## Gene Family Statistics

Gene families are ranked by alignment score combining mean per-position variability, alignment length, and gappiness.

## Strategies to Increase Single-Copy Gene Number

Number of single-copy genes (7) was less than requested (100).

Examining the number of genes per genome in the 'Genome Statistics' table above may indicate incomplete or plasmid entries with few genes which may be removed.

Criteria for calling single copy genes can be made more lenient by increasing Max Allowed Deletions and/or Max Allowed Duplications.

Omitting one of the following sets of genomes will provide the approximate boost in single-copy genes:
