· You INVESTit

And it is the most satisfactory, the biggest dividend paying investment you ever made. There is no fluctuation—no decline— the longer you own an "ACME," the better you will like it.

It is one investment your friends and seighbors will be mighty glad to see you make. It will save you dollars, lots of them, in gathering all the grain and reducing the waste to a minimum.

### All The Name Implies

"ACHE"— the highest standard—the very pinnacle of perfection—the OHE Grain Binder that HUST be absolutely right in every detail, that must back up the name to the very letter, before it leaves our fectary. And there is one Grain Binder that strives for this standard and upholds it—it is The "ACHE."

### The Tie That Binds

"ACMES" bind bundles of grain, millions of them, every year. But they do more than this—there is still another mighty important bind—one that should not be overlooked. That bind is the "tie that binds "ACME" users to the "ACME" line. A feeling of friendship and cooperation between manufacturer and user hande the name "ACME" the best known and most popular Binder wherever it is used. A feeling of condidence, rightly placed, has made the name "ACME" mean the best Binder, by far, that money can buy.

### What You Get For Your Money

The strength, rigidity and power of a battle-ship and the mechanical perfection of a watch. The best bundle maker and the surest tier. Three packers in place of the usual two. Re-volving all steel butt adjuster that handles long or short grain alike. The lightest draft of any binder made, and the surest operating machine of its kind in the world. All this and more.

### A Positive Guarantee

Every "ACME" Binder must be up to standard— every machine must give you efficient service. This our dealers guarantee to you, and we stand lack of the firms that represent us. This policy, and this policy alone, has made it possible for us to build the largest independent harvesting ma-chinery factory in the world. Therefore, it is safe to invest in an "ACME."

### Free To Farmers

Send for our Free Catalog. You will be in-terested in the book even if you are not going to buy right now, and we want you to have our Free Souvenir without fail. Ask how you can get one. Write us TODAY.

Manufacturers of Grain and Corn Binders, Mowers, Headers, Side Del. Rake and Ted-der, Sweep and Sukp Rakes, and Stackers.

Veterinary Course at Home

Dr. E. H. Baldwin writes: "I took the course for my own benefit on the farm, but the success I had started me in practice and now I am going night and day. Your course has been worth thousands to me, and will be to any man."

\$1500 A YEAR and upwards and upwards by taking our Veterinary course at home during spare time. Taught in simplest English. Diploma granted. Graduates assisted in getting locations or positions. Cost within a contract of the course of the c or positions. Cost within reach of all. Satisfaction guaranteed.

Write for particulars The London Veterinary Correspondence School Dept. 20. London, Ontario, Canada

### **WANTED:** Men to Learn the Barber Trade

The World needs more barbers than any other tradesmen. We have originated a plan to teach it quickly and earn some money while learning. Tools included, Board if desired. Open to everyone. Write today for illustrated catalogue. MOLER BARBER COLLEGE. 514 Main St., Kansas City, Mo.

### JUST ABOUT FARMING

Houston in Topeka, "is diffused sirable for Kansas. responsibility in every department." The secretary of agriculture is a champion toward larger farms is not always a of commission government in counties. healthy sign. It is caused largely by the He would have four or five commission- land hunger of Kansas farmers, which in ers, one for schools, another for roads, many cases leads men to buy additional another for health and so on. He would land that they don't need and can't make every commissioner responsible for satisfactory conditions in his line, and would provide the recall to keep the commissioners straight and on the job, or to sponsible for some of the amazing jobs get rid of any who failed to do good of farming some men do.

Commission government in would be a step in the right direction, just as the same system has been in cities. There is no telling how much commission government has saved Topeka, besides centering responsibility and making it easier and more satisfactory to deal with the city. Everybody who has business with the city recognizes the great difference in that respect. City government was becoming more costly year by year, when To-peka adopted the new plan. There were always deficits also. Now taxes are no higher than six years ago, bills are all paid up clean at the end of the year, and there is an actual cash surplus. In place of costing every year thousands of dol-lars more than the year before, the increase in city expense has been halted, and at the same time government has been better.

Commission government in counties would undoubtedly be beneficial. It is based on the correct principle, which is direct accountability and the division

### Co-operation

There are more than 7,500 co-operative associations in the United States, and they did a business last year of more than a billion dollars. Kansas has more than its share of these organizations, The co-operative movement among farmers in this country, and especially in the Middle West, is making more progress than most men believe.

The reason for the remarkable success of the movement is that there is a definite place for it. Co-operation in Kansas has increased the profits in farming, and more than this, it has taught the ducers to work together. It is filling a definite need in the life and work of the people. Co-operation will have a great deal more to do with the business of farming three, five and ten years from now than it has at present.

### Schools

Better salaries are needed for rural school teachers. The standard of the rural schools of Kansas can be materially raised by spending more money on them. Much of the efficiency of the city schools is due to the fact that liberal appropriations are made for the expenses of education there. In the cities of 4,000 persons and over in the United States an average of \$32.28 a year is spent to the pupil; in the country and the villages under 1,000 persons the average cost is \$16.52. Doesn't that indicate a reason for the low standard of efficiency which is found in many rural schools?

### Larger Farms

The rural population of Kansas not increasing in parts of the state; in some communities, especially in the castern section, there has been an actual decrease in the last few years. There is 39 per cent of the population of Kansas now in cities of more than 1,000 persons, while the proportion was but 34 per cent 10 years ago. If this movement continues it will not be long before population will be about evenly divided Kansas between the cities and the farms.

The ideal condition in Kansas farming is to have farms of a medium size, that are not so small as to keep the owners from making the most economical use of machinery and at the same time will allow the maximum acre production that is possible from an economic standpoint. High yields are not

GITHE great fault with our local gov- all the profits. Very small, highly ernments now," said Secretary tilled, low man yield farms are not de-

But on the other hand this tendency

### Creameries

There is a considerable interest in creameries in Kansas. The increasing interest in dairying is bringing up the question of co-operative creameries again or at least of the operation of the smaller local creameries. Prosperity has come to many agricultural communities by the successful operation of creameries, but, on the other hand, many farmers have lost money by investing in expensive equipment in localities not prepared to operate a creamery successfully.

The main requirement for the success of the creamery is a sufficient supply of cream; an insufficient supply means failure of the creamery and a loss to all concerned. Experience has proved that about 600 cows are necessary to furnish cream enough to operate a creamery economically. The number of available cows in a community is generally overestimated. A creamery must make at least an average of 1,200 pounds of butter a week in order to keep the expenses reasonably low. This will require about 1,000 pounds of butterfat. The smaller the output the greater the cost a pound of manufactured butter, for some of the expenses will remain about the same whether the daily output is 100 or 200

### Winter Vacation?

Some of the men whom we meet on Kansas Avenue this winter are having the time of their lives. No chores; stay up until nearly 9 o'clock every night; sleep until 6 or 7 o'clock; no fires to light; plenty of outdoor cigars; nothing to do. But it comes only once in two

### City Labor

The recent order of the postoffice department dividing the country into 18 great labor districts, and making the department a great national employment bureau, shows a modern tendency very forcefully. It has been clearly seen that something must be done to reduce the congestion of unskilled labor in cities. It is proposed to turn the drift back to the small towns and to the country.

Considerable good no doubt will be done in getting employment for this ordinary help in the small towns. Living costs are much lower in the smaller towns than they are in the city, and the wages that usually are paid there allow a higher standard of living. So far as getting many of these men back to the farm the movement will not get far, although it will do some good. There are a few of these hands near the bread line in the cities who would make fair farm hands—for a large proportion came from the proportion is very small. The big effort should be to keep the country young men on the farms, rather than to send them to the cities, where as unskilled laborers they haven't one chance in 10.000 of winning a worth-while success.

### Poison Vines

Poison vines, wild grape vines and other similar pests are doing much to damage the farm woodlots of Kansas. It will pay well to cut these, and winter is a good time for the work.

### Ideals

No man can progress above the level of his ideals. We need higher ideals in desirable, if the extra bushels or tons Kansas farming, both in the material were obtained at a cost that takes away part of the work and in the art of living.

# Nothing New in the Freiburg Plan for Mothers Announced as a Sensation

By CHARLES H. LERRIGO, M. D.

ARY Ellen Page has just called the Pages so long that Mary Ellen feels at liberty to say to me or ask of me anything she pleases. And she does.

"Doctor, why aren't you as noble as the Germans?" she exploded as she

"I'm too busy for hard riddles today, Mary Ellen. Ask me something easy, like when is a door not a door," I

"I'm in earnest about this, now, Doctor. I read the ladies' journals and they keep us poor women informed about things. Here these German doctors have arranged—"

"Oh, I know about that," I interrupted. "It's at Freiburg, isn't it? The babies come while mother is taking her afternoon nap, and they are all washed and dressed and securely sealed in original packages with a written guarantee hobby of the use of a certain solution. inal packages, with a written guarantee and a number to which you will please

and a number to which you will please refer if any complaint is to be made."
"I see that my magazine is right," said Mary, rather bitterly. "They say the American doctor—"
"Now wait a bit, Mary Ellen; I know just about what they say," I again interrupted. "They tell you that this whole beautiful plan has been worked." whole beautiful plan has been worked out by two doctors in Germany, and American doctors are trying to hide it up because it means harder work for them."

ARY Ellen Page has just called at my office. I have attended the Pages so long that Mary Ellen feels at liberty to say to "But you remember I wasn't joking when your Bobbie was born. And you remember, perhaps, when I stuck my hypodermic needle into you and you said

magazines began to fuss about Twilight Sleep, and to tell you what I injected wouldn't have meant anything to you at all. Nevertheless I was using it at that time and so were many other Amer-

"Then these two German doctors are

"Not at all. I will enter for them a plea of 'not guilty.' They are very fine physicians who have really made a hobby of the use of a certain combination of drugs to relieve the distress and shock to the nervous system which accompanies childbirth. They aren't responsible for—all the things the magazines say about them. They have done good work and are enthusiastic about it. When Doctor Kronig was in this country in November, 1913, which was quite a while before the popular magazines began printing articles about Twilight Sleep, he was invited to speak before a Chicago medical society about X-Ray treatment. But he was so eager to tion of drugs to relieve the distress and Ray treatment. But he was so eager to tell the Chicago doctors about his suc-

cess with this painless cess with this painless childbirth plan that he asked permission to change his subject. This method, which he calls "Dammer-schlaf," or in English "Twilight Sleep," he had tried successfully

Kronig and Gauss afterward took it up with it, and they two are entitled to this credit — that they have followed it up

"Not exactly. Here is Doctor Kronig's Chicago speech. I will read to you his own description: 'A state during which the woman concerned has indeed a perhypodermic needle into you and you said you enjoyed it because it was so different from the other pain. Well, I was then injecting that very same wonderful drug."

"And it did me lots of good, too. Why on earth didn't you tell me that was what you were using?"

"Because it was two years before the magazines began to fuss about Twilight to the woman concerned has indeed a perception of pain, but not an apperception. Two opposite extremes must be avoided. If too much is given in order to bring about a full narcosis from which all expression of pain is absent the labor pains cease and there arises the danger of atonic bleeding. On the other hand, if too little is administered the pains are perceived and also apperpains are perceived and also apper-ceived. Between these two limits lies the region of "Twilight Sleep." Half an hour after the second dose the wo-man is asked whether she remembers that half an hour previously she was stuck with a needle, or that she saw a watch or some other object that was shown to her at that time. If she re-members, the desired effect has not yet been achieved; if, however, she does not remember, she has passed into the de-sired condition of semi-narcosis."

"So it isn't so much that it eases her pain as that it destroys her recollection

of it?"
"Exactly. Doctor Kronig says in his speech, "The patient cries, gives expression to pain, but afterward remembers little or nothing." The whole object is to save shock to the nervous system."
"It all sounds simple enough. Why

aren't American doctors smart enough to

aren't American doctors smart enough to do it? Are they afraid of it?"

"Some are. They have tried it with bad results. Babies have been asphyxiated beyond resuscitation. Mothers have had hemorrhages. Doctor Kronig accounts for it partly by the use of a decomposed drug and partly by employing too large doses."

"But you used it successfully with me."

"But you used it successfully with me."

"But you used it successfully with me."

"Not in the sense that it is applied by Doctor Kronig at Freiburg. I gave you the first dose, which is something any doctor may do for any patient who is in fit condition to take it, and is about as far as a doctor dares to go with it at present unless he is fully equipped to carry out the whole Freiburg treatment."

"The same drug—nothing new about it at all. Kronig doesn't even claim originality for its use in child-birth, for it was first suggested in that con-

birth, for it was first suggested in that connection in 1902 by a doctor named Von Steinbuchel. In common with many other physicians Doctors

With these things we shall have as good Kronig and Gauss afsuccess as the German doctors. the mothers who insist upon getting the and experimented treatment in their own homes and are willing to take it from doctors unpracticed in its technic which will meet trouble."

"And that means that this treatment

better and obtained is only for the privileged few who can better results than go to these hospitals."

"And that means that this treatment is only for the privileged few who can go to these hospitals."

"At present. Even those can't get it unless they are free from heart and ly put the mothers to kidney troubles, have a normal blood pressure and normal measurements of

the pelvis. It is still on trial. We must go with exceeding care for, after all, the relief of pain is a small matter compared with the satisfaction of bringing mother and baby through safe and well."

"But doesn't this record of 3,000 cases orove it good? How can you say it still on trial?"

"Three thousand cases prove nothing at all in childbirth. Nearly four times that many babies are born every day to the white people of the United States alone. I repeat, the method is still on trial. When the doctors have tried it if it proves safe for use in general practice your family physician will bring it to you. He is the one through whom it must come and he is the one in whose

knowledge you must trust."

"Yes," said Mary Ellen, and her words
may have concealed some irony. "I suppose he's just about the only perfect
person."

### Seasoned Sausage

their sausage before grinding. I know it used to be a cold, disagreeable job to season it after grinding and we did not always get the seasoning proportioned right. This I think a much better way: I get my salt, pepper and sage ready and as I cut the meat in strips ready and as I cut the meat in strips to feed into the grinder I season it, a layer at a time; then when it is ground it is seasoned just right, and the disagreeable work of seasoning after grinding is eliminated. Anna H. Williams. Sylvan Grove, Kan.

Rose, Kan.

In cooking turnips add a tablespoon of sugar to remove the strong, bitter taste sometimes noticeable. Mrs. Leon Smith.

Changes in advertisements or orders to discontinue advertisements nust reach us not later than Saturday morning, one week in advance of the date of publication. We begin to make up the paper on Saturday. An ad cannot be stopped or changed after it is inserted in a page and the page has been electrotyped. New advertisements can be accepted any time Monday. The earlier orders and advertising copy are in our hands the better service we can give the advertiser.

# Passing Comment -- By T. A. McNeal

### Criticized by German Sympathizers

Within the last week I have received a number of letters from Germans. Some of them abuse me with great vigor. One or two apply such epithets as seem to them best suited to my case. Others proceed to argue the question with me, of course from a biased standpoint but still fairly and with reasonably good nature.

When I wrote the editorial referred to I knew that it would cause criticism, but it was an honest expression of opinion concerning the grave situation which, while located in Europe, directly and indirectly concerns the people of the United States.

I have tried to make it understood that my criticisms are directed at the ruling classes in Germany, for they in connection with the kaiser are responsible for the actions of the German empire. The kaiser is the supreme ruler notwithstanding the fact that Germany is supposed to be a constitutional monarchy, but it is scarcely fair to lay all the responsibility on his shoulders. If he were not supported by powerful forces outside of his own official family he could not dominate Germany.

In my opinion the great masses of the German people are not to blame for bringing on this war. I think they had nothing whatever to do with it, but they have been trained to yield obedience to the ruling powers and to believe that it is their highest duty to support their government without question. I think this accounts for the apparent manimity of the German people. They have been made to believe by the ruling class that there is a great conspiracy to crush the German nation and that they must be ready to fight to the death to preserve the nation and themselves from foreign aggression.

I do not think that these masses of honest, hard-working Germans are filled with pompous pride or inflated with the dream of pan Germanism.

Here is an extract from a letter written to me by a German resident of Kansas, but as I understand still a subject of the kaiser. He says, "I frankly almit there is a little, but powerful clique in Germany, backed by the manufacturers of war ammunition, armor plates and gunpowder, in Rhine Prussia, who believe in pan Germanism. I also admit that there are a few writers like Bernhardi and others who believe in German militarism but not in German culture and education, but let us be fair to the German people.

At the last election in Germany 5 million voters voted the Socialist ticket. That means that 5 million Germans more than 25 years old are opposed to militarism, opposed to capitalism, and who believe in the brotherhood of man. \* \* \* I know you as the fairest writer I ever heard of (several of the gentlemen who write me this week would not agree to that sentiment for a minute.—Ed.) but when you denounce German militarism and German diplomacy it is wrong and very wrong to identify them with all Germany."

If I had identified them with all Germany that criticism would be entirely just, but I repeatedly have distinguished between the ruling class and the masses of the German people.

I do not know that it is worth while to discuss the question. The abusive letters amuse but do not worry me in the least. The other letters arguing Germany's case do not seem to me to state Germany's side any more strongly than a half dozen other letters already published have stated it.

Here is a rather curious thing that I presume my German sympathizing friends will not be willing to believe, but which, nevertheless, is true. All my life I have been an admirer of the German people. Until the outbreak of the present war I entertained a higher opinion of the German emperor than of any other sovereign in Europe. On the other hand, I always have had a certain prejudice against both Russia and England.

During the war of the Rebellion the conduct of the ruling classes of England was infamous. The land grabbing policy of that country has not met with my approval at all although I believe it must be acknowledged that wherever a people have been brought under British rule they have been benefited by the change. I had never been able to take France 4 (160)

seriously. I regarded it as a decadent nation and nowhere near the equal of Germany.

But I have tried with whatever ability I have to weigh the evidence in the present war. The last bit of evidence I have read was a pamphlet sent out by the eminent German, Dernberg, scattered all over the United States for the purpose of presenting Germany's defense in the case of Belgium, Instead of clearing Germany that document, to my mind, conclusively shows that the German invasion of Belgium was without excuse other than it afforded the easiest way to get to France.

The invasion of Belgium was a national crime, the most cruel, the most indefensible that has occurred for a century. Even the crimes of Napoleon do not rank with it in heartlessness, in the slaughter of the innocent, in the wanton, merciless destruction of life and property.

Nearly all of my German sympathizing correspondents by way of justification of Germany point to aggressions and crimes committed by other nations, more especially Great Britain. Admitting the truth of the accusations against other nations is no justification for Germany. Supposing next year Great Britain, or Russia or France should inyade some weak nation, burn its towns, levy tribute upon its people after the manner of the ancient conquerors; shoot down in cold blood all men found in houses from which a hostile shot had been fired; lay waste its fields and leave its inhabitants shelterless and starving, would the precedent set by Germany in the case of Belgium offer any excuse for the awful outrage?

Whenever any nation commits a crime similar to the crime committed by Germany against Belgium I shall denounce it with all the vigor I possess.

### Co-operation and Competition

A subscriber asks me to state the differences between the competitive system and the co-operative system.

I might say in the beginning that it cannot be said that there is in the world today what can be called a general competitive system, or on the other hand, a general co-operative system. The discussion of the comparative merits and demerits of co-operation and competition opens such a wide field that it cannot be treated fairly in the space that reasonably can be given to one editorial in the Farmers Mail and Breeze.

Starting with the origin of the words "competition" and "co-operation." Competition is derived from two Latin words, meaning literally, to seek together, or to seek for the same thing. Co-operation also is derived from two Latin words meaning literally, to work together.

It will be seen from the literal definition that competition is not necessarily evil. It is praiseworthy for example, for all men and women to seek for the things that benefit humanity; that tend to increase the happiness, the comfort, the morality and the intelligence of the human race. There is no evil in a generous rivalry to excel along many lines for example, it is praiseworthy to seek to excel in useful knowledge; to excel in good works.

Competition becomes an evil only when it is based on a selfish desire to deprive others of a just share in the things that are necessary to life, health, happiness and general well being, in order that the person so selfishly seeking may have an undue share of wealth, pleasure and power.

### Unfair Competition Leads to Anarchy

I apprehend that the inquirer had in mind the comparative merits of co-operation and competition as applied to the everyday business of the world and to the government of the people.

Ever since commerce began to be organized, perhaps even before that time, there has been promulgated the heartless doctrine that there should be no sentiment in business; that he should take who can and hold who is able.

Even yet the heads of the greatest business concerns of the world admit frankly that the rule upon which they operate is to charge all the traffic will bear, which is simply another expression of

the doctrine that might makes right. The great transportation company operated on this principle takes advantage of the weakness of certain individuals or communities and charges them all they can pay for transportation and still live, while concessions are granted to powerful individuals or favorably located communities, because those communities or individuals have the power to enforce concessions.

This is exactly the principle on which brigands and robber barons operated in the old days when they controlled the commerce of the world. They levied tribute wherever they were able but if they were wise barons or brigands they did not destroy the persons levied upon. It was much more profitable to allow them to proceed with their little ships or caravans than to destroy them, for if they were left enough so that they could continue to carry on their business they would continue to be tribute payers. If the traveling merchants and shipowners could form a combination, as they sometimes did, that was powerful enough to stand off the pirates, they escaped the payment of tribute.

It happened, sometimes, also, that even powerful traders in those early days agreed to pay a certain amount of tribute in order to save themselves from molestation by the pirates, although they might have been able to repel a piratical attack. The pirates on the other hand were willing to take a small tribute in such cases because they did not want to run the risk of an attack on a powerful enemy. It was therefore a clear case of charging what the traffic would bear.

The doctrine of competition also has its limitations in other ways. Experience has shown that when carried to its logical conclusion it will destroy itself. Slavery is the logical conclusion of competition but experience demonstrated that slavery destroyed the efficiency and earning power of the slave and therefore reduced the profits of his master.

It was discovered that a nation or community depending on slave labor could not compete with the commercial nation or community where the work was done by free, or relatively free, labor. There is a general impression that slavery has been abolished in the so-called civilized nations of the earth on account of the growth of humanitarian sentiment. While that may have had something to do with it, the most powerful reason for the abolishing of chattel slavery was an economic reason.

Experience has shown that a selfish competitive system unrestricted and unchecked will finally result in anarchy and the destroying of organized government founded on that idea. Under unrestricted competition the most powerful class seizes all the wealth. This class gradually diminishes in number, as the most powerful among this powerful class push those who are less powerful to the wall, until finally all the wealth is concentrated in the hands of a very few. The masses sink deeper and deeper into degradation and poverty until one of two things happens: either the masses become incompetent to produce wealth by their labor and the government dies from decay, or, having grown desperate, the masses rise at the suggestion of some agitator and overthrow the government.

As these masses have been kept so long in a state of ignorance and degradation they are almost incapable of construction and only capable of destruction, therefore anarchy results as it has resulted in Mexico.

A great many statesmen who believe, or at least profess to believe, in a competitive system, see the logical conclusion of the system and therefore try to devise ways in which competition may be checked and the logical conclusion averted. Anti-trust laws and the creating of commissions to control corporations are the result of this effort to avert the natural result of a selfish competitive system.

### Competitive System the Cause of War

While the immediate inciting cause of war between nations may be some comparatively trivial incident, such as the alleged insult to the sovereignty of one nation by another the real reason for most wars can be found in a greedy desire for commercial advantage and extension of trade and profits. The extension of trade and the increased profits will inure to the benefit of a very few, if realized at all, while the masses, who receive no benefits and

on the other hand who do create tremendous damage both to themselves and their posterity, are called on to do the fighting; to expose themselves to death, wounds and sickness and their wives and children to misery, want and perhaps starvation.

### The Progressiveness of Co-operation

In ne government on the face of the earth has the principle of co-operation been fully adopted. It has, however, been adopted in a limited way in many governments, not however, as a part of the government. For example, the largest and most powerful co-operative organization perhaps in the world has its headquarters in England and has branches in several other countries. This is the Rochdale Co-operative association, which started something more than a generation ago among a few poor weavers in generation ago among a few poor weavers in

Dermark has carried the principle of co-operation further, perhaps, then almost any other government. Nearly all the business of that remarkable little Nearly all the business of that remarkable little kingdom is done by co-operative associations acting in comparation with the Danish government. The result of the system has been to make the people of Denmark from a condition of great poverty and distress to a condition of at least comparative comfort and affluence. All this has been accomplished within a single generation. within a single generation.

Fifty or sixty years age the people of Denmark were among the most poverty stricken in Europe whereas at present they are among the most prosperous. With the possible exception of Holland, I think it is safe to say that the Danes are the most prosperous people in Europe.

### Co-operation in the United States

In the United States there are a large number In the United States there are a large number of co-operative associations. Not all of them have succeeded by any means but where there has been a failure it invariably can be traced to bad management, or graft, or both. We do not have however, anything approaching a general system of co-operation in this country, but in my judgment we are evoluting toward that condition.

are evoluting toward that condition.

The fact that the competitive system, if it can be called a system, is wasteful, uneconomic, brutal and finally leads to the destroying of the government, war and final anarchy, is gradually permeating the minds even of men who have themselves profited most from the system. When a Guggenheim declares that "every worker is entitled to a job and that the government should see that he gets it," with a good deal more along the same line it would seem that new light is dawning. seem that new light is dawning.

I do not look for general co-operation to be brought about by a sudden revolution. It will come about gradually, spreading until it covers the eptire nation. It will not then be one system but a large number of systems working together in harmony.

There will be national co-operation, concerning matters that are naturally and properly national. The railroads for example, will be owned by the nation. There will be a system of banks owned and operated by the government to facilitate the exchange of commodities. There will be government warehouses in which commodities that are not easily perishable will be stored. There will be public works to develop such recovers as are national in characteristics. to develop such resources as are national in character, such as the building of interstate railroads; the improving of navigable rivers; the developing of the water power of such rivers.

There will be state co-operation along lines that may be determined properly to come within the jurisdiction of states. Such I think would be the constructing of wagon roads, for example. There will be co-operation in the lesser municipalities such as cities, towns, counties and townships concerning matters that are local in their character and which can be better managed in a local way than by either can be better managed in a local way than by either the nation or the state. All these co-operative units will work together harmoniously but to a large degree independently, each within its own proper sphere. Just as there are in the universe an infinite number of systems, each perfect within itself but all moving together in perfect harmony.

### Concerning the Game Laws

te

cial will

l at and If a person has a hunting license in Kansas permitting him to shoot waterfowl from September 1 to April 15, can such person be prosecuted under the federal law for shooting ducks between these dates, if there is such a federal law in effect? Would it make any difference if he hunted only on his own land or on government streams?

Description Ken OTIS MATHEWS. OTIS MATHEWS. Bushton, Kan.

Under the federal statute the closed season on duck shooting in Kansas lasts from December 16 to September 1. This of course conflicts with the state law which permits duck shooting from September 1 to April 15. The same conflict of federal and state statutes is present in other states, and several cases are now pending in the United States. several cases are now pending in the United States courts as a result.

I am informed by the United States district attorney that he has been instructed by the Department of Agriculture, which has jurisdiction in the enforcing of the game laws of the government and the fixing of the open and closed seasons, not to bring prosecutions under the federal statute for the present. I pressure the purpose of the Department present. I presume the purpose of the Department

is to wait for the decision of the courts in the cases originating in other states.

The federal statute makes no exception in favor

The federal statute makes no except or along a of the man hunting on his own land or along a of the man hunting on his own land or along a navigable, or government-controlled stream. Mr. Mathews may therefore rest easy for the present at least concerning prosecution by the government. Later on the courts may decide in favor of the government, in which case the state laws will have the be amended to conform with the national laws.

### Widow's Inheritance

If a woman marries a widower who has considerable property, does the housework and helps raise his children, would the isw give her half of his property at his death ar would his children inherit all, and she be thrown on her own resources? If his property is wified to his children before her manriage without her knowledge could she get any of his property?

"Inherit" means to racelve by descent that which has formerly belonged to someone else. Why does the law of Kansas or any other state consider that a woman inherits her share of the estate at her husband's death when both started with nothing and she has dune her full share of the labor in accumulating the property?

Why does the law consider the children as becoming to a man and not to a woman in case of separation, when we know the natural law is the reverse?

Women have trusted men to make the laws under which they must live. Have the men been honest? McPherson, Kan.

1. Unless there was a premuptial contract be-tween the man and his second wife she would stand in the same relation as his first wife so far as the estate is concerned—that is, she would inherit half of the estate of her husband.

The husband could not by a secret will deprive

his widow of her share of the estate.

3. While the laws of Kansas are more liberal to women than those of almost any other state in the Union, they are nevertheless to a certain extent a relic of the old theory that the wife's property rights were merged in those of her husband. It simply illustrates how ancient ideas and customs

So far as honesty is concerned, some of the men are honest and some are not. In this respect the average is about the same with men as with women.

### About the Farm Adviser

What is your opinion of the "farm adviser"? Is it a good thing to have one or not? READER.

That depends in my opinion, almost entirely on the farm adviser himself. If he is the right kind of a man he will be worth a good deal more than his salary and if he is not the right kind of a man

his salary and if he is not the right kind of a man he may prove to be an expensive nuisance.

The farm adviser needs to be a man with a large amount of knowledge coupled with energy and good sense. When he goes to a county he must not go with the impression that he knows it all to start with. He ought to be both a student and an interest of the couplet of market in th structor. He can gather a great deal of useful in-formation from the farmers as well as imparting useful information to them. Every county in the state presents some different agricultural problems from any other county and only experience and in-telligent experiment can solve them.

Aside from the value of his knowledge and sug-

gestions concerning agriculture, stock breeding, dairying and poultry culture, the first class farm adviser can do an immense amount of good by iminging the farmers of a county together and persuading them to act in unison for their common advantage. In one case at least that has been brought to my attention the farm adviser in addition to his other work acted as a sales agent for the farmers of the county and I think also to some extent as a buying agent.

There are a dozen ways in which a farm adviser may be of great benefit if he is the right kind of a man. As I have said, if he has not the proper qualifications for the job he is very likely to be a failure just as any man is more or less of a failure who is trying to do something he is not qualified

### Opposed to the Torrens System

The fellowing explanation of and objection to the Torrens system of transfer of land titles is furnished by the president of the Kansas Abstractors'.

Editor The Farmers Mail and Breeze Under the Torrens system the value of registrar's certificates rests wholly and absolutely upon the regularity of judicial procedure which is necessary in every instance before a title can be registered.

To begin with, the validity of an application for registration is determined in a judicial proceeding in the nature of a suit in equity to quiet itle and to bring necessary parties under the jurisdiction of the designated tribunal, and to set up the allegations the applicant must have a complete abstract of title, in order that he may have complete status of the title on which such allegations are based.

The application recites the names and addresses of all parties interested in the land as well as those who, by reason of some defect in the title, may have a claim which may cast a cloud upon the title.

A process of summons is had upon all persons named and all other parties unknown whom it may concern, the method of serving such summons being generally the same as that prescribed by code in civil actions. Unknown parties and persons or mailing of notices.

Procedure thereupon takes the usual course gov-

erning civil actions and in due time, if the application is not contested, or if all the objection made to it is evenuled, the court enters a decree directing the registration of the title, subject to such encumbrances as may then exist, a certificate of title is issued in duplicate and the title becomes absolute within such period as may be prescribed in the law.

phication is not combessed, or at all the selection made to it is swermiss!, the court enters a decree directing the registration of at all the selection with the registration of the little becomes absolute within such period as may be prescribed by law.

The foregoing is the seneral method of registering the registration of the divocates of the system assert examination of the little is unnecessary. Such assertions between, are not correct or fair. Registration certainly cannot bind or made parties to the properly served bound thereby.

To determine whether all necessary parties to the properly served bound thereby.

To determine whether all necessary parties were properly served bound thereby.

To determine whether all necessary parties were properly served bound thereby.

To determine whether all necessary parties were properly served bound thereby and examined and to determine whether all necessary parties were brought under the purisdiction of the court, the author and the properly served the search of the properly served bound thereby and the search atom, could and would a layer functive advise its client to rely upon a registered little without first making such an examination?

The certain of title that are issued by the registered little without first making such an examination?

The certain of title that are issued by the registered little without first making such an examination?

The certain of title that are issued by the registered little without first making such an examination of the registered little without first making such an examination of the registered little without first making such an examination of the registered little without first making such an examination of the registered little without first making such an examination of the registered little without first making such an examination of the registered little without first making such an examination of the registered little without first parties and the registered little without first parties and the registered little without fit

President Kansas Abstractors' Association.

### Anybody May Sell Real Estate

C. W. P. of Stockton, writes as follows:

Having some property that I wished to sell or trade I asked a friend of mine in Meade county to trade it for land. He wrote me that he would not dare to do that as the real estate men of Meade they had done to two men a few days before, one of them a liveryman and the other a farmer. This Meade county man is a truthful citizen. What I want to know is this: Is there any law that would prevent a man from making a sale of that kind?

No. It would be however, within the power of the city of Meade, which is an incorporated town, to levy an occupation tax on real estate agents and for-bid inhabitants of the town from following the business of selling real estate without paying the li-cense fee required by the city ordinance, but this could not apply to any one living outside the cor-porate limits of the city.

### Information About Heligoland

At least four subscribers have written me giving me information concerning the trade between Great Britain and Germany, by the terms of which Great Britain ceded Heligoland to Germany. In return for this Germany ceded the island of Zanzibar on the east coast of Africa to Great Britain. The office encyclopedia does not give this information, for which I wish to thank these readers. This shows that they keep pretty well posted. that they keep pretty well posted.

# For the County Unit?

# The Farmers' Union Favors the McMillan Bill-A Good Roads Fight Pending

legislature.

There are numerous departures from former county unit bills in the Farmers' union measure introduced by Senator McMillan. Under its provisions the county commissioners are required to levy a tax of not more than 4 mills upon all taxable property in the county for the payment of teachers em-ployed in the elementary grades by the school district boards and the boards of education of cities of the first and second class. This money shall be collected in the same manner as other taxes, and apportioned among the district and city schools in proportion to the number of teachers employed.

A State Highway Engineer?

T. H. Doyle of Pottawatomie county, secretary of the County Commissioner association, is working against the bill introduced in the house by Jasper T. Kincaid of Johnson county which provides for a state highway commission vides for a state highway commission. Mr. Doyle has a bill which will be introduced to take the place of the Kin- islate. caid measure.

"Our bill contemplates a state highway engineer who will have offices in Topeka," said Mr. Doyle. "But he will act only in an advisory capacity to the county commissioners."

### Economy Is Greatly Needed.

"Unless the appropriations for the next biennium as compared with the biennium just closing can be reduced approximately ½ million dollars, the legislature will be confronted with the necessity of authorizing an increased state tax levy for the first tax year of the next biennium if the credit of the state is to be maintained."

This is the news that Chairman Samuel T. Howe of the state tax commission imparted to the legislature last week. It brought forcibly to the attention of the legislators that they must practice rigid economy, as urged by Gov-ernor Capper, in making appropriations or accept the responsibility of increasing taxes.

### Where the Money Goes.

It takes \$8.10 a day to keep each of 40 state senators supplied with help, according to the amount spent by the state senate for employes during the first ten days of the session. For the same period the members of the lower the Kansas State Fair at Hutchinson for the Kansas State Fair at Hutchinson for the Nouse from Rice county.

Another Dog Law.

Another Dog Law.

W. A. S. Bird of Shawnee, the "mesame period the members of the house, has introduced a not here."

house were allowed \$2.15 worth of employes a day.

The first ten days of the 1915 legislature cost the state \$15,469 according to a statement prepared in the office of W. E. Davis, state audi-tor. This figure includes all the vouchers allowed for the house and senate business.

The statement shows that the senate expenses amounted to \$5,497, while those of the house to-taled \$9,561. Miscellaneous expenses that could not be placed directly at the door of either house amounted to \$411.

The house, with

A COUNTY unit bill has been introduced by Senator Harry McMillan of Ottawa county, by request. The bill was drafted by the officers of the Farmers' union and has the support of that organization, having been submitted at its recent state meeting at Fort Hays and afterwards transmitted to Sena
| A COUNTY unit bill has been introduced by F. L. Martin of Reno. The appropriations asked for forty members. The postage amounts to Revolving fund. The biennium follow:

For Co-operative Banks.

A bill authorizing farmers' co-operative associations to do a general banking business has been introduced by Senator Harry Gray of Osborne county. The bill also authorizes other co-operative organizations which meet the qualifications in the bill to branch out into the banking business.

### Free Transportation For Stockmen?

The Laing bill providing that transportation must be given stockmen on passenger trains with shipments of livestock, the number of passes limited to four persons for each owner of stock shipped, was reported favorably out of the committee of the whole in the house. The stockmen in the house generally favored the measure, and the merchants and several of the wheat farmers opposed it. J. A. Mahurin of Coffey said the house was wasting time-that stock shipped to Kansas City came under the scope of interstate commerce and the state had no business trying to leg-

For More Attractive Highways.

Patent medicine and paint signs, sales bills and other kinds of advertising are prohibited upon bridges, fences and buildings along public highways by a bill introduced by Senator J. H. Stavely of Osage county. The bill permits the posting of such printed or painted signs upon fences and buildings, if the owners permit it. For the convenience of farmers desiring to post sales bills and similar advertising, the county and township boards are permitted by the Stavely bill to erect and maintain bulletin boards to erect and maintain bulletin poarus at places which they may select. The bill does not prohibit guide posts and signs telling the distance to the next of from \$25 to \$500, or ten days to six months in jail, if a bill introduced in the house by Ren Endres of Leavenworth

Two bills to exempt mortgages, and notes secured by real estate, real estate contracts or real estate mortgages, from taxation, have been introduced in the house.

I. N. Williams of Sedgwick, and C. T. Neihart introduced bills along this line. The Neihart bill provides for a registra-tion fee; the Williams bill does not.

FISCAL YEAR 1916.

Free Books For Schools?

Free text books may be supplied to the pupils in any public school by vote of a majority of the electors of the school district, according to a bill introduced into the house by E. D. Samson of Gove county. The bill provides that every school board shall have a revolving fund for the purchase of books. In ing fund for the purchase of books. In case the district does not have free books the board shall sell books to the school patrons. By another provision of the bill the board shall designate a dealer or dealers to handle the books and receive a commission of 10 per cent.

### Elections Every Four Years.

General elections only once in every four years are contemplated by A. E. Mayhew of Atchison. Mayhew has introduced a resolution to submit a constitutional amendment making executive state officers hold for four years. He plans to introduce legislation putting members of the legislature and all coun-

"This would save from \$375,000 to \$400,000 every four years," said Mayhew. "The off presidential years are just an added unnecessary expense."

### To Accept the Lever Funds.

A resolution authorizing the Kansas State Agricultural college to accept government aid for agricultural extension work has been introduced in the house by A. S. Bardwell of Riley. Under the terms of the Smith-Lever act, the federal government supplies \$10,000 a year for this work. The federal government also will give an extra amount equal to appropriations by the state.

### Don't Overdraw Your Account.

the house by Ben Endres of Leavenworth becomes a law.

### Optional State Grain Inspection?

Optional state grain inspection is provided in a bill introduced in the lower house by J. S. Hart of Jewell. A compulsory grain inspection bill is to be introduced later, having the backing of George B. Ross, state grain inspector, and member of the house from Rice

troduced a nother dog bill. It provides a tax of \$1 ond and third class cities, the money to go to the state school fund. Bird lready has a dog introduced by request, on the house calendar.

Scales on sidings for the weighing of grain and seeds in carload lots must be supplied by railroads in Kansas if the bill introduced by J. S. Hart of Jewell becomes a law. The act will apply only of grain a year his best.

have been shipped for the last 5 years.

### Amend Tuberculin Law.

An amendment to the tuberculin test act of 1911 was introduced in the lower house by J. A. Mahurin of Coffey. The bill provides that the tuberculin test shall comply with the instructions and rules as given out by the bureau of animal husbandry of the federal department at Washington for conducting the tuberculin test. No person except those designated by the state livestock sanitary commissioner would be allowed to administer the test. The act also would strengthen the power of the commissioner to quarantine tuberculous cattle.

### Divide the Road Funds.

County road funds shall be expended pro rata among the townships, according to the provisions of a bill introducedin the house by Fred Riebe of Anderson. As the law now reads, it is contended that in some counties the money is expended on roads in the richer parts of the county.

### For Sanitary Schools.

A commission of school sanitation, to supervise school house construction in the state, is provided in a bill introduced in the house by H. L. Aldrich of Montgomery. The proposed commission would have charge of the building and remodeling of school buildings. The member-ship of the proposed commission would be the state superintendent of instruction, the secretary of the board of health and the sanitary engineer of the university.

### Concerning Cholera Serum Costs.

The cost of manufacturing hog cholera serum is to be checked up to the Kansas State Agricultural college, with instructions to report to the legislature, according to a resolution introduced in the house by William Campbell of Bour-

### Keep the Hedges Trimmed.

The hedge trimming bill has been re-vived in the house by Henry Rogler of Chase. The Rogler bill provides that owners of hedge fences on highways must keep them trimmed to a height of 5 feet, unless the trees be 16 feet or more apart.

### To Favor Mutual Insurance.

Mutual fire and tornado insurance companies will be allowed to write shorttime policies if the bill introduced by Charles P. Hangen of Sumner county becomes a law. The Hangen bill would amend the law to allow policies written for any length of time up to five years. It now reads from one to five years, and shuts out 30, 60 and 90-day policies.

### For More Community Centers.

To allow township high schools to be used as social centers, a bill authorizing township school boards to condemn and purchase schol grounds not to exceed 5 acres, was introduced into the house by S. T. Jocelyn of Sedgwick county.

The present law gives a township high school only 1½ acres of ground. The laying out of grounds for baseball, basketball and other outdoor games necessitates more space. The Jocelyn bill is designed to make school grounds large enough to introduce playground aparatus and make the school plant a place of entertainment for the neighborhood.

### Mule Does Not Fatten

on male and \$2 on female dogs outside of first, sec-what can be done in this case?

I have a 5-year-old mule which eats well but does not gain in flesh. Can you tell me what can be done in this case?

F. M.

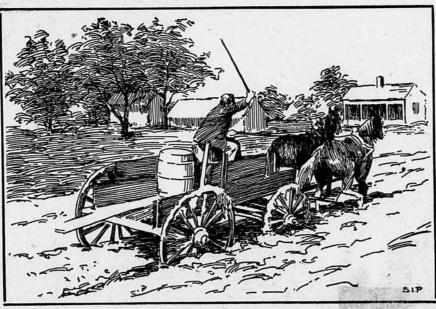

Worms may be the cause of the un-thriftiness. I will suggest giving the animal 2 ounces of turpentine mixed with a pint of raw linseed oil one-half hour before the morning feed. This treatbill and a dove bill, ment should not be given oftener than once a week. Bad teeth are another cause of unthriftiness. Have a competent graduate veterinarian examine the mule's teeth and correct any faults he may find. The mule also may be affected with indigestion. If the trouble is due to this cause give an ounce of Fowler's solution of arsenic, mixed with the food, once every day.

Talk Is Said To Be Cheap, But It Is Mighty Expensive Unless It Produces Better Roads for Kansas.

# Trees for the Farms

# Select Species Adapted to Your Conditions, and Give Them Good Cultivation

REES are essential on every Kansas farm. Every home requires plantings of trees and shrubs, to make it attractive. More than this, wind-break plantings are needed, to give the home and the farm animals protection from unfavorable winds and storms. In addition, every farm in this state except those in the western part, where trees make a slow growth, should have a farm woodlot, for the production of posts, fuel and other timber.

It is in the central and western parts

of Kansas where the greatest tree prob-lems come. In the eastern section many species grow well, so the problem is quite largely one of proper management. But farther west it is different; in speaking of tree planting in the western section, C. A. Scott, the state forester,

a few days ago said:
"Western Kansas is greatly in need of more trees, Past experiences have of more trees. Past experiences have demonstrated that trees can be grown there successfully when the right species are planted and the proper care is given. These two points will determine the success or failure of any planting. In selecting trees for planting throughout this region, only those species educted to growing under arid concies adapted to growing under arid conditions should be chosen. Trees, like animals, vary in their requirements as to soil and climatic conditions. Only drouth resistant trees should be planted, and even these must have proper

care if a successful growth is obtained.

"It is a waste of time to plant trees in the western half of the state unless the ground in which they are to be planted is under thorough cultivation. The trees must have good cultivation until they shade the ground and thus protect themselves. Cultivating previously to planting is necessary, to conserve the moisture necessary for tree growth. The life and growth of trees depend entirely on the available supply of mois-There is no soil so poor that it financial limits of success. will not support a tree growth of some

tains a forest nursery for growing forest trees suitable for planting throughout the state, and it supplies them to land owners for planting at the cost of production. The capacity of the nursery is 1 million trees. The nursery never has been able to supply the demand made upon it for planting stock. The work has been seriously handicapped because of the lack of funds for increasing its capacity. The need of such a pursery capacity. The need of such a nursery in Kansas is beyond question, as there is not a nursery in the state that is doing a wholesale business in forest tree

The first consideration in establishing woodlot is to obtain planting stock

The success of growing trees in west-The success of growing trees in west-ern Kansas depends largely on the se-lection of species that will withstand dry conditions. Then the ground in which they are to be planted must be under thorough cultivation, to conserve as much of the moisture for the growth of much of the moisture for the growth of the tree as possible. The trees also need careful planting. This includes securing trees from the nurseryman in good condition, and planting them properly without undue exposure of the roots to the weather. The trees must be given as thorough cultivation as any crop grown on the farm until they are thoroughly established. This cultivation must be such as will keep the soil free from weeds and maintain the soil mulch, to conserve the soil moisture. to conserve the soil moisture.

The trees suitable for western Kansas are: Evergreens for ornamental or windbreak purposes; the red cedar, Chinese arbor vitae; and Austrian pines for the favorable locations. Broadleaved species for shade, or yard trees; honey locust, Osage orange, Russian wild olive, and Russian mulberry.

The Chinese arbor vitae is an evergreen tree, generally of low, compact growth. When planted in good soil under favorable climatic conditions, the trees attain a height of 60 feet and a trunk diameter of from 5 to 6 feet. They reach their best development in a deep soil rich in salts, and they even

On the Ft. Hays Branch Experiment Station, Where Many Of the Trees Grown In Western Kansas Are Produced

to grow a woodlot crop at a profit if the original cost exceeds \$12 or possibly \$15 an acre. A fully stocked woodlot will contain from 2,000 to 3,000 trees an acre. Hence the cost of the stock must be nominal to keep within the financial limits of success. In a forest nursery large quantities of trees are nature, if moisture is available."

The department of forestry of the Kansas State Agricultural college, under the care of the state forester, main-

at a reasonable price. It is impossible resist a considerable amount of alkali. According to Chinese observations, these trees are known to live more than 2,000

The Chinese arbor vitae was introduced into Kansas probably not more than 20 years ago. Wherever it has been planted it is making a very successful growth, and is likely to be one of the most desirable trees for western Kansas windbreak and ornamental planting. It is propagated entirely from seed, which is produced in considerable abundance after the trees are eight or ten years old. The cones are gathered as soon as they begin to show signs of ripening usually in the latter part of ripening, usually in the latter part of September or early in October. These are spread on large sheets or board floors exposed to the sun until they open and liberate the seed. The seeds and cones are then separated by sercening. The seeds may be stored over winter in

At one year they are ready to set out in the nursery row where they are grown for one or two years until ready for permanent planting. The growing of evergreen seedlings, however, requires or evergreen seedings, however, requires expert knowledge of nursery work, and usually it is much cheaper to buy the nursery stock than to try to grow the seedlings on the farm. The most desirable stock for extensive planting is from 12 to 12 inches high, of once transable stock for extensive planting is from 12 to 18 inches high, of once trans-planted trees. The Chinese arbor vitae perhaps is the easiest of all conifers to propagate. They transplant with but very little loss and this feature is suf-

ficient in itself to insure their extensive

All conifers must be handled with great care, to prevent exposing their roots to drying conditions for even a few minutes. They must be protected as much as possible. When a shipment of evergreen trees is received, they should be stored in the cellar or some other coal moist place until they are other cool moist place until they are set out. Under favorable conditions, they will keep for several days with-out injury in the bales or boxes in which out injury in the bales or boxes in which they are shipped. The packages in which they are received should be opened enough to let the tops have plenty of air to prevent heating or molding. The tops of evergreens should never be wet. If there is any danger of the roots becoming dry, they should be moistened, but not soaked. When moistening the roots, do not open the bundles so as to expose the roots, but pour a cupful or two of water over the stems at the top of the bale to allow it to trickle down into the packing. into the packing.

when ready to plant, prepare a bucket of puddle before opening the bundle of trees. Puddle is prepared by mixing water and sticky clay to the consistency of cream. Open the bale of trees in the cellar, taking out only as many as can be put into the puddle at one time. Clear the roots of the packing material, and immerse them in the puddle. Carry the trees to the planting site, in the the trees to the planting site, in the puddle, and take them out one at a time, as they are needed for planting. This method of handling evergreens eliminates all danger of exposing the roots. Water should not be used as a substitute for puddle. It washes the roots too free of soil, which is a protection for them.

The ground should be in a good, loose, moist condition at the time of plant-

moist condition at the time of planting. When a large number of trees is to be planted, furrows may be drawn with a lister or plow, and holes to receive the trees can be dug in the furrow. When only a few trees are to be planted, the holes must be dug by hand labor, but the ground should be spaded up beforehand to a depth of 2 feet or more if the subsoil is hard. If the soil is dry, it should be soaked a few days before the trees are to be set, so that it can be worked without danger of puddling at the time of planting. The puddling at the time of planting. The holes for the trees should not be dug until the time of planting. Two or 3 inches of loose soil should be left in the bottom of the hole. Place the tree in an unright position. the bottom of the hole. Place the tree in an upright position, arrange the roots in natural order, and fill in about them with loose moist soil. When the hole is partly filled, tramp the soil firmly and leave no openings around the roots. Two or 3 inches of the top soil should be left in a loose, open condition for a soil mulch. If the soil is in good condition, the newly planted trees will not dition, the newly planted trees will not require watering. When planted in their permanent location the trees should be set 3 inches deeper than they grew in the nursery.

### Quail Disease Again

The third known outbreak of quail disease has been discovered by the Bureau of Animal Industry in quail sent for examination from the National Zoological Park. These birds were received a few days ago from two of the principal importers in widely separated parts of the country. Most of the quail now on the market are imported from Mexico on the market are imported from Mexico and are entered at the port of Brownsville, Tex. Under these circumstances all outstanding permits have been cancelled and further importations suspended for this season. All birds suspected of havany dry room, if protected from mice. ing the disease were examined at Browns-They are sown in well prepared beds wille or forwarded to the U. S. Departeither in rows or broadcast the following April or early May. The seedbeds must have part shade, which is usually of disease detected. Game commissioners and sportsmen who are interested in accomplished by using a lath or brush accomplished by using a lath or br and sportsmen who are interested in quail or who may have purchased birds for restocking this season are requested to advise the Department if any of the birds are known to have died from disease of any kind. As a measure of pre-caution any birds now in captivity should be kept under close observation for a period of at least ten days and in case any of them die the bodies should be forwarded to the Bureau of Animal In-dustry of the Department of Agriculture for examination.

of Mankato, Kan., are not allowed ture. The to spend much of their life loafing around the barnyard. That is not is stormy. Mr. Kemmerer's idea of the proper way

All the to grow healthy, vigorous hogs. He produces 175 to 200 head of purebred breeding stock a year, and for this number he has 300 acres under hog fence. Mr. Kemmerer has been growing pure-bred Poland China hogs for many years, but until five years ago he simply fat-tened them for the meat market. Now he sells all of them to breeders.

Plenty of range is a point in methods of hog growing that Mr. Kemmerer believes to be very important. As soon as the sows are bred in the winter they are turned out in the fields, and are kept there until farrowing time. Just enough the corn. The mothers of the pigs have tankage, shorts, and a substantial feed of all the time. Such sows produce thrifty Plenty of range is a point in methods prices. of hog growing that Mr. Kemmerer beall the time. Such sows produce thrifty pigs, and disease is almost unknown. Permanent sheds or houses do not find

favor with Mr. Kemmerer. Of course he has enough barns and lots and sheds to house his whole herd comfortably dur-ing severe weather, but the less time they spend in such shelter the better he is satisfied. Shelter is provided out in the fields. It does not take long to make a warm straw shed that protects the hogs very well indeed until they are placed in a fresh pasture and given a new temporary shed.

The farrowing house on this farm is long shed-like building on the south side of a large hay barn. The sun reaches every square inch of floor sur-face when the doors on the south are open, which is the case on nice days. This open, which is the case on nice days. This building is one of the warmest places on the farm on cold winter days, Mr. Kemmerer says. Even so, however, he finds it necessary to sleep with his clothes on when he has valuable sows farrowing in cold March weather. Hogs that he expects to sell to breeders must be farrowed early, he says. Farmers who buy breeding stock do not care so much; they would just as soon have April pigs, but the breeders of purebred stuff demand the early pigs.

Sows that do not bring two fine lit-

Sows that do not bring two fine litters a year do not have a home for long on the Kemmerer farm. Feed, room and labor are too valuable to be squandered on animals that are not up to a

high standard of productiveness.

When the pigs are about 4 weeks old sale this winter.

they are placed out on the range with

There are 480 their mothers. The spring litters do not farm. Every year 150 acres of this is need to spend much time around the planted to wheat. The balance is in

All the hogs receive a substantial ration of grain the year round. Just because they are out on rich pasture does not mean that their grain ration is cut down to amount to much. In growing purebred hogs it does not pay to give the hogs less than the best possible care, Mr. Kemmerer says, for that simply gives someone else a chance to produce the best hogs and get the fancy

OGS on the farm of John Kemmerer barnyard after they first go to the pascorn and alfalfa, and small amounts of Mankato, Kan., are not allowed ture. The fall litters must be brought to spend much of their life loafing in to warm shelter whenever the weather around the barnyard. That is not is stormy. ground. There are five alfalfa pastures for the hogs A few acres are planted to wheat every fall for hog pasture. The hogs get a great-deal of benefit from this green feed during the winter, and in the spring the patch is planted to corn. The fall plowing, and the manuring that the hogs give it during the winter, puts this ground in condition to grow a large crop of corn. The increase in corn yield pays for the seed and the extra work. pays for the seed and the extra work, and the good that the hogs get from the

His Hobby For Soil Improvement Is the Principal Reason Why Kemmerer Has a Modern Farm Home and a Heavy Automobile

fed ground alfalfa with which a little corn chop has been mixed. This ration is not an old tried one, Mr. Kemmerer to be built up. Because he does have says. He has used it one year with excellent success, but some other breeders say it is not satisfactory. He wishes to use it for another year before he says anything very emphatic in favor of it. The hops do enjoy it very much, and section of the country was quoted as it. The hogs do enjoy it very much, and it seems to leave them in excellent condi-

and Jumbo Ex. He expects to grow rain there will not be a crop. If there fewer hogs next year than he has this is plenty of rain at the right time year. He is planning to sell a number no one needs a farm demonstrator to of his tried brood sows at his annual sow tell him how to grow a big crop, so he

There are 480 acres in the Kemmerer

section of the country was quoted as it seems to leave them in excellent condi-tion for farrowing.

The males that Kemmerer uses are Nebraska Chief, Long King's Best Son, and Jumbo Ex. He expects to grow will not be a crop. If there

on our land 20 years from now. I believe these dry spells we have every few years are the means that a wise Creator takes to check us in our process of merrily robbing the soil. There is seldom a time when we cannot grow a profitable crop if we use the proper methods and don't starve our soil. Our trouble does not come from lack of moisture. If we were always to have rain when we need were always to have rain when we need it we would take just that much more from the soil, without returning plant food to it, and in a few years we would not be able to grow any better crops than we do now with a limited amount of rain."

Cowpeas is a crop that Mr. Kemmerer

has been experimenting with for the Cultivate, not to kill the weeds, but last few years. He is enthusiastic about to hold the moisture. The end reached its value as a soil improver. He says will be the same, and the labor less.

that a person is foolish to grow cowpeas for hay where he can produce alfalfa, but that they are a valuable crop
when grown where they are needed. He
finds it worth while to plant a 10-acre
strip of them every year in a 40-acre
field of corn that is to be used for hog
pasture after the corn is husked. After
the corn is gathered this field is cross
fenced and the hogs are put into only
a small section of it at a time. Each
section of the field that is pastured has
a strip of cowpeas running through it.
These peas give the hogs a variety of a strip of cowpeas running through it. These peas give the hogs a variety of feed. The hogs seem thoroughly to enjoy the arrangement. Mr. Kemmerer admits that he does not get so valuable a crop from the ground that is planted to cowpeas as he would get if it were planted to corn, but he is sure that it is wise to plant them. The crop of corn that he grows on the pea ground the next year is a little extra, both in quality and quantity and it is worth while to have the peas for a relish for the hogs. These peas are planted in a different These peas are planted in a different

Mr. Kemmerer has done much to improve the quality of the hogs produced in his section of the country. Most of the boars that he grows are sold to farmers who live close enough to come and look at them before buying. He does some mail order selling, but he admits he prefers to sell to his neigh-

### Cooking Feed For Hogs

Should grain for hogs be fed whole, ground, or cooked? I have been cooking kafir until it is soft, and feeding it to hogs. The hogs seem to be doing fairly well but do not eat very much of the grain. What is a good tonic or conditioner to feed with this cooked grain? The hogs in this neighborhood do not seem to be doing so well as they should.

Comanche County, Kansas.

It does not pay to feed whole kafir to hogs. Grinding usually is more satisfactory than cooking. The kafir meal should be moistened, or wet so it will just pour from the pail, when it is fed. Some feeders make the slop too thin and force the hog to drink a large amount of water in order to get a little feed. This method of feeding does not produce the best results. Our inquirer does not say whether he is using other feeds in connection with the kafir. If kafir is the only feed given the heart this feet will only feed given the hogs this fact will alone account for the loss of appetite. Some other feed such as shorts, tankage, or linseed meal which supplies growth-producing material should be fed in connection with the kafir. nection with the kafir.

The condition powder usually known as the government hog cholera remedy may be used as a tonic. This remedy is made by mixing 1 pound of wood charcoal, 2 pounds of sodium chlorid, 2 pounds of sodium hyposulphite, 1 pound of antimony sulphid or black antimony, 1 pound of sulphur 2 pounds of sodium 1 pound of sulphur, 2 pounds of sodium bicarbonate, and 1 pound of sodium sul-phate. The ingredients should be pul-verized completely and mixed thoroughly. If there is profuse diarrhea the sodium sulphate may be omitted.

T. W.

### Gentle Way to Throw a Cow

If you wish to throw a cow fasten a rope to the right forefoot below the ankle, pass the rope over the back, un-derneath and over again. Then, passing to the left side, reach over the back and take hold of the first strand of the rope with the left hand, the second with the right hand. Pull on the rope in the Here is the way Mr. Kemmerer answered that argument:

"If we were to have all the rain we desire, at the time we wish to have it, we would not be able to grow beans on our land 20 years from now. I have to be urged to move a little. Keep the rope tight by slipping it around the body with the right hand, and gently drawing it down across the spine. The cow will sink to her side gently without any struggle. I have done this without left hand. Sometimes the animal will

help.

If your object is to dehorn, place a rail or pole across the neck, one man astride at each end. Turn the head over the rail, hold the horn in one hand and the saw in the other. When it is cut, lay the head back with something under it to keep dirt and trash from the cut, then cut the other horn. Cutting the under horn first prevents blood from it

soiling your clothes. Edwin Sircolomb. Denver, Colo.

The broad minded man has his doubts, but the narrow minded man is cocksure of everything.

Cultivate, not to kill the weeds, but

# Start Right Now to Condition Your Stock For Spring

If you want your work horses to look sleek and pull hard on the bit when spring work comes along, take my advice and start in to condition them right now to help them get rid of their old coats, get full of vigor and ready for hauling, plowing and other hard work that calls for horseflesh, muscle and staying power.

The long, heavy milking season is ahead of you—see, therefore, that your cows are put in the pink of condition and that those with calf are fit and healthy.

Then there's the spring pig crop—by far the most profitable live stock crop on the whole farm—you ought to see that the sows are up to snuff and that the litters get a good start.

Understand, your stock have been penned up all winter and on dry feed, and as corn or oats and hay do not contain the laxatives and tonics so liberally contained in grass, some of your animals are most likely to be in bad shape.

And the ailments common among stock just now are chronic constipation, dropsical swellings, indigestion, stocking of the legs; but by far the worst disease (especially among hogs) is worms. Worms are the biggest pork robbers I know of. Let me urge you to condition your stock right now, so that they will be able to derive the full benefit of the pasture as soon as you turn them out. I want every farmer and stock raiser to feed

### Dr. Hess Poultry Pan-a-ce-a

This is just the time you should be giving your poultry this splendid tonic. It will put them in fine condition, make your hens lay, ensure fertile hatching eggs and strong, vigorous chicks. Very economical—a penny's worth is enough for 30 fowl per day. Sold only by reliable dealers—never sold by peddlers. 1½ lbs. 26c; 5 lbs. 60c; 25-lb. pail \$2.50. Except in Canada and the far West. Guaranteed just the same as my Stock Tonle—your money back if it doesn't do as I claim.

### Dr. Hess Instant Louse Killer

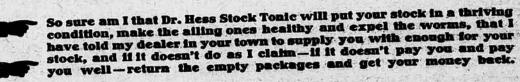

Kills lice on poultry and all farm stock. Dust the hens and chicks with it, sprinkle it on the roosts, in the cracks, or, if kept in the dust bath, the hens will distribute it. Also destroys bugs on cucumber, squash and melon vines, cabbage worms, etc., slugs on rose bushes, etc. Comes in handy sifting-top cans, 1lb. 25c; 3 lbs. 60c. Except in Canada and the far West. Guaranteed just the same as my Steck Tenic—your money back if it doesn't de as I claim.

# DR. HESS STOCK TONIC A Splendid Conditioner and Worm Expeller

My lifetime experience as a doctor of veterinary science, a doctor of medicine and a successful stock raiser has taught me what are the needs of stock that require conditioning at this season, and I have put every necessary ingredient into this scientific preparation of mine—Dr. Hess Stock Tonic.

I have included *Tonics* to improve the appetite—*Blood Builders* to tone up and enrich the blood—*Laxatives* for the bowels and *Vermifuges* for cleaning out the worms. I don't know of anything under the sun better than Dr. Hess Stock Tonic as a worm expeller. Every ingredient in my Tonic is highly endorsed by the U. S. Dispensatory and other world experts for the particular purpose I use them for. I couldn't have stood before you men for 22 years unless Dr. Hess Stock Tonic had made good—had proven its wonderful merit.

Now, I have never asked any farmer (and I never will) to buy Dr. Hess Stock Tonic on my or anybody else's word. I've got the fairest proposition to make you that you've ever heard—the broadest guarantee you have ever read in all your life. Here it is—read it:

You can't buy Dr. Hess Stock Tonic of peddlers, but only first-class dealers whom you know. I save you peddler's wagon, team and traveling expenses, as these prices prove: 25-lb. pail \$1.60; 100-lb. sack \$5.00. Smaller packages as low as 50c, except in Canada, the far West and the South.

Send for my book that tells all about Dr. Hess Stock Tonic-it's free.

## Stormy Days on the Farm

### The Mail Carrier Has Troubles-Hog Prices

BY BARLEY HATCH

standing in pools we doubt whether there will be much of a meeting. An 8-mile drive looks pretty dubious to us under such conditions but what can be thought

of the mail carrier who has to make his 28-mile route no matter what the weath-

There are some who think the rural route carrier gets a big salary. We can-not think so when we consider what he

carrier on an average route must either keep a motor car and a team or two

teams and he must make that long drive

every day, rain or shine. His pay amounts to little more than \$2 a day

which is none too much for the length

We are hoping that this storm will not muss things up much. The yards have been in fine condition all winter

and stock has done well, especially hogs.

It is necessary that they do well now with corn selling at 65 cents and with our local buyers offering only \$6.25 for good hogs this morning. We are willing to stand by the assertion that the farm-

ers of Kansas, taken as a whole, have lost money on all the hogs they have fed since last fall. It is in but few

localities where corn can be bought as cheaply as it can be bought here, and when a farmer has to feed 75 cent corn

to \$6.25 hogs he is not in a mood to be patient with the demand being made

Our work on the farm this week has

been in building a wood house. It was built of the odds and ends left from an old house torn down last summer. The new wood house is aristocratic in

one respect-it is boxed with white pine

boards and finished with white pine sid-

ing. In spite of the years of service this old lumber has seen it is still in good condition and will give many more

years of wear than would new yellow

ruined the lumber when driven out.

pine exposed to the weather. The finish in the old house was of the finest of white pine but it was put on with old fashioned iron nails which completely

# See The Lock

KITSELMAN BROS. Box 52 Muncie, Ind.

locality it seldom pays to feed it to cattle. It is not nearly so good a cattle feed as our corn or kafir fodder but for wadding it does very well at times. Our idea of the roughness crop for cattle feed is that it should be raised as a by product of grain. In this way the fields can be cleared for the next crop and the stalks can be made a source of profit and at the same time furnish a supply of manure. In eastern Kansas we think interest.

tle seem to enjoy it, however.

THE county Grange was to meet to- there is no call to make roughness the day, January 16, in Gridley. As we sole crop the land bears; it should raise look out of the window and see the roughness and grain too. We cannot see snow coming down and note the water anything in prairie hay as cattle feed standing in pools we doubt whether there when the price rises above \$5 a ton.

> Why does motion protect such things as apples and potatoes from freezing? Take a car of potatoes and let the train keep moving and there will be very lit-tle danger of a freeze. But once the car comes to a stop freezing begins at once. Potatoes can be moved in wagons in weather that would freeze them solid if the moving stopped. Neither apples ner potatoes have blood to keep in circulation by motion but motion protects them from freezing just the same.

A friend writes to ask us what we think of the future of the hog market. We think that the future of the hog market lies largely in the hands of the men who have always controlled it—the packers. If they get control of large quantities of cured meat and the receipts of hogs show signs of growing smaller then we may look for higher hog prices. It is true that hog supplies have been large lately but they have not been above the normal of the years prior to 1911. Packers are continually urging farmers to increase their livestock supplies but what inducement do they offer for such increase? Why, they promise, by reason of past performances that they will "jump on the market with both feet." Is this an inducement for a man to increase the meat supply? As to future prices there are so many things to consider that no man can tell what they will be. He may guess and if his guess was like ours it would be, that hogs would rise in price about March 1—always provided that it was to the packers' profit that they should rise then. It is strange that all other eatables should rise in price while pork products take the down grade. We appreciate the efforts of a certain packing firm to supply chales agreement continued. firm to supply cholera serum at cost but would also ask for a little more consideration when corn rises close to the 70-cent mark. Seventy-cent corn and \$6.25 hogs do not "jibe."

More than two thousand Swiss families have offered to adopt Belgian war orphans.

Laws do not make us; we make laws, and bend them to our purpose.

Has the sile or corn-crib been planned next grade, the 6 to 2's, cost \$3.50 yet?

### THREE REASONS Each With Two Legs and Ten Fingers.

A Boston woman who is a fond mother writes an amusing article about her experience feeding her boys.

Among other things she says: "Three

chubby, rosy-cheeked boys, Bob, Jack, and Dick, respectively, are three of our reasons for using and recommending the food, Grape-Nuts, for these youngsters have been fed on Grape-Nuts since infancy, and often between meals when other children would have been given candy.

"I gave a package of Grape-Nuts to a neighbor whose 3-year-old child was a weazened little thing, ill half the time. The little tot ate the Grape-Nuts and cream greedily and the mother continued the good work, and it was not long before a truly wonderful change manifested itself in the child's face and hay, either keeping a supply of prairie body. The results were remarkable, hay in the racks all the time or else even for Grape-Nuts.

"Both husband and I use Grape-Nuts every day and keep strong and well and have three of the finest, healthiest boys you can find in a day's march."

Many mothers instead of destroying the children's stomachs with candy and cake give the youngsters a handful of Grape-Nuts when they are begging for something in the way of sweets. result is soon shown in greatly increased health, strength and mental activity

# How to Establish Grades

The Leveling on Kansas Farms Can Be Done Easily With Simple Instruments, Which Are Not Expensive

O'N THE farms of today there are many operations requiring the use of the level. Building, draining, grading, laying cement floors and numerous jobs of a similar nature call the use accurate means of measuring for an accurate means of measuring for an accurate means of measuring vertical distances. Where the points to be leveled are not too far apart, the ordinary carpenter's level which is found on every well-equipped farm can be used with a straight edge. But when they are farther apart, it becomes a different matter, and some means has when they are farther apart, it becomes a different matter, and some means has to be provided to project the line of sight beyond the instrument.

Every farmer should own a leveling instrument. It need not be expensive; an instrument costing from \$15 to \$20 will do his work very well. At present I am using a homemade outfit that cost \$1.25 for material and with which I get very good results, says a writer in Farm Engineering. Many farmers consider leveling too difficult for them, but this is not so. Any man, who can add and subtract and measure horizontal distances can run a level. Leveling is simply the practice of finding the vertical distances between points, even

vertical distances between points, even if they be at some horizontal distance from each other.

A level is simply a curved glass tube, nearly filled with some non-freezing liquid, as ether or alcohol, and sealed. The remaining space, or bubble, as we call it, is filled with the vapor of the liquid enclosed. This is mounted in a stock having straight edges, and in the to the bubble at its highest point must be parallel to have the level accurate. This applies to the ordinary carpenter's level, that being the kind with which we are most familiar. The principle is

cured by a peep hole at one end and crossed wires at the other. In using this instrument the head is first brought to such a position by means of the lev-eling screws that the bubble occupies the same position no matter in what

Accurate Work in Leveling Is Necessary in Drainage.

There Is a Great Deal of Use For Surveying Instruments on a Farm.

turned on its vertical axis. Any points that coincide with this line of sight will be at the same elevation. This line of sight is called the H. I. (height inquid enclosed. This is mounted in a of instrument) and the elevations of the stock having straight edges, and in the best levels is adjustable. The straight uring down from this imaginary line to the bubble at its highest point. to the bubble at its highest point must be parallel to have the level accurate. This applies to the ordinary carpenter's level, that being the kind with which we are most familiar. The principle is the same in all.

In the drainage level the part that corresponds to the straight edge in the carpenter's level is the line of sight that passes over or through the instrument parallel to the axis of the bubble. In the cheaper instruments this is secured by a peep hole at one end and crossed wires at the other. In using this instrument the head is first brought.

In the drainage level the part that corresponds to the straight edge in the carpenter's level is the line of sight through the instrument that the line of sight strikes the target rod, which is held in a vertical position on the hub, at a point 4.5 feet from the ground, that is, the rod reading is 4.5 feet. Subtracting this from the H. I.

I have been using a level consisting of a 30-inch carpenter's level equipped with a 30-inch carpenter's level equipped with sights and mounted on a homemade tripod with a revolving head. With it I have run a line 700 feet long with a variation of only 1-100 foot. Probably this was exceptional, but it shows that by careful handling such a level is capable of sufficiently accurate work.

direction the sight tube is turned. Any one buying one of these instruments will get a small book of instructions with it, showing the different adjustments needed in its use.

If the instrument is accurate, if the line of sight passing through the instrument is parallel to the axis of the bubble, this line of sight will describe a level plane when the instrument is actually describe a level plane when the instrument is actually accurate work.

I have run a line 700 feet long with a variation of only 1-100 foot. Probably this was exceptional, but it shows that by careful handling such a level is capable of sufficiently accurate work.

Eliminating the carpenter's level and the scraps of lumber of which the tripod and head are composed, this outfit need not cost more than \$1.25. No account is taken of the level and lumber, as they are found on avery form. ther was the time used in making it considered, as it is a good rainy day job. The money covered the following items:

items:	
Sights for level	.75
Two carriage bolts, %x3% inches with wing nuts	.10 .25 .15
Hinges for tripod	.15
Total	1.25

In the instrument that, I am using the sights were made by punching a small hole in a piece of sheet metal bent to form the eyepiece and driving a small head (8) inch into the top of small brad (%-inch) into the top of the level, until the head was at the same height as the aperture in the eye-piece, to serve as the front sight. One must be very careful here to get the line of sight parallel to the bubble These sights were painted black to avoid reflection, and work very nicely, the head of the forward sight showing plainly against the target of the rod, surrounded by a circle made by the hole in the rear sight.

### Choosing the Better Part.

A man is usually willing to provide for his family and prefers to have his wife take care of the home. Wouldn't it be wiser to let the care of the home be a woman's chief aim, and be a producer only if necessary or when she has sufficient help? After all, money alone cannot bring happiness, and oftentimes cannot restore health to an overworked constitution.

Moundridge, Kan.

# Any temperature, any time!

Many old-fashioned things are now being replaced by the better, because the new give the people not only what they need but a greater value. The solid popularity of radiator heating is due to the fact that it does give

home folks the genuine heating comfort they need—as they need it—and no fuel waste! You can have just the volume of warmth, just the degree of temperature you like, and just at the turn of a valve -if you use

These world-famous heating outfits are the best controlled, the most reliable distributors of warmth, the most economical users of

fuel, the most cleanly, and the easiest to care for - easier than a stove—a child can run them.

IDEAL Boilers and AMERICAN Radiators are perfectly safe—protect the home from all fire risk and never leak coal gases. IDEAL Boilers consume less soft coal or cheapest screenings to heat the whole house than stoves consume of expensive hard coal to heat a few rooms. They also burn lignites, wood, coke, oil, gas, etc.—anything that will burn. Every known improvement and many exclusive features make IDEAL Boilers and AMERICAN Radiators the most efficient and economical in the world, yet our enormous volume of sales in both Americas, Europe and Australia enables us to put the price within reach of all.

IDEAL Boilers are put in farm houses and other buildings remote from waterworks supply. A few gallons only of water need be added once or twice during the season. They can just as well be put in farm houses without cellars, or where cellar is used for vegetable storage the piping may be covered with asbestos to hold temperature down to degree required.

Why not put in at once IDEAL Boilers and AMERICAN Radiators and cut your fuel bills, passing a winter of solid, clean, comfort, every room and hall "warm as a pepper-pod," without spreading sah-dust or coal-gases to ruin the housewife's disposition and the house furnishings. Fuel saved plus freedom from repairs (nothing to rust or wear out as long as house stands) make IDEAL Boilers and AMERICAN Radiators the best investment in home equipment. Iron prices now rule the lowest in 10 years and at this season you get the services of the most skillful fitters. Let us tell you our full story — complete, valuable book of heating facts sent free. Write us today. Puts you under no obligation to buy.

### Or Back From The Grave

By Libble Sprague Phillips.

# HowTwoBoysWonTheirWay of you can think of, aren't they! Yet there was a time once when pins were so rare that only queens or very, very rich women could afford to have any

### The Great Chance Came When the Snow Fell

BY W. CLEMENT MOORE

I'T WAS a cold, blustery day in midwinter. All through the night the snow had been drifting into every nook and corner of the town's busy streets, and when the morning sun peeped out from behind leaden clouds, the scene showed a crest of dazzling white everywhere. The sidewalks were piled high with drifts.

My first plan was to spend the morning in clearing the sidewalk and paths of snow, but just

of snow, but just then the postman brought my morning mail and with it a mass of work. Hastily I shoveled away a little of the snow that pe-destrians might pass the easier and then settled my-self to work at my

Suddenly there came to my ears a merry whistle. I looked out, and down the street side by side, came two jolly chaps with snow shovels over their shoulders.

They saw me at the window and called

"We are cleaning pavements, sir. Will you give us a job?"
"What's your price?" I asked.
"Twenty cents for a space like this,"

answered one.

"All right, go ahead," I called back as I turned again to my work, relieved to think that the snow would be cleared away without demanding any more of my attention.

Almost an hour later one of the boys tapped on my window and announced that the work was done. And done it was—everything cleaned up in good shape. I expressed my appreciation of the good work and paid them. One of the boys had brown eyes and a very neat appearance, the other was a trifle careless in his dress, but just as earnest in his work. The first acted as spokesman. As I paid them, it was this brown-eyed boy who asked:

"Shall we come again sir, when the Almost an hour later one of the boys

"Shall we come again sir, when the next snow comes?"
"Why yes," I replied. "If you will do as well as you have done today you may

have the contract for the winter."

"Thank you," said he joyfully, and shouldering their shovels they marched on to the next uncleaned pavement to ask for another job.

As other snow-storms came, I naturally became better acquainted with my two pavement cleaners. I found that their names were Horace Lear and Bert Truax and that they were working for cess next time.

a purpose.
One day I asked Bert what he intended to do with his money, for the snows came thick and fast that winter and they had so many contracts they were forced to get other boys to help them out, especially when the snow was deep.

visited the Ledger offices, and as soon of them were laid head to point in a as we can get enough money, we expect long line they would reach 15 miles. to buy a printing press and start in Pins are the commonest thing most

"We have tried to do that, but just now there are no openings, so we thought of this plan to earn some money anyway, and perhaps there may be a chance for us by the time the winter is over."
"You have the right idea, Bert," I

said encouragingly. "I believe you will make a success too.

How much have you made?"
"We have contracts for ten pavements and they amount to \$2.80

every time it snows. We have saved about \$8 apiece and both of us have given a part of our money to our par-ents. Besides we never miss but a half day at school at a time for we get up sometimes as early as four o'clock and work with a lantern. This is our last

work with a lantern. This is our last year in high school, you know, and we are keeping our work up to top notch for we expect to graduate."

I watched the progress of these two boys, saw them graduated and kept in touch with them after they had entered printing offices. I felt at first that they would soon drift apart and perhaps they would soon drift apart, and perhaps take up another calling even—that the whole idea was simply boyish talk—but later I realized they were in earnest. I knew that they had established their ideal and meant to reach it. So it happened, that when a few years later, the firm of Truax & Lear established a small but well equipped printing office on one of the busy streets of the city, I was as happy as they. I am confident too, that at some time

in the near future, we shall awake some morning to find on our doorstep, a copy of the magazine which Bert and Horace dreamed about while they were little chaps yet in their "teens." And when that journal is started, there will be no chance for failure for here with a no chance for failure, for boys with a purpose, such as these two lads had, will never know the real meaning of fail-They will make mistakes, perhaps, but such mistakes will only serve to teach them how to make a better suc-

### Some Points About Pins

More than 15 miles of pins are lost every day in the United States. That sounds pretty big, doesn't it? It is true, though, as you can see for your-self if you take your pencil and paper. What the Plan Was.

"Well, I'll tell you," he said. "Horace and I have an idea. We have often more than 1 inch long, so if 1 million more than 1 inch long, so if 1 million

mine the Monton Some day when Im grown up big I hope I'll find out why My mama says at dinner time, With a queer smile in her eye The boy who eats most butter breed Gets the biggest piece of pie

at all, and even they had only a few. It meant more to lose a pin in those days than it means now. Possibly that is how the old idea that it is good luck Prices to pick up a pin was started.

Many boys and girls have no idea how pins are made. They are manufac-tured from wire that is brought to the factories in large coils. The wire is wound off from these coils and drawn by machinery till it is the right thickness for a pin. Then the wire is cut into the right lengths and another machine gives the pins their heads and points. The pins are next put into large round vessels containing silvering. After this bath they are put in tubs of bran to dry, and then are polished by putting this bath they are put in tubs of bran to dry, and then are polished by putting the pins into large trays holding thousands and shaking them in emery till they are bright. Now they are all done except the cleaning. A wonderful machine puts the pins into pieces of pleated paper in which we find them at the stores. Dozens of pins are stuck in at one time one time.

### Too Late For Robinson Crusoe

Did you know that Robinson Crusoe's island is being equipped with wireless service? Just think what it would have meant to poor, lonely old Robinson Crusoe if he could have climbed to a wireless station on top of that wonderful stockade of his and sent out an S. O. S. signal that would have brought a ship hurrying to his rescue! But Crusoe didn't even know about a telegraph or a telephone, and a wireless message would have frightened him as badly as his gun frightened Friday and the cannibals.

Maybe you didn't know there was a maybe you didn't know there was a real Robinson Crusoe island and that a real sailor was shipwrecked there and lived alone for four years before he was rescued, though of course you have read the book about him and wished you could have a desert island of your own for a few days, with tame goats and parrots and bread fruit trees and cocoanuts. The island is called Juan Fernan dez and belongs to Chile. It is about 360 miles straight west of Valparaiso. Get your geography book some time and find out just where that would be.

There are really three islands in the uan Fernandez group. The name is Juan Fernandez group. The name is applied usually only to the largest of the three, which is known as Mas a Terra, three, which is known as Mas a Terra, meaning nearer land. A small rocky islet rises out of the breakers near the west end, and this tiny bit of land is called Santa Claus. You thought Santa Claus land was up by the North Pole, didn't you? Maybe this island is his summer home. It was on the island of Mas a Terra that Alexander Selkirk, who was the real Robinson Crusoe, spenthis lonely exile. The island is about 12 miles long and not more than four miles. miles long and not more than four miles across at its widest place. There is one mountain called the Anvil, which is 3,000 feet high. The southern end is comparatively low and flat and nearly barren, but the northern end has very fertile valleys in between its craggy ridges. This island has become a stopping place for many ships. The bay is well stocked with fish, the lobsters and crayfish being especially fine. Chile has done many things to encourage colonization and make the island of value to settlers. The wireless station now being built is a part of this colonization plan.

### These Owls Kept Busy

A pair of barn owls once nested in one of the towers of the Smithsonian Institute in Washington, D. C. A government scientist examined the nest and its suroundings at one time and found 454 skulls. Of these 225 were meadow mice, 2 pine mice, 179 house mice, 20 rats, 6 jumping mice, 20 shrews, 1 mole and 1 vesper sparrow—an interesting record for a pair of birds.

It is not the sign of a gentleman not to work. It's the sign of a loafer.

### Trail of the Pneumonia Germ

January and February are two of the worst months for the worst disease, pneumonia, says Dr. S. J. Crumbine, secretary of the state board of health, in his "Health Almanac for 1915," just issued. Pneumonia kills more people every year than any other human malady, not

even excepting consumption.

The germs of pneumonia get into the lungs through the mouth but not every man who has the germs in his mouth will have pneumonia. If he did practically all of us would have the distinction of the winter. It is only when ease during the winter. It is only when in France have been given the right to the system is "run down" that the vote in place of their husbands, who germs do their dread work. These are have gone to war.

the things which make pneumonia flour-

Excessive drinking of alcoholic liquors. Unusual exposure to extreme weather.
Exposure of old persons or persons suffering from other diseases.

Living and sleeping in badly ventilated rooms.

To avoid pneumonia—

1. Do not drink alcoholic liquors.

2. Dress warmly but not too thickly.

3. Do not needlessly expose yourself.

4. Have abundant fresh air in your living and sleeping rooms.

5. Do not have your rooms too hot and then go into the open air unprotected by wraps.

6. If exposed to extreme or rough weather, and wet or numb, undress in a warm room, rub off with a rough towel until the skin glows, then go to bed and stay there several hours.

7. Avoid over-cating and keep the bowels open.

bowels open.

8. Keep your feet warm and your head cool. 9. Take a moderate amount of brisk

exercise in the outdoor air daily.

10. Avoid dust and other irritating aubstances.

### A Sure Cure For Croup

Prepare for croup and colds by getting from the drug store a few ounces of sulphate of ether with from 3 to 5 drops of oil of cloves for every ounce of the ether.

The quantity of the oil of cloves depends
on the age of the child and the tenderness of its skin, as the cloves will burn the flesh if the solution is too strong. Then when Willie's hoarse cough wakens you some night, or Mary comes home from school some evening with a pain in her chest, don't be alarmed and anxious; just quietly bring out your bottle of ether and cloves and a square of cotton batting. Hold the cotton up to the affected spot, be it throat or chest, and pour about a tablespoonful of the ether mixture behind the cotton directly on mixture behind the cotton directly on the flesh. Cover quickly with the cot-ton to prevent too rapid evaporation. ton to prevent too rapid evaporation. In a very few moments your child will be breathing easy, and in most cases, will not cough any more. If the case is deep seated, several applications may be needed. This remedy has proved very valuable in our family, and by the addition of a few more drops of the oil of cloves, has been found effective for adults also. adults also.

It must be used with care, however, as the ether is inflammable and should never be brought near a fire or a light. Keep the mixture in a cool place, tightly corked, as it evaporates rapidly.

Mrs. Jennie P. Gallentine.

R. 3, Pomona, Kan.

### Sausage That Keeps

There are many ways to make and keep sausage. Much depends on the individual preference and taste. The best sausage is made from the lean trimmings and the tenderloin muscles with just enough fat ground in to make the mixture fry well. Three parts of lean to 1 of fat usually is considered about the right proportion. Here is an old recipe for seasoning that has given satisfaction for seasoning that has given satisfaction for a long time.

Use 2 ounces of salt, 1 teaspoonful of finely ground black pepper, 1 teaspoonful of cayenne pepper, and 4 teaspoonsful of finely grounds age for every 10 pounds of meat. The seasoning should be worked into the meat the worked be worked into the meat thoroughly. It may be sprinkled over the unground It may be sprinkled over the unground meat or worked in with the hands after the meat is ground. It is a good plan to sample the sausage, while it is being made, to learn if it has been seasoned to suit the taste. The essential thing in making good sausage is to grind the meat thoroughly. The sausage will be of a finer texture if it is run through the grinder twice. This also will mix the seasoning with the meat more thoroughly. in making good sausage oughly.

The sausage can be kept for several weeks by stuffing it into cotton sacks which are about 3 inches in diameter. If part of it is to be kept for a longer period, or for summer use, it should be fried and packed in hot lard in quart cans. The cans need not be sealed. Cans are preferred to larger jars because the danger of it spoiling while being used is eliminated.

The wives of the municipal counselors

## Proper Care for Incubator

### Buy Machine That Is Guaranteed to Give Satisfaction

BY EFFIE HILL, Achilles, Kan.

day and night temperature does not the roof of the house causing yary much, as external heat will affect fumes and gases to escape, the internal heat of the machine to a like 3 partitions forming marked degree. Many persons say a compartments each 3 by 2 feeclar is the best-place for the incubator end is, of course, the warrends of the pass good as this and I nut my halve. but I have not found it to be as good as a temperate room above ground. It is

the same. When saving eggs for hatching gather them twice a day during cold weather and keep them in a room where the temperature never falls low at any time. Do not let them get too hot by

time. Do not let them get too hot by placing them near a stove.

During the second and third week of incubation the daily airing of the eggs is an important matter. Take the trays out of the machine and allow the eggs to air for 20 or 30 minutes a day, up to the nineteenth day. At that time the door should be closed and not opened until the hatch is entirely completed. The developing chick must have air for perfect development. Incubation experts perfect development. Incubation experts

### Heat Kills Chicks in Shell

as these made it more comfortable for the chicks. These pieces of carpet were changed every day. I find this plan an easy way to keep down mites as they will hide in the old carpet and if scalded once a week in a strong suds, you will not have any mites and your chicks will grow like weeds.

Mrs. T. J. Pickering. Wakeeney, Kan.

### Brooder That Works Well

I have a brooder that has been in use a long time and by many poultry raisers but there are many, no doubt, who have not used it. It is a homemade affair and just the thing for those that cannot afford the high-priced brooders, but desire to raise their chicks on the artifi-

NE of the most essential items for cial plan. We have used it for two seasons with the very best results.

I cleated together two 12-inch boards 12 feet long to form the top, and a 12-inch and 4-inch board, 12 feet long for the back. One 10-inch board 12 feet long for the back. One 10-inch board 12 feet long made the front cover leaving a 6-inch opening the entire length of the back and top pieces were nailed together with 12-inch boards 2 feet long made the front cover leaving a 6-inch opening the entire length of the back and top pieces were nailed together with 12-inch boards 2 feet long priced machines. By all means get a machine that is guaranteed to give satisfaction.

Light the lamp and run the incubator for two or three days before placing eggs in it, and keep it lit until you are sure that a high and even temperature for two or three days before placing in it. The temperature will drop at once and the normal temperature will not be regained for 24 hours or more. Do not increase the heat until this amount of time has passed.

Keep the machine in a room where the day and night temperature does not yary much, as external heat will affect

At the opposite end a smaller pipe ex-tended from the 6-inch pipe up through the roof of the house causing all of the

I have 3 partitions forming 4 separate compartments each 3 by 2 feet. The fire end is, of course, the warmest and at this end I put my baby chicks. As they grow older and require less heat, better also to have the machine on the main floor so that the thermometer may be seen easily.

Another item of great importance in setting an incubator is to use fresh eggs of high vitality. Thrifty chicks will not hatch from stale eggs or those which have been kept for many days in a cold place. The fresher the eggs the better will be the hatch, other conditions being will be the hatch, other conditions being out over their backs. In the day time the same. When saving eggs for hatchbetter also to have the machine on the I move them to the next compartment out over their backs. In the day time I keep the board up and when I clean the brooder I also raise the hinged 10inch board making it easy to clean and letting the sunshine enter and purify the interior of the brooder. It is a pleasure to watch the chicks run in and

pleasure to watch the chicks run in and out of the brooder and at all times adjust themselves to the heat.

The cost of this brooder including the stove was \$11. It can be made any size and operated in almost any kind of chicken house. I screened the stove in and placed a thick piece of asbestos underneath it which eliminates all danger of fire. We have brooded as many as 600 chicks in this brooder at one time. It reduces the mortality to a minimum and our chicks mature into strong perfect development. Incubation expenses time. It reduces the mortality to a min-say sticking and dying in the shell is time. It reduces the mortality to a min-duce largely to lack of air during the in-duced largely to lack of air during the in-vigorous birds. We do not make these

brooders, nor have we plans to sell. Colony, Kan. G. C. Freeman. Colony, Kan.

I consider fresh eggs the most important item in getting a good hatch from the incubator. Next is care in regulating the heat at hatching time. My experience is that heat kills many chicks in the shell. At hatching time I wet a cloth in warm water, wring it out so as not to drip and lay it in the center of the tray. Repeat as often as necessary. This keeps the air moist. By this method I have hatched every fertile egg.

I raised all but three of one hatch of 130. The chicks were fed when 36 hours old on a ration of hard boiled eggs with a little black pepper on them. Two eggs with pepper was their breakfast every morning for 10 days, oat meal at 9 o'clock, table scraps at noon. They had cracked kafir at 3 o'clock, all the corn chops or whole kafir they would clean up at night, and fresh water before them constantly.

Their coops were cleaned every day.

Taking Off a Full Hatch

Gather eggs for setting several times aday if the weather is cold. If you must keep them several days turn them every day. Fill the incubator boiler with warm water and see that the incubator is level. Have all the parts of the lamp perfectly clean and put about a teaspoonful of common table salt in the bowl of the lamp to keep it from smoking. Light the lamp and turn it up to a fair height, then put a newspaper on the egg tray and lay the thermometer on the paper and close the door so as to regulate the heat. Try to keep them constantly.

I am careful not to crowd the eggs and make sure that none stand on end. I lay the thermometer on about the sixth egg from the front being sure that the bulb is resting on the egg. I keep

them constantly.

Their coops were cleaned every day.

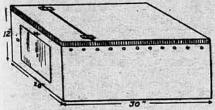

I used old strips of carpet in the coops the thermometer at 102 the first week. I fill the lamp every morning and trim I fill the lamp every morning and trim it twice a day. Beginning the second day I turn the eggs once every day, and twice every other day. I put a pencil mark on each egg when they are set so I can tell whether they are turned. I test the eggs on the four-teenth day and remove all the bad ones. At the end of the first week I increase the heat to 103 and keep it there until the chickens begin to neep, then I keep. the chickens begin to peep, then I keep it up to 104 and 105. On the nineteenth day I stop turning the eggs. My hatches are always off by the night of the twenty-first day. I have a warm basket

### It Keeps the Chickens Warm

A brooder may be made from a small pine box 30 inches long, 20 inches wide and 12 inches high. Bore eight ½-inch

strip of heavy cloth around the sides and the other end, from the bottom up to the air holes. Before tacking the cloth to the top of the box it should be padded with cotton or straw. Take the boards that were on the top of the box and nail a narrow strip 1 inch wide to each side. It makes it handler to feed each side. It makes it handier to feed the chicks if the first board is separated from the others and fastened with leath-

The Completed Brooder

er hinges. The bottom of the brooder should be covered with cut straw. The hover is made by lining and padding a cheese hoop on the inside and tacking a strip of cloth around the outside which is split every 2 inches. Then three legs 6 inches long are nailed on.
Mrs. Emma Arnold.
934 Sycamore St., Ottawa, Kan.

### Put Straw On the Concrete

Our hen house is 9 by 36 feet. It is covered with 1 inch boards and a layer of light weight corrugated iron roofing. This keeps out the rain and wind and makes it plenty warm for the fowls. The floor is made of concrete which keeps out the rats and skunks. It is covered with stream about a inches deep covered with straw, about 6 inches deep, which makes a dry, soft surface for the hens. We feed the grain in this straw so as to give the fowls the exercise of scratching for their feed.

The nest boxes are on a platform about 18 inches from the floor. This gives the fowls more room for scratching and keeps them from scratching straw into the nests. There are three divisions in the house, about 12 feet each. The drop boards are 3 feet above the floor and the roost 6 to 8 inches above the drop boards. That gives us plenty of room to get a hoe in to clean off the boards. We rake the droppings into a tub and haul the manure off on the

land. Each partition is boarded up tight and Each partition is boarded up tight and extends about 6 inches farther than the drop boards. This helps to keep all drafts from the birds. Ours are the canvas drop windows. The frames are made of 1 by 4 inch pieces and canvas is tacked to that. They are hinged at the top and swing in and fasten to the ceiling. They are kept open all the time except They are kept open all the time except when it is very cold and stormy from the south. In case the windows have to be closed the fowls still can have fresh air.

We have 275 hens and get about 60 to 70 eggs a day. The hens have free range except in cold, wet or stormy weather. We use crude oil on the roost, drop boards and nest boxes, to keep out.
the lice and mites. We put it on with
a paint brush two or three times a year.
Bluff City, Kan. Geo. E. Gould.

I find turkeys very easy to raise if brought up with turkey hens. As soon as my turkeys have laid their first clutch of eggs I set all the eggs under chicken hens and break up the turkey hens that want to sit. Then by the time the turkey hens lay their second clutch of eggs and become broody, the first settings of eggs are almost ready to hatch. I put a few of these eggs under the turkey hens and let them finish sitting on them until they are hatched. By this method the turkey hens are not all tired out and thin when they finish the hatches.

Warrensburg, Mo.

I have been a reader of your paper for the last ten years and think it the best farm paper published.

R. 3, Axtell, Kan.

I have been a reader of your paper for the last ten years and will say that there is not a farm paper that I have read that equals the Farmers Mail and Breeze.

Lone Jack, Mo. Odom Tyson.

I enjoy very much reading the Farmers Mail and Breeze and I think it ought to be in every home as it is a paper for young and old. out and thin when they finish the

I put from 25 to 35 little turkeys with each turkey hen. I leave the turkey on the nest about 24 hours after the turkeys are hatched, or until they are thoroughly dry, then I dust the old birds with good insect powder and put them

with their broods in a large coop. The coop has a slat front that permits the little turks to go in and out at will but I keep the mother up four or five days.

I do not feed the little turkeys until

I do not feed the little turkeys until they are 36 hours old, then I give them a little bread soaked in milk and squeezed dry, four or five times a day. I do not give them much as I want them to be hungry and forage for themselves. I also put fine sand in the coop for them to pick at as they need grit the first thing.

After they are five days old I turn them out when the dew is off the ground and let them go where they wish but I always bring them back to their coop at night and feed them there. It is not long before they will come of their own accord. I raise the pure Bourbon Reds. They are very thrifty and easy to raise.

### Hatched in An Incubator

I keep about 25 turkey hens. Last year was pretty discouraging from one point of view, but not so bad when I consider the source of my bad luck. I wanted to raise 500 turkeys, but dogs, cats, hawks and coyotes cut them down to 140. I betch was turkeys in a source of the sou to 140. I hatch my turkeys in an incu-bator and then put them with turkey hens. I had trouble with only one tur-key hen about taking the little turkeys. I do not like chicken hens for mothers because they don't go far enough away to get the grasshoppers and bugs which is the best feed for young turks. I feed the turkeys very little for if they have

"Suffer little children to come unto me and forbid them not, for of such is the king-dom of God." The church opens its arms to the young. The great character-builder and steadier of youth is religion, the divine spirit which lifts man above the brute. If you would give your boy or your girl the Greatest Gift and the greatest resource in time of trouble or temptation, place it within their reach and set them an example by going to church yourself.

as much range as they ought to have, they will get their own living. They eat many insect pests and are a great source of profit in that way.

Mrs. Fannie Roberts.

R. 2, Tonkawa, Okla.

### Two Geese To One Gander

Will you kindly tell in the Farmers Mail and Breeze, how many geese to mate with one gander?

No more than four geese should be mated with one gander. Two geese to one gander is the more common mating. Wild geese always mate in pairs, and occasionally a domestic gander will mate with only one goose, but such instances are reare. Fertile aggs should nearly are rare. Fertile eggs should nearly always result from a mating of either two or three geese to one gander.

DEALING IN A THOROUGH WAY WITH CLIMATIC AND CROP CONDITIONS

AGUISE for FARMERS
By S. T. Folley

In the fruit of wide study and observation. By it you may know climatic conditions in advance from one year to another and through a cycle of 27 seasons. This is proved by statistics of crops which show the effect of planets in their several positions. The yields of wheat, corn and oats from 1866 to the present are given for reference.

New Edition Modern Silage Methods

# Lorimer of the Northwest called to inquire for his wife, and—he didn't call sober."

BY HAROLD BINDLOSS

Author of "Ranching for Sylvia," "By Right of Purchase," "Winston of the Prairie," "Alton of Somasco," and Other Stories.

We've been several weeks telling of the hard work and the adventures of two young Englishmen, Ralph Lorimer, leading man in this company, and Harry Lorraine, his good natured partner. After crop disappointments enough to make many persons quit the business these two young farmers take a contract to build the roadbed for the railroad then building through the Northwest. Lorimer is in love with Grace Carrington whose father, Colonel Carrington, is opposed to him as a son-in-law. Lorimer finally returns to his farm with his sister as house-keeper while Lorraine continues the railroad work. This sister, Aline, is beginning a big job of cleaning up the bachelor quarters.

### THE STOLEN CATTLE.

HAD broken a further strip of virgin prairie, besides plowing, with hired assistance, part of the already cultivated land, before the Indian summer passed. Jasper paid us frequent visits, and seemed to enjoy being badly deto enjoy being badly de-feated in a verbal encoun-ter with Aline, after which he would confine his talk to cattle-raising, which of late had begun to command increased

attention on the prairie.

"This is too much a one-crop coun-"This is too much a one-crop tour try. Stake all on your wheat yield, and when you lose it you're busted," he said, soon after my return. "Now what's the matter with running more cattle? They'll feed themselves in the summer; and isn't there hay enough in the sloos if you want to keep them? while one can generally get a good fall profit in Winnipeg. I've been picking up clean lots all year, and if you have any money to spare I'll let in reasonably."

per," said Aline. "My brother is what you might call a single-crop man. One thing at a time is enough for him. Ralph, why don't you try a deal in cattle?"

cattle?"

The same thing had been running through my own mind, and the result was that I wrote Harry, who, being of a speculative disposition, arranged for an interim payment, and sent me a remittance, which was duly invested in a joint transaction with Jasper, who had rather over-purchased.

in a joint transaction with Jasper, who had rather over-purchased.

"I'm a little pressed for payments just now," he said. "Want to hold my wheat, and can't afford 8 per cent interest. The beasts are fattening all the time, and there'll be a high-class demand in Winnipeg presently for shipment to Europe."

He was right; and I began to have a respect for Aline's judgment when the papers reported that prices were rising fast, and stock-salesman firms sent circulars to this effect into the districts. But, when I conferred with Jasper, he advised me to hold on. "The figures are climbing." he said, "and they'll reach high-water mark just before the ice closes direct shipment."

At last the frost began in earnest, and I payment to the the

At last the frost began in earnest, and I prepared to settle down for the and I prepared to settle down for the winter. There were improvements to be made to the granary, implements, harness, and stables, in anticipation of the coming year's campaign, besides alterations in the house; for I felt that many things might be appear to a set the set of many things might happen before next autumn, and I desired that Fairmead should be more nearly ready if wanted to receive its new mistress.

Again, however, fate intervened, for, instead of a round of monotonous work, many stirring events were crowded into that winter. The first happened, as usual, unexpectedly, and came nearly ruining our cattle-trade venture. To understand it satisfactorily it is neces-sary to begin the narrative at the be-

It was a chilly night after a warm day. I sat beside the stove mending harness, while Aline criticized the workmanship and waxed the twine for me. The last mall had brought good news from Harry, and I felt in unusual spirits as I passed the awl through the leather, until there was a creak of wagon wheels outside, followed by a pounding on the door.

a pounding on the door.
"It's too bad," said Aline. "We are both tired after our ride, and I was looking forward to a chance for giving you good advice, and a cozy evening. Now some one is coming to upset it all."

She was not mistaken, for when opened the door a neighbor said, "I've brought you Mrs. Fletcher. Met her walking to Fairmead across the prairie. No; I guess I'm in a hurry, and won't get down."

It was with no great feeling of pleasure that I led the visitor into the house; foot had frightened her.
and it is curious that as I helped her "No," Aline answered, "The Indians
down from the wagon something are in their own way gentlemen. It

(Copyright Frederick A. Stokes Co., N. Y.) should recall Harry's warning: "That fellow Fletcher will bring more trouble on you some day."

on you some day."

He had done enough in that direction already, and though I did not wish Aline to hear the story, I was glad she was there, for preceding events had taught me caution. So, making the best of it, I placed a chair beside the stove, for Minnie Fletcher explained who she was, and then, while Aline sat still looking at her with an apparent entire absence of curiosity which in no way deceived me I waited impatiently. Minnie had not improved since I last saw her. Her face was thin patiently. Minnie had not improved since I last saw her. Her face was thin and anxious, her dress—and even in the remoter corners of the prairie this was unusual—was torn and shabby, and she twisted her fingers nervously be-

fore she began to speak.
"I had expected to find you alone, Ralph," she said; and though I pitied her, I felt glad that she had been dis-appointed in this respect. "However, I must tell you; and it may be a warn-hos fallen into ing to your sister. Tom has fallen into bad ways again. He is my husband, Miss Lorimer, and I am afraid not a very good one."

I could not turn Aline out on the prairie, and could only answer, "I am very sorry. Please go on," though it would have relieved me to make my own comments on the general conduct

own comments on the general conduct of Thomas Fletcher. "It was not all his fault," she added. "The boys would give him whisky to tell them stories when he went to Brandon for the creamery, and at last he went there continually. He fell in with some men fro mWinnipeg who lent him money, and I think they gambled in town-lots, for Tom took the little I had saved, and used to come home ram-Then he bling about a fortune. stay away for days together, until they dismissed him from the creamery, and all summer he had never a dollar to give me. But I worked at the butterpacking and managed to feed him when he did come home, until—Miss Lorimer, I am sorry you must hear this—he used to beat me when I had no more money to give him.

Aline looked at her with a pity that Aline looked at her with a pity that was mingled with scorn: "I have heard of such things, and I have seen them too," she said. "But why did you let him? I think I should kill the man who struck me."

Minnie sighed wearily. "You don't understand, and I hope you never will. Ralph, I have tried to bear it, but then life is killing me, and I have grown horribly afraid of him. Moran, a friend of the creamery manager, offered me a place at another station down the line, back to-night, and I dare not tell him, so I wondered whether you would help me."

"Of course he will," said Aline, "and if your husband comes here making inquiries I hope I shall have an opportunity for answering him."

I had the strongest disinclination to be mixed up in such an affair, but I could see no escape from it. There were even marks of bruises on the poor woman's face, and when, promising as-sistance, I went out to see to the horses and think it over, Minnie Fletcher burst into hysterical sobbing as Aline placed an arm protectingly around her. She had retired before I returned, for I fancied that Aline could dispense with my presence and I found something to detain me.

Ralph, you are a genius," Aline said "Ralph, you are a genius," Aline said when I told her that I did not hurry back, "I have arranged to lend her enough to buy a few things, and to-morrow I'm going to drive her in to the store and the station. No, you need not come; I know the way. Oh, don't not come; I know the way. Oh, don't begin to ask questions; just try to think a little instead."

I allowed her to have her own way. Indeed, Aline generally insisted on this, while with many protestations of gratitude Minnie Fletcher departed the next morning, and I hoped that the affair was ended. In this I was disappointed, for, returning with Jasper the next day from an outlying farm, I found Aline awaiting me in a state of suppressed excitement. She was paler than usual, and moved nervously, and the Marlin rifle lay on the table with the hammer

drawn back.
When Jasper volunteered to lead the horses in she dropped limply into a chair.

"I have spent a terrible Ralph. In fact, though I feel ashamed of myself, I have not got over it yet." I eased the spring of the rifle and inquired whether some wandering Black-

a laugh and a sob before she continued: "He came in a wagon with another little dark man with a cunning face, and walked into the room before I could stop him. I want my runaway wife, and I mean to find her. Who the deuce are you—another of them?" he said.
"I found it hard work to keep back the

words that seemed most suitable, and perhaps I was not altogether successful, while Aline'e forehead turned crimson and she clenched her hand viciously as she added:

"I told him that I was your sister, and he laughed as he said—he didn't believe me. Then he swore horribly, and said—oh, I can't tell you what he said, but he intended to ruin you, and would either shoot his wife or thrash her to death while the man in the way.

would either shoot his wife or thresh her to death, while the man in the wagon sat still, smiling wickedly, and I grew horribly frightened."

The rattle of harness outside increased, and turning I saw Jasper striding away from the wagon, which stood near the open doorway, while Aline near the open doorway, while Aline drew in her breath as she continued: "Then Fletcher said he would make me tell where his wife was, and I determined that he should kill me first. He came toward me like a wild beast, for there were little red veins in his eyes, and I moved backward round the table, feeling perfectly awful, because he reeked of liquor. Then I saw the rifle and edged away until I could reach it, and he stopped and said more fearful things, until the man jumped out of the wagon and dragged him away. I think Fletcher was afraid of the other man. So I just sat down and cried, and won-

So I just sat down and cried, and wondered whether I should have dared shoot him, until I found there wasn't a cartridge at all in the rifle."

After this Aline wept copiously again and while feeling both savage and helpless, I patted her shoulders, calling her a brave girl, Jasper looked in.

"I won't stop and worry Miss Lorimer now," he said shortly. "I'm borrowing a saddle, and will see you tomorrow. Good evening."

He kept his promise, for the next

He kept his promise, for the next morning, when Aline was herself again, he rode up to the door and came in

chuckling.
"I guess I have a confession to make,"
he said, "Couldn't help hearing what
your sister said, though I kept banging your sister said, though I kept banging the harness to let you know I was there, so I figured as to their probable trail and lit out after them. Came up with the pair toward nightfall by the big sloo, and invited Mr. Fletcher to an interview. Fletcher didn't seem to see it. He said he wouldn't get down, but mentioned several things—thev're not worth tioned several things—they're not worth repeating—about his wife and you, with a word of your sister that settled me.

"'I'm a friend of Miss Lorimer's. Are

you coming down now?" says I.

"'I'm not,' says Thomas Fletcher; so
I just yanked him right out on to the
prairie, and started in with the new
whip to skin him. Asked the other man whip to sain him. Asked the date had he didn't raise them. Then I hove all that was left of Fletcher right into the sloo, and rode home feeling considerably better."

He laughed a big hearty laugh, and then started as Aline came out of an

"I want to thank you, Mr. Jasper," she said. "There are persons with whom one cannot argue, and I think that thrashing will do him good. I hope that you did it thoroughly."

Jasper swung down his broad hat, fidgeted, and said awkwardly, "I didn't figure on telling you, but if ever that man comes round here again, or there's any one else scares you, you won't for-get to let me know."

Aline glanced straight into the eyes of the speaker, who actually blushed with pleasure as she said: "I will certainly promise, and I shouldn't desire a better champion, but there is at presented." ent no necessity to send you out spread-ing devastation upon the prairie."

Jasper looked idiotically pleased at this, and for a time we heard no more of Thomas Fletcher, who nevertheless had not forgotten the incident. As the former had anticipated, the demand for shipping cattle still increased, and when it was announced that several large steamers were awaiting the last load before the St. Lawrence was frozen fast. Jasper rode west to try to pick up a few more head, and informed me that he would either telegraph or visit Winnipeg to arrange for the sale before returning. News travels in its own way on the prairie, and we afterown way on the prairie, and we after-ward decided that Fletcher, who had returned to his descrited home, must have heard of this. Jasper had been gone several days when a man in city attire rode up to Fairmead with two assistants driving a band of stock. He showed me a cattle-salesman's card, and stated that he had agreed with Jasper to dispose of our beasts on commission, and as the latter was waiting in Winnipeg, he asked me to ride over (Continued on Page 19.)

# Feeding Cows in Winter

# Alfalfa Hay and Silage Are Valuable in Cold Months

BY F. H. SCRIBNER AND ROY HARRIS

Nature gives us a model in dairy feeds in June and this is recognized to such an extent that the words "June pasture" suggest the ideal condition for producing milk and butterfat of the highest quality and in greatest abundance.

Our common grasses supply all of the

Our common grasses supply all of the required nutrients in the right proportions. Besides, this forage is relished by animals to such an extent that they will consume it almost to the limit of their capacities. Pasture grasses are great consume it almost to the limit of their capacities. Pasture grasses are succulent, and so keep the digestive system of the animal in a laxative condition favorable for the very best action of the organs of digestion and assimilation. "dope" bottle after the damage is done. pasture are supplied with an abundance of fresh air and sunlight.

We must adjust ourselves to conditions of climate, soil, location and capitions of climate, soil, location and capi-tal which in turn are affected by market for products and the help available for the care of the herd. What would be wise practice for one man may be folly for another, which shows that each should solve his own problem for himself. It certainly is worth some study if he can make a pound and a half of but-ter where but one was produced before can make a pound and a half of butter where but one was produced before
—especially if the first pound was made
without a profit and the extra half is
nearly clear gain.

Winter conditions bring their own
problems and difficulties but there are
some possible advantages. While the
herd has to be kept under artificial con-

herd has to be kept under artificial conditions, these are more likely to be under the control of the feeder than is

possible at other seasons. In place of the ration prepared ready for use by nature we must supply feeds from various sources which will answer in its stead. We must furnish nutrients, bulk and succulence. We first consider what is available in the form of roughage, for upon the quality of this will depend the selection of the concentrates or grains intended to balance the nutrients and supply them in sufficient

Considerable judgment is required to get best results and the feeder must know his cows and something of the effects of the feeds to be used. For instance, cornmeal is an excellent feed but a good dairyman would not think of feeding it alone. The same is true to an even greater extent with oilmeal, cottonseed meal or other high-protein feeds, but when one of these is mixed with the heat producing cornmeal and other farm grains the ration is improved in heless. in balance.

Without alfalfa or clover hay in the roughage, it is difficult to make a satisfactory and economical ration entirely from homegrown material. It is not best to feed cows more than they will eat up clean but if grain is left when it would seem that no more than enough is being fed, it will be well to modify the

ration to suit the taste of the animals.
Succulence must be furnished if we tion. The silo solves the problem best lightning.

THE profitable feeding of dairy cows consists in supplying them with plenty of well-balanced, palatable feed in surroundings which afford them health and comfort.

Nature gives us a model in dairy feeds in June and this is recognized to such an extent that the words "June pasture" suggest the ideal condition for producing milk and butterfat of the highest quality and in greatest abundance.

Our common grasses supply all of the

ing may be used:	Link Fall M

Do not overfeed a calf at any time, as that is quite sure to bring on indigestion, resulting in scours. If any feed is left in the pail, or any symptoms of scours are noticed, cut down on the feed. If this does not cure the calf, feed dried If this does not cure the calf, feed dried blood for several days. A tablespoonful or more should be given at a feed. This

seldom fails to check the disease.

One fruitful cause of scours is neglecting to clean the drinking pail properly each time after use. Wash it thoroughly. Use a brush with bristles at the ly. Use a brush with bristles at the end, so that the corners at the bottom of the pail will be reached. Then place the bucket so that the sunshine will reach all parts of the interior. A calffed from a filthy pail cannot do well, no matter how well it is treated otherwise. Smith County.

### Cream Replaced by Meal

A skimmilk calf should be fed some good calf meal to take the place of the butterfat that it does not get. There are several satisfactory brands of calf meal on the market, prepared expressly for that purpose. A good one can be mixed at home by grinding 2 bushels of oats and 1 of corn together, and adding a bushel of middlings, ½ bushel of bran, a peck of cottonseed meal and ½ gallon of salt. This will give an article as good as can be bought, and it will cost a lot less than some of the mixtures on the market.

Begin feeding in small quantities, not more than a tablespoonful at a feed for the first week. Increase the amount gradually until the calf is taking a pint or more at a feed when it is 3 months of age. This meal may be placed in the bottom of the pail before the milk is poured in, or it may be fed dry after the milk. I have had excellent results and no harm has come from feeding it

in the milk.
Marion County.

Which would you rather be, a boy with a dime to spend or a miser with a million to hoard?

Succulence must be furnished if we are to have anywhere near an ideal ra-

received encouraging support from the members in the last year. Many men do not realize the growth of the co-operative movement in Kansas and in the world. It is not generally known that

Our country's flag is an emblem of what we are, of what we hope to be. It means universal education, light for universal education, light for every mind, knowledge for every child, that all distinctions based on birth or blood have perished, that this Government will stand between the weak and the strong, between wealth and want, between labor and capital, between motherhood and the saloon, and give and guarantee simple justice to all. Beneath its folds the weakest must be protected and the strongest must obey. Let us take this flag away from the saloon and brothel and wrap it about the brothel and wrap it about the children of this nation. Let's work with all the earnestness we possess for National Constitutional Prohibition.

there are almost 290 chapters of the farmers' grange in Kansas. Neither is it generally known that there are more than 7,500 farmers' co-operative associations in the United States and that they did a business last year of more than a billion dollars.

than a billion dollars.

Co-operation is growing rapidly all through the world. As John Graham Brooks said in a recent issue of The New Republic, ""Like parrots, men keep on repeating, 'Oh, co-operation does good work in distribution, but in production it fails." This is an error. In its own self-created market 'co-operative production' has won the most brilliant successes. It is this feature, indeed, which has shown the most amazing growths. One of the ablest of the London weeklies reports the last co-operative congress in these words:

"The International Co-operative alliance, which has been holding its ninth congress this week at Glasgow, has grown into the most gigantic of all our non-official world federations. Its 24 national units now include something like 130,000 separate co-operative societies, having no fewer than 20 millions of

farmers' organization made 33½ per cent profit last year. The store did a business for the year of \$53,681. George L. Stuart is manager.

The Farmers' elevator at Plevna, in Reno county, has declared a dividend of 100 per cent. The actual earnings were 105 per cent. The actual earnings were 105 per cent. This is, of course, larger than the profits usually are, for it was a good wheat year in that section. Considerable profit has been made on the advance in the price of wheat.

There are many farmers' co-operative associations in Kansas that have done just as well as the farmers at Wathena and Plevna. Almost all of the hundreds of such organizations in this state are in good shape financially, and they have received encouraging support from the members in the last year. Many more defining the past 20 years, been increasing rapidly.

In respect to productive co-operation, it adds:

"As a matter of fact, the co-operators' success has been even more remarkable in production than in distribution. The co-operative movement runs five of the largest of our flour mills; it has, among others, the very largest of our boot factories; it makes cotton cloth and woolens, and all sorts of clothing; it turns out huge quantities of soap; it makes every article of household furnitures. ture; it produces cocoa and confection-

ture; it produces cocoa and confection-ery; it grows its own fruit and makes its own jams; it has one of the largest tobacco factories, and so on."

For 60 years objectors have set every sort of theoretic frontier that was to call a halt upon the movement. At first "only the English workingman had the genius for it." "It must be confined to small local trading." It could never hope to do banking or manufacturing or take the risks of insurance. In no case could it reach any considerable part of a nation's business.

of a nation's business. These solemn incredulities now appear humorous. Within less than 30 years Denmark has become a co-operative nation. Germany has 30,000 such societies. In at least 20 nationalities co-operation In at least 20 nationalities co-operation has struck such root that it can no more be stopped than popular education. The first failures in Italy were said to prove that "co-operation did not suit the Italian character." Its growth there in the last 18 years has been in many ways more fascinating than the story of the airship. Small farmers co-operatively manufacture their own fertilizers. They run co-operative banks, farms and marrun co-operative banks, farms and mar-ket gardens. The commonest sort of labor hires engineers, buys material, and pays its own bills from its own co-oppays its own bills from its own co-operative banks. It paves streets, dredges lands, builds all manner of structures, even to the Reggio-Emilia railroad. This work now runs yearly into many hundreds of millions of lire. The government and cities are organically committed to a working partnership with these co-operators.

### Cow May Have Tuberculosis

I have a cow which has a bad cough. The cough started a few weeks ago following the feeding of some dusty hay. She coughs most at morning. She is affected with scours at times and does not milk well.

Lyon County, Kansas.

I will suggest that

I will suggest that you have your cow tested for tuberculosis. The symptoms you give, to some extent, are characteristic of this disease. If you will write to the state livestock sanitary commissioner, Topeka, Kansas, he tary commissioner, Topeka, Kansas, he will designate some veterinarian to do this work for you. If the work is done under the direction of the state live-stock sanitary commissioner there will be no charge. Dr. R. R. Dykstra. be no charge. Dr. R. R. Dykstra Kansas State Agricultural College.

(family) members, representing three or four times that number of persons.

The essential feature of the to think he is a block off the old chip world-wide co-operative movement has then trouble is afoot.

### Lorimer of the Northwest

(Continued from Page 16.)

to his homestead to obtain delivery. This I did, and afterward accompanied him to the railroad, where I saw the cattle put safely on board a stock train, and early the next morning I returned, feeling that I had done a good stroke of business.

feeling that I had done a good stroke of business.

The same afternoon, while Aline prepared a meal, I sat writing a letter to Harry, telling him with much satisfaction how well our investment had resulted. Aline listened with a smile to my running comments, and then remarked dryly:

"I think you have forgetter.

sulted. Aline listened with a smile to my running comments, and then remarked dryly:

"I think you have forgotten your usual caution for once, Ralph. You should have gone with them, and seen the sale. I didn't like that man, and once or twice I caught him looking at you in a way that struck me as suspicious. I suppose you are sure the firm he represented is good?"

"It's as good as a bank," I answered, and then grew almost vexed with her, for Aline had an irritating way of damping one's enthusiasm. "Now try to say something pleasant, and I'll buy you a pair of the best fur mittens, in Winnipeg when we get the money."

"Then I hope you will get it." said Aline. "for I should like the gloves. Here is another cattleman going south." She placed more plates on the table, while, throwing down the pen, I looked out of the window. Here and there the dry grasses were buried in snow, and a glance at the aneroid suggested that we might have to accommodate the visitor all night, for the appearance of the weather was not promising. He came on at good pace, wrapped in a short fur coat, and I noticed that he did not ride altogether like the prairieborn. When he dismounted I led his horse into the stable before I ushered him into the room. The meal was almost ready, and we expected him to join us as a matter of course. He was a shrewd-looking young man with a pleasant face, and bowed gracefully to Aline as he said in a straightforward way:

"I thank you for your kindness, madam, and must introduce myself—

pleasant face, and bowed gracefully to Aline as he said in a straightforward in way:

"I thank you for your kindness, madam, and must introduce myself— James Heysham, of Ross & Grant, high-class cattle-salesmen. Best market prices, immediate settlements guaranteed, reasonable commission, and all the rest of it. Glad to make your acquaintance, Mr. Lorimer; here's our card. I rode over from the railroad on the way to Jasper's, to see if I could make a deal with you. Now's the time to realize on your stock, and Ross & Grant the best firm to entrust them to. Don't want to accept your hospitality under false pretenses, and there are still a few prejudiced Englishmen who look down on the drummer. Once waited on a man called Carrington—and he wasn't even civil."

"Sit down," I said, laughing. "This is my sister, and at least we can offer you a meal, but you are too late to sell our stock. I have just returned from shipping Jasper's as well as my own under charge of a new partner of Gardner's."

Heysham looked puzzled. "It's a reliable firm—almost as good as our own,"

Heysham looked puzzled. "It's a rellable firm—almost as good as our own," he said. "You must not smile, Miss Lorimer; when one earns a living by that talk it's hard to get out of it. But they're conservative, and never send drummers around. Besides, there's only Gardner and his brother—they haven't a partner. Now I wonder whether"—and the last words were unintelligible.

intelligible.

An uneasy feeling began to grow on me, and our guest looked thoughtful.

"You suspect something, Mr. Heysham," said Aline, "and you ought to tell us what it is. I want to know exactly what you meant when you added "Confidence men."

Then I started, and Heysham bowed as he answered: "You are evidently new to the wicked ways of this country, Miss Lorimer. I meant that some unprincipled person has, I fear, unfortunately taken your brother in. I have suspicions. Was he a little dark man, or perhaps it was another, rather stout and red-faced? Still I'm puzzled as to how they acquired the local knowledge how they acquired the local knowledge and learned enough about your business to fool you."
"No," I answered with a gleam of

"No," I answered with a gleam of hope, "he was neither;" but Aline broke

"The man you mention drove here in a wagon some weeks earlier, and I know how he got the local knowledge—the other, with the red face, was Thomas Fletcher. He lived on the prairie. We have the way the state of the state of

Thomas Fletcher. He lived on the prairie, Mr. Heysham, and there must have been three in the plot."

I rose from the table flinging back my chair, but Heysham nodded gravely. "Exactly; there are three of them. Your sister has made it all clear," he said. "I know the party—they've been engineering various shady deals in essaid. "I know the party—they've been engineering various shady deals in estate and produce, and now, when Winnipeg is getting uncomfortably warm, this is evidently a last coup before they light out across the boundary. The dark man was a clerk in the stock trade have to work.

—turned out for embezzlement—once, you see, Still, they can't sell until to-morrow, and we might get the night train. No chance of trade hereabouts, you say; then, for the credit of the market, if you'll lend me a fresh horse, I'm going right back to Winnipeg with you. Sit down, and finish your dinner; you'll want it before you're through."

I looked at Aline, who was equal to the occasion. "You must certainly go," she said. "Even if there is a blizzard, I shall be safe enough."

So presently she buttoned the skin coat about me, slipped a flask of spirits into the pocket; and just before we started kissed me, saying, "Take care of yourself, and do your utmost. There are all poor Jasper's cattle besides our own. Mr. Heysham, I thank you, and whenever you pass this way remember there's a hearty welcome for you at Fairmead."

"I am repaid already, madam," said Heysham as we rode away.

"I am repaid already, madam," said Heysham as we rode away.

### A RACE WITH TIME.

A RACE WITH TIME.

A DREARY ride lay before us, for already the afternoon drew toward its close, and the light drifts were eddying under a bitter wind. The pale sun was still in the heavens, but a gray dimness crept up from the grass-land's verge toward it, against which the patches of snow gleamed lividly. However, I thought little about the cold, for with careless stupidity I had allowed a swindler to rob my partner, and a succession of blizzards would not have stopped me then. Heysham, though uninterested, seemed equally and a succession of blizzards would not have stopped me then. Heysham, though uninterested, seemed equally determined, and we rode well, so the long miles of grass rolled behind as. Now a copse of birches flitted past, now a clump of willows, or the tall reeds of a sloo went down with a great crackling before us, then there were more swelling levels, for our course was straight as the crow flies from horizon to horizon, and we turned aside for no obstacle.

course was straight as the crow flies from horizon to horizon, and we turned aside for no obstacle.

It was dusk when with lowered heads we charged through the scattered birches of a ravine bluff, and far down in the hollow beneath I caught the dull gleam of snow-sprinkled ice.

"It's a mean-looking gully," gasped Heysham. "I guess that creek's not frozen ha.d, and it's pretty deep. Say, hadn't we better lead our horses?" and I flung an answer over my shoulder:

"That will just make the difference between catching and missing the train. I'm going down in the saddle."

"Then of course I'm going too," said Heysham breathlessly. "Your neck is worth as much as mine is anyway."

For the next few moments I saw nothing at all but the shadowy lines of birch stems that went reeling past. A branch struck Heysham's horse, and swerving, it jammed his leg against a tree; then there was a crash as my own beast, blundering, charged through a thicket where the brittle stems snapped like pistol-shots, but the salesman was close behind me, and with a shout of "No bridge for miles. I'll show you the way over," I drove my horse at the creek.

The quaggy banks were frozen hard now. They were also rough and blowed

creek.

The quaggy banks were frozen hard now. They were also rough and plowed up by the feet of cattle, which had come there to drink before the frost, and the leap looked horribly dangerous, for I dare not trust the ice; but the beast got safely off and came down with a great crackling amid thinly frozen mud and reeds. There was a splash and a flounder behind me, and then as we staggered forth Heysham came up abreast, with the water dripping from his horse, and I found breath to exclaim:

"Well done! I never should have thought a city man could bring a horse down there."

down there."
"Thanks!" said Heysham, with more "Thanks!" said Heysham, with more than a suspicion of dryness. "In this enlightened country one must earn one's bread as one can, but I wasn't brought up to the drummer's calling. Used to ride with—but that has nothing to do with you, and I'm hoping you'll strike the railroad on the shortest possible line. It wouldn't be nice to spend tonight on the prairie."

There could be no doubt on this point, for when we reached the levels darkness had closed down and the air was thick with uplifted snow which smarted

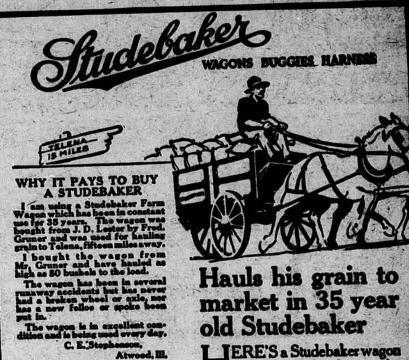

ness had closed down and the air was thick with uplifted snow which smarted our eyes and made breathing difficult, while, for the first time, I began to have misgivings. Heysham had understated the case, for unless we struck the railroad we might very well freeze to death on the prairie. I explained this to him, and gave him directions how he could find a farm by following the creek; but he laughed.

"It's an exciting run," he said, "and even life in Winnipeg grows monotonous. Lead on, I'm anxious to be in at the finish."

### (TO BE CONTINUED.)

The trouble with too many reformers is that they attempt to make epithets take the place of arguments.

It's a hard lot to be lazy and still

Ithat has had hard usage for thirty-five years, served two owners and is still on the job.

And this isn't an exceptional Studebaker, for we have thousands of testimonials telling similar stories about the long life and good service Studebaker wagons have given.

### Why Studebaker's Last Longest

These many long lived wagons are the result of Studebaker superiority; a superiority which comes from the long ageing and weathering of the timber, tested steel, the splendid standardization of the manufacturing processes and the rigid requirements of test and re-test through which each wagon has to pass. Even Studebaker paint and varnish is analyzed before it is used.

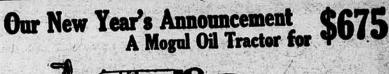

But, remember, since paint can make all wagons look of equal quality, appearance

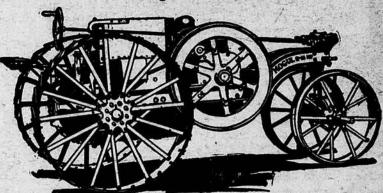

is a most deceptive thing. And that since the cost of a farm wagon is in direct pro-portion to its length of life, that wagon is the cheapest that can prove the longest average term of service.

To make sure you will get a lifetime of service, buy a Studebaker. You will never regret having bought it.

Studebakers last a lifetime

nce for 1915 an all-purpose farm tractor with 8-H. P. at the drawbes and 16 on the belt—Mogul 8-16

### A Small-Farm Tractor for all Farm Work

HIS new Mogul 8-16 tractor has power to do the THIS new Moses. work of eight horses.

Being a four-wheeled, all-purpose tractor, you can use it

every working day.

It will do all the plowing, disking and seeding.

It will draw manure spreaders, wagons, hay loaders, mowers or It will run a corn sheller, feed grinder, small shredder, thresher or ensilage cutter.

Any farmer can buy this new Mogul 8-16 tractor for \$675.00, cash, f. o. b. Chicago.

The man who can use one of these Mogul tractors pays, at this price, the least for which a good, reliable, all-purpose 8-16 tractor can be sold. If you want to use a Mogul small-farm tractor for spring work, your order should be placed now with the I H C local dealer. Write us for full information.

CHICAGO McCormick Champion Deering

ing \$20 to \$100 an acre on hay, and from \$300 to \$700 an acre on seed. It yields the biggest tomage to the acre of any high-class hay known. If you plant Sudan Grass, you never have to buy feed for your stock. As a catch crop, it turns loss into profit by replacing crops that have failed because of drouth or \$500. By rotating it with other crops, you conserve and increase the fertility of your soil. Sudan Grass is one of the big factors that are bringing prosperity to the South. You ought to know all about it right now.

### This Book Tells **All About It**

I am the largest grower of Sudan Grass in America. I have studied it for years. This book contains everything I have learned about Sudan Grass. It is complete and absolutely reliable. It is the first and only book ever published that tells all that is known about Sudan Grass. Profusely illustrated with actual photographs of growing, harvesting and threshing Sudan Grass.

Prof. B. Youngblood, Director of Experimental Stations for the state of Texas, says—
"Mr. David B. Clarkson: "I have read your new Sudan Grass book. Glad to note that it brings forth the most comprehensive and authoritative information on Sudan Grass as yet published in book form."

Don't Start Wrong! Don't commence growing bow to secure, grow and keep seed pure, hew and whete plant, where and on what kind of soil it will grow, how to cultivate and harvest for hay and seed, how to threat and harvest for hay and seed, how to threat and harvest for hay and seed, how to threat and harvest for hay and seed, how to threat and harvest for hay and seed, how to threat and all other particulars. My book tells you everything

Wonderful Book for 10c book may prove to be worth thousands of dollars I want every American Farmer to know all I ke I Sudan Grass. Morely send your name and address the to the property and are accounty interested. At David B. Clarkson, Robstown, Texas

### For More Farm Investigations

BY J. H. WORST.

that spends approximately 1 billion dol-lars annually upon her government, much of it in the nature of "pork barrel" legislation at that, can well afford cropping, without adequate returns, to invest ample funds for promoting the most soils are deficient in nitrogen, to invest ample funds for promoting the

popular and stable, but arm those who engage in it with the best information obtainable, bearing upon production as well as distribution. To accomplish this end, no money should be spared so long as the money spent multiplies it-self many times in the national income. And this it does. But what is the attitude of congress toward agriculture when compared with the non-product-

ive departments of the government?
The United States Budget for 1912-1913 contains the following items:

### Appropriations.

Agriculture .

And yet farmers are constantly reminded by their representatives of the munificent appropriation the congress annually makes for the encouragement of agriculture. Compared with 10 years ago, congress is indeed liberal, but would not increased liberality augment the prosperity of the country to a remarkable degree? I am confident that the annual expenditure of 3 million dolthe annual expenditure of 3 million dollars for college extension work would soon increase the agricultural wealth of the nation by not less than 5 per cent, or 500 million dollars annually. However, the treasury department, depends largely upon the agricultural prosperity of the country, receives for maintenance \$120,633,000 more than the department of agriculture, while the war department receives a sum in cess of agriculture to the tune of \$184,-247,000.

I have no disposition to question the appropriations made for the army and navy, which combined exceed that of agriculture by \$304,880,000, but millions of farmers are wondering why agriculture by comparison gets so little-only \$17,233,000.

### Why the Spring Increases

In the Farmers Mail and Breeze of In the Farmers Mail and Breeze of December 19, 1914, Harley C. Hatch says: "It is commonly noticed that there is a stronger flow in springs at times when no rain has fallen and such flows usually come when a change of weather is at hand. A widespread influence is at work underground for which there is no apparent explanation. We there is no apparent explanation. We do not know what causes this under-ground movement of water."

Let me tell why, in behalf of the boys: Near here is Spring Creek which usually goes dry some time in May and then starts up again the latter part of Octo-ber, without rain effecting it one way or another. It does this every year. The reason for this is that in the spring as soon as the trees begin to grow and the grass to flourish, the roots of these plants take up all the surplus moisture in the soil and the creek goes dry some time in May.

runs for some rods down the stream and neighbors say, "It's going to rain. The little spring is rising." This is because the air, becoming moist preparatory to rain, makes the grass moist and the grass, therefore, takes less water from the soil. Consequently the water rises in the soil and flows out. In the winter when there is no vegetable winter when there is no vegetable growth Spring Creek and the tiny spring both become active and send forth their flow of water. I am not criticising Mr. Hatch but am merely giving my observations and conclusions.

### Joseph Roung. R. 5, Independence, Kan.

For green fodder productions, kafir gives big returns on drained swamp land and alluvial land.

### Sources of Plant Foods

BY W. H. BOWKER.

A country that can construct a Pan-ama canal at a cost of 375 million dol-lars to facilitate trade relations be-tween her eastern and western coasts, elements for their growth, ranging from that spends approximately 1 billion dol-nitrogen to iron. It is known that soil and air are abundantly supplied with most of them ; that through continuous business and social status of agriculture in every legitimate way.

The government's first concern, therefore, should be not only to make the industry which is her chief reliance both
popular and stable, but arm those who

Thus we have searched the world for Thus we have searched the world for sources of phosphorus, contained in phosphate of lime. We have found enormous quantities of phosphates in the Carolinas, in Florida, in Tennessee, and now in Wyoming and Montana. We have mined this phosphate, washed it, and ground it, and following the discovery of Lighing we have dissolved it covery of Liebig, we have dissolved it and converted it into a super-phosphate, now popularly known as acid phospate.

We have searched the earth for potash to take the place of the potach which we used to get in wood ashes, and so far we have found only one available source, in Germany, and that seems to be inexhaustible. But it is a monopoly, and we are made to pay much more for it than we should pay. We have searched the world for nitro-

gen, the most costly element of plant food, and we have found it in the enormous nitrate deposits of Chili, and in the coal deposits of Pennsylvania, Ohio and Illinois, or wherever there is soft and Illinois, or wherever there is coal which can be used for cooking purposes. This we are recovering in the cooking purposes. the form of sulphate of ammonia, the use of which should be encouraged, for the reason that it is not only an excellent source of nitrogen, but it is a home source, lying right here under our feet, by the use of which we can build up our agriculture and keep at home some part of the millions we are now sending abroad for nitrogen—an economic prop-

osition from any angle we view it.

We also find nitrogen in the by-products of our packing houses and fisheries—in the immense quantities of tankages, waste meat and waste fish, which are converted into fertilizers. We also find it in seed meals, like cotton seed and linseed; but these and the tankages are now being used so extensively for feeding purposes that they are not a dependable source.

Finally in our search for nitrogen we come to the atmosphere, the greatest source of all. Recent discoveries are rendering available the nitrogen of the atmosphere in a chemical known as Cyanamid, and also in nitrate of lime, but the utilization of atmospheric nitroated at low cost, which cannot be sold for lighting or manufacturing purposes, at that point it can be utilized to extract nitrogen from the atmosphere. A plant is in successful operation at Niagara Falls and one in Norway. Also plans are under way for developing the great water powers in the Blue Ridge mountains for this purpose. A scheme is also reported in the newspapers to utilize Grand Falls in Labrador for extracting atmospheric nitrogen.

Another source of nitrogen is the leguminous crops grown by farmers, whereby soil bacteria are utilized. It Not far from here is a tiny spring, is known that no plant can thrive is a sandy plot with little water oozing out in dry weather. But just before a rain the flow increases and the water runs for some rods down the stream and neighbors say, "It's going to rain. The little spring is rising." This is bein turn yield up their life that men and animals may exist, thus rounding out a marvelous cycle, the connecting links of which we are just beginning to study, and in a small way to comprehend.

So we see that the fertilizer industry

is something more than mixing a few ingredients together with a shovel on a barn floor. If one will take the time to go through a modern fertilizer plant and note its laboratories, furnaces, lead chambers, retorts and towers, its crushers and grinders, he will see that it is something more than a mixing mill

Breed for the largest yield of butter

### **Guaranteed Pure**

### Seed at Bargain Prices If You Order at Once

Standard, pure Sudan seed is worth, right now. \$1 a pound. It will probably be higher before spring. Practically every farmer in the country will plant some Sudan. In a month the demand will be great and prices high. I am confronted with an unforseen obligation. I've got to cashin on part of my Sudan, quick. That is just the reason for this 30-day offer. It's your opportunity to save one-half or more on your spring plantling.

## Here Are My New Sensational 30-Day

# A Manure Pit Easy to Make

### House 22 by 24 Feet Can Be Made For \$76

A MANURE pit will pay for itself the government chemists and soil experts are not badly mistaken. An average of \$100 worth of manure is lost annually on every corn belt stock farm. That is to say fertility elements with that value are washed away or lost by bacterial action. The liquid manure is the valuable part but only a cement bottomed pit will save it. Covered pits are better than open ones. Excess moisture in the open pit, due to rain and the manure pit, that any farmer could afford to build.

A litter carrier which travels on a track connected with the barns, carries and dumps the manure at any part of the pit desired. If kept moist by the addition of small amounts of rain water from the roof, the losses of manure will be reduced to a minimum. It is usually a good plan to round off the corners a trifle are better than open ones. Excess moisture in the open pit, due to rain and snow, makes the job of hauling manure very disagreeable. Some moisture and also to slope and also to slope the sides. Such a plan aids in keeping the manure it retards the growth of the bacteria which cause the loss of nitrogen, the most valuable fertility element.

A covered manure pit 22 by 24 feet is here illustrated by plans and drawings.

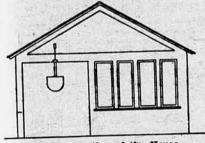

An 8 by 24 foot driveway and a manure pit 12 by 24 feet, take up all the floor

pit 12 by 24 feet, take up all the floor space.

Cost of the Pit.

Total Material Cost.....\$76.00

The concrete walled and floored pit will be built first, with foundation walls from the manure heap in-

Front Elevation of the House.

2 feet deep and 8 inches thick. The concrete walls above the grade are 6 inches thick. They are strong enough, as they are only 3½ feet above the grade line. In building these walls, inch lumber was used for forms. These forms were braced and stiffend with the brace and cross ties. and stiffened with stakes and cross ties. A concrete mixture of 1 to 4 of cement and bank run gravel was used. This was mixed thoroughly and water was applied until the mixture was of a "quaky" consistency when poured into the forms and tamped slightly. The forms should be filled level full with concrete. Before the concrete hardens, by inch by 12 inch bolts are set into the soft wall so that a firm connection here. soft wall so that a firm connection between the concrete and frame work will be possible. The forms can be removed in two weeks and the four inch thick concrete floor laid to cover the bottom. For the floor a weaker, 1 to 5 mixture can be used with good results. The floor to the driveway or manure spreader shed need not be of concrete, but piers of some sort should be built to support the frame work.

Seven foot 2 by 4 studs form the walls above the pit. One side is boarded up but the two ends and the side next to the driveway are left open as is shown by the elevation drawing. These openings are covered with screen to keep out the flies and also to allow for a circulation of air to make work as comfortable as possible for the man who does the manure hauling job. A double 2 duced in the United Sta by 4 plate around the top of the 7 foot ary 8, this resolution:

by 4 plate around the top of the 7 foot studs supports the ordinary shingle roof using 2 by 4 rafters as a foundation for the sheathing lumber. This sheathing was the same that was used in the concrete work for forms. A few ties and braces across the center will complete this big profit making covered plete this big profit making covered work for forms.

nure. Keep it compact as possible and add moisture enough to exclude all air.
This prevents bacterial
action which would result in fermentation and the formation of ammonia gas and a consequent loss of nitrogen. Gas arising dicates a loss of nitrogen. Ammonia is commonly thought of as a liquid, but such a commercial form is merely a water solution of the ammonia

The liquid manure much more valuable than the solid. Twenty cows produce about \$600 worth of fertilizer annually. Almost \$400 would be lost by poor manage-ment if the liquid was not conserved. The shed cov-

ered pit seems to be the type best adapted to farm use. Without the prohas a very disagreeable job when the pit is to be emptied. While the manure is not damaged by being so exposed, the slight cost of the roof makes it worth while. An occasional watering is possible from the rain water collected by the roof the roof.

FLOOR

V BOLT

The direct application of the manure from the stall to the field is best, since the greatest value is to be obtained from the manure, but such methods are only possible for all farmers. A cheaply constructed pit will save money on any farm in the plant food elements conserved. It will also make possible a cleaner and more sanitary condition of the yards and feed lots.

### Concerning the Luten Patents

There is considerable question about the 40 Luten patents covering more than 400 claims on reinforced concrete. The rights of these patents have a great deal to do with bridge work in Kansas. provide for an investigation into these Luten patents, Senator Bristow introduced in the United States Senate, January & this applications of the United States Senate, January & this applications of the United States Senate, January & this applications of the United States Senate, January & this applications of the States Senate, January & this applications of the United States Senate, January & this application of the

It is to be hoped that this investigation will clear up, for all time, this question about Luten patents.

Pasturing the fields is a good way to harvest the waste portion of the crop. SHENANDOAH, IOWA. Box No. 16.

THRESHING SUDAN GRASS SEED ON W. J. STALGUP FARM, NEAR LUBSOCK

# ure-Dependable-Guaranteed UDAN GRASS SEE

THERE'S no such thing as saving money on seed. Low-price seed is low-grade seed and every nickel saved in the price will cost you a hundred fold in the harvest. It's the most foolish form of economy—and it's mighty poor farming, because low-grade seed is adulterated and will sow your land with Johnson grass and other pests reducing its value by thousands of dollars.

I Lubbock County is recognized as one of the best producing centers of Sudan Grass Seed in the U. S. and the Lubbock Sudan Grass Seed Association is composed of actual seed growers, representing about 95% of the total acreage of the crop in Lubbock County. The chief purpose of the Association is to maintain the absolute purity of the seed crop grown by its members and to supply it direct to farmers.

### Silo or Grain Crop?

For the benefit of those who think the silo is not a paying investment and the large number of men who say there is more money in wheat raising in the central part of Kansas than there is in any other crop, I submit these figures on the cost of raising an acre of wheat and an acre of corn.

. . . . \$ wing and harrowing. Planting Tending growing crop.
Harvesting, binding.... \$ 14.30 Total cost an acre.....\$ Value of the crops: Corn

\$ 32.00 3,200.00 acre...
100 acres wheat at the cost
of \$9.55...
100 acres corn at the cost
of \$14.30.... 955.00 1,430.00

Profit on 100 acres....\$ 445.00 \$1,770.00 I do not advocate buying a silo large enough to hold corn from 100 acres but farm your 100 acres, say 25 acres to corn and the remainder to alfalfa. You can feed 75 to 100 cattle for six months on this. Your increase will average at least \$15 a head, making your profit about \$1,500. This will pay for your sile the first year beside wages for yourand interest on your money inself

You will find that your wheat does not turn out so well. By the time you not turn out so well. By the time you pay for a binder out of your \$445 profit

The people have no objection to big business honestly and fairly conducted. Many persons know these giant corporations are vastly useful and many believe they are inevitable, an evolution of the times. What the people do object to is being robbed and preyed upon by a predatory management of them, of being made victims of a greed not satisfied with fair profits and a monopoly, but which abuses the confidence of the people by holding them up for every cent the traffic will bear. This kind of big business will be abolished wherever found. For years the express companies robbed the people until it compelled them to go into the express business themselves with a parcel post. Dis-honest and dishonorable big business should take warning.

you will not have very much left. But remember you cannot make such a large profit on corn without a silo for you lose 40 per cent of the feeding value of every acre that you do not put in a silo. If I owed you \$1 and wanted you to take 60 cents and call it square. you would scarcely do that. But, ac-cording to all reports, that is just what a man is doing when he is trying to farm without a silo.

The summary of 100 acres is about as follows: 100 acres of wheat would make a net profit of \$445; 75 acres of alfalfa and 25 acres of corn would make a net profit of \$1,500. And the corn land is increasing in value of production while the wheat land is decreasing. What is the manure from 100 head of cattle

worth to your farm every year?
Shady Bend, Kan. I. L. Walker. Shady Bend, Kan.

### More About Paints

Your writeup on painting in last week's Farmers Mail and Breeze made me think that I would like very much to the paint that should be used and about the quality of the same. After sixteen years' experience with paint I Nevada. They offer opportunities for citizens to establish homes in a growto have a line or so to say in regard to the paint that should be used and that is white lead and oil. Do not buy that is white lead and oil. Do not buy ready mixed paints, although the paint men usually advise doing so because they say they are mixed more thoroughly. But if you wish to have your paint mixed right, get a man that understands how to mix paint and you will have no trouble with your job.

Now as to some men saying there is some sections truck farming pays well.

is the whitest material there is and besides no one would put 50 per cent of 10 or 12 cent stuff in paint for if they did they could not mix it and sell it for what they sell it for.

When you get a painter that says ready mixed paint is the best, put it down that he cannot mix the paint for white is the most difficult value to mix

white is the most difficult paint to mix and any good painter will tell you so. There is more to white paint than lead and oil and where the man saw his bluish white paint and said there was too much zinc in it, it was the blue that was put in the white to bleach it out that caused the bluish cast.

If anyone wishes any advice about paint and will write me I will gladly paint and will san. answer him, if I can. Charles Kniger.

Phillipsburg, Kan.

### Some Easy Bookkeeping

The simplest books are the books for a busy farmer. In my judgment about the easiest books to understand are the journal and ledger. Everything can be itemized in the journal and then posted to their respective accounts in the ledger. The vest pocket memo book and the check book can be used for the day book. The journal and ledger can be bought for about \$1 at almost any drug store.

I do not believe there is one farmer out of twenty-five who carries his own check book. When he pays his account he will ask for a check on a certain bank and write the check for whatever the amount may be. And perhaps in the course of a day he will write a number of checks for different amounts. By so doing he has no way of knowing what his bank balance is until he gets his statement from the bank which, as a rule, is not very often. If he would keep the amount of every check entered on the stub of his own check book and bring the balance down, and carry it forward with every check, he would know at any time how he stood with the bank. Then when he went to do his book work he could enter the different amounts in the journal, then in the ledger. For instance, if he buys a load of coal and gives a check in payment for the same he could make the following entry in the journal:

Expense account....Dr. ....\$11.55 Cash account.....Cr. ..... \$11.55 Explanation—Check No. 174 to Kansas

Lumber Company for 2880 pounds coal. Post the amounts to their respective accounts in the ledger. If he sold a cow to a neighbor on 60 days time he could make the following entry in the journal: L. H. Jones account.Dr.....\$75.00 Shattles account....Cr. ..... \$75.00

I am not a farmer so, of course, I do not know what heading the different departments of the farm should have, but they could be called anything you wish to call them. To my mind this method is the easiest method of bookkeeping. Shady Bend, Kan. I. L. Walker.

### Farmers Wanted

Uncle Sam is looking for several hundred practical farmers to take up homes on the irrigation projects he has been building in the West. The land is free, but the law requires settlers to pay their share of building the irrigation system, and for this reason a moderate capital is necessary. A practical farmer with from \$1,500 to \$3,000 should have no trouble in acquiring one of these farms and putting it in successful cultivation.

Under the new Extension Act the settlers are allowed twenty years in which to pay for their water right, and no interest is required on deferred payments. Details concerning opportunities and terms will be supplied upon request by the Statistician of the Reclamation Service, Washington, D. C.

how to mix paint and you will have no trouble with your job.

Now as to some men saying there is too much zinc in the paint when it turns a bluish cast, they are away off. Zinc

### All Farms Can Have Fruit

BY GEORGE O. GREENE, Kansas Agricultural College.

You can't take care of an ore ard if you do much farming, is the reason often given for so many orchards on Kanten given for so many orchards on Kansas farms being neglected. C. R. Myers, Udall, Kan., who farms 400 acres of Cowley county land and specializes also in hogs, cattle and sheep, does not take much stock in that sort of doctrine, and just to prove that he is right, he grows some excellent apples every year in a well-cultivated, well-sprayed and well-pruned orchard. Mr. Myers also learned a long time ago that paint must follow pretty closely after the pruning saw.

pruning saw.

During the Farm Demonstration week in Cowley county, Mr. Myers allowed his farm to be used by O. P. Drake, demonstration agent for Cowley county, for a field meeting. He also invited 32

A Well Pruned Tree on the Myers Farm

of his neighbors to be present and hear what the college people had to say about his hogs, cattle, and sheep and his or-

He was putting on the second spray for this season when the crowd met at his orchard. The dark green foliage, with practically every leaf intact, showed in direct contrast to many other similar small orchards in Cowley county. It proved that the first spraying had brought results. His neighbors could not help but he convinced. not help but be convinced.

This was not the first time Mr. Myers This was not the first time air. Myers has had the Agricultural college people on his farm to give a lift at just the right place. He said to his neighbors, "I was going to cut out every Missouri Pippin tree on the place on account of blotch which attacks the fruit so badly that we never had good fruit until we began spraying. Besides that I don't like the trees which overbear to such an extent that the side limbs break down with their load, leaving the tall, straight center limbs which grow higher each year with all of the good apples clear up in the top. The Agricultural college people rather insisted that we try some heavy pruning in the top and some thorough spraying. I believe it is going to work out all right." straight center limbs which grow higher

Mr. Myers has only 21/2 acres in orchard but he takes as keen an interest in that 2½ acres as he does in other things on the farm. He gives the orchard the same careful attention that he gives to other crops and expects it to turn him other crops and expects it to turn him a good profit. When the Agricultural college representative told his neighbors that the orchard was big enough for the general farm and all that the average farmer ought to try to care for, Mr. Myers said, "Out of that 2½ acres we had, in 1913, all the apples we could eat all winter and sold \$150 worth besides."

Mr. Myers thinks that any farmer can grow all the fruit that the family needs. He believes one can grow as good

needs. He believes one can grow as good fruit in Cowley county as anywhere if he really wants to do so and if he gives the orchard the same care that he ought to give to other crops. His orchard shows that he is living up to what he believes.

With a real war going on beyond the seas, it's hard for the political pop-guns to make themselves heard.

# Paige Means Power

And Paige Power is merely one of the many tremendously vital features that have won for Paige Cars the supreme distinction—"The World's Greatest Motor Car Value."

We believe that there is no more discriminating judge of motor car values than the Country Gentleman. There is no man who exacts more from his motor car or is more dependent upon his motor car.

From just such judges of character and worth Paige Cars have won their position of supremacy.

Compare the Paige Glenwood "Four-36" with any four cylinder car in the world -at any price-consider beauty, roominess and staunchness, consider the electric starting and lighting systems, the ignition, the lubrication, the reputations and your own personal requirements. Consider the relative costs of maintenance and operation. A proof of Paige Supremacy is the proof of Paige economy. Then consider the vital features and superiorities of the Paige "Four-36" printed below. And the new price is \$1075.

You must also see the epoch-making, seven passenger Paige Fairfield "Six-46"—at the record-breaking price— \$1395.

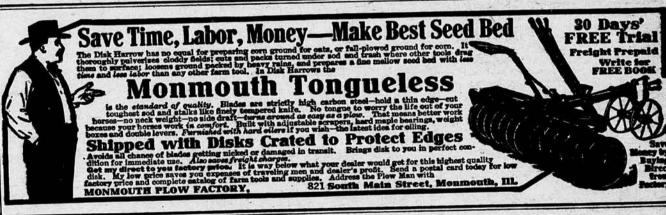

Paige Quality means Supreme Economy, Supreme Service and Supreme Satisfaction.

Paige-Detroit Motor Car Co., 211 McKinstry Ave., Detroit, Mich.

Four-cylinder long-stroke motor, 423 inches. Multiple disc, clutch with cork inserts. Gray and Davis large unit electric system. Bosch magneto. Center control. Floating type rear axie. 116-inch wheel base. Tires, 34 x4.

\$1075

Equipment — Rain vision ventilating windshield, silk mohair top with envelope; speedometer; one extra domountable rim; robe rall; license bracket; horn; pump; jack; tools and tire repair outfit. Trimmings black and nickel.

# Learn the Production Costs this you can get at your daily expense. boss. The idea has been advanced to By dividing the \$1,727.50 of expense by put the adviser in direct charge of the your operations. The idea has been advanced to by dividing the \$1,727.50 of expense by put the adviser in direct charge of the county farm and I think it is a fine idea. We all know what an expense our poor farm is and if scientific farming can be advanced to by the production that the production cost of your operations.

### A Good System of Accounting Will Enable You to Increase the Profits From Your Farming Operations

A business venture as is any manusconer or later, and by that time they facturing plant, and the farmer should have been paid for out of the earnings of the farm.

Every farmer knows that fencing is a the farmer who is going to get all out of his land and stock that there is in it. The true business man is one who it. The true business man is one who knows every evening just how much the day has cost him, how much the day every year, he would at the end of a certain brought him, what he owes others and what others owe him.

Every Kansas farmer ought to know just how much it costs him to go out to the barn every morning—why? Be-cause when he knows what his daily over-head costs are, he can tell what his

Suppose a man is in the business of for itself and that whatever it is worth general farming. He will have some at that time is profit and that a new wheat, some corn, some hay, some oats, and probably two or three other crops. the question is how many bushels of oats or wheat or corn must be harvested to pay for the crop—after that comes the profit.

### The Chief Factors.

What are the factors that will enter into this cost? In general they are:
The interest on the investment. This item seems just, as it is the one that goes on all of the time. No matter what else is being done, the interest on the invest-

ment goes on continually.

The item of depreciation. This is almost as important as the interest, but there are times when it does not go on as in the case of growing stock. Note that is in the case only of immature stock, for when the stock once becomes mature, the item of depreciation at once

After depreciation, comes labor. We cannot confine the cost of labor strictly to the cost of the man labor alone, says the Gleaner, but we must also consider the cost of the horse labor, the gas engine labor, and other means by which work is accomplished but these costs are included under other heads.

Following these items come supplies such as feed, repairs, and other miscel-laneous articles on hand. To take up in detail the finding of the over-head cost of the farm will entail an inventory of everything on the farm.

The most important part is the land itself. To inventory the land, the selling value must be considered; that is, it must be taken at the highest value for which it might be readily sold, or in some cases the price that had been paid for it, if recently bought.

The next thing would be an inventory of the buildings. This should include every building on the place and they should be taken at the cost that would just about replace them in their present shape. Here we must also include the fences. These two items would make up the inventory of the real estate or immovable permanent property.

Then the next part of the inventory would seem at first glance to be a lit-tle more difficult, but when the matter is taken up it works out as a very simple operation. This is the listing and valuing of every bit of personal property outside of the household goods. It will include the control of the include horses, cows, hogs, and all other kinds of livestock, and poultry. It must also include all machinery, tools, har-nesses and other articles used on the

### Figure the Inventory.

In this inventory we must figure what the item listed is worth at the time of the inventory and then what that item will be worth at the end of the year. The difference in the value of the items at the beginning and the value at the end of the year will be the depreciation. This will vary as to the thing listed. For example, the land ought to be worth just as much at the end of the year as at the beginning, because there will be no depreciation for that item but in the case of the buildings and the fences there will be a certain amount of loss in value. The buildings will show little wear for many years, but there must be an amount of money spent on them every year for repairs and paint and other items that must go into them to keep them up to the same state as they were at the start. And there must also come a time when they will be worn out, and must be replaced. This time may

KANSAS farm is just as much a be very distant, but it will surely come

system in the proper state of repair.

All farm machines deteriorate and go out of date in a very few years as every farmer knows, and how much more satisfactory it is to know that at the end of five years a manure spreader has paid for itself and that whatever it is worth

### Do It This Way.

The stock can be inventoried with no great trouble, with the exception of the chickens and hogs. These are changing so often that they are somewhat difficult to keep track of.

A concrete example of the way in which this works out would be as fol-

### What a Hustling Farmer Says

I believe in rotation of crops. I have farmed in northeast Kansas for 16 years, and this is the rotation that I use: Two years in corn, one year in oats, two years in wheat and back to corn.

The kind of corn has as much to do with the yield as the quality of seed, I find. Last spring good seed was hard to get and farmers had to plant any kind they could buy. I secured fairly good seed of two kinds of corn. I planted it

The future welfare of this nation depends, in a large degree, upon the moral purity of the rising gen-eration. Too little thought and attention is given to character building in our day. How few parents and school teachers realize that the child is a character builder! How few parents realize that the future happiness of every child depends upon its moral and spiritual development and that religious training is the great steadier.

in the same field and one kind made a

that is being hurt to any extent. Most of "wash" land is farmed in wheat or in hay of some kind. There are plenty of farms here that are 25 per cent better

make it pay better than the present management it would be an example for us to follow.

The pessimistic view of farm condi-tions taken by many speakers, and by some farm papers, causes an outsider not familiar with conditions on the farm to think that Kansas is bankrupt in an agricultural sense. What we need is a more cheerful viewpoint.

Easton, Kan.

### Colonel Woods Quits

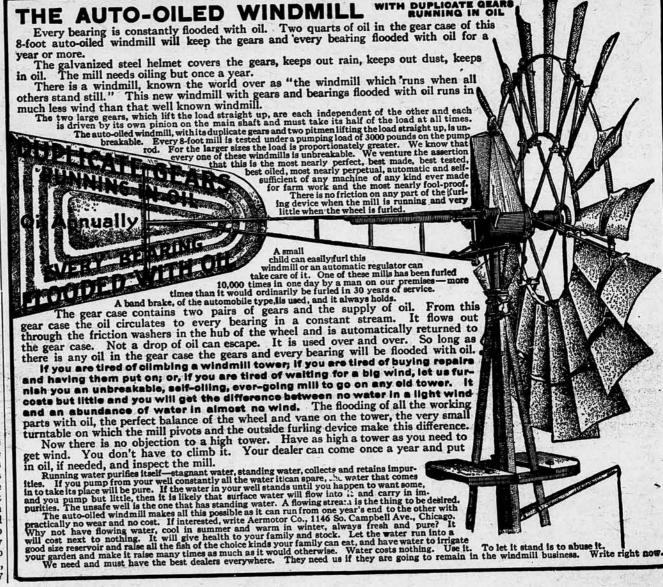

Colonel Fred M. Woods, one of the leading livestock auctioneers in the United States, has retired from active work. Colonel Woods has been in the business 42 years and during that time has presided at public sales of purebred stock in almost every important live-stock section of the United States and Canada. He has been interested in stock all his life and always has advocated purebred animals on every farm.
Many breeders of the Middle West owe
their start in the business to Colonel
Woods. He will be missed at many sales of purebred stock.

### Renter Not Wholly to Blame

in the same field and one kind made a yield of 7 to 10 bushels an acre more than the other. It is important to get seed with a high per cent of germination, but we should not overlook the fact that we should also get corn that is adapted to our soil and climate.

In this part of Kansas the land is hilly, and soil washing is one of our troubles, but I think it is successfully handled here. I do not know of a farm that is being hurt to any extent. Most of "russh" land is farmed in wheat or hired help, and pays rent and other ex-

hired help, and pays rent and other ex-penses, there is mighty little left. Many renters have to deliver the rent grain in

### For Better Farm Success

workers who are dumped on the luckless workers who are dumped on the luckless world every year. You may be certain that you will get all the "real life" you need after you have finished a higher school that will give you a real training which will fit you to do something well, so there should be no hurry about the start. The day of the specialist is here; it is the men who know how to do work that ordinary men can't do who make their goal and do things—and get the money.

and get the money.

It may be that while you admit that these factors apply to city conditions, you are not certain that they govern success in the country. Well, they do, and if you do not believe this you should look around you and note the men who have made a success in farming. In all and get the money look around you and note the men who have made a success in farming. In almost every case you will find that they are specialists; while they may handle several lines you usually will find that they have based most of their success on some certain line. This may be here or deiry cettle horses horse. be beef or dairy cattle, horses, hogs, fruit or specialized seed production. There are few general grain farmers in Kansas who have made a success that can be compared with that of the successful livestock farmers, and when they have you usually will find that they have used especially good methods of production production.

So a young man can be certain that if he wishes to make the best success of farming he must get a training that will fit him to be a specialist in the line he likes best. How can he get this training? There are several ways in which it can be obtained; the best and cheapest way is to take a farm course at the Kansas Agricultural college. In addition to getting a fine training in crops and animals at that school, one will get a training in general subjects like history, English and economics that will more nearly fit him to be a lead-er among his fellows.

This old-time objection to a college course on the ground that the money and time is lacking is mostly bunc. The thing that needs to be considered is the success that a man will make in a life-time, and in nine cases out of ten the college man page the untrained man the college men pass the untrained men in the highway of success long before middle life is reached. And if the money lacking one can work his way through; any young man who has ambi-tion can work his way through the Kansas Agricultural college.

### Shall I Buy a Home, or Rent?

One of the greatest events of a man's life and of no little concern to his descendants, is the buying of a home. It should be in a quiet, peaceful and thrifty neighborhood, and preferably away from large cities and towns. Past history and the events of the present day are a terrible warning that people should not flock to the cities. Such calamities as famine, fire, earthquake, flood, torna-does, war, crime, pestilence and panics cause more terrible destruction of life and property in cities than in rural dis-tricts

Because of the increase in population, but few people can expect to acquire extensive holdings of real estate. Avoid making debts. If we cannot pay as we go today how can we tomorrow, with tomorow's debt added? It may, however, be better to pay \$100 interest than \$100 rent. Ten acres paid for may be ever, be better to pay \$100 interest than \$100 rent. Ten acres paid for may be thews somewhat aneau of thine, since \$100 rent. Ten acres paid for may be upon Matthews, with virtuous rage, better than 40 acres mortgaged. The postupon Matthews, with virtuous rage, wrote him the following note:

"You must be a goose-Berry to send the postupon where it is duein personal property. The best character and highest ideals in citizenship are developed in the home. Most crimes are committed by people that own no home. Cedar, Kan. Edward Lind. Cedar, Kan.

A good dairy herd is rather to be Berry." chosen than great riches, because it may easily lead to the latter.

### Growing the Osage Orange

A good many thousands of boys have finished their work in the common schools of Kansas this year. These boys have obtained their eighth-grade diplomas, and they are debating the old, old question of what to do in life. Many, question of what to do in life. Man 12.5 and 7 cents each, or a total acreage value of \$524.04. The land could hardly have been put to any other use that would have brought greater returns. The reproduction of the Osage orange,

according to the agents of the Forest Service, is abundant from seed, suckers, and stump sprouts. When an Osage orange is once established, its complete removal is a matter of much difficulty. Suckers from the roots will come up year after year. Sprout growth furnishes the best means of reproducing a plantation for posts or fuel. Since young shoots grow from the stump with great vigor, the second crop is more likely to consist of straight post timber than the first, unless the trees of the original plantation were cut back one or two years after planting. This ability to reproduce insures a continual renewal of the plantation without further

The Osage orange may also be propagated from root cuttings, but this is not a practical method. Propagation from seed is not difficult. The pistillate trees bear "oranges" in abundance. These should be collected in the fall as soon as ripe and kept in a cool, dry place over winter. Prolonged soaking in cold water softens the pulp so that the seed may be extracted. The seed germinates readily without preliminary treatment of any kind. It should be sown in nursery rows in rich, well prepared soil. The seedling will grow from 1 to 2 feet in height during the season and be ready in height during the season and be ready to transplant to the permanent situation the following spring. Osage-orange seed-lings are cheap, and the planter who does not wish to raise his own trees can get them at nurseries for \$1 to \$3 a thousand.

Osage orange trees should be set close to overcome the tendency toward profuse branching and should not be more than 3 feet by 6 feet or 4 feet by 6 feet apart. The species is well adapted for planting in mixture with intolerant species, such as black walnut, black lo-

species, such as black walnut, black locust, honey locust and green ash.

Cultivation should be given several times each year until the ground is partly shaded or until the size of the trees prevents. Weeds and grass should be kept out at all times.

The roots of the Osage orange are wide spreading and are said to draw considerable nourishment from the surface soil to the detriment of adiacent

face soil to the detriment of adjacent field crops. This objectionable feature can largely be eliminated by inclosing the plantation with a plowed strip four or five furrows in width. This strip will also serve as an efficient fire guard.

If a plantation is accidentally burned ver, the trees should be cut back immediately to encourage a new sprout growth. If the trees are left uncut the roots are likely to become weakened by disease, which gains entrance through the dead wood.

Since the trees rarely clear themselves of branches pruning is necessary if first-class post timber is desired. Moreover, pruning stimulates height growth.

### A Berry Patch

A tailor named Berry who had lately succeeded to his father's business, once sent in his account to Charles Matthews somewhat ahead of time, where-

me your bill-Berry, before it is due-Berry. Your father, the elder-Berry, would have had more sense. You may look very blue-Berry, and may feel very blue-Berry, but I don't care a straw-Berry for you and your bill-of.

# 25¢ THREE MONTHS

To put the big \$1.50 national farm weekly at once into half a million farm homes, the next 13 issues of THE COUNTRY GENTLEMAN will be mailed to your address for 25 cents—less than two cents a copy!

The issue that is out this week—and will be mailed to you on receipt of the coupon attached and your 25 cents—has the cover shown above and these big features:

Manna in the Mountains—The most valuable article on grass you ever read. It shows you how to build up a sick farm to a profit basis.

What Shall I Grow This Year?—This one story alone may mean to you all the difference between loss and profits this season.

Old Orchards Made New—In three years up to 1912 George Groh's income from his orchard was \$999.70. In the next three years he sold \$7030.70 worth in apples. Spraying made the

Testing Your Seed Corn-The last word, from sawdust to sprouts, in selecting the seed ears that will give you a whopping crop

Kafir in Place of Cash—The man who grows kafir, keeps hens and hogs, and milks cows, feeds on the fat of the land and can borrow money. This is in the dry country-do you live there?

War and the Meat Markets—Prices paid to producers for meat animals dropped 5.8 per cent last October; the usual drop at that season is 1.2 per cent. Why? Read the answer in this issue.

Live Items About Livestock-Short news articles for the man who wants to keep abreast of the times and the markets

Why Apples Rot—You may harvest a fine apple crop, only to have it rot in storage. Do you know the storage diseases and how to prevent them?

And a score of other articles of value in field, feed lot, barn, dairy, poultry yard, garden and home. Every one of your 13 issues for 25 cents will be as good!

The skunk is a great destroyer of small "varmints," which, if unmolested, destroy crops.

The store bill is the dum dum bullet little camera is a pleasure-making There is no end to the culling season. addition to the equipment of the home. in the farmer's battle against debt.

# FARMERS CLASSIFIED PAGE

Advertisements will be inserted in this department for 5 cents a word each insertion for one, two or three insertions. Four or more insertions 4½ cents a word each insertion. Remittances should preferably be by postoffice money order. All advertisements are set in uniform style. No display type or illustrations admitted under any circumstances. Each number or initial counts as one word. Guaranteed circulation over 110,000 copies weekly. The rate is very low for the large circulation offered. Farmers Mail and Breeze is the greatest classified advertising medium in the farm paper field. It carries the most classified advertising because it gives the best results. Here is a splendid opportunity for selling poultry, livestock, land, seeds and nursery goods, for renting a farm, for securing help or a situation, etc., etc. Write for proof that it pays. Everybedy reads these little ads. Try a classified for results.

# Many Sales to Be Held Soon HITCH IT TO YOUR PRESENT IMPLEMENTS

### Meat and Wood For Next Summer Being Prepared Now

BY OUR COUNTY CORRESPONDENTS

ARM sales are being held almost every day in Leavenworth county, and this activity will continue until March 1. A great many automobiles have been purchased by Thomas county farmers this winter. Wheat looks well, but the stand is thin in many places. The report from Cloud county says that rent is high, and that it is difficult to get farms for spring occupancy. In many parts of the state wheat still is being held for higher prices. According til March 1. A great many automobiles have been purchased by Thomas county farmers this winter. Wheat looks well, but the stand is thin in many places. The report from Cloud county says that rent is high, and that it is difficult to get farms for spring occupancy. In many parts of the state wheat still is being held for higher prices. According to Mr. Kingsley, most of the farmers of Ellis county are selling what wheat they have to spare. Butchering, and sawing wood for next summer, are common jobs

### KANSAS.

Coffey County—Snow and severe weather. Cattle doing well. Plenty of feed. No hog cholera reported. Eggs 30c; wheat \$1.25; corn 65c.—Mrs. A. H. Stewart, Jan. 22.

corn 65c.—Mrs. A. H. Stewart, Jan. 23.
Saline County—Ground still is covered with snow and it has been very coid all week. Farmers holding fat cattle for better prices. Not many sales in this part of the country. Wheat \$1.28.—Jas. Gribben, Jan. 23.

Cherekee County—Having some real winter weather and the ground is covered with ice. Not much wheat to selt in this county. Fat hogs scarce but selling for Sc. Wheat \$1.30; eggs 30c.—A. E. Mereland, Jan. 23.

Washington County—A blizzard on January 16 made the road bad for traveling. Weather cold but clear at present. Farmers not doing much but chores. Farmers' Union taking in new members.—Mrs. Birdsley, Jan. 23.

Hodgeman County—About a foot of snow January 16. Weather is cold and windy. Stock doing fine. Butchering almost done. Corn shucking almost finished. Help 4s scarce. Wheat \$1.33; corn 75c; eggs 27c—Johnnie Deutsch, Jan. 18.

Shawnee County—About 4 inches of snow. Wheat looks all right. Some alfalfa is being baied and shipped. Nearly all the corn and wheat sold. Plenty of rough feed for stock. Some hog cholera yet. All other stock doing well. Eggs 30c; corn 68c; wheat \$1.15.—J. P. Ross, Jan. 23.

Commanche County—Weather a little hard.

P. Ross, Jan. 23.

Commanche County—Weather a little hard on the wheat as the ground is bare and the thermometer is near zero in the mornings. Stock wintering well as there has been no snow. No fat cattle and but few hogs. Public sales scarca. Some plowing being done for oats.—S. A. Delair, Jan. 23.

Thomas County—Light snow on January 18 but it all went off the next day. Some milk cows dying of an unknown cause. Some farmers still holding their wheat. Not much doing here now. A great many automobiles bought this winter by farmers, Wheat \$1.25; eggs 27c.—C. C. Cole, Jan. 20.

Wheat \$1.25; eggs 27c.—C. C. Cole, Jan. 20.

Lyon County—Real winter weather is hard
on the stock that are not well housed. We
have had a cold winter with plenty of snow.
Plenty of rough feed in the country. Plenty
of moisture for the wheat. Farmers having
their wood sawed ready for spring and summer. Hogs 7c; wheat \$1.25; eggs 27c.—E. R.
Griffith, Jan. 22.

Eiths County—Weather very cold. A blizzard on January 16 which drifted badly in the east and west roads. Plenty of feed, and stock in good condition. Farmers busy hauling wheat, and not many holding it for better prices. Wheat \$1.27 to \$1.28 a bushel; corn \$6c; oats 55c; eggs 27c; butterfat 28c.—D. C. Kingsley, Jan. 22.

D. C. Kingsley, Jan. 22.

Anderson County—About 2½ inches\* of snow on the ground, and the temperature 8 below zero. Farmers butchering and getting up their summer wood. Fat hogs pretty well shipped out except a few light ones which still are being fed. Rough feed plentiful and stock doing well. Hogs \$6.25; corn 67c; kafir 65c.—G. W. Kiblinger, Jan. 23.

Jefferson County—A week or two of nice weather is being followed by stormy weather though it is not very cold for midwinter. Farmers sawing wood and butchering. Stock going through the winter in good condition but the extreme changes in weather are bad for them. Not much corn or wheat being sold at present.—Z. G. Jones, Jan. 22.

Norten County—Light snow on wheat now. About 40 per cent of the wheat did not come up in the fall. About a fifth of the old wheat still in the farmers' hands. Some hog cholera in the county yet. Horses bringing good prices. No demand for young mules. Fat cattle and hog prices very poor. Wheat \$1.27; corn 65c.—Sam Teaford, Jan. 22.

Wilson County—Snow storm today. Threefourths inch rain last week. Stock water not
so scarce now. Some plowing done the first
part of January. Wheat not looking well
as it was too dry last fall. Some corn fodder and kafir to thresh yet. Stock doing
well. Plenty of grain and feed. Not many
hogs left for market. Corn 67c; eggs 30c.—
Adolph Anderson, Jan. 22.

Adolph Anderson, Jan. 22.

Allen County—Winter weather with very little snow. Plenty of feed of all kinds and stock wintering fine. Many horses and mules being sold. Hogs not dying so fast since the late rains. Not half as many public sales as a year ago. Hogs plentiful but not breeding so heavily as last spring owing to feed being so high. Corn 65c; oats 45c; kafir 60c.—George O. Johnson, Jan. 23.

### OKLAHOMA.

Garfield County—Weather has been changouble the last three weeks with an occasional snow and sleet. Stock still in good condition. Some ground being prepared for spring crops. Farm herses high in price, wheat \$1.28; eggs \$0c.—Jac. A. Voth, Jan.

Cleveland County—Cold weather has stopped field work, Lots of spring plewing done. Cattle and hogs doing well in feed lots. Grain feed high and stock prices low. Some sales and prices good for nearly everything. Not much land changing hands, wheat and flour prices high. Eggs 30c.—H. J. Dietrich, Jan. 23.

### Windbreaks For the Prairie

BY C. S. HARRISON.

In a prairie country where the winds have full sweep, protection is an abso-lute necessity. Delicate flowers out in lute necessity. Delicate flowers out in the open are cuffed and whipped by the merciless blasts. The iris, for instance, is one of the most delicate and lovely of all our flowers, but let it be exposed to the sweep of the hot southwest winds and in a day the delicate petals are torn and withered. Vege-tables also suffer much from the beat-

ing winds.

It is a simple matter to give protection. A small place enclosed with a hedge changes the condition of things, and flowers assured of protection put on their fairest robes. The ideal hedge for the vegetable and flower garden is

The war trust plays one big power against another. The United States now is spending 68 per cent of all revenues, exclusive of postal receipts, for war, in time of peace. And with the endless chain system of agitation being carried on by the war trust, and the ever-increasing appropriations by congress, there seems no way to stop it except by arousing public sentiment against it.

the bush or tree honeysuckle. There are a dozen kinds of these, but the best of a dozen kinds of these, but the best of them all is the Manchuria, which comes from Manchuria, China. It is very hardy, and when the flowers bloom it is a great mass of beauty. After a time the flowers are replaced by masses of red berries. When putting out the honeysuckle if you use plants, put them about 2 feet apart. Cuttings may be 6 to 12 inches apart. Be sure to have the earth solid around the base of your the earth solid around the base of your cutting, so the roots can get hold. It is not enough to have the top firmed.

On general principles the windbreak is of great importance. In a year when the siroccos rage with the mercury 110 in the shade the farmer notices that his corn on the north side of a high hill or on the north side of a tall of trees is not injured, while that row in the open is burned up. Experiments show that a wind blowing at 30 miles an hour takes more moisture from the ground in one day than would be absorbed in a week of calm weather. The inference is plain: Check the winds and thus conserve the moisture.

In years to come the great western plains will be defended with groves and windbreaks of the Bull or Ponderosa pine, and a barren and windswept George O. Johnson, Jan. 23.

Leavenworth County—Farm sale almost every day and probably will be until March I. Cows in great demand. Young cattle sell unusually high. At present prices most farmers consider hog feeding a losing proposition. Considerable corn and hay being shipped in. Some wheat being sold and a large amount of it is being held for a higher price.—George S. Marshall, Jan. 22.

McPherson County—Wheat looks good but the stand is thin. Plenty of moisture with both rain and show in the last month. Some hog disease reported over the county: also considerable trouble with horses pasturing in corn stalk fields. Corn is being shipped in for feeding. Cattle feeders feeling blue over the outlook. Wheat \$1.36; corn 70c;

### THIS BIG, 31 FOOT .ESCOPE

This is a real telescope and not a worthless toy. It is made by one of the largest manufacturers in Europe. When closed, as shown in picture, the telescope is 12 isoches long and has a circumference of 5½ inches. When all 5 sections are pulted out the full length is over 3½ feet. It is built of the best materials, brass bound throughout. We furnish with each telescope a solar eye piece for use in studying the sun and the solar cellipses. Eye piece can also be used as a magnitying glass to detect insects or germs in plants or vegetables.

**Powerful Lenses** 5 to 10 Mile Range

The lenses in this telescope are carefully ground and correctly adjusted by experts. See objects miles away. Farmer said he could count the windows and sell the colers of a house? miles away and could study objects 10 miles away which were invisible to the naked eye. Absolute necessity for farmers and rased men. They can keep their eyes on the cat-

Our Offer II We will send big telescopes free and prepaid to all who send \$1.00 to pay for one year's new or renewal sub-scription to Mail and Breeze, and 25 cents extra for postage (\$1.25 in ail). The Telescope is guaranteed to please you in svery way or your money will be promptly refunded. Order at once. Address all letters to

Mail and Breeze TOPEKA, KANSAS.

### NORTH DAKOTA

BEST DEAL ON BEST SOIL in rain belt. Wadsworth, Langdon, N. D.

### You Can Buy Land From Us and Pay For It in Crops

Financing Farm Purchasers. Why our plan is better than renting or homesteading: 1st, if you rent you are paying for a farm which you do not own; 2nd, homesteads now open for entry are mostly in arid regions, culled over, and too far from market and settlement to be desirable. Better to buy land on the CROP PAYMENT PLAN, near town, in midst of settlement and thrifty agricultural district, where corn, small grain, tame grasses and live stock are produced in abundance, where crop failures are unknown. Ask for particulars, stating in first letter, what you have in stock, finances and equipment for farming.

GREAT NORTHEEN LAND & STOCK CO.,

# Beef Prices Are Too Low are here shown: The figures for December, 1914, and 1918

### Wheat and Corn Continue To Sell For More Money

By C. W. Metaker

That cattle are losing money, and killers and retailers are making more than the usual profit in beef. Few bunches of fat cattle marketed in the last 10 days have paid the feed bill, and more of them lost money in addition to the expense of feeding. Thin cattle that cost 17 to 38 when they went into feed but cannot be held three to four months on feed and sell at \$7.25 to 38.25 and not lose money. Iowa and the surplus corn states east of the Mississippi river have received the worst lolt in cattle feeding administered, since me panic of 1907. Western states have suffered relatively less because they have marketed fewer eattle.

Westward. One lows shipper cut the tops out of three loads of short fed steers and the state of them in Chicago last week at 7. The other two loads were marketed in Kansas City at 7.50 and went back to the country for feeding.

Hogs to Rew Low Levels.

After showing a rise of 10 to 20 cents on Menday last week, when the 7 cent outsilon was returned, the hog market decline the bulk of the hogs sold under 6.50, making prices at country shipping points 36 to 36.25. These low prices, with

### A Moderate Country Protest.

Early last week the country entered a protest against declining prices in cattle, and on Monday with greatly reduced supplies the market responded with a better tone. However this advantage was eliminated when large marketing was resumed. Not only does the market need nursing, it needs to be put on a diet so thin that killers will be unable to maintain supplies. Killers realize that a famine supply is to be expected before long, as the result of large selling of fed cattle for four months past, and no refilling of eastern feed lots. Killers act only under necessity, and at present are reaping a harvest that will guard them in the time of small supplies.

### Cattle Figures Lie.

Cattle Figures Lie.

Cattle receipts thus far this year would indicate a material increase in the supply, but in reality that is not true. Here is a fair sample of the movement that prevails: Last summer some light weight stockers went to Iowa. Last week they were marketed in Kansas City again, and sold to an Oklahoma buyer who intends to hold them until spring and remarket in Kansas City. They will sell to some feeder and be marketed finally as fat cattle. Already there are two market accounts against these cattle with the probability that they will figure four times in the supply before they pass into beef.

### Trying to Relieve Chicago.

Many fat cattle, and large numbers of stock and feeding cattle are coming to Missouri river markets, that under normal conditions would go to Chicago. At the lake market the outlet for stockers and feeders is closed by quarantine, but feeders of fat cattle to Chicago under prevailing conditions is less profitable than sending them

### WISCONSIN

30,000 ACRES cut-over lands; good sell; plenty rain; prices right and easy terms to settlers. Write us. Brown Brethers Lum-ber Co., Ehlmelandsr, Wia.

Upper Wisconsin Best dairy and gen-the Union; settlers wanted; lands for sale at low prices on easy terms; sak for booklet on Wisconsin Central land grant; state acres wanted. ### WYOMING

FOR SALE OR RENT—MY 240 acres fine irrigated land, 3 miles from Wheatland, Wyo. Plenty water, fine climate, no crop failures, 30 cultivated, 30 cliatia, 160 grass, comfortable buildings. Sod breaks easily, no brush. Will pay \$3 per acre for breaking 100 acres or all provided wheat is sown in spring. Applicant must be equipped for farming. Option to buy. Alfalfa, wheat, sugar beets, other crops thrive, Write for terms and booklet. Reference required. W. A. Smith, Crawford Bidg., Topeka, Ear.

SETTLERS WANTED: 40 acres, \$575: level, near school and station. \$100 cash. Ebert-Walker Co., Duluth, Minn.

CORN AND CLOVER FARMS near Twin City markets. No drouth. Ask for descriptions. \$25 to \$75 per acre. Carter Land Ca., Near Union Depot, St. Paul, Minn.

### NEW MEXICO

IRRIGATED FARMS and ranches for sale or trade. Most healthful and mild dismate. Planty of pure water. "No trouble to answer questions."

Brainy & Ball, Pottales, New Mexico.

After showing a rise of 10 to 20 cents on Menday last week, when the 7 cent quotation was returned, the hog market took another dip reaching new low positions for the last three years. At that decline the bulk of the hogs sold under \$6.80, making prices at country shipping points \$6 to \$6.25. These low prices, with snow and cold weather generally ever the big hog states, makes prospects for the next 10 days doubtful. There are pienty of hogs in the country and they will be marketed in the next 60 days, so that some record breaking market supplies are expected. The high price of corn is decidedly bearish to the hog market, as feeders will market their hogs as soon as they show reasonable weight. The use of corn with hogs thus far has been more general than in the corresponding time last year, and the average weight of hogs now is the heaviest in nearly two years past. This increase in weight is yielding a similar increase in product. Packers figure that they will buy February hogs at \$6.50 to \$7.25, and in the next 10 days prices at shipping points probably will fall to 6 cents and less.

### The Sheep Market Unsettled.

The Sheep Market Unsettled.

Though the sheep market last week showed spurts of firmness it was unable to break away from the depressing influences of lower prices for cattle and hogs. After advancing 50 cents the first half of the week, prices fell back 25 cents. The general market prospects, however, remain unchanged, and as soon as short supplies force urgency in demand prices will rise rapidly. Mutton is a meat that loses favor in cold weather and especially so when it is relatively higher than pork and beef, but it picks up readily under prospects for mild temperatures. The wool market is firm, eastern shipping points quoting a slight advance in prices. Sheepmen are of the opinion that late marketed lambs will come in for a material advance, and that March prices will be well above 9 cents.

### The Movement of Livestock.

The following table shows receipts of cattle, hogs and sheep at the five western markets last week, the previous week and a year ago:

Cattle	11048	gneep
	44,925	31,850
	190,000	63,000
		37,650

### British Buying Light Mules.

British agents last week inspected and accepted about 709 light weight 13½ to 14½ hand mules. These animals will be shipped to India for farming purposes. Also about 600 jacks were shipped from New Orleans, consigned to India, where they will be used for breeding purposes. The other trade in horses and mules remains about the same as in preceding weeks. Domestic demand is unusually small.

Can the Country Continue the Pace?

### Can the Country Continue the Pace?

Can the Country Continue the Pace?

Can this country continue the pace of exporting that December disclosed, and not come to a period of extreme shortage? According to the statement of the Department of Commerce five times as much wheat and six times as much corn were exported from the United States in December as in the same month in 1913. Flour exports increased more than 68 per cent. If the period in 1913 increased than 178 million bushels of wheat, flour included, have been exported in the last six months, this is 87 million bushels more than in the same period in 1913.

are here snown:	Dec., 1914.	Dec 1912

### Alfalfa Meal for Pigs

What is the feeding value of alfalfa meal?
Will ground corn mixed with alfalfa meal be a good feed for pigs if the mixture is soaked or cooked? Could a person winter fall pigs at a minimum cost on this ration? I have not had very much success feeding alfalfa hay to hogs. My experience has been that the hogs must be almost starved before they will est the dry hay.

Bourhon county, Kansas.

Charical analysis and digostion trials

Chemical analysis and digestion trials show that alfalfa meal has a feeding value slightly lower than that of wheat bran or shorts. Results obtained at the Nebraska Experiment station showed that, in actual test, alfalfa meal gave a little better returns than wheat bran or shorts when fed with corn to fattening hogs. General farm practice as well as these experimental results in-dicate that alfalfa pasture, alfalfa hay, or alfalfa meal can be used profitable. in the place of shorts or bran

The meal is slightly more efficient and can be fed with less waste than the dry hay, but it often happens that the hay is more profitable because of the cost of grinding the meal. This is in accord with results obtained at practically all experiment stations where the meal and hay have been compared. Hog growers as a rule have no trouble getting their hogs to eat the dry hay.

A mixture of ground corn and alfalfa

meal will make a comparatively cheap feed for the fall pigs. The meal should not form more than 30 per cent of the ration. It will be better to mix the ground corn and meal and wet every feed of the mixture, immediately before it is fed, so it will just pour from the pail, than either to soak or cook it.

### Injured Cow

I have a cow, 8 years old, which cannot stand up. She ate well in the evening but the next morning she could not get up. We lifted her, but she cannot use her feet. She seems all right in every other way. She is due to calve soon. Can you tell me what the trouble is and suggest a remedy?

Marion County, Kansas.

J. E. K.

It is possible that your cow was par-lyzed as the result of eating mokly alyzed as the result or decomposed feed. Give 1½ pounds of epsom salts in about a quart of warm water to obtain a free movement of the bowels. She also should have 2 teaspoons of fluid extract of nux vomica

once every day.

It is possible that she has broken one of the bones of a limb, dislocated a joint, or ruptured a ligament. The symptoms in all these conditions would be the same. You will have to make a careful examination to determine the exact nature of the trouble.

Dr. R. R. Dykstra. Kansas State Agricultural College.

It's a remarkable coincidence that the man who paints his nose seldom does as much for his buildings.

The rotten few bring down the selling price of the shipment. This applies to all perishable farm products.

Janu

### Sheep Systems and Breeds

The plan of management to follow and The plan of management to follow and the breed to select are important things for the man who is starting in the sheep business to consider. Two general systems of sheep farming usually are practiced in this country. Wool, in one, is given the first consideration while in the other mutton is the most important. The man who would succeed with the The man who would succeed with the flock cannot afford to ignore either wool or mutton. In many instances they should have equal consideration. The tendency on most farms where sheep are kept at present is to give more attention to mutton and to consider wool a sec-ondary product. This is due to the constantly increasing price of meat; but so long as nations are civilized there will be a demand for good cloth, and wool will be an important source of income from the flock though it be considered of secondary importance.

The feed and labor available, and the market for wool and mutton are the factors which will determine the system to follow. If the pasture is sparse and feed expensive, and market arrangements poor, wool should receive as much consideration as mutton. If there is plenty of pasture and feed available and a good convenient market for lambs or fat sheep the ability to produce good mutton at a low cost should be the im-portant thing to look for in breeding

Considerable thought should be given the selection of the breed. The different breeds have been developed in different localities under different conditions and for different purposes. All these should be considered. The breed selected should be one that has been bred for the pur-pose in mind and developed in an environment similar to the one in which it is to be put. One thing to remember is that any breed is better than no breed at all. There are 30 breeds of improved sheep that have been brought to fixed Twelve of these breeds are well established in the United States.

It is not to be expected that all farmers in a county will select the same breed. Some may wish to follow plans that differ materially from those pre-fered by others. There are, however, many advantages that may be realized, if the farmers of one community will if the farmers of one community will raise sheep of one type and breed.

farms are of the same type and age they can be sold at the same time. Thus the lambs from a number of flocks can

to that community. The same co-opera-tion for the production of a standard, merchantable product will prove profit-able in the marketing of wool. Another able in the marketing of wool. Another advantage of growing only one breed in a community is that good rams need not be sacrificed after they have been used two seasons. When the daughters of a ram of merit are old enough to be control to another flock in the breed he can go to another flock in ex-change for one that has been siring

lambs of equal worth.

The U. S. Department of Agriculture has just published a bulletin on the best breeds of sheep for the farm. This is Farmers' Bulletin No. 576 and can be obtained from the Department on request. Descriptions with photographs of the different breeds are given.

### Concerning the Farm Profits

A farm may be made too small for efficient farming, according to the specialist of the U. S. Department of Agriculture. A study has been made recently in the corn belt to gather data for a bulletin on the best methods of for a bulletin on the best methods of farm management. The belief is expressed that it never will be possible to get the farms so small in this country as in Europe, for the farming here is firmly based on machinery and horses; we do not take kindly to hand labor.

The states in the corn belt were chosen for this survey because they excel almost all other regions in wealth of farm products. On rich soil with ample rainfall, a system of agriculture is found that is unequalled as an example of the expansive type of farming. This type is developed on the basis of the farm work horse as the means of motive power. Data from about 700 farms in this rich area have been taken as a this rich area have been taken as a basis for a new bulletin.

In the region studied the owners made fair profits. The average labor income of the farm owners operating their own farms was \$408 and of the tenants \$870. In addition, the operators had a house to live in and those products which the farm furnished toward their living. This gives an idea of what may be expect-ed from the utilization of high-priced land under an expansive system of agri-culture. The landlords, on the average received 3.5 per cent on their invest-ments. The size of their investments had no appreciable bearing on the rate of income

If the lambs raised on the different arms are of the same type and age hey can be sold at the same time. Thus he lambs from a number of flocks can be shipped in one car; or if there are amounts to 50 cents an acre a year. be shipped in one car; or if there are amounts to 50 cents an acre a year. several cars buyers will be attracted On the rented farms the average amount

invested is \$368, and the cash paid out for new machinery, harness, and repairs is 21.2 per cent of the inventory value. This makes a cost of 56 cents an acre. It is expected that the cost would be higher on this item as men just starting in farming as tenants would be like-

ly to purchase more new machinery.

The size of a farm is the controlling factor in the efficient use of farm labor and machinery. The old hand-labor methods practiced by our forefathers, which are still common in Europe, were suited to a small area. Under those conditions a man needed only as much conditions a man needed only as much land as he could properly cultivate alone. A family was able to raise only a small amount above that needed for their own living. If these methods still prevailed in this country, the present number of farmers would be entirely inadequate to support our urban population.

The adoption of modern machinery has

enormously increased the efficiency of farm workers. Fewer men are now needed in the farming districts, and those not needed are able to devote them-selves to useful work in the cities and towns. As a result of this condition more of the benefits of civilization are available to the farmer. Although the farmers are fewer in number, the pro-duction to the man is increasing. If hand labor could compete with machine work, farm wages would be much less and the product for every man proportionately smaller.

### Guard Against the Acid

Sour soil is one of the greatest limitations in growing alfalfa and clover in Kansas. The soil must be sweet for in Kansas. The soil must be sweet for these crops to give a profitable growth. Quite a bit of the land in the state, especially that on the hardpan soils of southeastern Kansas, is sour, and it will have to have lime added to it before legumes will grow well. Soil acid is the principal thing that is holding back an increase in the alfalfa acreage in eastern Kansas

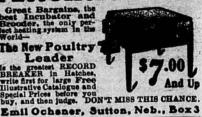

This acid condition may be cheaply corrected by the addition of ground limestone. This is the great improver or alfalfa soils. Add the limestone at the rate of at least 2 tons an acre a correct before the alfalfa or clover is to year before the alfalfa or clover is to be sown.

of income.

Disking the plowed ground conserves
The average amount invested in farm moisture and starts the weeds.

S. W. Kansas and W. Oklahoma

BY A. B. HUNTER.

On Friday, February 5, I. N. Green of Klowa, Kan., will hold one of the biggest stack sales to be held in the state this season. He will sell 34 jacks and jennets, 56 horses and mules, 11 dairy cattle and a lot of Duroc-Jersey hogs. Mr. Green is offering entirely too much stock for one day's sale and as a result of this there will doubtselled and as a result of this there will doubtfor something good and at a bargain price,

The above is a very good picture of Blue valley A Wonder, by A Wonder. He is the property of Thos. F. Walker & Son, of Alexandria, Neb., and many of the young sows in their February 13 bred sow sale at Fairbury will be bred to him. He is conceded the best boar ever sired by old A Wonder by many prominent judges and is certainly a great individual. In this sales Thos. F. Walker & Son sell 50 bred sows and 40 of them are early spring glits and the sisters to the 46 spring boars that were sold by and Breeze when you write to this firm.

it certainly will pay you to attend this sale. F. S. Kirk, sales manager, for catalog of the Mention Farmers Mail and Breeze when breed in which you are interested and arwriting.

### Buy Cowley Wonder Litters.

Buy Cowley Wonder Litters.

G. B. Woodall, of Winfield, Kan., owner of the Walnut. Valley Farm and breeder of purebred Duroc-Jersey hogs, is carrying a regular card ad in Farmers Mail and Breeze. He has been having a good trade in spring and summer boars and still has a few good ones on which he will make very close prices. He is also ready to ship a few bred gilts. Recently Wr. Woodall bought as an additional herd boar, Cowley Wonder 144171, sired by Beauty's Model Top, twice grand champion of Missouri State Fair. If you want some good Duroc-Jersey hogs write Mr. Woodall and mention Farmers Mail and Breeze.

### Tatarrax Duroc-Jerseys.

Buskirk & Newton, of Newton, Kan., owners of the Tatarrax herd of Duroc-Jerseys, have for sale 75 bred glits and 10 serviceable boars. See their ad in this dissue. Tatarrax Duroc-Jerseys are especially noted for their size and quality. Chief Tatarrax, for whom this herd is named, was a grand champion two years in succession at two state fairs and the sensation at each show. His get have been prize winners and high sellers ever since he has been in service. You cannot do better than buy one or more of these bred glits if you want to add to your brood sow herd or one of the young boars if you want a high class herd header. Write Buskirk & Newton and mention Farmers Mail and Breeze.

the 4th. All the sales in the circuit can be conveniently attended. Everything on this circuit is immune and all the offerings are good. Watch the Farmers Mail and Breeze for further notices about these sales. You will receive one as soon as they are off the press.

George Bingham, Bradford, Kan., offers 50 Poland China bred sows at private sale. Mr. Bingham is an old Iswa breeder, having maintained a herd at Manning, Iswa, a number of years ago and later at Mexico, Mo. He is one of the well known breeders of strictly big type Poland Chinas. The sows he is offering at private sale are exceptionally good. Write him for prices and descriptions.

J. H. Harter, Westmoreland, Kan., offers a few choice spring boars at attractive prices. Write him for prices and tell him to book you for his big bred sow sale catalog February 17, at the Agricultural college, Manhattan, Kan. Mr. Harter starts the big Riley county Poland Châna bred sow sale circuit at the college on that date. J. L. Griffiths sells the day following at Riley, Kan., A. J. Swingle solls the day following Mr. Griffiths' sale, at Leonardville, Kan., and James Arkell sells the day following Mr. Griffiths' sale, at Leonardville, Kan. Two hundred sows will be sold en this circuit and it is the big opportunity to buy the right kind and get your pick of the 200 sows. Write them at once for their catalogs and arrange to attend all four sales.

Durer Bred Sow Sale.

Saturday, February 6, is the date of Philip Albrecht & Sons' thirteenth annual Duroc-Jersey bred sow sale. The sale will be held in Smith Center, Kan., in a heated pavilion. The breeding and individual merit in the Albrecht herd is as good as there is in the West. It is one of the oldest and strongest herds in the north central part of the state. Thirty-five bred sows, well grown and in the best possible breeding condition will be sold. Write today for catalog and attend the sale. They will also sell their pure Scotch bull. He is a great individual and a splendid sire.

Higginbetham Brothers' Cattle.

Last week we reported the sale of Hereford cattle by F. S. Jackson to Higginbotham Brothers at Rossville, Kan. In this announcement it was stated that the Higginbothams were retiring from the Holstein business and intended to devote all their energies to breeding Herefords. This was a mistake, Higginbotham Brothers own four farms near Rossville, some of which are especially adapted for handling dairy cattle while others are adapted to raising of beef breeds. It is their intention to handle both Holsteins and Herefords. They will be in a position to supply breeding stock to either the dairyman or the beef producer.

Big Type Poland Sows.

Hig Type Poland Sows.

H. C. Graner, Lancaster, Kan., will sell Poland China bred sows at his farm near Lancaster, March 3. In this sale he will sell 40 head. Ten will be tried sows that made an average of better than eight to the litter last spring. Many of them are sows that Mr. Graner has bought at long prices. He has always been a good buyer and was never known to buy a common individual. Mr. Graner is an old timer in the Poland China business and has been a consistent advocate of the larger type and has never bred anything else. He owns a big farm that is well improved. He is an up-to-date farmer as well as Poland China breeder. He raises Shorthorns and is a believer in good stock of all kinds. His big bred sow sale will be advertised in the Farmers Mail and Breeze in later issues. You can ask him to book you for a catalog today and you will get one as soon as they are off the press.

Big Poland China Sow Sale.

Big Poland China Sew Sale.

Herman Gronniger & Sons, Bendena, Kan., are pioneer breeders of Poland Chinas in northeastern Kansas. While they have never made any sensational sales they have always enjoyed an exceptionally liberal patronage from the breeders, not only in their section of the state but from all over the state. They have bred one type, and advocated one type for more than 30 years. He is recognized as one of the best judges in the country and his sons know the Poland China business from the ground up. Their annual bred sow sales are always attended by breeders and farmers from all over the country and they always receive good prices and the average is always good. The sows they breed themselves usually sell higher than those they buy from elsewhere. The date of their big annual bred sow sale is March 1 and you should plan to attend it. It will be advertised in the Farmers Mail and Breeze in later issues.

Wile March 10 as the date of his big dispersion.
D. E. Reber, Morrill, Kan., has claimed March 10 as the date of his big dispersion selled of Shorthorns and Percherons. Forty-five Shorthorns will be cataloged including Diamond Goods, which is the \$1050 top of Bellows Brothers' sale in 1912. There will be daughters of Choice Goods and other cows and helfers of noted breeding. It is one of the big Shorthorn events of the sale are an indeed a choice lot. The cows and helfers are among the best ever offered in a public sale in the West. Diamond Goods is an indeed a choice lot. The cows and helfers or noted cows in this sale are in their prime and have cost Mr. Reber lots of money. The Percherons are all registered or clightle. The sale will be advertised in the Farmers Mail and Breeze. You can alog. They will be out in a few days.

Percherons and Shorthorns.

Percherons and Shorthorns.

In this issue of the Farmers Mail and Breeze Will Graner, Lancaster, Kan., is advertising Shorthorn bulls and Percheron stallons. He is offering 10 Percheron stallions ranging in ages from 2 to 6 years. His Shorthorn bulls are yearlings and yearlings past and both offerings will be found as desirable from every standpoint as any like offering that will be made this season. The Percherons are strong in Brilliant breeding and are blacks and greys and are out of Mr. Graner's great breeding mares and stallions. Everything is registered and the man that is looking for a good stallion will simply be consulting his own interests by investigating Mr. Graner's Percheron stal-

BUSKIRK & NEWTON **NEWTON, KANSAS** 

lion offering. The Shorthorn bulls are 17 in number and are big rugged fellows that have been handled in such a manner as to prove valuable to the breeder or farmer who wants a bull for hard service the coming season. Will Graner is a brother to Henry Graner, who is well known to Farmers Mall and Breeze readers because of the high class herd of Poland Chinas which he maintains and advertises in this paper. Look up both advertisements and write him today for prices and further information about his Percherons or Shorthorns.

Duroc-Jersey Sow Sale.

Howell Brothers' Duroc-Jersey sale at their farm seven miles northeast of Herkimer, Kan., on the St. Joe and Grand Island railroad and five miles west of Marietta, Kan., on the Blue Valley branch of the Union Pacific, is one of the big Duroc-Jersey events of the season. They will sell 50 sows and glits. Ten tried sows, 15 fall yearlings and 25 spring glits make up the offering. The breeding in this sale is as good as will be found in any sale this winter. Joe's Pride was sired by Joe, the great show boar owned by McFarland Brothers of Sedalia, Mo. Royal Climax was the second prize winner at the American Royal in 1913. He was sired by Climax A and was out of the great sow Dotte. All of the tried sows are by Joe's Pride. These sows and the fall and spring glits are bred to the three boars. One of the boars is Revelator, a son of the great sow, Queen Mary, the grand champion sow in 1913. The Howells were good buyers in southern Kansas sales last winter and some of the choice breeding secured in these sales go in this sale, Ask for their catalog today and mention Farmers Mail and Breeze. Send bids to John W. Johnson of this paper in care of Howell Brothers. Such bids will be carefully handled.

Great Poland China Sows.

J. F. Foley, Oronoque, Kan., (Norton Co.) is one of the well established Poland China breeders of the West. He is the pioneer in Norton in the purebred Poland China business and has kept abreast of the times by buying from leading Iowa, Nebraska and Kansas herds. His offering of 40 tried sows, fall and spring gilts Saturday, February 13, is one of the really good offerings of the season. The tried sows are of proven value, as producers. They are sired by such boars as Blaine's Last Hadley, King Hercules, Ott's Big Orange, and other noted sires. The fall gilts are great. They are sired by King Hercules. The 20 spring gilts are by The Glant, King Hercules and Blood Orange, by Ott's Big Orange. All are bred to the herd boars. The herd sows that produced the gilts are as choice a lot as will be found in any herd in the West and are in the same class with the herds of the East. The 40 sows and gilts in this sale will please the most exacting and it will be a great place for the breeder who wants a few sows to build up his herd. Write to Mr. Foley today for his catalog. If you can't attend send your bids to John W. Johnson or Jesse R. Johnson in care of Mr. Foley at Norton, kam, and they will be well treated. For a catalog address him at Oronoque, Kan.

Great Poland China Offering.

Great Poland China Offering.

James W. Anderson, Leonardville, Kan., will sell a draft of 40 Poland China bred sows and glits from his well known herd, on February 9. His sale is the day before the Agricultural college sells Poland Chinas at Manhattan and the day following the college sale, Howard R. Ames of Maple Hill, Kan., will disperse his herd at the farm four miles south of St. Marys, Kan. This forms a circuit of good sales that can be conveniently attended. In Mr. Anderson's herd is to be found some of the richest of big type breeding. Clay Jumbo, by Nebraska Jumbo, is one of the really big boars and valuable sires of the breed. Joe Wonder is another great, big type sire, in the 1000 pound class. A King is a great young boar out of the \$200 sow Mr. Anderson bought in the John B. Lawson sale last winter. He was sired by A Wonder Jumbo. The sows and glits in the sale will be bred to him. We hope every breeder in Kansas will write for Mr. Anderson's catalog. It will give complete breeding and general information about the great blood lines to be found in this sale offering of bred sows. Those who cannot attend may send bids to J. W. Johnson in care of Mr. Anderson at Leonardville, Kan. Write today for the catalog and mention the Farmers Mail and Breeze when you write.

Annual Poland Sow Sale.

In this issue appears the advertising of Joshua Morgan's big Poland China bred sow sale at his farm near Republic, Kan., and Hardy, Neb. This is the regular annual bred sow sale which Mr. Morgan makes and the offering of 40 sows and glits this season is stronger than ever. There are 20 fall yearlings in this sale and they are as good as any 20 young sows that ever went into one sale annywhere. About half of them were intended for Mr. Morgan's own bred sow reservation but because of the fact that some of the spring glits intended for the sale did not successfully pass over he has decided to add the fall yearlings and insure an offering that will be as good as will be made in the West this season. There are two great sires in this herd, Long Sam and Guy's Price Wonder and either of them are over 1000 pounds in weight if highly conditioned and they would not have to be so blamed fat either. The Morgan herd has always been noted for great size and this season's offering combines size, good feet and legs, best of backs and coats. You want to be there and you will be convinced of the truth of these statements. Write for the catalog today and mention the Farmers Mail and Breeze when you write. If you can't come you can send bids to J. W. Johnson of this paper and such bids will be handled carefully and honestly. Address Mr. Morgan at Hardy, Neb. He is just over the line in Jewell county, Kansas. Come to Republic, Kan, or Hardy, Neb., and you will be met by autos or teams and returned for evening trains.

### Nebraska

PHIL WALKER KANSAS MOLINE,

Neb., should attract buyers that are in the market for the best. Both offerings are descended from ancestors that have been shown and were winners at Nebraska State Fairs. Remember the date, February 6, at Pickerell. G. A. Wiebe sells the day before, at Beatrice, seven miles away. Bids may be sent to Jesse Johnson care of Ben Ridgley, Pickerell, Neb.

Last Call For Wiebe's Sale

G. A. Wiebe will have one of the good Poland China bred sow offerings of the winter. His sale will be held at Beatrice on February 5 and the entire offering is immune. The Wiebe kind will please the best breeders of Kansas and Nebraska. The Jones & Ridgley sale will be held at Pickerell, seven miles from Beatrice, next day. Readers of this paper wanting the best should attend both sales. Bids may be sent to Jesse Johnson in Mr. Wiebe's care at Beatrice, Neb.

Garrison's Shorthern Sale.

Garrison's Shorthern Sale.

Readers of this paper should not overlook the big reduction Sharthorn sale advertised for Wednesday, February 3 at Summerfield, Kan., by A. B. Garrison, one of the oldest and most successful breeders in Kansas. The Garrison Shorthorns are the practical useful kind. The cows are heavy milkers and the herd bull, sire of the most of the young things, is one of the best Scotch bulls in the West. He is a grandson of Choice Goods. All of the cows are bred to him. O. A. Tiller of Pawnee City, Neb., 12 miles from Summerfield, consigns a few choice individuals. viduals.

Successful Hereford Sale.

Successful Hereford Sale.

Mousel Brothers' sixth annual Hereford sale at Cambridge, Neb., attracted a big crewd of Hereford breeders from all over the country. Their inquiry for catalogs prior to the sale was the biggest they have ever had. Buyers were there from Kansas, Missuri, Nebraska, Indiana, Colorado, Wyeming and Idaho. The 60 head sold for an average of \$271, which was very satisfactory to Mousel Brothers. Thirty-five bulls sold for an average of \$275. The interest in the offering centered around their great herd bull, Beau Mischlef. The top of the sale was \$930, paid by Hugh Whiteford of Guilford, Mo., for the junior yearling show heifer, The Winning Girl, a daughter of Beau Mischlef. O. J. McCulloch of Clarks, Neb., paid \$800 for Beau's Mixer, a yearling bull sired by Beau Mischlef. Many of the best things in the sale were bought by Nebraska breeders.

### **Draft Horses and Holsteins**

Praft Horses and Holsteins.

Watson, Woods Bros. & Kelly Co., Lincoln, Neb., report active sales in draft stallions. This company has taken pains to provide an attractive collection of Percheron, Belgian and Shire stallions of various ages and of a character to suit their established trade. This firm has long had the reputation for supplying draft horses of the better class, combining extra good weights, quality and action. The company has never made it a practice to carry an especially large stock, but has always provided horses of a high standard, and in sufficient numbers for the most critical buyers. They invite their old patrons, and any who are interested in securing drafters, to visit their barns in Lincoln and inspect their offerings. This company has recently been advertising Holstein helfers and is having a brisk demand. A number of recognized dairy cattle experts have within the past few days inspected these helfers and pronounced them a very superior collection throughout. They have been selected from heavy milking ancestry. They adhere to the approved Holstein type and markings, unregistered but practically purebred, and many of them will freshen within the next few days.

### S. E. Kan., S. Mo. and E. Okla.

BY C. H. HAY.

Chas. W. Finley, of Otterville, Me., breeder and exhibitor of some of the state's best Durocs, has decided to quit the hog business and will hold a dispersion sale at Otterville, March 2. This will be your opportunity to get some of the best.

C. M. Howard of Hammond, Kan., is advertising two good French draft stallions, and a few good jacks. Mr. Howard's adappears in the Polled Durham columns. If you need anything in the line of French draft stallions, jacks or Polled Durhams, write Mr. Howard.

A. G. Dorr is offering a choice lot of Duroc-Jersey gilts bred for spring farrow. Mr. Dorr is one of the oldest breeders in the state and has shipped his hogs to practically every state in the Union. He is making very close prices on these good gilts. Write him at once.

O. C. Hagans, secretary of the Miami County Breeders' association, states that inquiries are being received for lists of stock being sold in the sale at Paola, Kan., February 25. The Miami county breeders have gone into this proposition to make it win. They are going to put up a class of stock that will make the public know what is going on in Miami county. They realize their future business depends a great deal on this sale and they are going to leave nothing undone on their part.

### Publisher's News Notes

The Stay There Earmark.

The Stay There Earnark.

Nothing is of greater importance to the livestock breeder than the matter of the proper identification of his stock. To do this successfully some kind of marker must be used. The Stay There Marker has been in use by some of the best stockmen of this and foreign countries for many years. It is highly recommended everywhere, made of aluminum and hard metal and will not rust. Made stamped with number and initials of person buying. Used for cattle, sheep, goats, and swine. For full particulars, circular and sample free write M. H. Stoll, Beatrice, Neb.

Profit in Poultry Raising.

Meat shortage is the cry from all parts of the world. For ten years past the supply of beef, pork, veal and other meats has been growing less in proportion to the demand. The sale of breeding stock, hog cholera, foot-and-mouth disease, and the European war are factors in cutting short the supply and increasing the demand. Poultry raisers will find in this a splendid

Foundation stock that carry the blood of the very best Scotch famllies.

2 helfers and 1 bull - milking strain, not related \_\_8250.

2 fresh milk cows, calf at foot and rebred-milking strain—\$350.

Strong in the blood of the most noted sires of the breed.

8 head of helfers, milking strain and Scotch herd bull all for \$1,000.

A car load of rugged young buffs, \$100 to \$150

A WORD TO MR. BREEDER

It is easy to increase the value of every Shorthorn you raise from \$10 to \$30, simply by using a better breeding bull. Stop and figure what this means even on the first crop of calves, whether you have 5 or 50 breeding cows and heifers in your herd. I have never before had such splendid herd bull material from which to select. I want to place these bulls where they will do the most good. The success of those who buy these herd bulls will prove more than all my prize winning and show ring honors my ability as a breeder. Come and see them, you will say with others they are the greatest bunch of herd header material you ever saw on any farm.

S

GRANDVIEW JACK FARM

chance for profits, Even when eggs are high in winter, it will pay better to put them into an incubator and raise broilers, fryers and full-grown hens. It will give you a better income, because chickens on the place grow up largely on farm wastes. A small investment in a reliable incubator is the first requisite for a proper start. Among the incubators on the market, the Sure Hatch stand forth prominently as a successful hatching machine. It has been on the market 17 years, and is a recognized standard; manufactured by the Sure Hatch Incubator Company, Bex 14, Frement, Neb., in one of the biggest incubator factories in the country. It is beyond question a splendidly built machine, and a reliable cold weather hatcher, which is very important. Its double walls, dead air space, thoroughly insulated top, copper het water heating system, and automatic regulation make it a chick producer of superior quality. The Sure Hatch Incubator Company will send this machine freight paid to any station in the United States, under a 10 year guarantee and on 60 days trial. They supply full directions with the incubator; also their Uncle Sam Poultry Book, which gives many valuable hints from official sources on how to succeed with poultry.

Prazier's Great Offering.

One of the extra good bred sow offerings in the state of Missouri this season will be that of E. D. Frazier of Drexel. The sale will be held on the Frazier farm, Wednesday, February 10. You may judge the kind of hogs Mr. Frazier raises when you recall that he made the top average of this section last year. Since these he has built up and added to the herd a number of exceptionally well bred individuals. Mr. Frazier thinks that the hogs will be 25 per cent larger than any he has ever sold. The offerling will consist of 25 spring silts and 25 yearling and tried sows, sired by such great boars as Frazier's A. Wonder, Expansion Hadley, Major B. Hadley, Giant Wonder, Big Logan Ex., and White Sox Chief. In addition to the sows he will sell the best two boars raised this year. Last spring Mr. Frazier purchased from Mr. Lawson of Jowa, Wonder King, one of the best pigs ever sired by Long King's Equal. His dam, Wonder Jumbo 4th, is by A. Wonder-Here is a real big type bred hog and Mr. Frazier is to be congratulated on his splendid judgment in selecting such a herd boar. Three-fifths of the spring gilts, a large portion of the tried sows and some of the yearlings are bred to Jumbo Ben, by Big Ben, dam King's Jumbo 5th, by Long Frice, one of the best pigs ever raised by Pfander & Son. In the display ad you will find the cut of one of the fine gilts to be sold. There are some litter gilts that sell that are even better than this one. There were 11 pigs in this litter, nine raised. The top boar will sell in the sale. There were 11 pigs in this litter, nine raised. The top boar will sell in the sale. There were 11 pigs in this litter, nine raised. The top boar will sell in the sale. The sold pigs and see what good blood lines are offered in this sale. Mr. Frazier uses the simultaneous method of vaccination. Please mention this paper when you write.

### Hog Feeding Experiment

In average years Kansas farmers do not purchase much feed to take the place of corn for fattening any class of stock but in years following seasons of drouth much commercial feed is used. This year there is a greater scarcity of corn than usual and many commercial feeds are being sold in the state. The Kansas Experiment station is conducting an experiment the object of which is to determine the feeding value of hem. to determine the object of which is to determine the feeding value of hom-iny feed for growing and fattening hogs. The experiment was started on March 2, and 45 fall pigs are being fed. These pigs are divided into five lots. Two lots are being fed on growing rations and are being fed on growing rations and will be developed for breeding purposes. One of these lots gets a mixture of 50 per cent hominy feed, 45 per cent shorts and 5 per cent tankage and the other gets a mixture of 50 per cent cannot also be a per cent shorts. corn, 45 per cent shorts, and 5 per cent tankage. Two lots are being fattened tankage. Two lots are being fattened for market, one getting a ration composed of corn 62 per cent, shorts 30 per cent, and tankage 8 per cent and the other a ration composed of hominy feed 62 per cent, shorts 30 per cent, and tankage 8 per cent. The fifth lot is being fed on a mixture of corn 50 per cent, shorts 45 per cent and tankage 5 cent, shorts 45 per cent and tankage 5 per cent. These pigs will be grown during the early part of the feeding period and then probably finished on alfalfa pasture on a ration consisting of corn 62 per cent, shorts 30 per cent, and STOCKTON, KANSAS, (Rocks County)
At private sale: 18 mammoth jacks ranging in ages from serviceable jacks down to weanlings. All are black with white points and have bone, size and substance. Also 35 lennets in foal. Write for descriptions and prices, and visit for descriptions and prices, and visit my barn at Stockton. Visitors called for at Plainville. If you are looking for the best at reasonable prices write me. Cornelius McNuity, Stockton, Kan.

Alexander on a ration consisting of corn 62 per cent, shorts 30 per cent and tankage 8 per cent. The results of this experiment should help the feeder to decide whether it will be more profitable or grow them until they develop good frames and finish them on a heavy grain ration and alexander.

Hominy feed is a byproduct obtained in the manufacture of hominy and brewers grits, and consists of the hulls and some starchy material from the grain. It is a palatable feed of good quality. Experiments at other stations have shown that when supplemented with some feed rich in protein hominy feed has about the same value as corn meal. This byproduct, probably will come into more general use in this state in the future and the results of the Kansas experiment should be of interest

to all hog growers.

# Percheron Stallions and Mares

50 Head of Percherons All Registered in the Percheron

Society

of America

Algarve by Samson at the head of the herd, is a wonderfully impressive sire. weighing over Percheron Mares of Correct Type | 2200 pounds.

Young stallions and mares by Algarve and big handsome mares of correct type, in foal to him, make up a large part of this offering. His two-year-old daughter was 1st in class at the International and the mares we offer you bred to him are the kind that will do honor to him.

If you want Percherons, we want to meet you and there is no better way than right at our barns and pastures, where you can see what they are and how we raise them. When you see this year's crop of big-boned, square-built, handsome colts you will have a better idea of what we have to sell.

These Percherons are strong in the best blood ever imported from France. They have size, bone and conformation that cannot help but please you if you want the good, big draft type of Percheron. We expect to sell Percherons because we have the right kind and at prices you will say are reasonable. Write wire or phone what you want or when you can call at the farm, 3 miles East of Great Bend. # Anderson's Clay Jumbo Sale

40 Poland China Bred Sows and Gilts—40 Leonardville, Kan., Tuesday, February 9

The day before the Agricultural college sells Polands at Manhattan

One of the Notable Sires of Northern Kansas. Look Up His Breeding.

The offering consists of 12 choice tried sows, five spring yearlings and 23 spring glits. All are bred to the best advantage to Clay Jumbo, Joe Wonder and A King. The glits were sired by Clay Jumbo and Joe Wonder and other noted boars. Clay Jumbo was sired by Nebraska Jumbo and other noted boars. Clay Jumbo was sired by Nebraska Jumbo and has a host of admirers who proclaim him one of the great sires of the breed. He could be put above the 1,000 pound mark if highly fitted. Joe Wonder is another great boar in the 1000 pound class. A King is a great young boar sired by A Wonder Jumbo and out of the \$200 sow bought by Mr. Anderson in the John B. Lawson sale last winter. The records show that Mr. Anderson has bought as much high class Poland China breeding as any breeder in the West. Get his catalog and be convinced. The 40 sows and gilts in this sale carry the breeding of the most noted sires. The sale will be held in town, under cover. Write today for catalog. The tried sows and spring yearlings are cholera proof. Send bids to J. W. Johnson in his care. Address

# \$50 Course in Traction Engineering-64-Page **Photographic Catalog**

I want every man, young or old, whether mechanically inclined or not, to investigate the wonderful money making opportunities that await graduates of my school in the automobile business; and I want to send you, abso lutely FREE, my beautiful new 64-page Catalog—a book that costs me over 50 cents apiece to send out. This book contains 110 photographs, showing students at work in every department of my school, and pictures how we teach you to become an auto expert or a gas, stationary or traction engineer in Six Weeks, without the use of books of any kind—and how you can fit yourself to become an expert Chauffeur, Mechanic, Salesman, Demonstrator, Garage Manager, Stationary, Gas or Traction Engineer, or Motorcycle Repairman, and earn from \$75 to \$150 per month. In addition to this wonderful, beautifully illustrated Catalog—if you answer at once,—I will send you one \$50 FREE Scholarship Certificate which will pay in full the cost of my Complete Course in Electric Starting, Electric Lighting, and Traction Engineering, when you enroll for my Complete Automobile Course.

E. J. SWEENEY, Pres.

# Earn From \$75 to \$150 Per Month

That's exactly what you can do the very minute you have mastered the SWEENEY SYSTEM of Practical Auto Instruction-and that's what thousands of Sweeney Graduates are doing in every state in the Union and in many foreign countries. Sweeney Graduates are in demand; they have no trouble securing positions-for a Sweeney Diploma means something. It carries weight, and classes the bearer as a thorough, competent mechanic. This because the Sweeney System is practical; because you learn the business from the ground up, by practical work, under the guidance of expert teachers, on real, running automobiles, engines and tractors; because you learn how to operate, repair, and care for Autos, Tractors, Engines, and Power Motors, not from "books" or "charts" or "say so's", but by actual operation and with real tools in your own hands.

The Sweeney System of Practical Auto Instruction embraces every point worth knowing, including vulcanizing, brazing, oxyacetylene welding, lathe work, machine and shop practice, testing, driving, truck repairing and operation, etc.—and you learn by doing the work on real cars under the watchful eyes of skilled instructors.

Everybody in the automobile business is making big money. Here is your chance. You can become an auto or tractor expert and earn from \$1000 to \$3000 or more per yearthe SWEENEY SYSTEM and become an expert in SIX WEEKS' time. I want you to come to my school and see for yourself how quickly and easily you can learn the business and become a highly paid man. Six weeks after the day you enroll, you will be prepared to properly repair any auto made, drive any car or truck or traction engine, or open a garage or repair shop of your own.

As a Sweeney Graduate you do not have to devote your entire time to the automobile, for graduates of this school are equally as well drilled in the care and operation of gasoline, traction, and stationary engines. There is a demand right in your neighborhood for competent traction engineers and mechanics, and we teach you on five different types of tractors in actual work, and also give you factory experience no other school can of-fer. Men are wanted right now for good jobs. Here is a wonderful opportunity for you--an opportunity that will assure you a pleasant, permanent, good paying position. Take advantage of it—now.

Come to the Sweeney School; learn the Sweeney System; gct the very best—and that's exactly what you get here—the best method, best instruction, and the best and very latest equipment of every kind. For instance, we are the first and only school in the world to own the new 8-cylinder Cadillac. We purchased this new car sensation in order to thoroughly teach our students the very latest developments. No other school owns this type of car. Whatever is newest and best is adopted by Sweeney first.

E. J. Sweeney, Pres., The Sweeney Automobile School, himself a practical mechanic, has during the past seven years graduated more than 4,000 successful students, scattered all over the world. Today there are 445 students enrolled and more coming at the rate of from five to eight a day. The Sweeney System of Practical Auto Instruction is taught without the aid of books or

of my graduates say:

E. S. Satchfield, Cleveland, Miss.—"I have a five-passenger Kissel Kar and am running a livery and garage business here in Cleveland, and am making an average of \$10 per day with only one car."

W. A. McGuire, Isabel, Kan.—"I am working in the garage here in my home town. It is one of the best equipped garages in this part of the country. I get half of what we take in at the garage, and furnish nothing but myself, and get to drive part of the time."

M. Loucks, Skidmore, Mo.—When I left school I had about \$500 cash. Now I have over \$700 worth of equipment in my garage, and I am the owner of a Marathon touring car worth \$1,200. It is entirely paid for, and I do not owe a dollar, thanks to you."

### OLDFIELD SAYS:

"Dear Sweeney—I consider yours the most complete-ly equipped automobile school in the country. I have visited many schools in my travels, but yours is far ahead of any I have ever seen, as you teach the me-chanical end in a practical way, which is in my estimation far ahead of learning it by books and charts. You know me. Barney Oldfield."

# The Sweeney System of Practical Instruction gives you a choice of selection. You may want to become an auto expert, gas, stationary or traction engineer—but no matter which profession you choose, your training under the Sweeney System will be just as thorough and just as practical in one department as anyother. In our Automobile, Electric Lighting and Electric Starting departments are forty automobiles and every known system of starting and lighting on which Sweeney students work, with real tools and with their own hands—with the very best and latest tools and machinery. In the Tractor Department to the successful of the word of the world can be part the proportion of the small advantages with the very best and latest tools and machinery. In the Tractor Department of the saudomobile business. In the Tractor Department of the saudomobile successful the successful the successful of the saudomobile successful the successf
