Crop Production

This Farm Management guide reports Kansas land prices and cash rents for 1986-2005. These data are useful to farm managers in determining cash rental rates, to farmland appraisers in calculating indexes for making time adjustments to land prices, and to landowners and investors who base expectations on historical price and return levels for farmland. The average prices in this guide encompass parcels of land that vary widely in productivity. Thus, these data are more appropriate for analyzing trends than for establishing market value or rental rates for specific tracts of farmland.

nonirrigated cropland, irrigated cropland, and pasture. This information is combined in two additional land groupings: all cropland and all land in farms. While these two groupings do not represent a particular type of land (e.g., nonirrigated cropland), they provide a broader classification of interest.

The land values reported also include the value of any buildings that may be on the land. The value of the buildings represents a small portion of the total value, on average, and thus this reporting method does not significantly affect the accuracy of land values reported.

Kansas Agricultural Statistics

For reporting purposes, Kansas Agricultural Statistics Service has divided the state into nine agricultural statistical districts. The districts are: Northwest (NW), West Central (WC), Southwest (SW), North Central (NC), Central (C), South Central (SC), Northeast (NE), East Central (EC), and Southeast (SE). Since 1976, Kansas Agricultural Statistics has collected price information on three types of land:

Kansas Land Prices

Tables 1 through 5 show average prices of land and buildings in each district and an average for the state for the most recent twenty years reported. Data are shown for each of the five land groupings: all land in farms, all cropland, nonirrigated cropland, irrigated cropland, and pasture. The annual data are based on February 1 for 1986-1989, and January 1 for 1990-2005.

Cash Rental Rates

Average cash rental rates for nonirrigated cropland, irrigated cropland, and pastureland by region are shown in Tables 6 through 8 for 1986-2005. Cash rent for specific tracts of land will be influenced by many factors other than the class of land (e.g., productivity, size of government program payments, location, size of parcel, road access) and thus there will be considerable variability around the average reported rate.

Table 9 shows average price per acre, cash rental rates, and rent as a percentage of price (i.e., rent-to-value) for nonirrigated cropland, irrigated cropland, and pasture in Kansas.

In 2005, the average rent-to-value was 5.1 percent, 6.1 percent, and 2.7 percent for nonirrigated cropland, irrigated cropland, and pastureland, respectively. These averages can be useful “rules-of-thumb” for establishing cash rental rates or evaluating land purchase decisions. For example, if the market value of a particular piece of nonirrigated cropland is \$750 per acre, a reasonable expected cash rent would be \$38.25 per acre ($\750×0.051). Similarly, a person interested in buying pastureland that rents for \$14 per acre would expect the land to be valued at about \$518 per acre ($14 \div 0.027$). If the actual land value is significantly higher (lower), this suggests the land might be over (under) priced.

Footnotes

^a Source: *Kansas Agricultural Statistics (KAS)*, Kansas Board of Agriculture, United States Department of Agriculture

^b District land prices for 1986-1988 and cash rents for 1986-1989 were not available. Values for these years were calculated by KSU to be consistent with KAS reported state level changes during this time period.

^c Data for some of the individual districts were not available in 1995 and 2002. Missing values for these districts were calculated by KSU to be consistent with KAS reported state level changes in those years.
