livestock Reporting Service.

An estimated 82 per cent of available grassland was leased by April 1, compared with 78 per cent last year and a 1960-69 average of 87 per cent.

Lease prices were down a little but ranchers indicated pasture leasing has been delayed this season by scarcity and high prices of prospective grazing cattle.

The April 1 condition of Bluestem pastures was 91 per cent of normal, up 2 points from last year condition and 3 points above average.

Grass prospects and water supplies were nostly good, but rain is needed in southern Bluestem counties to get pastures off to a good start.

Bluestem pasture lease prices for this grazing season were below a year ago for all classes of cattle.

The rate for steers and heifers under 700 pounds averaged $24.10 compared with $24.80 last year, and for steers and heifers over 700 pounds was $28.00 compared with $28.60 last April.

The season leasing price for cows with fall calves decreased from $43.20 to $41.90 and the rate for cows this spring calves dropped from $38.40 to $38.10.

The average for all cows with calves was $39.50, down 60 cents from a year earlier.

The guaranteed acreage of pasture per head this season was virtually the same as last year.

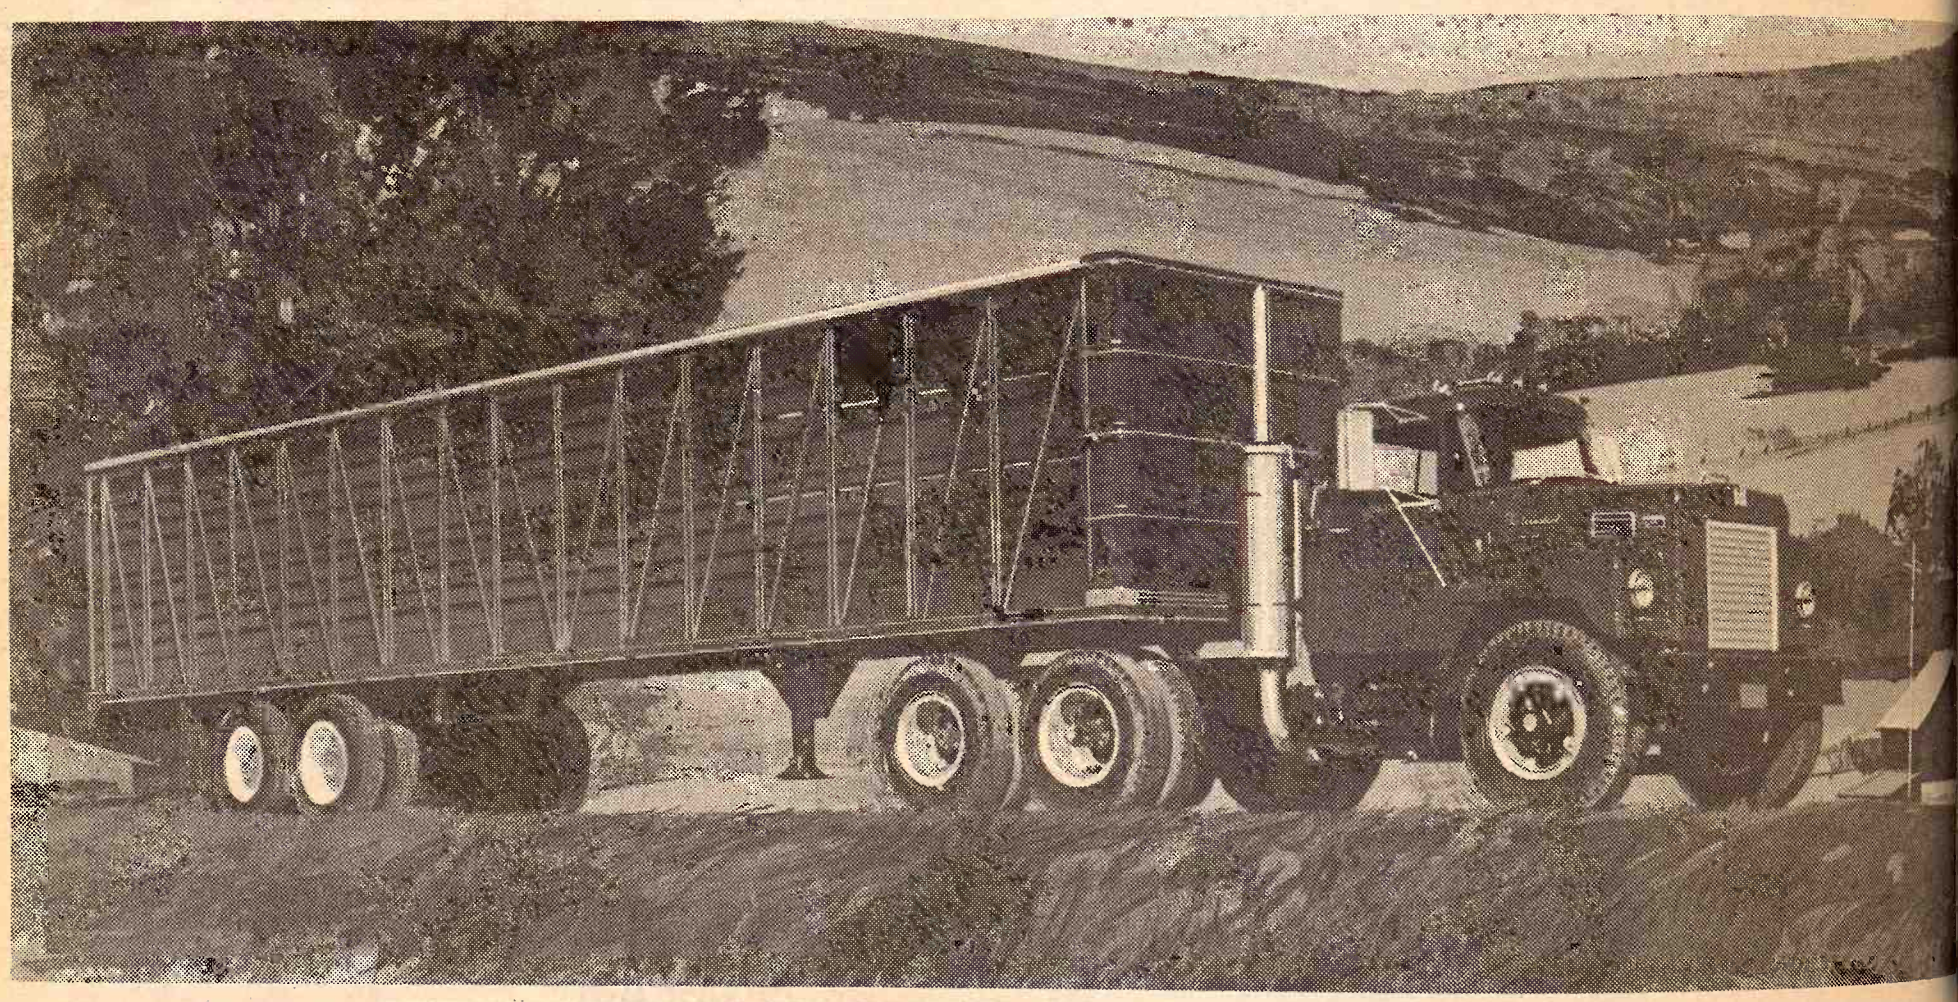

The average acreage guaranteed for steers and heifers under 700 pounds was 4.0 acres, unchanged from last year. That for steers and heifers over 700 pounds was 4.9 acres, up .1 acre from a year earlier.

Grass acres guaranteed per head for all cows with calves was 6.7 acres, also the same as last year.

The per acre season leasing rate for Bluestem pastures was $6.00 compared with $6.10 in 1970.

INTERNATIONAL FLEETSTAR-D

DIESEL POWER ALL THE WAY

THE VALUE-PACKED SOLUTION TO SPACE-SAVING DESIGN

The job-proved Fleetstar 2000-D series offers large-displacement diesel engines in a 92-inch BBC. Tilt-hood maintenance convenience is combined with conventional cab-behind-engine design to create a low original cost truck for modern fleets and multiple uses. Economically powered with heavy-duty diesel engines, the Fleetstar-D series is ideally suited for use with 40-foot or longer trailers—and big loads. It's just right for tough jobs, too. Many are outfitted as transit mixers or with dump bodies.

Five popular Detroit Diesel and Cummins diesel engines, ranging from 218 to 270 hp, are available as standard or optional power sources. Featuring dependability and long life, these high-output engines are the answer to operator's demands for large displacement engines in compact trucks. Numerous transmissions are available to match power and load to road, some with optional aluminum housings.

More power—less weight! Fleetstar-D slashes dead weight through the extensive use of lightweight but strong aluminum. Heat-treated steel channels that carry greater payload are utilized, as well as a tough fiberglass tilt-hood-and-fender unit that's hard to damage but easy to repair. It all adds up to extra payload, greater dollar savings!

Within the 92-inch BBC, a spacious cab provides the driver with both clear view and easy truck control. The cab is functionally designed. All controls and instruments are positioned for safety and ease of operation. No unnecessary frills to confuse, confound or repair. The Fleetstar-D simply offers the maximum driveability and comfort required to make every trip, long or short, a safe and profitable haul.

Fleetstar-D models are available in capacities from 32,000 to 46,000 pounds GVW in either tandem or single rear axle models, and GCW ratings of 65,000 or 79,000 pounds. Diverse needs for line-haul tractors or straight truck applications are easily met.

State Wool Income At Bottom

Kansas wool production in 1970 was the smallest in more than four decades, according to the Kansas Crop and Livestock Reporting Service.

Wool shorn during the year totaled 606,000 pounds, 11 per cent less than in the previous year.

Sheep and lambs shorn in 1970 numbered 320,000 head, 9 per cent less than in 1969. Weight per fleece averaged 8.1 pounds, compared with 8.4 a year earlier and a range from 7.9 to 8.5 pounds during the preceding decade.

An average price of 31 cents per pound was received for the 1970 clip, 2 cents less than a year earlier.

Total value of 1970 wool production for Kansas was $808,000, 22 per cent less than in 1969.

United States

Production of shorn and pulled wool in the United States during 1970 totaled 176 million pounds, grease basis, down 4 per cent from 1969.

Shorn wool production of 161 million pounds, declined 3 per cent from a year earlier, and is equivalent to 77 million pounds, clean basis, using a conversion factor of 47.7 per cent.

Pulled wool production totaled 15.0 million pounds during 1970, down 12 per cent from 1969 and is equivalent to 10.9 million pounds, clean basis, using a conversion factor of 72.9 per cent.

The number of sheep and lambs shorn in 1970 totaled 19.1 million head, a decrease of 3 per cent from 1969.

Fleece weight of shorn wool averaged 8.46 pounds per fleece, slightly under a year earlier. The average weight per skin of wool pulled was 3.40 pounds in 1970 compared with 3.46 pounds in 1969.

Ranchers and farmers in the United States during 1970 received an average price of 35.5 cents per pound for shorn wool, 6.3 cents less than in 1969.

Ranchers and farmers in the United States during 1970 received an average price of 35.5 cents per pound for shorn wool. 6.3 cents less than in 1969.

Native States, (which account for most of the "fleece" wool production) received an average of 35.5 cents per pound in 1970 compared with 36.1 cents in 1969. The 11 Western States, Texas and South Dakota, (which produce most of the "territory" wool) received an average price of 35.4 cents per pound, compared with 43.7 cents in 1969.

Total value of shorn wool produced in 1970 was $57.0 million, a decrease of 18 per cent from 1969.

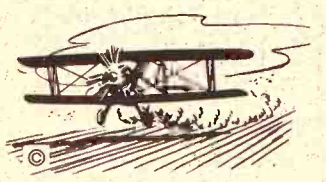

ATER DISTRICT FORMING N SE DICKINSON CO.

ABILENE — Progress is being ade toward formation of a rural ater district in southwest ickinson and part of Saline county. he district would range from the moky Hill river to highway K4 orth to south and highway K15 to ypsum creek in Saline county, east west. Officers of the organization re F.M. Froelich, Jerry Gray, Jim riffin, and Herbert Bolliger.

6 Million Beef Count-Threat

Kansas has nearly three cattle for every two it had 10 years ago.

That's the story from the January 1, 1971, livestock inventory made by the Kansas Livestock Reporting Service, which reckons the first-of-the-year count of all cattle to be 6.618 million.

That's up 10 per cent from a year ago and shows close to a 50 per cent gain from a decade ago.

In 1961, Kansas counted for the first time in history over 4½ million cattle. Prior to that, for seven decades of statistical history, the state has rather steady cycles of cattle inventories, building up to around 4 million cattle at peaks, the falling back to closer to 2½ million when oversupplies cut cattle prices.

The last deep plunge in the cycle was made after the 1957 price disaster. There was a moderate cutback in 1965 and even slighter decreases in cattle numbers in 1967 and 1968. Otherwise the graph shows steady increase since 1957. In three years the deep slash of 1957 was recovered and the count went over 4½ million in 1961. The 5-million mark was broken in 1963 and the 5½ million figure in 1966.

Last year the figure for the first time hit 6 million, after a 6 per cent increase, and the 10 per cent gain this year puts the new count at 6.618 million.

Cattlemen are nervous about the new count, not sure if the absence of a major bust in 14 years is an indication of a new trend on it portends some price disaster around the corner.

The gain in cattle numbers is not met with horror by all cattlemen, many of whom feel that the basis of the cyclical boom-and-bust of the past has changed and that the buildup in Kansas is a reflection of the importance of feedlots in the state, at the expense of competing cattle areas, and increasing favor by the consumer for beef, even when the price at the retail market is high.

Per capita consumption of beef has risen even faster than the population and this persuades some stockmen that the market can absorb larger increases in beef cattle than were built up in the late 1960s.

In some years past, cattlemen have been skeptical of consumption increases, feeling that people bought more beef merely because of lower prices. The gains in per capita consumption in the last decade, however, have been in the face of steadily rising costs of beef at the super market.

Cattlemen watch several aspects of the early inventory carefully. One, of course, is the gross number of cattle and the changes in that county year-to-year. A subtotal of this figure is the number of beef cows as a percentage of the whole. The cow, of course, is the factory of beef. The total numbers may vary with inshipments, changes in feeding patterns, and other variations in moving the cattle to slaughter, but if beef cows remain steady, then obviously the capacity to produce more beef has not gained.

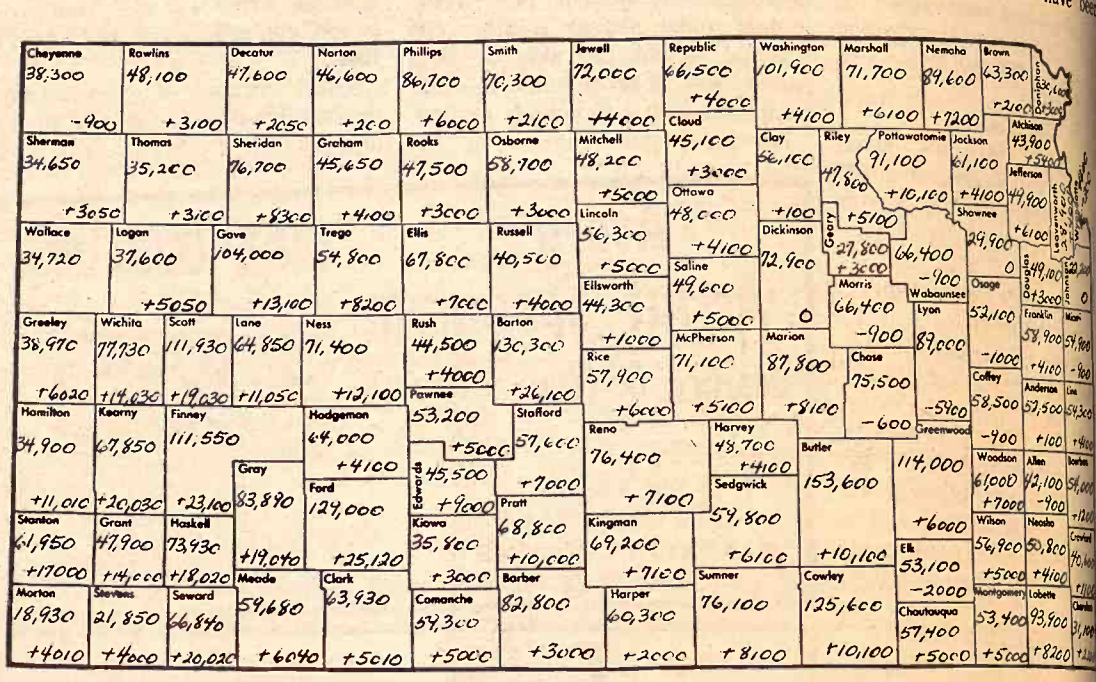

That figure is not available with the January 1 inventory figure, but it generally is assumed that the number of brood cows has not increased anything like the 17 per cent gain in total numbers in the past two years.

One other figure that is closely scrutinized is the "adjusted" figures from the year before. The January 1, 1971, figure is a preliminary one. It is based on a mailbox survey taken by the Reporting Service and of course is subject to some error by the method of sampling.

Later in the year, after abstracts of county assessors' reports are completed, the figures are changed to "official" ones. Cattlemen watch this adjusted figure closely, for if it has changed much from the original "preliminary" figure it means their judgment of conditions was [illegible] based on inaccurate information.

The Reporting Service can [illegible] proud of its 2970 preliminary survey [illegible] The 6.016 million figure for all cattle (including dairy) was figured [illegible] right on the button, and the [illegible] justment on beef was about three tenths of one per cent, adjusting [illegible] years preliminary figure of [illegible] million to 5.812 million on the official 1970 count.

Since 1966 there have been [illegible]

COUNTY-BY-COUNTY CATTLE COUNT, SHOWING CHANGE

The figures in each county show number of head of beef cattle as inventoried on January 1, 1971. The plus or minus figure shows change from the count of one year ago. For example, Butler county — the state's leading cattle county — in south central Kansas, had 153,000 head of beef cattle. That was a gain of 10,100 from the 1970 count.

THE TOP 25 CATTLE COUNTIES IN KANSAS

The top cattle counties in the state as of January 1, 1971, were these:

1. Butler	153,600
2. Barton	130,300
3. Ford	129,000
4. Cowley	125,600
5. Greenwood	114,000
6. Scott	111,930
7. Finney	111,550
8. Gove	104,000
9. Washington	101,900
10. Labette	93,900
11. Pottawatomie	91,100
12. Nemaha	89,600
13. Lyon	89,000
14. Marion	87,800
15. Phillips	86,700
16. Gray	83,890
17. Barber	82,800
18. Wichita	77,730
19. Sheridan	76,700
20. Reno	76,400
21. Sumner	76,100
22. Chase	75,500
23. Haskell	73,930
24. Dickinson	72,900
25. Jewell	72,000

Big Jump By Barton In Top Beef County List

The list of top cattle counties in Kansas has some new names. The Flint Hills area, which in years past has dominated the list, often having eight or nine of the top 10, finds three western Kansas counties in the list, as well as a major central Kansas feedlot county, and, for the first time, a southeast Kansas county.

Butler county, of course, easily leads the state with 153,000 cattle (not counting dairy cows and heifers).

Barton, riding a big feedlot buildup in the past two years, jumped to second place with a 130,300. A year ago Barber made its first appearance ever in the top 25 list, ranking 13th in the preliminary figures and then jumping to 4th when the official figures were put together later in the year.

Ford (Dodge City) ranked 3rd with a 129,000 count. Barton's jump into the top 10 is somewhat reminding of Ford county's entrance into the major cattle category in 1961. Never having ranked in the top group before, Ford ranked 19th in 1961 and jumped to 4th in 1962 and finished as high as second in both 1964 and 1966. The feedlots there have not been uniformly filled, however, and the county has jumped in and out of the top 10 list in the past decade.

Fourth ranking countywas Cowley (Ark City-Winfield) with a 125,600 count. Cowley, with the second most grassland in the state, following Butler, has only finished out of the top five once (in 1969) in six decades.

In fact, either Cowley, Greenwood or Lyon county has finished second to Butler in all but three years in the past. Only Ford (twice) and Barber (Medicine Lodge) in 1960 have broken that domination.

Greenwood (Eureka) finished 5th in this preliminary count with 114,000. Sixth was Scott (Scott City), another burgeoning cattle-feeding county with 111,930.

Finney county (Garden City) ranked 7th with 111,550. Finney first hit the top 10 in 1966, dropped back for a couple of years, then finished 10th in both 1969 and 1970.

Another western Kansas county, Gove (Quinter) was 8th with 104,000. Gove first made the top in 1964, dropped back for three years, then finished 8th in 1968, 5th in 1969, and 9th in 1970.

Washington county ranked 9th, hitting 100,000 in the preliminary estimate. The preliminary figures a year ago put the county in six figures but official figures were adjusted downward to 97,800, for a 1970 position of 6th.

Completing the top 10 was Labette (Parsons) county with a 93,000 count, a record for southeast Kansas. Labette was 11th a year ago. The county had made the top 10 as far back as 1957 but had not recorded major numbers again until last year.

Nemaha (Seneca-Sabetha) ranked 12th with 89,600. Nemaha perhaps has the most consistent record in the state, aside from Butler. Nemaha made the top 10 last in 1961, but it hasn't missed the top 20 since.

Lyon county (Emporia) has seldom missed the top 10, usually ranked no lower than fifth and often high as second. Lyon dropped out of the top 10 in 1963 and 1964, came back to 2nd in 1967 and 1968, finishing 7th last year and 13th this year.

Marion county ranked 14th with an 87,800 count. Marion ranked as high as 3rd in 1955 and usually has been in the top 10, dropping back into the 2nd 10 group three years ago.

Phillips county (Phillipsburg) led the northwest area, finishing 15th with 86,700, while Gray county was 16th and Barber (Medicine Lodge) was 17th. The Gyp Hills leader finished as high as 2nd in 1960 and has been in and out of the top group since.

Reno (Hutchinson) was 20th. Rounding out the top 25 were Sumner (Wellington), Chase (Cottonwood Falls), Haskell (Sublette), Dickinson (Abilene) and Jewell (Mankato).

Chase's count was off considerably from the prelminary count a year ago, with the official count adjusted downward from 97,000 to 81,000. The new preliminary count is 75,500. Chase is often considered the epitome of the Flint Hills country, because it is almost completely a grassland with no towns of any size and no important manufacturing.

The fall to 24th by Dickinson county is a decline from 7th just two years ago. The last time Dickinson fell from the top 20 in 1959, and that county was in the top 10 in all but one year of the 1960s.

Jewell county (Mankato) has emerged as a major cattle producer in the past five years. Its 72,000 count ranked 25th this year.

Marshall county (Marysville) dropped to 26th. Marshall county made the top 10 in 1955 and often has been in the top 20.

McPherson ranked 28th, the second year in a row that McPherson dropped out of the top 20. McP[illegible] ranked in the top 10 in 1959 and [illegible] the top 25 every year since [illegible] for 1963-64 and 1970.

Smith county's 70,300 ranked [illegible] tops in the northwest except[illegible] neighboring Phillips. Re[illegible] (Belleville) finished 35th [illegible] 66,500 count.

The placing of Bluestem co[illegible] Morris and Wabaunsee in 36[illegible] 37th was a considerable dro[illegible] these old grassland stand[illegible] Morris (Council Grove) ranked [illegible] in preliminary figures a year [illegible] but downward adjustments d[illegible] it back in the official rankings.

Wabaunsee county (Alma) [illegible] regular in the top 10 in the 19[illegible] has generally right back [illegible] since. Only in 1963-64 has the [illegible] missed the top 25 until this [illegible]

Two northeast Kansas co[illegible] Brown and Jackson ranked [illegible] 43. Brown (Hiawatha and H[illegible] has sometimes made the [illegible] group.

Woodson (Yates Center) [illegible] 44th with a 61,000 count, highe[illegible] the lower Flint Hills group.

Ranking about average in [illegible] numbers were these G&G [illegible] counties:

Sedgwick, 46th, with 58[illegible] Franklin (Ottawa), 49th with [illegible] Osborne, 50th with 58,700; Co[illegible] 51st, with 58,500; Rice (Lyons), [illegible] with 57,900; Chautauqua, 54th [illegible] 57,400; Wilson (Fredonia), 55th [illegible] 56,900; Lincoln, 56th with [illegible] Clay, 57th with 56,100.

Miami, Linn, Bourbon, M[illegible] gomery, Elk, Anderson, Osage [illegible] Neosho ranked slightly further [illegible]

In a group with 40,000 to 50,00[illegible] cattle were Cloud, Mitchell, O[illegible] Ellsworth, Rush, Russell, S[illegible] Harvey, Atchison, Jefferson, [illegible] Douglas, Allen and Cra[illegible] counties.

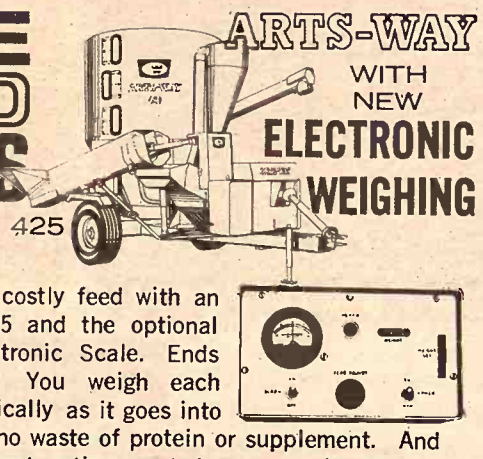

None of these counties have [illegible] been major beef producers al[illegible] in the days before Tuttle Lake [illegible] the expansion of Fort Riley, [illegible] county sometimes ranked in the [illegible] 20.

Ranking near the bottom as [illegible] counties were Doniphan, Le[illegible] worth, Johnson, Shawnee [illegible] Wyandotte counties.

SAVE FEED DOLLARS

ARTS-WAY WITH NEW ELECTRONIC WEIGHING

Model 425

You'll never waste costly feed with an Arts-Way 425 or 325 and the optional new Arts-Way Electronic Scale. Ends ration guesswork. You weigh each ingredient electronically as it goes into the mixer. There's no waste of protein or supplement. And you can weigh exact rations out to your animals.

Come in and see it in action!

Sign Of Changes In Industry?

Major adjustments on the preliminary counts to the relief of cattlemen, who went into near shock in 1966 when a four per cent upward correction of the preliminary figure was added onto a 9 per cent increase in the preliminary figures for the next year. That 4 per cent error was about as great as the adjustment has been. Over the years, the Reporting Service — a cooperative program of federal and state departments — has kept its adjustments in the one per cent neighborhood and three times in the past seven has virtually hit the figure right on the head in its preliminary guess — accuracy enough to make any scientist beam.

For the most part, even the county-by-county figures were correct. In years past the preliminary figure of perhaps a dozen counties was off by 20 per cent or more. These tended to balance out one another — a high estimate of 10,000 cattle will be countered by a low guess of the same size in another county.

The last couple of years there were only a half dozen or so counties that needed major adjustments from the initial count of last year.

The worst guesses a year ago were in the Flint Hills area, where the estimates for Lyon, Chase, Morris and, to a lesser extent, Wabaunsee were off. Balancing these out were low reckonings for some of the big feedlot areas in western Kansas.

Most notable in the group was Barton county (Great Bend) where last year's early estimate of 81,000 proved to be short of the 104,000 that were counted in the assessor's figures.

With a new estimate of 130,000 for Barton, that county now ranks as the second highest county in cattle numbers, jumping from the 13th place esimate of a year ago.

In the past estimates have tended to be more accurate in the grassland areas of the east than they are in the west. Major adjustments are not typical in Butler, Greenwood, Cowley and Lyon counties, generally the state's leaders in cattle numbers.

The tide flows less evenly in western Kansas, usually the first to react to drouth or build up herds when grass and wheat pasture are available. The percentage of cattle in feedlots in the west is also higher than eastward, and this also counts for major variations in the counting.

The western feedlots were clearly full on January 1 this year, judging from the huge increases recorded especially in the southwest and west central areas. Cattle numbers jumped 26 per cent in 14 southwest counties and 19 per cent in nine west central counties.

The Flint Hills area, however, actually showed a decrease in cattle count. Of the state's 105 counties, 91 showed increases, three held even, and only 11 went down. Seven of the nine counties with decreases were in the east central area.

Increases of around 10 per cent were noted in the central, south central, and northeast regions. The gains were more modest (around six or seven per cent) in the southeast, northwest and north central areas. Save for the huge increase in Barton, the north central area would have a very modest gain.

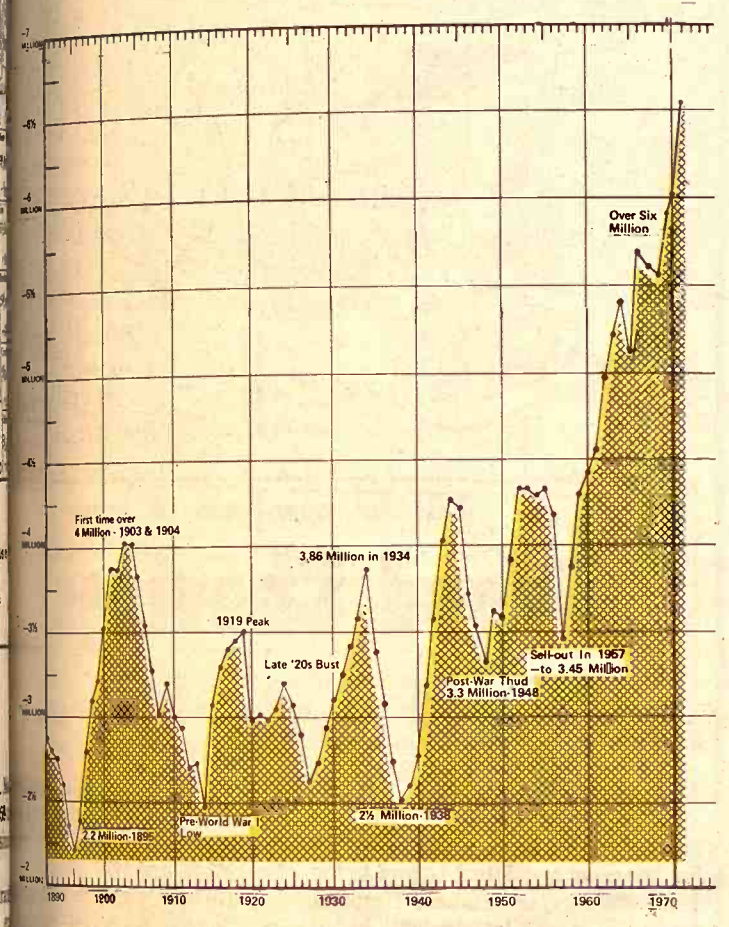

Butler county (El Dorado) again led the state in cattle numbers, as it has for the past four decades. Butler has nearly 600,000 acres of pasture, far more than any other county in the state and has some substantial feedlots.

Butler's total beef count was 153,000, a gain of 10,100 over a year ago. Nine counties had over 100,000 cattle counted (that's counting beef cattle only, not dairy cattle) — far more than ever reached that figure. Last year there were five counties reaching six figures in beef numbers.

Barton was second with the 130,000 count, and Ford (Dodge City) was third with 129,000. Fourth was Cowley (Winfield-Ark City) with 125,600, and Greenwood (Eureka) was fifth with 114,000.

Three western Kansas counties — Scott, Finney and Gove, — followed, and Washington county ranked 9th with 101,900.

Completing the top was Labette with 93,900 — the first time ever that a southeast Kansas county hit the top 10.

YEAR–BY–YEAR

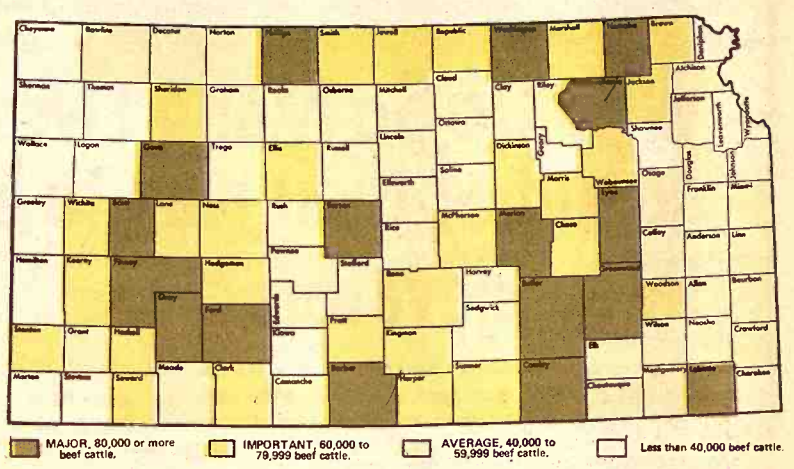

This graph shows the regularity of cycles of cattle numbers in Kansas since statistics were started in 1890. Until past World War II the trend was to approach peaks of four million cattle in high tides, then ebb back to around 2½ million when supplies forced prices down. Following a shorter drop after World War II, cattle inventories grew as stockmen prospered in the early 1950s. A drastic decline came in 1957 as dry pastures and heavy supplies devastated prices.

The buildup started back the next year, however, and there was a steady increase from 1958 until 1965. The figure dropped then, shot back to a record in 1966, but declined about 3% in 1967, slipped back another 1% in 1968, and virtually held steady in 1969. Last year, however, there was a 6% gain, followed by this year's 10% jump, highest since the comeback after the 1957 debacle.

Because older Reporting Service statistics included dairy cattle, this graph includes them for all years, showing some 6.618 million for the current inventory, and accounting for the variation from figures in the accompanying article.

Cycles, Yes — But Farm's Most Stable

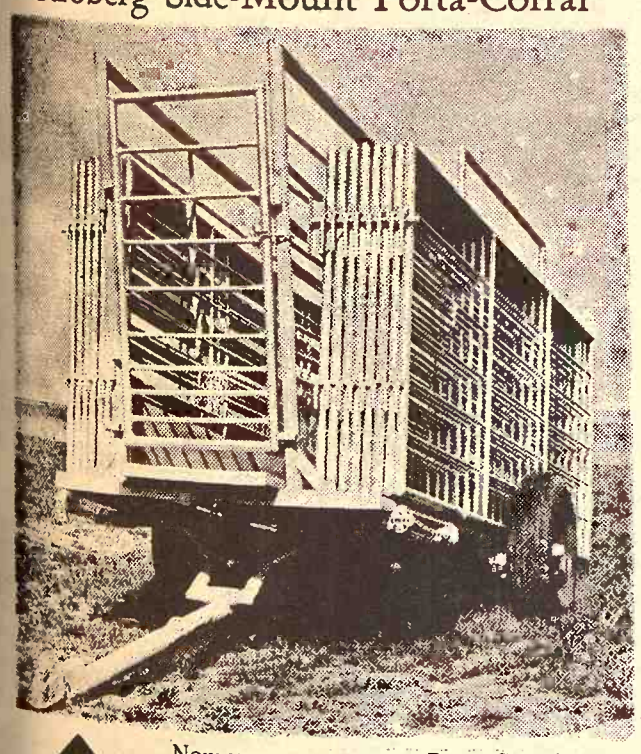

While cattle numbers definitely move in cycles, records show that cattle are the most stable of all livestock operations. A basic reason, of course, is the longer period from birth to market, making the cattle industry slower to respond to the market than, say, poultry or hog raisers.

WHERE THE CATTLE ARE

All but four Kansas counties have at least 25,000 beef cattle, indicating the major beef status of the state. This map shows the general distribution of the inventory as ofJJanuary 1. Solid yellow counties have 80,000 or more cattle and calves. Counties that have over 60,000 cattle are marked with a heavy tintoof yellow. About average in cattle numbers are the counties with a light yellow tint marking. The white counties have less than 40,000 cattle each.

Finishes 70 Years As Operator Of His Own Farm

When 91-year-old Maurice A. Miller holds his farm sale southwest of Minneapolis this week he wrote the end to a 70-year cattle and crops operation, all conducted from the same "home place." Miller himself has been actively engaged in the entire program.

Evan Corman, attorney, said this week that he has seen many pieces of land remain in family names for longer periods, "but few abstracts will show an individual as both an owner and operator for 70 years."

Mr. Miller and his brother, H. P. "Percy" Miller, bought the home place of 120 acres in December of 1901. With H. P. working for his father, the late Burzillia Miller, and Maurice feeding cattle for the late John White, the two of them had saved $1000. They applied this on the purchase price. They moved onto the place and it has been their home from that time.

Percy died last year at the age of 95. During the many years of partnership the Miller Brothers had increased their holdings to about 1600 acres. Their main interests lay in cattle, and much of the land was grassland.

Maurice remembers many highs and lows in cattle prices. He recalls one time buying 13 head of "little steers" out of Kansas City at $3.75 per hundred. He remembers they more than doubled that price when sold.

His present plans call for continuing to live on the home place for the time being. He considered putting in 40 acres of wheat this coming fall, then later decided to sell the land. One thing is for sure, he says. He won't go back to feeding somebody's cattle for $15 a month, like when he began.

"Go steady with you? I'd ... to! Who is this?"

TAKING TEMPERATURE
Dr. Homer Caley, Extension veterinarian at Kansas State University, right, takes temperature of sick replacement calf in the research feedlot at the Garden City Branch Experiment Station. Dr. Dudley Arnett, livestock researcher at the station, assists. Caley has treated more than 5,000 sick calves in extensive field studies during the past two years.

BLOOD SAMPLE
Dr. Homer Caley, KSU Extension veterinarian, takes a blood sample from sick replacement calf for analysis by the Diagnostic Laboratory in the KSU College of Veterinary Medicine. Blood analysis have shown many disease-causing organisms whose possible interactions make shipping fever complex difficult to treat.

–Article reprinted from G&G, April 20, 1971

Ways To Avoid Feedlot Deaths

Dead cattle in a feedlot always show up on the red-ink side of the business ledger — sometimes to the extent that there's little profit left to show up on the black-ink side of the sheet.

Dr. Homer Caley, Extension veterinarian at Kansas State University, reports that death and sickness losses in Kansas' booming cattle feeding industry have reached alarming levels — undoubtedly in excess of $10-million annually.

However, he feels these losses can be substantially reduced with management procedures he has learned in two years of extensive field trials involving more than 5,000 sick replacement calves in five typical central and western Kansas feedlots.

Purposes of the trends were to: (1) find out what makes feedlot replacement calves get sick or die; (2) evaluate new and commonly-used drug treatments and management procedures, and (3) learn how to partially control sickness and death losses.

The biggest killer in a complex disease called either shipping fever or bovine respiratory problems. It has a wide variety of symptoms usually associated with the respiratory and digestive systems including runny nose, watery eyes, coughing, lung congestion, high temperature, and general rundown condition.

"Almost all cases of shipping fever trace back to stress associated with selling and hauling the calf. These include recent weaning from the cow, hunger, dehydration, weariness from a long truck ride, and breathing diesel truck exhaust fumes," Caley explains.

Death losses alone average two percent for the entire state and go much higher in individual cases according to Caley.

He bases the following recommendations largely upon analysis of 1,100 case histories of sick calves These histories included how the calves responded to various treatments, how completely they recovered, and how well they performed after recovery.

For calves hauled more than eight hours:

1. Inject each half with 25cc of terramycin before it is loaded on the truck.

2. Get on the road immediately and make the trip as quickly as possible.

3. If possible, redirect truck exhaust fumes to keep calves from breathing excessive fumes. In two limited studies, Caley found 10 per cent more sickness in calves loaded in the upper truck deck near the exhaust.

4. When calves arrive at the lot, sort off the culls — blind, crippled, weak, or down — and return them to the seller or else get a satisfactory adjustment.

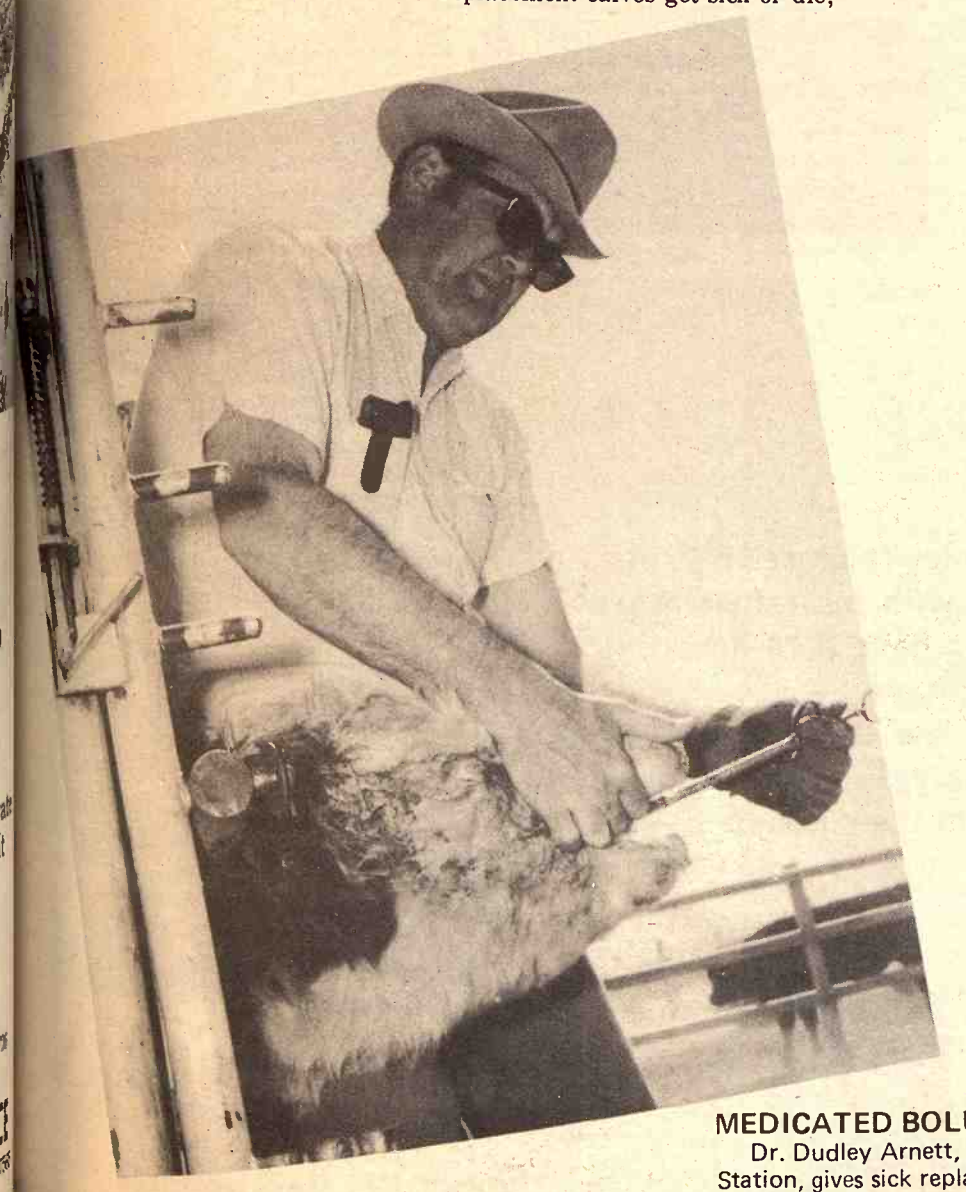

5. As calves are unloaded, take each one's temperature and separate those with temperatures higher than 103 degrees and those that are obviously sick from the healthy ones. Treat these sick calves immediately with terramycin and supportive therapy such as dextrose and other medications. It is vitally important to treat a calf while his temperature is rising, not after it has peaked and started back down.

6. Allow healthy calves to rest 8-10 hours in a small pen. After the rest period and still within 24 hours after arrival, vaccinate them for IBR, blackleg, and leptospirosis. Some feedlots need to vaccinate for BVD and other clostridium bacterial diseases. Castration may be delayed if the owner desires.

7. Keep calves in a small pen for 7-10 days. Get them eating something as quickly as possible. Bromegrass hay or good native grass hay scattered on the ground and sprinkled with concentrate or water-diluted molasses usually gets them eating faster than putting feed in fence-line bunks. Gradually shift to starter ration during this period.

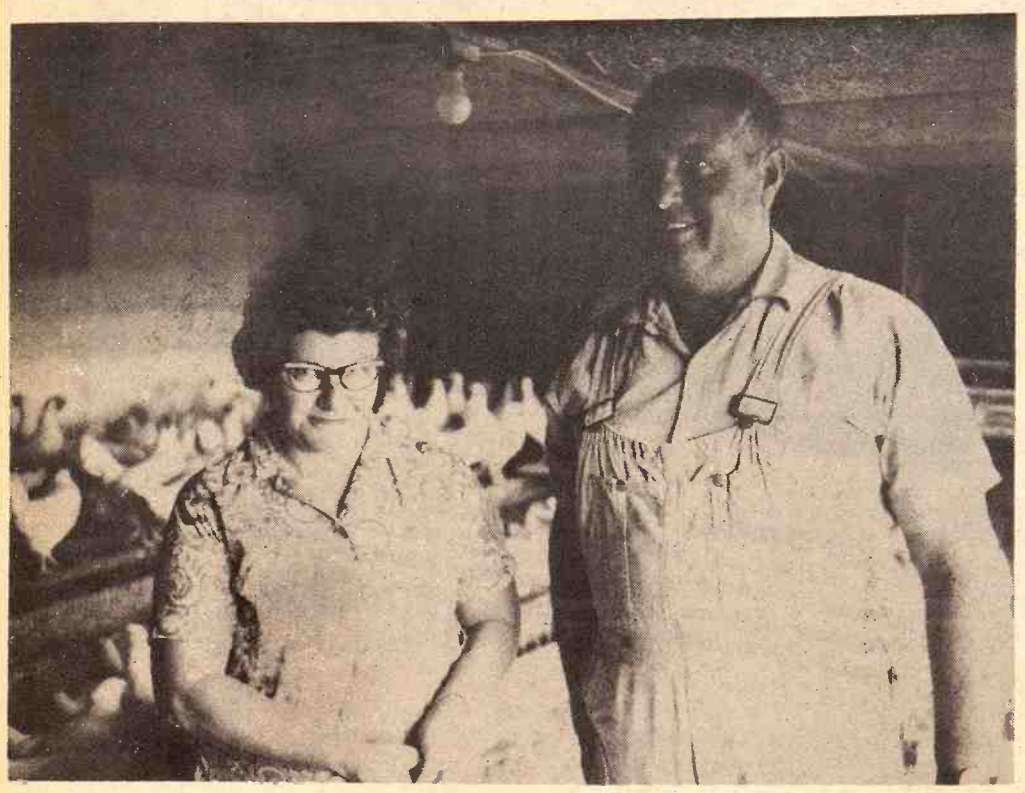

8. Observe and treat all calves that get sick during this period. Isolate them from the healthy calves.

Caley plans to continue his field trials to evolve even more satisfactory means of curbing the appalling losses Kansas suffers from sick and dead replacement calves.

MEDICATED BOLUS
Dr. Dudley Arnett, livestock researcher at the Garden City Branch Experiment Station, gives sick replacement calf a medicated bolus. Treatment is part of a study being conducted on the station in cooperation with Dr. Homer Caley, KSU Extension veterinarian.

THESE PEOPLE WANTED BETTER FEED AND SERVICE -- THEY GOT IT AT CO-OP

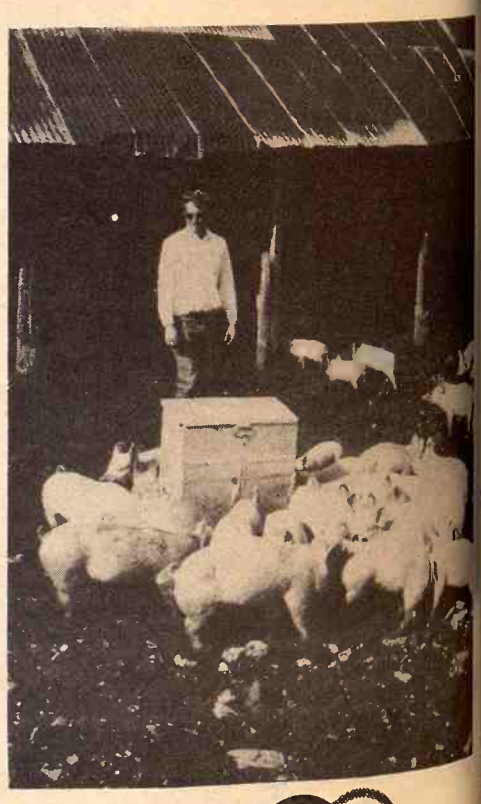

Mr. & Mrs. Lester Pauley, R.R. 1, Manhattan, Kansas, have 450 laying hens they have been feeding Co-op feed. "We use Co-op feed right down the line and we are happy with the results."

Larry Vannoy, Wabaunsee, Kansas, looks over 100 native woolies he received April 19th out of Missouri. Larry feeds out 12,000 to 15,000 lambs per year. He also runs 85 sows and a feeder pig operation along with farming in partnership with Richard Mertz. Larry likes the service and quality of Co-op feed.

Harold Bailey (pictured r & l) is in partnership with his father Wayne Bailey. They have a 70 head dairy herd and have a 20-sow pig operation. The Baileys use Co-op feed exclusively and are very satisfied with their results.

The recipients were Jerry Hatfield, Wamego, on the left and Larry Vulgamore of Shallow Water. Presenting the awards is Dr. O. W. Bidwell of Kansas State University Department of Agronomy, Manhattan, Kansas.

Reprieve On Limit On Young Harvest Drivers

Rep. Keith Sebelius, R-Kan., said ast week a decision reached in Washington by government officials ould mean young farmers between he ages of 18 and 21 will be able to rive farm trucks during the coming ansas wheat harvest.

Sebelius said Department of ransportation officials have agreed suspend proposed "arbitrary and realistic" farm vehicle safety egulations for normal farm erations during the 1971 harvest ason.

The congressman said the vernment officials have also reed to adopt a new rule-making rocedure and consider amendents to safety regulations that ould protect normal farm erations in the future.

The effective date of any new regulation has been suspended indefinitely until new amendments can be considered, he said.

Texas Votes — 241.

Texas has legalized the sale of hard liquor in saloons for the first time in more than 50 years.

Gov. Preston Smith signed into law a bill repealing the article of the state constitution which closed the bars in 1919 in line with national prohibition.

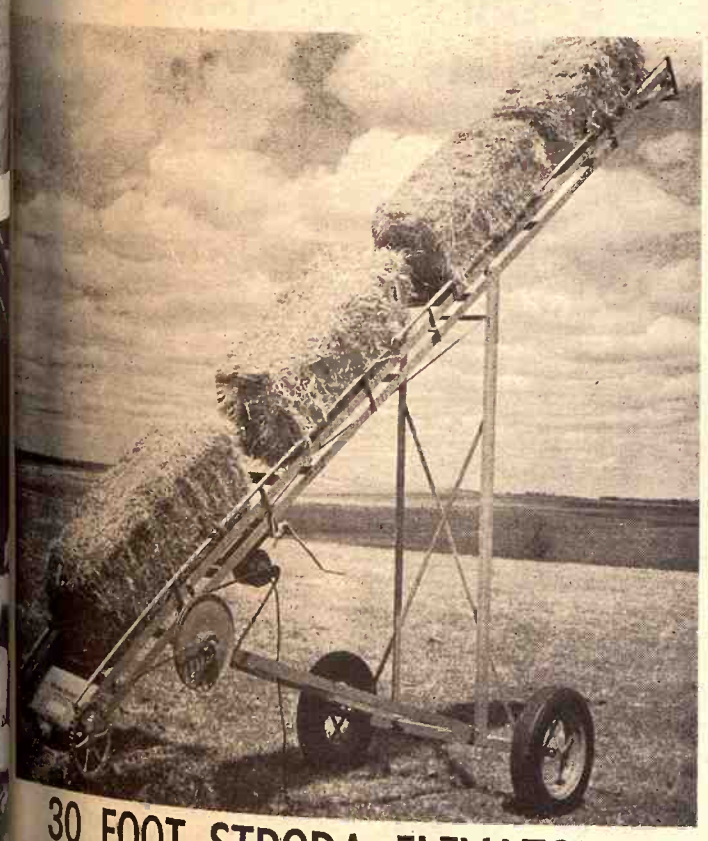

A series of local elections now will decide which areas want to go wet. At present, Texans can buy only beer or wine in bars and restaurants and some areas ban even this.

Signing the so-called "liquor-by-the-drink" bill which won passage through the legislature this week after years of controversy, Smith said it would help attract the tourist and convention trade to Texas.

The ban on selling hard liquor in bars spawned hundreds of private clubs, many of them attached to restaurants, where membership could often be obtained just by signing the guest book.

State Sen. Joe Christie of El Paso, chief sponsor of the bill, estimated that the fees and the liquor taxes should net the state about $20 million a year.

Judge Upholds Statewide Farm Reevaluations

Shawnee County District Court Judge David Prager has upheld state property valuation director Ronald F. Dwyer's directives to counties ordering them to change farmland valuations.

The judge dissolved a temporary restraining order blocking implementation of the directives. The restraining order was asked for in a suit by Atty. Gen. Vern Miller who challenged the directives as unconstitutional because property owners allegedly were not given due process in their implementation.

Dwyer's directives went to 96 counties in March, directing the county boards of commissioners to make changes on agricultural lands based on median values of land in nine "equalization districts" created by Dwyer's department.

The judge made his ruling following oral arguments in the case. The suit challenged the constitutionality of a 1964 law under which Dwyer acted.

Asst. Atty. Gen. John Martin argued that property owners did not receive written notices that their valuations were changed by the directives. This precluded property owners from appealing to the State Board of Equalization within 30 days from the time the directives were issued, he said.

But Clarence J. Malone chief attorney for the valuation department, said there are four statutes besides the 30-day procedure under which property owners can protest the changes.

Judge Prager said a 1970 Kansas Supreme Court case upheld two of the four appeal procedures, and issued a mandate for Dwyer to eliminate valuation inequities existing from county to county.

The Supreme Court case was brought as a test suit by then Atty. Gen. Kent Frizzell who challenged the state motor vehicle proration formula.

In that case, the attorney general's office argued that property owners who purchased cars after the month in which they were assessed for taxation could not appeal to the Board of Equilization within 30 days.

Judge Prager asked Martin and Asst. Atty. Gen. Matthew Doud, if there were any substantial differences between the 1970 case and the present case. The attorneys answered that other than the number of property owners involved they could find none.

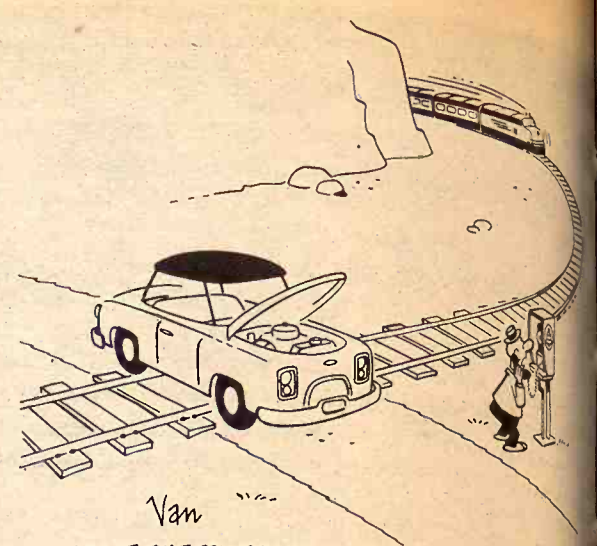

About 40 of the counties realized increases, while 40 counties enjoyed decreases in the valuations, according to Martin, who represented Miller in the case.

The judge said the only issue before the court was whether the directives met due process requirements of the U.S. and Kansas Constitutions.

Malone also argued that appeals through county boards of commissioners would not be of much avail since the changes were made on a countywide basis. He differentiated between a countywide increase and one that involves specific intra-county changes.

He argued that the time to appeal would be after Nov. 1, when tax notices are mailed.

"Certainly, the property owner is going to get the best notice in the world on Nov. 1 when he receives his tax statement. Then he can pay his taxes under protest and seek a refund," Malone said.

Central Soya Founder Dies

Dale W. McMillen, 91, who built a $2,000 investment into a soybean processing business with annual sales of 678 million dollars is dead.

His wife, Mrs. Agnes McMillen, 87, died nine days before.

McMillen's Central Soya conpany now directed by his sons, Dale W. McMillen, jr., and Harold W. McMillen, has 70 plants, including processing and sales facilities in Puerto Rico, Jamaica and Brazil.

McMillen, a native of Van Wert, O., started his career in the family's feed and grain business. The family settled in Fort Wayne in 1911 after an unsuccessful wheat growing venture in the Texas Panhandle.

Larceny In Heart Of City Shopper

The man stands on the sidewalk, his back to the street apparently staring mindlessly at the store front of a major department store. But he is alert, a little on edge. He ignores the woman who glares at him because he is blocking traffic. And the man with the sideburns and long hair. A third person passes him, a young woman, in her twenties, nicely dressed. After a moment's hesitation, he falls into step behind her as she enters the department store.

A half hour later the young woman leaves the store by another exit. The man watches her disappear in the late afternoon crowd, a $25 designer scarf stuffed in her coat pocket. But he goes back to his post and does nothing about it. He works for Management Safeguards, Inc., and his job is to pick customers at random — the third person to pass him on the sidewalk — and follow them through the store.

The store wants to know how much stealing is being done by customers, and to get an idea of who is stealing what, and how much.

Saul D. Astor, president of Management Safeguards, Inc., has conducted surveys for department stores in Philadelphia, Boston. New York & Chicago. In New York, one out of every 16 customers followed by Astor's men and women stole something from the store. In Boston, the figure was one out of every 22 persons followed. Philadelphia apparently has more than its share of shoplifters. One in every 11 persons walked out with something not paid for.

But Chicago holds the record. So far. One out of every eight persons tracked by the Astor investigators stole. Management Safeguards, Inc., has yet to turn up a professional shoplifter in Chicago, one of those people who supposedly haunt the stores wearing coats with special pockets or capacious bloomers.

The kids don't turn up in disproportionate numbers. Neither do the disadvantaged, nor the minority groups. "The preponderance of shoplifting is done by more or less average looking persons from about 21 to 35 years. "And the ratio is clearly two to one, women over men."

There's no real evidence the average shoplifter is stealing for the usual reason — to score personal economic gain. It is almost as if a normally honest persons sees something and snatches it without thinking. The average amount stolen in dollars in the Chicago sample was $7.75. In the samples elsewhere, taken over a period of one and one-half years, the average dollar amount has been $5.50.

"No one," says Saul Astor, "is really enriching himself by shoplifting. He has an underlying feeling that he is being cheated by the stores, particularly now that we've had the inflation of the past couple of years. They steal and figure they've evened things up."

Railpax Or Amtrak – It Has Its Critics

Rep. Harley O. Staggers, chairman of the House Commerce Committee, has suggested recalling into Congress the Railpax system — now called Amtrak — and revising it to add more cities onto passenger train routes.

The National Railroad Passenger Corp. has failed to come up with a good system to serve the people of this country, the West Virginia Democrat told the subcommittee on transportation and aeronautics of which he is a member.

"How could we possibly have a national system and leave six states out entirely, as well as such key metropolises as Cleveland, Little Rock, San Antonio and Dallas?" Staggers asked.

"This is incomprehensible." Staggers, whose state has only one route in the system, through Charleston, maintained that Amtrak was ignoring "the vast part of rural America" which needs development.

"If further funds are required for a national system you should have come to us with the necessary support for additional funds," Staggers told the directors.

Eight directors, including Chairman David W. Kendall, testified before the subcommittee which is considering routes of the National Railroad Passenger Corp. and 20 congressional bills to revamp it.

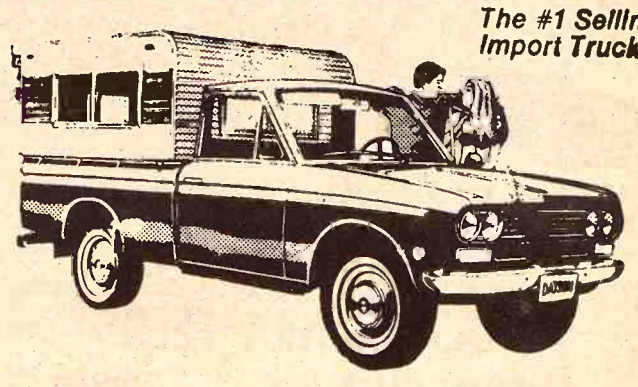

The name Railpax, which the system was using, has been officially changed to Amtrak, for American tracks.

Amtrak is to begin May 1.

Commission Study Famine From Pesticide Ban?

A chemical industry spokesman says if pesticides were banned entirely the United States would be faced with famine and soaring prices for farm products.

H.L. Straube, vice president and general manager of Stauffer Chemical Co., said Congress must guard against writing new pesticides laws that are "overrestrictive and unreasonable" in their effects on the industry.

Straube's comments were presented Tuesday at a meeting of the Newspaper Farm Editors of America.

A complete ban on pesticides, he said, could mean sudden and sharp reductions in the food supply.

"Even in this country," Straube said, "starvation would be rampant. If pesticides were eliminated, the price of farm products would likely increase by 50 to 75 per cent."

Proposed new legislation is being considered by Congress to tighten and update older laws governing the use and manufacture of pesticides.

Straube said a "pesticide credibility gap" exists because of what he said were claims by experts and pseudo-experts who have presented emotional cases against agricultural chemicals.

"The accumulative impact of their voices, their promises and their threats have prompted some of the new regulations being proposed today," Straube said.

"Our industry, like any other industry," Straube said, "simply will not pour research and development dollars into future products if the incentive is lacking."

Honor Retiring Profs At K-State

MANHATTAN — Twenty individuals with an accumulated 664 years of service to Kansas State University and to the state of Kansas — more than 33 apiece — will be honored this week at a recognition tea hosted by the K-State Faculty Senate.

President James A. McCain will present a certificate of appreciation to each of the retirees "in recognition for loyal and dedicated service to Kansas State University."

Dean of those retiring, in point of service, is John F. Helm, a professor in the College of Architecture and Design, who has been at K-State since 1924.

Seven other retirees have served 40 or more years. They include Rufus F. Cox, former head of the department of animal science and industry, 41 years; M.C. Axelton, who recently retired as head of the Southwestern Experimental Field at Minneola, 42; Maynard L. McDowell, department of chemistry, 43; A.C. Andrews, department of chemistry, 45; William G. Amstein, for many years state leader of extension agricultural specialists, 40; M. Christine Wiggins, an extension home economist in clothing, 41, and Nina M. Browning, a home economist in foods and nutrition, 41.

Other retiring faculty who will be recognized at the tea for their service are Mahala M. Arganbright, 47; Willis L. Blume, 23; John P. Clifton, 24; M. Lester Cox, 25; Annabelle J. Dickinson, 30; Conrad J.K. Eriksen, 25; Glenn W. Long, 33; Verl E. McAdams, 37; Alva E. Messenheimer, 25; Ralph E. Silker, 24; Winona M. Starkey, 26, and Verne B. Sweedlum, 31.

VAN DALE EQUIPMENT

The Salina-Van Dale team combines to produce greater feeding efficiency and a healthier net profit. It's a combination that works for hundreds of successful feeders and dairymen, and it'll work for you. Big capacity silos to 2100 tons. Unloaders to 35 tons per hour.

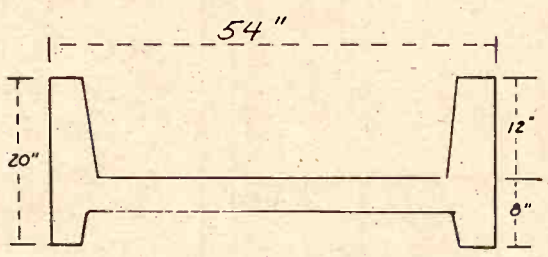

Every piece of equipment is loaded with exclusive features, and your choice of capacity and total investment is packaged to fit your operation. Shouldn't you have all the facts about Salina Silos and Van Dale Equipment?

No Challenge To Scout As Most Popular Wheat

Scout wheat, though declining slightly, maintained the position of most popular variety in the State for 1971, according to the Kansas Crop and Livestock Reporting Service.

Scout was seeded on 46.9 per cent of the State's acreage for harvest this year, about 1 percentage point less than a year earlier. Included in the Scout percentage was 6.5 per cent of Scout 66, a selected strain.

Triumph variety likewise decreased slightly but remained second with 11.4 per cent of the State's acreage.

Satanta increased sharply to 8.4 per cent and moved into third position. Parker gained moderately to 7.9 per cent of total seeded acres but dropped back to fourth most important variety.

Bison was in fifth place with 4.6 per cent, a moderate decrease. The five leading varieties accounted for 79 per cent of the State's total seeded acreage.

Scout plantings represented a larger proportion of the wheat acreage than a year earlier in the western districts of Kansas, but a lower percentage in central and eastern districts.

For the state it was planted on 46.9 per cent of the total acreage compared with 48.1 per cent last year.

Scout was the leading variety in all western and central districts. Seedings of Scout were 50 per cent or more of the acreage in 36 counties, all in the western two-thirds of the State. In 11 counties 70 per cent or more of wheat acreage was seeded to Scout, with 82 per cent in Greeley County being highest.

Triumph percentages were close to last year in most districts, and for the State the variety represented 11.4 per cent of the acreage compared with 11.7 per cent a year earlier.

It was the leading variety in southeast Kansas, and second most important in the south central and northeast districts. The Triumph percentages includes Improved Triumph, Triumph 64 and Super-Triumph strains.

Satanta advanced to third place in acreage seeded, with 8.4 per cent of the State's seeded acres compared with 0.8 per cent in 1970. In the southwest and west central districts Satanta ranked second only to Scout, and in the northwest and three central districts it was planted on substantial acreages.

Parker, seeded on 7.9 per cent of the State's acreage, increased from 6.6 per cent last year. It was planted mainly in central and eastern areas, being the leading variety in the east central district and second most important in the north central, central and southeast districts.

Bison had 4.6 per cent of the acreage compared with 6.5 last year. It was still important in western districts and locally elsewhere.

Gage was seeded on 3.1 per cent of the State's acreage, compared with 3.7 per cent last year. It was the leading variety in northeast Kansas and represented substantial acreages in east central, southeast and north central districts.

Wichita, with 2.9 per cent compared to 4.4 last year, was seeded mainly in the western districts.

Apache declined to 2.4 per cent from 3.0 a year earlier but was quite important in some west central and south central counties.

Lancer was seeded to 2.3 per cent of the State's acreage compared with 2.6 per cent for 1970 and was the second leading variety in the northwest district.

Kaw had 2.1 per cent of the seeded acreage compared with 4.1 last year.

Chanute increased charply to 2.0 per cent this year compared with 0.3 last year, being the second leading variety in east central Kansas and important in other eastern districts.

Kiowa was planted on 1.1 per cent of the State's acreage, Ottawa, Warrior and Shawnee each had 0.8 per cent, and hybrid varieties 0.1 per cent. Other and unknown varieties accounted for 2.4 per cent.

This wheat variety report is based on information supplied by nearly 4,600 Kansas farmers who reported the acreage of each variety of wheat sown on their own farm.

Table 1 shows the relative importance of different varieties in each of the State's nine crop reporting districts. Table 2 includes the relative acreages of the varieties for the State as a whole in 1971 and selected earlier years.

IF YOU PLANT CORN, SORGHUM, BEANS

PLANT ACCURATELY WITH ACRA-Plant® OPENERS

For higher yields...a proper stand is more important than a better hybrid...and, ACRA-Plant® Openers give you more of everything it takes for a proper stand:

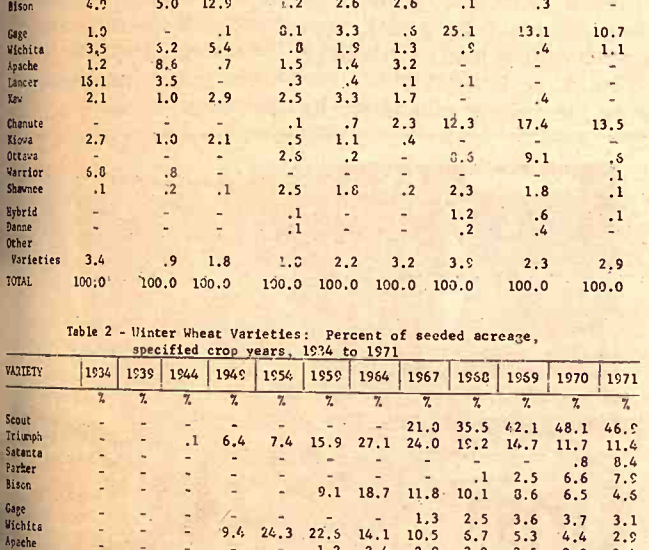

1. The right plant population for moisture conditions and fertility.
2. The highest possible survival rate of seed planted.
3. Proper plant distribution within rows and between rows.
4. Fast, uniform emergence of all plants.
5. Quickest possible establishment of secondary root system.
6. Correct leaf orientation.

This year plant your seed accurately with ACRA-Plant® Openers...they'll pay for themselves the first full day you use them. Ask your local implement dealer for a detailed ACRA-Plant® brochure.

For name of your nearest Acra dealer, contact:

Corn Blight In Kansas? Only Special Conditions Could Cause It

Southern corn leaf blight, which reached epidemic proportions in the Corn Belt last year, poses a threat to the ever-expanding Kansas corn crop this year.

"Conditions would have to be just right, but if those conditions exist, the blight could cause severe damage here just as it has in other states," says Claude L. King, Kansas State University Extension plant pathologist.

The right conditions are the carrying of the wind - borne spores into the state just prior to a rain, and a continual high moisture in the air.

The blight was reported in several places in Kansas last year. Most of it was in the area along the Missouri River from Atchison to Kansas City.

Three fields were affected near Beloit, the furthermost western invasion confirment last summer.

"When I went to counties giving crop lectures this winter — I showed color slides of the blight and a lot of men came up and said they had a little of it last year, but I'm not sure it was that widespread," King said. I think the most westward point that any one reported trouble to me was at Albert."

King said Kansas might have escaped last summer's blight problem through a bit of luck "We were so hot and dry during July and August that it couldn't get started here," he said.

But, he said, the blight spores have wintered over in Iowa, Missouri and Arkansas, and a wind from the east, plus proper moisture, could spread it "pretty fast" over the state.

King said the blight affected all stages of the growing plant. If there is a damp, warm weather when the seedlings are coming up they could be damaged. Where it blows in, there would be spots on the leaves, which grow to capsule-shaped spots about twice as long as they are wide.

When the ears are coming out it will hit the shuck, King said, and once it starts a spot there, it will go right through the shuck and cause a rotting of the kernels. Most of these spots are black, the color being produced by the fungus-producing spores.

"And sometimes you will just have the rotting at the tip of the ears when the spore lights there and gets started in the damp area," he said.

Travel by air is no problem for the spores, "If they can blow all the way from Florida to Iowa in one year they can get across this state okay," King said.

King said he didn't want to sound like an alarmist — that unless the climate was warm and damp, an unlikely combination for Southwest Kansas, the blight wouldn't take hold in the area.

If there is blight trouble it is possible to spray with Dithane M-45 of Manzate 200. "We really don't have much scientific proof that spraying will pay," King said, "but a few observations lead us to believe that it would be profitable."

And on the subject of whether he would plant corn in Kansas because of the possibility of blight, King said he would.

"I can tell you that as far as the Southern blight is concerned I would a lot rather be planting in Kansas than I would in Illinois where they have that moisture in the air and the infection already in the ground, all it has to do is blow up on the leaves," he said.

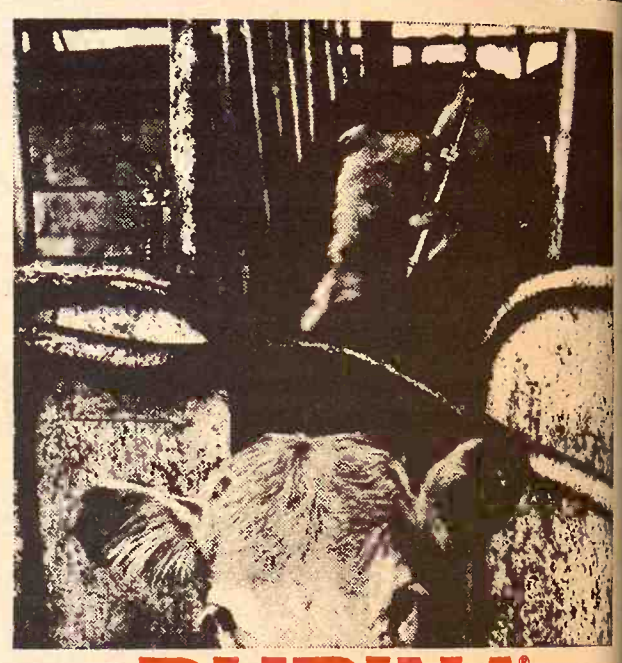

Southeast Area Promoters Bypass Federal Funds

PARSONS — Directors of [illegible] America Inc., a nine-county southeast Kansas promotional organization, have decided to return the corporation to its original field of privately-financed industrial development, effective Nov. 30.

A current grant from the Economic Development Administration expires at that time.

The organization has announced to the county membership that it will no longer avail itself of federal grants for regional planning, which it has accepted since 1966.

Until the current grant expires the organization will continue to support regional planning and development. Original annual budgets of the corporation were in the realm of $50,000-$60,000, with funds raised from sources in the nine-county area.

PURINA®

PURA-MYCIN® INJECTABLE

Could be the only disease protection he'll need

Purina Pura-Mycin Injectable, containing Terramycin, attacks disease throughout the body. It's the fastest way possible to get high levels of Terramycin* to infected trouble spots.

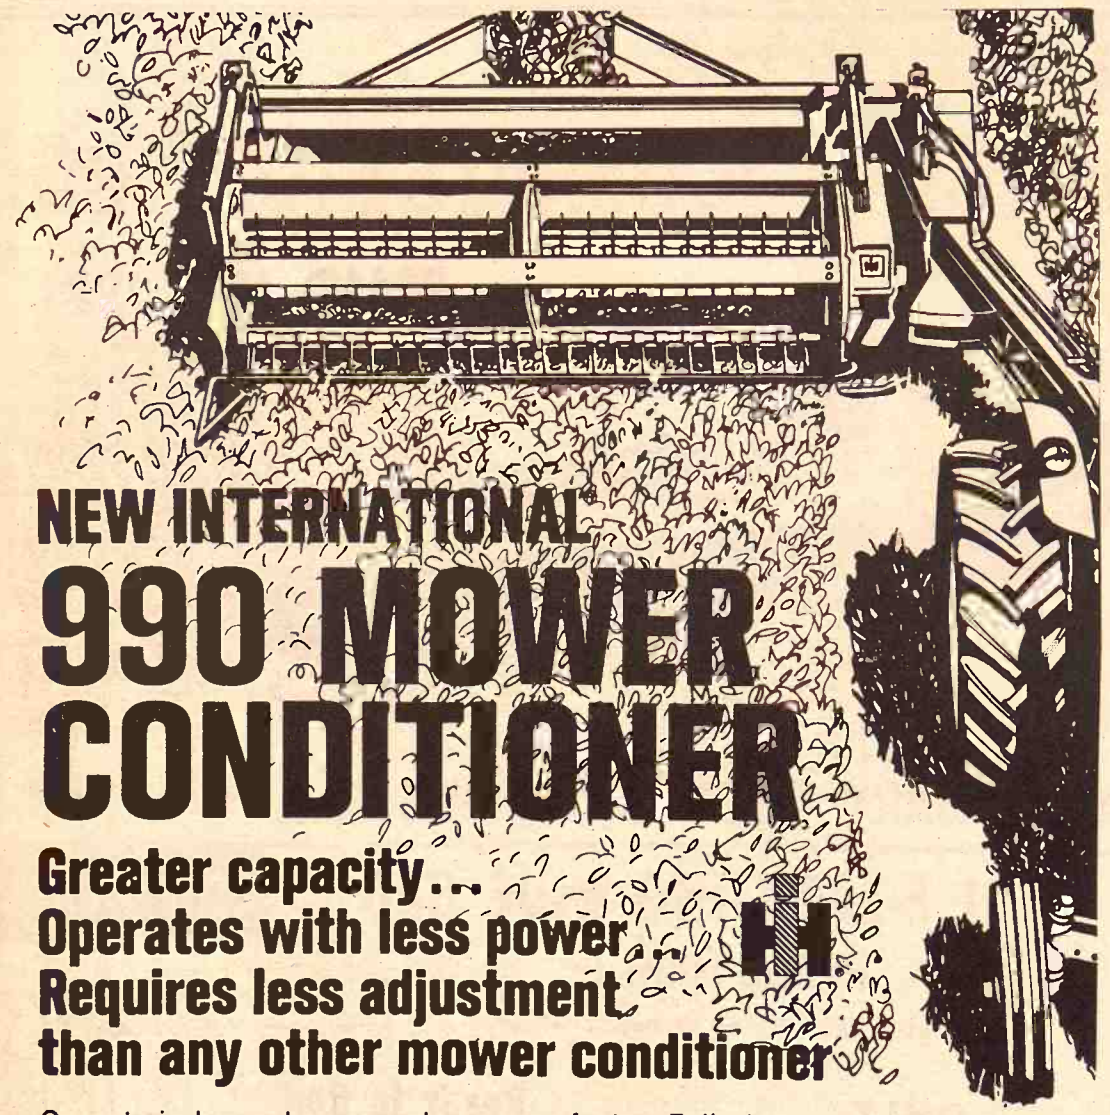

Pura-Mycin Injectable also fights many secondary infections following disease outbreaks—infections many other treatments may miss completely.

No other single antibiotic injectable gives you better control of so many different disease conditions than Purina Pura-Mycin Injectable. It's convenient and easy to use. Won't freeze or settle out. Stop in and pick up Purina Pura-Mycin Injectable and keep it on hand.

PURINA CHOWS

NEW INTERNATIONAL
990 MOWER CONDITIONER

Greater capacity...
Operates with less power...
Requires less adjustment
than any other mower conditioner

Operate in heavy hay or sudax a gear faster. Full-width conditioning rolls eliminate dead spots that waste power. And you'll find there's no power loss due to side draft on hillsides or on the level.

You get increased capacity because larger diameter 44-inch reel is less affected by changing crop conditions. And, the unique position of the reel bats holds the crop flat so it feeds through the conditioning rolls, without hesitation. What's more, controlled platform float and self-compensating roll pressure lets you move from field to field crop to crop and rarely ever readjust the 990.

Soil Moisture Only Moderately Below Average

Soil moisture available for the 1971 Kansas wheat crop at mid-April was moderately below last year and average, according to the Kansas Crop and Livestock Reporting Service.

Results from the survey conducted in the western two-thirds of the State showed 3.79 inches of water available for plant use in the top 4 feet of soil. This compared with 4.27 inches at mid-April last year and a 1960-69 average of 4.31 inches.

The top 4 feet of a medium textured soil will hold about 8 inches of water available for plant use when at field capacity.

Available moisture in the top 3 feet of soil this year was less than last year, while in the 4th foot it was virtually unchanged.

Depth of penetration of usable moisture this spring was 45.0 inches, compared with 45.5 inches last year and an average of 40.7 inches.

The top foot of soil averaged .83 inch of available water, compared with 1.20 inches last April. Available water in the second, third and fourth feet of soil averaged 1.03, 1.00 and .92 inches, respectively, while in 1970 the same soil depths averaged 1.11, 1.05 and .91 inches.

By crop reporting districts soil moisture supplies were down sharply from last April in the northwest, north central, central and south central areas and slightly below in the west central and southwest area.

Seeding of the 1971 wheat crop was slowed by early fall rains, especially in central and eastern areas. Stands were mostly good although some replanting was necessary due to washing by heavy rains.

Precipitation during the late fall and early winter was light but February snows provided some moisture. Wind erosion caused only local damage and at mid-April most wheat remained in good condition except in a few western counties.

At mid-April the average height of wheat plants in the western two-thirds of the State was 6.2 inches, slightly less than the 6.4 inches last year and the shortest in 9 years. Average plant height by districts ranged from 4.7 inches in the west central and north central up to 8.1 inches in the south central.

This spring 337 tests were made in wheat fields in the western two-thirds of Kansas. Moisture content was determined at various depths including the top 6 inches, 6 to 12 inches, the second foot, the third foot and the fourth foot.

Limited moisture in strata near the surface reflected rather light winter and early spring precipitation.

Of the samples taken this spring in the **top 6 inches** less than one-half of 1 per cent were classified as wet, 81 per cent moderately wet and 19 per cent slightly damp. This compares with 4 per cent very wet, 11 per cent wet and 85 per cent moderately wet last April.

In the **second 6 inches**, a fraction of 1 per cent of the samples were rated wet, 97 per cent were moderately wet and 2 per cent slightly damp, while last year 1 per cent were very wet, 12 per cent wet and 87 per cent moderately wet.

For the **second foot**, the percentage falling in each category were 1 per cent wet, 98 per cent moderately wet and 1 per cent slightly damp, compared with 9 per cent wet, 91 per cent moderately wet and less than one-half of 1 per cent slightly damp last April.

In the **third foot** of soil, 2 per cent of the samples were wet, 93 per cent moderately wet and 5 per cent slightly damp. Last spring 8 per cent of the samples were wet, 88 per cent moderately wet and 4 per cent slightly damp.

In the **fourth foot**, the percentages this year were 3 per cent wet, 85 per cent moderately wet and 12 per cent slightly damp, compared with last year's 7 per cent wet, 76 per cent moderately wet and 17 per cent slightly damp.

FERTILIZER ASSN OFFICERS

Officers of the Kansas Fertilizer & Chemical Institute Inc. are shown here discussing plans for the 1971 Kansas Fertilizer and Agricultural Conference to be held in Topeka on Dec. 13,14,15, 1971.

The officers are, l to r: Bernie Kastens, president, with Farmland Industries, McPherson; Jack Hendrix, vice president, with J. R, Simplot Co., Great Bend; Lyle Maddux, sec.-tres., with Topeka State Bank, Topeka; and Dr. Larry Murphy with Kansas State University, Manhattan.

Mostly Talk By States On Pollution Limits

A year after the first Earth Day most state legislatures, under pressure from conservationists, are talking about antipollution measures. But few bills are winning approval.

Attacks through state laws on the nation's growing pollution problems have hit at ecological contamination from industrial waste, noise, throwaway bottles and many other causes.

Some of the new laws have been called inadequate by the environmental lobby. And others have brought complaints from industries and businesses which claim they'll be forced to close down because the cost of meeting the new standards is too high.

Among the 40 legislatures meeting this year, antipollution laws already have been passed by Arkansas, Colorado, Idaho, Indiana, Kansas, Maryland, Nevada, New Mexico, North Dakota, Pennsylvania, South Dakota, Utah and West Virginia.

The Department of Environmental Resources was created in Pennsylvania to consolidate the state effort. Eight other states — Alabama, Alaska, Arizona, California, Massachusetts, New Mexico, Rhode Island and Washington — are considering similar streamlining or realignment of environmental agencies.

Pennsylvania Rep. John F. Laudadio, a leading proponent of environmental laws, said he hopes that with the new state department "We're going to get tougher enforcement. . ."

Alfred Hawkes, executive director of the Rhode Island Audobon Society, agreed that "we need a little more determination on the part of enforcement officials to get things done faster." But, he added, "Our laws need to be strengthened."

Business interests, however, often say enough already has been done legislatively, although as conservationists celebrate the first anniversary of Earth Day this week there seems to be no let up in their campaign.

Larry Kiml of the California State Chamber of Commerce said, "We're moving awfully fast without knowing the answers. Most of the tough problems have already been legislated. So you've got guys (state legislators) scratching around for new fields to conquer."

North Dakota passed what its officials say is the first noise pollution statute in the nation. The law covers noise from farm machinery to rock bands and provides a penalty of up to $1,000 for offenders.

Gov. William L. Guy, who proposed the law, cited hearing loss by farmers. "Engine manufacturers have hoodwinked the public that a high noise level is equated with power," Guy said.

Feed Sunflower Soybean Pellets and watch winter weight snowball.

It's a long drive to market bloom and few cattlemen can afford to sit out the winter. So, to finish ahead of the other herds this spring, feed Sunflower Soybean Meal Pellets this winter.

During winter months, most of the feed your cattle will eat merely goes to meet basic energy requirements. Most herds will be doing well to hold their own. That's why you need a super-charged protein supplement if you're looking for a substantial winter weight gain. The best one you can buy, and feed, is Sunflower Soybean Meal Pellets.

This is a supplement made from nature's richest source of protein.

Prime soybeans. They're carefully processed to preserve vital protein content while actually increasing their palatability and digestibility.

Feed Sunflower in 40% soybean meal pellets or as 36%, 32%, or 22% formulated range cubes.

Don't let cold weather hold up your herd's drive toward market bloom. Keep them moving. Supplement winter grasses with Sunflower Soybean Meal Pellets and pack on the pounds. That way, winter feeding will be more than just dead wait.

KANSAS SOYA PRODUCTS COMPANY, INC.

Many of your neighbors have fallen in love with our power, comfort and protection . . .

NEW 71's

NOW WE'RE OUT TO WIN YOU!

YOUR CASE DEALER'S NEW GOLDEN OPPORTUNITY TRACTOR IS READY FOR A NO-OBLIGATION DEMONSTRATION

Big Case cubes . . . we've unleashed more of their power for '71. You'll plow faster, disk faster, handle any big load faster. And you'll do it smoothly and easily. Why? Big Case cubes . . . up to 451 turbo in the Case 1170. We've poured on more power in our Agri Kings . . . up to 12½% more. But we've maintained the high-torque reserve of big-displacement engines, moderate engine speeds.

MODEL	CUBES	RATED RPM	HP INCREASE*
770	267 cu. in.	2000	+ 12.5%
870	336 cu. in.	2000	+ 10.0%
970	401 cu. in.	2000	+ 9.4%
1070	451 cu. in.	2100	+ 7.0%
1170	451 Turbo	2100	+ 7.8%
1470	504 Turbo	2000	No change

*Manufacturer's rating

Now the best in comfort is even better. Tomorrow's tractor but yesterday's cab? Not with Case! We'll show you a whole new concept of comfort. A cab that's extra tight, sealed from dust and dirt . . . a new filtration system that surrounds you with fresh, clean air in the dustiest conditions. And throw away your ear plugs. It's as quiet inside as your living room with the kids at school!

We value your safety too. You're far more relaxed and alert at the wheel of a new Case Agri King—especially after a long day in the field. And a comfortable operator is a safer operator! Our cab, too, offers super protection—with a rigid frame that resists front crushing and supports the entire weight of the tractor on a complete rollover. J I Case Company, Racine Wisconsin 53404.

uto Safety ecord Poor In ickinson County

Dickinson County had the worst ghway death rate in Kansas last ar except for three of the most avily populated counties.

Final figures compiled by the fety division of the State Highway mmission showed 22 persons led in 14 accidents in this county. y counties having a higher ality rate were Sedgwick 52, nson 26, and Shawnee 24.

Coming right behind Dickinson s Geary County, with 20 highway aths. Saline had 13, McPherson 15, Riley 5, indicating that the erstate system and central nsas are not the safest places in state for driving.

ll of the fatal accidents in this unty occurred in urual areas tside the towns and cities. All did occur on I-70, as there were a mber of bad accidents on K-15 on th sides of Abilene as well as on er roads.

Altogether 634 investigated ac- ents happened in this county ring 1970, with a total of 278 in- juries reported. Of this number 338 accidents were in towns and 296 in the county.

For the state as a whole there were 547 fatality accidents in which 657 persons were killed, including 31 on the Kansas Turnpike.

The incidence of fatal one-car accidents continued to be extremely high, as there were 247 persons killed where there were no other cars involved. Drivers on the wrong side of the road were involved in 136 accidents. Railroad grade crossing accidents accounted for 49 deaths and 131 injuries, and 46 pedestrians were killed.

The state report showed teenage drivers were involved in accidents in which 142 persons were killed and 10,403 injured. Male drivers were involved in 67 per cent of the accidents.

'No Fault' System To Get Insurance

Fletcher Bell, Kansas insurance commissioner, says he will make a study of "no-fault" automobile insurance with his own staff if the Legislature fails to make a review of such insurance.

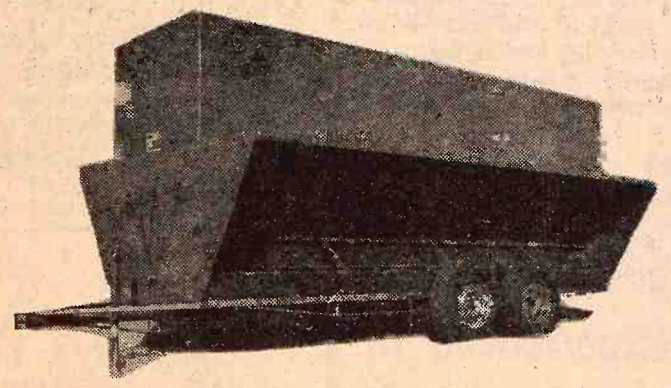

Bell said he will see that a bill to carry out such an insurance plan is offered to the 1972 session of the Legislature.

Two bills on the subject were introduced in the 1971 session but received no action.

The newly-created Kansas Legislative Coordinating Council is scheduled to meet next week to make decisions on legislative studies to be carried out prior to the 1972 session.

Bell said he neither favors or opposes the so-called no-fault insurance but "some type of change is needed in our present system of paying claims for medical costs arising from automobile accidents."

"RANCHERS PRIDE"
Cattle Self Feeders

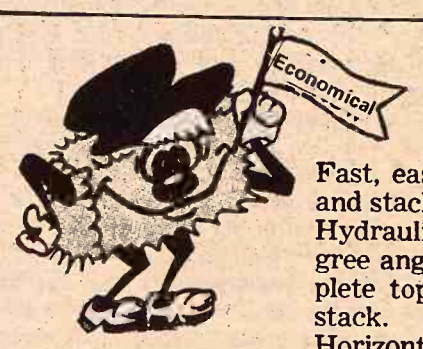

These all steel — all welded, fully portable cattle self-feeders are offered by leading feed mills and farm supply firms throughout Kansas. If your feed dealer doesn't keep any in stock — Then ASK him to contact:

STOCKMANS SUPPLY INC.

$40 For Farmer - $60 To Process & Sell His Product

Of each $100 spent for food at the supermarket by U.S. housewives, approximately $60 goes for labor and other costs of processing and distribution.

That's the conclusion reached by Larry H. Simerl, an agricultural marketing economist at the University of Illinois. The other $40 goes to the farmer who raised the crop or livestock included in Simerl's survey. But about $30 of that is spent for farm supplies, equipment and other expenses.

"This leaves about $10 as net income to the farmer out of each $100 spent," Simerl said. He noted that out of that margin, the farmer must figure out a way to pay himself a salary, provide for his family and pay other costs of running a home.

Simerl also has studied price trends at the retail level and related them to the income of consumers. He said the average retail price of foods has increased about 27 per cent in the last decade. During that same time, he added, the average family income has increased 72 per cent — after allowing for the increase in tax deductions and payments.

Other studies this year, including one by the U.S. Department of Agriculture, indicate that the homemaker is spending only 16½ per cent of her family's take-home pay for food items. Those studies add a postscript: if the average housewife spends more than that — and she probably does — part of the reason is that she buys many non-food items on her shopping expenditions to the market.

In his spring outlook report, the Illinois economist noted that farmers this year will be producing an abundance of meats and other foods.

"Pork chops, ham and bacon will be unusually plentiful," he noted. "Compared with last year, the supply will be about 20 per cent greater during April, May and June and about 5 per cent more in July, August and September. Consumers have not had such an abundance of pork since 1952."

He added that the supplies of beef products, poultry and eggs also will be plentiful, though poultry producers have cut down their production somewhat because of a recent oversupply. The supplies of dairy products will exceed consumer demand, Simler noted, with the government probably buying the surpluses, as it did last year, to prevent a producer-price depression.

"Supplies of bakery products, fruits, vegetables, sugar and most other foods will be about normal," he predicted, "and will be ample to meet all needs."

Simerl said the average American this year will consume about 72 pounds of pork, including ham and bacon; 113 pounds of beef, 40 pounds of chicken and poultry, 315 eggs; 121 quarts of milk, 17.7 pounds of ice cream, 11.4 pounds of cheese and 5.2 pounds of butter. Not all of that, of course, actually winds up on the plate. Those figures include fat and bone and shrinkage during cooking.

South Vietnam Works Profits Out Of Poultry

The Agriculture department reported South Vietnam may have pulled a chicken coup against Communist enemies the last three years. According to a report by the foreign agriculture service, the United States in 1968 launched an aid program to help South Vietnamese farmers increase the size of their chicken flocks.

"The rapid commercialization of South Vietnam's poultry industry has materially enhanced the economic aspects of that country's Vietnamization program," the report said. "At a time when the government of Vietnam was struggling with the Viet Cong for the allegiance of the population, a fast-developing and highly profitable program was seen as one means of convincing people their government was giving full attention to their well-being."

From small flocks of 5 million chickens each, South Vietnamese poultry production now has boosted the country's gross national product by at least 300 million dollars a year, the report said. The South Vietnamese chicken program was helped by the U. S. Agency for International Development funds and technicians.

"The poultry industry also has created much support and sideline industries and institutions," the report said.

"At least six firms now manufacture plastic poultry equipment and many local farm firms produce metal feeders, waterers and brooders."

What's Happening With Farm Credit

What's the credit situation for farmers? No doubt you've been hearing that the tight money "crunch" of the past couple of years is relaxing and interest rates are backing down. Does this mean farmers can borrow money easier now than before? Are funds generally available readily?

A recent interview with Dr. John E. Lee, Jr., of the USDA's Economic Research Service, Washington, by an editor in the USDA's Statistical Reporting Service, sheds some light on the situation. Here are the questions and answers:

Question: Dr. Lee, what is happening to farm credit right now?

Lee: Money is becoming more available. Its wholesale cost has shown some substantial declines.

For example, prime interest rates dropped to 6 per cent in early 1971 from their high of 8.5 in June 1969. Also, money now costs less in the central money markets to agencies such as the Farm Credit Administration.

Already some of the production credit associations (PCA's) have reduced their interest rates from the predominant range of 8.5 — 9.5 per cent in mid-1970. Rural banks indicate that more money is available now than has been the case in recent years.

Q; Does that mean that things are returning to normal?

Lee: No. We're not back to where we were prior to the tight money situation. That is, we're not back to 1966 — the most recent year that things were more or less normal. However, the credit situation looks brighter for 1971 than it has for 2 or 3 years.

Q: Will the credit situation continue to get better?

Lee: We expect it to improve during the first half of 1971. After that, if we have a big economic boom, money may get tight again.

Q: What will this mean to the farmer who wants a loan from his local bank? How will this be reflected when he seeks to borrow cash for production expenses?

Lee: It'll affect farmers in three ways.

First: The sound commercial operator has been able to get adequate production cash even during periods of tight money. The credit ease will mean he'll get expansion money. He'll be able to invest in new machinery, add to his breeding herd, or perhaps build a new porch or home. Many of these kinds of expenditures were postponed during the tight money period.

Second: Some farmers who were considered marginal borrowers during tight money times will be able to get credit. These were the people hurt most during the past 3 years.

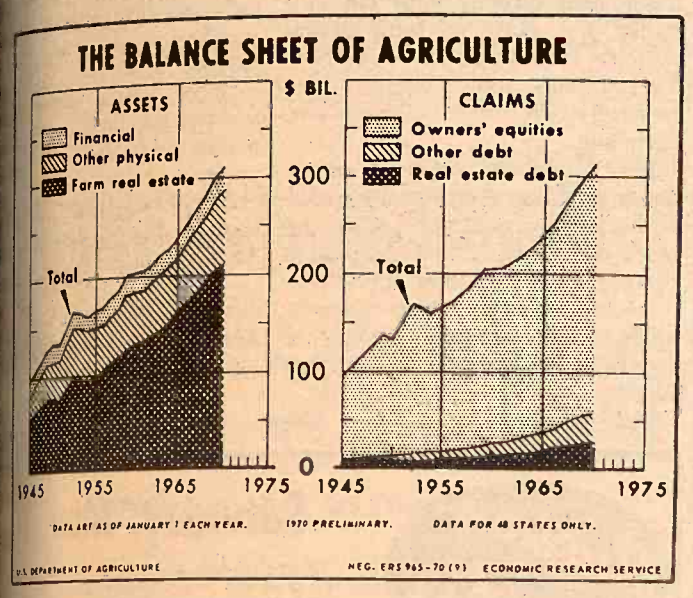

I might add, though, that there's no evidence that farmers as a group were any worse off than other borrowers in the economy.

Finally, for all farm borrowers, the cost of using borrowed funds will be lower.

Q: Has there been any change in farmers' loan sources during the past 3 years?

Lee: The commercial banks have seen their share of the market decline slightly during the past years.

building blocks

CO-OP Mineral Concentrates provide a solid foundation for building livestock profits. Whether you feed sheep, swine, beef or dairy cattle.

Minerals are essential for efficient gains, top production, vigor and health. CO-OP Mineral blocks and concentrates supply a wide range of calcium to phosphorous ratios, from 4:1 to 1:1. Disease-fighting additives are available plus built-in fly and worm control. All are formulated to latest recommendations by feeding experts.

See your double-circle Co-op for help in selecting the CO-OP Mineral Concentrate that's best for building your livestock operation.

(Farm Credit continued)

The PCA's have expanded their share some, because they had an advantage over the banks during the recent tight money period. They could still go to the central money markets and sell bonds and debentures to savers in the large national money centers.

The PCA's paid dearly for this money, so PCA interest rates were often higher than those charged by other lenders. But when farmers couldn't find money elsewhere, they could get it from PCA s.

The Farmers Home Administration has always had a very small share of the direct lending market, and it remained very small — about 3 per cent.

Q: What about the insurance companies?

Lee: During the tight money times, insurance companies had less capital to lend. Consequently, they allocated most of it to high return investments — shopping centers, urban apartments, and that sort of thing.

Also, some of the states have low ceilings on interest rates — 7 and 8 per cent. When the cost of money got above these rates, life insurance companies could no longer lend in those States.

Prior to the recent tight money period, life insurance companies held nearly a fourth of farmers' real estate debt. That share has declined to less than a fifth because the insurance companies had little new money to lend or could not lend it at the high rates they had to charge.

Q: Who filled the credit gap?

Lee: The Federal land banks (FLB) and noninstitutional lenders. Federal land banks went straight to the central money sources regardless of high prices.

These banks are not affected by state usury laws. FLB mortgage loans outstanding jumped 94 per cent between 1965 and 1971.

In addition, there's been a big increase in the amount of land transactions financed by sellers. Something like 53 per cent of the land sellers have worked out their own land purchase contracts with buyers.

Q: Now that money is more available, will life insurance companies enter the picture again?

Lee: That's the big question farm credit people ponder.

Some life insurance companies say they're out of farm credit for good because during the last 3 years they dismantled their network of agents scattered throughout the farm states. Given the decline in farm numbers and the limited volume of farm credit, it may be too expensive for them to reestablish offices and restaff them.

But three or four of the larger companies have insisted all along that they never wanted to be out of farm credit at all and that when money was available they would be lending to farmers again.

Several other companies may be back, but not making the same kinds of loans. One company now considers only loans for $100,000 or more.

Q: Will new sources of credit arise?

Lee: Within banking circles there's been quite some discussion on improving the flow of funds to farmers. There's not a critical need for improvement right now, but there are always better ways to do things.

One group that continues to have problems lending to farmers is commercial banks, particularly small rural ones.

Small rural banks have limited loan funds and so are limited on loan sizes to any one customer. But as farms grow, there's a need for larger operating loans. The growth of small rural commercial banks has often not kept pace with farmers' needs.

Say, a farmer with a moderate-size operation in the Midwest or Great Plains needs $30,000 or even $40,000 cash for production expenses. A small bank may be limited to lending only $20,000 to a single borrower.

A committee of agricultural economists in the Federal Reserve System is discussing how to overcome lending limitations of small country banks. Some proposals would allow the bank to resell the debt to a larger outfit.

There's also quite a bit of discussion on improving correspondent bank relationships, which work like this:

A small country bank needs to make a loan of $40,000 to an individual farmer. The small banker gets together with a larger bank on the loan. The small bank lends the farmer $20,000. The larger bank puts up the other $20,000, but the small bank services the whole loan. In other words, the small bank acts the part of an agent for a big city bank.

Q: What about outside credit?

Lee: Well, remember around 40 per cent of production credit comes from noninstitutional sources. It comes from merchants, dealers, and individuals — who through delayed billing, and that kind of thing, give farmers credit.

In addition, some of the larger feedlot operators and other farm operators have been going around traditional sources of farm credit. Some deal directly with big city banks. For example, some of the nation's largest banks — in New York, Illinois, and California — are now heavily involved in direct farm financing.

Here's another source of credit. Some farming ventures are going public — incorporating and selling stock as a means of raising capital to finance or expand their operations.

Another source is investments made by persons in high income-tax brackets who seek to shelter their high incomes with capital gains.

The Tax Reform Act of 1969, limited this kind of investing [illegible] still important for some kinds [illegible] livestock enterprises and specialty crops.

Q: How have farmers been repaying the money they have been able to borrow over the past 3 years?

Lee: In general, farm repayments have been very good. Delinquencies are relatively few and foreclosures have been rare.

Some exceptions occurred in localized areas, where drought, southern leaf blight, or low livestock prices hurt farmers' income severely.

There were some increases in bankruptcies in specialty crops, especially in the Pacific area.

Q: With all this talk about [illegible] and credit — are farmers getting too deeply in debt?

K-State's Cattlemen's Day Next Week

(Farm Credit continued)

Lee: Despite the fact that they're
orrowing more than twice as much
s at the start of the 1960's farmers'
ebt of $60.4 billion on January 1,
971, amounted to less than 20 per
ent of total assets. That's lower
han for most major industries in the
ation.

Farming is changing. It's no
onger a subsistence industry where
armers produce their own inputs.
armers now approach credit like
usinessmen. They see money as a
ool to expand and increase
roductivity. And if by borrowing
ore they make more — they
orrow.

MANHATTAN — The 58th annual Cattlemen's Day on May 7 at Kansas State university will be dedicated to Dr. Rufus Cox, former head of the department, now retired. A special recognition ceremony is planned.

Highlight of the event will be an afternoon address by Dr. Hilton M. Briggs, president of South Dakota State university, concerning "Trends in the Beef Cattle Industry."

Registration begins in Weber Hall arena at 8 a.m.

Morning KSU research reports at 10 a.m. will include Dr. David Ames, "Buffered Environment for Livestock"; Dr. Harold Tuma, prefabrication of beef carcasses in the future; Dr. Keith Huston, "Livestock Pollution Status in Kansas"; Dr. Calvin Drake, current nutrition research, and Dr. Robert Schalles, cowherd research. Fred C. Germann, president of the Kansas Livestock association, will speak.

Following Briggs' address in the afternoon, cattlemen may visit the KSU Beef Cattle Research center. Also of interest will be demonstrations in Weber Hall arena showing a computerized least-cost ration and predicted gains from it, rations for bull performance testing, and a frozen meats demonstration.

On Thursday evening prior to Cattlemen's Day, the Kansas Cow Bells have a dinner in the KSU Student Union. Reservations should be made to Mrs. Don Good, 2027 Sunnymeade Road, Manhattan, Ks. 66502.

Special women's activities during Cattlemen's Day include a 10 a.m. coffee at Weber Hall Memorial Library and a program conducted by Mrs. Mary Jo Huseman, home economist for the Kansas State Board of Agriculture.

Cow Feed From Human Trash?

Human trash could become the raw materials for animal feed in the future, if research being conducted by Dr. Ronald R. Johnson at Oklahoma State University, Stillwater, becomes conclusive.

"Many waste products are, to some degree, fibrous materials," Johnson said. "This digestibility ranges from zero to a useful value."

Nutritional value of hardwood bark, sawdust, and tree limbs discarded by the woodpulping industry is being studied by Johnson at Oklahoma Agricultural Experiment Station.

Lignin — an indigestible organic material that masks fibers — impedes digestion of the cellulose and hemicellulose, Johnson said, thus slowing the use of wood fiber as a useful form of energy.

Johnson said this roughage material should be of use to ruminants such as cows, however. He also is proceeding with basic research on use of rice hulls for animal feed.

Waste paper, municipal rubbish and sugar cane pulp also contain high proportions of cellulose of fiberous materials that might be used for animal feed.

The researcher believes chemical processing may be needed to make these materials usable, as are garbage and table wastes that are readily recycled into animal feed.

Johnson said animal feed use for waste would reduce pollutant effects of the waste.

See More Promise In Japan For Farm Exports

Officials of 12 midwest states who participated this month in the Tokyo Trade Show are enthused about the promising and rapidly growing market for midwest farm products offered by Japan and the Far East.

Ken Boughton, Marketing Division director of the Kansas Department of Agriculture, said 43 food companies of the Mid America Agri-Trade Council (MIATCO) Region displayed more than 500 types of processed food articles. Kansas product bank member TNT Food Products Inc. of Lawrence displayed popcorn products to Japanese buyers. TNT was presented by a Japanese trading company at the Tokyo show. More than 2,000 Japanese food buyers and food trade leaders participated in the six day event.

MIATCO is an organization composed of the Departments of Agriculture of Kansas, Illinois, Iowa, Indiana, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota and Wisconsin.

It was established in April, 1970 to expand and develop foreign markets in cooperation with the Foreign Agricultural Service, U.S. Department of Agriculture.

Gordon Ropp, Director of the Illinois Department of Agriculture, headed the MIATCO delegation to Japan. "The economy of Japan has been one of continual and rapid growth," Ropp said, "they will have a 10 per cent increase in Gross National Product over last year." He added, "A foot in the door to the Japanese market means more to midwest agriculture than the more than 100 million increasingly affluent Japanese consumers."

"As important, or even more so," he said, "is that Japanese traders have distribution points and do business in areas like Singapore, Hong Kong and others. This provides additional opportunities for selling our commodities."

Wolfgang Grundei, Executive Director and coordinator for the MIATCO organization and Japanese Trade Show noted that 12 MIATCO organization and Japanese Trade Show noted that 12 MIATCO member states accounted for about 50 per cent of the agricultural exports. "Agricultural Exports from MIATCO states totaled 3.2 billion in fiscal 1970." Grundei said, "Six of the members were among the top states in export shares, led by Illinois, which was first with an export of 650 million." Kansas ranked sixth nationally with an export total of 314 million in fiscal 1970.

U.S. agricultural exports for calander year 1970 reached 7 billion, of which Japan purchased 1 billion, to make it the U.S. farm largest single customer.

SATURDAY, MAY 1

STARTS 9:00 a.m. LUNCH SERVED

In order to settle the estate of the late Inez Lindahl the following personal property will be sold at the home located ½ block south of the Methodist Church in Marquette, Kansas.

Household and Miscellaneous

1962 Plymouth Belvedere
Complete line garden tools
Fishing equipment
6 Lawn chairs and glider
Elburn piano and bench
R.C.A. television
Dining table, buffet, 6 chairs
2 3-Piece bedroom sets
5-piece bedroom set
Hollywood bed and dresser
Divan
3 Occasional chairs
Platform rocker
2 Corner shelves (fancy)
Desk
Library table
Floor lamps
700 Bales alfalfa, shedded
Several sets luggage
5-Piece kitchenette
Dropleaf table and 4 chairs
IHC Refrigerator
IHC Freezer, chest type
Kenmore washer
G. E. Range
Mangle iron
Singer sewing machine
Sears carpet sweeper
Hoover vacuum sweeper w/att.
Center and end tables
T. V. Trays
Cosco table
Several kitchen stools
Table lamps
Hall tree
2 Cedar chests
Record cabinet
Flower stands
Linens, bedding, quilts
Table linens
Cooking utensils and dishes
Auto griddle
Waste baskets
Hampers
2 Bathroom chests
Folding bed
Electric fans
Straight chairs
Silverware
Small electric appliances
Christmas decorations

Collector and Antique

AUCTIONEERS NOTE: This listing does not nearly cover all of the items of a miscellaneous nature. The collector and antique items are of good quality and condition consisting of sets and individual pieces.

China and Glassware

Pitchers, assorted
Salt sellers
Toothpick holders
German chocolate set
Carnival pitcher and 6 glasses
Footed cake plate
Teardrop candy dish
Vase, cutglass
24-Piece Swedish plates and stemmed glasses, (cutglass)
150 Vase collection
Bavarian, German, English sets of dishes
Fruit compote
Souvenir plates and glasses
Doll dishes
Avon bottles
Carnival glass, assorted
6 Glasses, crystal
Salt and pepper shakers
Milk glass bowl, lace edge
Celery dish
Relish dishes, assorted
20 Bone cup and saucer sets
Mustache cup
China knick knacks

Furniture

All brass bed
Round oak table
Singer sewing machine
Secretary bookcase
5 Chairs, needlepoint with porcelain casters
1 Rocker, porcelain casters
Arm and straight chair, matched
Wicker seat sewing rocker
Wicker seat stool
Wooden wheel chair
Child's rocker
2 Washstands 1 w/teardrop pulls
Oak highback bed, carved
Cast iron leg stools
Oak tea cart
Walnut night stand
Captain chair
Dresser and oval mirror
Wood rocker
Platform rocker
2 Center tables
2 Pie tables
Coffee table
Wicker settee and chair

Miscellaneous

Cast iron elephant
Cast iron cannon, miniature
3 China head dolls, 2 with leather bodies
Sleigh bells
5-Piece silver tea and coffee service
1910 Rodger sterling table service
Assortment of pictures and frames
15 Needlepoint pictures and frames
Several Birger Sandzen pictures
Necktie box and contents
Books of all kinds
Wicker baskets, assorted
Trunks
Ink wells
Umbrellas
Doll buggy
Doll house and barn
Iron floor lamp
Table linens
Dryden pottery
Kerosene lamps
Crock churn
Trumpet and music
Fireplace iron ends
Cosmetic items
Clocks and radios

Many other articles too numerous to mention

Auction SALE

Saturday, May 1

Starts 10 a.m. — Lunch Served

We will sell the following listed items as we are moving to Abilene. Sale located at Abilene, Ks., 2 miles south, 3½ west & south; or from Solomon 4 miles east & south, ¼ east, then ½ south.

MACHINERY

1952 AC WD tractor with live power, PTO, in good condition
AC 1943 Model B tractor with mounted mower, good tires, in good condition
1947 AC Model C row crop tractor with 2 row cultivator in good condition
AC 3x14 plow, snap coupler
AC No. 50 combine with tandem wheels, canvas Innes pickup att., cleaner att. for alfalfa. Shedded all of the time & in good condition
AC 2 row lister for C tractor, good
JD 2 wheel manure spreader on rubber, good
AC 3x14 3 pt. plow
AC 3 sec. 24' drag harrow
AC 10.6 ft. single disc
IH 400 springtooth harrow, 3 section
Dump rake
4' tumble bug
2 row stalk cutter
Osborn side delivery rake
P&O 2x14 pull plow
IH 12x8 grain drill
IH 12x8 grain drill with feeder

MISCELLANEOUS

Two 4-wheel trailers with grain box
3 IH 6' hay windrowers
AC 6x11' grain auger with electric motor
2 IH feed grinders
Small camper for pickup
Cattle oiler; 6' stock tank; 3x10' stock tank; large block & tackle; some lumber; roll of hog wire; chicken wire; approx. 100 steel posts; some hedge posts.
Several KP&L light poles; hay rope; long cable; 32' extension ladder and others; grindstone; 3 bundles of cedar shingles; 2 hand corn shellers; electric brooder stove; emery grinder, mandrel and wheels.

Sprayer; bolt cutter; 1 ton chain hoist, good; several sets plowshares; shovels; forks; scoops; hog wire stretcher; chains; steel post driver & puller. Lots of other tools not mentioned.

ANTIQUES & HOUSEHOLD ITEMS

Coronado 20' 2 door combination refrigerator and freezer, good; Frigidaire 30" electric range, good; GE 9300 BTU air conditioner, good; Maytag square tub wringer washer, new.

Modern large dinette set with formica top, extra leaves; full size metal bed with springs and innerspring mattress.

Huffman 23" TV; Coronado console radio; steamer trunk; Singer treadle sewing machine; Fiesta Rotobroil No. 17 rotisserie and stand.

Small oak buffet; 10x11 Bigelow rug, floral design, with pad; Coronado No. 17 electric cream separator.

Project For Feedlot Fertilizer Sans Pollution

Is it possible to increase cropland production through the orderly application of feedlot manure and stormwater runoff while minimizing the effects of pollution?

Kansas State University scientists are attempting to achieve these goals in a research project being conducted in cooperation with the Pratt Feedlot, a commercial feedlot of 30,000-head capacity at Pratt, Kansas.

Objectives of the research are 1) to characterize feedlot stormwater runoff, 2) to characterize manure generated in a feedlot and 3) to determine the influence of different lagoon water and manure treatments on the soil, stormwater runoff from the disposal areas, and corn yields.

Stormwater runoff from the feedlot is measured as it flows through channels and is sampled periodically with automatic vacuum samplers. Analyses have shown that runoff from snowmelt has had a pollution load several times that from rainfall.

In one phase of the study, corn was grown on plots which received 0, 2, 4, 8 and 16 inches of lagoon water. The plots were irrigated with well water as needed and forage yields were taken.

In another phase, manuare was removed from the feedlots at the end of a feeding period and stockpiled for application onto land at a later time. Seven to 10 pounds of dry solid wastes per animal were removed during cleaning. On a dry weight basis, nitrogen averaged 1.2 per cent and phosphorus 0.5 per cent.

In another part of the project, corn was grown on plots on which manure was plowed down at rates of 0, 10, 20, 40, 80, 160 and 320 tons per acre. Manure used on the irrigated plots was relatively high in nitrogen, phosphorus, calcium, iron and potassium with lesser amounts of magnesium, sodium and zinc.

Researchers found that the plant population decreased as the rate of manure application increased. Forage yields increased as rate of manure application increased, up to 80 tons per acre. Corn yields were depressed when more than 80 tons were applied. Soil analyses have indicated large accumulations of salts in the soil from heavy applications of manure.

Runoff during rainfall is collected from the waste disposal plots. The scientists noted that the pollution load of runoff has been greater from treated plots than from check plots.

FARMERS OUTLOOK

L.H. Simerl

April 27, 1971

Plenty Of Beef In Feedlots

The quarterly report of cattle on feed issued on April 16 indicated that beef supplies may be slightly larger during the next few months, as they were a year ago. Farmers are putting a few more cattle through their fattening pens, but they are selling them at lighter weights.

The USDA report was based on a survey made the first of April, when farmers reported that they were fattening 11,731,000 cattle and calves. This was only 1 per cent more than a year earlier. However, the number of cattle moving through the feedlots is probably up 2 to 4 per cent, because farmers are marketing their cattle at lighter weights this year than in 1970. Hence, the average stay in feedlots is shorter. This makes fewer cattle to count at any one time in relation to the total number being fattened during the season.

The statistics in the report show the tendency to market cattle at lighter weights. Thus, the number of steers weighing over 1,100 pounds was down 8 per cent, and the number of heifers over 900 pounds was down 17 per cent. The largest increase in the number of cattle on feed consisted of steers weighing 700 to 900 pounds — up 9 per cent from last year. There was also a large increase, 26 per cent, in the number of heifer calves (weighing under 500 pounds) on feed. The drouth in the southern and central Great Plains probably forced ranchers to sell some of the heifers they had expected to keep for breeding purposes.

Farmers reported that they planned to market 6,238,000 fed cattle during April, May, and June — 5 per cent more than they did a year ago. In order to do this they will probably have to sell their cattle at lighter weights than they did a year ago. The reduction in average weights probably will be 2 or 3 per cent — 20 to 30 pounds per head.

Competition from pork will be very heavy during the next few months. Hog marketings may exceed year-before figures by about 20 per cent. Last year, the prices for Choice steers averaged around $29.50 in May, $30 in June, and $31 in July, then declined to $26 by December.

Drouth Threatens Feed

The drouth began in Texas and Oklahoma early last summer. By September, it had moved up to the Canadian border and covered most of the Great Plains and the western edge of the Corn Belt. Fall rains provided temporary relief.

There was very little rain during the winter in Texas and the Southwest. The principal grain-producing areas in Illinois, Indiana, and Ohio were also dry. By mid-April, the drouth had become severe over a large part of the feed-producing section of our country.

The wheat crop is already severely damaged in many parts of the Southern Plains. The corn crop will also be short — unless the weather is unusually favorable from now on. The corn will need more rain than usual in order to produce a normal yield.

There may yet be good crops of corn and sorghum in many areas. But the combination of reduced grain stocks, a shortage of soil moisture, and the danger of hot winds is expected to keep prices fluctuating widely during the next several weeks.

34% Hog Buildup

The thing about the huge buildings of hogs in Kansas in the past year is that it is so unanimous.

The entire state accelerated its hope that there was a buck to be made in hogs, and not one of the 105 counties in the state cutback on its hog numbers from the year before.

The count, on December 1, 1970, was 2.202 million, says the Kansas Livestock Reporting Service, and the statistical service figured that only Kearny county (Lakin) in far western Kansas managed to hold its hog census even to figures from the year before.

For all other counties, the figures were up, up, up.

HOG COUNT

Figures in each county show the number of hogs as December 1, 1970. The second figure shows the change from the year-before count. The leading county in the state, for example, is Washington, which had 88,000, an increase of 18,000 from the year before. Washington is on the Nebraska border slightly east of the center of the border.

Overall, the increase amounted to 34 per cent. The figure from the year before was 1,643 million. The top million mark was reached for the first time since the middle of World War II.

The hog business has always been rather like a yo-yo — up and down, up and down, up and down. Hog breeders had had one of the longest up-cycles in the late 1960s, as prices were clearly profitable much of the time and at least satisfactory to all but the most pessimistic.

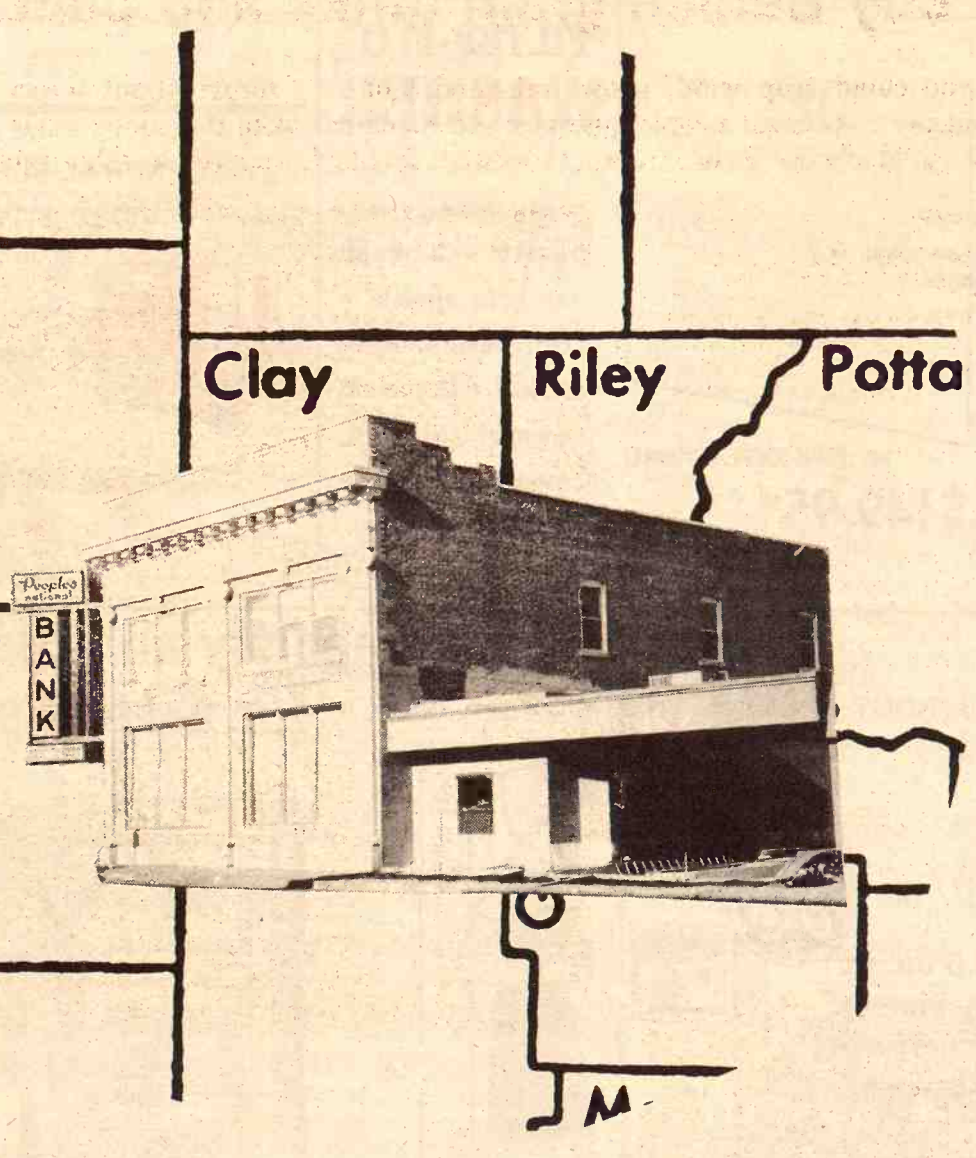

From about 1966 on the state's hog count pushed up about 50 per cent, but the count in 1969, reflecting persuasion from oldtimers in the field, dropped about 7 per cent. As it always has in the hog business, the buildup ultimately made itself felt in the market, with hog prices in the latter part of the year not great enough to show substantial profit, or even any profit for the latecomers in the field especially.

Of course the view that higher or lower hog counts in Kansas reflects market prices may be excessively parochial. It doesn't count the other major hog-raising states of the midwest, which last year increased their numbers, though not to the degree that Kansas did.

It also presumes that the current inventory estimate by the Reporting Service is reasonably accurate, a point of contention sometimes.

The Reporting Service should have regained some of its status

Buildup Was Unanimous

with hogbreeders, however, for the second time in three years the preliminary estimate of April has proven to be substantiated almost to the thousand by the official figures gathered later in the year from assessors' reports.

Thus, the statisticians have gained some face with the hog breeders, who were muttering about figures don't lie, but liars can sure figure" after the preliminary figures of 1966 and 1967 proved to be 9 per cent and then 8 per cent too low.

The hog situation has long been a nightmare for the statisticians. The size of litters, the ease of breeding, the shortness of gestation, the quickness of fattening and the easy relationship of the public's taste for pork with its price, had promoted quick changes in the market.

While all areas of Kansas increased their numbers of hogs last year, the most marked buildup was in the Southeast, which the year before was the only area to show an increase. Hog numbers in 14 southeast counties were up 60 per cent in 1970.

The northeast, which directly utilized its longtime leadership as a corn producer to dominate state hog production for many years, showed a gain of 33 per cent, about average for the state.

The northeast no longer dominates hog production to the degree that it has in the past. For 20 years, it was automatic that Nemaha would be the state's leading hog producer, and Brown and Doniphan would follow.

Three years ago Nemaha cost its title to Washington county as the state's number one hog producer, and Washington holds the rank thru the current census. Washington counted 88,000 hogs and pigs on December 1, a gain of 18,000 from the year before, to stay ahead of Nemaha's 84,000 count.

The top four state hog counties lie along the Nebraska border, with Jewell and Marshall following Washington and Nemaha in the standings. The dominance of the Nebraska border counties in state swine production has prevailed for many years, but has shifted westward from Sabetha-Hiawatha-Horton-Troy.

Just as a strip of northern counties finished 1-2-3-4, a strip of three counties centered at ElDorado finished 5-6-7. Butler (ElDorado) was 5th, Cowley (Ark City-Winfield) was 6th, and Marion was 7th.

Three more counties along the northern tier along with two neighboring counties ranked next, with Republic (Belleville) ranking 8th, Pottawatomie 9th, Clay 10th, Brown 11th, and Smith 12th.

It was the third straight year out of the top 10 for Brown (Hiawatha-Horton), which ranked 1st, 2nd or 3rd through most of the 1940s, 1950s and 1960s.

Leading the buildup in the southeast was Montgomery (Coffeyville-Independence) which ranked 13th with 43,000. Doniphan (Troy), also a top ranker until three years ago, moved up to 14th.

Reaching the 2 million mark this year marked the high point for Kansas since the state's swine inventory dipped to an all-time low of 697,000 in 1954.

The state didn't get back to a million mark until 1958, with the count staying rather steady around 1 one-third million, finally breaking the 1 ½ million mark, in 1968, for the first time since 1951 and only the second time since the middle of World War II.

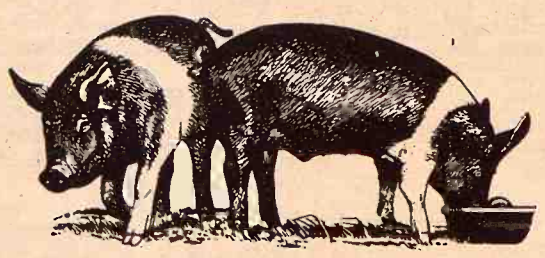

Though the current count is the highest since then, it is no record.

The state had over 2½ million hogs as early as 1890. There were 3 million hogs counted as early as 1898, and the 3 million figure was reached again in 1907-08, 1929 and 1932-33.

Federal programs of the depression 30s and low prices cut state herds down to little more than one-fourth of peak numbers in 1937 and 1938.

Hog counts in the state have been relatively stable since 1939, however, except for a buildup during World War II and the drastic retrenchment of 1953-58.

On the basis of population growth, it appears reasonable that Kansas would only be maintaining its share of the market if its hog inventory continued over 1½ million. Two million might indicate too much of a buildup for a profitable market, unless Kansas gets its increase at the expense of other hog-breeding states or unless pork promotions effectively get more pork into the American diet.

THE TOP 25 HOG RAISERS IN KANSAS

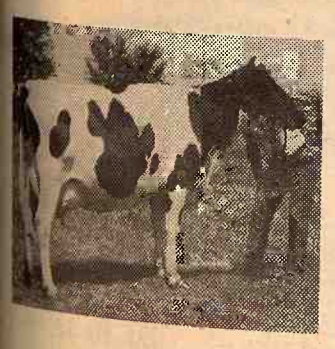

The top 25 counties in hog production as of December 1, 1970, are these:

1.	Washington	88,000
2.	Nemaha	84,000
3.	Jewell	72,000
4.	Marshall	62,000
5.	Butler	62,000
6.	Cowley	55,000
7.	Marion	54,000
8.	Republic	50,000
9.	Pottawatomie	48,000
10.	Clay	48,000
11.	Brown	48,000
12.	Smith	46,000
13.	Montgomery	43,000
14.	Doniphan	42,000
15.	Dickinson	40,000
16.	Neosho	38,000
17.	Phillips	38,000
18.	Sedgwick	36,000
19.	Harvey	36,000

Our heavier, deep ridged steel shell is only *one* reason so many farmers buy Behlen grain tanks and buildings

If you could stop wind, snow, rain and hail . . . forget about insect and rodent damage . . . prevent people, animals and machines from damaging walls . . . then you could choose farm structures without Behlen's rugged, weathertight shell.

You could.

But, even then, you might not

. . . because Behlen products won't cost any more than many thin-skinned structures. They stay looking better, longer . . . and they're so simple to erect.

Case in point: the Behlen Curvet.

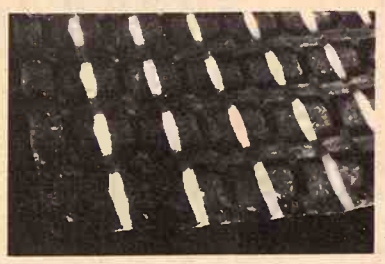

It gives you far more value for your building dollar.

You can pile grain 10 feet deep against the husky sidewalls of grain storage models. Utility models provide safe, economical storage for machinery. Or, steel partitions let you **store both grain and machinery under one roof.**

Big double slide doors make it easy to get in and out. Building sizes from 33 to 68 feet wide. Nearly any length.

All parts are punched and formed for fast, bolt-together erection.

Wide 41" panels go together fast. And, you can add on at any time.

Or, if vertical storage fits your farm best, you can choose Behlen grain tanks and get the same kind of "steel fist" protection.

"Waffle Panel," a powerful network of ridged steel muscles, protects each tank from top to bottom.

It's an exclusive double-corrugation. Incorporated into vertical panel construction, it multiplies the tank's rigid strength.

There are no weak spots.

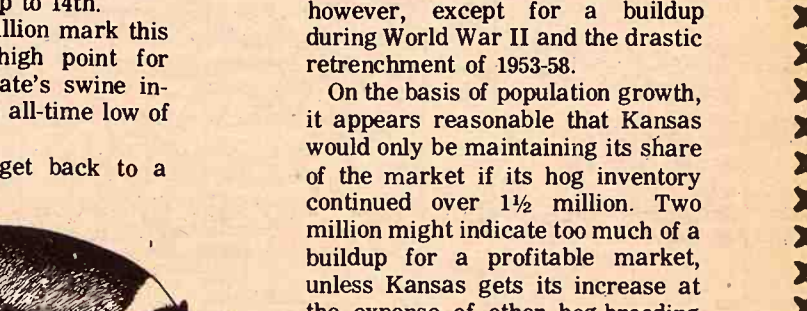

Panels lock together with ⅜" galvanized bolts every 3" (1½" on tanks larger than 7,000 bushels). Butyl stripping, pressure-sealed into seams, keeps moisture and pests outside.

An overlapping "Eave Seal" locks walls and roof into one solid unit. Even the oval door is double sealed.

Behlen's steep-pitch roof design lets you use every cubic inch of grain tank.

Fill it to the peak.

A wide range of capacities (from 1,135 bushels to 46,230 bushels) gives you a size that meets your needs.

In fact, there are big-muscled Behlen products to meet every grain storage, drying and handling need. Practical products, built for maximum use, built to match . . . to work together with ease as a completely integrated system.

You name it. Wayland Construction Co. can give you complete information on buildings, tanks, elevator legs, all types of grain dryers. See them soon.

Dairy Numbers Fairly Steady After Reporting Adjustment

When the Livestock Reporting Service produced its "official" livestock census last year, it proved to have a rather amazing record in its first-of-the-year preliminary figures.

It counted about 6 million beef cows with hardly an error at all. Its reckoning of some 1,643 million hogs and pigs in the preliminary figures proved to be exactly the right figure when the official figures were tabulated off assessor's reports. Its estimate on sheep and lambs proved exactly right also. In estimating something so numerous as chickens as its early error was little more than one per cent.

In fact, the smallest number the Reporting Service had to work with last year was the dairy cattle census, and it produced the greatest adjustment.

When the Reporting Service figured the number of dairy cattle at the start of 1970 as 224,000, that proved to have about a 10 per cent error.

When the official figures were put together, the dairy census was placed at 204,000.

Writing off the error in the preliminary figure a year ago, it does now appear that the steady decrease in dairy cattle over the past four decades has now slipped back to about a rock-bottom figure. The Reporting Service figured the county as of January 1, 1971, was 198,000 — a decline of about 3 per cent from the final figure a year ago.

Not a single county was figured to have increased its dairy county, but 41 counties were estimated to have held steady: i.e., the count was so close that the Reporting Service figured the new tabulation was identical to the official figure a year ago.

While 64 counties were figured to have had some decrease in milk cows, all of the declines were small.

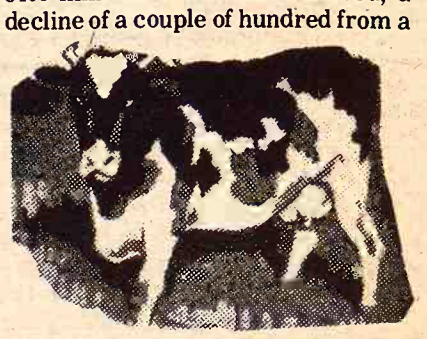

The decrease had averaged about 5 per cent a year during most of the 1960s when dairy farmers were about low men on the financial totem pole. In the last three years dairy income has turned around considerably, not so good as some dairymen would hope for but certainly far more favorable than was possible in the early and mid 1960s.

For a number of years the decline in the number of dairy cows on Kansas farms was primarily attributed to the small family milking operation. Old Bossy lost her place in the barnyard.

As a symbol of the family farm, the milk cow became less representative and for several years it appeared that the large dairy operation was losing out too.

The steadiness of figures this year may indicate that the number of dairy cows in the state can get little lower and meet consumer demands. Moreover, while requiring great work and management, dairying has become about as profitable as any line of farming.

The state's leader, Nemaha county, was figured to have about 8400 milk cows that have calved, a decline of a couple of hundred from a

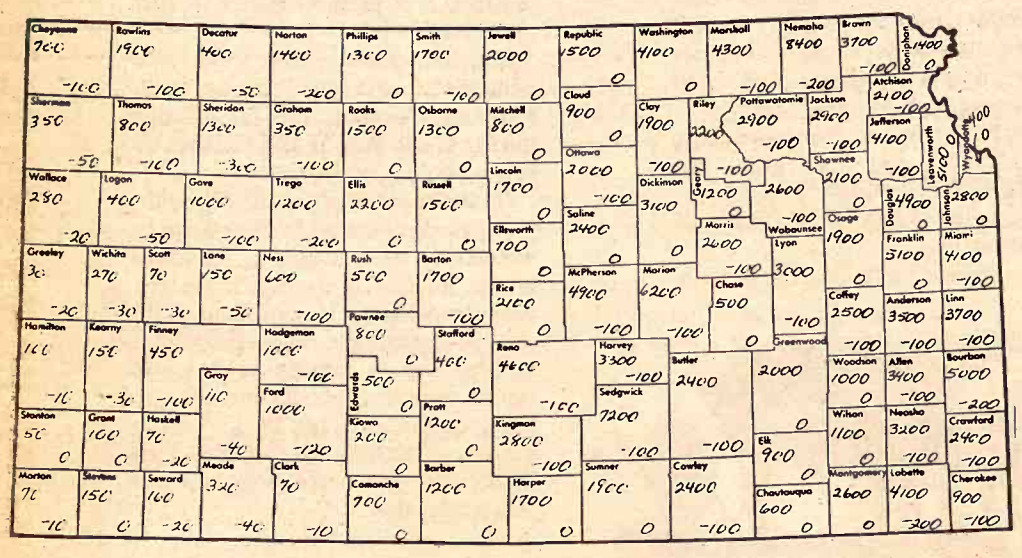

year ago. Sedgwick and Marion — the state's second and third ranking dairy counties — also showed small declines. Leavenworth and Franklin (Ottawa) finished 4-5 and held steady at 5100 cows each. Bourbon (Ft. Scott) ranked 6th with 5,000 and Douglas (Lawrence), McPherson, Reno, and Marshall (Marysville) finished out the top 10.

Kansas had its all-time peak in dairy numbers in 1934, and 967,000. The current figure is little more than 20 per cent that zenith.

The number has dropped steadily since 1934, although there was a brief increase during World War II when the count got back to 841,000. When livestock inventories were first taken in Kansas in 1890, there were 648,000 milk cows.

While the number of milk cows drops, the production per cow goes up each year so that the decline in milk production is slight and in some years the productivity gain exceeds the loss in cows producing.

DAIRY COUNT IN KANSAS

The map shows the number of dairy cows that have calved in each county as of January 1, 1971. The second figure within each county shows the change (+ or -) in each county from a year ago. For example, the state's leading dairy county, Nemaha, has 8400 head of dairy cattle, 200 less than a year ago.

THE TOP 25 DAIRY COUNTIES IN KANSAS

The top 25 ranking counties in Kansas in number of dairy cows as of January 1, 1971, are these:

1.	Nemaha	8400
2.	Sedgwick	7200
3.	Marion	7200
4.	Leavenworth	6200

New Canadian Rules On U.S. Livestock Imports

Officials at the Canadian Department of Agriculture recently announced changes in regulations designed to prevent the spread of livestock disease from the U.S. to Canada.

Control on anaplasmosis in cattle and bluetongue in sheep is the aim of the new regulations. Cattle formerly had to be free of brucellosis and tuberculosis before they could be imported.

Since the successful eradication of an outbreak of anaplasmosis in 1968, Canadian cattle have been free of the disease. Cattle being shipped from the U.S. to Canada must not be accompanied by a health certificate signed by a veterinarian of the U.S. Agricultural Research Service.

Points covered by the certificate specify that the herd of orgin has been inspected within 30 days of shipment and no clinical evidence of anaplasmosis was found.

The veterinarian must also certify that, to the best of his knowledge, anaplasmosis has not been found in the herd during the prior two years.

He must also test each animal for anaplasmosis within 30 days of the date of shipment. If a reactor is found during the individual tests, none of the animals from the herd can be imported into Canada for at least two years.

LETTERS— from the G&G Area

To G&G Readers:

A letter from Mrs. Lowell Davidson of Hope in the April 20 Grass & Grain missed the word "not" in a sentence and changed the meaning of Mrs. Davidson's letter. The point Mrs. Davidson made is that a change in the price support of milk did not really affect the consumer price because the market price is over the price support. The absence of the not changed the meaning, and G&G regrets the error.

Mrs. Davidson had written noting that some news stories implied that the change in price supports came as a result of pressure from dairy groups and that the change made by Secretary of Agriculture Hardin could increase the consumer price of milk.

Auction SALE

We will sell at public auction the personal property of the late Ruth Signer at her residence located 817 North Broadway in Chapman, Kansas.

Ford's Special Spring Values

Above, Special Torino 2-Door Hardtop
Below, Special Mustang Hardtop

Specially styled, specially priced Mustang and Torino at your Ford Dealer's now.

Mustang...with a racy look you've never seen on our hardtop before.

You take a classic Mustang Hardtop. Add a sports car hood—NASA-type scoops and all. Dual racing mirrors. Color-keyed Spoiler bumper. A unique grille with sport lamps. Brighten the sides with Boss-tape stripes. Wide tires with special trim rings. Then cut the price of all the extras and you're home.

Spring won't last forever. Neither will your Ford Dealer's Special Spring Values.

Torino sports an all new vinyl halo roof and other extras at a very special price.

Take our beautiful Ford Torino. Put new styling accents on the roof, the wheel covers, the sides, the doors, the upholstery. Add lots of other luxury touches for a very different look. But underneath, it's the same mid-price, mid-size Torino that's big enough to seat six, small enough to handle and park easily. See the new spring Torino and the 14 other Torinos at your Ford Dealer's now.

Special Spring Values at your Ford Dealer's now! FORD

More Options Into GM Car Prices

General Motors Corp. is raising car sticker prices by amounts ranging from $116 to $439 by making optional equipment like power steering and automatic transmission standard on most full-size cars.

GM did not announce the changes but confirmed it had sent letters to dealers outlining the new practices. The changes take effect on cars shipped to dealers on or after May 1.

It was the latest in an unprecedented series of pricing changes affecting 1971 models. GM made two major price increases last fall, one when the new models were introduced and the second after the lengthy auto workers strike. Then in February GM made another change in prices when it came up with a new procedure for handling the work by dealers preparing cars for delivery.

A spokesman said the changes include the "addition of an automatic transmission and power steering as standard equipment on certain models for which these are now available as options, the elimination of six-cylinder engines on some models and other engine changes in two other models.

"The automatic transmission is currently ordered as optional equipment by at least 99 per cent of the customers buying the models involved. Power steering is being ordered by over 95 per cent of the customers buying those models on which it will become standard."

The six cylinder engine is being removed from the Olds F-85 and Buick Skylark models with the V-8 the only engine available .

A 400-cubic-inch V-8 will now be standard on the Pontiac Catalina wagons instead of the 350 inch now standard.

A spokesman said that while pricing adjustments will be made to cover the extra equipment "the changes will not present any additional profit to GM on sales of comparably equipped cars to dealers."

The automatic transmission has been added as standard equipment to all regular size Chevrolet cars with V-8 engines; all regular size Pontiac cars, all regular size Oldsmobile cars except the "98" and Toronado where it is already standard; and all regular size Buick cars except the Electra 225 and the Riviera where it is already standard.

Power steering will be standard on all six-cylinder and V-8 regular size Chevrolet cars and the Monte Carlo, and the Pontiac Catalina and Catalina Brougham models, including Safari wagons. It is already standard on the larger GM cars.

Power disc brakes were made standard on all full-size GM cars with the start of the 1971 models.

Focus On Cowherd At St. Joseph August Meeting

A beef cow herd can turn the average Midwest farmer or cattle feeder into the most efficient farm operator in the country. And this idea — cows in the Corn Belt — will be the theme of the first Midwest Beef Production Conference August 19 and 20 in St. Joseph, Missouri, reports Jim Sprake, conference chairman.

The program, sponsored by the Livestock Business Associates, St. Joseph, Area will bring together some of the top beef cattle experts and producers in the United States. It is open to all persons in the four-state area of Iowa, Kansas, Missouri and Nebraska and will cover all phases of beef cow production. The object will be two fold. First, to show all farmers how they can become more efficient by adding a beef cow herd to their operation. And second, to help established cowmen do a better job of managing and marketing their cattle.

A highlight of the conference will be a presentation by Dr. L.S. Pope, Texas A&M University of the beef cattle potential of the Midwest. His illustrated talk will show how patterns of feeder cattle movement have changed over the years and how these changes favor the Midwest cow-calf producer. He and others will explain how the tons of corn stalks and other forage that are wasted in the Corn Belt each year can be used to profitably support a beef cow herd.

The two-day event will also be highlighted by a trade show featuring the latest cattle handling and forage harvesting equipment plus displays by bred association and animal health products and feed manufacturers.

Complete information on the conference and details on registration and room reservations will be announced later.

Fertilizer From Moon Dust?

Scientists hope that a pinch of moon dust, a nuclear reactor and a few lettuce leaves will teach them how to better fertilize plants to grow food.

The experiment, to be conducted at Texas A&M University, will explore an unexpected result from the Apollo moon missions.

Following the first moon landing of Apollo 11 in 1969, scientists added moon soil around the roots of various laboratory plants. On some plants there was no reaction at all. On others, the soil seemed to cause unexpected growth.

This was particularly puzzling to scientists because current soil-less show plants take their food from the soil in a form of solution and not from the elements in moon dust is insoluble in water.

"We synthesized the soil for the plants using the best formula available," says Dr. Paul Baur, a North Texas State University botanist working at the space center. "The soil should have had everything the plants needed, but when we mixed in the moon soil..."

But the formula soil "didn't seem to be enough for some of the plants," he said. "The lunar soil must have contributed. Something from the moon soil is helping some of the plants grow."

Just what that "something" is may be answered with the help of the A&M nuclear reactor and the lettuce plants.

Later this month, he says, the activated moon soil will be placed around the roots of lettuce plants. Then the lettuce uses any of the moon material in its growth, it will be carried into the plant's leaves and tissues, along with traces of radiation.

After about two weeks, the lettuce will be harvested, and scientists will test for the presence of the activated elements.

Baur said if the plants took up any of the activated elements found in the moon soil they can be detected by X-ray plates. He said the process will also determine which elements in the moon dust were taken up by the lettuce.

In this way, Baur said, "we hope to find out what it is in the moon soil that helps plants grow.

"This may give us new clues to fertilizer requirements of plants and could change some of our thinking about the use of fertilizers in growing crops."

Fertilizers now are based on the idea that plants take in all their nourishment from the soil. But experience with the moon soil seems to show that plants also need some form of insoluble material.

During earlier experiments, the moon soil that was not radioactive, scientists found that primitive plants, such as liverwort and algae, responded vigorously to the moon soil. The little plants turned a deep green and grew rapidly. More advanced plants seemed to be unaffected.

The Holstein district show will be held at the state fairgrounds April 29.

The big Holstein event of the year will be the All-State Holstein Show slated for May 1 also at the fairgrounds. Judge will be Donald Collins, of Perry, N.Y. Last year the show was held at Topeka.

Should City, Not Landowner, Pay More Street Cost?

HUTCHINSON — Dallas Crable, a newly elected city commissioner here, has proposed a major policy change in the method of paying for local street improvements.

Crable wants the city at large to finance a greater share of all paving costs and is calling on his fellow commissioners to delay final action on a disputed E. 17th Street paving project until his plan can be fully explored.

The 17 Street proposal has stirred opposition but the commission tentatively decided recently to approve the project over considerable citizen opposition.

A final vote on the paving resolution will be taken this week.

Crable suggests that the city commission classify all Hutchinson streets in one of three categories: thoroughfares, arterial streets or residential.

Crable also recommends that to encourage more paving in residential areas, particularly the city's low-income south end, the city at large pay 10 percent of the special assessment costs which now are paid entirely by property owners in a benefit district with the exception of intersection projects.

The commissioner said that the city at large should pay 90 percent of the costs on all thoroughfares and 80 percent of the costs of arterial streets, giving the residents along these streets a major cost-break compared with the traditional assessment procedures in effect for several decades.

If the city at large picks up a greater percentage of paving costs, officials say the payment can come from only two sources which include the limited amount of city revenue derived from the state gasoline tax and the city's bond and interest tax levy financed with property taxes.

City Atty. John Robinson warned Crable that while his plan has merit, it probably will take several months to evaluate the tax impact of his proposal and to study additional points in the plan.

The newly elected city commission has talked of several revisions in distribution of $156,000 in gasoline tax revenue, tentatively committed by the old commission to four major street paving projects this summer.

A BUSY MAN ON SANDLOTS AND TRACTOR SALES

For 11 years Max Stowell has been associated with the Ford tractor business in Manhattan, but he's known over the G&G area and neighboring states as well for several sports pursuits. Now sales manager for Burns-Salisbury Inc. in Manhattan, Max has organized semipro football and basketball teams, composed principally of former Kansas State University players.

Called the Raiders, the football team has competed against sandlot teams in Missouri, Nebraska and Iowa for several seasons. The Raiders basketball team, captained by Lynn Dickey, record-holding K-State quarterback, traveled over 1800 miles playing benefit games this winter.

Stowell's interest in sports extends to the rodeo ring. He is booked to announce 16 shows on the rodeo circuit this year, travelling five states for the Southwest Cowboys Association and the United Rodeo Association.

Max boards horses for college-age contestants and he has a practice area for them.

He and his wife Ginny have two junior high age daughters, Brenda and Tanya.

'All Meat' Franks Deceive On Label, Says Court

A suit brought by the Federation of Homemakers against Secretary of Agriculture Clifford M. Hardin for the "false and misleading labeling" of all-meat frankfurters was decided in favor of the plaintiffs last week.

Judge Barrington Parker sitting on the U.S. District Court, ruled that "the common understanding" of the expression all-meat" is that it describes "a substance that is totally and entirely meat." He ruled that the misleading labeling violated the "Wholesome Meat Act and was a "contradiction in terms."

Frankfurters labeled all-meat are permitted by law to contain 15 per cent of non-meat substances; 10 per cent water; 2 per cent corn syrup solids and approximately an equal amount of salt, spices and curing additives.

Parker has given the plaintiffs 10 days in which to present an appropriate order to implement their suit.

Edward Berlin, lawyer for the federation, said a cease-and-desist order to remove "all meat" [illegible] labeling will be sought.

Auction SALE

Sunday, May 2

Starts 1:30 p.m.

Due to health, I am selling my custom harvesting machinery at public auction at my place in Willard, Ks., on the Rossville-Dover Road, 17 miles west of Topeka on I-70, then 2 miles north.

2 1968 G Diesel Baldwin combines with 2 20-ft. headers and 2 13-ft. headers with 2 9-ft. Sun pickups. These combines have tilt cabs, deluxe seats, 23-in. driver tires, airplane tires behind with straw choppers and milo guards.

These combines are in excellent condition and have less than a 1,000 hours each in operation.

Have two combine trailers you can load anywhere; also two header trailers, each of which hauls 2 headers.

2 International Load Starr 1,600 series, 1965 and 1966. 1966 truck has power steering. 2 Trail Wind beds, all metal 42-in. sides. These trucks have pusher axles on them and hoists and trailer hitches. They have less than 33,000 actual miles each and are in good shape.

1965 Chevrolet 1½-ton with unified body, 58,920 miles. Has good rubber and is in good shape. It has a Big Six motor. 1 fuel tank to fit this truck with 2 departments for gas and Diesel. It holds 470 gallons.

1 550-gal. fuel tank on trailer.

2 tarps which fit trucks.

1 Trailer axle with 900 tires and bud wheels.

1 Tent.

Air compressor for truck.

Buick motor, clutch, 4-speed transmission.

Power take-off for truck.

Some good used lumber. 50 2x8's, 14-ft. Sheeting to cover building 24-ft. square.

Other articles too numerous to mention.

Terms: Cash — Nothing Removed Until Settled For
Not Responsible For Accidents

ewest Sheep And Lambs Since 1920s

sheep business doesn't lack good boosters. There are ssional livestock people who nvinced that there are profits sheep business, and promoters nthusiastic that frozen meat ging will allow grocers to effectively sell lamb to the consumer.

Despite the urgings, especially from university specialists, Kansas farmers haven't gotten very excited about sheep.

In the past year there was another 13 per cent decline in the number of sheep and lambs on Kansas farms and there are now fewer sheep in the state than anytime since the mid 1920s'

The Kansas Livestock Reporting Service figured the January 1, 1971, inventory was 328,000 — down from the 378,000 of the year before.

That's the sixth straight year there has been a downward count and the eighth year out of nine. The total decline accumulates to some 61 per cent from a peak of 848,000 in 1962.

The middle plains around Wichita continue to dominate the sheep field with eight of the top 10 counties contiguous and centering around Wichita.

Sedgwick led the state with 38,500. Reno had 23,500 and Harvey 19,000. Sumner, McPherson, Kingman, Dickinson and Harper were other in-line counties to make the top 10. The two non-Wichita area counties to make the top list were Republic, with 12,000, and Lincoln, with 7,000.

Until about five years ago, western Kansas counties tended to dominate the sheep statistics. This year there were no western counties in the top 10.

As always there were some good-sized variations from county to county. Sheep numbers do jump about considerably from county to county, reflecting the vagaries of the market, the quickness of the breeding season, and the ease of great movements of sheep from one area to another.

The latter fact explains how one county may double or triple its sheep numbers from one year to another, and another county may see its sheep census slip to one-half in the same period.

For example, a year ago Grant county (Ulysses) and 5,600 sheep. This year the count was down to 100. Finney (Garden City) county's count dropped by half. But Riley county (Manhattan) jumped from 1300 to 5200.

Big sheep owners move their flocks quickly from one grazing area to another, and a feedlot moves from full to empty.

Across the state, 55 counties showed declines, 24 were up, and 16 held even.

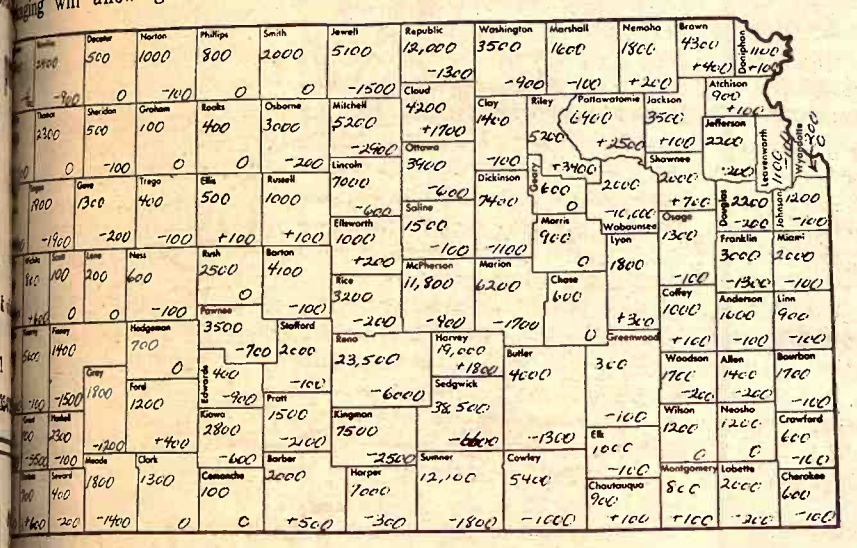

While the total number of sheep is near the record low, that doesn't mean the count won't climb again. The total dropped below 600,000 in 1956 and was nearly 50 per cent greater inside three years.

The high count since World War II was the 883,000 counted in 1959 but the 1962 census showed 848,000.

But the state's sheep census totals are still a long way from the state's peak. Back in the 1880s Kansas had over a million and a half stock sheep only for six years running.

Profits from wool are just about beyond reach at current markets, but sheep promoters think there is much potential in the sale of lamb in frozen packages. There have been test programs which have satisfied grocers, who have objected to handling lamb in the past because sales were too low to justify spoilage. There are still no processors for frozen lamb, however, close enough to handle supplying retail outlets.

A general feeling among university experts is that there are profits to be made in sheep breeding, and more farmers might take a look at the business and find it a worthwhile cash venture.

SHEEP COUNTY-BY COUNTY

This map shows the number of sheep and lambs estimated in each county as of January 1, 1971. The second figure shows the change (+ or -) from 1970. Eight of the top 10 counties are around Wichita. For example, Sedgwick, the state's leader, had 38,500 sheep and lambs on January 1, a decrease of 6600 from a year ago.

THE TOP 25 SHEEP COUNTIES IN KANSAS

The top 25 counties in the state in number of sheep and lambs as of January 1, 1971:

1.	Sedgwick	38,500
2.	Reno	23,500
3.	Harvey	19,000
4.	Sumner	12,100
5.	Republic	12,000
6.	McPherson	11,800
7.	Kingman	7,500
8.	Dickinson	7,400
9.	Lincoln	7,000
10.	Harper	7,000
11.	Pottawatomie	6,900
12.	Marion	6,200
13.	Hamilton	6,200

Okay On Young Truck Drivers

The ruling of the Bureau of Motor Vehicle Safety that would have barred 18-year-olds from driving farm vehicles during the coming harvest will be suspended for the time being, reports, from Washington early in the week said.

However, the Dept. of Transportation announced only Friday that a study of the problem is being continued.

A vast outcry from farming sections followed the ruling. Farm state congressmen are leading the way in getting the order rescinded. Both Sen. James B. Pearson and Rep. Keith Sebelius of Kansas have been active in the fight against the ruling.

Sebelius called the order [illegible] and unrealistic while Pearson moved for legislation to insure that any federal regulations when promulgated will be based on common sense and an understanding of the normal operations of the nation's farms.

Sat., May 1 — Farmland & Equipment

Auction SALE

Starts 12:30 Noon Real Estate 2:30 p.m. Lunch Served

SALE LOCATION — 5 miles south and 1 mile west of Tipton, Kansas, or 5 miles west and 2 north of Hunter, Kansas.

320 Acres Mitchell & Osborne County Land

Real Estate

Tract I Osborne County

Improved 160 acres farm. Located 5 miles south and 1 mile west of Tipton, Kansas.

Legal Description

The Northeast Quarter of Section 24, in Township 9 South, Range 11, West of the Sixth Principal Meridian.

Improvements consist of an all modern 2 story 5 bedroom home, double grainery, large barn, good corrals, excellent water system, good fences, lots of trees for natural protection.

A.S.C. Bases — Cropland 120 acres, Regular Wheat 52.2 acres, Domestic wheat 23.6, Corn 3, Grain Sorghum 7, Conserving base 31. Approximately 36 acres of growing wheat planted.

Tract II Mitchell County

160 Acre farm. Located across the road east of Tract I.

Terms 25% the day of the Sale and the balance when deed and abstract showing merchantable title is delivered to the purchaser. Taxes for 1970 and all prior year have been paid by sellers.

For further information about Real Estate contact: GERALD ZIMMER, the Auctioneer, Beloit, Ks. Ph. 738-2010.

— Also selling farm machinery, a car and a pickup, miscellaneous farm equipment and supplies, household goods and some antiques.

TERMS — CASH

For Complete Information on farmland and listings of personal items, See Grass & Grain, April 20.

Another 5% Cut In Poultry Count

's been tough to make a buck in poultry business, and the census ...ckens numbers in Kansas shows

...count of all chickens in the ... as of January 1, 1971, was ...ated at 4,635 million by the ...estock Reporting Service, a ...e of about 5 per cent from the ...l figure of a year ago — 4,879 ...on.

...at 5 per cent decline is about in ... with the average decrease over ...past 20 years. The decline was ...n slightly a couple of years ... when higher egg prices thru ... of 1969 got a lot of farmers ...ying the layer business. ...ost of them did little more than ...dy and egg prices declined ...what after that. Probably it ... not too much effort for most ...ers to avoid getting into the ...ess, for most farmers seem to ...der chickens more trouble than ...re worth.

Whatever changes occur in the poultry business in Kansas now seem to depend heavily on the emergence of the super-large laying operations or the closing of some of the larger layer farms that have already gone into operation.

The state's leading poultry county continues to be Wabaunsee (Alma) county, a leadership which startled the industry a couple of years ago, as leadership in years past had alternated between Washington and Marion counties, two highly diversified farming areas where the size of the farm encouraged the family flock.

Wabaunsee is a prototype cattle county. It has 350,000 acres in grassland and usually harvest crops off little more than 100,000 acres. Only seven counties have less cropland than Wabaunsee, and all but one of them, Chase, is a smaller county in square miles.

Alma, Maple Hill, Paxico, Harveyville, Eskridge, and Alta Vista are its only towns, and none has a population of even 1,000.

The bluestem grass in Wabaunsee is the county's pride, and no county in the Flint Hills can persuade this county south of Topeka and Manhattan that it has better grass. One does not find huge grains bins there to handle the crops, and it is so wholeheartedly devoted to the cattle industry that one would guess that it would be about the least likely area in the state to be interested in the chicken business.

Actually, few farmers in Wabaunsee county have been interested in chickens. But the ones that have been, have developed large operations and of course there is a superlarge commercial operation near Maple Hill, and Alma has one of a dwindling number of hatcheries in the state.

Likely, 85 per cent of the entire county's chicken population can be found in half a dozen operations.

The Reporting Service indicated that Wabaunsee county had about 42,000 less chickens this year than last, indicating that some of the larger operations have made some cutbacks. That is the way changes in the industry will come in the future — a decision on the part of a single layer operation can markedly alter the number of chickens in any particular county.

The second-ranking county to Wabaunsee is Reno (Hutchinson) which had 268,000 chickens, a gain of a couple of thousand. McPherson, Sedgwick and Dickinson ranked 3-4-5.

Harper, Chase, Marion, Harvey and Clay completed the top 10.

Republic (Belleville) ranked 11th, and Washington, the state's leading producer along with Marion for many years, finished 12th. Also in the second 10 are Kiowa, Leavenworth, Lyon, Trego, Ness, Marshall and Anderson counties.

Most of the top 25 counties are ones which traditionally kept more chickens then other counties in the state, although Chase is a notable exception. Chase may be the only county in the state which is more wholeheartedly a cattle county than Wabaunsee. But there it ranks — 7th in the state in chicken count with 183,000 birds. Only a few western Kansas counties have fewer farms with chickens then Chase. But there are a couple of extra large operations which account for most of the entire county total.

Last year 300 counties held their poultry count about even, 17 were up and 58 were down.

The chicken inventory has been drastically pruned over more than 20 years. The decline in the family-sized flock from the farm, lost first as a nuisance to the more prosperous post-war farmer and then as unprofitable when both chicken and egg prices got more and more marginal, made a steady cut in Kansas chicken numbers after 1945.

While the Board of Agriculture does not list numbers of chickens in the state back to 1867 as it does for some farm animals, it does show egg production since 1930.

The current production is about 850 million eggs, about one-third the production during World War II. As production per bird has increased, it is fair to assume that there were more than 15 million chickens in the state in the 1930s and 1940s.

In numbers, the chicken inventory declined from 7 million in 1961 to 6.8 million in 1963, 5.4 million in 1965 to 5.2 million in 1966.

The count went up slightly in 1967, just stayed above 5 million in 1968 and now has dropped close to another half-million in the past two years.

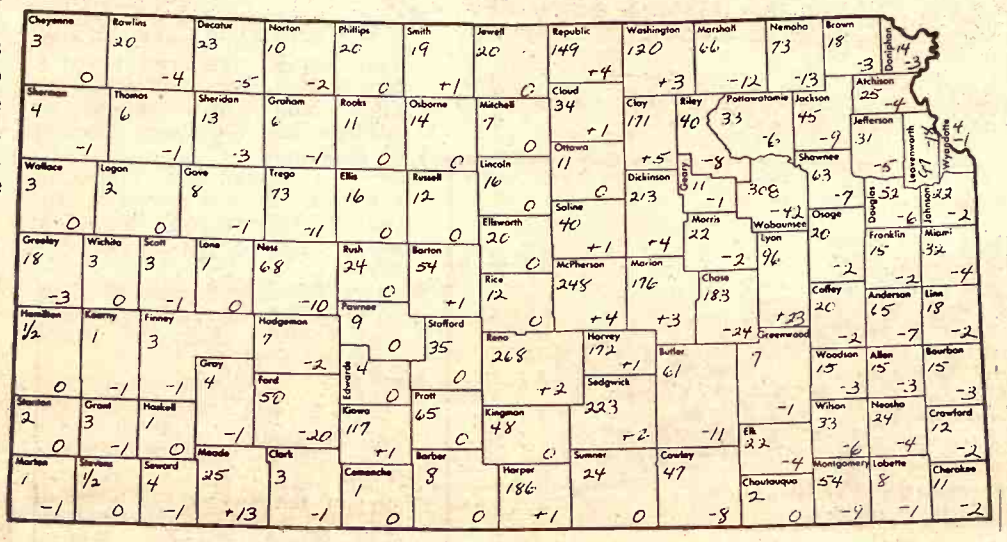

The direction the figure will take now appears certain to depend on large operations, running tens of thousands of birds.

POULTRY COUNT IN KANSAS

This map shows the number of chickens in each county as of January 1, 1971. The figure is in thousands. The second figure within each county shows the the change (+ or -) from the count as of one year ago. For example, the state's leading poultry county, Wabaunsee had 308,000 chickens, a decrease of 42,000 chickens from the year before.

Belleville Livestock Commission Co., Inc.

SELLING CATTLE AND HOGS

EVERY **FRIDAY** Starts 12:30 Noon
Hogs Sell First

With a large run of cattle on hand for our sale Friday the market looked $.50 to $2.00 higher on all classes of stocker and feeder cattle. Cows sold a steady basis with heiferettes selling sharply higher. We had a house ll of buyers, both local and from 4 surrounding states.
Listed below are some sales from our auction:

Might Try Denver Base To Run Interior Dept.

Interior Secretary Rogers C. Morton may run his department from three to six weeks from Denver, Colo.

A spokesman said the idea is under "serious consideration" but has not yet been definitely decided.

The spokesman said Morton is thinking of taking 10 to 20 members with him and operating from existing office space in a federal center where a number of major regional offices of the Interior Department are located.

He said Morton wanted to get close to "where the action is" as the Interior Department programs are focused in the Western states.

Department employes who go with Morton would receive subsistence payments to cover food and lodging up to a maximum of $25 a day, the spokesman said.

The spokesman said the trip, if it does occur, would probably be timed to coincide with any summer session Congress might take.

Johnny Ka Says:

We know he is smart because he's with us.

Ford Dealer M. B. Salisbury Is Dead

TOPEKA — M.B. Salisbury, Ford farm and construction equipment dealer at Topeka, is dead.

Salisbury died last week at the age of 72. A onetime football player at the University of Kansas and later a barnstorming pilot in the early days of aviation, Salisbury was first a salesman for J.C. Nichols in Kansas City and then a road machinery salesman. He founded his Topeka firm in 1944 and was also associated with the Ford dealership at Manhattan, Burns-Salisbury Inc.

Soybean Planting Spreads Into New Areas

Soybeans, often referred to in these modern days of agriculture as the "miracle crop," have been moving deeper into Kansas the past few years, although the state's acreage has remained generally stable.

Heaviest soybean production in Kansas is in the southeast and east central counties but production is spreading into the northeast and into fringes of the central counties. Some soybeans are now grown under irrigation in Kansas.

Increased pressure has been put on producers this year to increase acreage by the National Soybean Crop Improvement Council. Kansas farmers have responded by reporting intentions to again plant more than a million acres to beans. This would mean 1,095,000 acres devoted to the 1971 crop, about 21,000 acres above last year's total.

Kansas lags considerably behind other soybean producing states in yield per acre for the crop. Last year the Kansas crop, hurt by drought, averaged only 15 bushels per acre. The average for the past 5 years has ranged from 21 to 25 bushels.

Top midwestern soybean growers are averaging 43 bushels per acre, up 1½ bushels from 5 years ago. The national average is about 26.5 bushels per acre.

Kansas processing capacity is about 37 million bushels. Last year, due principally to the late summer dry spell, the crop fell short about 13 million bushels.

Economists are predicting that soybean demand will continue to grow over the next five years and are encouraging increased acreages this year. The price remains high. Topeka elevators were paying $2.73 per bushel last week.

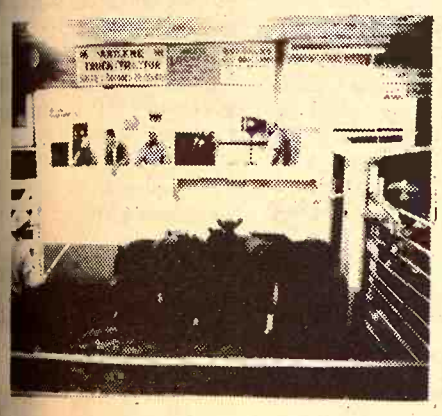

Protest Campers Fee At Milford

JUNCTION CITY — A $1 per night camping fee in the Rolling Hills federal use area of Milford Lake has been protested by the Milford Lake Water Sports Club.

In a letter to the U.S. Army Corps of Engineers, Ronald Dunn, club president, said the fee is discriminatory because it is not charged to all users of the park, such as picnickers, boaters, skiers and swimmers.

He said non campers are able to use boat ramps, latrines and showers without charge as long as they are not camping in the area.

Dunn said the club feels that if one person is charged a fee all users of the park area should pay a similar fee.

Reynolds Sale Barn

ABILENE, KS.

Selling Every
FRIDAY
Starts 1:00 p.m.

The welcome rain put a lot of steam to the market last Friday. Prices looked $1.00 or more higher on grass cattle. Feeders fully steady. Cows steady to 50¢ lower.
