Weather Report for March. 1889.

Prepared by Prof. F. H. Snow, of the University of Kansas, from Observations taken at Law-

Only five Marches on our twentytwo years record have been warmer than the month just closed. The rainfall was normal, the winds were of low velocity and the sky was slightly cloudier than the average. White apples were in blossom on the 11th, dog-tooth violets on the 20th, and elms on the 22d. The weather has been highly favorable for the wheat crop. Peach buds are in fine condi-

MEAN TEMPERATURE-44.73 degrees, which is 3.26 degrees above the March average. The highest temperature was 71 degrees, on the 14th; the lowest 22 degrees, on the 9th, giving a range of 49 degrees. Mean temperature at 7 a. m., 38.12 degrees; at 2 p. m., 52.69 degrees; at 9 p. m., 44.05 de-

RAINFALL—230 inches, which is 0.01 inch above the March average Rain in measurable quantities, fell on 7 days. Snow whitened the ground on the 27th. There were two thunder showers. The entire rainfall for the three months of 1889 now completed has been 5.29 inches, which is 0.46 inch above the average for the same months in the preceeding 21 years.

MEAN CLOUDINESS+-42.80 per cent. of the sky, the month being 1.45 per cent cloudier than usual. Number of clear days (less than one-third cloudy) 14; half-clear (from one to two-thirds cloudy) 6; there y are 7 entirely clear days and 3 entirely cloudy. Mean cloudiness at 7 a. m., 50 per cent; at 2 p. m., 49.68 per cent; at 9

p. m., 28.71 per cent.
Wind—N W, 23 times; N E, 20
times; S E, 15 times; S W, 11 times; S, 11 times; E, 6 times; N, 4 times; W, 3 times. The total run of the wind was 11,110 miles, which is 3,160 below the March average. This gives a mean daily velocity of 358.39 miles and a mean hourly velocity of 14.93 miles. The highest velocity was 47 miles with the man hourly velocity was 47 miles. The highest velocity was 47 miles with the man hourly velocity was 47 miles. The highest velocity was 47 miles with the man hourly velocity of 14.93 miles miles with the man hourly velocity of 14.93 miles miles with the man hourly velocity of 14.93 miles miles miles with the man hourly velocity of 14.93 miles an hour, on the 18th, from 2 to

3 p m.

BAROMETER—Mean for the month, 29 127 inches; at 7 a m, 19 148 inches; at 2 p m, 29 107 inches; at 9 p m, 29 127 inches; maximum; 29 536 inches on the 10th; minimum, 28 600 inches, on the 14th; monthly range, 0 939

RELATIVE HUMIDITY-Mean for the month, 69 3; at 7 a m, 79 1; at 2 p m, 55 3; at 9 p m, 73 7; greatest, 100 on 4 occasions; least, 18, on the 10th. there was one fog.

Hon. M. Mohler, secretary of the Kansas state board of agriculture, on Thursday issued his first official crop report for 1889, in which he says: Reports now in from about 500 correspondents, representing 100 counties of the state, show that wheat, rye, stock of all kinds, fruit and grasses in nearly every county in the state, are in unusually good condition. In some sections of western Kansas, wheat made a small growth in the fall by reason of dry weather and the drowth being continued intolearly winter there was much anxiety among the farmers with respect to its condition. The winter, being extremely mild, and later on moisture came in the form of snow, and in March, abundant rates fell, bringing out the wheat in splendid shape. Probably the plant has never shown a more vigorous and thrifty growth throughout grasses in nearly every county in the vigorous and thrifty growth throughout the state at this date than at present. The winter being extremely mild and feed abundant, stock generally wintered well.

Every drop of blood in the system passes through both the kidneys and lungs many thousand times in each lungs many thousand times in each twenty-four hours. This explains why 52 per cent. of the patients of Brompton Hospital for consumptives. London, England, have unsuspected kidney disorder. If the kidneys we end in a healthy condition they would expel the waste matter or poisonous acrid and prevent the irritation of the lungs. But if diseased they are unable to perform their functions. This explains why Warner's Safe Cure has proved so valuable in cases of lung trouble. It removes the cause. The condition is the condition to the lung trouble. It removes the cause. The condition they would explain the condition to the lungs and lung trouble. It removes the cause. The condition they are put up by H. Warner & Co., proprietors of Warner's Safe Cure has proved so valuable in cases of lung trouble. It removes the cause. The condition to the condition the conditio

Bringing out tickets of women just for a joke, as they report it, don't pay the bummers, if they are the ones who do it. The "joke" was attempted at Cottonwood Falls, and the whole ticket composed of ladies with Mrs. W A Morgan as mayor was elected. The same kind of a "joke" was tried in Rossville with the same

James T Stevens died Tuesday morning after an illness of about a year. He came to Lawrence from Illinois in 1869. He was for a time connected with the Spirit of Kansas, established here in 1870. He was a strong party republican and had been justice of the peace. He leaves five children, N O Stevens, of the Southern Kansas railroad, W C Stevens, assistant principal of the Emporia high school and lately elected assistant in the natural history department of the University, J B Stevens, book-keeper in the First National Bank, Mrs. A C Griesa, and Miss Carrie F Stevens.

The direct of the St. Louis Sanand Francisco railroad have declared a dividend of 1 per cent on the preferred stock. This is a reduction of 1 1-2 per cent from the last dividend declared, which was 2 1-2 per cent, the dividend is semi-annual placing the preferred stock at the bassis of 2 per cent per annum.

This is the season of the year when the police authorities should exercise extra precaution, to the end that the ordinance prohibiting live stock run-ning at large be strictly enforced.

Volume 3, No. 1 of the Topeka Business College Journal is received at this office. It is certainly one of the most ably edited college journals of the west. This, however, is no surprise to those acquainted with the Topeka Business college, and its able and worthy proprietors. This grow building, at 521 and 523 Quincy St., first door north of the YM C A Spring term from April 5 to June 21. For illustrated catalogue, address the business manager, E. E.R adebush at above address.

The April ECLECTIC has an attractive table of contents. Prof. Huxley's paper on "Agnosticism" has attracted much controversy in Europe. Mme. Olga Novikoff, the well-known representative of ROIL, the well-known representative of Russia in England, contributes a racy aticle under the quant name "A Cask Full of Honey with a Spoonful of Tar." Prof. Edward bowden talks of "The Hopes and Fears for Literature" "A Poet's Corner." by W. A. Gresswell, will attract all those interested in Westminster Abbey and its mighty deed. In A. I. H. Gressi's contributions. mighty dead. Dr. A. J. H. Crespi's contri-bution on "Some Curiosities of Diet" is very entertaining and shows that we have by no means exhausted the resources of nature. Under the name of "Minicoy, the Island of Women," we have the coy, the Island of Women," we have the freshest and most graphic sketch of travel in an out-of-the-way place that one can fancy. Many will be interested in reading about railways in China, fully discussed in Mr. Dunlop's article. Max Muller has a strikingly good paper. And there is a capital sketch, semi-scientific, entitled "Desert Sanda." Mrs. Humphry Word the much talked of author of "Bob. Ward, the much talked of author of "Rob-ert Elsmere," gives us a clever and scho-arly talk on "The New Reformation," a continuation of the subject of the celebrated novel in dialogue form.

WARNER'S Log Cabin Remediesold-fashioned, simple compounds, used in the days of our hardy forefathers, are "old timers" but "old re-liable" They comprise a

Our readers will doubtless call to mind the offer so widely advertised for the past ten years by H. H. Warner & Co., the proprietors of Warner's Safe Cure and Warner's Log Cabin Remedies, that they would pay \$5,000 to any person who would prove to an impartial referee that they had ever published a testimonial that was not genuine so far as they knew.

This offer had the ring of honesty about it, and as the watter has an especial interest just now we give a copy of the offer as it appears in the Mes-srs. H. H. Warner & Co.'s pamphlet:

AN OFFER OF \$5,000.00 Every Testimonial published by

us is Bona Fide, and, so far as we know, is absolutely true. To any one who will prove the contrary to an impartial referee we will give \$5,000. H. H. WARNER & CO. Rochester, N. Y., January 2, 1888.

We ask the reader's careful attention to the following testimonials, as bearing on the offer, and their unbiased opinion of the same with reference to the \$5,000.

Iowa City, Ia, June 30, 1888 .-Some weeks since my daughter had a severe attack of Rheumatism. She was persuaded to take one bottle of Warner's Safe Cure, and one of Warner's Safe Rhenmatic Cure, and has entirely recovered. We think it won-derful, as twice before she had been confined to her bed for months with it.—Mrs. Sylvanus Johnson.

CAMP VERDE, ARIZONA, Oct. 27, 18-88.—For nearly a year I suffered from Gravel, and was under the treatment of a doctor. I took a great deal of medicine, but it all seemed to fail. I then began with Warner's Safe Cure, and after using one bottle of it began to get better; got another bottle, and life .-- MRS. DOLLY MASON.

231 Myrtle Ave., Buffalo, N. Y., Nov. 1888.—In 1866 I was attacked with kidney disease, and suffered for twenty years, applying often for advice to medical men of high standing, without any apparent relief. In 1886 I was advised to try Warner's Safe Cure, and after having used fifteen bottles of it I was completely cured, and am happy to state that I have never felt the disease since in any form .- P. B. McMullen.

NEWARK, N. Y., June 20, 1888.—Last winter I was attacked with severe kidney difficulty, which incapacitated me for work, severe pains in the small of the back, attended with almost constant aching on the least exection I suffered much pain, the passage of water was a severe trial, accompanied with much scalding and reduess of the urine. I felt I was suffering from premonitory symptoms of Bright's Disease. I procured a bettle of Warner's Safe Oure, and after taking the first bottle I felt so much improved that I continued to take it to the extent of four bottles. I am now a new man, able to do a good hard day's work, with no recur rence of any trouble with the kidneys. -MANDEVILLE W. PLASS.

There is no getting away from such testimony as the above. The offer is gequine. In fact Messrs. 'I H Warner & Co. have always requested that doubters should write direct to per sons giving testimenials, (enclosing stamp,) and who are of necessity, in

"ALL-STEEL" CONVICTED **Upon the Strongest Testimony of**

Upon the Strongest lestimony of DISINTERESTED WITNESSES.

In response to the question, whether Wood and Steel and Iron for Vehicles, Cars and Harvesting Machines is superior to all steel or all iron, the great Columbus Buggy Co. say: The prerequisite is strength, lightness, neatness and durability, and through experience, observation and close study it has been discovered that it requires the combination of the three materials mentioned—wood, steel and iron,—to produce this desired want.

The world-renowned Studebaker Bros. in substance say:

"We use a combination of Wood, Steel and Iron for WAGONS

the longer they are used.

The ropular Milburn Wagon Co.

Sav: "We make Wagons of Wood, Steel and Iron, because no better way has been discovered." The tendency upon Iron Gears is to work at the bults. Some years go we constructed a Wagon of all fron, except the reach, longue, double and single trees, but our experiments were not such as to lead us to go forther."

The reliable Emerson & Fisher Co. say: "That the great objection to an all-steel Vehicle is the vibration of the metal if not combined with wood. There is a tendency in roon and steel to crystallize and become brittle. The clamping of wood and iron together diminishes, the tendency to crystallize.

The famed Moline Wagon Co. say: "A better and more durable vehicle can be constructed of part wood and part iron or steel than of metal exclusively. An all-metal which would soon pound itself to pieces and force of the botts, nuts and rivets. The elasticity of wood will obviate this."

The Celebrated BUCKEYE BINDER MACHINE, but its a combined to the world. An illustrated of part wood and goon of the botts, nuts and rivets. The elasticity of wood will obviate this."

The Celebrated BUCKEYE BINDER MACHINE, but its a combined with the world. An illustrated before the constructed of the botts and force of the botts. The clasticity of wood will obviate this." Catalogue sent free to every farmer contemplating the purchase of a Machine. Address AULTMAN, MILLER & CO., AKROM, O., U. S. A.

LIFE'S WANDERER.

Pass on, O tired wanderer! Upon thy lonely way; Thou must not pause a moment, Till the closing of the day.

Out there, upon thy pathway,
But the land is white with snow,
But ever, ever onward,
Thy weary feet must go.

Why dost thou stand here, wanderer, And weep with bitter fear? Why dost thou not go bravely on, Without a sigh or tear?

Dost thou not know, O wanderer, That just beyond thy sight The soft, green grass is growing, And the sun shines warm and bright.

And when at last, thou seest
Gold and purple in the west,
Thou mayst lie down, O wanderer,
To a long, long, peaceful rest!

And thou will know of grander things, When thou wakest from thy sleep; Then, wanderer, thou wilt wonder Why it was that thou didst weep. Pass on, pass on, O wanderer,
Upon thy toilsome way!
Thou wilt rest in peace and happiness
At the closing of the day.
—Zola M. Boyle, Boston Transcript.

JACOB BLOUNT'S WILL.

BY H. A.

Jacob Blount was dead! There was not a man, woman or child, in the village of Chester, but had heard of it.

Who, then, was Jacob Blount? Briefly, the richest man in Chesterworth fifty thousand dollars, at the very least. So said rumor-and, in this instance, rumor was correct.

The property consisted partly of a house and grounds, partly of stocks in various banks and manufacturing corporations. These had been wisely chosen, and proved a productive invest-

A few words as to Jacob Blount him-

He was an eccentric man, of few words, a hasty temper, and difficult to understand. His death was in harmony with his life.

He had gone to Philadelphia. ostensibly on business. A week afterward his servant returned alone, with the intelligence that his employer had been seized with an apoplectic fit, and died almost instantly; that he had been in-terred at Laurel Hill cemetery, and that he, the servant, had thought it best to return immediately.

"What has he done with the prop-

erty?" thought every one.
For the determination of this inquiry, curious questioners were compelled to wait until the nearest of kin could be summoned, and the will read.

The probable heirs were but two in number—nephews of old Jacob Blount, and cousins to each other.

One of these, Henry Seymour, was a trader in Boston. He was a hard, worldly, sordid man, and had married a woman who, instead of abating had encouraged, these

The other, Edward Gates, was a bookkeeper, on a limited salary, on which, with his wife and one small child, he was compelled to live with the utmost frugality.

To each of these persons a letter was addressed by the attorney of the deceased. It was to this effect:
"Dear Sir:—It becomes my painful duty to advise you that your uncle, Jacob Blount, is no more. He died, struck down with apoplexy, while on a recent visit to Philadelphia. The reading of the will will take place on the 28th inst. at the residence of the deceased. As a near relative of the deceased, you will, no doubt, feel an interest

in being present.
Yours respectfully,
Norman Coke, Att'y at Law." A few words will indicate the man-ner in which the above letter was received by the parties addressed.

Mr. Seymour was surprised to see her husband hastily approaching the house, in the middle of the afternoon, bearing a letter in his hand, and evidently in excellent spirits.

'Guess what has happened?" said he. rubbing his hands.

"Something fortunate, I imagine,"

was her reply.

"Egad, you're right," he responded.

Here the wife caught a glimpse of
the letter, with its black seal. 'You don't mean to say old Blount's

dead?" she exclaimed, rising, excitedly.
"The very thing. Here's a letter from Coke, my uncle's lawyer, inviting

me to attend the reading of the will. Hadn't I better decline, hey?" Seymour was not, in general, a face-tious man—rather the reverse; but good news plays queer tricks now and then with the recipient.

"Of course the old fellow's left you mething handsome. What is he something handsome.

"Fifty thousand dollars. Not a cent

less.
"Fifty thousand!" repeated Mrs. Seymour, her eyes sparkling. Yes," said her husband. "But there's another whose chances of succeeding to it are as fair as mine."

"Who is that?"
"My cousin Edward."

"A mere drudge of a bookkeeper."
"Very true; but he may get the money, nevertheless."
"Your uncle wouldn't be so absurd."

"I hope not. But he was so full of whims and fancies, that there's no knowing what he may do."

In a tenement house, on a narrow street, lived Edward Gates. It was drawing near six o'clock. In a modestly-furnished room, a very pretty wo-man was engaged spreading the cloth for tea. She had scarcely completed her task when a well-known step was heard at the door, and Mrs. Gates hastened to admit her husband. He

received her cordial greeting kindly,

but sadly.
"What has happened?" she, too,
asked, feeling instinctively that some thing had occurred to dampen her husband's spirit.

"Uncle Jacob is dead," was the reply.
"Is it possible?" asked his wife,
"When did

is it possible? asked his whe, instantly looking sober. "When did he die?" What are the particulars?"

"This letter contains all that I know of the matter," said Edward, handing

"It was a sad death," she said, briefly, after reading it through. "Qf course, you will go to Chester? "Yes; day after to-morrow.

Henry Seymour and Edward Gates met, for the first time for several years on the day appointed to read the will. Seymour, uncertain of the manner in which his uncle had seen fit to dispose of his property, received his cousin with polite affability. At the same time, he could not repress a certain nervous tremor, when he considered his uncle's eccentricity, and that it was barely possible that he would be left without a penny of his uncle's property

"Gentlemen," said the attorney, adjusting his spectacles, "are we ready to proceed to the reading of the will?"
"Quite ready," said Seymour, look-

ing at his cousin.

While the lawyer was deliberately unfolding the will, Seymour nervous! played with his handkerchief. His cousin, on the contrary, looked as calm as if he had no interest in the proceed

ings.
"Know all men, by these presents," began the attorney. "that I, Jacob Blount, of the town of Chester, being of sound mind, do make the fo lowing disposition of my property: My lands, tenements, and stocks, I bequeath all and severally, without exception, to my nephew. Henry Seymour, of Boston, trader."

Seymour looked radiant with delight. Edward exhibited no other emotion than a trace of surprise

"Is that all?" inquired the unfortun-

"Not quite; there is one more sentence. It is this: 'At the same time, I recommend to his generosity his cousrecommend to his generosity his cousts at the late to the my serior that score. in, Edward Gates, for whom I feel it I think my cousin will do what is necessary to make formal provision, right." necessary to make formal provision, feeling assured that he will be liberally treated by his cousin."

Edward was more gratified with the reflection that his uncle had remembered him kindly, than by the amount of money he was likely to receive, though this would be of no small imnce to one of his limited income. Without a trace of envy, therefore

Edward went forward and took his cousin's hand, congratulated him on is success to the property.

"He wants to ingratiate himself with

was Henry's ungenerous thought. He very affably accepted his cousin's congratulations, however, and added:
"Of course, Edward, it will be a great
pleasure for me to carry out the recommendation of my uncle. If you will give me your address, I will communicate with you as soon as my plans are a little settled."

a little settled."
"Thank you," said Edward. "That
matter I trust entirely to you. I
should be very glad to see you in
person, if you can conveniently come.

You have never seen my wife."
Seymour thanked him for the invitation, but did not reciprocate it. He well knew that to his wife, as well as himself, his cousin would not be a welcome guest.

"Of course, we must move into a we house," said Mrs. Seymour.

"What is the use of having money un-less you let people know it?"

"Very true. A house renting at four hundred dollars will hardly suit the possessor of fifty thousand." "Of course, too, we shall need new

"All in good time. This quarter has yet two months to run. This will give thing had transpired. It was not less time for me to look about. In the meantime, there is one thing that embarrasses me."
"What is that?"

"My uncle's will enjoins me to do

something for my cousin."
"It doesn't require you to do it." "True; but you know how people would talk if I didn't. I must, in decency, do something. Luckily, the amount is left to my option."

"How much do you mean to give?"
"That is the thing that puzzles me. Of course, I don't want to give any more than is absolutely necessary. I expect old Blount meant that I should

give him half." "Half! That would be preposterous.

"Of course it would; and I think you know me well enough, Maria, to know that I am incapable of such an absurdity. Fortunately, the will don't say so."

"You won't give him anything like that?" "Certainly not. I believe I will give

him two thousand dollars. That will be quite a fortune to one in his circum-"It is too much," said his wife, decis-

"One thousand is full enough. It is more than the man ever had in his life."
"If I thought it would do," said Sey-

ward Gates. His wife sat as the table, sewing. He had drawn off his boots, and, in dressing gown and slippers, was reading aloud from an entertaining book, when he was suddenly in terrupted by a knock at the door, he saw, an old man, poorly attired, and

eaning upon a cane.
"Will you permit me to come in and warm by your fire?" was the peti-

tion of the wayfarer.

"With pleasure," was the reply.

"This way, sir. It is a cold storm."

He ushered the unexpected guest ntol the comfortable room where his wife was seated.

"Martha," said he, "this old gentle-man is cold. I have invited him in to share our comfortable room." "I am glad of it. Let me take your

nat, sir."
"No, I thank you. I shall be going mmediately."
"Not to-night, sir, unless you have

some more comfortable place to go to."
"That I have not," said the old man, nesitatingly. "But I should intrude ipon you. Not at all. We always have a spar bed, and are glad to have if used. "But you do not know me."

"Why should that matter?" "I may get up in the night and rob

"You don't look like it. At all events, I would rather lose a little than "You don't—pardon me. I should judge that you we are not rich."
"We are not."

"Perhaps you have expections from some rich relative."
"An uncle died, recently, who left me something."

"A large sum, I hope."
"That I can't tel." He left the propety to my cousin recommending him to provide for me."

"How much did he leave?"
"Fifty thousand dollars." "Ard this cousin of yours—will he prove worthy of his uncle's confi-

"I think so. I am expecting to hear from him soon." "If I were in your place, I would ell out my chance cheap," said the

old may, in a significant tone. 'I do not trouble myself on that score.

At that moment a knock was heard It proved to be the post boy. "I really believe this is my cousin's hand writing. We can soon tell how he is disposed to act. I will read

it aloud:

"MY DEAR COUSIN:—It gives me a great deal of pleasure to comply with the recommendation of my Uncle Jacob, by making a provision for you. I have thought, under the circumstances, that I could do no less than allow you one thousand dollars, for which amount, please find enclosed a check upon the Merchants' Bank. Your cousin,

"One thousand out of fifty!" said the stranger suppossible. it aloud:

the stranger, sarcastically. "That is

"It is hardly as much as I expected," said Edward, calmly. "Still, it was left at my cousin's opinion, and I suppose it is natural that we should think differently upon this point."

"Why didn't your uncle divide equally between you?"

"It was unjust."
"Sir!" said Edward, a little warmly;

"while you are my guest, I trust you will not indulge in reflections upon my uncle's character. I accept gratefully what I have received, and am not so ungrateful as to grumble because "I beg your pardon," said the man-

"I was wrong, perhaps."

The next morning the stranger departed, though pressed to stay longer.
He had given no name, and Edward thought it would be indelicate to ask

A week later and excitement was at a fever heat in Chester. The strangest than this: Old Jacob Blount, one afternoon, walked into town as composedly as if he had not been dead and buried. The first man who saw him, absolutely turned on his heel and fled, filling the whole village with terrific screams. From the windows of houses, and, in some instances, from the tops, for the sake of greater security, people stared, with their hearts in their mouths, at the wonderful apparation. If it was a ghost, however, it was a very humanlooking ghost, being a close copy of Old Jacob, in dress, manner, and gait.

Finally, the mystery was cleared up. It was discovered that Jacob had never died at all, but that it had suited his purpose to be supposed dead for a time. What that purpose was, will be gathered from the following letter, addressed by Jacob to Henry Seymour, his now displaced heir:

displaced heir:
"NEFFEW HENRY:—It will, no doubt, gratify you to learn that your old uncle is still living. The report of his death was premature. I will not deny that my object, in my sudden disappearance, was to test your generosity; and my firm intention now is, to bequeath you in my will, which I shall make to-day, the same amount you allowed your cousin. That amount is one thousand dollars. Had you given him one-half, such would have been your own share. The sum being se small, I will pay it at once, if you desire. The remainder will go to your cousin.

It would not be an screeable task to

It would not be an agreeable task to "If I thought it would do," said Seymour, irresolutely.

"Do? Of course it will. You know the extra thousand will go a good ways toward furnishing our parlors. It will procure a grand piano."

"So it will. A thousand dollars let it be, then. I really think, under the circumstances, it is all we can afford."

Was it not the truest wisdom that dictated the prayer to be delivered from the temptation of riches?

"It was evening at the house of Ed
It would not be an agreeable task to paint the rage and mortification of Henry Seymour and his wife, when this letter came to hand. Their sordidness had proved retributive. They were obliged to postpone their project of moving into a new house, and the grand piano is not yet obtained.

Jacob Blount survived this event several years. At his death, his property passed to his nephew, Edward Gates, who, with his wife, had contributed to smooth his descent into the vale of shadows.—Yankee Blade.

DIPHTHERITIC GERMS.

The Latest Discovery of Prof. Pas-teur—A Wonderful Step in the Advancement of Science.

A special cable to the Cincinnati Enquirer from Paris says: The Enquirer correspondent found Prof. Pasteur this afternoon in the magnifient building known as the Pasteurian, in the rue Rotat, which has been erected by public subscription as a memorial and as a home for the greatest sci-

entist of the age. "Yes," said the professor, with a pleasant smile, "I think that I can give you good news for the Enquirer. My able assistants, Drs.. Rouex and Yersirs, have discovered the germ of the dreadful disease, diphtheria, which perpetrates such terrible ravages during the winter in your large cities. I believe it exists in a more violent form in the United States than it does in any other part of the world. My assistants have taken pieces of the diseased tissue or membrane from the victim and have inoculated several animals therewith. All of the latter have in due course died of a disease displaying all the objective symptoms of diphthe-ria, that terrible destroyer of child life. So far so good. But the opponents of the microbe theory in epidemic diseases then argued that these experiments only showed the terrible virulence of the original poison. To answer this my young scientific assistants, by means of a series of glass tubes diluted the morbid tissue to an infinite simal amount. A germ was then taken from the final result, and a rabbit was inoculated therewith, which immediately died as quickly as the first victim in the eause of science, before the dilu-

tion of the virus." "This is how we stand," continued Prof. Pasteur. We have found the deadly germ, but we have not as yet secured a prophylactic for its cure or prevention. My conferrees are now at work solving the problem, and from their success so far in this original field of research I have but little doubt but that the inoculating fluid will soon be forthcoming. We can give diphthe-ria to any number of rabbits and dogs and kill them as effectually as though they had caught it first hand in the regular course of events. I have not. however, succeeded yet in attennuating the virus, and cannot inoculate. I wish you would lay great stress on this point because I know the cirula-tion of the enquirer and the wonderful receptivity of the American people for news and ideas, and I am afraid that whole ship loads of your countrymen will be coming over to secure, by visit to the Pasteurian Institute, immunity from diphtheria affections. Tell them, please, that we are not

ready for business yet, but that perpaps we will be in the summer."

As the correspondent turned to leave Dr. Pasteur submitted to his inspection his glass tubes filled with deadly germs, microbes and bacilli of many diseases to which the flesh is heir. In doing so the professor remarked, with a smile: "Our children are in luck. It will be much pleasanter to live in the twentieth century, when epidemics will be done away with."

gallows. The firemen were called upon to bat tle with 3,202 fires, which did damage aggregating \$1,566,401.

A large number of imigrants came to this country in 1888. The total was 383,505.

A Shrewd Otter.

In the last number of the Forest and Stream a hunter tells a good story of an otter and a duck: One day as I was standing on the

shore of Cranberry Bog Pond I saw a

large flock of ducks near the middle of the pond, and soon after discovered three otters in front of me, but not near enough to shoot. While watching the enough to shoot. While watching the maneuvers of the otters, they started down the pond in a straight line for the ducks. The old leader struck out lively, leaving his mates far behind, and as he neared the ducks he dived, and presently I saw one of the ducks disappear beneath the surface after a considerable structle the remainder of siderable struggle, the remainder of the flock rising and flying away in great commotion. The otter had gone under the flock and selected a certain

BOURBON VS. BOURBON. awsult of the Ex-King of Naples Against His Youngest Son.

A royal lawsuit of rather remarkable character is now occupying the attention of the judges and councilors of the Paris Appeal court. The plaintiffs are King Francis II., once ruler of Naples, and the other princes of his family, who seek to restrain their relative, the name of the Bourbons on the offspring of an ex-dansuese of the opera. The count is the youngest son of King Fer-dinand and was born in 1852. After having accompanied his family in their wandering he came with them to Paris, where he married Mile. Blanch de Mar-collay, a "star" of the operatic ballet, who was four years his senior. The lady, before her nuptials with the count, was the mother of a boy named Gabriel Henri Richard, whose paternal progenitor was unknown. In 1880, and the marriage, the count de Bari adopted the boy as his own. The ex-king of Naples, as well as the count de Caserta and the count de Trapani, opposed this at the time before the French tribunals. Meanwhile Gabriel Henri Richard, although registered at his birth as French, became a naturalized Italian under the name of Henri de Bourbon, and the tribunal of the Seine, therefore pleaded incompetency in the case. The plaintiffs now urge that the French tribunal is competent, because they are naturally loth to carry the action before the Italian courts of justice. The chief point then at issue is to prove that Gabriel Henri Richard is a Frenchman and that he has no right to the name of "Bourbon," under which he is inscribed as an Italian on the registers of the old Palazzo Reale district in Naples.

Maitre Duret, who appeared for the count de Bari and his adopted son, said that the young man adopted by the count, who is the son of an ex-dancer of the opera, now Countess de Bari, declared that he wished, to remain a French citizen on attaining his majority, and that, moreover, he wanted to enter the army and serve in the Eighth Cuirassiers; but Gen. Boulanger, who was then minister of war, or rather his chief of staff, Gen. Young, would not allow him because he bore the noble title of "Henri de Bourbon," that the young man naturalized as an Italian and entered King Humbert's army as "Henri de Bourbon." The case then was for the Italian and not the French courts. This Maitre du Buit, the council for the Neapolin Bourbon family, does not admit, and he holds that the French tribunals have power to make the young man refrain rom using the family name of the Bourbons.

Pithy Observations.

The devil speaks for a man in a pasion. Love may live an age if you

marry it. Every woman is Eve in so of her life.

The fire of jealousy burns ittle fuel. On what strange solitudes eve rate soul dwells. Many roads lead to happiness

ides the one we take. It takes two to tell a lie-one to peak and one to listen. A husband's name is a far bigger

shield than a father's. Truth can be outraged by silence quite as cruelly as by speech. To the spider the web is as large as to the whale the whole wide sea.

Woman is never too angry to be without a mouthful of sweet words. When girls are old enough for a lover they are a match for any gray head.

A man that gets the woman he wants seldom gets any other good thing. A daughter is a little white lamb in

the household to teach men to be gentlemen. A woman is not to be counted your own until you have her inside a wed-

Social Philosopher—"Oh, no; not by the way he laughs, but by what he laughs at."—New York Weekly.

Andrew D. White in Scribner's Magazine. To go back to it from Flaubert, and Daudet, and Tolstoi, is like listening to the song of the lark after the shretking passion of the midnight planoforte—nay, it is like coming out of the glare and heat and reeking value of the glare and heat and reeking the first light and music and breezes of the morning. It is not for nothing that so many thousands have felt toward something that the first light and music and breezes of the morning. It is not for nothing that so many thousands have felt toward few, if any, other writers of English fiction have ever awkened. Andrew D. White in Scribner's Maga-

HARRISON'S CABINET. ersonnel of the Men Who Have Been Chosen as the President's Advisers.

SECRETARY BLAINE. James Gillespie Blaine was born in Washington county, Pennsylvania, in 1830. He entered the preparatory department of Washington college in his 18th year and graduated in 1847 at the head of his class. He then went to Kentucky, where he was professor of mathematics in a military institute. There he met his wife, who was from Maine, and at her persuasion removed to Augusta, Me., where he has since resided. In 1854 he became part own-and editor of the Kennebec Journal and editor of the Portland Daily Advertiser in 1857. He was one of the organizers of the republican party in Maine and served in the state legislature from 1858 to 1862, the last two years being speaker. In 1862 he was elected a representative in congress, and was re-elected for each successive term until 1876. He was speaker of the house of representatives from 1869 to 1874, and was again the republican candidate in 1875, but was defeated, the democrats then having a majority in that body. In 1876 and in 1880 he was a candidate for the republican nomination for president, but was defeated by Mr. Hyes in the one case and by Mr. Garfield in the other. In 1876 Mr. Blaine was appoint-ed United States senator from Maine to fill a vacancy, and was subsequently elected for the term expiring in 1883. This position he resigned in March, 1881, to accept the secretaryship of state offered him by Mr. Garfield. The assassination of the latter caused Mr. Blaine to tender his resignation to Mr.

didate for president in 1884. SECRETARY WINDOM. William Windom was born in Ohio in 1827. He practiced law for several years in his native state, when, in 1855, he removed to Minnesota. During the ten years, 1858-68, he was a member of the house of representatives at Washington. He was appointed United States senator to fill a vacaned United States senator with a vaccing of in 1870 and the following year was elected for a full term. In 1876 he was re-elected and was senator when appointed secretary of the treasury in pointed secretary of the treasury 1881. In 1883 he was a candidate In 1883 he was a candidate for re-election to the senate, but Mr. Sabin carried off the prize. During the time when the president-elect and Mr. Windom were in the senate together they sat near each other and were good friends. While he was in office as secretary of the treasury in the Garfield administration Mr. Windows was a Minnesota man. Since 1882, however, he lived almost constantly in New York and Europe, connected with

Blaine to tender his resignation to Mr.
Arthur, which was accepted in December, 1881. Since that date he has filled no office. He was the republican can-

Eads ship railway scheme and wolarge interests.
they secretary proctor farm id Proctor was born in Verconside fifty years ago and was at time governor of that state. He is pingurnized leading of the process. pinchgnized leader of the republi-party in Vermont, and as chairman the delegation to the Chicago con-ention was head of the only delega-on in the whole body which voted for Harrison from first to last. -Gov. Proctor has accumulated a comfortable fortune. He lives at Proctor, a town founded by him, and which is situated near Rutland. He controls the output of the Vermont marble quarries and is one of the largest mar-ble dealers in the United States. He is a farmer on a large scale and owns one of the finest flocks of Winkley merino rams and ewes in the world. SECRETARY TRACY.

Gen. Benjamin F. Tracy is about 57 years old. He was born in Oswego, N. Y., and secured his education in the common school of his native town. After leaving the Oswego academy he entered the law office of Nathaniel W. Davis and commenced the study of law. In 1851 he was admitted to the bar of the supreme court and opened an office in Oswego. In 1853 he became a can-didate for district attorney of Tioga county, and though it was a democratic stronghold was elected. Two years later he was again elected to the same office, defeating Gilbert C. Walker, afterward governor of Virginia. He was elected to the assembly in 1861, and a year later he recruited the One Hundred and Ninth and One Hundred and Thirty-seventh regiments and received his commission as colonel of the former regiment from Gov. Morgan. In 1864 the regiment was active in Burnsides corps of Grant's army, and in the battle of the Wilderness, May, 6, Col. Tracy led in the thick of the fight. He was carried from the field exhausted, but refused to go to a hospital, and led his command through the three days fight command through the three days fight at Spottsylvania, when, being completely broken down, he had to give the command to his junior officer. He subsequently was tendered and accepted the command of the One Hundred and Twenty-seventh United States colored troops and later he was ordered to take charge of the military post at Elmira, with its 10,000 rebel prisoners. After the war Gen. Tracy settled in New York and resumed the practice of law with the law firm of Benedict, Burr & Benedict. He was one of the counsel Benedict. He was one of the counsel for the defense in the Beecher trial. In 1883 Gen. Tracy was made United States district attorney for the eastern States district attorney for the eastern district of New York. In 1881 he was the republican candidate for mayor of Brooklyn, but withdrew from the contest in order that his friends and the friends of Mr. Ripley Ropes, the independent candidate, could unite upon Seth Low, who was elected. In 1882 Gen. Tracy was nominated for justice of the Supreme court, but was defeated by James W. Ridgway. Gen. Tracy is said to be the greatest lawyer in New

York state, but with all the honors thrust upon him he is a very modest gentleman. He was one of the old guard in a republican sense, having for years been a stalwart of the stalwarts. He was conspicuous among the followers of Grant at Chicago—the historic 306 of 1880.

SECRETARY NOBLE. John Willock Noble. was born in Lancaster, O., Oct. 26, 1831. He passed his early days in Columbus and Cincinnati, studied a year in Miami university, and taking the junior and senior courses in Yale college graduated in 1853. After graduating he applied him-1853. After graduating ne applied nim-self to the study of law, entering the office of Henry Stanbery, who was afterward attorney-general of the United States under President John-son. In 1855 he settled in St. Louis and was admitted to the bar the same year but moved to Keokuk, Iowa, in 1856, where he established an excellent practice. At the breaking out of the war he enlisted as a private, but was soon elected lieutenant and afterward adjutant. At the close of the war he was promoted to be brigadier general for meritorious conduct. During the war he was married at North Hampton, Mass., to a daughter of Dr. Halstead. In 1867 he was appointed United States district attorney of the eastern district of Missouri upon the recommendation of Attorney-General Stanbery. He is the senior member of the firm of Noble & Orrick.

POSTMASTER GENERAL WANAMAKER. John Wanamaker was born in Penn-sylvania fifty one years ago of a German father and a mother who was of French extraction, of a Huguenot famrrench extraction, of a Huguenot family. His father and grandfather had been bricklayers, and John, as a boy, used to do occasional work in his father's brick yard. It was while he was a public-school pupil that he worked in his father's yard, turning the bricks for a pittance. He soon started out as a clerk in a bookstore at \$1.25 a week, increasing that to \$1.50 a week later on by obtaining a place as sales. later on by obtaining a place as sales-man in a clothing store. He left this to become an errand boy in another store called "Tower Hall," where he was again and again promoted with frequent changes of salary. He staid there five years, and at night conducted a little paper called Everybody's Journal, for which he got subscriptions and advertisements. He also made cologne and bottled and sold it. By instinct a money-getter he had saved \$2,000 when he was 20 years old. At about that time he became secretary of the Young Men's Christian association, and was induced by his father to become a master brickmaker. The work and life was too monotonous. In partnership with his brother-in-law, Nathan Brown, he opened the "Oak Hill" clothing store April 8, 1861. He is a trustee or director or officer in the Real Estate Trust company, the Merchants' Estate Trust company, the Merchants' bank, the Philadelphia & Reading railroad, the Williamson schools, the Presbyterian hospital, the University hospital, of which he is manager, and the Penny Savings fund, of which he is president. He has large business interests in a number of cities, including Chicago. Chicago.

TTORNEY-GENERAL MILLER. W. H. H. Miller has never been prominent in politics and has never held an official position. He is the law partner and most intimate friend of Gen. Harrison. He went to Indianapolis from Fort Wayne 16 years ago and entered the law firm of Harrison & Hines, afterward succeeding Mr. Hines as second in seniority, and since the election of Gen. Harrison as president he has been at the head of the firm.

The base have devoted to law and the law and t partner and most intimate friend of success of his partner. In late years his health has been bad in consequence of close application to professional business.

SECRETARY RUSK. elected to the assembly. In July of that year he resigned his seat in the legislature to accept a commission as major of the Twenty-fifth Wisconsin volunteers. For gallantry he was given the eagels and for bravery at the battle of Salleshatchi was made brevet-brigaof Sallesnatchi was made brevering adder general. He served with Gen. Sherman from the siege of Vicksburg to the close of the war. On his return district in the Forty-third and Forty-fourth congresses. In the Forty-third congress Gen. Rusk was chairman of the committee on invalid pensions. He was nominated and confirmed as minister to Uraguay, which position he declined. President Garfield then tenclined. President Garneld then tendered him successively the mission to Denmark and the position of chief of the bureau of printing, both of which were declined. In 1881 Gen. Rusk was elected governor of Wisconsin and twice re-elected by increased majorities. But the change in state governor twice re-elected by increased majora-ties. By the change in state govern-ment from annual to biennial sessions of the legislature Gov. Rusk's term was increased one year, which made his increased one year, which made his term of service seven years, the longest known by any executive. Gen. Rusk is a strong Grand Army man. Two years ago, when he went to the St. Louis encampment, every member of his staff was an old veteran who had lost a leg or an arm or was otherwise disabled.

Cause of a Common Occurrence. A good many accidents happen with guns that are not loaded because the people who handle them unfortunately are. - Somerville Journal.

TRIALS OF AUTHORS. Something About the Iron-Clad Contracts of Publishers.

There is a great difference betw fame and popularity. W. D. H. wells is said to be the greatest living American novelist, but it is not likely that he ever wrote a novel of which over 10,-000 copies have been sold. The sale of the works of well-known novelists such as Edward Fawcett and Julian Hawthorne would probably fall below 5,000 copies as an average for each book. The rewards of authorship are not inviting. The publisher generally

When you have had your book exepted, you will be asked to sign a formidable document, from which I am going to make quotations. It is printed on beautiful paper and presents somewhat the appearance of a passport (on what the appearance of a passport (on your brains) and somewhat the appearance of a passport (to fame). After the usual "agreement" between the party of the first part and the party of the second part, in your landlord's own phraseology, it proceeds to declare that they may be of more use than no secret of his partialities and displicitly the fires.

Clean out the rack each day if many papers come into the house, but somethe second part, in your landlord's own phraseology, it proceeds to declare that they may be of more use than no secret of his partialities and displicitly may be of more use than no secret of his partialities and displication. Later on, the second part, in your landlord's own phraseology, it proceeds to declare that they may be of more use than no secret of his partialities and displication. Hamburg having lost the right of accrediting diplomatic agents to the said party of the first part, who is the author, "hereby agrees that the said party of the second part," who is the publisher, "shall have the exclusive papers are used. Place the superfluous papers in a pile, tie them together and put aside for use when wanted. Put the largest sized papers and those printed on heavy paper in sive right to print and publish the said book during the full term of the copyright thereof, and also during the full term or terms of any and all renewals of said copyright."

The author then agrees that he will not "write, print, or publish, or caused to be written or published, any other edition of said book, revised, corrected, enlarged, abridged, or otherwise, or any book of a similar character," thus delivering afterthoughts and preconeptions along with his whole mental product and equipment—his children of the brain, "hoofs, horns, and tal-low." That done, the author must of the brain, "noois, norms, and tar-low." That done, the author must further agree that he will "protect and defend" the publishers "against all suits and other actions at law inconsequence of any infringement of copyright." After making a complete surrender he must become protector, and fight for the hand that enslaves

On the second page of this beautiful piece of parchment the publisher, on his part, agrees simply to print and publish and report semi-annually the sales and to pay the author—here a blank space is left, which is usually filled with the words "ten per cent of the retail price of the books actually sold"-"provided that the said party of the second part (the publisher) shall not be required to make any such payments until they shall have sold a sufficient number of copies of the said books to reimburse them for all moneys expended in manufacturing and publishing the same. The climax of this series of "provid-

ded howevers" is this: "If after the said book shall have been published two years, the said party of the second part cannot sell the said book at the

on any other sum."

This is the form of the agreement made with the authors by one of the largest publishing houses in New York. With difference in details all forms are substantially like this. It is not once Gen. Jeremiah M. Rusk is a native of in two years that a copy of this inter-hio. He was born June 17, 1830. He esting kind of document finds its way went to Wisconsin in 1853 and settled at Viroqua, Vernon county. He was reasons that no author after he nas signed it cares to have it made known, and the publisher before it is signed and the publisher before it is signed and the publisher off all writers went to Wisconsin in 1853 and settled into print, for the very excellent at Viroqua, Vernon county. He was

whom he has not thus bound to him. It is but fair to say that those extra rigid provisions are seldom carried out. The upshot of the whole transaction generally is that an author intrusts himself to his publisher with the childlike faith that distinguishes the craft that awaits the accidents of popular favor with what composure he can. home Gen. Rusk was elected bank comptroller, which position he held from 1866 to 1869. He represented the Sixth congressional district in the Sixth congress and the Seventh to the press to be reviewed. It is on the second and third (if there ever came and third) semi-annual reports that he must base his hope of a cash payment. If you except the few successful professional authors (and successful professional authors (and they are very few) the amount of money paid over by the publishers to the average writer of a book is not enough to buy pens, ink and paper.

The most difficult question to answer, therefore, in modern life is this:

Why do so many really insich in

"Why do so many people insist in lamp cloths around. writing books?"

The only answer that is ever given is the hope of reputation. Yet few things (in the modern world at least) are more transitory than a book. A smaller percentage of them last ten years than of sets of china, or of oil paintings, or even silk hats. The gold pen with which it was written in most es outlasts a novel.

Use for Old Newspapers.

There are few homes nowadays into which a daily and one weekly paper, at the least, do not enter, and many homes where each member of the family has his or her favorite publication. Where the family is a large one there is always an accumulation of this kind in the home to try the patience of the housewife, for there are few things will give a room such a general air of disorder as newspapers settled. disorder as newspapers scattered about kindling, for they may be put to a crisis, which had its inception in the much better use. There are numerous "war of the duchies," and terminated

and those printed on heavy paper in one pile, and the smallest sizes and those of soft paper in another. Put both aside, yet have them in some convenient place so they may be found easily when wanted for use, also that they may be added to each cleaning out. Tie the string that holds them to-Tie the string that holds them together in a loop knot, so it can be undone when adding to its contents.

The large heavy papers are excellent

for laying under carpets, many prefer-ing them to the patent carpet lining. The latter, unless some preventive is put under the carpet, will, in close weather, breed moths, but with the newspaper there is little danger from these pests, as the printers' ink is very obnoxious to them, and they much prefer keeping at some distance away. have used both papers and lining under carpets, and our experience enables us to prefer the papers for general use. These heavy, large papers are nice for cutting out patterns, more especially of cutting out patterns, more especially of children's grownests. If one paper is not large en agh in itself for an extrasized pattern, fasten two together, using flour paste, put aside, and when the pattern wanted. Mucilage using flour paste, put aside, and when dry cut the pattern wanted. Mucilage can be used for this purpose, but it is not as good as the paste, as it does not leave the jointure as smooth. Many home dressmakers use these papers altogether for their cutting. For closet shelves and to lay in the bottom of bureau drawers they are excellent, and when packing a trunk always begin by laying one of these heavy papers at the bottom or the incidence. bottom on the inside.

The soft papers can be used more generally, as every day they may figure in some part of the housework. After scouring the tins thoroughly, they are be made to leaf the part with her seems to be seen to be made to leaf the part with the seems the best of the seems the best of the seems that her the seems the best of the seems the best of the seems that her the seems that the see they can be made to look very nice by they can be made to look very nice by rubbing briskly with soft newspapers, which vives a polish that nothing else will. Lamp chimneys after being washed and dried may be rubbed with very sentom, keeping them looking nice by breathing into them and wiping with soft newspaper. After steel knives have been cleaned, they can be given an added gloss by rubbing hard with newspaper. For sweeping carpets there are few things will take up the dust as thoroughly as dampened newspaper. First wet the paper thoroughly, then squeeze out as much of the water as possible. Pick the damp room. A soft piece of newspaper is to the court of St. James'. That such just the thing for rubbing over the top a slur should have been cast on the of the range after cooking, burning the paper when through with it. Persons suffering from bronchial affections are much benefited by wearing a layer of newspaper across the chest when going abroad in severe weather. cold feet during the winter claim to suffer very little, even in the coldest days, when the feet are encased in days, when the feet are encased in mewspaper. To be sure, the shoes will tagonist.—Pall Mall Gazette. need to be large enough to admit of the paper being wrapped around the stock-inged feet, or the treatment will not be efficacious. Newspaper is not to be re-commended in polishing mirrors or fine window glass, as it is apt to scratch the surface. When filling a lamp and by accident it overflows, wipe off the superfluous oil with a piece of news-paper, burn the paper and there will not be any danger of fire from keeping

These are some of the uses to which old newspapers can be applied, and the house-wife who adopts them will find other uses suggested that will help her in her daily round of labor.—American

· Obscure Service.

It is said that the elder Booth used cases outlasts a novel.

If men and women desire fame, they should build houses or change from one political party to the other or engrave their names on umbrellas. All these things last longer or give longer cause for notoriety than the writing of half the books that have been published in the United States since May 1. Do you remember the name of the writer of the new novels you read last summer? often to take a subordinate character in

DR. HENRY GEFFCKEN.

Editor-Professor Who Excited Bismarck's Enmity.

A short but comprehensive biographcal sketch of the man who has just lately suffered from the vengeful displeasure of that inscrutable master of muscular diplomacy, Prince Bismarck, may not be devoid of interest to newspaper readers. and where many are coming into the brushes it is next to impossible to keep them in place all the time. To be 1855 he was charge d'affaires at Berlin sure, they can be placed in a rack, or piled together, but it will take a good-sized rack to hold them, and it will need to be cleared out very often and not inviting. The publisher generally has the advantage.

When a man (or woman either) goes to trade away the children of the brain, writes a correspondent of the St. Louis Globe, the publisher is going to drive a hard bargain; and genius ought to have a good bargain-driving faculty.

When you have had your book excepted we women use these for while the piled together, but it will take a good birthplace, he was twenty-five years birthplace, he was twenty-five years of twill take a good birthplace, he was twenty-five years of the duffer out to will take a good birthplace, he was twenty-five years of the superfluous ones placed out very often, and the superfluous ones placed some national aspirations, he obtained ready recognition from many notabilities of the dailies are the housewife's bug-bear, for they accumulate so fast that they resent than an ordinative for the dailies are the housewife's bug-bear, for they accumulate so fast that they resent than an ordinative for the family of order. Some women use these for while the present Empergy William II. they need continual watching and thinning out to keep them in any kind of order. Some women use these for his abilities, of order. Some women use these for his the fire, and keep the rack clear in that way, but it is not advisable to use them thus unless short of kindling, for they may be put to a crisis which had its incertion in the Hamburg having lost the right of accrediting diplomatic agents to foreign countries, his fellow townsmen by a vote of 18th of July, 1869, elected him a member of their syndicate. In that position he might have re-

mained, in useful but inglorious activity, had not the political storm of 1870 afforded him another opportunity of answering the calls of a destiny which even the influence of Hamburgian aspirations was not sufficiently powerful to control. Dr. Geffeken, the popular member of the syndicats, sent in his resignation, being determined to try his fortune with the hubbub of political resignation where the syndicate where the syndicate resignation of the syndicate where the syndicate resignation of the syndicate resignation. cal social convulsions, where the man of active mind often finds the road which leads to success and distinction. Armed with his diploma of Dr. der rechte (D. C. L.), he joined the agita-tion which had for its aim the foundation of a Strasburg university. Here the choice of professors was based on a principle of a wide tolerance in the matter of political and religious belief. It was by no means a sine qua non that they should be fervent disciples of M. de Bismark. What was principally re-quired of them that they should intstil into the minds of their pupils the essential conditions of the Germadic system of civilization. Dr. Geffeken was appointed professor of civil law at this university, where he pursued his calling with credit to himself and benefit

to the youths of Alsace.

When Marshal Manteuffel made his appearance on the scene as statthalter (governor), he not only renewed his friendly relations with Prof. Geffcken, but he accepted him as a colleague, by conferring upon him the title of councillor of state. About this time the doctor's health began to be affected, and possibly also his scholastic duties became irksome to him. He had never succeeded in freeing himself entirely from his political aspirations; and even at Strasburg he was the determined opponent of Bismarck's plan of waiting of the old church laws the of revision of the old church laws, the 'Kulturkampf," and in consequence in-diction.

Later on Dr. Geffcken published an interesting work on the Crimean war, with transcripts of letters on the sub-ject written by Prince Frederick William, and copies of dispatches exchanged between the courts of London

and Berlin.
In the chancellor's official report, water as possible. Pick the damp paper into small bits and scatter over the carpet to be swept. These particles everyday readers knows, the extraordiof paper, when sweening will earliest the carpet to be swept. of paper, when sweeping, will collect nary statement that the late Emperor the dust and prevent it flying about the Frederick had disclosed state secrets. a slur should have been cast on the memory of Frederick by Prince Bismarck has possibly not surprised many people. One thing, however, is certain, that while the unfortunate Count Arnim was undone, and ultimately driven to despair and death, in his re-Many who are habitually annoyed with cold feet during the winter claim to suffer very little, even in the coldest

Labor in Japan.

In Japan the wages of carpenters are from 30 to 45 cents a day; wood carvers, 35 to 53 cents; paper hangers, 23 to 45 cents; stone cutters, 45 to 53 cents; blacksmiths, 23 to 38 cents; gardeners, 19 to 38 cents; day laborers, 15 to 23 cents. The workingmen: pay 40 cents per month rent for a house of one room, \$2.25 per month for food, and \$3.75 per year for clothes. This schedule of wages and living will hardy prove complacent reading for the average American working-man.

Topeka again has elected a democratic mayor, and a good one.

Baldwin City is one of the towns that elected the woman's ticket.

The Kansas Senator is not the kind of a Plumb that Murat Halstead likes.

The directors have great confidence in the future of the Lawrence Y. M. C. A. It was not much of a republican

victory in Lawrence because there was no opposition. It was not a democratic victory in Topeka. Gen. H. K. McCounel of Osage

City committed suicide by shooting, at the Fifth Avenue hotel in Topeka, Thursday morning. He had been connected with a scandal for three months, which preyed upon his mind. He had tried twice before to kill him-

A mass meeting of the farmers of Brown county, Kas., has been called to protest against the extortions of the binding twine "trust." In England pinding twine sells for nine cents a pound. In the United States farmers pay for it twenty cents a pound.

The Senate has adjourned, and the President will shake the dust of Washington from his boots and the office seekers from his skirts and fly to some country spot for two weeks Now there will be grumbling and gnashing of teeth that the appointment mill has stopped for re-

Murat Halstead was defeated for minister to Germany because it was believed by the Senate that he was not fit for the place. We incline to side with Plumb and Ingalls in their opposition. The nomination was the President's first great mistake in that

Whiskey, imported from Missouri, was the cause of another killing in Topeka last Sunday. A lot of fellows got a keg of beer and some stronger drink, and went out into the country east of the city to have a spree. Before it was over, two of them, Keating and McGuire, became drunk and as a result, Keating shot and almost instantly killed McGuire, it matters

Advices received by Secretary Mohler of the State Agricultural department at Topeka regarding the condition of winter wheat in Kansas, are highly encouraging. The acreage is very large, and the plant has come through the wint rin excellent shape. There has been considerable rain in all sections of the state, and the ground is well supplied with moisture. The present indications are that the wheat yield of the coming season in Kansas will be the most abundant in the history of the state.

Hammond, their heirs and successors, were to drop dead to-day and their slaughter pens, dissecting rooms, refrigerator houses, railroad rebates, books, accounts, meat cars, private contracts and other necessary regalia were to burn to ashes-if the big four's legal advisers, bulldozers, legislature manipulators, bribers and slaves were to suddenly realize their selves—if all of these events should be the same, and it would be the same. be the same, and it would be safe to feed. prophesy a grand advance in prices.

Anthracite coal at Alms, Wabaun-see county, is an assured fact. The drill has now passed through four veins, and reached a depth of 1,846 The first was struck at 1,680 feet, and was forty inches in thickness. Thirty feet below this a twenty-eight inch vein was found. A tnird vern, twenty-four inches thick, was found about thirty feet below the second. Ninety six feet below the third a fourth vein was reached Sunday evening, about three feet in thickness. The analysis made by a chemist shows that the deeper veins contain a little better quality of coal than was found in the first. An analysis of the third vein shows it to be an anthracite coal equal in quality to that found in Pennsylvania. Anthracite coal in Kansas is a new idea to our geologists, but such is the fact. Chemist Church of Topeka says that this is extra good coal for manufacturing and domestic purposes. It is hard, compact and clear, and contains 92 per cent of total carbon. The ash is about equal in amount to that found in Pennsylvania anthracite, and is fine and light. It is free from sulphur and phosphorus, and much superior to any coal heretofore found in Kansas. It is very valuable for the manufacture of clear white gas, free

Mixed Farming.

One of the principal objections to risking the farm profits upon any one crop, or kinds of stock, is the increased risk in failure, first, in raising or growing anything to sell, and, second, in being able to secure good prices, or rather prices that will

return a fair per cent of profit.

There is always some risk of this at all times, and with classes of products and stock, but, with a variety of crops raised and fed to stock, this risk is re duced very materially. If the same general line of farming, however, is carried on, what we fail to receive with one we can make up with another, so that the average will be a fair per cent of profit. It is hardly to be expected that any one particular crop will return the largest per cent of profit each year. It is possible to cull out the worst and select the best but not so fully but that there will be a considerable variation each year in this respect. At least, in a series of years, the farmer who carries out s system of farming based upon this plan will be able to show much the best per cent of profits.-N. J. S., in Prairie Farmer.

A Favorable Outlook

Everything now looks favorable for a most prosperous year for farmers. Spring has opened from two to four weeks earlier than usual, and all conditions for seeding are favorable, ex cept in some localities fears are enter tained that the soil is too dry for successful germination. The complaint of drouth is quite general except in Missouri and portions of Kansas, where spring rains have been abund little whether by accident or other-being left from the winter supply ant. Feed is abundant, large amounts will soon furnish sufficient feed for quality, and corresponds in brilliancy sheep and young animals. We sum and hardness to the Rock Springs' marize the reports as follows:

Illinois: Spring two to three weeks earlier than in many years. In some places rain is needed badly on meadows and land sown to oats; ground in good working condition; grass started and plenty of feed for cattle until pastures are ready. Peach trees in bloom in Pulaski county; condition of winter wheat as compared with an av erage, 97 per cent.

Missouri: Indications very favora-If Armour, Swift, Nels Morris and trees have been in bloom for two weeks in some counties; seeding is nearly done, considerable corn land has been plowed; pastures are green; an abundant supply of feed left ever Condition of winter wheat as compared with an average, 99 per cent.

Iowa: Spring early; great need of rain; spring plowing commenced; the seeding of wheat, oats and barley well advanced, but ground too dry in

Kansas: Spring one month earlier than usual; good rains in many coun-At Milwaukee Margaret Kinlin and ties; seeding will be finished by the their home yesterday morning. several other counties are listing corn; oats are coming up; greatest surplus cash only. of feed in many years; condition of winter wheat as compared with an

with an average, 108 per cent.

Nebraska: Season one month in advance of last year; finest winter ever known; ground in fine condition for working; rain needed; farmers are plowing, and seeding is well advanced; a surplus of feed."

Tesoive to pay cash for what he will need for food and clothing this year, or do with out until he can raise the cash to pay for them. The poorer the farmer the immer

The Causes of Death

Our readers are doubtless all familiar with the Robinson poisoning cases which have recently come to hight in Somerville, Mass., a suburb of Bos-

It seems that eight deaths have occurred from arsenical poisoning, seven in one family, and within five years. It is doubtful if the murderers would have been brought to justice had not an organization in which the victims were insured began an investigation as to why so many persons had suddenly died in one family.

But the sensation from a medical point of view connected with the case, took place in Boston at a recent meeting of the Massachusetts Medico-Legal Society, when it was stated by Dr. Holt that there was general ignorance of the symptoms of arsenical poisoning and because of such ignorance the Robinson poisoning cases had gone on without arousing the suspicion of medical men. The Rob-inson cases were all treated by regular physicians, with correct diplomas, men supposed to know what they were doctoring for, and to know the effect of drugs on certain diseases. Yet in the five deaths from arsenical poisoning of which we speak, certificates of death were given for pneumonia, typhoid fever, meningitis, bowel disease, and Bright's Disease

Such a commentary on the general gnorance of the medical profession, made by one of its own number, we believe to be without a parallel.

Is it any wonder that patients are

osing faith in their doctors? Here were five able bodied people slowly poisoned with arsenic before their very eyes, and yet these very wise medical men were doctoring them for pneumonia, typhoid fever, meningitis, bowel disease and, Bright's dis-

In the very same manner thousands of patients are being treated this day for pneumonia, heart trouble dropsy, incipient consumption, etc., when these are but symptoms o' advanced kidney disease, which is but another name for Bright's disease. The doctors do not strike at the seat of the disease—the kidneys, and if they did nine times out of ten they would fail as they are on record as saying they can not cure Bright's disease of the kidneys. Rather than use War ner's Safe Cure, a well-known specific for this and all other forms of kidney disease they would let their patients die, and then give a death certificate that death was caused by paricarditis, apoplexy, phthisis or cardiac affec-

Is this not the honest truth? Do you not know in your own personal history very many instances where physicians doctored the wrong disase, and caused untold suffering, and many times, death? Which leads us to remark that very much can be learned by one's self by careful observation, and that the doctors are very far from having a monopoly of the knowledge of medicine or disease.

VICK'S MAGAZINE FOR APRIL.

The April number has articles on Wild Flowers for Easter, Evergreens and How they should be Planted, Botanizing Tour in the South, No. 3, relating especially to Columbia, S. C., and the surrounding region, The Farmer and Nature, Experience with Chrysanthemums, The final Charm of the Flowers, Cannas, Where Mushrooms can be Raised, Green Lawns on Sandy Soils, Germinating Seeds, Winter Blooming Plante, Black Rot of the Grape, Lilies Planted in Spring, The Diamond Grape, Peach Yellows, Disease of the Bean, An Insecticide, The Adirondack Forests, Spring Notes, A New Gooseberry, a story and natural history for the Young People, several gems of Poetry, and much else not mentioned. A number of excellent engravings illustrates the articles, and a handsome colored plate of the Diamond Grape, the new white Grape, superior to Posteliozer, and The April number has articles on Wild Diamond Grape, the new white Grape, superior to Pocklington and Niagara, make it a very bright and interesting number. One of the important features of this MAGAZINE is its excellent form which enables it at the close of each volume, to be bound and placed in the library for future reference, and for this purpose it is unequalled as an authority.

It is probable that this will be a remarkable year for sorghum. The season is early, and the crop will get a splendid start, so that it will have an unusually long season to mature.

April one, with the air balmy, the grass green, the trees in leaf and the farmers busy as bees putting in their crops. Early planting will succeed this year, and the hot winds of August will come too late to prevent it.

In the senatorial election which took place in the department of War, France, on Sunday, two of the voting divisions failed to elect a candidate, and a second ballot will be necesary.

Prince Jerome Bonaparte and two other survivors of the disaster of the steamer Countess of Flanders, which was sunk off Dunkirk by the steamer Princess Henriette, have reached London.

A Corrupt fountain corrupts the warner's Log Cabin Rose

for Catarrh. It has no equal. Sold by druggists.

Garden Irrigation

In irrigating garden truck it is best never to flood the ground. Make narrow ditches between the rows, with a shovei plow, letting a small stream run in each furrow, until the thirsty soil is full. Night or afternoon is the best time, as the hot sun shining on the ground is sure the hot sun shining on the ground is sure to bake and make it hard and lumpy. Never irrigate melons, potatoes and to-matoes if you can help it, as it spoits their flavor and makes them late. Since good prices are obtained only for early to-matoes and melons, it becomes necessary

s good prices are obtained only for early tomattees and melons, it becomes necessary
to use every method to insure earliness, although at the expense of size. Thorough
cultivation will do wonders in time of
drouth. Cabbage is greedy for water. It
would astonish one who never had seen
to crops arrigated to observe the almost
magical difference presented by a field of
cabbage after even one irrigation.
It is useless to think of growing either
fruit and forest trees successfully without
water. The same is true of small fruits.
Although strawberries can be and are
raised without it, they are wanting in
size and sweetness. The ditch system is
the best for strawberries and other small
fruits. The same care needs to be taken
in avoiding too much water and in giving the water at night or afternoon, as
in in the case of vegetables, thus avoiding the baking of the ground. In short,
if we copy nature's methods as much as
possible we shall soon reach the desired if we copy nature's methods as much as possible we shall soon reach the desired succes. We have seen people turn water on their trees in a wet time and then wonder why their trees died. When we notice how refreshed every leaf and blade of grass are in the morning effect by of grass are in the morning after a heavy dew or after a rain during which the sky is cloudy and the sun's heat partially with-drawn for a time, we have the key to suc-cessful irrigation.

The Forum for April. THE FORUM for March contained an at-

tack on the public school system by Cartack on the public school system by Cardinal Manning. In the April number Prof. George P. Fisher, of Yale, makes a reply and points out the necessary conflict between Catholicism, as interpreted by Cardinal Manning, and American institutions, defending freedom of religion and the public school. The extraordinary career of Boulanger in French policies. and the public school. The extraordinary career of Boulanger in French politics is narrated by a Parisian journalist, Guillaume C. Tener, who explains from within the condition of parties and politics whereunder a dashing adventurer, by means of a fine horse and of a popular song in his praise, may even become President of France. The Rev. Dr. William Barry analyzes social unrest to find lam Barry analyzes social unrest to find signs of impending economic revolution, which are the loss of the old bond of the church, the rule of the rich everywhere, and the increase of poverty with plenty all about it. His essay is a prediction and a warning. Albion W. Tourgee reviews the negro problem to show the injustice of the rule of a minority, and he predicts a race conflict if the Negro vote is suppressed by fraud and force, Mr. predicts a race conflict if the Negro vote is suppressed by fraud and force. Mr. Edward Atkinson, in the last of his series Edward Atkinson, in the last of his series of essays on social reforms, emphasizes the necessity of giving reformatory agitation a practical turn. Would not better cooking and more judicious selection of food, he ask, do more for society than any presentious reformatory theory? Mr. W. S. Lilly, in "Ethics of Art," defines what art is (for the same principles govern all art), and he points out the evidences given in undern art of the deiden dences given in modern art of the deide-alizing of life,—the necessary results, as he regards it, of the prevalent material philosophy of the time. This essay takes a proper place in a series of papers on art, of which Prof. Chas. Eliot Norton's "Definition of the fine arts" in the March number was one. Following his recent inquiry in the Forum as to whether America has produced a root W. Ed. America has produced a poet, Mr. Ed-mund Gosse explains the reason for his fear of democratic tendencies prevent a proper appreciation of literature, and he points out some discouraging evidences points out some discouraging evidences of a lack of proper American valuation of the great poets. Dr. Thomas Hill, formerly President of Harvard, apropos of the discussion of phonetic spelling, explains a successful school experiment that was made under his direction in teaching children Ellis's "Glossic system. Mr. H. C. Bunts, of the Cleveland (O.) bar; explains the true meaning of the Monroe Doctrine, which has undergone a gross popular misunderstanding. His argument is that it never became a fundamental policy of our Government, that it rests on no enactment, and as commonly rests on no enactment, and as commonly rests on no enactment, and as commonly understood, is contrary to international law. Darius Lyman, for many years a student, in the public service, of our navigation laws, points out the legal impediments to a rival of our carrying trade, and shows how the laws need revising. Senator Stewart of Nevada brings up for public discussion the duty of the Covern public discussion the duty of the Govern-ment in preparing for the proper irriga-tion of our great area of rainless land, discussing the question of the proper ownership of land and water and re-

Cities of the third class held their elections on Monday, and those of the first and second class, on Tues-day. Several of the former elected full tickets of women and will never regret it.

viewing oriefly the experience of other Governments.

The outlook for Kansas crops was never so fine as at present. Travelers all over the through lines of railways unite in the assertion that the winter wheat crop will be unexcelled. The prospects are favorable for every kind of farm product.

The sweet cider selling has become so questionable in Lawrence that it has been prohibited altogether in quantities of less than one gallon. Because of persistent attempts to vi-olate the law by mixing and smug-gling, the sale of innocent drinks must be stupped. It is better to be

The bite of the worm at the root withers the leaf at the top. Use Warner's Log Cabin Extract for internal and external application.

If any farmer will show us how he is benefitted by holding an umbrella over the head of a capitalist and standing out in the pelting storm himself, we shall accept it as a full demonstration of why he should vote to tax himself to put money in the coffers of the manufacturers. The visible taxation is heavy enough, but if the invisible taxation should suddenly present itself to him in all its extortionate enormity he would be aroused to the very verge of rebellion.

Taxation—the whole bulk of it eyentually falls upon the shoulders of the producing classes.—Ex.

No better advice could be given to the farmers of Kansas than is con-tained in the following article from the New York Tribune. Read it carefully, study it; it contains much of the very best advice:

"Yes, it is time to move if you are going to make farming pay; but this doesn't mean that you are to move from your present farm. Three of the latter moves are said to be as bad as a fire. They are expensive, first for the cost of pulling up and trans-porting goods but much more so in getting used to a new locality with its different conditions, soils, markets, demands and deficiencies. Don't move so unless actually compelled to. But move out of the rust, a little nearer economy and a little farther from extravagance; move out of the weatherbeaten shell of indifference about your business to one of intent study about it and its possibilities, move away from the cider barrel to sober industry, if that be what ails you, and move up out of the low gossip and jesting place called "the store evenings, to the pure, more refined influences of the home. Move out of the babyish habit of sitting down every time it rains, to the thrifty plan of active work indoors, beginning at once and sticking to it until able to again go afield.

Move! This is the tendency of the

age. Move or you will not keep ahead of the times. Move into interesting your boys and girls, if your desire be to keep them on the farm; move them into a position where they can make a profit on something, re-membering that this doesn't need to lessen your income, but will increase it directly, as they will make less demands upon you. Move eyes from regretfully surveying the past to a keen gaze into the future. Move out of Grumble town and be cheerful. Move out to church on Sunday recollecting that respectability if nothing else, demands this. Move to farmers they consider a enew thoughts and fresh ideas time in the secured. It is intercourse pinches, are others in the same business and pinches, poothers in the same pushess and pinches, poothers in the same pushes and broadens many such and benefits the mind. Move out of these has any such a narrowness if there be any such a thing. Move heaven and earth before giving up and saying that farm-

The plan provides for the use of corn fodder to construct the roof, chimneys and the exterior. The col-

Inside of the pavilion will be an American kitchen, in which over one hundred preparations of corn will be cooked on American ranges in full view of the visitors, and samples of Yankee cookery will be distributed free. It is also contemplated to have a lecturer in attendance to explain the merits of Indian corn and the mode of preparing and cooking the various dishes. Pamphlets in the English, French and German languages are to be distributed. Photographs of the interiors and exteriors of all of the corn exchanges in this country, and a colossal map of the United States, with colored areas showing the grain districts, and statistical charts giving the amount of the corn product and of the export trade, will be exhibited. The object of the display is to draw attention to corn as a cheap and palatable food, and thus provide an outlet for the excessive quantities that are now produced in the West, and much of which must be converted into bef and pork before it can be marketed. Few Europeans are corn eaters, and the value of the grain as a food product is almost unknown among the nothing. Do not let your doubts toiling masses. Efforts are being cause you to waver, for you may be made to raise money by private sulscriptions, as the Congressional appropriation is insufficient. The produce Exchange has sent a petition to Congress to have the appropriation increased, and efforts are being made t, get the Legislatures of the corn States to make appropriations.

The Usefulness of the Crow.

The crow is a much abused bird, being misrepresented and slandered to a shock-ing degree. The mischief he does to the corn fields in spring is known to all, wrille his usefulness in destroying grubs, worms and other injurious insects, besides multitudes of mischievous mice is known to only a few. Insects have insides multitudes of mischievous mice is known to only a few. Insects have increased to such an alarming extent that farmers should be exceedingly cautious how they allow themselves unwittingly to promote their still farther increase by destroying any of the birds that destroy large numbers of these injurious insects. The injuries which the crow inflicts upon the corn field can be easily prevented by care in stringing the field, or tarring or sulphuring the seed corn, or sowing a surplus of corn on the surface for the crows to eat instead of pulling up that which has been planted. Usually a few quarts then sown on the surface will abundantly supply all the crows need to eat, besides the numerons grubs and worms which they pick up.

A close observer of the habits of the crow declares that he must require at least half a pound of animal food, or its equivalent, daily, to keep him from starving, but they seem to keep in good condition in winter as well as in summer. The crow is an industrious bird, and when he has more than he can eat he hides away the surplus in place of safety.

when he has more than he can eat he hides away the surplus in place of safety hides away the surplus in place of safety for future use, and still keeps himself busy hunting for mice, squirrels or insects. The crow is a knowing bird, and generally manages to supply himself with all the needed stores of food, and shews himself skillful in capturing his prey. Evidently he does not prefer seed corn to other food, but takes a little of it as a relish along with his diet of grubs and worms. A large part of the crow's diet is composed of grubs, worms and mice, and it requires quite a large number of these to make the half-pound needed daily by the crow. A flock of afteen or twenty crows raiding upon the insect hordes and field mice daily would cause a great destruction in the course of a whole hordes and field mice daily would cause a great destruction in the course of a whole summer, and it must be considered that every insect destroyed is arrested in his power to increase his kind, so that if all the in ects destroyed by a single crow in one summer were allowed to go on increasing their kind, their number would be greatly increased. A single insect will sometimes, in one summer, cause an increase of thousands of its kinds. The destruction of the one-prevents the increase from it, and a bird that destroys hundreds of the insects daily prevents the production of wast hordes of such insects.

Kindness to the Cow.

Kindness to the Cow.

Kindness pays almost anywhere It pays in the dairy as well as anywhere else. Some one says: "Speak to a cow as you would to a lady." Certainly speak kindly to her, and do not give her a fright by yelling at her. Anything that gives a shock to her nervous system has its effect on the lacteal secretion, both diminishing and impoverishing the flow. Hence, yelling at a cow, thumping her with a milkstool, punching her with a milkstool, punching her with a fork, or any other act of violence, will be discounted in the milk-pail. It is a bad sign to see cows begin to "stand around" sign to see cows begin to "stand around" and watch every movement of a man assoon as he enters the barn-yard or stable. soon as he enters the barn-yard or stable. It is a sure sign that they are accustomed to ill treatment of some kind at his hands, that puts them on their guard. It is easy, in a herd of cows, to tell whether they are ill or kindly treated. If accustomed to ing doesn't pay in your own locality."

The Novel Project of the Grain Men for the Coming Paris Exposition.

The grain men of the Produce Exchange proposes to erect a pavilion entirely constructed of corn at the Paris Exposition if sufficient funds can be raised.

The plan provides for the use of times, however, cows that are well treated will be shy of strangers, but they do not act as if in fear of a blow or a kick.

Kind treatment, however is not con-

chimneys and the exterior. The columns, balustrades and lattice work will be formed of the ears of corn and the leaves. The frieze over the columns and the paneling are to be formed of mosiacs in which the grains of various colored corn will be used. There will be emblems of husbandry and agricultural mottoes, done in corn, and showing in every conceivable way the great corn product of the Western States.

Kind treatment, however is not confined to merely refaining from acts of violence toward animals. Neglect to care for them properly may be the severest unkind treatment, and yet the animals may not realize that they suffer wrong at the hands of their owner. He may treat them openly in a kindly manner, while he does not give them the necessary food, nor comfortable shelter. They may also suffer for want of a supply of clean water, and a lack of salt. At the same time, they may have to stand in a filthy stable, they may have to stand in a filthy stable, inhaling a foul atmosphere, or be compelled to tramp around in a miry barnyard. This is the worst kind of unkind treatment, and it will surely react to the great detriment of the owner. Keeping the outside of the platter clean while neglecting the weightier matters of the law—proper food, shelter, water, salt, cleanliness, and other requistes to health and comfort—is no more to be commended in dairying than in religion. Cows must be well fed, well housed, and kept clean and comfortable, or they will not give the best returns. The laws of nature demand kind treatment in these directions, as well as in others. they may have to stand in a filthy stable

ture demand kind treatment in these directions, as well as in others.

It is highly necessary that the cow should receive kind treatment at the hands of her milker. He must have her confidence, that she may bestow upon him some of that brute affection which in a state of nature would go to her calf. This is necessary to the free and perfect secretion of milk. Without, it the cow will not "give down," the flow sometimes will be slow, and the milk unsatisfactory, because of so much stripping. If she dislikes her milker, she will "hold up" her mess, and it will be only a question of a little time when she will be dried off. Kindness pays in the dairy. T. D. C.

Horticultural Department. B, F. SMITH, Editor.

The Strawberry Farmer's Market. The nearer berries can be grown to the consumer the more profitable will be the consumer the more profitable will be the crop. The man who contemplates going into berry culture should first consider well the locality before he begins his berry farming. Our great market centers are not now the surest places for best prices. Being great markets they are often glutted with the products of many miles around. While berries will always sell for something in a large city, they will bring better prices when grown near by, or shipped to the smaller cities and towns of our country.

When grown near a country town mar-

and towns of our country.

When grown near a country town market, the grower can save the expense of freight, and the commission for selling, which are no small items. Almost every town in the country with a population of from 5000 to 10,000 inhabitants can consume the product of from ten to fifteen acres of strawberries; and a city of 20,000 to 30,000 people ought to consume 20,000 to 30,000 people ought to consume the product of at least 50 acres, when

fully supplied.

Not a few small fruit cultivators have Not a few small fruit cultivators have made sorrowful failures in seeking a locality in thinly settled country depending on the great distant cities for renumerative prices. The long distance, and time of transit in which the fruit might be damaged, the express charges, commission, and the possibility of a glutted market, are factors worth careful consideration. As proof that our statements above are true, we have just received a letter from one of our plant patrons in the south, who writes that last season he shipped 79 crates, 1896 quarts, that lacked \$28 of paying the express charges. His crates and quart boxes cost him \$17; the picking of 1896 quarts, \$37.92. Then the \$28 loss on account of a glutted market \$28 loss on account of a glutted market or bad management of the commission merchants, foots up a nice little loss of \$82.92 to say nothing of the cultivation and use of land.

and use of land.

One of the main springs and secrets of success in small fruit culture is in selling the fruit product. For one who has to ship to far away markets, it is a fine point to determine where his berries will bring the best prices. A safe rule to abide by, is not to ship the fruit all to one market, but divide it equally be.

one market, but divide it equally between some three or four market centers-should be his resolve.

Winfield has a net v chartered organization with a capital of \$500,000, called "The Alliance Exchange Co-operative Company."

A Profitable Use of Apples.

Some of us are feeding our apples o stock. I feed them to horses, pigs and poultry. For the general pur-pose horse of the farmer I know from experience that apples are a valuable food. I have had horses that were in a very low condition from worms entirely freed from this trouble by the use of apples, and my horses always improve in the fall when running among apple trees, where they eat all they want. I believe that a horse not at hard work would do as well on 4 qts. of oats and a peck of apples as on a peck of oats. If this were so, it would give apples a feeding value of about 24c per bu. Now if the windfalls and refuse apples are of any value, why should not good sound fruit be of still greater food value? My pigs eat apples when they don't eat meal. To about 50 hens I feed 2 or 3 qts. of apples daily, crushing them a little with the food. The hens seem to fairly revel in Hutchinson.

Cropping an Apple Orchard.

Question—What would be the proper treatment of an Apple orchard on heavy clay soil, that has been in sod six years without manure, and from which a crop of hay has been removed every year?

Mr. C. M. Hooker—My advice would be to plow it up shallow and keep culti-

Mr. C. M. Hooker—My advice would be to plow it up shallow, and keep culti-vated; if poor, manure. The best time to plow is in the fall. Prof. Cook—We plowed in June, culti-vated and manured, and the next year we had almost a thousand bushels of good

vated and manufed, and the next year we had almost a thousand bushels of good fruit. The plowing was rather shallow.

Question—To what extent is the cropping of orchards with other crops desir-

Mr. Hooker—When trees are very young Mr. Hooker—When trees are very young you can crop an orchard, provided you are careful not to injure the trees when planting or lifting the crop. A Pear or Apple tree that is barked by a cart or horse is injured forever. It is a very difficult thing to crop ground without injury to the trees.—Report in Vick's Magazine for March.

Does it seem possible that only one Does it seem possible that only one hundred years ago, when Washington was inaugurated in New York the First President of the United States, that the city was then a small place, sixty times, smaller than at the present day, or having only about thirty thousand inhabitants? How New York City looked at that time, and the customs and costumes of ing only about thirty thousand inhabitants of that brute affection which in a state of nature would go to her calf. This is necessary to the free and perfect secretion of milk. Without, it the cow will not "give down," the flow sometimes will be slow, and the milk unsatisfactory, because of so much stripping. If she dislikes her milker, she will "hold up" her mess, and it will be only a question of a little time when she will be dried off. Kindness pays in the dairy. T. D. C.

He that knows nothing doubts of nothing. Do not let your doubts cause you to waver, for you may be assured that

Warner's Log Cabin Liver Pills

will cause the slugish liver to resume its wonted functions, and produces the results you desire. They are effective and by miless, being purely yeget.

The season is a mouth in advance of last year.

of last year.

Difficulties in Churning.

Regarding the skimming of the milk and the preparation of the cream before churning, it may be stated that nearly all the mistakes are made before the churning begins This subject is an important one to those who keep only one or two cows, and is prompted by the following from a lady in belaware: from a lady in belaware:

In skinming the cream to put away for the churning should any nilk be taken with it, and if not what is done in case there is not sufficient at the end of the week to churn? I find that the milk left with the graph takes

the week to churn? I find that the milk I left with the cream turns to sour water, and I should suppose that it would affect the butter. In case the milk is too cold for the butter to come, what can be done to bring it up besides keeping it for some time where it is warm? I mean when it won't "break" from cold. What can be done to bring butter immediately? It is almost an impossibility to skim off the cream without taking away some of the milk, but the difficulty is due, as a rule, to the keeping of the cream until enough can be secured for a churning. If a large number of cows are kept this difficulty is avoided, as it is an easy matter to have cream of one age and which difficulty is avoided, as it is an easy matter to have cream of one age and which has ripened at the same time. When cream is gathered and saved until more cream can be obtained in order to secure a sufficient quantity the difference in the age and stage of ripening compared with that which is gathered later is sometimes great enough to cause the butter to be slightly bitter. The sooner the cream is taken off the milk and the sooner it is churned after being gathered, the better. churned after being gathered, the better. It is well enough to develope a slight acidity in the cream, but it should not be very sour. Experienced dairymen recommend that the temperature of the cream be raised to 72 degrees as soon as skimmed, strring it down to 62 degrees and churning at the first stages of acidity. It is best to skim off the cream as soon as it can be done instead of waiting for every portion of it to rise.

If the milk is too cold for the butter to come, or the temperature is too high (as

come, or the temperature is too high (as

The improper keeping of the cream, and allowing it to become sour while waiting for more, and the failure to keep the milk and cream in some place of eve the milk and cream in some place of even temperature, is the cause of nearly all poor butter. The quantity of the cream should be uniform, and no mixing of dif-ferent ages can be done safely. No amount of working the butter can compensate for the injury done before churn lng, and every portion of the work should be done speedily and not be made depend-ent on something that is to follow.

an interesting portrait of John Burroughs at twenty opens the April Wide Awake, as frontiplece; this engraying accompanies Mr. Burroughs's own story of his toyhood, "The Boy John Burroughs, a Glance Backward," telling how he had to struggle for his "schooling." Another excellent piece of biographical and historical work is ry an English writer—Mrs. Blathwayt, entitled "Raleigh and the Potato;" this gives by courtesy of the National (fallery, Dublid, Irleand, a portrait of Lady Raleigh, Bir Walter's wife, also engravings from photographs made especially for Wide Awake, of Hayess Barton farmhouse (Sir Walter's birth-place), of the Raleigh place of wership, the church at Budliegh Salterton, also Sir Walter's the first potatoes were planted in Ireland, and many other interesting illustrations. "A Dash for a Flag," by R. M. Backus, is a spirited story of the Clvil War. "The Little Girl of Okobojo," by Mrs. Clara Doty Bates, is the tale of a great Western river-freshet. "The Cast Carroii Dance," beautifully illustrated by Garrett, gives instructions for a joyous Easter game for children. Mrs. Claffin's behavior series, "Daisy's Letters to Patie," has a letter that ought to interest the parents of all school-girls. The Public School Cookery article has helpful diagrams for "markating." The romante story of the famous Braganza diamond is told by Mrs. Goddard Orpen "Men and Things," the new department is full to overflowing with bright, origin al aneedotes, arecounts and "short talks."

The poems of the number are particularly good. The serials, "Five Little Peppers Midway," by Margaret Sidney, and "David Vane and David Crane," by Trowbridge, are folly reading.

Wide Awake is \$2.40 a year. D. Loth-Roy Company, Publishers, Boston.

Designs for Cheap Houses. An interesting portrait of John Bur-

Designs for Cheap Houses.

In the March issue of CARPENTRY and Building there is commenced the publication of a series of designs of tistics for government use. It is pertistics for government use. publication of a series of designs of houses costing \$1,000 and \$2,000 each to build. Several months will be required to present all the designs that have been secured for the purpose, and the variety that will be shown, it is believed, will rank this series above anything else ever attempted. The studies have been obtained through two competitions in which liberal cash prizes were offered, and include the work of architects in every part of the country. Each design is acthe work of architects in every part of the country. Each design is accompanied by a brief specification of construction and a detailed estimate of cost. of cost.

The season is a mouth in advance their legislature to give them a uniform system of school books.

Home Influence on the Hired Man,

It does not pay, nor is it right to treat your hired man as if he were a machine, and your only interest is to get a certain amount of work out of him. Many of them have grown up with little schooling and less training, in a home hardly worthy the name, and have been forced to start out agrly in life to shift for the out early in life to shift for them-selves. If there is any thing you can do, either by precept or example, to make such a one a better man and citizen, one who can respect himself and whom others can respect, is it not

worth the effort?
In this effort, as in so many other phases of farm life, the good wife must be the constant and watchful helper. Your influence over him will ever be largely a matter of example.

It will be of no avail to preach a doctrine to him you are not constantly illustrating in your own life. How-ever thick headed the hired man may be in other respects, he is remarka-bly keen in detecting inconsistencies

in his employer and his wife. Encourage him to read evenings, providing him with plenty of good books and popers. Give him something light and captivating at first, just to break up that habit of lounging at the corner grocery. Perhaps, by and by, when he nas acquired a taste for reading, you can persuade him to try something deeper, Iusist upon personal cleanliness and provide suitable conveniences so that he can take a bath with as much comfort as you do. Teach him both by precept and example to spend his money wisely, to avoid all debt as he would a viper, and to try to lay by a certain sum, no matter how small, for the

If the milk is too cold for the butter to come, or the temperature is too high (as sometimes happens in summer), it may be brought to the desired temperature by the addition of cold or warm water, as the requirements may be, until the proper temperature is obtained. The use of a thermometer will greatly assist in the work of churning. Some prefer to raise the temperature by placing the churn in a tub of warm water. Any mode that will raise the temperature will answer. Rectangular churns, which dash the butter from side to side, are now largely in use, the buttermilk being drawn off as soon as the butter assumes the granular stage. After the buttermilk is off, if prefered, a strong solution, made by dissolv—"alt in water, may be poured into the churn. This carries off the buttermilk and partially salts the butter. The improper keeping of the cream, and allowing it to become soone or later. And then in the mitter of temperance, what a wonderful opportunity to impress upon his mind how useless, yes, worse than useless it is to make use of stimulant of any kind! Provide an abundance of good whole-some drink to satisfy the thirst which hard work in the open field under a scorching sun is sure to.

Sum, no matter how small, for the proverbial rainy day, which is sure to come scouer or later. And them in the mitter of temperance, what a wonderful opportunity to impress upon his mind how useless, yes, worse than useless it is to make use of stimulant of any kind! Provide an abundance of good whole-some drink to satisfy the thirst which hard work in the open field under a scorching sun is sure to. change at first. Such a taste is more easily acquired than gotten rid of. But there is all the more need of watchful vigilance on the part of employer and wife. Perhaps there will be one the less in that long procession of drunkards who are annually going

to dishonored graves. Who knows!
Invite him to go to church and do not leave so many chores for him on Sunday morning that he will have an excellent excuse for remaining at home. If he has done an extra good day's work, or you can detec

at improvement in any directly him a word of honest praise.

A correspondent desires us to call the attention of the farmers to a very important item for them to rememfectly natural for them to make the acreage and prospects appear as flat-tering as possible, but they forget that on the basis of these figures the great grain and stock combines at the center base their calculations for the next year's haul. In other words they

She is and disappointments of those who try unmarried and travels with a maid of to be literary and come down to some-honor and a chamberlain, to whose thing within the realm of the possible. honor and a chamberlain, to whose tender mercies are confided the fourteen animals that compose her traveling menagerie. When in Madrid she carried a tame rat in her arms when she walked abroad, and was followed by her chamberlain, who was chained to a small cinnamon bear.

JAMES C. FLOOD'S late residence is the most magnificent in San Francisco, and it fairly rivals those of the Vanderbilts. It required four or five years to build it, all of the brownstone, of which it is chiefly constructed, having been transported from the Atlantic coast. It was not completed until the latter part of 1886. The site is on the very top of aristocratic Nob Hill, fronting California street, and overlooks the whole of the city, the bay and the Golden Gate. The most lavish expenditure is noticeable in every detail of its finish and exterior appointments. Special agents were employed in Europe without limit or cost to buy pictures to adorn its walls. A ponderous bronze railing surmounts the grantite encloseure of the broad grounds surrounding it, and the cost of this work of art, which is the only thing of the kind in this country. West of the Special agents were employed in work of art, which is the only thing of the kind in this country west of the Mississippi, was about \$60,000. The designs for the gates were imported. The total cost of the mansion and its sort of place. So it is. Not at all such accessories is said to have been about a charming abode as you thought. \$5,000,000. Mr. Flood also possessed a country house at Menlo Park, near the Palo Alto farm of Senator Stanford, and it once excited nearly as much wonder as the Nob Hill palace does now. It is surrounded by a domain of 15,000 acres.

Now in deciding what branch of work to pursue don't forget one essential: To pursue don't forget one essential: To which are you best adapted? Settle that without delay, then the time spent in learning that is less irksome and a positive gain to you Then how much time will you spend at that? Are you

WHAT WILL THE GIRLS DO?

Avenues of Employment for Women.

Literary Work—Clerking in Stores -Factory Life-Housekeeping a Lost Art Among American Wives -Good Advice from Eva Gay.

Girls, what are you going to do? That question out to be easily answered. It has doubtless occured to all promoted to the rank of lieutenant of you several times lately. This is about the time of year when you have plenty of time for reflection. Midwinter days seem to bring with them a period of leisure, when the mind carefully reviews the past and forms plans for the future. The particular class of girls with whom I want to talk are those who have lived in moderate circumstances, always went to school, and probably have had as little care about how their food or raiment came as have the lilies of the field. There is a have the littles of the field. There is a difference, girls, now: You begin to feel within yourself the first faint, tremulous thrills of coming womanhood. Childish plays grow tiresome.

There is a world of thought and action all about you. There is a place in it for all of us and you being too weary of THE four new states admitted into the restraints of school and home, longing to take your place in the busy throng, where all are struggling for position, wealth, or fame. That notion of yours is perfectly natural and an

> But have you decided what place you want? Now is a good time to think about that. There are many wise people who still believe that a woman's true sphere is at home, and that the mother fulfills her highest duty us plainly as words that you have some times dreamed that a Prince Charming afterward, as the story books say.

"All that is so far in the future," you take care of itself. Let's see what can be done now. You know something of arithmetic, grammar, reading and orknowledge is a good thing and the foundation upon which a good education may be built. Yet you must have something more. Now, this is the time to make up your mind what you will do, and put your mind to learn the necessary acquirements for that statements. necessary acquirements for that sta-

About nine girls out of ten would like to write poetry and magazine articles, have themselves in print, see the newspaper reviews mingling flattery with notes on their personal appearance, be the center of an admiring literary circle and having everybody talking about them. All very well for an air castle, girls. Let it go at that, don't waste time over those fancies. Let me tell you a few reasons why you can't be an author. In the first place, even the most ordinary newspaper scribbler must be able to write a clear. legible hand, spell correctly, punctuate properly and have an instinctive notion of the sort of articles that will please dance with the rule that gives a bishop- the public. Then the real literary elect the right to declare what bishop genius must have an insight of human shall preach the sermon at his conse- nature and a talent for portraying it so in a thousand possesses even the smallest amount of those faculties, or that genius and perseverance rather, that make an author. None of us are

You would like to be a clerk per haps. Such a position would be pos-sible with your present education; but you will find hundreds about you, all struggling for the first place. Yet there isn't any reason why you shouldn't succeed if you are faithful,

pleasant, and prompt.

Then there's all kinds of factory If you are strong and not afraid to work, better wages can be earned than in the stores. But you will have to work in dirty, badly-ventilated shops, listen to coarse and rude language, have to obey orders-in short everything will be different from the home and school to which you have been accustomed. Good common sens and a pure heart are your only safe-guards. Begins to look rather hard oesen't it?

Lastly there are all branches of do mestic work. I say lastly because so many of you think its such a terrible thing to do housework. Yet in this despised work a girl who is competent to do what she attempts is practically her own mistress, for housekeeping is

Now in deciding what branch of work

willing always to be a clerk and never rise any higher? Many are so content and stay for years at the same counter. If you are satisfied to do that, all right. If not, lay your plans accordingly.

"But, girls, no matter in what kind of work you find employment, there are some qualities which always count; honesty, promptitude and reliability will keep you a place where many a brighter girl fails. Do you possess those qualities? It takes some of us a lifetime qualities? It takes some of us a lifetime to thoroughly acquire them. Might be a good time to practice them while wait-

Then, during the few years that you work there will be some grave problems always coming up. Why are there so many idle? What makes wages low and long hours a rule? Why are we all poor? And any number of wages low and long hours a rule? Why are we all poor? And any number of other questions will be suggested. What are you going to do about them? Will you face them squarely and try to find a solution for them, or will you say: "Oh, these things are no concern of mine, I'm going to be married soon, and then I won't have to think about them, and every new burden will make them, and every new burden will make them more apparent.

All these problems are interesting the best thinkers and economists of the age, and surely they are worth a little share of your thought. Now, girls, what will you do?—Eva Gay, in Journal of United Labor.

Trade in Peanuts.

When we pass a peanut stand, or see a bag of peanuts in the grocery store, we do not think of peanuts as forming any important share in our commerce. We do not think that the peanut trade is a branch of trade very important to the people in a certain section of our country; that if the crop should fail it country; that if the crop should fall it would mean suffering and ruin to many people. Peanuts grow in Virginia, Tennessee and Eastern North Carolina, Alabama and Mississippi. The best grade comes from Virginia, and they are known as "goubers;" in Alabama and Mississippi as "pinders." Dealers and distinct of the pan and Mississippi as "pinders." Dealers and cover, pour the contents of the pan and Mississippi as "pinders." Dealers and cover, pour the contents of the pan and Mississippi as "pinders." say that no improvements have been into a quart of clear soup; taste for made in the peanut farms; they are just what they were thirty years ago, al-through a sieve, rub the pulp through though the peanut trade has doubled in nine years. The farms are small, and dissolve half a teaspoonful of flour in the crops are cared for by negroes. The nuts are planted in hills about a lumps and add to the soup. When hot, foot apart, in rows about two and onehalf feet apart, and are harvested by plowing and turning over with long-handled forks; this shakes off the dirt, Trim off the outside fat and boil the when the vines are gathered and shocked about a pole, where they are left to move the meat from the broth, allow it dry, the vines being so placed as to to cool, then remove the bones and cut protect the nuts from the rain; mildew-the meat into neat squares or triangles. ed nuts turn black, and are less salable though the nuts may be as sweet. A dealer says, in the New York Evening Post, that "the shocks, after they have crumbs and fry as you would doughbeen built up, are left standing for everal weeks, until the nuts are quite dried and cured. They are then stripped from the vines by hand, packed in bags, and carried to the middleman who handles them for the farmer. By the middleman the nuts are taken to the top floor of the factory, and are scoured and polished by rubbing against each other in a long revolving iron cylinder. Spouts carry them, after cleaning, to the second floor, where they are run through a fanning mill. From the mill they are delivered on to an endless apron made of slats hinged together, and as they travel along on this girls sitting on each side sort them into grades. The nuts are then put into sacks and are ready for shipping. They are brought to New York mostly by steamers, although some come by rail. They are sold here as 'Wilmingtons,' 'Vir-ginians,' 'Tennessee' and 'Spanish.' The last variety was formerly grown in Spain, but is now raised in Virginia to good advantage. The grades are known as 'fancy handpicked,' 'extra handpicked,' and 'choice.' The screen-

bought by venders at county fairs and mixed in with a better grade."

Peanuts are shipped to all parts of this country and to the West Indies, but no trade has been developed with Europe. This limited trade, however, amounts to five million dellars remained. amounts to five million dollars per

ings are the poorest nuts, and these are

Lengthening Days. When autumn comes with glooming skies. The days make haste to hide their eyes, And more and more reluctant rise. When winter brings the biting blast, They fold their arms and scurry past, Each hurrying to outrun the last. But when the sunward march begins, And even the old earth lightlier spins, Each day recounts the grace she wins.

A moment more to tend her flowers!— So prays she of the generous powers, So grow the gold-linked summer hours. Until, at song's and sunshine's height,
Their rapture overflows the light,
To sigh with wakeful joy all night.
—Carl Spencer, Boston Transcript.

Original Forest in New Jersey. There is not much really original or primeval forest left standing in New Jersey. That is, there are few, if any, large tracts of forest that have not been cut off at sometime since the settlement of the the state by white men. There is a small piece of white oak woods on the farm of Mr. Thomas Lawrence, near Hamburg, in Sussex county, which has never been cut. These trees cover a re-markable hill, or long, narrow ridge, which rises eighty or one hundred feet above the fertile valley of the Wallkill river, and one would have to travel far to find a more interesting or attractive grove. Though they stand very near to the busy haunts of men, the great trees are populous with great southers to trees are populous with gray squirrels, who appear to have learned to feel entirely comfortable and secure among them.

The Household

For a Damp Closet—Fill a small box with lime and put it on a shelf. It should keep the air of the closet dry and pure.

A Kidney Stew-Cut all the good parts into small pieces, lay them in salt and water for half an hour; wash them well, put on in clean cold water to boil; as soon as it boils pour off that water, put them in fresh water, with an onion chopped fine, some bits of butter rolled in flour, pepper and salt, and simmer very gently until tender. If you boil kidney fast and hard it will become tough as India rubber. A teaspoonful of lemon juice improves the

Riz a l'Imperatrice—Boil three table poonfuls of rice (picked and washed clean) in a pint of milk, with sugar to taste, and a piece of vanilla. When done put it into a bowl to get cold. Make a custard with a gill of milk and the yolks of four eggs. When cold mix it with the rice. Beat up to a froth a gill of cream with some sugar and a gill of milk and the yolks of some sugar and a gill of milk and the yolks of some sugar and a gill of milk and the yolks of some sugar and a gill of milk and the yolks of some sugar and a gill of milk and the yolks of some sugar and a gill of milk and the yolks of some sugar and a gill of milk and the yolks of some sugar and a gill of cream with some sugar and a gill of cream wit pinch of isinglass dissolved in a little water; mix this very lightly with the rice and custard; fill a mold with the mixture, and set it on ice. When moderately iced, turn it out and serve.

Hominy Browned for Breakfast-In small but rather deep frying pan put a bit of butter, a little more than enough to prevent sticking. When this is hot and spread around the sides with a spoon, fill the frying pan with cold boiled hominy; press it in evenly; cover till thoroughly heated. Then remove the cover and let it remain on the range until a brown crust has formed below and on the sides. Loosen

The Snow-Storm.

Blow, blow; snow, snow, Everything is white. Swift, swift; drift, drift, All the day and night.

Squealing pig, paths to dig, Hurry out of bed, Rub your nose, warm your toes, Fetch along the sled.

Red-ckeek girls, wavy curls, Schoolhouse down the lane: Fingers tingle, sleigh bells jingle, Jack Frost come again.

Hurrah? hurrah! now for war Build the white frost high. Steady aims wins the game, See the snowballs fly. Setting sun, day is done, Round the fire together; Apples rosy, this is cosey, Jolly Winter weather.

The Cormorant of Countries. Great Britain is the cormorant of

countries. The splendid trope used by Webster to describe the extent of its dominion in every quarter of the globe is truer to-day than at the time of its utterance half a century ago. The sun never sets upon the scarlet uniform or the tax-gatherer for the the British crown. Out of the little island, once a conquest of the Roman Empire, has a conquest of the Roman Empire, has spread a colonizing and conquering people whose dominion has spread to worlds unknown by Alexander and Cæsar. No continent is free from its sway. From the little island of Heligoland, less than a mile in extent, held under the very frown of Bismarck, and the slightly larger fastness of Giballand, and the grasped firmly in the raltar, which is grasped firmly in the very face of Spain, Great Britain, having possessions in every continent and in every group of islands, ascends to complete and pitiless dominion over the peoples of India. The mere schedule would fill a column. The total area is nearly 10,000,000 miles; the total population only less than 275,000,000.

Makes a Difference.

The date of the grand Sunday-school convention to be held in London has been fixed for July 2-6. From the United States 6
delegates are expected. A Cunard steamer has been chartered to take delegates from New York June 19. On their arrival at Liverpool a special train will be found waiting and will carry them to London.

A bill has been introduced in the Canadian parliament to extend the provisions of the present extradition act. The bill deals with criminals found in Canada, who may be surrendered for the offenses enumerated irrespective of any treaty existing with the country from which the criminal comes. The projector of the bill holds the view that these oriminals are not desirable settlers and should be got out of the country under any circumstances.

Secretary Fairchild has awarded the contract for the transportation of government moneys and securities to the United States moneys and securities to which Thomas C. Express company, of which Thomas C. Platt is president. It is stated that the rates offered by the United States company over the lines controlled by it are from over the lines controlled by it are from thirty-five to fifty per cent. less than the rates now paid the Adams Express company for the service over its lines. An idea of the extent and importance of this service may be gained from the fact that the shipments of paper money, bonds, etc., during the last fourteen years aggregated over \$12,000,000,000. The average annual shipment of national bank notes and United States note is \$401,000,000. The movement of gold, silver and subsidiary coin is on a correspondingly large sale.

FARM AND HOUSEHOLD

Hiring Farm Help.

Every year at this season the all-important question among farmers is the employment of farm labor, and especially the rate of wages. Competition is now greater than ever before, and with low rates for farm products it is increasingly difficult for even the best manager to make much money. The tendency undoubtedly is to hire less help, to allow more of the land to go uncultivated, and thus reduce the cost of running it. Most farmers cannot work much harder than they now do. To employ less help seems the most practi-cable mode of reducing expenses within the restricted income caused by low-er prices for farm produce. This is the natural corrective of this evil, and is therefore presumably right as a general rule. It is, in fact, the inevitable result. If farmers fly in the face of existing facts they get hurt, and are taught not to do so any more. When crops for a series of years do not pay they are abandoned, reluctantly, it may

be, but none the less surely.

To this extent, farmers are neces sarily governed by their circumstances It is after election, and there need be no hesitancy in repudiating the politi-cian's cry that the farmer only is inde-pendent. He is really no more so than men engaged in any other business. If his land is poor, or he is heavily in debt for it, if his stock is inferior to the average, the probability is he will be forced to do as he can rather than choose to do what he would. It is this that often makes farmers smile at the advice given them in agricultural journals. It is often excellent advice, but to them is or seems to be impracticable under the circumstances. To use one of last year's well-worn campaign phrases, it is a condition rather than a theory that confronts them. They do not farm poorly because they do not know better, but because they cannot always do what they know to be best. The original cause of this trouble in

most cases is the increasing difficulty in hiring reliable farm help at reasonable rates. Wages have gone up, while character and efficiency of service, except as increased by improved implements, have declined. The young men who thirty-five to sixty years ago worked for wages a few years on the farm to get the money to begin farming on their own hook, have either gone west to cheaper lands, or have flocked into cities to engage in other

occupations. The enormous increase in city population within fifteen or twenty years tell the story. It is an unnatural and unhealthful increase, and therefore must be followed by a reaction. Almost all kinds of business in every city are overcrowded, while the farms are more and more neglected. Men and women work in cities, saving less than they could save working on the farm. May be they have what they consider a better, that is a livelier, time in the city; but when poverty pinches, as it does nearly every winter, many of them wish themselves on the

again.
believe the long-predicted re action in favor of farming interests is about due, and if so it will be well for farmers to take advantage of it. If the mass of farmers cannot well afford to hire much help, there ought still to be enough exceptions to the general rule. Men who have great executive ability, men who work hard, and are therefore able to get most work out of farm help, men who are good managers in other respects, men who have kept their land in better condition as to fertility than the average, may each and all regard themselves as exceptions, and hire help enough to push their farms to the limit of profitable production. Those who cannot be classed under either of these heads may more properly regard themselves as restricted to hard work with their own hands, and must be content with such a living as they can themselves earn. In most cases such men will earn more by working for others at something than they can working for themselves.

It requires, also, in these times good judgement of men who know just whom it is best to employ. Wages are not really so important as character, skill, carefulness and general efficiency. A cheap hand may really be dearest, and the highest paid may well be enough more efficient to make him cheapest in the end. With the complicated machinery now in use on the farm, some one must be on hand who thoroughly understands it. The care of choice stock, if committed to men who neither know nor care for their duties, may involve greater loss than a season's wages. And surely no sensible farmer would think of hiring help to work with insufficient tools, or to care for stock whose worthlessness make the care for given it a matter of little importance.

For these and other reasons the era of low wages cannot be expected to return. When a good farmer hires a man in these days he probably expects a man conscientious, efficient and skilful, such a one as in the city could easily assure himself success in any business. He must pay a corresponding price. If he thinks to put up with inferior help he may rue his mistake. It may and probably will require good management on his part to make hired help pay, but if he cannot do it with the best help he urely cannot do it with poor. For many years the best and most efficient farm help has been drawn away to cities. The common impression was that any body would do to work on a farm. Now it is learned that farm labor demands the highest characteristics of efficiency, and the country sends to the city more would do to work on a farm. Now of those who have shown themselves unfitted for it than of those who have been successful.—American Cultivator.

All intelligent farmers know

Improved Seed Corn.

thing about the importance of planting good seed in raising the various crops usually grown on the farm. One of the first requisites in the production of a good crop of almost any kind is to use good seed. The corn crop in the United States is of such vast importance that the seed used in planting can hardly be selected with too much care. Corn may be vastly improved by mixng different kinds together, and all that is necessary to do this is to select any two kinds that may be desired and plant the different kinds in alternate rows, and at tasseling time watch closey and cut out all the tassels as soon as they are properly out in all the rows you wish improved. The ears on the mutilated stalks are then necessarily fertilized by pollen from the stalks in rows containing the other variety. hence the mutilated stalks yield the improved corn. This in turn may be mixed in a similar manner the next year, with any other variety or any other variety mixed with it that may be desired. Thus, by a careful and judicious selection of varieties best suited to climate and soil, any planter may obtain the healthiest, and most prolific, and in every way the best variety, perhaps it is possible for him to get. As a matter of course, this whole process for improvement should be conducted on a plat of land separated from where any other corn is grown sufficiently far as to insure an admixture with it. I adopted the above plan some time ago, with a view to obtain an improved variety, and I am free to confess that the result is somewhat surprising. I am unable to state with accuracy the advantage the improved variety has over the unimproved, but it certainly neighbors have obtained seed from me, and are pleased with it. Try my plan, brother farmers, and I have no doubt it will pay you largely.—Practical

Fruit trees cannot thrive on all kinds f exhausted soils. The trees will make a growth of leaves and wood on poor land, but they require mineral manure to perfect the fruit. Land that has been too rough for plowing may yet have spaces between the rocks where fruit trees will thrive, and is better than land that has been exhaust ed by long cropping.

If kept dry through the winter, corn stalks by alternate freezing and thawing lose much of their feeding value. As the sap in them evaporates they lose their sweetness, and the woody matter increases. For this reason shrewd farmers feed their corn stalks early in the winter, and keep more of their hay and grain for stock during that most critical feeding time of the year, between hay and grass.

The value of salt to make crops grov does not mainly depend on the manurial elements that it contains. It makes those in the soil available. It is of ittle value on land poor in vegetable matter. Wherever manure has been used without due result apply salt and note its effect. The best salt is now very cheap, and considering its greater ease in distribution, costs less on the land than the coarse lumps of impure salt mixed with earth that used to be sold for putting on land.

Mice make serious work among corn in the ear in cribs, They work around freely among the ears where cats can-not follow them. Rats kill off the mice, but are themselves worse than the vermin they destroy. The best security against vermin in corn houses is to set the building on posts capped with a tin pan so that mice cannot effect an The corn house should entrance. cleared of all rubbish, cobs and the like at least once a year.

Unless the breeding of his stock is poorer than any good farmer should allow, it will pay him to keep heifer calves rather than sell them to the butcher. If the male parent of the heifer is of good milking strain, the progeny will more than likely prove a good milker. It is in this way that pure-bred males soon develop the best diary capacities in the herds of cows that they are bred to. The inexperienced farmer is quite apt to be deceived ed by appearances in selecting diary stock to grow, and may easily reject those that he would find most valua-

The true draft horse is too heavily built for fast driving. He has strength of limb to get over the ground rapidly if necessary, but his weight makes his feet strike too heavily on hard roads, and this evil is intensified when driven fast. It is this that gives currency to the idea that heavy horses have naturally poor feet. They are not adapted to the work and thus the work, and thus wear out before their time. If always driven slowly, draft horses remain in good condition until they are old. They are not a nervous horse, and with horses, as with men, it is worry, not work, that kills.

Rhubarb, or pie plant, as it is often

called by housewives, is an important part of evey farmer's garden. The part of every farmer's garden. The ground can hardly be too rich for it, and if properly cared for it provides an excellent acid sauce, healthful and refreshing, and better than medicine to clear from the system in spring the humors engendered by two close contact and American women. The standard of education is very low, especially in the description of the women and American women. The standard of education is very low, especially

Impure Literature.

The case of the New Jersey teacher, whose female pupils deserted their classes, their modesty outraged at his description of the wickedness of a world to them unknown, has been commented upon in the severest terms in the columns of nearly every leading paper of the day. Under the guise of a warning these girls received into their minds, words which could never be expelled and which are suggestive and dangerous in the highest degree. This is bad enough, indeed, but the evil effects are apt to be limited to the circle of the class and probably

o a very small segment thereof.

What shall be said, however, of the class of authors who, posing as moralists and under the ill assumed guise of righteousness, spread among thou-sands their prurient imaginings, labeling it as wholesome food? What of the publishers who are chiefly respon-sible for the dissemination of such

books Realism, they tell us, is the trues art and the truest art is the highest truth. Can evil come from a marriage of truth and art?

As a matter of fact, they give neither normal truth nor clean art. Their facts—and they are after facts—come from lives that are the perversion of truth and their models from the wards

of a moral hospital.

Perhaps no better illustration of the methods of such as these has recently been given than is furnished by the reface of a novel fresh from the pres

will have backward slips, he will re-solve again and again and break his freeing himself from his entanglements

he will accomplish a miracle. But suffer he must. And I have painted a sufferer. If prudery places her skinny hands before her face and screams; if roues swear the drawing is incorrect and the shading too severe; if people who admit that the world has pitfalls but have a constitutional horror warning signs say it is too dreadful, you know, I cannot help it.

Imagine George Eliot opening "Adam Bede," or Dickens' "David Copper-field" with such words! Yet each of these books contains woven into its plot a story sad enough to draw tears, of sins no less terrible than foreshadowed in this preface, which leave the reader praying for better resolutions and greater strength, and are pure as the snow in intent and effect.—Detroit

To Cook Dried Fruit.

It may seem like a broad, sweeping ssertion, says the American Analyst, when we state that nine out of every en persons who undertake to cook dried fruit make a positive failure. The usual method followed is a very poor one, that of selecting the fruit to be eaten at lunch, dinner or tea two or three hours prior to using it, rinsing it in a little water, then placing it in water and allowing it to remain to soak pouring off the water in which the fruit was soaked and applying fresh water, put-ting it on the stove and cooking it thoroughly. Such a manipulation as this is calculated to produce the poorest possible result, if it does not actually ruin the fruit. Many people consider dried fruits hardly worthy of their time and attention, from the fact that after repeated trials they find so little of value—the fruit having lost its orig-inal flavor is tasteless and not at all palatable. If the following method for cooking dried fruit is followed, a directly opposite result will be realized. Select the fruit that you intend to use, rinse it thoroughly in clean, clear water, then place the fruit to soak in an earthern dish, with sufficient water to cover it. from ten to fifteen hours be fore requiring it for use. Then place it on the back of the stove in the same water in which it has been soaked, which contains the flavor and nutrition soaked out of the fruit, and allow it to simmer slowly, just coming to a boil occasionally until it is entirely cooked through, add sugar as the occasion requires to make it palatable. It can be quires to make it palatable. It can be served either hot or cold as you desire; as a rule, if it is placed one side and allowed to cool, it will be fully as palatable. By this method you will secure a wholesome, palatable dish, fully flavored, and resembling in appearance, size, taste and flavor the original green product as near as is possible. product, as near as is possible.

Female Progress in Japan.

The London Mode of Fashion says that the Empress of Japan is at the head of a powerful movement for bethumors engendered by two close confinement in the house in winter. To have rhubarb very early make a rough sash around each of a few plants. Bank with manure and cover on the coldest nights to keep from freezing. An old barrel with both heads knocked lout is good enough. A single plant and to the above method of securing early pie plant is common in many parts of the qualified and teaching their country—American Cultivator.

AN INDIAN WEDDING.

How a Converted Sloux Couple Were Married at a Western Agency.

On we went, until quite abruptly we came upon a grove of trees, in the continent. Here beef is dressed, pork midst of which, following a winding is packed, provisions are made, meats path, we found the little chapel, writes Rosa T. Shelton in Chicago Advance. Small and rude in many ways, it had a quiet dignity, and we felt a solemnity as we approached it, listening to its bell which so regularly called from their sun and stone worship the Indian "children of the prairie." Inside the fading light came softly through the stained-glass windows, scarcely pene-trating; making silhouettes of the faces, dark even in the sunlight.

Gradually our eyes became accustomed to the dim light, and we discovered a venerable Indian in his kindly way beckoning us forward to seats of honor just before the chancel. Indians are always kindly in their feel-ings towards those white men whom they can trust; warm-hearted and true are they to those whom they can prove their * friends, more often is the smile seen than the frown, and only ofter bitter wrong does the cruel, savage part of their nature show itself. Treacherous they are not; suspicious, the white man has made them. Their true character is much distorted by us Eastern people, until we have lived among them.

Poor as was the little mission church. it still possessed a simple, embroidered altar-cloth, and the rector's chair was one of those made only for holy places. and sent for review to the crision and sent for review the sent for review to the crision and sent for review to the cris what more suitable at a marriage of Nature's children, than that all nature, animate and inanimate, should lend a presence there.

The church gradually filled. Indian spuaws with babies predominated in the audience. The sad-faced rector, in gown and surplice, entered with book in hand. The hour arrived, but the bride was late. The father of the bride came, leading a little boy, fol-lowed by the mother and three small lowed by the mother and three small children. The father wore his citizen's dress, with a handkerchief knotted around his neck; the mother came in her shawl, the most important detail of an Indian woman's dress.

After a dead silence, broken frequent ly by the noise of babies and dogs out-side, there sounded at the door a shufside, there sounded at the door a shifting of heavy boots, unlike the soft, soundless steps of Indian feet in moccasins, and Winona and Caske walked to the altar, side by side, but out of step and out of time, followed by bridesmaid and groomsman in like

Winona was not yet sixteen years old. and like that of all Indian girls, her coiffure was simple. I mention that first since I noticed it first. The hair

hung in a single braid over her shoulders, tied with a red ribbon in schoolgirl fashion. Her dress was short, of some dark stuff, the only adornment being a broad cotton lace collar around her neck. She wore a brown straw sailor hat and this completed her cos-tume. The groom was dressed in ordi-nary citizen's clothes, a little the worse for wear.

They stood in bashful reverence while the rector stepped forward and read in the musical Dakota language the marriage ceremony. The responses were low and soft, almost indistinguishable even to us who were

A sadness came over me as I watched the girl-bride, for these Indian girls who marry while yet children so soon become old, wrinkled and haggard with hard work, when they should be strong and vigorous, in the prime of womanhood. And they are so ill prepared for the life awaiting them—no experience, no thought beyond the present! Yet this was a marriage of love, unlike the contracts made so often by the parents, in which those most concerned have no

As they knelt in simple style for the heavenly benediction, even the dogs were silent, and the bables stopped cry-ing; and quietly, side by side, they went out into the night—husband and

It was a beautiful wedding because of its simplicity, and the lack of all things artificial; yet there seemed to be no gayety among the people, and no rejoicing for the happy ones. This might be because Indians seldom show might be because Indians seldom show inner thoughts and feelings. The deepest feelings never change a muscle of a face or an expression of an eye. Yet Indians are as capable of deep emotion as white men. This is proved by those who know them best. mad.

But there were to be festivities. Upon these we dared not intrude. Rumors of a dog-feast came to us. Dog-flesh is their richest delicacy and they say: "Why not? You eat pig! Is dog worse than pig?"

As we left the little chapel it seemed

a benediction in itself. No massive pillars nor marble altar found we there; little to show men's handiwork, but standing so simple and plain, in the very heart of nature, it seemed a living thing, whispering Christ's message: "Go ye into all the world and preach the Gospel."

Mr. Winks-"My gracious! Look there where the sun comes in and see the cloud of dust floating in the room." Mrs. Winks —"Goodness me! Marie Come lower this curtain."—New York Weekly. The Cattle Question.

Chicago is the great cattle market of the country. It is the center of all the industries appertaining to that market. Here are the great abattoirs of the are tinned. In the purlieus of the stock-yards spring up all the economies of so vast a market. Nothing is wasted from horn to hoof. Bones, viscera, bristles, tallow, blood, marrow, every-thing is utilized. There are glue factories, factories for rendering refuse into fertilizers, factories for cleaning for brush-makers the coarse hair of hogs, factories for making lard and butterine. factories for making lard and butterine. Sell live stock in Chicago and all, even the minutest, of its value is taken into consideration. Kill a steer on the plains where he has grazed and nothing of the carcass is utilized but the hide and the beef. No glue is taken from the hoofs, no phosphate from the hores, as huttons from the hores. The bones, no buttons from the horns. The plood runs to waste, the viscera is left to taint the air while it rots.

This, then, is the market of the highest price and the greatest economy. Yet divers interests assail it. The lressed-beef interest is attacked in various eastern states where Chicago reaches the consumer with the produce of the western grazing plains. The local grazer wants protection, but as custom-house barriers can not be erected between the states resort is had to the indirection whereby it is proposed to prevent a market within the state for all meat not inspected therein on the hoof. That is, the im-portation of dressed meat will be prevented. These measures fail as they ought. While Chicago is making this market in the east the cattlemen of the west are fancying that something preju-dicial to their interests is going on in the Chicago market. Like the farmer of Ohio, Pennsylvania, and New York crying for protection these westerners, fancying themselves oppressed by some combination or machination in the Chicago market, which is really giving the utmost value to their herds by utilizing them to the last penny's worth, are demanding that something be done to enhance the price of their cattle. Acting upon the Kansas legislature they have secured a conference between committees from the capitals of various states to meet at St. Louis and consider the question. St. Louis is of all places the least desirable for such a conference. What can be seen there of the practical operation of the meat industries? What trustworthy information is there attainable of the methods of a great cattle mart? Instead of aiding to a full understanding of the which the property of the pr of the subject matter the local interest will lie in the direction not of suggesting a solution of any problem but of in-creasing its perplexities and of ioment-ing ill will against Chicago.

The commission cattlemen of Chicago

understand the whole subject matter. They stand between the pattle raisers and the cattle-buyers. Their own, like the interest of the seller, is to obtain the highest possible price. Their pro-position at this juncture is wise. Let the conference adjourn from St. Louis, where nothing is to be learned relating everything may be disclosed just as it

If the conference is wise it will accept this invitation and take its knowledge from the fountain source.—Chicago Times.

Salt on Their Tails.

Last week, Hermann, the magician, was standing with half a dozen gentlemen hear one of the trees in front of Williard's hotel. The branches were full of chattering English sparrows. Said Mr. Herrman: "I cut zis from a newspapaire about how to eat ze spar-

and he read as follows: "Take a fat little bird by the beak, sprinkle a little salt over it, take out the gullet, put the bird cleverly into your mouth, bite him off closely to your fingers and chew him manfully; the result will be an abundance of juice to envelop the whole organ, and you will enjoy a pleasure unknown to the

vulgar."
"That is all very well," said one of the gentlemen, "but how are you going to get the little rancals? They are too small to shoot, and too sly and lively to be caught."

'Oh, you are mistaken. It is very easy to catch ze sparrow. See, now, I catch one," and he made a grab into the atmosphere and sume enough, got cock sparrow in his hand that chattered and pecked viciously. Hermann showed up the plumpness of the little bird to his staring friends, saying: "Now, my little friend, do not hurt me. Ah, you get away," and the sparrow escaped and flew up to a limb, where he smoothed his feathers and looked very

"I will catch anodder," said Herrmann, and, making another grasp, secured another sparrow; this time a

Presently he let her go, and said:
"Now I will try to catch two sparrows at one time." and, making a clutch, took in his hand with two sparrows in

As he allowed them to escape he remarked, with his bonest smile that would take in a horse dealer, "You see, gentlemen, ze sparrow is not a hard bird to catch, eef you know how to eatch him."—Washington Post.

"Do you want any extracts from the bill of fare painted in?" "Yah; dotwas one goot ides. Baint en de board: 'Hot Sassage, Peer und Limburger Cheese.'"—Philadelphis Record.

The Wonderful Flea.

The wonderful fler is the subject o a sketch in the Swiss Cross. It say The legs of a flea are marvels o. strength and elasticity. They are joined to the body by long tendons that act like wire springs. In making its leap, which, it is said, can cover 200 times its own length, the flex draws the leg up close to the body and then throws it out with great force; but the impulse proceeds from the first joint alone, the others only increasing it by their stretch while the leap is being made.

Fleas are possessed of great strength. Mounet tells of a mechanic who made a gold chain, as long as this finger, that a flea dragged after him, and a golden chariot, which he drew also. Bingley writes of a watchmaker in the Strand who had an ivory four-wheeled chaise, with a coachman on its box. chaise, with a coachman on its box. drawn by a flea. The same man afterward made a carriage with six horses, a coachman, four persons inside, two footmen behind and a postillion on one of the horses, all of which was drawn by a single flea. Latiella mentions a flea which dragged a silver cannon of twenty-four times its own weight, mounted on wheels, and showed no fear when it was charged with gunpowder and fired off. Rene says that he saw three fleas drawing tiny omnibus; that a par drew a chariot and that a brass cannon was dragged by a single one.

Fleas are quarrelsome, and great ward made a carriage with six horses,

dragged by a single one.

Fleas are quarrelsome, and great fighters. When several are confined in a glass, they will stand on their hind legs, striking at their opponents with the others, and roll over and over each other, losing legs and antennæ, and at last giving up their lives in the right. There is a record of a fles which lived ten days after such an en. which lived ten days after such an enwhich lived ten days after such an encounter, with no atennee, three plates of his side broken in, one eye gone, and with only four legs, and these cut off to the first joint.

Three New Professions.

There is good news for the persons who are always asking: "What shall my son be?" or "What am I to do with my daughters?" It is announced from Paris that a new profession has tately been started there. The French capital is celebrated for the strange callings pursued in it. It is not in Paris callings pursued in it. It is not in Faris that the "quatorzieme" flourishes—the gentleman who sits in his chambers in full evening dress from 6 o'clock to 9 o'clock p. m. in hopes that superstitious diners will find out that they are about to sit down thirteen and will call the interpretation of the result the open? The new about to sit down thirteen and will call him in to avert the omen? The new profession has also to do with dinner, but it is concerned with its preparation and not its consumption. It is that of dinner-tasting. The professor, an exchef probably, is engaged by the host to some and samplewed dishes before they are submitted to his guests. Monarchs in the middle ages had, it will be remembered, a similar functionary, whose not over enviable duty it was to see that nothing poisoned was given see that nothing poisoned was given to his master. The 'dinner-taster's' duty is rather to see that everyhing is properly seasoned; that the soup has anough and not too much sold in it. enough, and not too much, salt in it; that the champagne has not been iced out of all knowledge, and so on. The success which is said to have attended the profession of dinner-testing suggests one or two other kindred possibilities. Why, for example, should not have of our manufaced algorithm. some of our unemployed elegants, take to tieing the white ties of their wealthier but less nimble brethern—for a consideration, of course? Our girls, too, might make a very pretty income by assisting hostesses to decorate their rooms in an artistic manner. If these suggestions should be carr ed out, we shall see au immense improvement both in personal and mental adorn-ment, and at the same time the ranks of the unemployed will have been perceptibly thinned .- London Globe.

The Tailor-Made Suits.

"I say, old fellow," said Blakely, meeting his friend Harry D. on the street, "I saw you and Edith pass each other yesterday without a sign of recognition. I thought you were en-

gaged!"
"I thought so too," said Harry.
with a deep s gh. 'but that's off.
"How's that?"

"How's that?"

"Well, it's all owing to these infercal fashions some of the women wear
uow—hat, coat, vest, collar, and shirtfront, for all the world like those worn
by the male sex. They'll make a raid
on our pantaloons next."

"I don't quite understand—explain."

"Well, you see I quietly entered Bob
Greenbag's law offlice about dusk one
evening last week and saw Bob setting
tehind a desk with his back toward
me, I stealthily approached, gave him evening last week and saw Bob sitting behind a desk with his back toward me, I steatthily approached, gave him a vigorous and familiar slap on the shoulder, and oried: 'I have come for you old man. You must go with me down to Hatchler's. Lots of gay girls will be there—that pretty little blonde you were mashed on in the bailet of the Black Theater—and I'm going for the plump variety singer—the one I had out to lunch the other might when we all got a little uproarious, you know. Come what d'ye say? Is it a go?' and I tilted his hat down over his eyes, and that settled it."

"How settled it? Did Bob give you away to his cousin Edith?"

"Naw. it wasn't Bob at all. It was the charming Edith herself, dressed in a tailor-made masculine suit, and the Arctic look she gave me as she ewept out of the office without a word told me that my matrimonial prospects in that quarter were everlastingly blasted. Well so long."—New York Graphic.

New York Graphic.

Lippincott's Monthly Magazine.

Lippincott's Monthly Magazine.

The extraordinary success of the "The Quick or the Dead?" renders the appearance of a new novel by Amelie Rives, in the April number of Lippincott's Magazine.

The Quick or the Dead?" has been more widely read and discussed than any novel of Ferent times, "The Witness of the Sun," Miss Rive's new story, is replete with dramatic situations, and gives further and stronger evidence of her rare power in depicting human emotions. It deals with a wider range of characters than the "Quick or the Dead?" and will undoubtedly create an equal if not a greater sensation. Richard Henry Stoddard gives an unusally interesting biographical study of Bayard Taylor. Stoddard and Taylor were friends and comrades for thirty years, and the article is chiefly made up of personal recollections, while an appreciative estimate of Bayard's worth as a poet is given. Alice Weilington Rollins has an amusing little skit, called "If He Had Known," which, by the space that it occupies, proves once more that "brevity is the soul of wit." The departments are bright and interesting, as usual. The Monthly Gossip answers in an intertaining manner various questions propounded. In Book-Talk the editor gives a clear disquisition upon the mutations of public taste regarding novels, and shoots a Parthian arrow at Howells and his school.

The importance of the stove store, the tin shop, the plumbing establishment and the rooling concern is well recognized in every community, but comparatively few persons are acquainted with the handsome manner in which these industries are served by the trade press. The leading paper representing these interests is THE METAL WORKER, of New York, and a review of one of the recent issues of this journal will illustrate the point we have made. The paper in size is 11 x 16 inches, and the issue for March 2 contains no less than 68 pages, being about average in size. The following departments show the classification of the work: "Editorial," "Retail Store," "Roofing and Cornice Notes," "House-Heating Competitions" "Stove Trade Notes," "Steam and Hot Water Circulation," "The Letter Box," "The Tin Shop," "Plumbing and Gasfitting," "Trade Report," and "Miscellaneous." No less than 50 contributors and editorial writers are represented in the columns of this issue, while 93 cuts and diagrams, some of them being very large, are employed to illustrate the text. Besides this, there is a supplemental sheet containing the pattern shapes for a street lamp, which in itself is equal to a dozen or more addia supplemental sheet containing the pattern shapes for a street lamp, which in itself is equal to a dozen or more additional engravings. To say which are the leading articles in this issue would be difficult for every department is so thoroughly sustained that all contain candidates for mention. It depends upon one's interests which is the most important feature of this number. For example, the roofers are treated to an illustrated article on slaters' tools; in the "Tin Shop" is an illustrated article on the making of tinware; a third article tells how the Court-House at St. Joseph, Mo., was heated by steam, while still another reviews a house-heating competition recently conducted by this Journal, and, in addition to announcing, in part, the names of the prize winners, describes one of the prize studies. To sum it all up, the paper is a volume in itself, and contains more technical information than could be found in a good-sized library of the usual sort. It very happily illustrates how the mechanical trades and the trade journals of the land are progressing hand in hand, and how new illustrates how the mechanical that and the trade journals of the land are progressing hand in hand, and how new and advanced ground is being continually occupied, to the advantage of the community at large.

"ROCK ISLAND ROUTE." Chicago, Kansas and Nebraska Ry (C. R. I. and P. Ry. Co; Lessoe.)

Wishing to provide every convenience for the traveling public in addition to their City and Depot offices, have placed on sale, tickets to any and all points reached by the "Great Rock Island Route" and connecting lines at Postoffice huildreached by the "Great Rock Island Route" and connecting lines at Postoffice building, North Topeka. Intending travelers and tourists can obtain any information in regard to routes and rates, secure sleeping car berths and have baggage checked through to destination—North, South, East or West—upon application to:
