GRASS & GRAIN

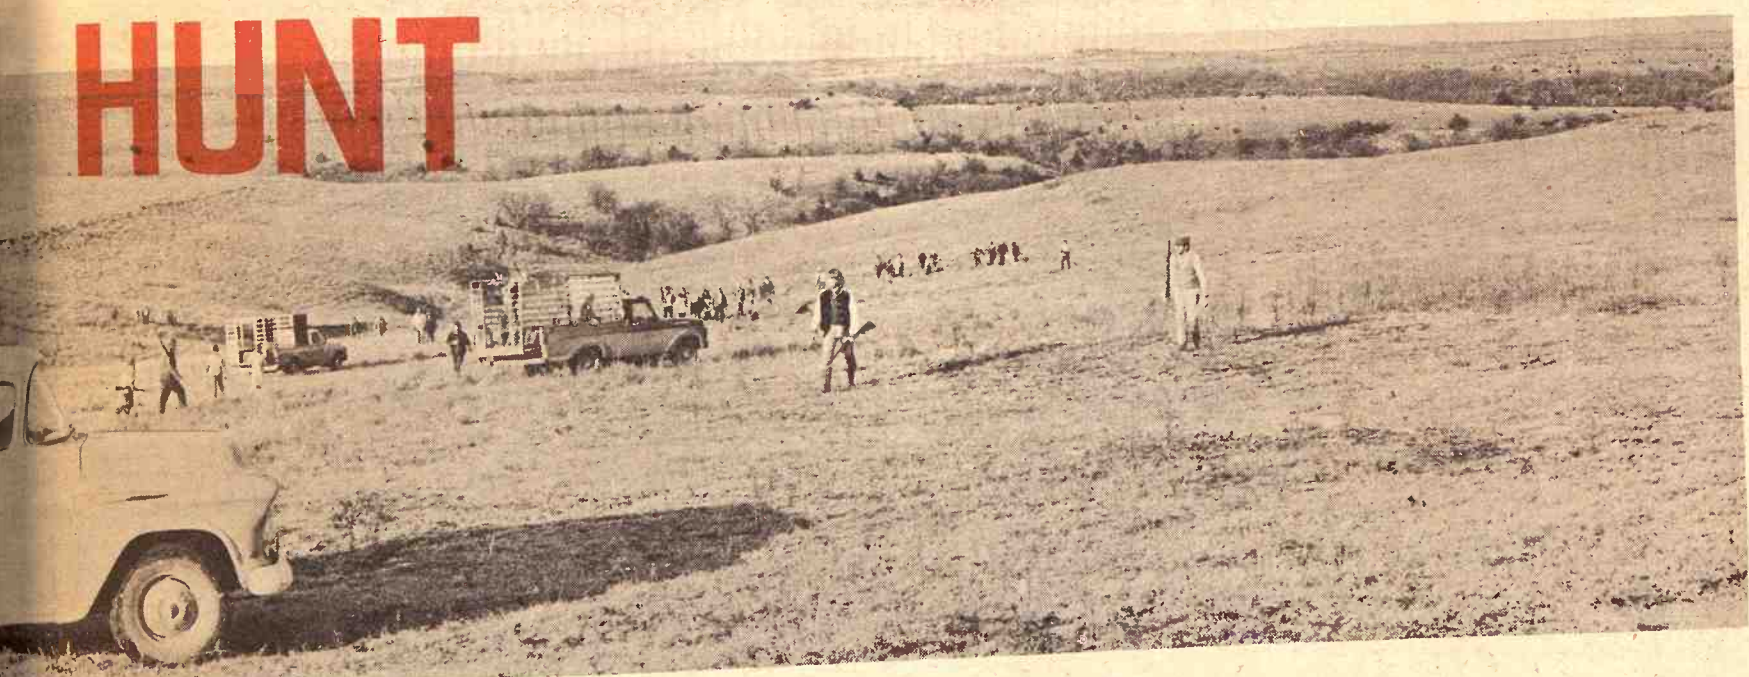

17th Year No. 46 January 11, 1972

New Years Day to many people means a day of rest and several football games. But to more than 200 energetic coyote hunters the day means an annual "Wolf Hunt" in northwest Riley county in the old Peach Grove district. The lineup here outside the old school was for the good lunch served. Some had to wait for about an hour to get through the serving line but after three hours of walking the wait was worth it.

Three men with years of experience in the neighborhood event warm themselves on the south side of the old school building as they wait for others to finish eating. They are Gus Benteman, Randolph; Butch Dettmar, Manhattan; and Henry Sump, Randolph.

WOLF HUNT

The hunt started about 9 a.m. and didn't finish until 5 in the afternoon. It involved five separate drives, each of which encompassed about two square miles. Outside of the trouble of getting 10 trucks up a couple of very slick, muddy roads, the drive went smoothly.

The total haul was 25 to 30 coyotes. The hunt on New Years Day at Peach Grove has earned a reputation as a very productive coyote drive. Hunters came this year from as far away as Kansas City and Wichita areas.

Major Changes In Corn Picture

The country's corn farmers in 1972 face sharp contrasts with the situation of a year ago.

For one thing, plenty of good seed corn is available for this spring's plantings, compared with a year ago when only 23 per cent of the seed supply was tolerant of or resistant to the devastating new type of Southern corn-leaf blight.

This year the Department of Agriculture is planning a sharp cutback in corn plantings; early in 1971 it feared blight losses and encouraged unusually large plantings.

And where corn prices were high a year ago — \$1.40 a bushel — they have tumbled 30 cents a bushel in the wake of the country's greatest corn harvest ever estimated at 5.5 billion bushels, or 30 per cent larger than the 1971 harvest.

A year ago farmers were paying as high as \$40 a bushel for good seed corn, if they could get it, compared to \$20 to \$25 a bushel the year before. A bushel will plant about five acres. This year most companies will be asking more for their seed because of added costs.

For the consumer, the bountiful harvest coupled with a bumper crop of good corn seed guarantees abundant supplies of meat, poultry, eggs and milk because three-fourths of the corn crop is fed to the animals that produce these foods.

For the farmer, the abundance of corn means cheap feed and probably sharply increased livestock and poultry production to help offset the lower cash market for corn.

Virtually all this year's seed corn is the kind that is tolerant of or resistant to blight. The major contributor to the record crop was the seed corn industry, which in one year accomplished a transformation in its seed.

The industry developed a seed corn that made unnecessary the expensive process of detasseling the final product. Detasseling controls undesirable pollination.

But while this new type of seed made it unnecessary to detassel, it also turned out to be highly susceptible to a new fungus blight.

The seed industry went to work with a will to revert to the previous type. It increased its planting in Florida and Hawaii and abroad in South American and Mexico. It even brought in seed from Argentina and Yugoslavia, and by the 1971 crop year they had produced enough blight-resistant seed for the corn farmers' needs. It was an amazing accomplishment for one year.

The result was one of the best seed-corn production years ever, just as American farmers had their best year growing commercial corn.

The Nixon administration has

announced that it wants to get farmers to leave idle 38 million acres normally planted for feed grains in 1972. This would compare with only 18 million acres left idle in 1971, when American farmers again illustrated their capacity to create a tremendous surplus in a single growing season.

Hike Fees For Grazing Federal Land

The Interior and Agriculture Departments have announced jointly that fees for grazing cattle and sheep on federal western lands will be raised an average of three per cent this year.

This is a relatively small increase compared with last year's sharp increase in fees.

The Interior Department said the latest increase was being held to three per cent to "hold the line on ranch operating costs in 1972 and thereby support President Nixon's economic stabilization program."

But it added that the administration still intends, as determined in 1969, to bring grazing land up to fair value in the long run.

The fees apply to the grazing of cattle and sheep on lands administered by the U.S. Forest Service and the Bureau of Land Management, where grazing is allowed under federal permit.

The Interior Department said some 25,000 operators hold such permits for grazing a total of about 9 million head of livestock.

Fees are assessed in terms of "animal-units" per month. The announcement said the fee

VW Moves To Fill Market In South America

Volkswagen of Brazil will begin work this year on a \$70 million

factory as the first phase in a vast expansion program in Brazil.

The factory is scheduled for completion in 1974 and will begin operations with 3,000 workers. By 1980 it will employ more than 15,000 Volkswagen officials say.

The factory will be built at Taubate about 100 miles from Sao Bernardo da Campo on the road to Rio de Janeiro.

Volkswagen gave no details of plans for the future but the plot of land it has bought is three times the area of the present Volkswagen complex at Sao Bernardo. The existing plant is the largest automobile factory in Latin America and Volkswagen's largest producer outside Germany.

The news of Volkswagen's ex-

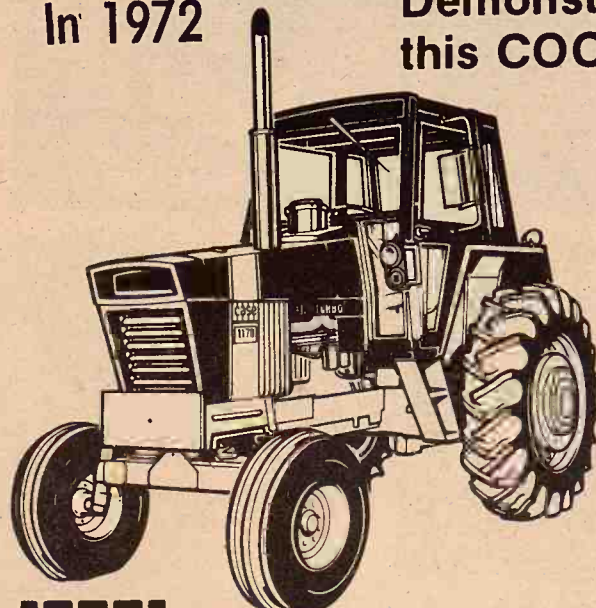

January 11, 1972

pansion plans in Brazil came as reports that the parent organization is closing six factories in Germany temporarily because of labor troubles and growing competition from world markets.

Volkswagen of Brazil, which last year took over the supply of Volkswagens to the whole Latin American market from the parent company, is still in its infancy as an exporter but orders are growing rapidly.

Last year Brazil exported 8,000 Volkswagens to Peru. This year has orders from Peru for more than 5,000.

"Gosh this drink of water wuz good, with all the football games on the weekend and deer hunters all week, I had almost forgot what it tasted like!"

Release Full Funds On Conservation Cost-Share

The administration has announced it will spend this year the full \$195.5 million authorized by Congress for a farm conservation program called REAP.

Congress had authorized the money for REAP programs in 1972 but when those were announced last October the Agriculture Department put spending at \$140 million. The balance, \$55.5 million, was frozen by the Office of Management and Budget. Secretary of Agriculture Earl L. Butz, who made the announcement, said "an additional \$55.5 million will be available for REAP in 1972.

(Kansas will receive about \$1,650,000 of the total, according to funding awards made earlier. Of the \$140 million released earlier, Kansas

received \$4.5 million, according to Frank Mosier, state director of the Agricultural Stabilization Conservation Service, Manhattan.)

The letters REAP stand for Rural Environmental Assistance Program and formerly, since it began in the mid-1930s, it was the Agriculture Conservation Program or ACP. Under REAP, the government agrees to share the costs with farmers of carrying out approved land and water conservation projects such as terracing, forestry practices, waste disposal, pond development and other watershed work. The cost sharing usually is on a 50-50 basis.

The total of \$195.5 million now available for REAP is the most since 1969 when the same amount—the figure designated by Congress—was approved. In 1970 the program was trimmed to \$185 million and for 1971 was held at \$150 million.

January 11, 1972

by the environmental assistance program.

The amount of additional funding to be earmarked for Kansas will be announced in the next few days, Dole said.

At Shawnee Mission Sen. James B. Pearson, R-Kan., said he "welcomed the decision of the Office of Management and Budget to release for immediate expenditure the more than \$55 million in impounded Rural Environmental Assistance Program funds."

The senior Kansas senator said, "This program is of great benefit to Kansas, because more than 20 per cent of all Kansas farmers and ranchers participate each year with the government in cost-share projects. I wrote OMB Director George Shultz and USDA Secretary Earl Butz on Dec. 22 urging prompt release of these frozen appropriations, and I'm pleased the voice of rural America has been heard."

The right questions to ask your dealer before you buy a new tractor:

Is the tractor really new? The International Harvester 1066 gear-drive Turbo—with 137* engine hp and 116 pto hp—is a new tractor. New 414 cu. in. Turbo engine. New quiet sound. New hydraulic couplers. New easier steering. New comfort and safety cab. New styling. A pleasure to drive.

What about power? Load this engine down and you'll notice it's virtually smokeless. What does this mean? More efficient fuel conversion. Less carbon to foul your engine. Better fuel economy. More usable power. Longer engine life. And it means new IH diesels are taking up where previous big IH diesels left off—with the best engine reputation in the field.

What about noise? According to official tests, our new 1066 Turbo has the lowest noise level [85.5 d B (A)] and quietest cab of any tractor ever tested at full load.

What about safety? Every modern safety feature—including a protective frame deluxe cab—is available on the 1066.

What about service? There's an IH dealer near you who has the know-how and the parts to give you fast, dependable service.

What about price? You'll find that the new 1066 Turbo, when comparably equipped with other tractors, is the lowest-priced tractor in its class. From the time you buy to the time you trade it in, the all-new 1066 Turbo is the soundest, most profitable tractor investment you can make!

The proof of performance is in the field. You owe it to yourself to try before you buy. See an IH dealer.

Ask about the 1066—or any of the other new models from 32 to 140 pto hp—including two new Hydrostatics, a new V-8, and a new 4-wheel drive.

Any of these International Dealers can furnish you with satisfactory answers.

Senators Say Conservation Plan Dollars To Help

Sen. Bob Dole, R-Kan., says the newly released \$55.5 million to the rural environmental assistance program should help farmers in Kansas.

Dole said the funding announced by Secretary of Agriculture Earl Butz will "enable Kansas farmers to continue their land improvement and conservation programs" funded

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Wm. Visser, Herington, Wins Weekly Prize

Winner, Mrs. William Visser, R 1, Herington: "When I planned to make this for my family today, I thought it would be a good one to share with my Grass & Grain friends as they have shared so many good ones with me."

HAM-BROCCOLI CASSEROLE

In shallow baking dish (9x13-inch) combine:
2 cans condensed cream of mushroom soup
1 and one-third cups rice, uncooked
2 cups water (may need to add more)
Arrange ham slice or ham cut into serving size on top of 1 package of broccoli that has been placed on the rice mixture. Cover with foil and bake until water is absorbed. Uncover and top with 1/4 cup cheese and bake till cheese is melted.

+++++

This recipe was sent by Lydia Yoder, R 2, Garnett: "This recipe has been in our family for several years. We like it best with fresh peaches. We also like it topped with whipped cream."

OATMEAL PEACH BETTY

Two-thirds cup flour
1/4 teaspoon salt
1/4 teaspoon soda
2 cups peaches, fresh or canned
1/4 teaspoon cinnamon
2 tablespoons lemon juice
One-third cup brown sugar
Two-thirds cup quick cook rolled oats
1/4 cup melted shortening
1 tablespoon butter
1/2 teaspoon vanilla
Grease 2-quart casserole with butter. Put peaches in casserole, sprinkle on cinnamon and lemon juice. Dot with butter. Sift flour, soda and salt together. Add and mix in the oats. Add brown sugar and

vanilla to shortening. Put on top of peaches. Bake in 375-degree oven 45 minutes. Serve plain, warm or cold, with milk or whipped cream as desired. Serves six.

++ +

Mrs. Charles E. Graham, Council Grove: "This makes super delicious cake or cupcakes and you will not believe how good this is until you have tried adding these three ingredients to your cake mixture."

SUPER-CAKE

Use 1 box of any prepared cake mix (except angel food) and follow directions on box. Add to this ready cake mix mixture:
1/4 cup buttery Wesson oil
2 tablespoons sugar
1 teaspoon butter flavoring
Bake according to directions on box of prepared cake mix. You may use any desired frosting.

++ +

Mrs. L. H. Rebiskie, R 1, Alma.

sent this recipe:

SALLY ANNE COOKIES

1 cup white sugar
1 cup brown sugar
1 cup butter
1/2 cup lard
3 eggs
4 1/2 cups flour
2 teaspoons cinnamon
1 teaspoon soda
1 teaspoon baking powder
1 cup chopped nuts

Mix the dough and form into roll. Let stand overnight in refrigerator. In the morning slice thin and bake.

Take A Close Look At Refrigerator Before Buying

When shopping for a new refrigerator, open the door and take a close look inside to be sure you get today's outstanding features—more storage space, more convenience and more flexibility in creating interior arrangements to satisfy all your keeping needs. With modern construction, you can get up to two cubic feet of extra storage space and if your present refrigerator is more than ten years old, one of the new models will probably give you six to eight cubic feet of additional storage in the same floor space. Conveniences to look for include frost in both refrigerator and

freezer sections to eliminate the messy chore of defrosting, separate adjustable cold controls so the freezer can be set as cold as one needs without affecting the refrigerator, optional automatic ice makers to be installed when desired and door closers that require just a nudge to shut doors tightly and lock in cold air.

Also look for a power saver control to reduce operating costs during periods of low humidity. Another nice feature is adjustable cantilever shelves, ideal for stemmed glassware and other containers that may tip over and spill their contents below. Another is split width can-

tilever shelves for maximum flexibility in arrangement.

Customers will also appreciate air wrap meat keepers that maintain meat freshness longer and which can be converted for use as vegetable crispers. And twin porcelain enamel crispers for ideal

moist cold that keep vegetables fresh and crisp longer are a must. Storage doors should have deep, adjustable shelves.

After inspection of the inside, close the door and look for attractive styling, color choice and flush opening door hinges.

Grass & Grain

5

January 11, 1972

and easy to do.

These and other innovations have taken the resilient floors out of the utilitarian class and made them suitable, even desirable, for a wide range of home installation needs.

Today's Floors Brighter And Bolder In Accents

Floors have become brighter and bolder, especially the resilient variety where the accent is on patterned designs and rich, vibrant colors.

Resilient floors are no longer limited to kitchens and bathrooms. The styles now are as likely to be found in the dining room, family room or front hall. Major improvements in installation, maintenance and functional performance have given birth to a whole new generation of floors.

Now there is a good looking sheet flooring product on the market that hates waxing as much as housewives do. It features a new type of wear surface that actually shines without wax. Most waxes won't even stick to the surface but then, neither will tracked-in dirt or spills. It comes up gleaming with a quick once-over with a damp mop.

The new resilient floors offer the same kind of underfoot comfort that

most persons associate with carpet. Many of the newer sheet vinyls are being produced with a built-in layer of foam cushioning to help quiet noise and reduce fatigue. While they provide carpet comfort, they are better suited than carpet to kitchens and heavy traffic areas because of their durability and ease of maintenance.

And for the do-it-yourselfer, a different type of vinyl asbestos tile has been developed with adhesive already applied to the back. To install, you simply peel off the protective paper, place the tile on the floor and press. It's clean, fast

False Lashes Require Washing

Your eyelashes, just like the rest of you, are dirt collectors. Your own lashes get cleaned with your face, but false lashes need to be taken off and washed. Wash-and-wear lashes make the cleansing simple. Just soak them briefly in a basin of suds, whisk around gently and let dry on a tissue or towel. They won't fade, shrink or lose their shape or style, including their built-in curl. Available in a variety of styles, the lashes can be worn while swimming, diving, surfing or water-skiing because they are waterproof.

by Ted Trogdon

"The shoes are just perfect . . . But I don't like them on this carpet."

Microwave Ovens Now Go With The Owner

For people on the go and those looking to the future, microwave cooking is the answer.

Realizing this, a leading manufacturer of appliances has expanded his line of electronic-cooking equipment with a portable microwave oven.

This unit comes in a vinyl clad steel cabinet and a front of solar bronze. A special trim kit converts the oven to a built-in unit in the kitchen, a bonus for those remodeling their kitchens or family rooms.

Installation of the oven is easy because no special wiring is needed. But the kitchen isn't the only place for this microwave unit. It is ideal for patio or backyard, family room, camper or pleasure boat.

With the microwave oven, food may be prepared in just a fraction of normal cooking time. A baked apple, for example, cooks in three to five minutes, less than ten percent of conventional cooking time. A meat loaf may take 18 minutes or about one quarter of the usual time.

Frozen foods can be defrosted in

minutes. A package of solidly frozen food is ready to serve in one or two minutes. A small frozen roast takes only about two or three minutes a pound. So your menu can be selected from the freezer and served in minutes.

Also, clean up time is reduced because many foods can be cooked directly on paper plates or towels so there are fewer utensils to wash.

And during the hot summer, the oven provides cool cooking, for the microwave energy is absorbed by the food and reflected by the oven's walls. Heat is confined to the food, so the oven stays cool and so does the cook.

Cork Protects Scissor Points

Points of scissors will not damage a sewing bag or your fingers if a cork is pushed onto the points. The cork will also prevent the points from breaking off should the scissors be dropped.

Lighten Makeup

Even the most carefully applied makeup sometimes turns out with color too intense. Dampen a cotton square with witch hazel and blot skin to lighten the color.

Silver Polish Removes Starch From Iron

Use silver polish to remove burned-on starch from the sole plate of a steam iron.

Use Sponges To Clean Hardwood

Use sponges to clean hardwood floors. Sponges can be wrung out when they are almost dry and no water will seep into cracks.

Wash Sterling In Soda Solution

Wash sterling silver articles in weak solution of soda and water. Rinse in clear water and thoroughly.

White Enamel Lightens Closet

To make a dark closet light, paint the inside with a glossy enamel.

Salt Removes Tea Stains

To make stubborn tea stains vanish from a cup, rub the briskly with table salt.

Cane Seats Can Be Washed

Cane seats on chairs can be washed with warm water and soap. They will shrink tight as they dry.

To Clean Marble

Wash marble tops of furniture with a solution of two tablespoons of baking soda to a quart of warm water. Let stand a few minutes and rinse with clear warm water. Dry.

"Mom... the paycheck's here!"

Stronger Pressures To Go Metric

The United States, power giant that it is, finds itself in a curious alliance with tiny Sierra Leone, Malawi and a half-dozen other countries on one world issue.

Those three, along with Ceylon, Gambia, Guyana, Jamaica, Liberia and Nigeria, are the only nations left in the world without a commitment to adopt the metric system of weights and measure.

Sen. Claiborne Pell (D-R.I.) says the United States may soon leave the ranks of the holdouts.

"The question is no longer shall we go metric. The question is how we shall go metric," said Pell, who is sponsoring a metrication bill and is urging Congress to reconsider what it refused to do 180 years ago.

Some hearings have been held and others are planned, probably in February. Meanwhile, the administration is considering proposing its own bill, and Secretary Maurice H. Stans of the Commerce Department has endorsed the change.

The switch to metric would involve measuring distance in kilometers instead of miles, weight in kilograms instead of pounds, and volume in liters instead of quarts.

No one disagrees that conversion would produce confusion, inconvenience and in some cases, loss of money, but foreign trade difficulties offer a strong argument for change.

With a metric system, American products could be designed and sold more easily to metric market countries which overwhelmingly dominate any economic chart.

The system itself is more logical than the existing U.S. measures of length, area and volume because, unlike the present system, all are based on the number 10.

Some sectors of the U.S. society, especially science, already use

metric measure.

Pell's legislation would allow 10 years for conversion.

The first step would be a resolution committing the nation and setting up a metrication board which would prod step-by-step change.

Although opposition has not yet crystallized, some argue against metrication on grounds it would cost

\$100 billion. Proponents see this an unfounded speculation.

Such companies as Ford, John Deere, and Honeywell, which have some metric experience, have reported the costs are running less than expected.

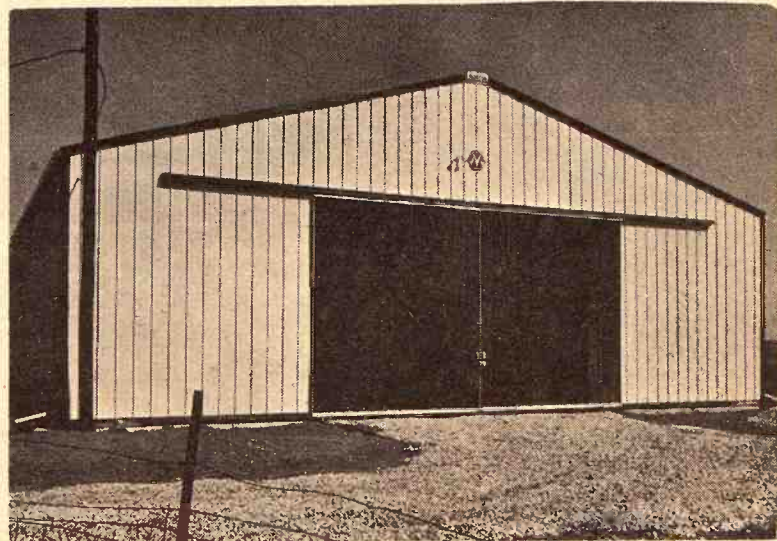

England, which exported its system to the United States then did an about-face, is scheduled to complete its 10-year conversion in 1975.

"The longer we wait, the more we must pay to switch," says Pell.

Pollution Or Not, There'll Be More Power Plants Built

Unless people are willing to turn their lights — and their TV sets — out and sit in the dark, this country must build new electrical generating plants like mad, no matter what the protests are from environmentalists.

The proposition is that simple, according to Howard C. Warren, board chairman of The Riley Company, a firm that makes its money helping to build generating plants. Warren is all for careful site selection and the cleanest possible

plants; his point is the plants have got to be built.

Pressure brought by the anti-pollution forces has actually caused the public utilities to "hesitate" on plans for plant construction and expansion, Warren reports. "For the last three or four months the utilities have been delaying some commitments," he says, "but this only means that there will be added pressure on orders later on."

The Riley Company has a double

stake in this. Its big division, Riley Stoker, Worcester, Mass., does more than \$70 million in sales, producing steam boilers and allied equipment for electrical plants. Its smaller division, Scam Instrument Corporation, Skokie, has sales of about \$17 million and makes a variety of sophisticated industrial monitoring and control devices — some of which end up in electrical generating plants.

Most of the generating plants that will be built in the near future will be

fired by fossil fuels rather than nuclear energy, Warren insists.

It would be easy to assume that Warren downgrades nuclear power's growth because Riley Stoker's big thing is coal-fired steam generating equipment. But Warren says he bases his prediction on the best surveys his company can make.

"I can see a time," he says, "when the percentage of nuclear power versus fossil will require Riley Stoker to get into the business, directly or by merger. We do have a lot of fabrication know-how that can be applied to nuclear vessels and fittings. But I feel that nuclear power is not going to be really significant in the next 15 years."

In any event, industry estimates have it that demand for fossil fuel steam generating equipment should increase by 15 to 20 per cent a year for the next 10 years.

The present Riley Company is the result of a rare minnow-swallow-whale merger. Warren's Scam Instruments, one-third the size of Riley Stoker, began buying into Riley Stoker in the late 1960s and finally acquired 100 per cent ownership in late 1971.

"I remember," says Warren, "that back in 1969 a mutual fund - stock analyst asked me why in the world we wanted to stick our neck out by buying into anything as old-fashioned as a boiler factory and one that was losing money, too. It was losing about half a million a month then."

"I pointed out that all the projections indicated astronomical growth for the power generating industry. And that Riley Stoker was the smallest of the four companies in its field. (The others are Combustion Engineering, Babcock & Wilcox, and Foster Wheeler.) Therefore, it could not only grow with the market but it could possibly get a much larger

8

Grass & Grain

January 11, 1972

share of the market.

"It has turned out that way. In 1969, the company had only 6 per cent of the market with \$45 million in sales. Last year it had 15 per cent with \$71 million. We hope to maintain and improve that percentage."

Eagles Found In G&G Area

Junction City — A crippled eagle found north of Junction City was taken to the Clay Center, Kan. zoo for treatment of an injured wing.

The bird, which could not fly, flapping on the ground when served by Tom Tankersly, Wildlife Jackson and Earnest Patrick, Junction City. They caught the eagle by throwing their coats over it.

Junction City police said the eagle had a torn spot approximately size of a quarter on its left wing where the wing bone was broken. The eagle had flown into an object, possibly a telephone pole. Officers did not believe it had been shot.

Jack McNealley, Salina, Kan., game protector, took the eagle to the Clay Center zoo and confided it to U.S. Fish and Wildlife authorities as to what measures should be taken in an effort to save the bird's life.

Bald eagles frequently have been sighted around Milford Lake. They are protected by federal law.

A dead golden eagle, also protected bird, was found in Milford Lake late last month by three Junction City boys. It was frozen and will be sent to the Department of Sport Fishing Wildlife laboratory in Albuquerque, N.M. for an autopsy. Fewer than 8,000 bald and golden eagles remain in the country, said Rush Lang, game protector.

Rural

Vote Registration

New voting laws which add 18-
ear olds to the eligible list and
quire rural residents to register
ave brought small numbers to
ounty courthouses in the G&G area
register.
County clerks have generally set
specific locations and dates to
ake rural registrations easier.

In Riley county, for example,
county clerk Wanda Coder has set up
these locations and dates through
the rest of the month to facilitate
rural registration:
Jan 11-12: Madison, Grant and
Wildcat townships at the Riley
American Legion hall.
Jan. 18-19: Bala and Fancy Creek
townships at Bletchers Store in
Leonardville.
Jan 20: Ogden township at the
American Legion hall at Ogden.
Jan 25-26: May Day and Center

townships at Winkler school house.
Jan 27-28: Manhattan and
Zeandale townships at Riley county
courthouse.
In area registration for Sherman,
Jackson, Swede Creek and Ashland
townships was conducted last week.
Voters who missed the special ac-
commodations can register at
regular office hours at the county
courthouse.

CALVIN DRAKE WITH FEEDLOT FIRM
Calvin Drake, former head of beef research at Kansas
State University, has been hired by AID Inc. (Agri-
cultural & Industrial Development Inc), Wichita firm
which operates three feed lots at Ulysses, Syracuse
and Kinsley.
Drake, reared in the Flint Hills around Piedmont,
has both undergraduate and doctorate degrees from
K-State. He has taught at Virginia Polytechnic as well
as K-State.

FERTILIZER ASSN HONORS

Robert Nuttleman, center, Extension agricultural agent in Montgomery county, and Bill Morand, right, executive vice-president of Collingwood Grain, Inc., Hutchinson, were presented distinguished service awards during the annual meeting of the Kansas Fertilizer and Agricultural Chemicals Conference. Eugene Cleavenger, left, emeritus professor of agronomy at Kansas State University, made the presentations.

Pillsbury To Re-open Flour Mill At Enid, Okla.

Closing of flour mills in the midwest became commonplace in the 1960s.

One of them is reopening. It's a Pillsbury mill at Enid, Okla., which closed 3½ years ago. The plant will

open with about 60 to 65 persons on the payroll and Pillsbury said the annual payroll would be around \$750,000. The plant manager will be Jim Fox, former manager at Atchison, Ks., who recently operated a mill in the Philippines.

Pillsbury officials say they will spend about \$400,000 in reopening the mill. When it closed in 1968, the unit had a capacity of 2.5 million bushels of wheat, and it milled 10,000 sacks of flour daily.

White To Close M & M Tractor Division

White Motor Corp. said it's closing its Minneapolis-Moline division headquartered in Hopkins, Minn., one of its two U.S. farm tractor operations. No specific closedown date was mentioned.

The company explained it's consolidating the U.S. farm equipment group's manufacturing, engineering, administrative, marketing and other support and service operations into the Oliver farm equipment division, headquartered in Charles City, Iowa. Oliver division is White Motor's other farm tractor operation.

The farm implement plant at South Bend, Ind., and a farm machinery operation in Canada will continue unchanged.

The announcement of the closing wasn't unexpected within the industry. In late October, S. E. Knudsen, White Motor's chairman and chief executive, told security analysts that the company's farm equipment group, which he said had a loss of \$42 million in 1970, would see some "major restructuring."

The company said it will begin to phase out production at plants in Minneapolis and Hopkins. However, the plants "will continue to build out some Minneapolis-Moline tractors and power units" until the consolidation is completed "later this year."

White Motor added that approximately 1,320 employees—850 hourly and 470 salaried—would be affected by the closedown. A company spokesman said that there would be "minimal transfers" to the Oliver division, now employing 1,950. He conceded that most of the affected workers would have to seek other jobs.

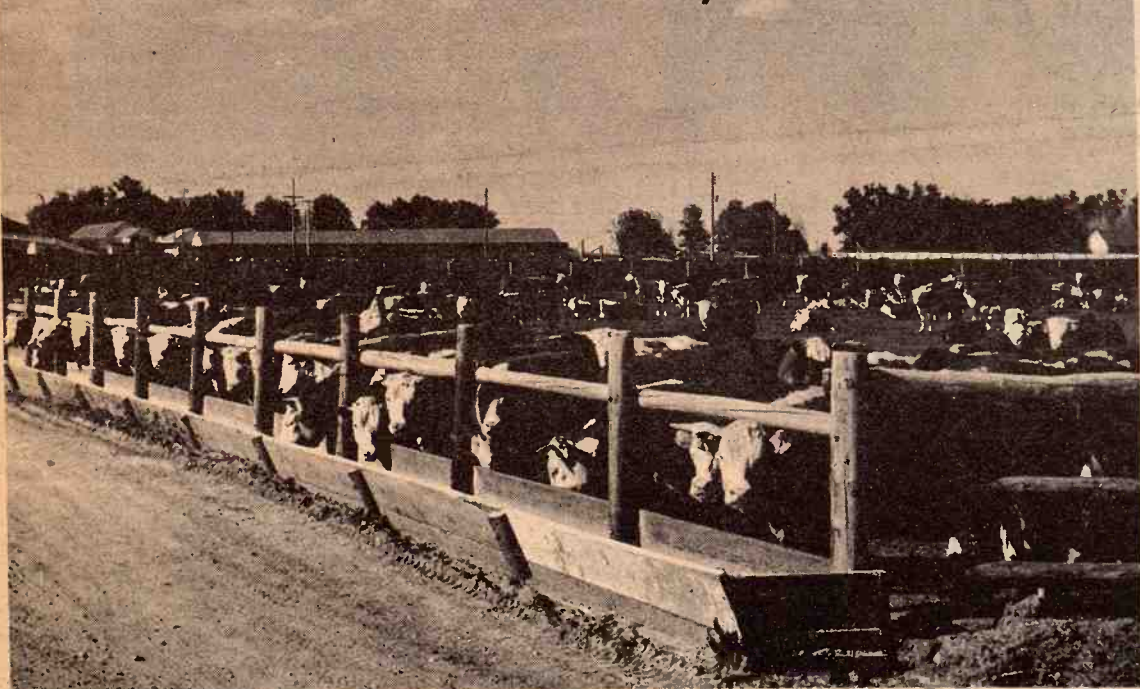

With consolidation, the company said, selected dealers will offer full lines of farm equipment as well as having the capability of providing parts and service for the Minneapolis-Moline and Oliver products.

The company said the consolidated farm operations will be headed by James D. Wormley, a group vice president.

Total U.S. retail farm equipment business, declining since 1966, appears to be leveling off, Wormley stated. He said the market is expected to remain at about present levels through the mid-1970s, adding that the Charles City facility "has production capacity adequate to handle all farm tractor production needed for some time."

In announcing the restructuring to employees and dealers, Knudsen said White Motor was remaining in the farm equipment business and expects to be "financially stronger and a more effective competitor as a result of the consolidation." White Motor also makes heavy-duty trucks and construction and industrial power equipment.

Can We Give You 10 Good Reasons You Should Feed Dehy?

Okay, count 'em—

- 1 Dehydrated alfalfa contains more total NUTRITION than any other natural feed-stuff.
- 2 Improved UTILIZATION of poor quality roughage.
- 3 Have specific protein GUARANTEES.
- 4 High levels of CAROTENE (Vitamin A source)
- 5 Fits into any ration NATURALLY.
- 6 Stored under scientific conditions to PRESERVE the Vitamin A.
- 7 Alfalfa's nutrition is in the leaf, and all the leaves are IN THE PELLET.
- 8 Closest available feeds to GREEN GRASS.
- 9 An excellent source of PHOSPHATE.
- 10 Produced from our own fields of the best varieties of alfalfa which have been heavily fertilized with phosphate and potash.

Dehy is available at the mill which produces dehydrated alfalfa

Use Visual System To Separate Wheat By Protein Content

If the state of Kansas had 250 million bushels of broken glass and a million bushels of diamonds to sell, it wouldn't take a financial wizard to see the costly error of mixing them all together and selling them for the price of glass.

Yet, Kansas has traditionally handled the marketing of its biggest and most famous crop—wheat—in a manner nearly that costly. Fortunately, there's a trend toward correcting this marketing misfortune.

At least one progressive-minded Kansas grain handling company—which chooses to remain nameless because its efforts are directed toward better customer relations, not widespread publicity—has found a way of separating the "diamonds" (high protein wheat) from the "glass" (low or moderate protein wheat) in the grain marketed through its facilities.

A sizeable portion of Kansas wheat has a high protein content. This high protein wheat is a valuable commodity because it is an essential ingredient in making flour that takes into consumer-acceptable bread.

However, in Kansas the identity of this much-needed high protein wheat is lost at local grain elevators during the harvest rush by being blended with a mass of wheat with low or moderate protein content. This mass of blended wheat is then marketed in individual carload lots.eldom is the protein content high enough to warrant a premium price. Only farmers who grow low protein wheat benefit from the present marketing system. Farmers who grow high protein wheat do not receive premium prices for their product.

When the millers can't find high Kansas, they import wheat from other states to blend with "station average" Kansas wheat. These extra transportation costs are passed along to the bakers in the flour sold. The end result is higher priced bread for consumers on supermarket shelves.

Dr. Floyd Smith, director of the Kansas Agricultural Experiment Station at Kansas State University, points out that "it's the nature of the marketing system that's at fault, not any one person or group. Kansas has simply evolved a system geared to handle wheat on a volume, not a quality (protein) basis."

Smith lists two items that need attention before wheat protein marketing will become widespread in Kansas: (1) more skill by local grain handlers in visually segregating wheat by protein content, and (2) better local facilities to handle wheat in several small volumes rather than in one large uniform mass.

The grain handling company mentioned earlier overcame many of the problems of wheat protein marketing and established a workable system of segregating wheat into protein lots and paying protein premiums to those wheat farmers earning them. The system could undoubtedly work as well elsewhere in the state.

The company tried the new system on a pilot basis with the 1970 crop. It worked so well that the plan was refined and expanded to handle the 1971 crop.

A spokesman for the company said there were several factors involved in the decision to make the protein marketing effort. First, management officials knew they were losing a valuable commodity. Second, they needed to boost harvest-time receipts. Third, they had the physical facilities to make the program work.

The local elevator has both rail dumps and truck dumps. Total capacity is several million bushels. In 1970, one rail dump was set aside for trucks with their own lifts. As the trucks were weighed and sampled, those having wheat that

was distinctly dark reddish and free of yellowberries (yellow kernels that have low protein) were asked to unload in the special rail dump.

At the end of harvest, the company had segregated 30,000 bushels which tested 13 percent protein when the station average was 11.5 percent protein. All farmers who dumped in the high protein dump were paid a protein premium.

The success of visually segregating the wheat in 1970 led to an expansion of the program in 1971. Improvements such as road asphalted were made to aid in the operation. The decision was made to segregate the wheat into three protein lots.

Wheat with high yellowberry content was unloaded in one truck dump. Darker colored wheat—but not too dark—was unloaded in another truck dump. The darkest wheat was unloaded in the rail dump.

An intense effort was made to quickly learn the skills necessary to visually appraise the protein content. The plant manager, chemist, elevator superintendent, and a high company official all cooperated to provide color judgment. Two other employees—hired just during harvest rush to take samples and weights at the truck scales—were also involved in the color determinations.

During the first of harvest, samples from each truck were sent away for 24-hour laboratory analysis to confirm protein content. Later in harvest, truckloads from the same farmer that looked identical were combined into one laboratory sample.

A company official admits the system is not perfect. "Some samples really fooled us, but as we gained experience and had confirmation from the laboratory, we increased our effectiveness. Before long, our two untrained sampling employees were making accurate color judgments," he reports.

The company found out that color, quality, and protein varied from farmer to farmer, highland to lowland, field to field, and combine dump to combine dump within the same truck. In general protein content rose as harvest progressed. There was ideal weather throughout the harvest.

Still, at the end of harvest, the company ended up with three very distinct protein lots. Here's how the harvest broke down: (1) 20 percent of all the wheat was unloaded in the low protein dump. Three bins of this grain tested 10.4, 11.7, and 11.9 percent protein; (2) 30 percent of the crop was unloaded in the moderate protein dump. Three bins of this grain averaged 12.0, 12.2, and 12.4 percent protein; (3) 50 percent of the grain was unloaded in the high protein dump. Five bins of that grain averaged 12.8, 12.75, 12.9, 13.1, and 13.25 percent protein.

So instead of having all its wheat on a station average of about 12.5 percent protein, the company in effect had three station averages that enabled them to pay a protein premium for the deserving wheat.

While the company is paying full market value for the higher protein, it also has a ready source of quality wheat that it did not have before. It is rewarding those farmers who grew high protein wheat and not

sharing the reward with those that didn't. There seems little question that customer relations with most farmers were improved.

The company is still not completely satisfied. Next year it intends to use four separate dumps, including one for wheat it believes is more than 14 percent protein.

In conclusion, the company has proven that a protein marketing system can work with extra effort

Grass & Grain 11
January 11, 1972

being expended. It's success will hopefully spark similar effort by other grain handlers in the state. Then Kansas will be well along the road toward receiving all the benefits from her number one crop—wheat.

Take Care Of Damaged Trees

By James J. Nighswonger
Environmental Forestry Specialist,
KSU.

Winter storms damage Kansas trees each year. How would you repair a tree if an ice storm hits? The answer depends upon three factors — the size of the damaged tree, the extent of the damage, and the nature of the damage.

If the tree is large or if limb breakage has occurred high on the tree, don't attempt to repair it yourself. Hire a trained arborist to do the job. Limit your own repair work to small trees and damaged limbs near the ground.

If the main trunk and scaffold (supporting) branches are still intact, the tree will usually be worth saving even if severe top damage has occurred. However, if the tree is split down the middle, uprooted, badly twisted, and broken up, then you probably should remove it.

Remove a broken, torn or split limb to its point of attachment. After shaping the cut, paint the edges of the wound with white shellac. Then paint the entire wound with a tree wound dressing, available at lawn and garden supply stores.

Topping or dehorning may be necessary if severe top damage has occurred. This method of pruning leaves large stubs, subject to decay, so top a branch only when necessary. Do not top or dehorn undamaged or slightly damaged limbs. Leave them alone even when nearby ones require topping.

Bolting or cabling will sometimes aid in repairing a badly damaged tree. A trained arborist with the proper tools can do this work.

If your shrubs are damaged extensively this winter, remove all broken canes. As with a tree branch, remove the entire cane, leaving no stubs. If the shrubs are severely damaged, cut the canes off near ground level. Most deciduous shrubs have a remarkable ability to grow back.

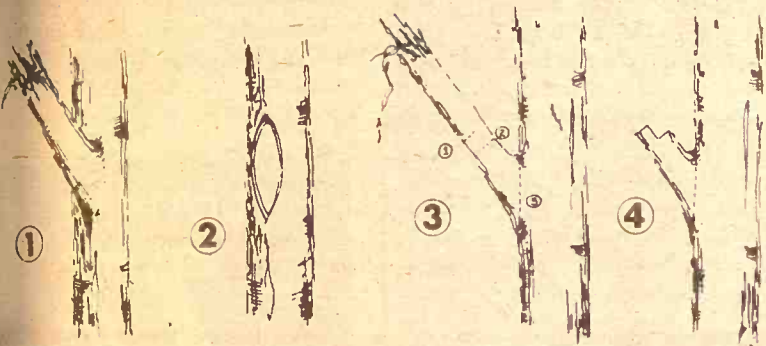

Illustration No. 1 shows a broken branch which would be removed. No. 2 shows proper removal of the broken branch to its point of attachment. A canoe-shaped pruning cut will heal best. No. 3 shows the three cuts required to remove a large branch without tearing the bark. Illustration No. 4 shows the same tree after cuts 1 and 2 have been made.

New Ag Secretary Comes To Kansas

EARL BUTZ

U.S. Secretary of Agriculture Earl L. Butz will make his first Kansas appearance since assuming his new duties, when he addresses the 1972 Kansas Agricultural Convention, Thursday afternoon, January 13. His address will be in the main arena of the Topeka City Auditorium, and is free to the public. Appearing on the same afternoon program with Secretary Butz are Attorney General Vern Miller, and a five-screen, ten-projector quadra-sound production, "Miracle On The Land," which portrays the amazing developments of American agriculture. Butz, a nationally-known speaker on agricultural subjects, was born and raised on an Indiana farm. He had a long career as a University educator and administrator, and was Assistant Secretary of Agriculture under President Eisenhower.

Sheep Ignore Green Stuff As Feed

SALINA — George W. White has his billfold back because Elmer Taylor's sheep are fastidious eaters.

White lost his billfold two years ago while racoon hunting north of Solomon. It turned up this week in a feed bunk used by Taylor's sheep. Taylor, of Solomon, took the billfold to the Saline County sheriff's office in Salina.

His theory is the billfold was lost in a hayfield, raked into a windrow and lodged snugly in a bale of hay. The billfold went unnoticed when the bale was broken into feed, but Taylor's finicky sheep bypassed it for the hay. Inside were \$7 and White's papers.

Despite Ad Ban, Health Scares, Smoke Sales Rise

Cigarette sales rose again during 1971 despite the ban on television and radio commercials, according to industry calculations.

At the first anniversary of the ban, industry sources estimated consumption had risen in 1971 by 1.5 per cent to 535 billion cigarettes. Sales grew by the same amount in 1970, after two years in which consumption declined.

Cigarette sales were expected to total \$11 billion for 1971, up 22 per cent from \$9 billion in 1970. Price increases prior to the wage-price freeze accounted for much of the rise in dollar sales, industry observers said.

Industry analysts estimated that R. J. Reynolds, the industry leader and maker of Winston and Camels would sell 169.9 billion cigarettes in 1971, compared with 165.7 billion in 1970. Philip Morris sales were expected to reach 96.3 billion, up from 87.5 billion, while Brown & Williamson, maker of Viceroy, should sell 91.2 billion against 88.2 billion in 1970.

Of the top six companies, only American Tobacco, makers of Pall Mall, and Liggett & Myers were expected to report lower sales. American's sales were expected to

drop to 93.5 billion from 100.5 billion in 1970 and L & M could slip to 32.5 billion from 34 billion in 1970, the trade sources said.

"One of the things that had been holding sales down in the past was very effective anti-smoking ads on television," said Irwin Kellner, an industry specialist with Manufacturers Hanover Trust Co. "Since the ban, these commercials rarely appear."

Before the ban took effect last Jan.

2, television stations had to run one antismoking commercial for every three cigarette commercials aired. Since the ban, airing antismoking commercials has been voluntary for station managers.

John C. Maxwell, a tobacco analyst for Oppenheimer & Co., a brokerage firm, also attributed the renewed growth in cigarette consumption partly to the increased number of people in the 20 to 40 age group, where smoking is heaviest.

Synthetics Don't Dent Baler Twine Market

Henequen and sisal, which have been squeezed out of many of their traditional outlets by synthetic fibers, are holding their own in the baling twine market.

Henequen and sisal are natural fibers produced from different varieties of the agave plant. They have been widely used for packing

and stuffing material and as raw materials for rope and twine.

But, in recent years, manmade fibers have replaced them in many of these uses. Only in the manufacture of baling twine for the booming U.S. hay industry do they compete effectively against synthetic fibers.

This is a crucial market for henequen and sisal fibers, because the nation's hay production, already rivaling soybeans as the second most valuable crop after corn, is expected to continue to expand.

Since 1954, U.S. hay production has increased to 126 million tons from 108 million tons. About 75 percent of the harvested hay is baled with twine, and natural fiber twine is the most widely used binding material.

Demand for twine by U.S. hay growers runs about 245 million pounds annually. In 1970, 214.7 million pounds were imported, up from 208.8 million pounds in 1965.

One reason twine made from henequen and sisal has been able to withstand competition from synthetic fibers is its lower price.

Polypropylene twine, which is manufactured in the U.S. from raw materials produced in the petrochemical industry, has ranged between \$8.50 and \$9 for a 9,000-foot bale in recent months. This is about \$2 more than some grades of henequen and sisal twine.

Since 1966, the price of baler twine made from henequen and sisal has dropped about 25 percent. Trade observers ascribe this to a price war among producer nations, including Mexico, Brazil, Haiti and Tanzania, and processor nations, including Belgium, Portugal and Canada.

In the past few years, the producer nations have begun building their

own twine-making plants and undercutting the prices charged by the processing nations in hopes of picking up a bigger share of the lucrative U.S. baler twine market.

Between 1965 and 1970, the processing countries' share of the U.S. demand fell to 45 percent from 59 percent, and the producing countries, excluding Mexico, increased their share to 29 percent from 4 percent. Mexico, the only henequen-exporting nation, supplied 27 percent of the U.S. twine imports in 1970, down from 37 percent five years earlier.

The lower prices that resulted from this competition reduced the total value of U.S. baler twine imports to \$21.2 million in 1970, compared with \$32.8 million for the smaller 1965 volume.

The Agriculture Department's Foreign Agricultural Service says these lower prices will help twine made from henequen and sisal retain its dominant position in the U.S. market. Farmers tend to buy the cheapest twine that fits their needs, and the lower-priced henequen and sisal twine is adequate for many farmers' purposes.

There are other reasons for the strength of natural fibers in the U.S. hay industry. "It isn't too hard to understand," says a dairy farmer in upstate New York. "Baling wire is a hazard. After it's cut from the bale, it lies on the ground and trips

animals or people." A New Jersey farmer has similar complaints about man-made fibers: "The stuff is strong and durable, but, doggone it, it won't rot. Years after it was used, it shows up tangled on the end of a cultivator blade."

Even so, U.S. consumption of natural fiber twine isn't increasing as fast as the nation's hay production.

The Agriculture Department says there is evidence that more and more farmers are chopping hay for silage instead of baling it. Also, the department notes, the portion of the crop stored "loose," in haystacks or haylofts, may be increasing from the recent average of 7 percent annually.

Furthermore, there are many farmers who prefer polypropylene twine. They say it is superior to natural-fiber twine for baled hay that is stored out of doors because it doesn't rot. The quality of polypropylene twine also is more consistent than natural fibers, farmers say. Some farm observers believe that the hay industry's demand for man-made twines will continue to increase.

Meanwhile, the use of baling wire for many years a mainstay of hay growers, is dwindling. After peaking at 27 percent of the crop in the 1940s, the portion baled with wire declined to 17 percent in 1967, according to an Agriculture Department study. The popularity of natural-fiber twine was the cause of this decline, the study says.

January 11, 1972

For a city slicker who used "to ride the neighbor's cows all the time — just foolin' around," cowboy Bob Clore, a sculptor and instructor of art, has come a long way in the rodeo world.

The Kansas State University educator broke into the rodeo circuit when he was 14. "All the kids I ran around with wanted to be cowboys, so we started entering Little Britches Rodeos," Clore says.

"Neither of my parents liked the idea of my rodeo participation," he reflects, "but it was in my blood and the excitement was there, so I guess there was no stopping me."

Clore certainly doesn't look like a cowboy, especially sitting in his office cluttered with paintings, sculptures, and dirty brushes.

He's only 5'9" with a wiry build, but his short-sleeved shirt reveals muscular arms and a pair of strong wrists.

Clore looks closer to the age of 20 than the 29 years he claims. His dress slacks and sweater shirt give no hint of his success as a cowboy.

Like anyone with the same dedicated attachment to the rodeo circuit, Clore can relate story after story of his rides atop a bronco or a bull. "I'll tell you what," says Clore, "and he'll launch into another incident of his rodeo experiences."

It hasn't been a bed of roses for Clore who has suffered "a couple of broken noses, a broken leg and ankle, and also a broken hand, wrist, and some ribs."

Participation in the Little Britches Rodeos enabled him to earn a place on the Westminster High School's rodeo team, which won the Colorado State High School Rodeo Championship for two years.

Riding bareback broncos is Clore's specialty, but he also tried his hand at riding bulls.

After high school, Clore, who didn't want to go on to college, worked as a jack-of-all-trades and was a consistent money winner in the Western States Rodeo Association. For six consecutive years he was in the association's "top ten" in both the bareback and bull riding events.

Later, when Clore decided a college education wouldn't be so bad after all, he accepted a two-year rodeo scholarship from Casper Junior College in Wyoming.

While a member of the rodeo team there, Casper's team won the National Intercollegiate Rodeo Association championship both years.

Clore continued his intercollegiate rodeoing and education at the University of Northern Colorado where he received a B.A. in art education and later a M.A. in sculpture and painting.

"A cowboy has to be in good

physical shape and also has to 'psych' himself up mentally," says Clore discussing the qualifications of a good rider. "You have to believe you can ride and then do it."

"I ride the bronc a dozen times in my mind, before actually get on him. 'I guess you call it positive thinking.'"

Luck plays a big role in a cowboy's success according to Clore. "I'll tell you there are guys who are good cowboys, but some of them are unlucky son of a guns."

He explains: "Some cowboys draw a lot of bad horses. By this, I mean a horse that doesn't buck much or put on a good show. And

since a cowboy is given points on his ride it is important to draw a good bucking horse."

"There's a lot of overhead in rodeos — travel expenses, and entry fees, with no guaranteed wage at all," analyzes Clore. "It all depends on staying on top of a good animal for eight long seconds, but those seconds go on and on," he adds.

"You can't blame your failure to complete a ride on anyone or anything but yourself — you have to be a real sportsman to handle it."

Clore doesn't strive to keep his opposite worlds apart. "Art and rodeos are a lot alike because each is demanding with individual competitiveness. If you make it in either field, you do it on your own."

He participated in 45 rodeos this past summer and finished a winner many times. "I don't like to talk about the money I've made in rodeos," He hesitates and adds, "but I've done well."

Clore's experience as a cowboy led to his recent appointment as coach of K-State's rodeo team. "I'm honored that the rodeo club had enough confidence to elect me as a coach. They felt they needed some guidance 'cause they want a championship team," he says.

It's been 15 years now since Clore entered his first rodeo and he hasn't tired of it yet. "I'm gonna compete as long as I'm physically and mentally able," he says with a determined grin.

RIDE 'EM PROFESSOR

Bob Clore, a sculptor and instructor in art at Kansas State University, Manhattan, says there is a lot of similarity between art and rodeos "because each is demanding with individual competitiveness. If you make it in either field, you do it on your own." Clore, who recently was named adviser to the KSU rodeo club, participated in 45 rodeos this past summer and was a winner several times.

by Ted Trogdon

"Is this where 'WHAT'S-HER-NAME' lives?"

Sheepmen Seek Means To Cut Coyote Losses

Killer coyotes that destroy small lambs, calves and pigs need to be brought under reasonable control in Kansas.

Those were the sentiments expressed at a meeting of the Kansas Sheep and Wool Growers Association during a Kansas Livestock Association Convention at Wichita.

"It's a sickening sight to go out in the morning and see a lamb lying dead from puncture wounds inflicted by the invading predator," said Virgil McClure, Newton. He has lost eight head of 35-pound lambs recently, he said.

Losses of ewes and lambs reported by producers to the KSU Extension Office for 18 months ending Dec. 31 totaled \$18,950, according to F. Robert Henderson, KSU Extension specialist.

Cost of losses to coyotes were cows, \$600; calves, \$4,800; pigs, \$2,240 and poultry, \$341—totaling \$26,931, figures show.

An unknown amount of damage goes unreported as farmers accept their losses, Henderson said, but added he doubted all losses to predators exceed \$100,000.

"People think we are lying when we say coyotes are doing damage," one sheep raiser said. "We need to take pictures as positive proof."

Kansas has taken the bounty from coyotes, according to Les Kohl, chairman of the KLA sheep committee.

The sheep and wool growers have decided to "do something" about their losses.

The group went on record in favor of a bill to present to the Kansas Legislature this year. According to Kohl, the model legislation bill would do two things:

- Give Henderson, KSU extension specialist, three wildlife damage control specialists.
- Appropriate \$45,000 to pay costs in salaries and research on the program.

The sheepmen are asking amendments to the cyanide gun law, according to Kohl, but are not pressing for it now.

Under the law, permits are issued for 30 days by the director of the Forestry, Fish and Game Commission. The sheep raisers are asking for an extension of the permit for 90 days, Kohl said.

Under the law, the gun cannot be placed less than one-half mile from a building site. Kohl is asking permission to place it within one-fourth mile from building sites.

Richard D. Wettersen, director of the Forestry, Fish and Game Commission, advised the group not to seek changes in the regulations at the present time. "A lot of environmentalist groups didn't like the poison," he added.

Dr. Don Good, head of KSU Animal Science Department, pledged complete cooperation of KSU in the predator control program.

Henderson said at present methods such as using an electric fence to protect the sheep and teaching people how to control coyotes are used.

Lower Prices On Latest Corn Purchases

The Agriculture Department announced last week the purchase of 2.77 million bushels of corn in a fourth weekly round of buying on the open market to help bolster prices at the farm level.

The latest purchase, the largest raised to 7.7 million bushels bought by the Commodity Credit Corp. since the series began last month.

Prices paid for the grain, from markets in Iowa and Nebraska, ranged from \$1.11½ to \$1.21¼ per bushel, lowest since the purchases began. Last week prices ranged between \$1.12 and \$1.27¼ per bushel.

Difference in prices result from locations of the grain and rail transportation costs, officials say.

In all, 20.1 million bushels were offered for sale to the government in the latest transaction. A fifth purchase announcement was to be made over the past weekend.

Auction SALE

Saturday, Jan. 15

Starts 11 a.m. — Lunch Served

Livestockmen Debate School Finance, Policy

A Kansas Livestock Association session taxes and school finance on taxes erupted into a debate over Kansas Board of Education policies and charges that the North Central Association of Colleges and Secondary Schools dictates school procedures.

Stockmen in the Wichita symposium rose to defend small schools and charged they are losing local control.

Harold Christ, state education board member from Scott City and a KLA member, challenged the assertion that small schools are expensive and inefficient. This

charge has been made principally by persons from large cities like Wichita and Topeka, he said.

Christ went to a microphone on the convention floor with statistics in hand from the state department which he said show some Wichita schools are as expensive as those in rural areas. He said there is statewide concern about large classes and educators want more individual attention for students.

"How can we give individual attention by making our units larger?" Christ said.

Wayne Rogler, Matfield Green, criticized the state board and said

"some of their rules and regulations are way out of line." He referred specifically to a principal he said was not allowed to teach. The man "sits around all day," he said, and such rules are costly to small schools.

Christ said the man may not be certified by state rules to teach at the right level. "You should find out about it before you start talking about it," he told Rogler.

Another stockman then asserted that North Central rules are "to discourage and destroy small schools." At Cedar Vale, he said, "We ran (school) without them for one year and we got along fine."

Panelists in the finance discussion had warned earlier that more state aid and a statewide income tax could lead to some loss of local control. When the Cedar Vale man said North Central regulations had already eroded local control, panelist Rep. Ray Vaughn, R-Burlington, agreed. "I'll buy that," he said.

Another panelist, Dr. J. B. Kohlmeier, a Purdue University school finance expert, disagreed with Vaughn, who is House Education Committee chairman.

"It was never intended that you have local control of schools," the lawyer-professor said. State responsibility for schools is in the Kansas Constitution, he asserted.

"When I started teaching school, I went to college 12 weeks and took an examination," the professor said. North Central "doesn't run the schools of any state," he said. Membership in the accrediting agency is voluntary and North Central "doesn't make any laws," he said.

A woman in the audience explained that North Central accrediting teams are composed of teachers and administrators, to which a man replied, "Who's paying those teachers who come around and tell us what to do?"

During the formal presentation, Kohlmeier, Vaughn and Ray Parr, KLA tax committee chairman from

Rossville, emphasized that recent court cases in California and Texas did not rule the property tax invalid, but did say that it could be one source of income—if all school districts were financed adequately and provide equal educational opportunity.

Kohlmeier noted all states have school finance problems. If five

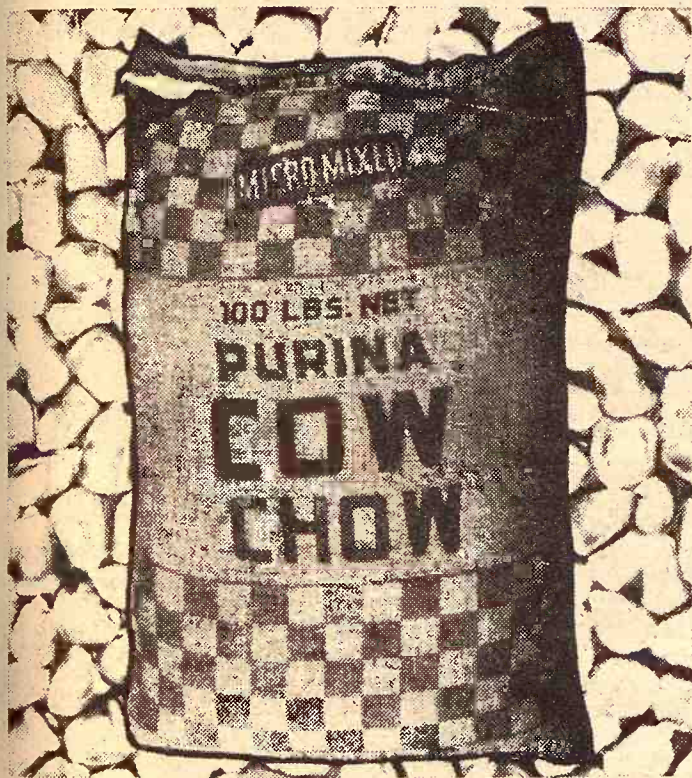

January 11, 1972

mills, for example, were cut from the property tax "you've got to find \$33 million someplace else." School finance plans cannot be sold politically unless districts are assured they will not lose money, he added.

IN MIDST OF SCHOOL COST DEBATE

Raymond Vaughan, Burlington livestock auction operator and state legislator; Ray Parr, Rossville cattleman and head of the Kansas Livestock Association's tax committee; and J. B. Kohlmeier, a school finance expert from Purdue University, were in the middle of the debate of school policy at the annual meeting of the Kansas Livestock Association at Wichita last week.

Make the most of your home grown grains with... PURINA COW CHOW CONCENTRATE 32%

Purina Cow Chow Concentrate 32% works with your home-grown grains to build a dairy ration that can help increase milk production.

Not All Like Cheap Grain Sale To Russia

Rod Turnbull
K.C. Board of Trade

Comments, some critical, on the recent huge sale of U.S. feed grains to the Soviet Union, suggest a review is in order of the law under which the Dept. of Agriculture may move grain out of its surplus piles, and of the general philosophy of the farm price support program.

The law not only is specific on how sales are to be made from government stocks (surpluses), but it carries out the philosophy of the farm program which is to bolster U.S. domestic market prices and not to demoralize such prices.

Charges have been made that the government, through its Dept. of Agriculture, sold oats and barley to the Soviet Union at prices cheaper than it would sell to U.S. farmers. This is true, and that is exactly the way the farm program laws were designed. Grainmen at the Kansas City Board of Trade understand this and probably most farmers. The government takes surplus grain off the domestic market in order to raise or sustain domestic prices.

The government gets title to surplus grains through the operation of its price support loan programs. At harvest or for a period thereafter, a farmer may put his grain in storage under the loan and collect the amount of the loan. If prices later rise above the loan level, the farmer can pay off his note with 3 1/2 per cent interest and sell his grain on the market. If prices do not rise above the loan, the farmer simply defaults.

When the government owns the surplus grain, it has the responsibility of getting rid of it. Such sales are handled by the Commodity Credit Corp. of the Agricultural Stabilization and Conservation Service of the USDA.

grades this year. The letter grades have been passed up in favor of written student evaluation progress reports from teachers and parent-teacher conferences.

RAILROAD DEPOT OF A MAJOR CITY

Remember when the railroad depot was the grandest edifice in many cities? Here's the "depot" in Cleveland, Ohio, which has been deserted by Amtrak as a major passenger service city. The Union Terminal has been closed in Cleveland, and the two daily long-distance trains serving the city will run on this single-track crossing thru an industrial area of Cleveland.

\$1 Charge Too Much For Unlisted Phone Subscribers

Unlike telephone customers in the rest of the nation, Kansans apparently consider the disadvantages of having an unlisted number greater than the risks of having a listed one.

The national trend is for more and more subscribers to ask for unlisted telephone numbers. More than 20 percent of subscribers in Los Angeles, New York, Chicago, San Francisco, Washington D.C. and Detroit already have them.

In Kansas, though, the trend appears to be in the opposite direction. Customers want their numbers listed. Through October, Southwestern Bell Telephone Co. figures for 1971 showed a 42 percent decrease in the number of unlisted telephone numbers among its customers in Kansas.

A possible reason for the massive

decrease in the number of unlisted numbers, though, was the new \$1 per month charge for no listing.

Before the fee for unlisted numbers was initiated in Kansas this year, Southwestern Bell noted a 67 percent increase over three years in the number of subscribers with unlisted numbers. The number increased from 20,900 in 1967 to 35,000 by the end of 1970, Kenneth L. Brown, manager, announced in February 1971.

Southwestern Bell argues that unlisted numbers hamper its ability to provide service, a spokesman said. Directory assistance operators, who do not have access to unlisted numbers, encounter a significant amount of irritation from callers who are unable to obtain numbers.

Kansans evidently agree they do not receive the full benefit of telephone service when they have an unlisted number. Commercial managers of Kansas' two other major telephone companies have noted no upward trend.

The United Telephone System, second-largest in Kansas behind

Southwestern Bell, placed an extra fee on unlisted phone numbers 1 1/2 years ago. The charge has prevented any increase in the number of unlisted phones, according to Don Heidebrecht, general commercial manager, Junction City.

Kansas Telephone Co. has charged extra for unlisted numbers for some time, Gary Clifton, state commercial manager, reported. He conjectured the number of unlisted numbers with Kansas Telephone has decreased.

Method To Control Dairy Cows From Retaining Placenta

Ralph Bonewitz, Extension dairyman at Kansas State University, reports that a California study involving two large dairy herds showed that cows with retained placentas had a 12 percent lower conception rate on the first breeding service and required 0.7 more services per conception than cows that "cleaned" normally after calving.

Bonewitz cautions that it is easy to assume that the retained placenta always causes the lowered breeding efficiency. This assumption is true when the uterus is injured by removing the placenta or when infections occur because the placenta was not completely removed.

However, he says it is easily possible that the retained placenta and the subsequent breeding difficulties are both caused by nutritional deficiencies or hormone

imbalances. Bonewitz suggests three management practices that help reduce the incidence of retained placentas and breeding difficulties: (1) the cow or heifer should drink large amounts of very warm water immediately after calving; (2) 30 days after calving each cow that required help in removing the placenta should be examined by a veterinarian, and (3) all cows should be fed a ration that includes plenty of vitamins, minerals, protein, and energy.

In problem herds, tests should be made to get a mineral analysis of the forage in the ration. Mineral deficiencies should then be corrected with supplementation.

PUREBRED CHAROLAIS BULLS

Start the New Year right. You can add 50 to 100 lbs. to your calves at weaning with the right bull.

We have top bulls available, recommended for commercial & purebred herds — 12 to 22 mo. of age — sons of our outstanding herd sires, CRESTOMERE ALGER (Full-French) and LCR SIR PERFECTO SAM 624 (domestic). Complete records available on all bulls.

Call us collect and arrange a visit soon.

Warnings To Heed Limits On DES

Failure of cattle and sheep producers to heed new diethylstilbestrol (DES) certification regulations would be harmful to both industries, warn two Kansas State University Extension specialists.

The new federal regulations—involving all cattle and sheep to be marketed—require the owner, feeder, feedlot manager, or marketing agent to sign a certificate indicating that:

- 1—The animals did not receive feed containing DES, or,
- 2—The animals received feed containing DES in accordance with Food and Drug Administration regulations but were withdrawn from this feed for seven days before arrival at the slaughterhouse.

Dr. George Ahlschwede, Ex-

tension sheep specialist, and Herman Westmeyer, beef specialist, believe repeated violations could result in more stringent regulations or even a total ban on the use of DES.

DES is a synthetic hormone like substance used to stimulate growth of cattle and sheep raised for food production.

"The use of DES in our cattle and sheep rations is of extreme economic importance to Kansas," point out the specialists. "The banning of DES would increase the time needed and feed used to produce a pound of meat. This would result in considerably higher prices for consumers."

If a marketer fails to meet the new certification requirements, his cattle and sheep will be held alive for at least seven days at his expense, or they will be slaughtered and tissue samples taken for laboratory testing to insure the animals are free of DES residues.

Ahlschwede and Westmeyer indicate USDA and FDA officials will make periodic inspection to determine if the certification requirements are being met. Certificates are available at most sale barns, commission companies and packers.

Hackberry Wood Gains Status

Hackberry is no longer the forgotten tree. In fact, it is one of the most versatile species grown in Kansas.

Because of its popularity, the hackberry is being made available to Kansans again this year through the tree distribution program of the Division of State and Extension Forestry at Kansas State University. Order blanks for the hackberry and many other species are available at the county Extension office.

Ten years ago hackberry trees were being passed up by loggers. Those not used for firewood were left to grow old and die.

Not so today. Hackberry is recognized as a quality hardwood in demand by the furniture industry. It is grown in all sections of Kansas.

This species has unsurpassed bending qualities as well as the proper combination of grain, porosity and color to adapt itself to any finishing stain.

Hackberry, ideal in windbreaks, is also a good yard tree in towns and on farmsteads. KSU foresters see it as a possible replacement for elms.

As a young tree, hackberry is a favorite food of the white-tailed deer. As it grows out of reach of the deer, it begins to produce seed. The tree's berries are a source of food for birds and small animals during the fall and early winter.

In short the hackberry is suitable for almost any use except as a Christmas tree.

2 M&W "Little Red Wagons" used a little	4 brand new Papec grinder mixers, 2 left
C 11 12 1/2' disc harrow	

HEY! HEY! HEY!

We have Miller, Miller, Miller. Another big load just arrived. And, Oh Yes, we have DuAl loaders, the loader you can take on and off in 1 minute. The D'ual 3000.

No, we haven't forgotten Great Bend, we also have them. The 800 and 900 on display. Yes, we handle Farmhand. We have their Grinder Mixer and Loader on Display.

And that ain't all — we have Hesston and we have most of their machinery on display. Right now we have a 420, 14' swather on display and a No. 10 pull type.

Yes! We have "Big Ox" and we have it on display. Not only their chisel plows but their blades.

Stop by with your pickup and take it home.

And we also have Waldon Dozer blades and they are also on display.

And we have Grain-O-Vator wagons and we have a couple of specials on a No. 30 and No. 55.

We are the dealers for Gilmore-Tagge Augers and they are on display.

We are the dealers for Lilliston Cultivators. A semi-load due in soon. Don't wait like you did last year and find they were all sold out. Buy now.

We are the dealers for Sidwinder cutters and they are on display.

We handle Hinkler, Excel, and Egging Cabs for combines and tractors!

And we even handle Irrigation equipment. We have the Valley Self Propelled. We can make it rain when the sun shines.

We are also the dealers for Berkley and Western Land Roller pumps, Ames Irrigation equipment, McDowell Irrigation Equipment and ASC Tubing.

Stop by and see us. On top of everything else, we have one of the most complete hardware lines in the country. Anything from pliers to equipment in St. Marys.

We Don't Need Any U.S. Wheat, Says India

India says it has fulfilled a pledge to eliminate the need for importing food grains under aid programs and has canceled a U.S. government commitment for 400,000 tons of wheat to prove it.

Prime Minister Indira Gandhi took the word to the people.

"The country's food production this year was such that despite famine conditions in a number of states and a flood havoc in others, we have so much food that storage has become a problem," the government radio said she told a rally in central India.

"We need not import a single grain from any country," Mrs. Gandhi said.

Official figures show that India produced 107 million tons of wheat and rice in 1970 with another record crop of about 115 million tons expected for 1971.

India has had a history of hunger

and poverty since long before it achieved independence from Britain in 1947. Its food grain imports have exceeded exports since 1921.

Under an 18-year-old arrangement in which the United States sells commodities and uses proceeds to help the recipient country's economy, India has received more commodities in dollar value than any other country.

Effective Jan. 1, the Agriculture Ministry said, India would receive no more food under this arrangement called Public Law 480. That includes, a spokesman said, 400,000 tons of wheat still due under a contract signed last April 1.

As early as last March Indian officials were predicting self-sufficiency in food grains by the end of the year for the 460 million Indians despite the drain on supplies of millions of refugees from what was then East Pakistan.

BLUEST
The year of 1971 was the best we
er had in the history of our
business. If the first sale of this year
as any thing to do with it, 1972
ould be a very good one also,
anks to our many friends and
customers over a wide area. A barn
ill of buyers and a big run of cattle
ade a real good sale last Friday.
Listed below are some of the
Phone representative sales of Friday, Jan. 7:

Postpone Signup Until February

The Agriculture Department has decided to postpone the start of farmer signups for 1972 crop programs for wheat, feed grains and cotton, a spokesman said.

The signup was originally scheduled to begin Jan. 17 and continue through Feb. 25. The new dates are Feb. 3 to March 10.

One official said the additional time would give the department an opportunity to look over a special survey report on farmers' planting intentions for 1972 crops. That report is scheduled for Jan. 27.

Speed 'Early Outs' Program At Fort Riley

FT. RILEY—Out-processing personnel on post wound up 1971 by working as much as 16 hours a day in an effort to discharge as many eligible soldiers as possible before the holidays.

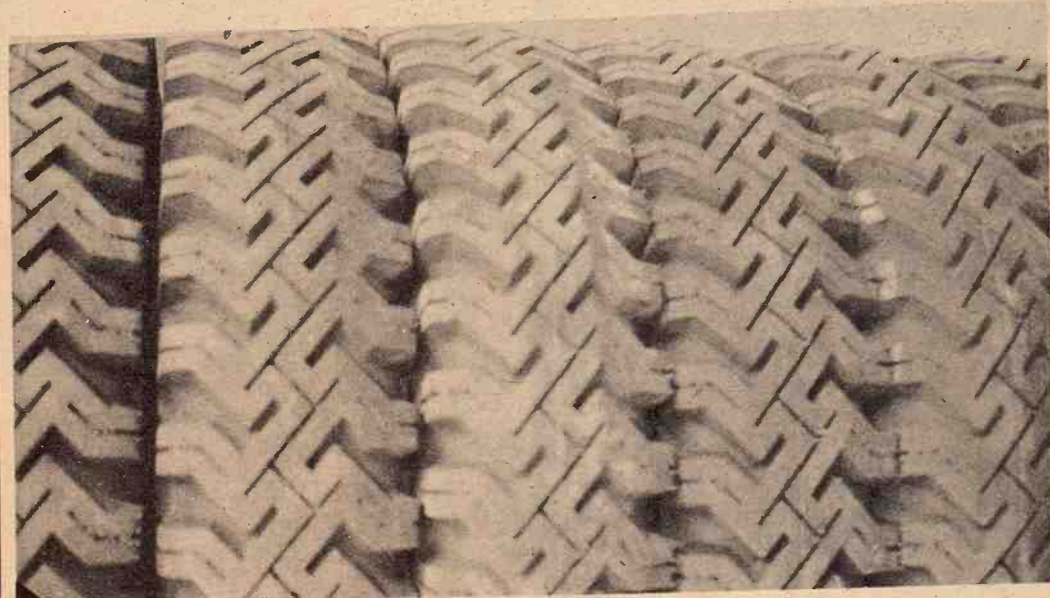

An estimated 4,100 soldiers—draftees and first-term volunteers—were affected by the Army's new "Early Out" policy announced Dec. 10. The policy calls for a mandatory 179-day early release for men in both categories. Men due to finish their term of service by June 30, 1972, are required to be separated no later than Jan. 31.

Army officials here reported men of the Transfer Point section in the post adjutant general's office worked an average of 11 hours daily from Dec. 15, cutting normal out-processing from five days to four.

The Processing Branch, also overrun, worked 12 and sometimes 16 hours daily, sending some 700 men through Central Clearance on Dec. 20 and 21 alone.

Sell At St. Marys

Sell Or Buy Cattle & Hogs By Auction Tuesdays

We had lighter receipts due to the cold snowy day. We sold 244 cattle which wasn't enough to really test the market, but I would call it about steady.

Following is a partial listing of our sale:
