The 1996 Federal Agricultural Improvement and Reform Act has given Western Kansas grain producers near-complete planting flexibility. Soybeans are a viable summer crop alternative in a intensive dryland wheat-summer crop-fallow rotation. The primary advantage of including soybeans in a dryland cropping system is that they are less input intensive in relation to some alternative summer crops. Also, the recent availability of soybean processing plants in Western Kansas offers producers a market for their soybeans.

These budget projections are based on the use of Roundup Ready soybeans. One application of Roundup herbicide at a 2 pint per acre rate is represented in this budget. In some situations a second herbicide application may be needed. A weed control program using two applications of Roundup herbicide is presented in MF-942, *Cost-Return Budgets - Nonirrigated Crops*.

Yield Goals

Cost per bushel and net returns in crop production are highly dependent on yields. The following estimated budget includes three different yield levels. Yield goals vary for a number of reasons such as soil type or land quality, historical weather patterns, input levels, and management. Budgeting for alternative yield goals can help producers compare the profitability of crop enterprises on farmland tracts with varying yield potentials.

Variable and Fixed Costs, Return Factors

Variable costs, such as fertilizer, repairs and fuel-oil, are costs that may vary with level of production. The cost columns show the interest on the variable costs (lines 1 through 15) for one-half year. Fixed costs do not vary with level of production and are incurred by virtue of owning

assets such as land and machinery. Land values have been adjusted for alternative yield goals. In customizing this budget to fit your farm, attention should be given to using land values representative of your farm's productive capacity. Projections of net percentage return on investment permit comparisons to be made among alternative enterprises or other investments.

Table 1. Factors Used for Cost-Return Budget

Item	Yield Level (bu)			
	20	25	30	
Fertilizer:				
N (Anhy.)	0	0	0	\$0.15/lb
N (Dry)	0	0	0	\$0.23/lb
P	20	20	20	\$0.27/lb
K	0	0	0	\$0.14/lb
Lime	0	0	0	\$0.0045/lb
Seed, lbs	40	40	45	
Seed price, \$/lb	\$0.50	\$0.50	\$0.50	
Labor hours	1.15	1.20	1.25	
Labor price/hour				\$10.80
Land value/acre*	\$430	\$540	\$650	
Land interest rate				6.00%
Land real estate tax rate				0.50%
Machinery investment**				\$191
Machinery life				10 yrs
Salvage value				35.00%
Interest rate on machinery				10.00%
Insurance rate on machinery				0.25%
Interest on variable costs				10.00%

* All land costs were computed and then multiplied by a factor of 1.5 to account for fallow land.

**Investment required per crop and fallow acres.
