FUN IN THE SUN

Most of the time the weather cooperates and there is action in all corners of the Rock Springs 4-H Ranch, south of Junction City. These 4-H'ers from Rice, McPherson, Marion, Saline, and Dickinson Counties find there are more things to do at Rock Springs than they can accomplish in their short visit. Time flies when you're having fun and most of the kids as well as some of the adults would like to stay for another session.

This camp of 453 4-H'ers and advisors had living groups of nine campers to one counselor and the groups were divided according to age. "This way kids feel equal in their own living group and they don't get homesick," one 4-H leader said.

FUN TIME

Whether it's archery, football, swimming, boating, crafts, the rifle range, or just enjoying the beauty of the Rock Springs Ranch, kids and adults have been enjoying the facilities since 1946. The first camp was a tent city with few of the recreation facilities available at the ranch now. Purchased by Kansas 4-H clubs the ranch is operated by the Kansas 4-H Foundation as a non-profit organization.

Feeder Cattle Shortage Predicted To Continue

A world-wide shortage of calves and feeder cattle likely will continue for the next few years, barring any significant expansion of global beef and veal production to satisfy fast-growing demand.

That's the prediction of the U.S. Agriculture Department's foreign crop service. It comes as beef prices in the U.S. are at record highs and those paid for live cattle are the highest in 21 years, all because of greater and greater demand.

"The world shortage of feeder calves may be further irritated as more countries seek to expand beef cattle production by feeding beef imported from distant sources," says Larry E. Stenswick in the Agriculture Department's livestock and meat products division. But, he adds, some countries in the Western Hemisphere that traditionally export beef and cattle, such as the U.S., Mexico, Canada and Argentina, find their own rising needs for beef have restricted the movement of feeder cattle.

As a result, Australia and New Zealand could emerge as important calf suppliers to Japan and other nations that rim the Pacific. The

remote, and expensive, possibility of bringing these calves to the U.S. is even being studied.

And it isn't difficult to see why. Even though cattle men are rushing calves and steers to feed lots as fast as they can, and even though the number of cattle on feed is smartly ahead of last year, there still aren't enough around to make everybody happy. Don F. Magdanz, executive secretary of the National Livestock Feeders Association in Omaha, estimates the nation has enough feed-lot capacity to handle 14 million to 15 million head of cattle; last Jan. 1, he noted, feeders had a record 13.3 million heifers and steers in their lots.

So, feed lot operators are scrambling for cattle, pushing the prices for feeder cattle up even more than prices for ready-to-slaughter animals. Feeder steers weighing 350-450 pounds now sell for \$44.50 to \$50 a 100 pounds, \$6 to \$7 above a year ago; that compares with a recent 21-year high in Omaha of \$37.50 for choice beef cattle, up \$5.50 from a year ago. (Fattened cattle normally weigh about 1,100 pounds each.) Prime grade feeders have sold for as much as \$60 hundred up \$12 from a year ago.

Feed lots are anxious for more animals largely because of climbing beef prices, of course. But more cattle are expected to be marketed in coming weeks, which will blunt

the price rise for the time being at least. Still, the cattle business remains attractive because feed costs are down. At around \$1.25 a bushel in Chicago, corn costs almost 38 cents less than a year ago.

Sources at major feed lots say that many farmers who previously sold them feeder cattle are now fattening the animals themselves. And some cattlemen are sending "green animals" — range cattle that haven't been fattened in a feed lot, to market to cash in on the stampeding demand for beef. Such practices "don't help the future outlook for beef supplies," observes one cattle shipper.

Meanwhile, says Michael S. Turner, extension economist at the University of Nebraska, prices for feeder cattle can be expected to climb further. In the past, he notes, the number of cattle going to feed lots has been increased by decreasing the calf slaughter. But now, he says, the calf slaughter is already so low that the method holds little potential for future increases in feeder cattle. He thinks more imports are the answer, but the Agriculture Department says international competition for feeder calves already is hectic.

The U.S. is a major importer of feeder calves, principally from Mexico and Canada. To ensure that its cattle herd isn't depleted, Mexico controls exports of feeders through

permits. Because of a severe drought early in 1970, Mexico granted permits for larger exports. The weather improved by mid-year and controls were retightened. The

embargo accounted for an 18 percent decline in imports from Mexico to 740,000 head last year, from 907,000 in 1970. In the year ending August, Mexican quotas allow for

mass production

That's the whole idea behind the CO-OP Sow Pow pig production plan. All the swine know-how of Farmland Industries has gone into new sow feeds that produce healthier, more productive sows; larger, more vigorous litters. Then the Sow Pow plan keeps on working to keep sows in shape all the way through lactation to rebreeding.

Sow Pow feeds are part of the CO-OP Meat Market Program, the total plan for producing quality pork more profitably. Get the details from the feed expert at your double-circle CO-OP.

775,000 feeders to be shipped to the U.S.

U.S. imports of feeders from Canada averaged more than 300,000 a year a decade ago, but dropped to less than 35,000 annually recently. Canada is attempting to build up its herd to supply growing demand of its own citizens for more beef. U.S. imports of Canadian veal calves into the northeast rose to 125,000 last year, up considerably from the 50,000 imported annually in the 1960s. But, Agriculture Department officials say, this is offset by a strong, growing Canadian demand for U.S. choice and good grades of slaughter cattle, which is helping swing the net cattle trade between the two countries more toward Canada.

Argentina currently is trying to recover from a dip in its livestock cycle that left her drastically short of cattle to support beef exports and restricted domestic consumption. The Argentine government also is restricting exports of calves.

Cattle numbers are rising sharply in Australia and New Zealand, which are picking up much of the increased demand from such nations as Japan and Korea.

So far, international movement of cattle over long distances has been of relatively little importance to the major beef-producing nations, with the exception of small-scale shipments for breeding purposes, Agriculture Department officials say. In the futures, however, trade links may be established between the growing beef deficit regions in Asia and Europe and the Southern Hemisphere countries in Oceania, South America and Africa that have natural advantages in cow-calf operations.

"But each country will be increasingly affected by the inevitable conflict between increased need for domestic beef and veal production and the strong demand for exports of calves," observes a foreign livestock analyst. "As long as the world demand for beef continues to grow, and there is now technological breakthrough, such as rapid development of twin-calving, a shortage of calves for export will continue."

Egg Production Down 7 Million In May Report

Layers in Kansas produced 65 million eggs during May, down 7 million from May 1971 and the lowest for the month for the last 47 years of record, according to the Kansas Crop and Livestock Reporting Service. The rate of lay during May averaged 2,108 eggs per 100 layers compared with 2,037 a

year ago. There were 3,093,000 hens and pullets of laying age on Kansas farms in May, 13 percent less than a year ago.

The Nation's laying flock produced 6,088 million eggs during May, nearly 2 percent less than in May 1971. Layers on hand during May averaged 308.3 million, 3 percent below a year earlier. Rate of lay during May 1972 averaged 1,975 eggs per 100 layers, up slightly from the 1,950 eggs in May 1971.

Commercial hatcheries in Kansas

hatched 1,090,000 chicks during May, down 9 percent from April this year but 1 percent above May last year. The egg-type chicks hatched during May totaled 900,000, unchanged from a month ago and compares with 832,000 a year earlier. May broiler-type chick hatch was 190,000 compared with 300,000 in April and 249,000 in May a year ago. Prices received for chicks by commercial hatcheries on May 1 were \$47.50 per 100 for hybrid egg-type pullet chicks, \$34.50 per 100 for pure and

crossbreed egg-type pullets and \$19.00 per 100 for broiler-type, straight-run chicks.

Hatcheries in the United States produced 353 million chicks during May compared with 350 million a year ago. Production of broiler-type chicks during May totaled 302 million, an increase of 4 per cent from 289 million hatched a year earlier. The number of broiler-type eggs in incubators on June 1 in the 48 States totaled 254 million, an increase of 6 percent from June 1, ago.

1971. Egg-type chicks hatched during May totaled 51.3 million, a decline of 15 percent from the 60.2 million hatched during May 1971. Egg-type eggs in incubators on June 1 were down 17 percent from a year ago.

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Maurice Merritt, Burlington, Is Winner

Winner, Mrs. Maurice Merritt, 711 North Second Street, Burlington: "Enjoy the recipes so much that Grass & Grain prints and hope everyone will like this recipe."

DREAM CAKE COOKIES

1 cup oleo
1 and one-third cups sugar
2 cups flour
1½ teaspoons baking powder
2 egg yolks
Cream oleo and sugar. Add egg yolks; add flour sifted with baking powder. Spread batter evenly in greased 13x9x2-inch pan.

TOPPING

1 cup brown sugar
1 cup chopped nuts
1 teaspoon vanilla
2 egg whites
Beat egg whites until peaks will keep shape; add brown sugar, nuts and flavoring. Spread over first batter. Bake at 375 degrees for 30 minutes or until crusty. Cool and cut in squares or rectangles. Yields 12-16 servings.

+++++

The following recipe is from Mrs. John Heinrichs, R 1, Endicott, Nebraska:

FIRST PRIZE

RED CHERRY

CHOCOLATE CAKE

1 regular chocolate cake mix
¼ teaspoon soda
1 No. 3 can cherry pie filling
2 eggs
one-third cup boiling water
Combine all ingredients. Beat two minutes by hand, do not use a mixer so cherries will be whole. Bake in two layers or 8x13-inch oblong pan at 350 degrees for 35-40 minutes. Frost or serve with Dream Whip or Ice Cream. Cake improves with age.

+++++

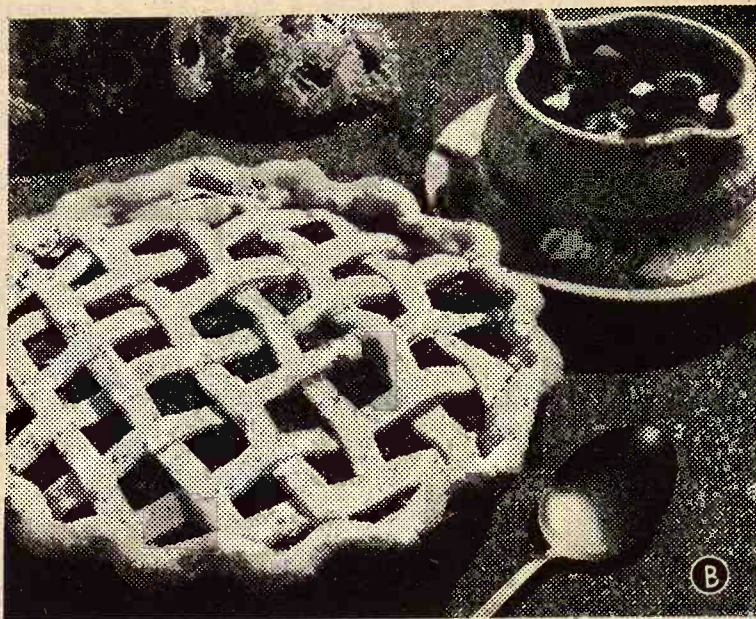

Suds Blinds In Bathtub

Wash venetian blinds in a mixture of good suds and a bleach in the bathtub. Swish them up and down and then rinse several times.

Step-Saver

Hang a tote bag on the rail of the stairway for the collection of small articles that must go upstairs. Then all of the items may be put in place in one trip.

This Meat Pie Makes For Extraordinary Eating

From time to time it's fun to put a dish as frankly extraordinary as this South American Meat pie on your table. While it's true that rolling and laticing the pastry will require more preparation time, the results, calculated in raves from your family, are well worth the few extra minutes.

To serve the pie, slice it into wedges. Spoon over each serving some of the remaining gravy, dressed up with sliced olives and hard-cooked eggs.

Round out your meal with hearts of lettuce salad, a fruit dessert and milk and coffee.

SOUTH AMERICAN MEAT PIE

1 pound ground beef
½ cup chopped green pepper
½ cup chopped tomato
one-third cup minced onion
¾ teaspoon cumin
½ teaspoon salt
1 can (10¾ ounces) beef gravy
1 package (about 10 ounces) pie crust mix, prepared
3 stuffed olives, sliced
1 hard-cooked egg, chopped
Dash cayenne

In skillet cook beef, green pepper, tomato, onion, ½ teaspoon cumin and salt until vegetables are tender. Pour off fat. Stir in ¼ cup gravy. Cool. Roll pastry for bottom of 8-inch

pie pan and strips ½-inch wide for lattice top. Fill pie shell with meat mixture; top with latticed pastry. Bake at 425 degrees for 25 minutes. Meanwhile, in saucepan, combine remaining ingredients. Heat; stir now and then. Serve sauce with pie. Makes four servings.

Practice Safety When Using A Ladder

Before attempting to repair or repaint high surfaces, keep in mind the following tips for indoor ladder safety.

The best type ladder for most light service around the house is a household ladder, varying in size from three to six feet. For more extensive work, a commercial ladder, three to 12 feet, is best. Greater safety is provided when the ladder hacks bear full weight against the side rail. Whatever type ladder you use, be sure it is secure and properly adjusted before trusting it with your full weight.

It's best not to paint a ladder, for this can cover any potentially dangerous cracks. Instead, use linseed oil or a coat or two of clear varnish to preserve the wood of a new ladder. Treat metal areas with oil to prevent rust.

Novice Can Handle
This Pickle Recipe

Plan ahead like our forefathers and save some of the bounty of the harvest season by canning. A bit of the harvest in the middle winter will be most welcome.

Perhaps the quickest and most economical product to can is the cucumber, even for beginners.

SWEET-PICKLE CHIPS

- 4 pounds 3-4-inch pickling cucumbers
- 1 quart distilled white vinegar
- 3 tablespoons salt
- 1 tablespoon mustard seed
- 1/2 cup granulated sugar
- 1 and two-thirds cups distilled white vinegar
- 3 cups granulated sugar
- 1 tablespoon whole allspice

2 1/4 teaspoons celery seed
Wash cucumbers thoroughly. Cut crosswise into 1/4-inch slices. Combine cucumbers with next 4 ingredients in large saucepan or Dutch oven. Simmer, covered, five to seven minutes or until cucumbers just change color from bright to dull green. Drain and discard liquid. Pack hot slices into sterilized jars. Combine 1 and two-thirds cups vinegar and remaining ingredients and heat to boiling. Continue simmering while adding hot syrup to one jar at a time. Fill to within 1/4 inch of top, making sure vinegar solution covers cucumbers. Seal each jar at once. Makes four to five pints.

Tips On Planning
Your Vacation Wardrobe

When planning your vacation wardrobe, practicality should be spiced with a dash of frivolity. Practicality helps you avoid problems, stay comfortable, and adds convenience to keeping up your appearance.

A little frivolity recognizes that part of the fun of getting away from it all is the chance to get into some exciting fashion looks.

On the practical side, clothes should be color-coordinated, able to serve double duty, and of easy-care materials. That cuts down on luggage and simplifies the problem of what to wear with what.

Keeping your travel wardrobe in one or two basic colors doesn't necessarily mean monotony. You can have solids, prints, plaids, and interesting trims. You can still get by with a minimum of shoes and handbags.

You will stand out in a crowd of fashions with an exciting print, mixed plaids that coordinate, or colorful embroidery. Synthetic knits are leaders among travelers since most of them don't wrinkle and are washable.

Standards for most vacationers are jacket, pants, and skirts, plus blouses including soft knit types.

Pants of all lengths usually travel and at least one sweater should go along.

Dress codes are rather liberal at resorts, where shorts are regulation wear, with and without skirts. Swimsuits are a must too, and if you're only taking one, select one that is quick-drying.

Shoes to take along might include a pair for walking, a pair for dressier daytime wear and a pair for evening. Consider comfort first in the pair you will wear most often on your trip.

A roomy daytime handbag and one for evening use should be enough. Add flair to your costumes with bright scarves, belts, hair accessories, costume jewelry, and a pretty shawl. An easy-to-style synthetic wig can make you a fast fashion plate while traveling too!

film wrap. Dehydration and darkening of the cooked egg white can be prevented by keeping them in a closed container covered with water. These eggs should not be kept more than seven to ten days under refrigeration.

Handy For Corners

As you wash windowpanes use a small bottlebrush to remove dust from the corners.

Cleaning Method For
Vacuum Bottle

To clean a vacuum bottle, put a little cleanser and water in it. Place your hand over the mouth of the bottle and shake vigorously. Repeat several times then rinse several times.

Wash With Care

Wash hand-painted decorations on china or glassware by hand with medium hot water and mild suds, then rinse.

Remove Marks From Tile

Remove black marks caused by metal furniture rubbing against ceramic tile with a scratchless scouring powder. Prevent further tarnishing by coating the metal legs with clear laquer.

Ends Climbing

Hang a mirror on the ceiling of your storage closet and it will let you see what is on the top shelf without climbing up on a ladder.

Anchors Mattress

Put a muslin sheet over box springs to keep a foam mattress from sliding.

Add Sauce To Leftover Dessert

When gingerbread or applesauce cake is back for the second time, dress it up with an elegant soft custard sauce.

Removes Soap Film

Soak plastic shower curtains in a mild solution of liquid bleach and detergent for 30 minutes to remove soap film and soil. Curtains may then be washed in the automatic washer in the usual way.

Laundry Fiberglass Drapes Separately

Fiberglass draperies should be laundered separately in a tub or sink by themselves. Swish the curtains around gently in warm, soapy water without wringing or twisting. Rinse them in cool water several times to be sure all the soap is removed. Hang them on a turkish towel.

Speedier Mopping

To speed floor washing, use a two-compartment bucket, one compartment for your cleaning solution and the other for rinse water.

Clean Gas Burners With Pipe Cleaner

Clean the holes in the burners of a gas stove with a pipe cleaner.

Organic Farming In Western Kansas

ULYSSES — Seven Southwest Kansas farmers and a horticulturalist from Colorado State University are currently growing vegetables for production of organic foods.

Organic foods, also known as health foods, are those which are grown without synthetic fertilizers or pesticides.

Charles Basham, a horticulturalist at Colorado State University and a former resident of Ulysses, had the idea of forming a health foods corporation when he was the Kansas State University Extension horticulturalist for Grant County.

The name of the corporation is Western National Growers, Inc. The seven farmers are growing

the organic vegetables in a 100 acre area in Ulysses, with each farmer growing about 14 acres.

John Boylen, Ulysses, is growing tomatoes, pinto beans and black-eyed peas for the corporation. "It's a little more work to grow the vegetables organically, but it's all fun," said Boylen.

Boylen said the vegetables are irrigated just like his other crops — but he must use manure instead of a synthetic fertilizer.

Dale Williams is growing tomatoes and hominy corn for the corporation now and he will plant other vegetables later in the summer.

The Development Corporation will construct a cannery in Ulysses to begin operation in late August or early September, according to Basham.

"We anticipate hiring about 20-25 people to work in the cannery," said Williams, one of the members of the corporation.

Other members of the corporation come from Stevens and Stanton Counties.

Other vegetables to be grown are beets, carrots, cabbage, cucumbers, pinto beans and spinach.

"There seems to be a ready market for health foods now, said Basham. "People seem to prefer to eat food that isn't treated with chemicals."

"People want to eat health or organic foods as a precautionary measure."

Basham said health foods were more expensive than ordinary foods, but "people don't want residues from fertilizers or pesticides on their food."

Basham said the Ulysses-grown foods would be distributed by wholesalers "mostly to health food stores in the Midwest."

For the first year he expects to produce about 200,000 cases of vegetables.

Mileage Check On Motor Vehicles Sales After July 1

Beginning July 1, a certification of mileage on motor vehicles must accompany the certificate of title with each motor vehicle sale, according to Elton D. Lobban, Superintendent, Motor Vehicle Department.

Lobban said, "The new law on transfer of ownership on motor vehicles enacted by the 1972 Kansas Legislature will aid in assuring the person who buys a motor vehicle that the recorded mileage for the vehicle is correct. This will help eliminate reported cases of speedometer mileage being turned back."

Vehicle titles issued after July 1, 1972, will have a space for an abstract of mileage for each owner of the vehicle to show when the title is assigned.

"Persons desiring to sell or trade their vehicle after July 1 who have the older style title will have to obtain a certification of mileage slip as their present title does not contain the abstract of mileage on it," Lobban said. "These forms are available from their local automobile dealer or County Treasurer's Office."

"Under the new statute, no motor vehicle can be sold or traded after July 1 without a notarized abstract of mileage or certification of mileage for that vehicle. It is the responsibility of the person selling a motor vehicle to furnish this," Lobban reiterated.

which about 45 million to 50 million are expected to be available for marketing during the first 12 months after July 1.

Producers sought permission to make the "light" whisky because they felt distillers abroad, as well as those of vodka and gin here, had an advantage. Distillers of traditional whisky in the United States must use new oak barrels for each batch. These new barrels can cost as much as \$37 apiece. After a single use, the barrel must be sold, with many of them going abroad for \$3 to \$10 each, and there they can be used over and over.

"Light" whisky is best made in barrels that are reused, and American distillers will be able to age it in reused barrels.

There has been a growing demand for liquor with a taste lighter than that of regular American whiskies, particularly among women and young people.

FMHA Policy Change To Help Rural Families

A policy changed by the Farmers Home Administration will allow many Kansas families to qualify for rural housing loans who previously were ineligible.

"The new FMHA policy allows just one-half of the wife's gross

income to be included in determining whether the total family income is within the maximum limit for loan eligibility, in families where both husband and wife are employed," Morgan Williams, state director, said.

Williams said that previously all of the wife's income had to be included in determining family income.

He said the total family income after deducting 5 per cent of the gross income plus \$300 per-child

must not exceed \$8,500. Williams said many families in the state have not qualified in the past because the wife's earnings pushed the family income over the ceiling.

Newly eligible families must demonstrate that they otherwise merit FMHA financing, and that credit is not available from regular commercial sources. He said loans may be made to families that will buy or build homes in open country or towns of up to 10,000 population.

Torture Toys Banned In California Stores

Toy bombs, grenades and torture instruments are being removed from shelves of California stores to beat the July 1 deadline of a new state law aimed at reducing violent influences on kids' playtime.

The law, passed at the current session of the legislature, prohibits manufacture or sale of such toys and provides for fines up to \$300. It is believed the first of its kind in the country.

Most major merchants checked disclaimed handling these toys in any great volume or said the demand for them had dwindled because of antiwar feeling and alarm over increasing crime.

Assemblyman John Burton of San Francisco, who introduced the legislation, commented:

"We are indoctrinated toward violence. We have enough of that sort of thing around without encouraging kids in it. The next step would be to ban sophisticated war toys. Anything that makes war and violence attractive and inviting is a bad thing. How anyone can label these things as toys is beyond me."

The law specifically exempts "any model of an aircraft, ship, motor vehicle, railroad engine, car or rocketship or any spacecraft" from the ban. It does not apply to toy guns.

Los Angeles County Dist. Atty. Joseph Busch said he was notifying,

city attorneys, law enforcement officers, manufacturers, wholesale distributors and major retailers that the law becomes effective July 1.

He said his office's unit which makes inspections for unsafe toys will check for banned items.

"Violence in our country should not be further encouraged by the sale of grisly depictions of torture and torture devices," he said. "Law enforcement has enough problems with real bombs and grenades without allowing the proliferation of false explosives."

The Toy Manufacturers of America, industry organization based in New York, says the California law is the only one of its kind in the country.

"I think it (the law) will have very little effect on the industry," said association President Walter Ross. "There was a series of vampire and torture model kits on the market a few years ago. I believe that sort of thing inspired the Burton Act. The growing unpopularity of the Vietnam war did much to decrease the popularity of war-type toys."

Mattel, Inc., of suburban Hawthorne, the biggest U.S. toy manufacturer, said it wasn't manufacturing the type of toys banned.

"Most of our 'monster' sales have slowed down," said a spokesman for the Los Angeles branch of F.A.O. Schwarz, famed toy store on New York's Fifth Avenue. "War toys are not carried."

Richard Lewis, manager of the three-store "The Toy Shop" chain in Sacramento said he quit ordering torture toy kits and grenades when

he heard the Burton bill had passed last December.

In Los Angeles, a spokesman for F. W. Woolworth Co., said, "We foresee no real effect on our stores due to the act. We support it 100 per cent. We have tried to keep this type of toy off the shelves."

And Sears, Roebuck & Co., said, "We were never involved in the torture toy field. We have nothing we feel will be questionable under the law."

Never-Never Lands Trick Many Buyers

Many developers promise "never-never lands of blue skies, clear water and virgin timber but don't mention the 'unlimited problems and drawbacks' of their property," says a federal official.

John R. McDowell, deputy administrator of Housing and Urban Development, opened a series of hearings in the first phase of a nation-wide crackdown on unscrupulous land developers.

He said Kansas City is a major "Some of them use separate Ozarks and Rocky Mountain areas, and his office gets about 12 complaints a week from this section."

The Federal Land Registration Law, effective in April, 1969, requires developers to give buyers a property report describing the kind of facilities to be provided, the nature of surrounding develop-

ments, title and sewer restriction.

"The salesmen are required to offer the property report at the time or prior to purchase," McDowell said. "All too often the salesman tells the buyer not to worry about the property report. This is the biggest violation we have in interstate land sales."

"Unfortunately, these tactics have been successful with even relatively sophisticated purchasers who are unaware of their rights under federal law," he added.

A buyer can revoke a contract if he is not given a property report at least 48 hours before he signs. However, McDowell said, many buyers waive the 48-hour clause by

If you want a good light truck, take the muscle from a good heavy truck.

Take the 392 cubic inch V-8 from a big INTERNATIONAL LOADSTAR® for instance. And make that engine available as an option in the International 1110 pickup truck.

Then, give the pickup leaf-springs all around. So it has the suspension to handle really-heavy loads.

But remember that a heavy truck engine and a heavy truck transmission and a heavy truck suspension don't have to mean a heavy touch. So offer power steering and

brakes. And deluxe vinyl upholstery. Air conditioning. Even an AM/FM radio. In fact, offer practically any option anyone could want.

Look, any pickup's fine for riding around the farm. But if you also expect it to work around the farm, you want something more. The International 1110. The pickup with the Loadstar muscle.

When you're at your International dealer, take a test drive. In both of them.

Free Fingerlings To Aid Kansas Fishing Potential

signing a statement that he and his spouse inspected the lot. Witnesses cited these cases as property inaccessible by a Tennessee firm sold to Camden County, Missouri, not provide property improvements. A Missouri firm failed to provide water and sewage facilities to pondowners who meet certain requirements.

PRATT — Pondowners of Kansas would start making plans for stocking their ponds with fish provided by the Fish and Game Department, advises Roy Schoonover, Pratt, chief of the fisheries division. According to Schoonover, the department again this fall will distribute largemouth bass, bluegill and channel catfish fingerlings at no cost to pondowners who meet certain requirements.

These requirements set by the Department are to assure success for the fish, the pondowner and Kansas anglers in general.

Ponds must be at least ¼ acre and deep enough to maintain fishlife during average periods of drought and ice cover. They also must be void of any existing fish, before stocking can take place, Schoonover stated.

He explained that if fingerlings are put into ponds already con-

taining established fish populations, their survival is low because often the larger fish eat the fingerlings, and the fingerlings are less able to compete with the larger fish for food and space. The Department will make just the initial stocking in a private pond.

In return for the Department providing the fish, the pondowner and tenant agree for a 10-year period that all Kansas fishing regulations are in effect for that water. Also, all persons except the pondowner, tenant and their immediate families, living with them, who fish the pond are subject to the state's fishing license requirements and game protectors are granted access to the property for law enforcement purposes.

"The stocking needs for state, county and municipal waters varies every year," he said. "The Department does not stock these larger bodies of water in a random fashion. Rather, stocking is based on scientific investigations into the need of a particular impoundment for a particular species at a particular time" he explained.

"The amount of private pond stocking each year, therefore, is somewhat dependent on the amount we have to stock in public waters."

Schoonover pointed out some of the benefits derived from the Department stocking private waters:

"First, the overriding objective of the fisheries division of the Fish and Game Department is to provide maximum fishing opportunities, with the highest rate of catch success for the people of the state."

Since one of the largest fishing resources of the state includes nearly 90,000 private ponds and lakes comprising more than 120,000 surface acres of water, Schoonover declared that maintaining and improving private pond fishing certainly will aid that objective.

"If every pondowner allowed only five persons, besides his own family, to fish his pond, that would mean fishing resources are available to more than a half million persons," he said. The Fish and Game Department is aware that a large number of Kansas fishermen do have access to these private impoundments.

"Because pond fishing supports a large number of fishermen across

the state, it relieves fishing pressure at the public fishing areas. Spreading out the fisheries resources between private and public areas so that neither is fished too heavily is a benefit to all fishermen."

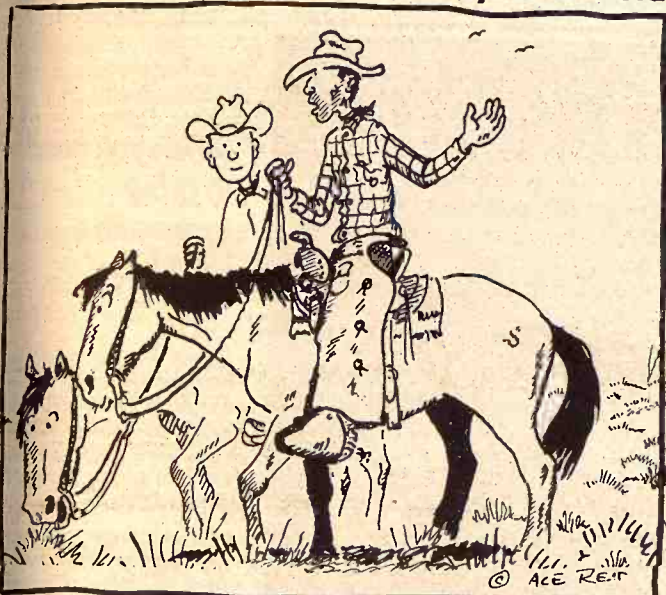

Schoonover said an incidental benefit of stocking private waters is that during periods of high overflow, some of the state provided fish may

be re-located to nearby streams with the flood water. Catchable fish populations of some of the state's smaller streams have been aided because of this occurrence he said.

Pondowners and tenants can obtain applications from the Fish and Game Department's headquarters at Pratt, from state game protectors, or from Soil Conservation District offices.

BULK DEHY

Dehydrated Alfalfa in Pellets

For All Livestock And Poultry — per ton \$40

BEEF CATTLE

A couple of cents worth of Dehy per day will give a nickel's worth of extra gain per day in fattening cattle rations. Even small amounts of Dehy in a ration resulted in increased gain and feed efficiency.

DAIRY CATTLE

Adding Dehy to your usual dairy mix helps keep production levels up longer, resulting in more milk and a healthier herd. Your cows will maintain their "calving condition" longer, too.

HOGS

Dehy supplies protein, vitamins and minerals needed by breeding animals. It will increase the vigor, health and livability of newborn pigs and increase the percentage of pigs weaned.

SHEEP

Feeding Dehy before and during the breeding season will improve breeding conditions, increase lamb growth, stimulate milk production, produce healthier and thriftier lambs.

To feed modern dehydrated alfalfa . . . put it where livestock can get it like any other feed. You'll reap all the benefits, the low price will insure profits from the start. Come or call — haul yours away today.

Musk Thistle Thrives In Kansas

Like many European imports the musk thistle's beauty belies its dangerousness. While ladies in the city nurture it along the farmer is trying his best to eradicate it.

Grazing land is squeezed to non-production. Ft. Riley has battled it on its reservation. Reservoir recreation areas fight it. But the purple flowered musk thistle continues to bloom.

Byron Patton, manager of the state weed and pesticide division, said any estimate on the money damage caused by the thistle would be guesswork. Livestock won't graze where the plant grows because of its thorns.

Patton's office coordinates county agencies in attempts to eliminate the musk thistle.

Patton said, "Its spread is determined mainly by weather conditions, the prevailing wind currents and humidity. Last year when the seed was falling in July and August it was humid so a lot of it just fell on the ground."

Patton said musk thistle came to this country from Russia as an ornamental plant. He said it has been in Kansas for many years, entering from Nebraska.

The spread of musk thistle has been from the northeast to the southwest in the state. Musk thistle is present in pastures in half of the state laying northeast of a diagonal line drawn from the state's northwest corner to the southeast corner, Patton said.

Evan Swartz, Shawnee County noxious weed director, said much of the damage by musk thistle may not be realized for 5 to 10 years. He said the weed may take over half the grazing space in a pasture. But the owner of the pasture continues to put the same number of animals on the land. The result is that part of the land becomes overgrazed.

The musk thistle competes for sun, moisture and nutrients with the grass. While the land loses value, cattle don't gain weight.

Patton said musk thistle first came to the attention of his department when farmers came to county courthouses asking for adjustments on the valuation of their land because musk thistle was cutting into their income.

In 1963, Kansas recognized musk thistle as a noxious weed after it had been present as a pest for 20 to 25 years, Patton estimated. He said the spread of musk thistle has been slowed. Halting the weed usually depends on the effectiveness of local programs.

The musk thistle seed is wind carried and supported by downy puffs from the flower. Don Lackamp, Osage County agent, said the seed can be carried as far as 30 miles.

Lackamp said, "People who have musk thistle, know about it and don't do anything about it should be prosecuted."

Charles L. Drake, who assists his father, Charles Drake Jr., in the Osage County noxious weed department, said fines for ignoring musk thistle range from \$50 to \$500.

He said most persons will cooperate when notified that they have the weed on their land.

Osage County sells a herbicide, 2, 4-D acid, to farmers at half price — the county stands half the cost — for control of musk thistle, Drake said. He estimated 500 farmers have been in this spring to get spray.

Swartz called 2,4-D "one of the oldest, safest chemicals we have. It doesn't hurt grass, just broadleaf plants. It is biodegradable (breaks down fast by natural means when exposed to the elements). We do have to be careful that it doesn't drift to anyone's garden."

Urban areas produce special problems. He discovers gardeners in Topeka who cultivate musk thistle, or upon discovering the "beautiful plant" keep the grass pulled from around it. "Sometimes they get mad at us for cutting it out," he said.

"It's a public relations job. We usually take a pamphlet on musk thistle along for them to read. Then they're more understanding." Swartz finds musk thistle growing along highways, railroads, in cemeteries, schoolyards and alleys. "The seed goes down in the fall, and the plants are there in the spring, just like dandelions," he said.

Drake said he once saw persons in Kansas City spraying musk thistle blossoms silver and gold for winter bouquets.

Darold Marlow Wabaunsee County Agent, said the musk thistle infestation is spotty in Wabaunsee County. He said there is some problem with everyone learning to identify the plant. Too many persons

get excited over the wrong thistles. Patton said the purple flowers of musk thistle are shaped more like a powder puff while the flowers of other thistles are shaped more like shaving brushes. The foliage is a definite green, but may have a silver cast to the underpart of the leaves. Musk thistle grows three to four feet tall.

Drake Jr. said once the plant blooms, the heads should be cut off and burned to destroy them. Swartz reminded landowners that spraying one year will not necessarily wipe out all musk thistle because seed from the plant may germinate anytime over a three-year period.

Marlow said spraying should be done by now, but it is not too late. He recommended using one pound of 2,4-D per acre for smaller plants or an average treatment of 1½ pounds per acre for the usual grouping of plants. He said if plants have blossomed, the best way to eradicate them is to go to the state limit of two pounds of 2,4-D per acre to "burn" the plants with herbicide.

Swartz said there is some evidence musk thistle is becoming even better adapted to conditions in Kansas. "It was never seen much in wheat or alfalfa fields until the last couple of years," he said. "It's not much of a problem in most crops since it can't take continuous cultivation."

NEW PHOTOGRAPHY CLASSES IN 1972 STATE FAIR

There will be two new classes for Photography in the Fine Arts Department of the 1972 Kansas State Fair. The subject matter for this

competition shall be related to either wheat production or marketing and is sponsored by the Kansas Wheat Commission, Hutchinson.

When you need to grow — grow with a PCA loan

Farms and ranches, like businesses these days, operate on a basis of high and low profit margin. Operators who find they have to grow, choose to use a PCA loan.

A PCA's only business is financing agriculture loans. Experienced loan officers give good advice along with needs and have realistic payment schedules. The loans are owned by the farmer, use them.

If you would rather grow, go, talk over your plans with your Production Credit Association.

Works like a truck.

What a difference Ford's two front axles make. Pickup driving becomes pure pleasure. Steering is steady, precise. Cornering is flat with little sidesway on curves. Nosedive when braking is practically eliminated. This is Ford's exclusive Twin-I-Beam independent front suspension—with a forged I-beam axle and big coil spring for each front wheel so each wheel steps over bumps independently and cushions the ride. In the rear, a unique leaf-spring suspension is offered that automatically adjusts spring stiffness to keep

the ride smooth, whether loaded or light. And Fords are built to stand up under big loads, too. 92 out of every 100 Ford trucks sold in the past 12 years are still on the job. Visit your Ford Dealer soon. Get a fully detailed pickup catalog and test-drive a new Ford. Sit back in a cab that's roomy enough for three broad-shouldered men and quiet enough to enjoy stereo music. Experience the ride, the handling, and the comfort you thought only a passenger car could offer.

Grain Trade Expects Abnormalities

Rod Turnbull
Kansas City Board of Trade

By its very nature, the grain
business is periodically subjected to
dramatic events or situations which
temporarily have major price in-
fluence.

While such situations that are
affecting price are abnormal —
which is why they are affecting
markets — the fact that they exist is
normal. In other words, as veterans
of the Kansas City Board of Trade
will readily affirm, the grain
business has learned to expect the
usual and so have farmers.

And when the abnormal situation
is confirmed as a fact or
passes completely from the scene,
grain prices once again respond to
what are called the fundamentals. In
fact, the fundamentals never are
completely ignored, even though
they may be temporarily over-
shadowed.

It is intriguing to wonder in times
when prices are fluctuating and
news on the bizarre side is having
some influence, just how much of the
changes may be attributed to
news and how much to the
fundamentals.

Within the last year or so, many
examples of news of the exotic or at
least unusual type which would
affect prices have appeared on the
market scene. The most recent and
one of the most important was
President Nixon's visit to the Soviet
Union. From the very day that the
resident revealed he was going to
make the trip, grain prices were
affected. In this situation, the
market was strengthened to some
degree on the premise that through
negotiations, the U.S. might
make a large sale of feed grains or
soybeans to the Soviet Union.

As it turned out, no announcement
came from the Russian negotiations
pertaining to a big sale of grains by
the United States.
The drama that such an an-
nouncement might have created,
faded away. Likewise, the sup-
portive strength that the possibility
of a big grain deal had given
markets disappeared. And, it could
be shown that prices weakened
heavily over the disappointment that
came with the revelation that sales
had not been made.

But in almost no time at all, the
market was assessing new factors
that might influence current values
as well as future prices. Ironically,
apparently the government and the
market still think that in the long run,

this country will be doing more grain
business with the Soviet Union.

It might be said that something
that could be developed over
months, such as expanded trade
with the Soviet Union, would be in
the category of a fundamental, while
a surprise announcement of a sale
would be just that.

Late last Fall for a couple of
weeks, rumors persisted throughout
the trade that this country was
to make big sales of feed grains to
the Soviet Union. This time, the
rumors were confirmed. Two major
U.S. firms did sell large amounts of
corn, barley and oats to Russia.
These were unexpected sales, and
they reduced the supplies of these
grains in the United States. This
became an obvious market factor.

Through the late Winter and early
Spring, parts of Texas, Kansas and
Oklahoma were suffering from a
severe drought. Wheat prospects in
the area were threatened. For many
weeks, this drought was mentioned
almost every day by market
analysts commenting on wheat
prices. Then rains began to fall.
First one section, then another got
moisture. In some areas, the rains
came too late to do much good, but in
others recovery was substantial by
the time the harvest was under way,
the Spring drought had diminished
as a market factor. The trade then
was interested in harvest yields and
the quality of the grain — both
fundamentals.

The war last Winter between
Pakistan and India over Bangladesh
disrupted sales of soybean oil and
attributed to low oil prices.

When news of a dramatic nature is
influencing price changes, the
tendency is to attribute wide fluc-
tuations to the action of speculators.
There can be some truth to this
assumption, but generally it is not
the full story.

It might be assumed, for instance,
that if speculators through

President Nixon would be successful
in negotiating a big sale of corn or
soybeans to Russia, they would have
been inclined to buy these com-
modities in the hope that they would
"cash in" on higher prices.

But they would not be alone.
Farmers all over the country have
access to the same news. If they
thought prices would rise because
of business with Russia, they would be
inclined to hold off on the sale of any
grain until the transaction was
completed.

And how about the processors or
importers? In each case, if they
needed grain, the obvious move
would be to get it bought ahead of an
anticipated price rise. Such pur-
chases would tend to strengthen
prices.

In every instance, the speculator,
farmer, processor, or importer has a
decision to make on what he is going
to do, and these decisions make the
market.

What are the fundamentals that
affect prices every day? The list is
long. Certainly, it would include
crop reports, data on utilization such
as the statistics on stocks in all
positions, the weekly export figures,
data on the general economy in this
country and around the world, and in
fact, anything that would contribute
information in the supply and
demand category.

\$13.5 Million To Kansas FmHA

About \$13.5 million has been
allocated to Kansas for farm real
estate loans for the fiscal year
beginning 1973, Morgan Williams,
director of the Farmers Home
Administration (FmHA) said.

The funds are Kansas' share of
\$350 million being allocated
nationwide.

Williams said the loan funds will
be used in conjunction with private

real estate lenders who have agreed
to make simultaneous loans with
FmHA.

The director said, "We expect that
during the next year over \$8-million
in private loan funds will be loaned
in participation with FmHA loan
funds. This joint loan procedure
stretches the impact of our farm
real estate program to over \$20
million."

Farm Income Measured?

Farmers' returns for their labor and management reached an all-time high on one group of Kansas farms in 1971, according to a report just issued by Kansas State University.

Dig a little deeper into the figures, however, and you get a more sobering look at the way things are going down on the farm.

Labor and management returns averaged \$9,597 for the more than 3,500 farmers enrolled in Kansas State University's Farm Management Association program, according to the organization's annual report. This is almost double last year's figure.

"Return to labor and management is the most meaningful figure we have devised to calculate the year's results for the farmer," says Don Pretzer, K-State economist who directs the farm management program.

"It measures net farm income minus six per cent interest on the operator's equity in his business, plus a small charge for unpaid family labor. This is the closest we can come to figuring a 'salary' for the farmer."

Assuming the farmer devoted 8,000 hours to his business during the year — or about 58 hours a week — his 'salary' would be about \$3.20 an hour for his labor and for managing an average investment of more than \$270,000.

However, some farms fared much better than others. For comparison, the report divides farms into four groups according to net income.

Average return for labor and

management was a deficit on the "low one-fourth" of the farms. "These farmers were paying themselves to work," Pretzer says. "They could sell their assets, invest the money at six per cent and show a higher return than they received from farming."

The report is evidence of a "dualism" which has characterized farming in recent years, Pretzer explains. The spread between high and low income farms has been widening steadily. This year the difference in net income was more than \$35,000. Ten years ago, it was half this much.

Pretzer points out that the high income farms keep growing each year and are able to offset increasing expenses. Low-income farmers are especially hard-hit by the cost-price squeeze. Due to a lack of opportunity or resources, they haven't been able to keep ahead of increasing expenses.

Pretzer believes the high income operators are more aggressive. They adopt the latest technology more quickly and are not afraid to borrow money to reinvest in the farm business. In short, they are better managers.

In general, farmers in the western two-thirds of Kansas fared better than the eastern third. Returns to labor and management averaged \$11,971 in the southwestern part of the state, \$11,524 in the northwest, \$10,569 in the south central, \$9,977 in the north central, \$7,561 in the southeast and \$6,253 in the northeast.

Higher crop yields and beef prices helped push income up last year,

Pretzer says. Gross value of crops was up more than \$10 per acre. Gross income from cattle soared almost 30 per cent.

Gross income from hogs jumped more than 20 per cent, despite a weaker hog market. This indicates

that farmers increased their pig numbers last year, Pretzer says.

Farms enrolled in the farm management program are all family-type operation and are representative of commercial agriculture in Kansas, Pretzer

notes.

These operations have averaged about 1.6 men per farm for each of the last 10 years, he says. This indicates that farmers are replacing labor with capital in terms of larger machinery

SALE EVERY
Thursday

We had a decent run of cattle for our sale last Thursday, June 22, considering the time of year. The market was active to stronger on all classes of cattle. In fact, it was sharply higher on killing cows and bulls.

We are expecting a good run of cattle for this coming Thursday. If you have any cattle you want to sell at this time, call us and we'll be glad to look them over for you. Or just bring them in. We'll have buyers and a good market.

Following is a partial listing of the sale last Thursday:

FARMERS' PROBLEMS

Down wheat and threatening clouds are just two of the reasons farmers get gray hairs during harvest. This field in central Dickinson county is an example of the wheat that has lodged in the Grass and Grain area. Harvest is finally in full swing and weather permitting should be well under control by the end of this week.

Increased Use Of Food Additives By 1980 Seen

Processed foods and additives may be dirty words to natural foods advocates, but like them or not, Americans will eat more of them by the '80s, according to an economist from California's Stanford University.

Dr. Robert E. Gentry, a food and agriculture economist at Stanford Research Institute, predicted strong growth for fabricated foods, snacks

and frozen foods with a weakening demand for fresh produce.

As use of manufactured foods grows, the business in additives will boom. Sales of additives to the food industry amounted to \$25 million in 1966, Dr. Gentry said. By 1980, \$55 billion worth of additives will go into food processing, an annual increase of 6.4 per cent. Included in this projection are preservatives and antioxidants, acidulants, leavening agents, emulsifiers, stabilizers and thickeners and food colors.

Most rapid growth expected in foods themselves are frozen foods. Dr. Gentry predicted a 5.6 per cent annual increase as compared with 1.2 per cent for foods in

general. In 1970 Americans consumed 16 billion pounds of frozen foods, by 1980 they will use 27 billion pounds.

Restaurants have started the trend toward frozen foods, Gentry pointed out. Frozen convenience foods bridge the gap between labor shortages and mass feeding. Labor shortages in Europe will push frozen foods on the restaurant industry there, too, Dr. Gentry predicted.

Snacks, a growing industry for several years, will continue their upswing. In 1968 Americans spent \$1.8 billion for snack foods and by 1980 will spend 9 billion a year by Dr. Gentry's projections.

Fabricated foods, the meat analogs and other protein substitutes, will become more prominent in the market, according to Dr. Gentry. He pointed out that spun soy protein already is used in a few products such as bacon-flavored bits. It will be used in more foods, he predicted.

Other new protein foods include yeast and bacteria grown on petroleum distillates, algae and oilseed proteins.

But they can be used as meat

extenders in food processing, partial meat substitutes in food service and retail outlets, meat analogs, snacks, beverages, bakery goods and cereals.

"The first penetration undoubtedly will be in the food service industry," he said, "where a meat analog or extended meat may be used with a sauce or seasoning."

Dr. Gentry pointed out the food service industry probably will be pressed into using non-meat proteins in quantity by rising food costs. Beef, pork and chicken substitutes already are available.

Consumption of fresh fruits and vegetables will continue to go down. Americans ate an average 90 pounds per person in 1960, 70 pounds in 1970 and will eat a projected 50 pounds each in 1980, Dr. Gentry projected.

Ribbon Cutting Set For I-35

McPherson — Gov. Robert B. Docking will cut a ribbon at 10 a.m. June 29 to open I-35 between McPherson and Newton.

The ceremony will mark completion of the interstate road between Wichita and Minneapolis and is being planned as a cooperative effort of communities along the entire route.

Ribbon cutting will be near the intersection of K61 and the original crossing of the Santa Fe Trail. Chamber of Commerce Manager Jack Groves said the ceremony site was chosen by a committee representing communities along the route to coincide with McPherson's Centennial year ceremonies. A special luncheon is planned at the Elks Lodge.

Tanneries Emit Polluting Effluents

Laboratory tests show that lime-sulfide solutions used in tanneries to remove hair from hides are highly polluting effluents, but can become a source of valuable protein, the Agriculture Department reports.

The department said the cost of removing the protein may be offset, or perhaps even exceeded by, the economic value of the material recovered.

"The protein has obvious promise as a feedstuff, and may also have

14 Grass & Grain
June 27, 1972

applications as an ingredient of human foods or of cosmetics, adhesives, or other industrial products," the report said.

William F. Happich, a chemist, said the treatment as performed in the Agricultural Research Service laboratory produced a protein of 90 to 92 per cent purity.

Beet Growers Plan Purchase Of Own Sugar Co.

Northwest Kansas sugar beet
producers are looking forward to a
larger stake in their efforts while
they complete plans for purchase of
the Great Western Sugar Co. in-
terests.

About 5,000 sugar beet grower-
members of the Great Western
Producers Cooperative expect to
close the deal for purchase of the
sugar company holdings by
November. Involved is \$90-\$100
million for purchase of the seven-
state operation, plus \$50-\$60 million
operating capital.

William Davis Sr., Goodland, Tri-
County Sugar Beet Growers
association representative, said
that financing plans are progressing
well and cooperative officials expect
to have the deal completed in time
for sugar beet harvest this winter.
Company facilities include 17
factories and two other processing
plants in Kansas, Ohio, Michigan,
Colorado, Wyoming and Montana.
Also included in the purchase will be
a short railroad in northern
Colorado, the main headquarters
office building in Denver, and
warehousing and shipping facilities
in both Chicago and Houston.

There are about 50,000 acres of
beets in the northwest corner of
Kansas and the northeast corner of
Colorado which will be serving the
Goodland factory. About 25,000
acres of beets are in Wallace,
Thomas, Sheridan, Logan and
Decatur Counties of Kansas.

Conditions in the beet fields are
good, growers said. Some beets,
however, have been planted the
third time after hail storms
destroyed first plantings near
Harmon Springs and Goodland.
Conditions in the Ark Valley beet
area in southwest Kansas are
essentially the same with good
depend on quick-kill
growing conditions prevailing from
the Arkansas River south into
Stevens County. There are between
5,000 and 40,000 acres of beets in
Kansas this year.

Prices for the crop may go as high
as \$18 to \$19 a ton for normal sugar
content beets at factory delivery.
Higher freight rates along with an
increase in labor costs will mean
farmers' costs also are going higher
this year.

Davis said wage rates in the
Goodland area for sugar beet
workers is \$2 an hour. A like rate is
prevailing in the Garden City-
Ulysses area. The hoeing by the acre
is gradually disappearing in the beet
fields.

In former years, growers hired
labor by the acre. Migrant workers
from West Texas would come into
the sugar beet areas of Kansas each
year, with whole families con-
tracting to hoe beets.

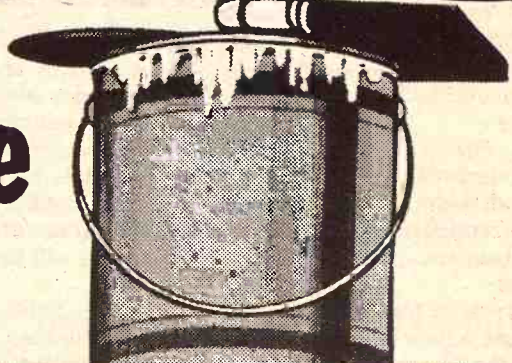

A trend toward using electronic
and mechanical thinning devices
and the use of herbicides to control
weeds means that fewer laborers
are hired each year and the by-acre
contracts are gradually disap-
pearing.

There appears to be fewer
workers from other states in the
Kansas beet fields this year than
ever before. Many growers in both
the Goodland and Ark Valley areas
are using Kansans to hoe their beets.

Wheat Products Top USDA Food List For August

Wheat products top the U.S. Agriculture Department's "Plentiful Foods List" for August.

Other plentifuls include neartines, fresh vegetables, peanuts and peanut products, boiler-fryers, turkeys and eggs.

Through its Plentiful Foods Program, the department keeps consumers and all segments of the food industry informed about foods expected to be abundant and in need of marketing aid.

The wheat carryover this year of approximately one billion bushels is expected to be the largest in nine years. This will assure ample quantities of grain and of bread, spaghetti, macaroni, noodles and other wheat products.

The department says total supplies of fresh summer vegetables will be seasonally large in August, particularly because of the combination of shipped-in and locally-grown produce. All indications are that the principal vegetables — sweet corn, cucumbers, lettuce, and tomatoes — will be plentiful.

Large plantings and reported good growing conditions indicate a record peanut crop this year, probably exceeding even this year's large demand for peanuts and peanut products.

The department says broiler-fryer production in August is expected to top that of a year ago, and attractive consumer prices are in prospect. The expected 26 million pounds of new crop turkey marketings in August will exceed year-earlier marketings by approximately 10 per cent and supplies of consumer-sized turkeys should be ample.

The report says that although August egg production is expected to drop below that of a year ago, eggs continue to be plentiful, and

represent an economical buy for food shoppers.

July 4 Holiday For Many G&G Area Businesses

July Fourth will be a holiday for most business houses serving farmers, but emergency service will be available for harvesting crews by most machinery dealers.

Two livestock sale barns will not operate on their regular sale day, Tuesday July 4. Rezac at St. Marys will be closed and will have no sale that week.

The Herington Sales normally operating each Tuesday and Wednesday has been selling on Tuesday only during harvest time, but will have their sale next week on Wednesday, July 5.

Ed Burt's Washington sale barn is closed for two weeks, so his Tuesday sale is not affected.

Grass & Grain will publish as usual on July 4. Offices will be open part of the morning July 4.

KLA Regional Meeting July 8

The Kansas Livestock Assn. of Southeast Kansas annual meeting is set for July 8.

Members plan to meet at the Blackjack Feedlot, four miles north of Yates Center, for a tour of the facility which recently installed a grass filter system for pollution control. The group will move to a picnic area west of Yates Center for a dinner and program.

Speakers will be Kalo Hineman, Dighton, KLA president; Pat Koons, Cattle Fax analyst for American National Cattlemen's Association, and John Meetz, Topeka, KLA executive vice president.

RETIRING CONSERVATIONIST

B. K. "Jimmie" Geraghty is retiring after 38 years with the USDA-Soil Conservation Service. He has been area conservationist at Manhattan for the past 20 years. His retirement is effective June 30.

A realignment of areas in Kansas placed him at Manhattan in 1952. He has been responsible for administration of the various programs of the Soil Conservation Service in seventeen counties of north central Kansas to date.

Crows May Have Federal Protection

PRATT — Yes, it is true. The common crow may now be a federally protected bird, according to a March 10 agreement between

the United States and Mexico.

The family corvidae, which includes crows, ravens and jays, was among 32 families of birds granted federal protection in the signing of the treaty with Mexico earlier this year, but some confusion has arisen over the interpretation of the agreement.

Although the treaty granted a general amnesty for crows, a provision was included allowing for the control of crows when they are committing or about to commit acts of depredation on personal property, crops, wildlife, or causing a health nuisance. A special permit would not be required for this control.

Because the terms of the treaty are vague on the control of crows and other depredating birds, the Kansas Fish and Game Commission is seeking an opinion of the U.S. Department of Interior to determine what constitutes an act of depredation and by what means the control can be applied.

Fred Warders, chief of law en-

forcement for the Commission cautions hunters not to shoot crows until the Department of Interior makes known the precise definition of the treaty, or hunters might be in violation of federal law. All other birds in the treaty were already protected under Kansas law.

MAINE-ANJOU SHOW SEPT. 1, IN PARIS

U.S. Maine-Anjou breeders gather in New York on September 1, leave for Paris, and attend the greatest Maine-Anjou show on earth on September 2.

In addition to the biggest Maine-Anjou show in the world, there will be a tour of the Maine-Anjou farms and then compare Maine-Anjou with examples of three other European breeds; Simmental, Charolais, and Chianina!

Send your reservations to: International Maine-Anjou Association, P.O. Box 5636, Kansas City, Missouri 64102.

Common Sense Best Policy In Ag Pollution Problems

Farmers and feedlot operators often can avoid a lawsuit by using common sense when selecting a site for an enterprise with pollution potential, a noted specialist in agricultural law said today.

"However, the fact that a feedlot was there first does not give the operator absolute protection against being sued unless a citizen assumed the risk of living next to a feedlot," Donald Levi told a group of Kansas State University Extension economists and farm management fieldmen attending a workshop.

"To assume this risk, the citizen must have realized how bad conditions were going to be when he moved in. This may not have occurred if he moved in during the winter when odor problems were minimal or if the feedlot increased

in size after he moved in."

Levi is an associate professor of agricultural economics at the University of Missouri and a member of the Missouri Bar Association.

Kansas has been a national leader in public and private regulation of agricultural pollution, Levi said. Private regulations generally results in a citizen suing a polluter for damages.

Public regulations in Kansas is handled by the State Department of Health and the Air Quality Conservation Commission. These agencies have established tolerance levels which vary for different locations and bodies of water.

A farmer or feedlot operator who discharges wastes in excess of these tolerance levels is guilty of pollution and may be subject to a court injunction and/or fine of up to \$1,000 a day, Levi explained.

"There is a misconception that agricultural pollution is subject to negligence rules," the economist said. "In reality, the primary legal

theory on which agricultural pollution suits have been brought is the nuisance law.

"Under these laws, a person is liable for creating a nuisance if he unreasonably interferes with another person's enjoyment of personal property. This interference may be caused by air, water, noise, or solid waste pollution."

Levi reviewed a landmark court case which occurred in Kansas several years ago. The defendants were a packing plant and a feedlot located on the banks of a small creek. The plaintiff operated a dairy farm downstream.

A heavy rainstorm flushed out the feedlot, and water from the creek seeped into the plaintiff's well. The dairy operator lost several cows which had drank water from the well and stream, and was eventually forced to go out of the dairy business.

The court held that the feedlot constituted a nuisance and awarded the plaintiff more than \$20,000 in damages.

lawn to mow cuts about 1,000 pounds of grass every two weeks. This amounts to about five pounds of chlorophyll.

As the grass dies, the decaying chlorophyll emits one-sixteenth of a pound of carbon monoxide, "or about the same as burning one-twelfth of a gallon of gas in a car without emission controls," Crespi

said.

The scientist said in an interview there is no danger from natural sources of carbon monoxide to human health. "It would take a tremendous room full of decaying vegetation in order to build up anything like toxic or lethal levels," he said.

Chlorophyll Emits Odorless Fatal Gas

Chlorophyll — the stuff that makes grass green — produces large amounts of carbon monoxide, an odorless gas which can be fatal, scientists at Argonne National Laboratory have found.

But the homeowner mowing his lawn doesn't have anything to worry about, according to the scientists, unless he's planning to fill a giant room full of decaying grass.

Chlorophyll is essential to photosynthesis, the process by which plants use sunlight to manufacture carbohydrates.

The scientists estimate that the naturally occurring chlorophyll produces 100 million tons of the gas throughout the world each year. This compares with an estimated 270 million tons produced by man-made sources, such as automobiles and factories.

The research at the Atomic Energy Commission facility here is designed to determine the total amount of carbon monoxide in the atmosphere as a step toward controlling it.

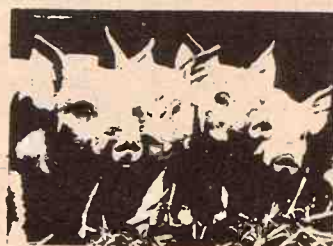

The work is sponsored by the Coordinating Research Council, jointly directed by the U.S. Environmental Protection Agency, the Automobile Manufacturers Association and the American Petroleum Institute.

The two-year Argonne project, conducted by Dr. Henry L. Crespi and his associates, found that chlorophyll produces atmospheric carbon monoxide in two ways.

The greater part of the natural production takes place when plants and fresh and salt water algae decay and die. This is estimated to be responsible for 60 million tons of carbon monoxide annually.

The production of chlorophyll in certain kinds of fresh water algae also produces the gas.

In everyday terms, Crespi said, the homeowner who has an acre of

Corn Heavy On U.S. Transportation System

Rod Turnbull
Kansas City Board of Trade

This marketing year, more corn will be sold from U.S. farms than the nation used to grow not so many years ago.

The U.S. Department of Agriculture, in its May Feed Situation Report, estimates 3,106,000,000 bushels of corn will be sold from farms this year. The marketing year started last October 1, and ends next September 30.

In all history, the United States never had a 3-billion bushel corn crop until 1948. And it did not have its next 3-billion bushel crop until 1956. Since then, the total harvest has increased almost annually to reach a record peak of 5.5 billion bushels in 1971.

The current movement of corn from farms where it is grown is dramatic evidence not only of changing patterns in the marketing of grain, but of the huge volume that the nation's ever increasing crops puts on the transportation system.

Corn, traditionally, was a crop that was fed where it was grown, either on the farm where it was produced or in the same locality. Most farmers were limited in the amount of livestock they would feed to the number of bushels of corn they raised each year. An occasional big feeder would feed all the corn he raised and then become a local market for any surplus in his community.

Examples recalled by this writer were two big cattle ranchers at Maple Hill who annually bought all the corn available in that area each fall, paying a cash price at their cribs equivalent to the prices quoted for the day at the Kansas City Board of Trade. Farmers in the Kaw River Valley nearby hauled their corn as they shucked it in wagons to the ranch cribs. It was a job that took all fall and into the winter.

Only 20 years ago, farmers were selling less than one-third of their corn crops from the farm. Ten years ago, it was less than half. In 1966, for the first time half of the corn produced was sold from farms. A gradual but steady increase in sales has brought the percentage up to an estimated 56 percent for this marketing year. Fifty-six percent of the 5.5 billion bushels produced last year is about 3.1 billion bushels.

Reasons for the big increases of sales of corn from farms include the trend to specialized farming in which some farmers emphasize grain production, while others put all their time and efforts into livestock feeding; the big cattle feedlots; the huge broiler plants and laying flocks; and exports.

Curiously, just about as much corn is being fed on farms where it was grown as ever, but all the equivalent of all the increase in production in recent years is being marketed away from farms.

Twenty some years ago, corn exports seldom reached a total of 100 million bushels. The last five years, exports have averaged 555 million bushels, and this year it is estimated the total will reach 650 million. At 650 million, that is about one-fifth of all the corn moving from U.S. farms.

Traditionally, nearly all wheat has moved from farms where it was grown. But here, the trend is the opposite to that with corn. Gradually, more wheat is being fed near where it is produced. However, the amount actually fed on farms where grown still is relatively small, estimated for this marketing year which ends June 30, at 73 million bushels. But the total amount being fed is estimated at a high 285 million bushels. A large part of this is marketed in areas of production and it is not going to traditional markets.

The amount of wheat said to be disappearing this marketing year in

the U.S. is estimated at 1,444 million bushels. Because of larger crops and greater disappearance, between 200 and 300 million more bushels of wheat are being sold from farms annually now than prior to 1960.

Virtually, all soybeans produced are sold from the farm except that used for seed. Soybean production has risen from 555 million bushels in 1960 to 1,169 million last year. Thus since 1960, more than 500 million bushels of soybeans have been added annually to market channels.

Milo production has been increasing gradually and sales from farms have shown a corresponding boost. However, during this marketing year milo exports have been down, and in fact, total disappearance of this feed crop has been less than in the previous year.

With corn as the bellwether, all feed grain use this marketing year (corn, milo, oats and barley) will be up according to USDA estimates, about 10 to 12 million tons over the 174 million tons utilized in the previous year, which would bring it to about 185.6 million tons. That's a lot of carloads.

Colleges Must Tighten Belts, Report States

Some 300,000 to 900,000 students now attending college mainly because of social and parental pressures, rather than from personal choice, should be counseled to drop out, the prestigious Carnegie Commission on Higher Education said in a report.

Initially, the report said, college admissions counselors should screen out students who the commission calls "reluctant attenders" or "the captive audience", and head them towards jobs or vocationally-oriented programs, and away from colleges.

In the latest in its series of reports on the future of higher education, the

commission also urges colleges not to try to retain poorly motivated students and minority students who have been given a chance, "but have shown they cannot make the grade in higher education."

Some \$10 billion, 20 percent, must be cut from the projected total spending of \$51 billion for higher education by 1980, the commission said. Higher education must "discipline" and "reform" itself financially, otherwise a "resistance point" will be reached where the public will not tolerate additional spending.

Half of the \$10 billion reduction can be realized by cutting the time it takes students to get a degree and by allowing "reluctant attenders" to drop out, the report said.

The other \$5 billion must come from cutting the cost per student of a college education, it says. Faculty-student ratios, the report adds, should be "cautiously" increased, faculty members should in some cases teach more course hours, new Ph.D. programs and new courses should be discouraged and, in general, colleges should adopt better management techniques.

EYE PATCH FOR CATTLE

If you see a cow meandering across the pasture with an eye patch, she's not wearing a disguise. The eye patch shown on this cow is designed to treat pink-eye. After the affected eye is cleaned and treated with an antibiotic the eye patch is applied with a special cement. It protects the eye from sunlight, dust, flies, and grass blades while holding the antibiotic in place so it can work. After a week or two the cement weakens and the patch drops off. By that time the pink-eye is usually cured. Cattle with both eyes covered by the patches are able to get around satisfactorily, according to the designer, Dr. William Kvasnicka, a practicing Nebraska veterinarian. The patch will be sold through a Nebraska firm.

Hog Tattooing Program To Help Eradicate Disease

The Agriculture Department says a tattoo on the shoulder of slaughter swine will be used in its Market Swine Identification program.

It says the tattoo-numbering system will be coded to cover or account for over 15,000 slaughter swine marketing points.

Identification to a herd of origin is the key to locating infected herds and the eradication of the costly swine diseases such as brucellosis, tuberculosis, and hog cholera.

Slaughter swine would be slap-tattooed when the owner consigns the animals to a market or sells them for slaughter. These animals can then be traced back through marketing channels to the herd owner.

The department says the coded slap-tattoo system will consist of six characters, three letters and three numbers. When the tattoo characters have been inked and applied to the animal's shoulder, the tattoo will last for four months or longer. It may be difficult to read the tattoo on the live animal, but when the hog is slaughtered and dehaired, the tattoo is clearly legible.

Preservatives Stop Spoilage In High Moisture Grain

Do grain preservatives prevent spoilage in stored high-moisture grain?

Recent field tests indicate they do. Dr. Robert Wilcox, a Kansas State University specialist in formula feeds quality control, says the tests involved treating milo or corn — containing 18 to 27 percent moisture — with mixtures of propionic and acetic acid and other preservatives.

The results? "Excellent!" says Wilcox. "The only spoilage occurred when moisture condensed on roofs and ran down into the grain, overcoming the effects of the preservative."

The two additives are mild organic acids that are easily digested by livestock. "Actually, they are formed at certain stages in the digestive process, and are therefore a natural nutrient," the specialist indicates.

Both the Food and Drug Administration and the Environmental Protection Agency have approved propionic and acetic acid as feed grain preservatives. However, treated grain is not OK'd for processing into human food, and will not be accepted by elevators or the grain trade.

Listing the advantages of adding preservatives to stored high-moisture grain, Wilcox says grain can be harvested at higher moisture levels, palatability of the grain is apparently enhanced, and molds are prevented and the danger of mycotoxins is thereby eliminated.

Another big advantage is that treated grain can be held in existing storage. Wilcox points out however that preservatives will cause some mild corrosion on metal. He recommends coating metal and concrete with a sealer, or covering with a plastic liner.

Wilcox emphasizes the importance of proper application and thorough mixing of the preservative with the grain. "Preferably each kernel should receive some of the liquid on its surface," says Wilcox.

"This will kill mold spores on that kernel."

He recommends applying more preservative at the higher moisture levels of grain — using manufacturer's recommendations. Over-treating is preferred to under-treating.

Wilcox stresses the following safety precautions for working with liquid preservatives:

- Apply in well ventilated area — avoid breathing vapors.
- Rubber or plastic shoes and gloves should be worn.
- Avoid smoking, open flames, or heating devices in the treatment and storage areas.
- Safety goggles, gloves, and aprons should be worn when handling the liquids or freshly treated grain.
- In case of liquid contact with skin or eyes, wash thoroughly with water. Get medical attention right away.
- If accidentally swallowed, wash out mouth with water and drink some milk (preferably mixed with

raw egg whites) to neutralize the acids.

• In cases of liquid spills on clothing, do a complete change as soon as possible, and wash clothing before wearing.

Wilcox has teamed up with KSU Drs. C. W. Deyoe, D. B. Sauer, and Keith Bolsen to produce a new Extension publication on grain preservatives. The brochure will be available at county Extension offices later this usmmer.

Tax Refund Option In Special Bonds Urged By Congress

Under congressional prodding, the Treasury is studying a plan to reward taxpayers who agree to lend the government the extra-large refunds they expect to get next year from income-tax withholding.

The idea is not so much to ease the government's borrowing problems as to head off a surge of inflation when taxpayers suddenly collect an estimated \$8 billion in spendable funds.

The proposal is to offer a choice to taxpayers whose 1972 returns show a refund coming: either take the cash, or accept a bond that pays better interest than the 5.5 per cent yield the ordinary seven-year government Series E bond provides.

Withholding has been a headache for two years for wage earners and

the Treasury alike. In 1969, the rate was set too low, and many taxpayers found that, when they filed their returns this year, they owed substantial amounts.

In an effort to correct this, Congress revised the withholding rate late last year, on Treasury recommendations, but over-compensated.

So, there is the prospect that taxpayers, with money taken out of their paychecks that the government would prefer to leave in the spending stream, will have big refunds coming in early 1973. That is when administration economists expect the economy to be more robust — and more inflation-prone.

In its report on the pending bill to extend the national-debt ceiling, the House Ways and Means Committee disclosed that the prospect of a special-incentive savings bond has been discussed with the Treasury.

The committee said the Treasury "has agreed to look into both the desirability and practicality of the

BROKEN DOWN

Paul Veach, Abilene, just finished replacing a bearing on the auger, while Wes Drake, who works for Veach, is reinforcing the battery brace. Veach said he had 280 acres to cut but with two machines it wouldn't take long.

matter and report to your committee."

Rep. Charles A. Vanik, D-Ohio, who brought the matter up in closed committee sessions with Treasury officials, said, "They had better do something — if this \$8 billion spins out all of a sudden it could send inflation up four or five points. . . I don't know when we've had that much money going all at once into consumers' hands."

One way to increase the yield on the securities, Vanik suggested, would be to issue pre-dated E bonds,

so that a holder would not have to wait a full seven years before collecting the entire face value of the bond, which is sold at a discount.

Mobile

More than 20,000 mobile homes were rolled off the assembly lines in Kansas and the units, if lined up, would stretch from Topeka to Hays, 100 miles. The mobile homes are sold at a wholesale market.

Jack Todd, executive of the Kansas Mobile Home Institute in Wichita, said that figure is a grossed \$96.7

wholesale market. The units are manufactured plants more than 3,000 per year to the Kansas Economic Development

A report compiled by Dr. Darwin Daicopoulos at the Kansas State University, said about 100,000 mobile homes are in the state. The trailer coach industry in the state is estimated to be worth \$1 billion.

There are more than 100,000 mobile homes registered in the state. Another 1,000 registered mobile homes are in the state.

Young married couples make up the largest group of mobile home buyers. The units retail for \$10,000 with the average price of \$12,000.

There are more than 100,000 mobile homes registered in the state. Another 1,000 registered mobile homes are in the state.

TREATING AGAIN

Jim Wood is using 2-4-D on the weeds in this field. He said, "We used Atrazine when we planted, and apparently didn't use enough." He had about 150 acres of milo to spray.

Mobile Home Boom To Continue

More than 20,000 mobile homes rolled off the assembly line last year in Kansas and the boom is expected to continue through the 1970s.

The units, if lined up end to end on Interstate-70, would stretch from Topeka to Hays, approximately 205 miles. The mobile home plants grossed \$96.7 million in the wholesale market last year.

Jack Todd, executive secretary of the Kansas Mobile Homes Institute in Wichita, said the industry should pass that figure this year.

The units are produced by 24 manufacturing plants which employ more than 3,000 persons, according to the Kansas Department of Economic Development.

A report compiled for KDED by Dr. Darwin Daicoff, professor of economics at the University of Kansas, said about 3.5 per cent of the national employment and wages in the trailer coach industry were located in the state. The employment figure could reach 5,500 in Kansas if business maintains its pace begun in the 1960s.

An estimated 150 to 160 retail dealers market the mobile homes in Kansas.

Total employment and wages — direct, indirect and induced by the mobile home industry — represents 6,700 jobs and an annual payroll of \$39.6 million based on first quarter 1971 estimates, Daicoff reported.

There are more than 30,000 mobile homes registered with the state department of motor vehicles with another 1,000 registered as real estate.

Young married couples and retirees make up 75-80 per cent of the market, figures show.

The units retail at from \$4,000 to \$15,000 with the average at \$6,500. The average represents a typical two-bedroom 12-by-60 or 14-by-60-foot home.

The resale value has improved with the bigger home sizes, improved lot developments and land site sizes, according to a local retailer. The resale value is almost equal now to permanent housing, he said.

The state's increase in the industry ballooned in the 1960s with 13 plants joining the five established in the '50s.

Six plants have located in Kansas since 1970, and another plant is under construction.

Guerdon Industries is the oldest company in Kansas, established in 1955 at Newton. A second plant was opened in 1966 at Manhattan. It had estimated sales of \$3½ million last year.

Richard Roughton, plant manager of Fleetwood Mobile Homes at

Lawrence, cited the central location and the good labor market as incentives for locating in Kansas. Other manufacturers also said the cooperation of the Kansas communities influenced their decision.

The reason for the continued boom of the mobile home industry is the alternative a mobile home offers to young people to "expensive conventional housing," Weidner said.

Roughton estimated the cost of a mobile home per square foot is half the cost of a conventional house.

Weidner said knock-out escape windows in all bedrooms are required effective July 1, and side wall and stress tests are more stringent and more carefully policed than that of on-site construction homes.

New regulations in frame construction and insulation as well as the conventional house appearance, with siding and sloping roofs, also help sales, mobile home spokesmen said.

Some states won't permit 14-foot wide units on the highways, but Kansas will, Todd said. This makes Kansas attractive to manufacturers. Nebraska, Oklahoma, Texas and

Grass & Grain

21

June 27, 1972

Colorado also permit the wide units on their roads.

Other positive factors which have spawned the mobile home growth listed by Daicoff include: increased financing by savings and loan associations benefits from the Veterans' Housing Act of 1970 to include mobile home purchases, increased use of mobile homes for vacations or second homes and possible adaptation as temporary housing for some of the urban poor.

MIXED DRINK

Dr. Frank Cunningham, has been concocting summer-time drinks of fruit juices and fresh eggs to come up with orangeegg, limeegg, lemonegg, appleegg, grapeegg, etc. The drinks are easily prepared, can be stored under refrigeration for a short time, or may be frozen for use later. Here Cunningham pours a sample of orangeegg for Peggy Lohmeyer, a KSU food science major from Palmer, who has been assisting him with the research.

New Drink In Orangeegg 22

Grass & Grain

June 27, 1972

You won't have to lift a fork to enjoy eggs with your orange juice in the future.

Delicious, nutritious summer-time drinks containing fresh eggs and fruit juice are being concocted by researchers in the department of dairy and poultry science at Kansas State University.

Dr. Frank Cunningham, an associate professor, prepared orangeegg from fresh eggs and thawed orange juice for a refreshing drink. He then pasteurized the drink and stored it in the refrigerator. But after four days members of a taste panel detected off-flavor.

Microbiological analysis of the drink revealed the off-flavor resulted from oxidation — not bacterial spoilage — and now Cunningham and Peggy Lohmeyer, a food major from Palmer, are studying the effect of antioxidants, at various levels, seeking to increase storage time of orangeegg.

Combinations of fruit juice and eggs, such as orangeegg, lemonegg, and limeegg, are easily prepared at home to be consumed immediately, stored under refrigeration for use within a couple of days, or frozen for use later. The high protein drinks also can be dried to a powder for longer shelf life.

"One potential use for a drink such as orangeegg is as a breakfast substitute designed for teenagers as a quick and fortifying meal," say-

Cunningham and Miss Lohmeyer, who also are studying mixtures of fresh eggs with carbonated and noncarbonated drinks.

Family Doctor Trade On Upswing

The family doctor is coming back strong among the nation's new generation of medical school graduates.

"The reversal trend from specialized practice is clear," Dr. Carroll L. Witten of Louisville told an American Medical Association family practice session today.

Ninety per cent of the University of Washington's last three medical school classes are entering family practice, said Dr. Edward J. Kowalewski of Baltimore.

Witten reported the number of family practitioners in the nation dropped from 80,000 in 1947 to 59,000 in 1967 and has returned to 64,000. He said the recovery rate will speed up in future years.

The decline in family practitioners developed with a surge to specialized practice after World War II.

The sharp increase in medical graduates choosing family instead of specialized practice reflects both a public need and demand and a commitment in the young medical generation, said Kowalewski, head of the division of family practice at the University of Maryland.

He said 126 of the 240 students in Maryland's last two classes are choosing to be family physicians.

Wheat Harvest - Cashing In Time

You nurse it, worry about it, and if you're lucky you harvest it. Wheat growers in the Grass & Grain area may not be breaking records this year but at least they're in the fields cutting and that's more than can be said for farmers in several western Kansas counties who were hailed out only last week.

These pictures depict a family affair, wheat harvest. Clyde White and his son, Randy, keep the combines running while mom, Mrs. Florence White, runs the trucks to the elevator.

This harvest scene was just west of Abilene along I-70. It craned the necks of many tourists in their air conditioned cars as they flew by heading west.

Randy said they had close to 700 acres to cut and the yields in this field were low, around 35 bushels, because of a lack of moisture after plowing last summer.

Farmers & Ranchers Livestock Commission Co., Inc

WEST ON
OLD HWY. 40

SALINA, KANS.

Receipts Monday totaled 1091 hogs including 420 feeder pigs and 1058 cattle. Fat hog top was \$27.65. Local feedyards took feeder cattle at about steady prices while cows were 50¢ to \$1.00 lower than last Monday.

95.0 estimated horsepower. New 414 cubic inch Diesel Engine. Isomounts (lower sound level). Gauges instead of lights. New quiet cab. New hydr. couplers. SEE US TODAY!**TRACTORS**

F756D less than 1250 hours with or without new duals, 3 pt. hitch, IPTO, TA, hydro seat, tilt wheel, wedge lock wheel, 18.4x34 & 10.00x16 tires and dual valves (class A-1 condition, always shedded)

F856D less than 1500 hours, 3 pt. hitch, IPTO, TA, hydro seat, tilt wheel, wedge lock wheel, 18.4x34 & 10.00x16 tires, dual valves, and No. 3000 Series diamond shape Excel cab, class A-1 condition, always shedded.

F706D, engine and TA major- ed 3 years ago, new 18.4x34 and flotation front tires, dual valves, 3 pt. hitch and balance of special equipment. This is a good clean tractor.

Two F460D, these tractors have been completely majored throughout. Engine major on one, transmission, TA and differential on the other. Both have new paint and one has new tires on all 4 wheels. They have been completely checked out thru our shop, 3 valve, TA, 2 pt. hitch, PS and so forth.

M Farmall, good slick tractor with like new 13.6x38 tires and new paint.

1300 Utility G with loader, hydro boom & bucket, 2 pt. 7 blade, will paint if you desire.

Ford 841D in good condition & extra good rubber. UD MM D with good 15.5x38 rubber, will make you a good work horse.

GT MM on propane with all necessary equipment, new pump on hydros, PTO. A real work horse.

F350 gas, Class A-1 tractor with like new rubber, new paint, 2 pt. hitch, TA and 3 valve. WD Allis in good condition

W9 gas with less than 400 hours on major engine overhaul and new hyd. pump, good tires and original paint. Class A-1.

Set of duals for 18.4x38 with new tires \$375. Duals for 16.9 x34 with good rubber \$200.

COMBINES

JD No. 55 completely recondi- tioned in our shop. New cyl. bars, new tin work above cylin- ders, new feeder drive sprock- ets, chain and other necessary repairs, PS and just repainted.

JD No. 55, complete major overhaul on engine, bored, new pistons and rings, new rod, main and camshaft and other necessary parts. This is a class A-1 machine.

JD No. 95 in Class A-1 condi- tion. What the owner didn't re- place or repair we did. All new reel, new 18.4x26 tires, new feeder and rattle chains, new Ausherman bars, all new tin work above cylinder, both com- pletely new elevator chains, complete transmission overhaul and new clutch last milo har- vest, complete engine major overhaul in 1971. Rebuilt prop- ulsion in 1970. New stop Pit- man and reel drives, PS, indi- vidual brakes. We have com- pletely checked this machine out in our shop. All new guards, knife section, new platform bottom, new cab and new paint and many other details repaired. You can't find a better one for the money.

IHC No. 403, the best you will find, cab, hydrostatic drive, clean low acreage machine. Al- ways shedded. Just traded for and it is field ready.

IHC 403. This machine has been checked out front to back and replaced or repaired as necessary. All new belts, brakes, hydro propulsion, elevator chain, feeder chain, grain pan sieves, and you name it and it has been done. This machine is in like new condition, painted 2 years ago and has been shedded. Have new cab to install.

Continued
Next Column**CLOUD COUNTY TRUCK & TRACTOR CONTINUED FROM PREVIOUS COLUMN**

IHC No. 303 with cab, com- pletely checked out in our shop and all necessary replacements or repairs made. This is a class A-1 machine and new paint.

ALL OF THESE COMBINES HAVE BEEN PUT IN CLASS A-1 CONDITION. YOU CAN BUY THESE MACHINES LISTED ABOVE WITH CONFI- DENCE AND LITTLE OR NO DOWN TIME IN THE FIELD.

We also have two IH No. 151, one with cab and one without. Also IHC No. 101. We have yet to get these machines ready. The 1961 No. 151 with cab will have a new motor not repaired and will be in class A-1 when completed.

We have used tandem and off- set discs & rear mounted culti- vator, 3 IHC No. 10 late style grain drills, fert., 2 with 16x8-16x10 sizes and one with grass seed attachment. Pull type, mtd. and steerable plows. A good se- lection of used balers. We have a lot of good clean used machin- ery, some yet to be hauled in.

We have new No. 715 com- bines in stock and access to No. 815 and 915 combines at prices you won't believe. We can get you a No. 815 combine with a big price concession and long deal on the others.

Don't forget that you can purchase a new or used tractor and any equipment with it prior to July 31st and receive finance and insurance until March 1, 1973. Most likely you will have to pay sales tax only.

WE LIKE TO DEAL AND WILL DEMONSTRATE

Winter Triticale Shows Promise

ST. JOHN — A new winter cross variety of Triticale at the Sandyland Experiment Field, is showing promise of resistance to winter kill, according to George TenEyck, superintendent.

The cross of rye with winter wheat was developed in Canada. The past several years Prof. Elmer G. Heyne, Kansas State University, has bred a new variety which came through the winter with 95 to 100 per cent survival, TenEyck said. It may be a breakthrough to planting Triticale in Kansas.

This compares to an estimated 45 to 60 per cent survival in an adjoining plot of spring triticale, Ten Eyck noted. The spring Triticale is a cross between rye and Duram wheat selected for its spring habit.

The KSU irrigation specialist cautioned that Triticale has not been fully developed as a variety as yet although showing promise.

The spring type makes spectacular growth in the fall suitable for winter pasture, but suffers from winter kill at the St. John station, Ten Eyck said.

The winter type makes much less growth in the fall but comes on in the spring beyond the pasturing time, he said.

"Triticale, in time, will be a crop," he predicted.

Professor Heyne said that the winter cross is rye on Duram wheat, hard macaroni type while the spring Triticale is a rye cross with Duram selected as a spring Triticale.

"We think that the winter cross has a potential for planting in the fall and surviving without winter kill," Heyne said.

No date has been set for KSU release as researchers have germination and other problems, Heyne said.

BERS

GETTING THE WEEDS

George Murrison, Chapman, is getting the weeds while they're small. "You let them get away and weeds will sap the moisture that milo needs." "This milo is kind of small because I had to replant after the green bugs ate it." Murrison farms along I-70 and meets a lot of curious tourists he added.

FARMERS OUTLOOK

Corn Market Situation

Corn producers, grain traders, and USDA officials are trying to find the answers to certain questions about the corn market.

They would like to know: (1) What market price will draw enough corn out of loan to meet market needs until the 1972 harvest, but keep the addition to carryover

stocks under loan? (2) What areas of the Corn Belt and of a state will get to sell this corn? (3) How much corn will farmers resell? (4) Will storage space be ample for the take-over corn? For the 1972 crop? (5) How high will corn prices go if this year's production is short of market needs in 1972-73?

Saturday, July 1

Starts 10 a.m. — Lunch Served
Will sell for the Herman J. Steffens Estate at the place 1 block west of Schoolhouse in Harbire, Nebr., located 14 miles northeast of Fairbury, Nebr. on Hiway 136.

On May 1, about 800 million bushels of corn were still under loan. Farmers had redeemed 119 million bushels earlier. At current rates of export and domestic use, another 200 million bushels (the difference between the quantity under loan and the increase in October 1 carryover stocks) will need to be redeemed before the 1972 harvest. The market will draw down this 200 million bushels by bidding farmers a few cents over loan redemption costs.

According to a recent report by the USDA, the loan-redemption cost for the 1971 corn crop this July will average \$1.12 a bushel in the five eastern North-Central States and \$1.06 in the seven western North-Central States. In mid-May, the average farm price of corn averaged 3 cents a bushel above the redemption cost in the Eastern Corn Belt and 6 cents above in the Western Corn Belt. Corn prices are currently below their May levels, but are still equal to or above the loan redemption costs in many areas. At these prices or a few cents higher, we conclude that the market will get all the corn it needs during coming weeks. It could be offered more than it wants.

Illinois and other Eastern Corn Belt farmers used to have an advantage in the redemption and sale of corn because their market price was higher in relation to the loan price than the one in the Western Corn Belt. Reduced loan rates and lower rail rates to market outlets now encourage Iowa farmers to redeem and sell corn rather than deliver it to the CCC. Recent bids to

Iowa elevators were only 4 to 6 cents under those to central grain dealers. This is about the difference in the loan rates. So, the farmers who get to redeem and sell corn are likely to be those who have higher-priced market outlets. Farmers in other areas should plant to deliver their corn to the CCC or resell it.

Eligible producers can resell 1971 corn on farms (in bins or cribs) and in approved warehouses, and get paid for doing so. Reselling is an excellent program for farmers who have corn sealed in cribs in the central and northern counties of Illinois and who wish to increase their storage for shelled corn. They can get paid about 11 cents a bushel for storing the corn from August 1, 1972, to May 31, 1973. Also, they can forward price the corn to their grain

Grass & Grain

33

dealer for delivery prior to that date at 1972 crop prices. In most areas of the state, these bids are currently 6 to 8 cents a bushel more than the loan redemption cost will be at time of delivery in May, 1973.

The loan redemption cost for 1971 resaled corn will increase only by the interest charges of about 3 cents a bushel, or to about \$1.15 in the Eastern Corn Belt and \$1.09 in the Western Corn Belt. Since these redemption prices are below current market bids for 1972 corn, a short 1972 crop is already being discounted. The uncertainties are (1) whether there would be enough resaled corn to fill the gap and (2) whether farmers would sell it.

- Nov. 10 — Tenth annual Hammarlund & Shamrock Angus Sale.
- Nov. 14 — Production sale at the ranch northwest of Clay Center, (Bill) Amstein Hereford Ranch.

Food Market Furor Continues

A year's supply of "market basket" groceries cost consumers \$5 more in May as a result of a \$16 increase for farmers and an \$11 price cutback among middlemen, the Agriculture Department said.

The market basket, used to keep track of where the consumers food dollars goes, cost an annual rate of \$1,288 in May, an increase of 0.4 percent over April.

The increase came after two consecutive months of small declines since February when the market basket hit a record \$1,297.

The Bureau of Labor Statistics said grocery prices declined 0.2 percent in April. The market basket, however, measures prices for the entire month while the BLS based its report on the first week.

The Agriculture Department said the difference between the two statistics mainly is due to higher prices for beef and pork for the latter part of May.

The increase announcement came as the administration was considering steps to try to halt the continuing higher movement of food

costs. Presidential press secretary Ronald L. Ziegler said that newsmen should not be led astray by reports that the Price Commission will consider a 30-day temporary freeze on food prices at a special meeting.

That report, carried in the Washington Post was all but denied by Price Commission spokesmen. They said that "nothing substantive" would be announced as a result of the unusual session.

Spokesmen described the meeting as "very informal" with even staff members excluded. The seven-member agency "wanted to hash things out," one source said.

President Nixon met with Treasury Secretary George P. Shultz and members of the Council of Economic Advisers on food prices for about an hour and a half. Ziegler said Nixon asked for additional facts on the subject but made no decision.

Newsmen allowed into the room before the meeting began heard Nixon remark in a joking way, "Don't buy meat."

The administration has blamed the rising cost of meat on a limited supply and a sharply increased demand by consumers.

Nixon said he is considering removing meat imports quotas temporarily to increase the supply as well as action to widen controls on food.

But there was no indication that the President or his Cost of Living Council were seriously considering the Price Commission's recommendation to lift the exemption on raw agricultural products, which by government definition includes live animals and vegetables. Processed food is controlled.

Price Commission officials said Chairman C. Jackson Grayson wanted to hold an informal meeting before leaving on a trip out of the country. They said he was considering a special meeting before the food price issue became heated.

Aerobatic Show Scheduled July 2 In Marysville

Spectacular aerobatics featuring military and civilian planes in demonstrations, will feature the annual air show held in connection with Pony Express Days here, according to Jim Swim, Marysville, air show chairman.

The show is scheduled for 2 p.m. Sunday, July 2 at Marysville Municipal Airport and will also be the scene of a fly-in from area civilian pilots.

FARM BUREAU PRESIDENT

John Junior Armstrong, Muscotah, has been appointed president of Kansas Farm Bureau by the board of directors to serve the unexpired term of Ray Frisbie, McDonald, who resigned to run as Republican candidate for Governor. A native of Atchison county where he farms in partnership with his brother and father, Armstrong, 47, has been vice president of Kansas Farm Bureau since 1960. Service on the board dates from 1949 when he was elected to represent the northeast Kansas First District.

LOOKING GOOD

Max Shepard, Chapman, is more than a busy man with harvest here. Showers around the Grass and Grain area have kept farmers out of the wheat fields several days last week. Joan Gfeller works for the Chapman Co-op and handles much of the wheat testing. This load tested 14.80 in moisture. Shepard said he had several hundred acres to cut, in addition to some custom harvesting.

Reynolds Sale Barn

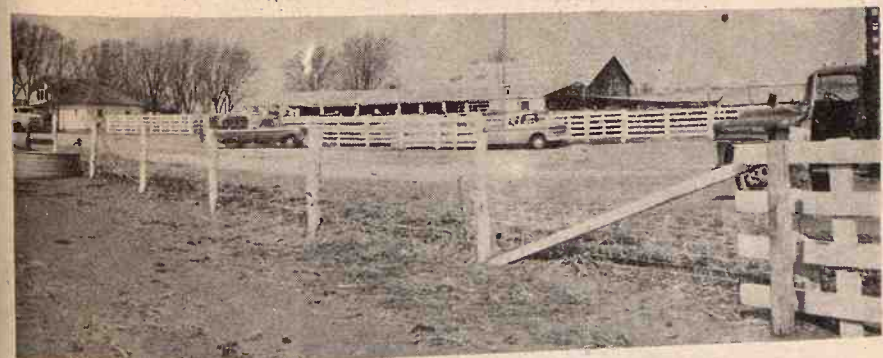

ABILENE, KS.

Selling Every
FRIDAY
Starts 1:00 p.m.

A very light run and a small crowd, but a very good market at last Friday's auction. Tones In Bones Could Mean Last Of Your Cast

The tones of your bones may mean the last of your cast.
Two orthopedic surgeons at the University of Wisconsin are using sound waves to test bone strength and lessen the time some patients will spend in casts.

Grass & Grain **35**
June 27, 1972

"People with fractures are often immobilized longer than necessary since physicians have no accurate way to judge bone strength," said Dr. John M. Jurist, one of the surgeons.

Jurist said he and Dr. Edmund Markey Jr., measure dimensions of a bone with X-rays, then gauge the frequency of its vibrations after hitting it with sound waves.

Meat Imports Fail To Lower U.S. Beef Market

Latest reports show meat imports into the United States for April were up 22 per cent from a year ago to 105.4 million pounds. This figure includes fresh or frozen beef or veal, mutton and goat meat.

If one includes canned or preserved beef, veal, mutton and goat and pork and all lamb, total imports were 157.4 million pounds, up 14 per cent from a year ago.

USDA said the country most responsible for the increase is Australia which originated 63.4 million pounds, about 70 per cent higher than a year ago in April.

Totals for the year to date are 348.3 million pounds for all red meat, up 8 per cent from January through April last year. For all meat, the total is 589.5 million pounds, up 12 per cent from a year earlier.

The extra imports do not seem to be hampering beef interests in the United States. Market was stronger and had fairly active trade according to Market Analysts at American National Cattlemen's Association, Denver.

They said fed cattle prices are strengthening, high slaughter levels are occurring as fat cattle move to market.

All signs are for a short-term strong market, at least. Average choice steers were bringing \$36.75-\$37.75 in Kansas, ANCA men said.

Federally inspected slaughter from April 8 through May 27 totaled 4.998 million head, about 3.2 per cent above the same weeks in 1971. Beef production during the same period was estimated at 3.126 million pounds, about 3.6 per cent above a year ago.
