

STICK HORSE

This young man is off to a flying start. He and several other youngsters under 16 participated in the stick horse barrel racing event at the 20th annual Wabaunsee County 4-H Rodeo.

GRASS & GRAIN

18th Year No. 12

May 23, 1972

UP AND OVER

Only one of the junior steer riders rode for the full 6 seconds, but most of the other young riders figured out why they got dumped seconds after the fall. One father was heard saying, "I told that boy not to lean forward."

ALL AROUND COWGIRL WAS JENNIFER WARREN, ESKRIDGE.

ALL AROUND COWBOY WAS STEVEN FLINN, ST. GEORGE.

POOR TRACTION

This young lady found that the loose damp dirt in the arena provided poor footing for her mount.

Rodeo Season Begins

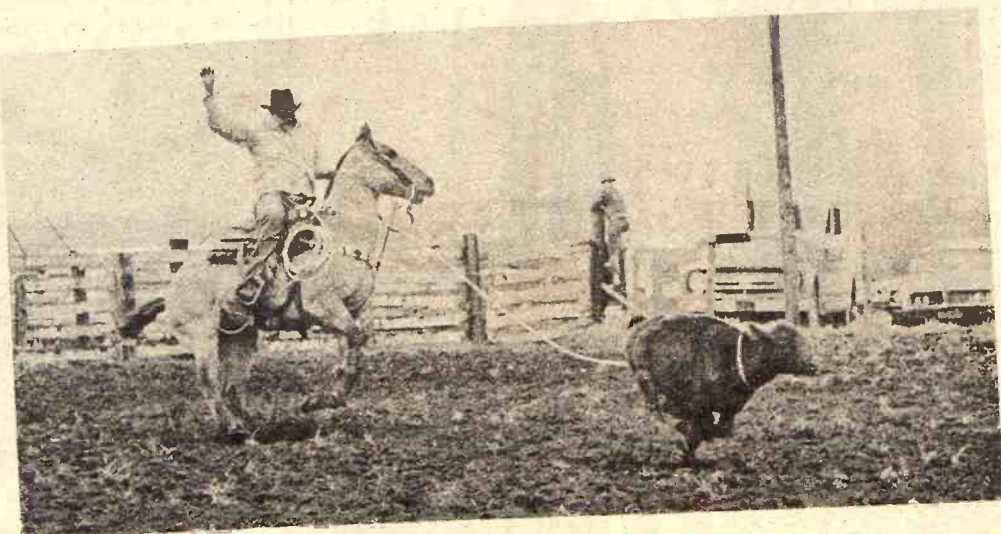

THE LITTLE CLOWN

Shawn McGinness, Alta Vista, had his barrel for protection. Unlike many of the participants and spectators he remained very calm during the steer riding.

GOING, GOING, GONE

The 4-Her won't be biting the dirt, instead he'll be hitting the mud. The area in front of the chutes was soft and wet.

GOING SOMEWHERE CALF

This 4-Her put the loop around this calf's neck, but the calf won't run out of rope because this was the break away calf roping event.

SPRAYING MARIJUANA

Leo Buessing, Axtell, is finishing a tank of herbicide he used on marijuana and musk thistle. "I try to keep the marijuana on my land sprayed and I've never had a problem with anyone trying to harvest any that I might have missed." Buessing farms 700 acres and has about 240 head of cattle.

Kansas Budget Could Top Billion Dollar Mark

Topeka — The Kansas Budget Division has reported to Gov. Robert Docking that a total budget of \$998.2 million for the 1973 fiscal year beginning July 1 was approved by the Legislature.

The total includes \$465.6 million for operating costs of state agencies,

GRASS & GRAIN

The Mid-Kansas news weekly published each Tuesday at 1531 Yuma, (Box 1009) Manhattan, Kansas, 66502 by Ag Press Inc. Second class postage paid at Manhattan, Kansas. Subscription: \$4 year Circulation 14,200,

\$384.4 million for aid to local governmental units and \$148.2 million for capital improvements.

The budget remained under the billion-dollar mark as Docking said he would insist on keeping it, but expenditures which will be approved by the 1973 legislative session in supplemental appropriations plus expenditures which are almost certain to be approved by the State Finance Council are virtually certain to push the final 1973 budget over the billion-dollar figure.

The budget division's report said aid to local units of government represent 38.5 per cent of the budget and it is estimated federal funds will provide \$252.2 million or about 25 per cent.

The fiscal 1973 budget represents an increase of \$22.8 million, or 2.3 per cent above the revised fiscal 1972

budget. It also represents an increase of \$47 million or 5 per cent over Docking's recommended fiscal 1972 budget.

The Budget Division report said the 1972 Legislature approved expenditures of \$389.0 million from the general fund, an increase of \$17.3 million or 4.7 per cent over the fiscal

1972 revised estimate.

Revenue measures adopted by the 1972 Legislature — primarily disallowing federal income taxes as deductions on the state returns of corporations and financial institutions — will produce an estimated \$16.7 million in new revenue.

The report estimated the state general fund closing balance will increase from \$19.3 million on June 30 this year to \$21.1 million by June 30, 1973.

Low point in the estimated month-ending balances was predicted for March, 1973, a deficit of \$2.9 million. If tax receipts exceed the estimates as they have been so far this year, the month-ending balances would be

2

Grass & Grain

May 23, 1972

higher.

The report said the significant increases in the general fund expenditures in the 1973 budget were for education. The state spending next fiscal year \$10 million more as the employee contribution for the retirement system for the school employees increased Board of Regents' appropriations by 5.1 million. A tuition grants program for students of independent colleges was reported with an appropriation of million.

Fertilize **MILO** before you plant.

International trucks look as good on your books as they do on your farm.

Sure, the optional fiberglass hood can give your next INTERNATIONAL[®] LOADSTAR[®] truck a smart new look. But it can also give your operating expense records a smart new look. Because the tilting hood and fender assembly lets a serviceman walk right up to the engine. That saves time. And that, of course, can save you money.

A new 5/16-inch frame is standard on most models and available on all. And the longer your truck lasts, the less it really costs.

When you do need service or parts, Loadstar puts you ahead again. With the

back-up of the largest organization of heavy-duty truck service centers in the business.

And it's nice to know that this same service is available for your International 1110 pickup truck. Which, incidentally, offers you many of the heavy-duty features you get in the big Loadstar truck. Including the optional 392-cubic inch V-8 engine.

International Loadstar. International 1110 pickup. Built to perform reliably on the job. So they perform beautifully on your expense records. Check them out soon at your International dealer.

OUT YOU GO

When you have a truck load of cows and one full of calves it's best to release them at the same time. Melvin Hasenkamp, Centralia, released 12 cows with calves in this pasture. Clem Koelzer, Onaga, (right), gave Hasenkamp a hand moving this small herd. Both men run cattle and farm. With the price of light calves up around \$60 a hundred both men were feeling pretty good.

SPRING SPRAYING

Roy Cravens, Manhattan, turns the high pressure spray on this herd. There are 32 cows in this bunch that belong to W. H. White and Cravens has 26 cows. This insecticide should prevent further lice and fly problems. "We usually try to spray in the spring and whenever needed during the summer," he said. Cravens operates 800 acres but most of it's pasture.

North Pole Melting Says Arctic Expert

People interested in changing the weather may have another aspect to consider. Arctic specialist Bernt Balchen says a general warming

trend over the North Pole is melting the polar ice cap and may produce an ice-free Arctic Ocean by the year 2,000.

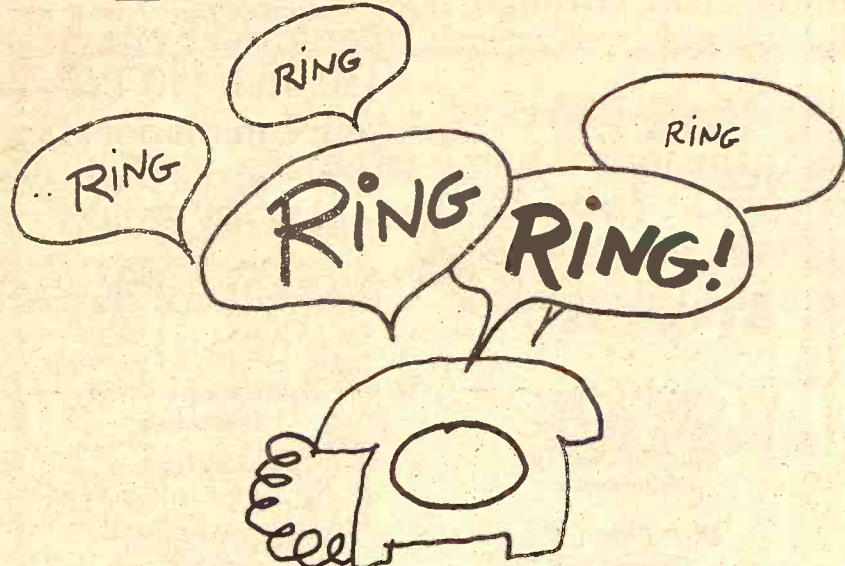

The gradual change in climate, Balchen says, eventually may make possible tanker shipment of oil from Alaskan and Canadian fields, and pave the way for water transport of the Far North's mineral wealth of uranium, nickel, iron, lead and zinc.

Balchen, 72, is recognized as a leading specialist on the Arctic. Forty-seven years ago he was a pilot-engineer with Norway's famous Arctic explorer, Roald Aundsen and in 1929 he flew Adm. Richard E. Byrd on the first crossing of the South Pole.

Weather across the northern half of the United States would be 20 to 25 degrees warmer than it is now, Balchen said.

"The central part of the United States would get dry winters, with a large water deficiency. The southern region — Florida, the area between 15 and 30 degrees north latitude — would have it 10 degrees cooler in winter," he said.

Loud or low as you like it

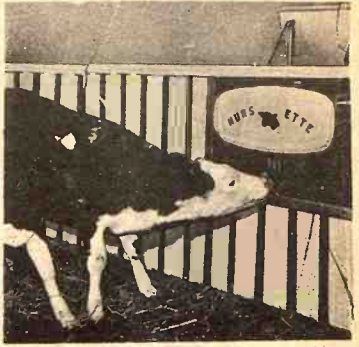

There's a control on the bottom of most telephones that enables you to vary the volume of the ring. If your phone is in a noisy location or you have hearing problems,

you simply make the bell louder. And it can be moved the other way, too. Like when the children are asleep. Volume control — lets you pick your ring.

Farm Exports To New High Despite Long Dock Strikes

Although dock strikes reduced the quantity of some shipments, the dollar value of U.S. farm exports soared to a record-high rate during the first nine months of the current fiscal year, says the Agriculture Department.

Also, preliminary reports indicate, farm exports in April were up from the month a year earlier, thus adding more impetus to the trend.

If further dock tie-ups can be averted, the total for the fiscal year ending June 30 could be near or more than the record \$7.8 billion for farm exports in 1970-71, officials say.

The value of shipments during the period begun last July 1 through March was \$5.97 billion, up 1 per cent from the record pace a year earlier, the Foreign Agricultural Service said in a report.

A spokesman said the April sales totaled about \$700 million, up from \$634 million during the month last year.

"The over-all gain stemmed from increases in cotton, tobacco, soybeans, soybean meal, dairy products, cattle hides, fruits, nuts and vegetables," the report said.

Declines in value were reported for grains, flaxseed, soybean oil, alfalfa meal and lard. Higher prices per unit of measure accounted for the over-all value increase.

The report was written by Dewain H. Rahe, a foreign trade specialist in the Economic Research Service, who concentrated only on specific changes in the export picture during the first nine months of the fiscal year.

By groups of commodities, Rahe's report included the following values of exports during the July-March period:

Livestock and animal products \$743 million, up 10 per cent from a year earlier; grain and grain products \$1,827,000,000, down 14 per cent; oilseed and oilseed products \$1,673,000,000, up 8 per cent; and other items, including cotton, tobacco and fruit \$1,724,000,000 up 12 per cent.

West coast ports were shut down from last July 1 until Oct. 6 and again from Jan. 17 through Feb. 20 this year. Some Gulf and Atlantic ports also were tied up by strikes

during the period.

Rahe said the stoppages helped reduce grain exports, particularly wheat shipments to Japan which were down 34 per cent from the previous year.

Wheat sales during the nine-month period totaled 441 million bushels worth \$748 million, compared with 558 million bushels worth \$917 million a year earlier.

Feed grains totaled 14.5 million tons, down 10 per cent from July-March a year earlier. Their value was put at \$789 million compared with \$919 million earlier. There was no breakdown for corn or other specific crops.

Tuition Rates For Two Jr. Colleges Called Exorbitant

The Garden City and Colby Junior Colleges have drawn fire from three Wichita County Commissioners. They complained in letters to these two schools that the tuition rates for out-of-county students are exorbitant.

The commissioners noted that the county's bill from Garden City for 30 hours of credit was \$1,240 and from Colby \$1,160. By comparison, the commissioners said, Dodge City

Junior College charged Wichita County \$737, Iola Juco \$785, and Hutchinson Community Junior College \$743 for the same number of hours.

"Inasmuch as our local county government and local schools are required to operate within the five per cent tax lid, we would appreciate it if your administration would be cooperative and sensitive to inflation control guidelines in confining your costs to the same limitations," the commissioners wrote.

In separate comments to Garden City, the commission noted that tuition costs at Garden City have increased 60 per cent from 1969 to

4

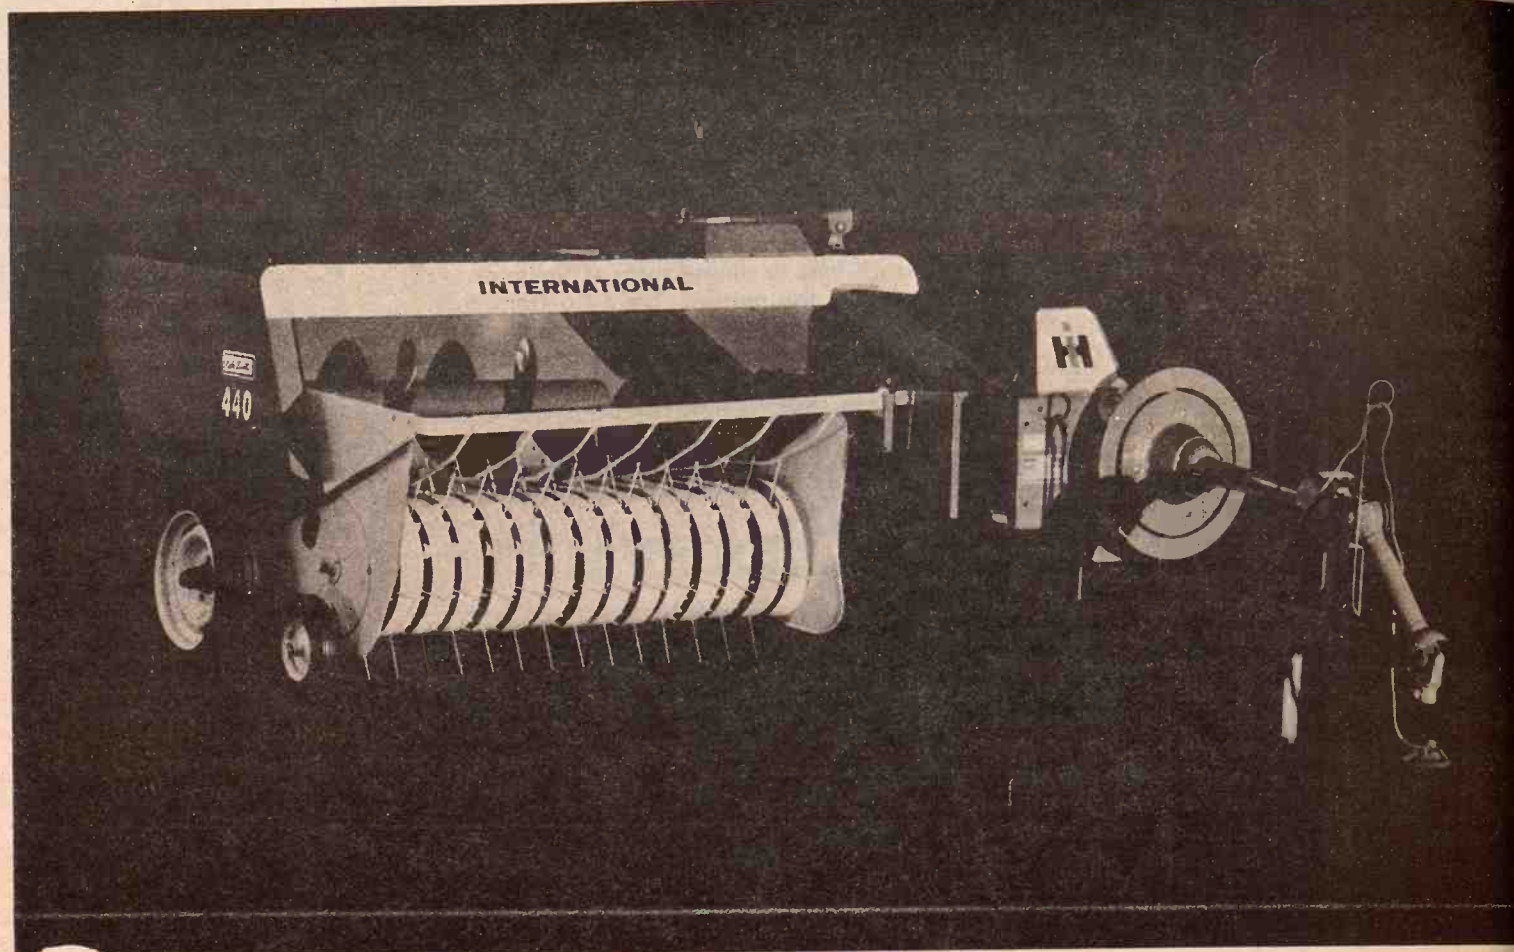

Grass & Grain

May 23, 1972

1972 — from \$777 to \$1,240.

"Since your school is the oldest junior college in Kansas — over 50 years — we feel justified in expecting a more stable and businesslike expenditure of funds from your administration," the letter said.

The letter to Colby complained that Colby's tuition increased 49 per cent in the same period — from \$777 to \$1,160.

Our exclusive double-thick twist ties your heaviest bales.

For keeps.

Extra-strength, double-thick twists. Exclusive with International self-stripping Lok-Twist Balers.

Your bales stay tied. For keeps. From rough handling in the field, through storage, until bales are fed.

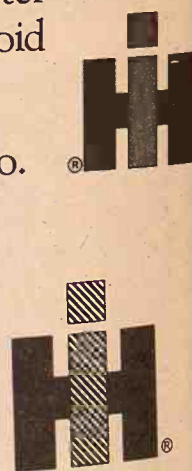

Four wire double thickness makes a cushioned twist. At the loop. Then twists down toward the bale. No stretched, crimped or weakened wires. Wire ends tuck into the bale. Makes

handling safer. No cut hands.

Baler operation is smoother, gentler because of our faster twisting cycle and slower needle cycle.

Look over our heavy crop balers—430 and 440 Lok-Twist models. Let your International Harvester Dealer show you how to avoid missed ties.

A BIG PLANTER

When Gene Holthaus, Seneca, starts planting he covers a lot of ground. Holthaus built a special hitch and tied two six row planters together. When he's ready to move to another field he mounts wheels on the axle extending across the planter, (part of the axle can be seen extending over the press wheels). A hitch on the other end allows him to pull the planter down most roads. When planting Holthaus can raise either of the six row planters with hydraulic jacks. "Being able to raise either side makes it easier to work the point rows," he said.

Undetected Food Poisoning Serious

Thousands of Americans suffer from bacterial food poisoning each year and many never realize it. Health experts say food poisoning can cause cramps, diarrhea and nausea is dismissed as "upset stomach" or "just something I ate."

In the current issue of the New England Journal of Medicine, Dr. Matthew S. Loewenstein of the Center of Disease Control in Atlanta, reports on the incidence of common bacterial food poisoning, which comes from food contaminated with *Escherichia coli* perfringens.

Loewenstein said statistics show more cases of perfringens bacterial poisoning are reported each year than any other kind. In 1970, he said, 6,942 cases of perfringens infections were reported, compared to 47 cases of salmonella, 4,699 of *Staphylococcus* and 14 of botulism. "When one considers that only about one per cent of the cases of salmonellosis are reported," Loewenstein said, "it is evident that most Americans have suffered from perfringens poisoning at some time during their lives and that millions of individual cases and family outbreaks go unrecognized and unreported each year."

Perfringens infections often are not recognized because the symptoms of true infections — vomiting,

chills, headaches or fever — usually are not present. Deaths from perfringens poisoning also are extremely rare and limited to the

elderly and the ill.

The sources of perfringens infections usually are beef, fowl or pork cooked and then refrigerated. The organisms are found in the ground, and subsequently in the feces of sheep, cattle, pigs, rodents and man.

Dr. Anthony J. Sinskey of the

Department of Food Science at the Massachusetts Institute of Technology says man usually carries perfringens in his lower intestine and the organisms do not cause a problem until they are introduced into the stomach and upper intestines, where they inflame the mucous linings.

May 23, 1972

Sinskey says cooking meat kills the growing, vegetative forms of perfringens, but not all heat-resistant spores. Studies show that some spores can survive temperatures as high as 200 degrees for more than an hour.

Set up your own mint

Your calves, your cows, your grass... all have increased income potential when you go on a Purina creep program.

When it comes to turning out extra dollars from a cow-calf operation, you won't find anything that pays off bigger or faster than creep feeding. Studies at Purina's 4-Square Ranch in Oklahoma show that you'd need 16% more breeding cows to equal the additional net income delivered by creep feeding. Even the best milk-and-grass ration falls short when you're after the most pounds of weaned calf possible.

Creep-fed calves are normally 40 to 100 lbs. heavier at weaning, much more uniform, and in perfect bloom. You'd expect such calves to be more valuable. They are. But there are still other money-making reasons for creep feeding which might surprise you.

Creep feeding improves cow efficiency, too. With the creep feeder taking over a major share of the nutritional load, cows don't get "pulled down" by hungry, growing calves whose demands for milk are never satisfied.

This helps cows cycle, and rebreed quicker; Purina research shows a 76% conception rate within the first 60 days of the breeding season vs. 41% in a comparable cow herd where creep feeding was not used.

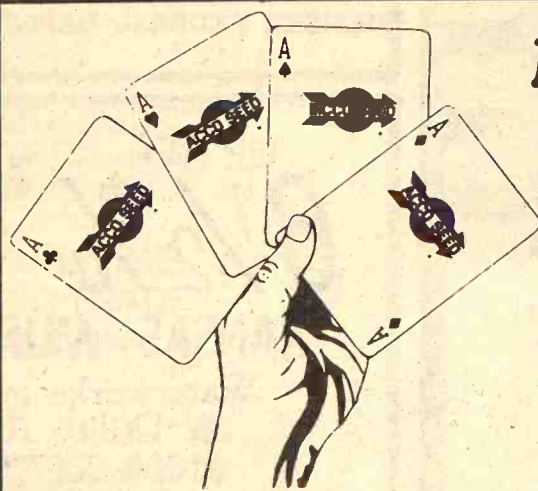

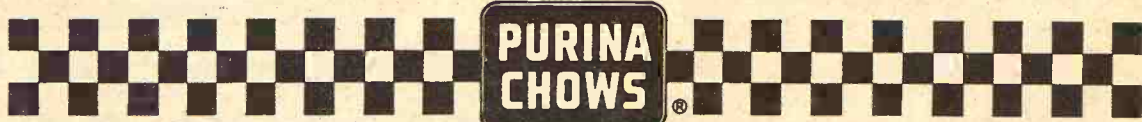

Immediate benefits. You can cash in on creep feeding benefits right now. And it's easy to get started. Just ask your Purina man or Purina dealer. He'll show you how.

Your Purina man can also help you obtain the new Purina AlumaLife Creep Feeders you need to make the program work best for you. The model shown is a new design. Sturdy, long-lasting and easy to move, it's made of double-thick, heavy-duty marine alloy aluminum. What's more, it's backed by a 10-year guarantee. Available only through your Purina dealer.

Figure that you'll need one Purina AlumaLife Creep Feeder for every 50 calves. Figure, too, that for every creep feeder you put out, you'll be increasing net income potential by the equivalent of eight brood cows. Now's the time to set up your own mint.

Phantom Acres Unaccounted

By Rod Turnbull
Kansas City Board of Trade

An interesting exercise in mathematics awaits anyone who would like to strike a balance on the number of acres which are planted to crops in this country plus the acres idled in government programs, as against the total available farm land.

All through the years of government programs there has been talk

of "phantom acres," acres which seemingly did not show up in official data. Whether or not such phantom acres existed or were of any importance is a matter of opinion. But the subject is interesting and the 1972 data is no exception.

Through the years under various programs, farmers have received government payments or other inducements, such as price support, for idling land. Farmers have had acreage allotments and they have been required to maintain their conserving base. The latter provision is that each farm has a certain acreage in pasture, as an example, which is not plowed and put to crops. That acreage must be maintained as non-cultivated cropland.

The 1970 Farm Act introduced a new system of idling land called the set-aside. To cooperate in the government program, the farmer is required to set aside (idle) a certain percentage of his acreage. After he has done this, except for his conserving base which he still must maintain, he can plant virtually as he pleases. Previously, the farmer had been required to stick with a certain allotted acreage on the crops under control.

Each year, one agency of the government calculates the number

of acres idled in government programs. Another agency each spring estimates the acreages farmers intend to plant to major crops. Later, there are estimates on acreages actually planted. Keep in mind, these always are just estimates.

Records are available in the Department of Agriculture indicating the acres planted to 14 major crops each year and the total acreage idled or "diverted" as the government calls it, in the farm program. Presumably, when you add the acres planted to crops to those diverted, you have the total crop acres. The 14 major crops named are corn, grain sorghums, barley, oats, wheat, soybeans, cotton, tobacco, rice, peanuts, rye, sugar, flaxseed and dry edible beans.

The U.S.D.A. also has records on the acres devoted to 45 other crops, but the 14 major crops account for most of the nation's cultivated crop land.

Looking back at the records over the last five years, it will be learned that in no two years are the figures the same — that is, adding the number of acres in crops and those idled does not total the same each year. In 1967, 252.1 million acres were planted to the 14 major crops

and 40.8 million acres were idled in the farm program, giving a total of crops planted plus diverted acreage of 292.9 million acres. In 1968, the planted acreage was 246.2 million and the diverted acreage 49.4, for a total of 295.6 million. In 1969, the planted acreage was 238.1 million and the diverted 58 million, and the total 295.5 million. Last year, 253 million acres were planted to the 14 major crops and 37.2 million diverted, for a total of 290.2 million.

This year, according to estimates made in March, 242.5 million acres will be planted, while 62.3 million acres will be diverted, for a total of 304.8 million.

While, as mentioned, the figures for no two years are the same, those from 1967 through 1971 do sort of fall into the same ball park. But the number of acres counted as being planted this year and those to be diverted total up 14 million more than in 1971, and 7 million more than the largest previous total in 1969.

What accounts for those extra acres? Hardly anyone in the grain trade will come up readily with an answer. What appears to be the case is that far more acres are being set aside this year than show up in the decrease in acres to be planted.

And one reason for this apparently is that under the set-aside program, a farmer ends up with more acres than he can plant as he pleases, than under previous allotment programs. In other words, under the older programs, after a farmer had planted his permissible allotments, he would end up with crop acres which he could not put to feed grains or wheat, but which he could put to some other crop such as alfalfa and soybeans. Now after he has set aside the required number of acres, he can plant the extra land to anything, including feed grains and wheat.

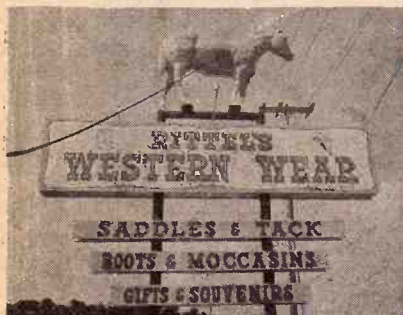

A look at the figures on one Kansas 320-acre farm indicates this farm has an additional 39 "free" acres this year as compared to years under previous programs.

Also in the last couple of years, County Agricultural Stabilization

and Conservation Service Committee have made appreciable adjustments in the conserving base on individual farms. Some of this was done to correct inequities others because farmers have changed their systems of farming. In total, the nation's conserving base has been reduced from around 10 million acres to something nearer 9 million, USDA records indicate. Some of the former conserving base may be in the major crops this year.

Another point to consider is that many farmers filled out their questionnaires for the March report on what they intended to plant before they signed up in the 1972 farm program. A farmer may have said he intended to plant so many acres and then later signed up to reduce this acreage. Thus, some of the same acres were included in his intentions to plant and the same acres were counted again in his set aside.

All of this suggests added interest in the July 12 crop report which will be the next indication of the acres planted. And then we can look forward to the fall reports on acreages harvested.

Cattle Market Weights Show Beef Trends

WASHINGTON — Agriculture Department economists are watching carefully the average weights of cattle moving into the major slaughter markets this spring for signs of what the price situation may be later on.

Back in February when fed cattle reached their highest peaks in 20 years, average weights were trimmed down as animals were moved to market quickly as they reached "finished" condition.

But cattle prices have retreated several dollars from the mid-February highs of nearly \$37 per hundredweight. Mean time, because of a temptation to hold animals in feedlots a little longer in hopes

market prices will improve, average weights have risen.

Another factor, according to USDA economists, is the relatively cheap feed supply in relation to cattle market prices. That also tempts producers, particularly with their own feed grain, to hold off on selling.

According to department economists, the outlook is for some further decline in fat cattle prices in late spring and during the summer as the supply increases.

A report on cattle feeding in half a dozen major producing states as of May 1 showed 7,800,000 head in feedlots, down one per cent from April 1 but up 11 per cent from a year earlier.

But the report also showed steady gains in average weights this spring. In April, choice steers sold at Omaha, Neb., averaged 1,154 pounds, a 30 pound gain per head since February and a 20 pound boost

since March.

Compared with a year earlier, the April average of 1,154 pounds per steer was up 22 pounds, the report showed. All showed an increase from a year earlier in the number of cattle and calves in feedlots as of May 1, including: Iowa 2,003,000 head, up 1 per cent from a year earlier; Nebraska 1,557,000 up 13 per cent; Texas 1,848,000 up 18 per cent; Colorado 956,000 up eight per cent; Arizona 550,000 up 14 per cent; and California 1,068,000 up 19 per cent.

Kansas, which did not show year earlier figures, reported 1,080,000 cattle and calves on feed May 1.

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Harold Carlson Of Junction City Wins

Mrs. Harold Carlson, R 2, Junction City: "This strawberry pie is a favorite of ours. It is pretty to serve at a party, too. It is also easy to fix."

STRAWBERRY PIE

- 1 3-ounce package strawberry gelatin
- 1 and two-thirds cups boiling water
- 1 4½-ounce container Cool Whip
- 2 tablespoons sugar
- Red food coloring
- 1½ cups strawberry halves
- Crumb pie crust

Dissolve gelatin in boiling water. Chill until slightly thickened. Measure ½ cup of gelatin mixture and blend into Cool Whip with sugar. Tint with food coloring to desired shade. If necessary, chill Cool Whip mixture until firm enough to mound. Spread over bottom and up sides of pie crumb crust. Stir strawberries into remaining thickened gelatin and gently spoon on top of the Cool Whip mixture. Chill at least three hours.

+++++

WANTED: RELIABLE WOMAN to live in and be a long-term companion to my wife, recovering from a heart attack. Personal quarters, air conditioned, schedule to be arranged. Can start any time before July 1.

Contact Tom Farrell, 1019 Osage, Manhattan, Ks., ph. daytime 913/539-5411 or evenings 913/776-6371.

Mrs. Alvin L. Meyer, R 1, Marysville: "This is a delicious salad and is easy to fix."

BLUEBERRY SALAD

- 2 packages blackberry gelatin
- 2 cups water (1 hot and 1 cold)
- 1 can crushed pineapple, No. 2 can, juice and all
- 1 can blueberries, juice and all
- Let set. When set, cover with 1 package Dream Whip. Makes a 13x9x2-inch pan.

+++++

Mrs. Robert Hobson, Carlton, says these brownies will keep well in the freezer:

QUICK AND EASY BROWNIES

- 2 sticks oleo (or 1 cup shortening)
- 2 squares baking chocolate (2 ounces)
- 2 cups sugar
- 4 eggs
- 1 and two-thirds cups flour
- 1 teaspoon baking powder
- ½ teaspoon salt
- one-third cup chopped nuts (more, if desired)
- ½ cup Ko Ko bits or chocolate bits (optional)

Place oleo and chocolate over low heat to melt or place in oven to melt as oven preheats. Add sugar; beat well. Add eggs and beat well. Add flour, salt and baking powder. Beat well. Blend in nuts and chocolate bits. Bake in oiled and floured teflon pan, 16x10½x1-inch, for 20 minutes at 375 degrees. Two smaller pans may be used. Reduce baking time to 12 minutes. Brownies are good plain; iced with your favorite icing; melted semi-sweet chocolate or sprinkled with powdered sugar. Cut into squares or bars.

+++++

Mrs. Ferd Vering, R 1, Marysville: "Please find a recipe enclosed for Rhubarb Crunch. We really like it. My husband did not care for rhubarb until I fixed it this way. Enjoy the Grass & Grain very much, especially the 'Our Daily Bread' column."

RHUBARB CRUNCH

- Crumb Topping:
 - 1 cup sifted flour
 - ¾ cup uncooked rolled oats
 - 1 cup brown sugar, firmly packed
 - ½ cup melted butter or margarine
 - 1 teaspoon cinnamon
- Fruit Mixture:
 - 4 cups diced rhubarb

1 cup sugar
2 tablespoons cornstarch
1 cup water
1 teaspoon vanilla
Whipped cream (optional)
Mix together crumb topping ingredients until crumbly. Press half of the crumbs in greased 9-inch layer pan. Cover with rhubarb. In small saucepan combine: Sugar, cornstarch, water and vanilla. Cook, stirring until thick and clear. Pour over rhubarb. Top with remaining crumbs. Bake in moderate oven (350 degrees) for one hour. Cut into squares and serve warm, either plain or with whipped cream. Serves eight. P.S. I add a little red food coloring to the fruit mixture.

+++++

Keep Key Handy

If you have trouble keeping track of your door key, slip an elastic hat cord through the hole in the key. Then push the metal tips of the cord through the lining near the top of your purse. Then you can unlock the door without detaching the key from your purse.

Versatile Do-It-Yourself Material — Foam Rubber

One of the most versatile do-it-yourself materials of recent years is latex foam rubber. Although it is available in many different forms, only one is of immediate interest to the housewife: the solid sheet or slab of foam rubber. This material is used in a wide variety of ways, from making reversible cushions, throw pillows, padded headboards, seats for chairs and stools, table pads, chair pads, upholstery for sofas and beds, to making a window-seat cushion.

Another use for foam rubber is in the purchase of a mattress. Whether you cut it yourself or have it cut professionally, the key is to allow an extra margin of half an inch around all sides, so that the material can be compressed within its fabric covering. If this is not done, the fabric will not fit tightly and will tend to develop wrinkles in use.

Thicknesses up to about two inches can be cut by the do-it-yourselfer with a pair of scissors. Thicker pieces can be cut on a bandsaw or with an upholsterer's electric knife, although in some cases it can be done with a pair of stout shears.

Most foam rubber projects, such as covering a kitchen-chair seat and upholstering a sofa, can be given a professional appearance with the use of a rubber fabricating cement of the type found in offices and ordinary muslin tacking tape.

An especially tight bond can be obtained by using two coats of

cement on both the foam and the tacking tape, applying the second coat after the first has dried completely. The two surfaces are joined after the second coat has dried enough to become tacky.

Aside from the more obvious uses of latex foam rubber, there are some interesting uses to which small leftover pieces can be put. These include a covering for wire hangers to eliminate the crease you often find in trousers hung on the bare wire; as a "brush" for both lint and pet hair; as a liner to stop small rattles around the house from such things as loose radiator covers; as a protection for a camera or small radio when traveling; and as a small paintbrush for little touch-up jobs.

Important For Woman To Make A Will

Estate planning is important for women as well as men. So why do so many married women neglect to make wills?

Much of the problem, it seems, stems from a mistaken assumption that one will a family, namely the husband's, is sufficient. Some also feel their property is not worth the trouble of drawing up a will, despite the fact that a woman's property may include valuable jewelry, furs, paintings and heirlooms, as well as life insurance policies, stocks, bonds, and real estate.

A particular advantage of a wife's making out a will while her husband is living is that she can benefit by discussing the subject as well as participating in joint planning for

children and grandchildren. Decision-making can be harder for a widow than a wife.

In the case of an unmarried woman with no dependents, a will assures that her estate will go where she feels it will do the most good — relatives, friends, schools, a religious group, or charities. Otherwise, her property would revert automatically to relatives, however distant or unknown they may be.

Husbands and wives should talk over family insurance policies and settlement arrangements so that both understand what policies exist, why they were purchased, and what provisions are made for later life or in the case of death. Knowing the answer helps provide security.

Avoid Oily Mop

A dust mop may be used on waxed floors but be certain that it is a dry dust mop and not an oiled one.

Lube Job For Vacuum Attachments

To lubricate the joints of your vacuum cleaner attachments, rub them with waxed paper occasionally.

Rejuvenate Tape

To rejuvenate a tape measure that has become limp from use, press it between two sheets of waxed paper for new body.

Over-Regulation Stifles Extra Meat Production

"Over-regulation, brought on in part by consumers themselves, is threatening to stifle abundant production of reasonably-priced meat and other foods."

That is an opinion of Dr. David Schafer, Extension meats specialist at Kansas State University, who believes governmental agencies sensitive to consumer group demands have a tendency to over-regulate the meat production and marketing industry.

He cites the controversy over additives and chemical residues as an example. Public concern stems from a law which states that no carcinogenic (cancer-causing) agents may be included in food products.

the law does not limit the bizarre experimental methods or levels used to show a substance can cause cancer tumors, points out Schafer.

Many naturally-occurring substances in food products are classified as carcinogens. Taken in abnormally high doses, they could cause sickness and death. But at the low levels normally found in foods and with the body's elimination mechanisms, they create no problem, contends Schafer.

"Problems have arisen since we've developed detection techniques that measure many of these substances in parts per billion (ppb) and even parts per trillion," continues Schafer.

"When they are found, the law has been broken and must be enforced, regardless of scientific evidence. Yet, doctors prescribe many times higher levels of some of these agents for the well-being of certain patients."

American eat nearly 40 billion pounds of red meat (carcass weight basis) in a year, meaning every person — from the farmer to the consumer — has a vested interest in assuring a safe, wholesome, efficiently-produced supply.

"Ironically, this places us in a dilemma," Schafer says. "We want the highest quality meat at the lowest possible price. Everyone should know that quality costs. It is a tribute to our technology and farmer efficiency that we've come as close to the best of both possible worlds as we have."

Citing pressure for better labeling laws as another example of consumer demands adding to the already increasing costs of food, Schafer says present laws require a great deal of information on product composition and method of preparation.

However, not all this information is necessary. If all information were

included on the label, Schafer believes consumers would become so deluged with facts that they wouldn't be able to sift out the important ones.

The KSU specialist says a better labeling law now before Congress is of little help to the consumer. One of its features is that it will require a percentage weight of ingredients to be included on the label of a food

product.

Presently ingredients must be listed on a label in descending order by weight. Standards of identity in many processed meat foods already require certain minimum amounts of meat and limit non-meat ingredients.

However, some flexibility is left for the manufacturer to respond to changing prices of meat ingredients. He may substitute some beef for pork or vice versa, depending on the supply situation. This does not change nutritional value and allows the manufacturer to keep prices as low as possible.

If a manufacturer had to have labels printed for every possible

combination of percent ingredients, it would spend many thousands of dollars on labels that would have to be added to product price.

The bill would also require an analysis of nutritional content, including fat, fatty acids, coloric content, and vitamin-protein values.

Schafer questions the need for stricter labeling requirements: "We must remember that every law

passed in this area involves added direct costs to the processor to be certain that he has complied with every statement on the label and added indirect costs through your tax dollars spent for the government to police the processor's compliance."

May 23, 1972

Young people in Kansas aren't asking for life on a silver platter. Most ask only for an opportunity at a good job in a clean environment.

At KPL, we're providing the energy to create those rewarding new jobs... yet providing it in the cleanest way possible. That's why we've used cooling towers since 1955 to guard against water pollution. That's why we use precipitators to protect our clean air. That's why we're constantly researching new ways that electricity can make Kansas an even healthier place.

When Kansas youth are ready to make it on their own, we'll need them to work with us at KPL... one important reason why we're working to keep Kansas a nice place to live...

We're concerned about their future, too

Plans For '73 Wheat Crop Held Up Again

Farmers won't be making plans for next year's wheat crop until late in July, and possibly later.

Glenn A. Weir, deputy administrator for commodity operations, said ASCS field officials will meet next month on 1973 plans.

"We want to take a closer look at the winter wheat crop," Weir said. "When we do announce it, we are going to go as far as we can with full details."

Asked if decisions on additional options such as payments to farmers for taking extra acres from 1973 wheat production might be deferred later than July, Weir said: "It's a possibility."

Some wheat producer groups have put pressure on the department to get full operating details of the 1973 wheat program announced not later than Aug. 1 to enable winter wheat growers time to plan their crop.

Winter wheat, planted in the fall and harvested the following year, is

the major type grown in this country and the kind most in surplus.

Last year the USDA announced the basic 1972 wheat set-aside program in July but modified the plan later after the winter crop was planted in hopes of cutting production this year.

Growers, unhappy over the signal changes for 1972, want the entire package wrapped and tied early for 1973.

Last month the department announced the 1973 wheat "national acreage allotment" at 18.7 million acres, was a one million acre slice from 1972. That is the acreage upon which government "certificate" payments are based and reflects the amount of wheat needed to meet U.S. domestic needs.

It also is the acreage upon which USDA bases wheat set-aside requirements, the acreage producers must take from production to qualify for price supports and payments.

By law, the maximum wheat set-aside for 1972 and 1973 crops is 15 million acres. In 1972 that was computed at 83 per cent of the national allotment. For 1973, a spokesman said, the projection

might be 85 to 87 per cent of the smaller 18.7 million acres in the national allotment.

Thus, USDA officials admit, if planners decide to increase the idled acreage to more than the 1973 basic set-aside — the maximum of 15 million acres — some kind of additional program will have to be put into effect as it was for this year.

For the 1972 wheat crop, farmers took about 20.3 million acres from production under the set-aside program, including about five million under the additional voluntary arrangements announced late in the season.

Despite a sharply reduced outlook for winter wheat production this year, estimated at less than 1.15 billion bushels or down 11 per cent.

fresh approach to pork profits

Litter Fritters, the freshest, most palatable pig pre-starter feed you can buy is here. Double-sealed in plastic to assure palatability and earlier dry food intake. Litter Fritters start young pigs on the road to profit in Co-op's all new Meat Market Program, the plan designed to produce better pork, higher profits.

Litter Fritters unique four-ply bag has two plies of polyethylene ... one sandwiched between craft paper walls to lock in freshness and flavor, the other bonded to the exterior surface to lock out contaminants.

And no pre-starter gets to infant pigs sooner with so much: Flavor, nutrients, Tylan + Sulfa medication, quality ingredients, easy-to-eat nugget form. Litter Fritters are rich in pure table-grade sugar and have high fat milk solids specially processed to preserve flavor.

If you have new litters on the

ground, or coming soon, plan now to start them on Litter Fritters. When they reach 10 pounds in weight, switch them to the 10/30 Pig Starter Plan ... the second step in the Co-op Meat Market Program.

10/30 is specially formulated for pigs in the critical 10 to 30 pound range. 10/30 Plan feeds are the result of extensive Farmland Industries research and provide all the nutrients a young pig is known to require. Extra palatability and Tylan + Sulfa medication are built in. Plastic lamination on the bag exterior insures freshness and purity.

These profit-powered pre-starter and starter feeds are available at your nearby double-circle Co-op. And they're just part of the complete Co-op Meat Market Program, the way to better pork and a more profitable operation.

Old Sol Feedlot Problem

converging the smooth bromegrass, perennial ryegrass. Later, the w Mexico, and Texas grasses will give way to tall fescue, which is salt- and moisture-tolerant. A kidney-shaped pond will occupy the northeast corner of the field, and a grass diversion channel at each end leads to a main channel that feeds the pond. A second slope leads to the main channel. A row of sprinklers will be set at the head of each slope, leading to one of the grass channels or directly to the pond. According to Peterson, that's all that's required to remove the harmful elements from the runoff of the Circle E Feedlot. Although the grass filter seems to be quite simple on its surface, it relies on some sophisticated engineering to do the job. Eisenhauer describes the process. Once the grass is up, water from the feedlot settling basin is pumped through the sprinkler system at rates high enough to cause from 60 to 80 percent of the water to run off the surface of the grass. The rest evaporates, or is absorbed into the soil. From three to six inches of water would be applied per week at .06 to .2 inches per hour, 8 hours per day, for three to four days per week. Eisenhauer says that at some time between two and six weeks after the sprinkling has begun, a "biological mass" forms on the grass stems and soil particles. The mass is made up of aerobic bacteria, and later, anaerobic bacteria. The aerobic organisms use the organic matter in the feedlot runoff for food, producing

oxygen, water, and cell mass as by-products. All the oxygen-demanding material in the runoff is removed in this manner.

Both types of bacteria and the grass plants themselves team up to rid the effluent of its load of nitrogen, releasing harmless nitrogen gas or nitrous oxide to the atmosphere. Phosphates are removed by the plants, and are collected by clay particles in the soil.

The filter demands close management. It must be kept moist and have a continuous supply of food, according to Eisenhauer. Heavy rains may damage the delicate biological mass, and it may actually become too thick, reducing its effectiveness.

If feedlot runoff becomes unusually heavy from a higher than average rainfall load, then it may become necessary to use some supplemental irrigation of effluent to relieve pressure on the grass filter.

According to Peterson, the system is supposed to work year-round, regardless of freezing temperatures and heavy ice buildup.

Compared to conventional irrigation spreading of feedlot wastes, the grass filter is far superior in that it takes only three acres of land for every acre of feedlot, compared to a 10 to one ratio in conventional spreading.

Also heavy application of feedlot wastes to cropland can cause high salinity and reduced permeability of the soil.

Compared to disposal by irrigation or manure spreader, the

grass filter requires little labor, and lends itself to total automation.

Peterson presently uses a Vaughn Manure Pump mounted on a floating barge to dispose of materials collected in his settling basins. The pump homogenizes solids and liquids into a slurry that can be piped to nearby cropland and applied with a "big gun" irrigation setup.

Circle E is a division of Kansas Beef Industries, which also operates packing and fabrication plants in Wichita and Philadelphia.

Garden City Lot Gets New Owners

Harry Oswald and Dudley Arnett, both of Garden City, have purchased the Raymond Morris Feedlot, eight miles east of Garden City. The new corporation, Oswald & Arnett, Inc., plans to completely modernize and expand the 12,000 head feedlot. Included with the purchase was 950 acres of farmland, most of it irrigated.

Oswald, industrialist and designer and manufacturer of cattle feeding equipment was president of Oswald Industries, Inc. of Garden City from 1961 to 1969 when the family sold the business to Butler Manufacturing Company, Kansas City. Last year Oswald purchased Hutchinson Foundry and Steel.

Arnett, who will be president and general manager of the cooperation, was in charge of research and testing of beef animals for the past five years at the Garden City Experiment Station. He has a bachelor's degree in Animal Science from Texas Tech, a master's in beef nutrition from Kentucky and a Ph.D. in beef nutrition from Oklahoma University.

The corporation will continue to

operate as custom feeders with most feedstuffs purchased locally. Flaking equipment is available for processing grain and grain storage facilities for 152,000 bushels are available.

Predator Poisoning Control Suspended

The Environmental Protection Agency's order suspending registrations of all uses of poisons for predator control will have little application in Kansas.

A major reason is that Kansas is the only state in the U.S. with an organized statewide trapper program administered through a land grant university.

Since 1953 this state, through Extension Service at Kansas State, has conducted an extensive educational program whereby livestock owners have been encouraged to trap predators such as

coyotes, bobcat and foxes. The use of poisons has been recommended only in extreme cases.

Robert Henderson, Extension wildlife expert explained that the Kansas program, intensified in 1968, has been aimed at the individual animal in the predator population that preys upon domestic livestock.

The Kansas program has been so successful that the EPA has initiated federal legislation for a nationwide predator control program identical to the system employed at K-State.

If the legislation is approved by Congress, federal grants will be available to all states to start Extension programs for teaching farmers and ranchers how to develop measures that will prevent

predator attacks and how to catch the offenders using methods least likely to disrupt the environment.

The EDA action involved the suspensions and cancellation of federal registration of 19 products that are based on four major compounds — thallium sulfate, cyanide, strychnine, and sodium monofluoroacetate, commonly known as 1080.

National Value Of Farms Climb

Farm mortgage debt is an estimated \$30.7 billion, \$1.2 billion higher than a year ago, according to the U.S. Department of Agriculture.

Debt rose 4 percent during 1971, compared with 4 and 4.7 percent during 1970 and 1969, respectively. The rate of increase in the debt has been declining since 1964, when it rose 12.4 percent.

Farm real estate values have gone up as debts have risen. The average value per acre of farmland for the year ending Nov. 1, 1971, increased 5 percent and was the largest recorded since March of 1969.

Nationally, the average value per acre was \$205, compared with \$195 in

Nov. 1970. Total farm real estate value was \$222.1 billion last November, compared with \$210.7 billion a year earlier. The strongest price increase was 9 percent in the northeast — due largely to increased urban and recreation demand for farmland. Corn Belt states increased 4 percent. Kansas land values increased only one percent during this same period.

Dr. John Schlender, Extension economist at Kansas State University, noted that Kansas land values have lagged behind the national increase primarily because of rising production costs in face of stabilized gross farm income. This is most evident in areas where wheat is a major crop.

Total farm debt — non-real estate short-term debt and real estate mortgage long-term debt — is \$65.5 billion. At the same time, USDA estimates that there will be 2,831,000 farms in operation, or 45,000 less than last year. There has been a 25 percent decline in farms in the last decade.

Milford Leasing Opens May 23

Bids for leasing of government property in the Milford Lake area will open May 23. The leasing area consists of pasture lands that are licensed to the Kansas Forestry, Fish, and Game Commission. There are 14 tracts with 2,193 total acres. A five month grazing period will be permitted. Possession begins June 1, 1972, and ends Sept. 30 1976. Water sources are available on almost every tract.

Twins Sweep Block & Bridle Judging Contest

Twins figured heavily in the final outcome of the 53rd annual Block and Bridle livestock judging contest at Kansas State University, Manhattan, this past weekend.

Doug and Brad Ott of Kiowa, and Larry and Loren Berger of Waterville, accounted for four of the top five spots in the contest, according to Dr. Bill V. Able, KSU livestock judging coach.

Top individual in the contest was Doug Ott, who piled up 954 points of a possible 1,000. Larry Berger finished right behind with 952, while Brad Ott; Tom Gatz, Newton; and Loren Berger rounded out the top five.

In the cattle division of the contest Larry Berger was first and Loren Berger was fourth, while Doug and Brad Ott were 2-3.

In swine, Brad Ott was high, followed by Mike Price, Liberty; Doug Ott; Gatz; and Jim Meekins, Newton.

In sheep, Larry Berger was the top individual, followed by Price, Doug Ott, Gatz, and Meekins.

In the junior division of the livestock contest James Buchanan, Little River, and Mike Bohn, Abilene, tied for first. Buchanan was awarded top honors on the basis of his higher reason scores. Doug Deets, Beloit, was third.

Real Estate Auction

We will sell at public auction, real estate located 1½ miles north of Wamego, Kansas on Highway 99 to the State Park.

Saturday, May 27th — 10 a.m.

21 Acre Tract North Of Wamego

LEGAL DESCRIPTION — A tract located in Section 32, Township 9 south of Range 10 East in Pottawatomie County, Kansas.

GENERAL DESCRIPTION — This tract consists of 21.35 acres more or less, all native grass with three ponds, a good well with a ¾ HP submersible pump, a septic tank, a pressure tank, natural gas line through property. Choice location just on north edge of Wamego, Kansas.

TERMS — Twenty percent down on day of sale when contract will be signed, balance on approval of merchantable title and possession will be given on final settlement or before July 1, 1972. 1971 taxes will be paid by the seller and the 1972 taxes will be pro-rated as based on 1971 taxes. Any statements made day of sale take precedence over any advertised statements made prior.

Steak Patties Draw Fire

The Kansas Meat Inspection Division has proposed new regulations destined to guarantee consumers that they get what they pay for when they buy pork tenderloins.

Jim Petr, head of the State Board of Agriculture meat inspection division, said the proposed new rules will give Kansas its first set of standards on the composition of pork tenderloins.

A public hearing is set for June 7 on the proposed new rules and while the suggested new standards for pork products probably are the most significant of the proposals to be considered, Petr said the most controversy is expected over the Meat Inspection Division's existing regulation on beef patties.

He said major packers and processors in Kansas City and in Oklahoma have indicated they want to testify against the meat patty

rules and regulations.

The Packers want to call a certain product they manufacture a "steak" when it really is a beef patty, composed of ground beef reshaped into a patty which contains some extenders and binders.

Meat Inspection Division rules and regulations specify that anything labeled as a "steak" must be a single slice of fresh, lean, muscle of cattle with naturally accompanying fat and in cuts such as T-Bone, round steak or club steak the naturally accompanying bone — in short, what the average consumer considers a piece of steak.

The proposed regulations on pork tenderloins affects only slaughter house operations, packers and processors but is aimed at curing abuses in labeling that occur most frequently at the retail food store outlet and restaurant level.

If packers and processors are

required to meet certain standards on pork tenderloins as the first step in processing, it's more likely the same honesty and accuracy will prevail at the wholesale, retail and restaurant levels, officials said.

Petr said his division is working with the Board of Health Food and drug division to insure accuracy in labeling pork tenderloin at the retail food outlet level, and with the State Food and Lodging Board for correct identification of pork products on restaurant menus.

Paul Ijams, assistant secretary of the Kansas Board of Agriculture, said pork tenderloin should come from the back of the hog, along both sides of its backbone. "That's the part least exercised, and thus the most tender and desirable," Ijams said. It's also the most expensive part of the hog.

Ijams said too many processors grind up pork, mix it with extenders, binders, less expensive parts of the hog and breading. Reshaped, it is sold as a pork tenderloin, or as "pork tender," he declared.

Petr said such labeling gives consumers the impression they are buying the most expensive part of the hog. "We have a lot of meat being sold as pork tenderloin, when it really is pork patties."

The proposed new rule would require that anything called a pork tenderloin or a pork tender "shall be prepared from fresh psoas muscle found on each side of the vertebral column of hogs. It may be breaded in accordance (with other regulations), in which case the

product must be labeled 'breaded pork tenderloin' or 'breaded pork tender.'"

The proposed new rules also spell out requirements for "pork patties" and "pork steaks."

National Feed-Milk Ratio Drops Again

The national milk-feed price ratio, which helps measure how dairy farmers are doing financially, dropped again last month.

The Agriculture Department says the April ratio was 1.76 compared with 1.81 in March. That is the amount of feed in pounds equal in value to one pound of milk sold by producers.

Although the April ratio was eight

per cent more than the year-earlier mark of 1.63 pounds, it still was 20 points below the record 1.96 set last October, according to USDA records.

The decline from March resulted from an increase in the cost of feed for dairy cows and a reduction in the market price of milk.

Milk production in April totaled more than 10.65 billion pounds, up 2 per cent from the month in 1971, the department said. Average output per cow was 870 pounds in April, up 3 per cent from last year and 2 per cent more than in March.

The number of milk cows during April totaled 12,246,000 head, down 1 per cent from a year earlier.

Rainmaking Problems Considered

The state of Kansas is trying to take the weather in its own hands. The first order is more rain for the northwest corner of the state.

The State Water Resources Board faces the task of developing a \$100,000 rainmaking project that promises a fair chance of relieving a six-month rain deficiency that has dropped the water level of three U.S. Bureau of Land Reclamation reservoirs to critical stages.

One of the big questions the Water Resources Board must investigate is the effectiveness of cloud seeding to increase rainfall.

However, substantial rains in the northwest quadrant of the state could bring the project to a halt.

Patrick Hurley, of the Bureau of Reclamation's Denver research center, said, "Given normal type cloud conditions, we should get an additional half-inch of rainfall a month."

Then he added, "In dry weather, though, it is hard to tell. You have to get the right kind of clouds."

He said rainmaking attempts last year generally were effective, although scientific evaluation could not be made. The highlight of the rainmaking year was in Oklahoma, he said. In the Altus, Okla., area, rainmaking efforts were followed by a 5-inch rain in less than an hour.

Experimental Proof

Altus has undertaken the program again this spring with treating of clouds April 26. The seeding was followed by three inches of rain.

Main efforts in the Kansas project will be directed to increasing rainfall, rather than initiating it, Hurley said.

W. E. Steps, an engineer and acting director of the Water Resources Division, Topeka, said, "The major problem in evaluating results is to know just what happened. What's the proof you've changed anything?"

Steps said no one can tell after a "successful" rainmaking attempt how much rain would have fallen had the experiment not been conducted. "If you don't have moisture available in the air, it won't make any difference what you do," Steps said. "One of the problems in Kansas and the upper plains is frequently there is not enough moisture in the atmosphere in sufficiently high concentrations to bring any rain."

"Success is doing the right thing to the right clouds," he said. June and July have the optimum conditions for seeding clouds, Steps said.

The object of seeding clouds, he said, is to get moisture to collect in large enough droplets to penetrate rising air and fall to the ground. Seeding can form nuclei around which the moisture can collect.

Rainmakers must watch weather developments in Kansas closely and act quickly, Steps said. The thunderheads which produce most of the state's summer rains generate and disintegrate fairly rapidly, he said.

Steps said definite boundaries haven't been drawn for the cloud seeding operations. Nearly all of the northwest quarter of the state is short of water, however, there has been some discussion about seeding wherever the clouds appear in that general area, he said.

Legal Aspects

The rainmaking project has raised a question about the legal right of the Water Resources Board to conduct such activity and also about any liability that might be incurred.

These questions will be turned over to the attorney general's office for opinions, according to Justus H. Fugate of Wichita, chairman of the Water Resources Board. Steps and also raised the liability question.

The danger of lawsuits "is possible whenever someone does something a neighbor doesn't like," he said. What happens, for example, when a cloud seeding operations is followed by a heavy rain on acres of drying hay?

A catastrophic flood that could follow rainmaking might be blamed

on the rainmakers and result in a lawsuit, he said. Any decrease in rain downwind from a rainmaking project also might be blamed on the project.

After the attorney general considers the proposal, the two agencies will work out a proposed contract and mode of operation. When the planning is well along, the Water Resources Board will hold a special meeting to authorize action, if the board deems it advisable, Fugate said.

Fugate said the bureau would do the work under a Water Resources Board contract.

Hurley said the bureau will volunteer the resident meteorologists for the operation, mobile radar and its operator, radiosonde equipment and its computer system.

The meteorologists would evaluate weather information with the help of the computers to determine the best time, conditions and formations for seeding.

The radar would be used to locate clouds and direct two or three seeding aircraft. The radiosonde equipment would measure wind, temperature and humidity in the upper atmosphere.

Both of the standard types of seeding from airplanes would be used, Hurley said. Silver iodide crystals would be used to form ice particles in cold type clouds and hygroscopic (water collecting) materials would be used to seed warm type clouds, he said.

The bureau prefers warm cloud seeding. Most warm clouds are seedable. Only about a one-fourth of the cold clouds can be seeded successfully. There is a danger of retarding rainfall from a cold cloud

because over seeding can make the clouds stretch higher and thinner and disperse.

So far, progress on the rainmaking project has not been slowed by recent rain around the state.

"We had lots of rain here last weekend," Fugate said, "But not enough in the northwestern quadrant of the state."

He said, however, that "if that area gets substantial rains, as far as I am concerned, it would stop the project. The problem is low reservoirs for irrigation. If you start adding storms in the right places, in a very short time it would affect the experiment."

In northwestern Kansas last week, Dwight Sowers, a farmer near Colby, said 1.60 inches of rain in recent storms have improved his crop situation but subsoil moisture still is lacking.

"If it stays dry we will have to do something," he said.

A neighboring farmer, Ted Bourquin, said he thought the effectiveness of rainmaking would depend on who was hired to do it. He recalled rainmaking attempts on two successive years in the 1950's in his area. One was effective and one

was not.

But he agreed, "We're going to have to get more rain before we get a wheat crop."

The rainmaking project developed after despairing irrigators in the dry area wrote to the Water Resources Board, Gov. Robert Docking and their state legislators for help.

The dry spell had prevented the reservoirs from filling either last fall or this spring, according to James S. Ingles, regional director of the bureau at Denver.

Last week Ingles said Webster Reservoir in Rooks County, just west of Stockton, was hardest hit. It had virtually no water for irrigation, he said.

Precipitation totals were the largest of the year in most sections. Webster Dam reported 2.36 inches while 1.48 inches fell at Stockton.

Norton Reservoir, six miles west of Norton, and Cedar Bluff Reservoir, 30 miles southwest of Hays, have been less affected but will be in critical shape unless they get rain before the irrigating season starts, Ingles said.

Norton Dam registered 1.79 inches of rain during showers recently. Just .6 inch fell at Cedar Bluff Reservoir, but 1.16 inches was registered at nearby WaKeeney.

All three are carry-over reservoirs designed to catch water in wet

or normal periods and store it for dry periods.

As a result of the farmers' pleas, state officials requested information from the bureau about cloud seeding. Last April 4 the bureau submitted a general outline of a two-month project designed for a \$100,000 expenditure to Gov. Docking. He then forwarded it to the Water Resources Board, according to Hurley.

The Water Resources Board April 12 passed a resolution asking the State Finance Council to release \$100,000 for a weather modification project. This was released last Friday when the council transferred that amount from the State Emergency Fund to a Weather Modification Project Fund effective immediately.

"I anticipate there probably will be a special meeting of the Water Resources Board called to consider the Bureau of Reclamation proposal and to take whatever action is necessary to implement it and get it moving," Fugate said.

The next regular meeting of the Water Resources Board is slated for June 16.

Kansas Egg Production Drops

Poultry flocks in Kansas produced 300,000, compared with 120,000 in March and 301,000 a year earlier. Prices received for chicks by commercial hatcheries on April 1 were \$47.00 per 100 for hybrid egg-type pullet chicks, \$33.00 per 100 for pure and cross breed egg-type pullets and \$19.50 per 100 for broiler-type straight-run chicks.

Hatcheries in the United States produced 345 million chicks during April, compared with 347 million a year ago. Broiler-type chicks hatched during April totaled 293 million, an increase of 4 per cent from April last year. The number of broiler-type eggs in incubators on May 1 was 4 percent more than a year ago.

Egg-type chicks hatched during April totaled 52.7 million, a decrease of 19 percent from a year earlier. Egg-type eggs in incubators on May 1 were down 17 percent from May, 1971.

Production of turkey poults of all breeds by commercial hatcheries during April totaled 21.5 million, an increase of 7 percent over the 20.1 million produced during April a year ago. The heavy breed hatch at 20.3

million was up 5 percent from a year earlier.

The light breed hatch of 1.2 million was up significantly from the relatively small 1971 hatch of 775,000. Turkey eggs in incubators on May 1 totaled 32.0 million, 2 percent above the previous year. Heavy breed eggs were up 1 percent and light breed eggs were up 19 percent.

The Nation's laying flock produced 6,025 million eggs during April 1971. Layers on hand during April averaged 314.3 million, 2 percent below a year earlier. Rate of egg production during April 1972 averaged 1,917 eggs per 100 layers, up slightly from 1,876 eggs in April 1971.

Commercial hatcheries in Kansas hatched 1,200,000 chicks during April, up 3 percent from 1,165,000 in April 1971, but 8 percent below a year ago.

The egg-type chicks hatched during April totaled 900,000, compared with 1,050,000 during March of this year, and 1,004,000 during April last year.

April broiler-type chick hatch was

300,000, compared with 120,000 in March and 301,000 a year earlier. Prices received for chicks by commercial hatcheries on April 1 were \$47.00 per 100 for hybrid egg-type pullet chicks, \$33.00 per 100 for pure and cross breed egg-type pullets and \$19.50 per 100 for broiler-type straight-run chicks.

Artificial Breeding Tests Reproduce Golden Eagles

Artificial insemination is well known in the livestock industry, but has taken on a new image. Now eagles have drawn breeders interest.

A study into the breeding habits and early life patterns of eagles has resulted in what is believed the first hatching through artificial insemination of the golden eagle species.

James Grier, a Cornell University graduate student who headed the project, said that attempts to pair captive adult golden eagles through natural mating were unsuccessful, resulting in the decision to use the artificial insemination technique.

This involved the injection of male semen into a female bird with a syringe. The female egg, thus fertilized, was removed and placed in an incubator at the university.

The result: two golden eagle chicks who are now gathering strength before being released to the wilds.

The first eaglet cracked his shell May 11 and weighed in at 3½ ounces. The second followed two days later, and five others are expected to see life at regular intervals until the last day of this month.

SALE EVERY

Thursday

As expected, our run last Thursday was lighter than the preceding week, due to people being busy and cattle runs have slackened up. The market was steady to stronger on all classes.

Please take special notice of our cow and bull market, which we feel was very attractive.

We are expecting a good run for this coming Thursday's sale, May 25. If you have cattle to sell, call one of us or just bring them in. We'll have a good market for you.

Following is a partial listing of our sale last week:

STOCKER & FEEDER CATTLE

1971 Milk Receipts Up Slightly, Production Off

Of the 1,717 million pounds of milk produced in 1971, Kansas farmers sold 1,590 million pounds as whole milk to plants and dealers, or 93 percent of the total.

Some 35 million pounds of milk was separated on farms and sold as cream, down 5 percent from a year earlier. Milk retailed by farmers direct to consumers as fluid milk and cream was estimated at 20 million pounds, down 5 percent from the previous year.

Milk used on farms where produced was estimated at 72 million pounds, unchanged from 1970. This includes 32 million pounds fed to calves and 40 million pounds consumed as fluid milk, cream and used for farm churned butter.

Cash receipts from marketings of milk and cream totaled \$95,045,000 in 1971, up 1 percent from the previous year and the highest in 48 years of record. Receipts from whole milk sold to plants and dealers totaled \$91,743,000, compared with \$91,287,000 a year earlier. Milk and cream retailed by farmers sold for \$2,419,000, up slightly from \$2,295,000 in 1970.

Receipts from farm separated cream totaled \$883,000, compared with \$951,000 in the previous year.

The average returns per 100 pounds of milk marketed as milk or cream was \$5.78, a new record high. The gross farm income for dairy products in 1971 was \$97,357,000, slightly above the \$96,744,000 in 1970. This included the value of milk, cream and butter consumed on the farm and cash receipts from marketings.

The value of whole milk produced, including whole milk fed to calves, was \$99,243,000 in 1971, compared with \$98,658,000 the previous year.

United States
Of the 118.6 billion pounds of milk produced on the Nation's farms in 1971, 3.8 billion pounds was used on farms where produced. Of the 1971 milk used on the farm, 57 percent was fed to calves.

Milk and cream marketed by U.S. farmers totaled 114.8 billion pounds of milk equivalent in 1971, up 1.5 percent from 1970. These marketings consisted of 112.2 billion pounds sold as whole milk to plants and dealers, 1.0 billion pounds skimmed on farms for sale as cream and 1.6 billion pounds sold directly to consumers as milk or cream.

U.S. farmers' cash receipts from milk and cream in 1971 were \$6,815 million, up 4 percent from the previous high of last year. Cash receipts increased in all of the ten leading producing States. Cash receipts from milk sold to plants and dealers totaled \$6,581 million in 1971, an increase of 5 percent from 1970.

Returns from sale of farm-

skimmed cream at \$25 million were down 17 percent from the previous

year continuing the downward trend for this item. Direct sales to consumers totaled \$209 million, down 3 percent from 1970.

Value of milk used in farm households in 1971 is estimated at \$132 million, compared with \$140 million the previous year. The farm value of all milk produced was \$7,043 million, a 4 percent increase from 1970.

Livestock Council Membership Drive ends June 30

Stockmen and others who would like to be identified as charter members of the Livestock and Meat Industry Council, which sponsors research to benefit the industry, primarily in the Department of Animal Science and Industry at Kansas State University, have until June 30 to do so, according to Charles N. Cooley, president of the council.

In its last meeting the Council set June 30, 1972, as the deadline for becoming a charter member. After June 1 contributors become members rather than charter members, Cooley said.

As a nonprofit, educational, and charitable corporation, the Livestock and Meat Industry Council receives, pools, and allocates tax deductible contributions for the support of animal meat science research and

related activities.

The Council has no fixed dues: every contributor to the Livestock and Meat Industry Council Fund is a member, irrespective of the amount contributed or the number of contributions.

In addition to charter memberships, Council Membership designations include:

Members: All contributors to the Livestock and Meat Industry Council Fund after June 30, 1972, irrespective of the amount contributed.

Sustaining Members: All members contributing \$100 annually to the Livestock and Meat Industry Council Fund. (Sustaining membership will lapse if \$100 is not contributed each year.)

Patrons of the Livestock and Meat Industry: All members contributing \$5,000 to the Livestock and Meat Industry Council Fund will be designated as Patrons of the Livestock and Meat Industry and honored in an appropriate ceremony sponsored by the Council.

Benefactors of the Livestock and Meat Industry: All members contributing \$10,000 to the Livestock and

Meat Industry Council Fund will be designated as Benefactors of the Livestock and Meat Industry and accorded special honors in an appropriate ceremony sponsored by the Council.

Designations of Patron and-or Benefactor of the Livestock and Meat Industry also will be made when cumulative contributions qualify donors for these honors. Should a contributor prefer to remain anonymous, his wishes will be respected.

Contributions to the Livestock and Meat Industry Council Fund should be sent to:

Livestock and Meat Industry Council, Inc., Weber Hall, Kansas State University, Manhattan, Kansas 66502.

the Agriculture Department.

That was only about half the drop reported the previous year. In 1969, the farm population was put at 10.3 million persons, representing 5.1 per cent of the nation's total population.

The 1970 count was slightly more than 9.7 million, or 4.8 per cent of the national population. A spokesman said the preliminary estimate, not yet officially published, means the 1971 farm population was 4.4 per cent of the national figure.

As a reference point, the 1960 farm population was more than 15.6 million persons, comprising 8.7 per cent of the national total.

Meantime, the department has issued new estimates on the number of farms in the country. For 1971 the count was put at 2,876,000. The

Grass & Grain

19

May 23, 1972

preliminary estimate for 1972 is 2,831,000, or a decline of 55,000 farms, about in line with recent trends.

The farm-number report, issued by the Crop Reporting Board, said the total land in farms last year was 1,117,401,000 acres. In 1972, the estimate is for 1,114,198,000, or a reduction of about 3.2 million acres.

That means an average farm size last year of 389 acres. For 1972, the size average was put at 394 acres. A decade ago, in 1961, there were 3,821,000 farms having an average size of 306 acres.

Farm Population Still Declining

The nation's farm population declined by 300,000 last year to an estimated 9.4 million persons, according to a preliminary estimate by

Forecast Shows 72 Wheat Crop Won't Set Record

Winter wheat production is expected to be 1 per cent less than last year but 3 per cent above 1970 in the United States, reports the State-Federal Division of Agricultural Statistics. The decline from 1971 is a result of lower yields which were only partially offset by a 5 per cent increase in acreage slated for harvest as grain. The current forecast is 11 per cent below the Dec. 1, 1971 forecast. At 82.4 per cent of planted area, acreage to be harvested for grain is the lowest since 1963. The Government's additional wheat set-aside program announced in January along with drought and freeze damage, were important factors in this large abandonment. Winter wheat production is forecast at 1,149 million bushels. Prospective production is down 11 per cent from the December 1 forecast chiefly because of drought in the Southern Plains, freeze damage in Oklahoma and Kansas, and the additional set-aside feature of the wheat program announced in early January after seedings were virtually complete.

The indicated yield per harvested acre is 33.0 bushels, 2.2 bushels below the record high 1971 yield and

0.3 bushels below 1970. Acreage expected for grain harvest is 34.8 million, 5 per cent above both last year and the 1970 crop. Indicated grain acreage is 82.4 per cent of the planted acreage, compared with 85.4 per cent in 1971 and 86.8 two years ago.

Kansas wheat prospects are good to excellent over eastern and northern areas, but much acreage in south central and southwestern sections has suffered from spring drought and or freeze damage. Greenbugs, cutworms, and other insects are present in a number of fields, but over-all damage has been relatively light. Wind damage caused scattered acreage losses in western and north central Kansas during late February and March. Soil-borne and streak mosaic caused some concern, but little abandonment has resulted to date. Development of the State's winter wheat crop was ahead of normal on May 1. During late April, sufficient moisture was received in most Colorado wheat fields to temporarily relieve stress.

USDA Predicts '72 Food Consumption Will Equal Record

The Agriculture Department says per-capita food consumption this

year probably will equal the record high level of 1971 but that menus will include slightly less red meat and more cereal, fresh vegetables and fruit.

Poultry consumption also is expected to rise again, officials say in a report on the national food situation. In all, per-capita food consumption in 1972 is expected to be up 3.4 per cent from 1967, the year currently used as a comparison.

That would be the same percentage rise as for 1971, according to department records. The 1970 index was 2.7 per cent higher than the 1967 base; 1969 up 1.5 per cent; and 1968 up 1.2 per cent.

The per-capita food consumption statistics indicate, for example, how consumers are demanding more of some products and less of others. They also serve as guides on which farm products are faring best in the market place and illustrate why others are in price trouble.

One of the best examples in recent years is red meat, particularly beef and pork. The two items showed, to some degree, opposite extremes in 1971.

Last year, according to the report, Americans averaged 191.8 pounds of red meat apiece. That quantity is carcass weight, before the slaughtered steer or hog is carved up into neat retail packages.

During much of 1971 hog prices were down, reflecting the large supply going to market. Thus, per-capita pork consumption rose to 72.9 pounds last year, the highest in two decades. It was a 10-per-cent boost from 1970.

Cattle production, on the other hand, rose only slightly in 1971. And prices paid to producers were strong, rising last winter to the highest peaks since the Korean War.

Thus, with relatively tight supplies, per-capita beef consumption actually declined slightly in 1971 to 113.1 pounds carcass weight, down

about 1 per cent from 113.7 in 1970.

Veal, lamb and mutton also showed per-capita reductions. Poultry consumption, including eggs, chickens and turkeys, rose slightly last year reflecting large

20

May 23, 1972

output, particularly for eggs which have been in price trouble on the farm for many months.

Tight Screening Reduces Credit Card Deadbeats

Credit card deadbeats are declining in number as a result of tightened operating procedures by card issuers and improving economic conditions, trade sources say.

Those who issue the bulk of the nation's 275 million credit cards — banks, retail stores, oil companies, and travel and entertainment concerns — agree that the percentage of accounts which are uncollectible has dropped in recent months. For competitive reasons, however, most refuse to disclose the percentage of sales represented by bad debts.

Furthermore, some issuers report a recent increase in the percentage of card users who are paying their bills promptly, which means upon receipt of the bill in the case of travel and entertainment cards and within 30 days for most others.

In addition to a slow but perceptible strengthening in the economy, reasons frequently cited for the improved collection pattern include better screening of applicants, growing use of "point-of-sale credit" authorization, earlier review of delinquent accounts and expanded collection staffs.

"We had a bad period for a couple of years, but collections now are as good as they have ever been," says Joseph Garcia, executive vice president of Diners Club, whose travel and entertainment card is the

second-most-widely used.

Bad debts now are running close to the acceptable norm of 1½ per cent of sales for this type of cards, he says.

"When the economic downturn came in '69, it hit credit cards like ours fast and hard," Garcia says. "Now we're getting the procedures we should have had three years ago. Our collection staff has been beefed up and there's a greater screening of candidates. We haven't changed our standards for applicants, but we investigate their backgrounds more thoroughly."

American Express, which has the most widely used travel and entertainment card, asks applicants to furnish such information as how long they've worked in their present job and whether their income is less than \$8,500.

"We don't expect to have a problem with bad debts because of the caliber of our clientele," a company spokesman says. Most American Express cardholders are either professional or executive people, he says.

Despite the supposed affluence of its cardholders, the company found that as the economic downturn gained momentum cardholders were slower paying their bills although not necessarily in the bad debt category. "But things are righting themselves now," the spokesman says.

Keith Halliday, vice president of credit for another travel and entertainment card, Carte Blanche, says the company's ratio of bad debt to sales, while still unacceptable, has been improving since late last year.

One reason for the improvement, he says, is a speed-up in the monitoring of delinquent accounts to the point where the company can review a credit card account the day a charge is made against it.

Like other card issuers, Carte Blanche furnishes businesses that accept its card with a bulletin containing the serial numbers of its unexpired credit cards that are in the lost, stolen or bad debt categories. Employees at those businesses are supposed to consult the bulletin before authorizing a credit card sale.

Some issuers try to encourage employees to check cards against the bulletin by promising a reward of anywhere from \$25 to \$200 to those who discover a card that is not in good standing.

Spokesmen for both major bank Charge and BankAmericard, say that banks which issue one or the other of the cards have less of a bad debt problem today than they did two or three years ago.

Spokesmen for both major bank credit cards, Master Charge and BankAmericard, say that banks

which issue one or the other of the cards have less of a bad debt problem today than they did two or three years ago.

The reason, they say, is federal legislation that went into effect in 1970 stipulating that all credit cards could be issued only at the request of the consumer.

MAYETTA CUTTING HORSE CONTEST DRAWS CROWD

Nearly 50 cutting horses from a wide mid-western area were entered in the second annual Mayetta Cutting Horse Contest.

The contest was held at the Gordon Kern farm just west of Mayetta.

Riders competed in seven classes from junior to open for a variety of trophies and cash prizes.

Among the riders was Jarrell Wilson, punter for the Kansas City Chiefs, who showed two horses.

ANTIQUE Saturday, May 27

Auction SALE

Starts 10 a.m. — Lunch Served

We will sell at auction the following listed antiques, furniture and collectors items of the late Packard Sisters, early day settlers, located 2 miles east of Enterprise, 1½ miles, and ½ mile east; or from Chapman, 4 miles west, 3 miles southeast to Peterson Bridge, then ½ mile east. Watch for Signs.

ANTIQUE FURNITURE

- 3 wooden beds; marble top dresser with wishbone mirror; kitchen cabinet; 3 pie cupboards; 1 walnut; china cupboard; oval walnut dropleaf table; center table.
- Camel back trunks; 2 dressers; 2 commodes; 2 chests of drawers; round oak table; cradle; odds and ends of antique chairs; rockers; settee; wall telephone; Seth Thomas mantle clock; kerosene cast iron cook stove dated 1892, small and unique.
- Whiskey barrel with pump; antique bath tub; other antique furniture not listed.

Antique Dishes & Collectable Items

- Several pieces of carnival glass; grape water pitcher with 5 water glasses; grape pattern berry bowl set.
- Spoon holder; cranberry water pitcher; lots of ironstone; pressed glass; depression glass; salt and pepper collection; black milk glass; perfume bottles; salts.
- Several hand painted bowls and plates; Teddy Roosevelt drinking glass; odd amber glasses; several syrup pitchers; toothpick holders; milk glass.
- Hand painted vases, cups and saucers; muffineers; 2 matching footed glass compotes; other compotes.
- 7 piece tea set (N.P.S.L.); 3 pieces blue glass with opalescent spots; mustache cup; souvenir plates of Enterprise; other souvenir plates; amber ink well; amber powder jar.
- Warners Safe Kidney and Liver Remedy; Electric brand bitters; Donnelly whiskey; Candy Bros.; ½ gal. brown Dandy fruit jar; perfume bottles; cigar jars; many other bottles and fruit jars; old eye glasses; womens gold case Swiss watch; "The King" mens watches, one key wind and several others.
- Rings, beads, bracelets, locket, watch chain and fobs, very

unusual; fans; hair combs and pins; dresser sets; old velvet and wooden boxes; old razors; large glass marbles.

Doll dishes; old dolls; two china heads; big collection of kerosene lamps.

String of 42 sleigh bells; cast iron book ends; two iron banks; railroad lamp; brass lanterns; 2 buggy lights; Model T kerosene tail lamp.

Tin boxes; saddle bags; churns; butter molds; swan daisy & square patterns.

Candle mold; snuffer; wash bowl and pitcher (Dresden); 3 paper weights; 5 walnut shadowbox picture frames; other picture frames; picture and autograph albums; copper teakettle; old battery radios; wheel chair; old clothes; high button shoes.

12 Daguerreotypes with cases; Bible stand; 4 double slates; old school books and other old books; campaign buttons.

Old Rice Seed Co. advertisement; old calendars back to 1899; newspapers of Chapman, Abilene and Enterprise back to 1894.

Approx. 18 old catalogs dated back to 1910 (some Sears & Roebuck); Dickinson County high school annuals; kerosene iron 1916; sadirons; crocks; jugs; sewing machine; buggy jack; old wagon; walking lister; breaking plow; 1 horse plow; cast iron implement seats.

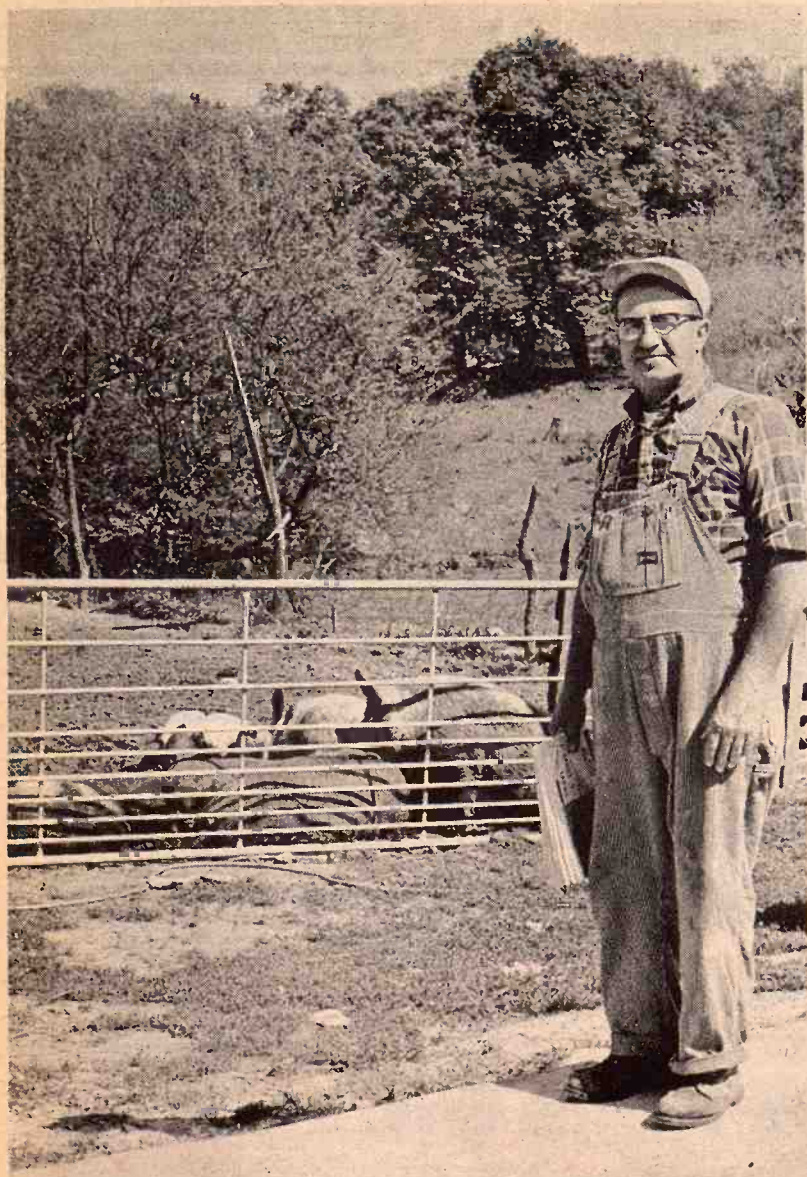

Butchering kettle; neck yokes; double trees; collection of bridge bits; cream cans; milk cans; old harnesses; hay knife; milk cooler; hand corn sheller; lard press; apple peeler; hand corn planter.

Porch swing; swing frames; 2 burner hot plates; air bubble; wire stretchers; oak & walnut lumber; 2 chrome kitchen tables; metal wall cupboard; electric lamps, Early American; maple lamp stand with lamp, Early American.

AUCTIONEER'S NOTE: This is an exceptional collection of antiques and collectables. Remember the date, don't miss this auction! No prior inspection please. Terms cash.

Far-Mar-Co Petition Gaining Farm Support

The goal of the 500,000 farmer signed petition started by Far-Mar-Co of Hutchinson is gaining ground in seven other states. The Republican strategists and leaders of the massive petition drive have reached what is termed a near split. The problem is that the petition is passing through what is considered prime Nixon country.

Leaders of the drive say the goal is for 500,000 farmers to sign and for the petition to be delivered to the White House next month. It calls for immediate action to improve farm prices and income.

Agriculture Secretary Earl L. Butz and others in the Nixon political stable are convinced the timing and show of farm force is an affront to their own 1972 farm plan.

Basically, according to interviews and documents, the Nixon farm strategy has been for a low-key approach to agricultural issues while stressing other, more general issues which have voter appeal nationally, such as the Vietnam war and the economy.

Butz, who joined the Cabinet last December, has freely spent more money on expanded farm programs and has repeatedly spoken out on the improved outlook farmers have this year for better prices and prospects for record net income.

The co-op petitioners, however, insist "the majority of farmers today are skirting outright financial disaster every year." They say debt has increased and farm prices have failed to keep pace with soaring expenses.

Thus these farmers say, Nixon should see that "temporary measures are taken to immediately bolster and stabilize grain prices" and for permanent legislation to bring long-range stability to agriculture.

Butz has turned down flatly the co-op request for him to present the petition directly to Nixon and to push for White House support of the goals, according to Agriculture Department sources.

Heavy pressure has been brought against some of the petition's originators, who say they began the drive as a move intended to help rather than hurt Nixon. But the signature gathering is reportedly well on the way to completion. The participating cooperatives alone represent 600,000 farmers.

Docking Favors Vo-Tech Schools Labor Supply

Gov. Robert Docking says vocational education provides a ready labor force for those industries which locate in Kansas.

Docking, in a speech at the Pittsburg Vocational Technical Institute graduation, said vocational education is good for the student, good for the school, good for the business community and good for Kansas.

"Approximately 60 per cent of those trained in vocational education remain employed in the school's vicinity after graduation," Docking said. "A large portion of the remaining 40 per cent remain in Kansas."

Docking said new industries locating in Kansas need qualified skilled personnel.

"We must continue to attract more new and expanding industries to our state. But to do so, we must continue to provide these firms with good working and living conditions and we must have trained personnel to assume responsible roles in the industry."

Safety Problems Close Winfield High School

The Winfield junior and senior high school has been closed giving

May 23, 1972

the 1,342 students an early vacation. Next year students will be attending school in double sessions.

The Winfield School Board voted unanimously to close the junior-senior high school immediately for safety reasons.

The state fire marshal and city fire chief had given the board a series of warnings and recommendations that the four-story building be closed immediately because it was both structurally unsound and a fire trap.

One section of the building was erected in 1910, another in 1917 and a third in 1923. Classes met on the first three floors and a cafeteria was on the fourth floor.

Garbage Generates Electricity

Garbage that once was destined for burning and then dumping in a landfill, is being converted into fuel to generate electricity for St. Louis.

The experimental project is viewed by federal officials as a means for reducing the nationwide problem of municipal waste disposal since existing generating plants could easily consume the nation's refuse output.

The project also may cut air pollution, since the utility's pollution control devices are more effective than those on the city's incinerators; reduce the fuel costs for the utility as the price of coal continues to rise, and conserve natural sources while using the energy now wasted in burning trash in incinerators.

Two of four boilers at the Union Electric Company's Meramec plant, one of six plants in St. Louis, have been altered so shredded refuse can be used as an auxiliary fuel. The converted boilers can be fed with a mixture of 10 per cent refuse and 90 per cent coal. They are expected to use about 300 tons of refuse daily, about a third of the city's average collection.

The 18-month trial will cost nearly \$3 million, two-thirds coming from the U.S. Environmental Protection Agency and the remainder from the city and Union Electric, which has agreed to spend up to \$550,000. The system will be dedicated Wednesday, but initial operations began last month to work out any start-up problems on the new equipment.

City refuse normally is burned at two incinerators, both built in the mid-1950s. But the process eliminates only about 70 per cent of the bulk, leaving the remainder as ash.

"The older plants just are not very efficient in terms of total burnout," John Molitor, deputy refuse commissioner, said.

The ash is hauled to an old quarry nearby and dumped as landfill. The quarry is expected to be full in about three to five years. If the amount of refuse continues to climb, Molitor said, the city must either find another landfill, which would mean longer hauling distances from the city, or construct another incinerator, which probably would cost at least \$10 million and continue to waste the heat energy.

The two incinerators, each designed to handle 500 tons daily, already are operating at near capacity, and in the summer months, when refuse collection jumps to 1,200 tons daily, both the facilities and the pollution control devices are strained, Molitor said.

Some of the refuse trucks that have completed their rounds are being diverted to a new building where they dump the refuse on a conveyor belt and carried to a hammermill where 30 hammers weighing 200 pounds each are swung at 900 revolutions a minute.

The refuse is sheared and pulverized into a dry material resembling dirty confetti, virtually colorless. Molitor said they are attempting to make each particle no more than an inch and a half, but some larger pieces have slipped through.

The material is conveyed to a magnetic separator, where iron and steel automatically are pulled out and dropped into a waiting truck.

The city is negotiating with scrap metal dealers for sale of the metal.

The remainder, including non-ferrous materials like aluminum, glass and plastic, is loaded onto trucks for the 18-mile trip to the electric plant, situated on the Meramec River in south St. Louis County. Molitor said leaving items other than paper in the refuse apparently does not hurt the burning quality.

At the power plant the refuse is scooped up by drag buckets and fed through pneumatic pipes that shoot the waste into a boiler. In each of the four corners of the boilers are five pipes, four throwing powder-like coal and one throwing refuse into the tangentially fired furnace. The material is swirled around in the center and burned in suspension at 2,500 degrees before dropping to the waterfilled ash pit below.

Arthur Tapperson, Jr., assistant plant superintendent, said the processed refuse apparently has about half the heating efficiency of coal. The normal coal usage is about 60 tons an hour, so 6 tons of coal will be dropped and replaced with 12 tons of refuse.

The company will receive the refuse free during the 18-month trial, and then a determination will be made as to whether Union Electric will buy it or the city will give it away. The cost of coal has gone to more than \$7 a ton, and will be more as the company attempts to purchase more low-sulphur coal, Tapperson said. A multimillion-dollar system to control the amount

of sulphur dioxide released into the air from the company's smokestacks was a failure, he said, and it apparently will have to purchase low-sulphur coal to meet pollution control standards. The refuse, however, has less sulphur than coal and is seen as a potential solution to the problem.

But Tapperson and other Union Electric officials see this prototype as more a benefit to the city than themselves.

"It'll probably just be a headache for us," Tapperson said. The refuse burning could hinder the recycling of bottom ash and fly ash by the company.

The bottom ash, the coal particles that fall into the pit after burning, is sold to the state highway department to use as a fill base and is given to schools for use on cinder tracks. The material left after burning the refuse, including copper, brass and glass, apparently will prevent that use. It now is being forced through a sluice pipe to a pond that may serve as a land fill. A drain in the pond carries the water, taken directly from the Meramec River, back to the river and some of the burned particles apparently travel through the screen over the drain and into the river, Tapperson said.

There may be some way, he said, to recover the metals before they enter the sluice and recycle them.

The fly ash, collected by electrostatic precipitators on the smokestacks, is sold to a firm that makes concrete blocks. But the burning of refuse may alter the

consistency of the fly ash, and could result in a change of color in the concrete blocks.

Grass & Grain

23

May 23, 1972

The refuse has increased maintenance costs for the company, particularly with a great amount of fine dust that accumulates on the machinery, and may increase operating costs, Tapperson said.

He said the company also is looking into the possibility of using refuse from St. Louis manufacturers that would be paper only, and probably would be easier to handle and burn. But for now the processed refuse is working.

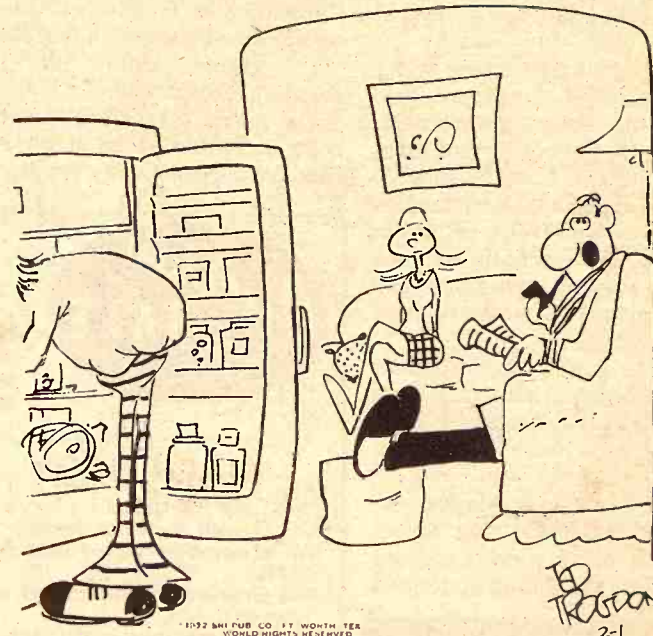

"It has generated electricity. There's no question about that,"

Tapperson said.

There are other questions — including what corrosion effects will be created by the increased amount of chlorine in paper over coal — that must be answered in the next 18 months to determine the economic feasibility of a wide application of the system. Extensive testing and analysis is being conducted during the test period. Utility executives, refuse engineers and environmentalists are waiting for the results.

Soviet Crop Losses Confirmed

Soviet crop losses may provide U.S. farmers with another market.

Western agricultural experts confirmed that the Soviet Union has suffered serious crop losses this spring. In addition, the specialists have discovered evidence of an outbreak of farm animal sickness such as hoof-and-mouth disease.

The conclusion that a serious agriculture setback is facing the Soviet government came from firsthand examination of major farm areas extending from the prime wheat belt of the southern Ukraine to the less productive but vital region near Moscow in central Russia.

Experts toured farm areas under tightly controlled conditions imposed by the Soviet government. They were not allowed to visit farm areas east of the Ural Mountains.

Still, the agricultural authorities have seen enough fields to affirm that about 30 per cent of the nation's wheat crop was lost earlier this year by an unusual combination of weather conditions.

Desperate efforts by Russian farmers to replant fields that were frozen because of a shortage of snow this winter have been only partly successful.

Evidence of the crop failure increases the likelihood that Soviet leaders will make a major grain purchase from the United States this

years, perhaps during President Nixon's visit to Moscow next week.

The loss of winter wheat represents a drop of 8 to 10 per cent in the year's total grain crop. Since the Soviet Union is able in normal years to meet its needs with only a little grain to spare, a loss of that size forces the country to import grain.

The present Soviet leadership is engaged in a major effort to improve the diet of Russian citizens and is continuing to increase its grain output not only for breads but also for feeding more meat animals.

Earlier this year, the Soviet government signed a major new wheat purchase agreement with Canada to augment the supply of bread grains. The new deal with the United States is likely to include corn and soybeans as animal fodder.

The Soviet Union has been dangling the possibility of long-term grain purchases before American negotiators, but asked at the same time for unrealistically low interest

rates and long-term repayment. The government has told the public there have been problems on the farms but has not admitted the dimensions of the losses.

During their tour, the Western farm experts said they found conditions in the southern Ukraine — the richest Soviet farm belt — better than they anticipated from early reports of winter damage.

The western Ukraine and central Russian growing areas, however, were in worse conditions than they had earlier estimated.

Bourbon County Judging Contest Draws Over 500

Over 500 adults, 4-Hers, and FFA members participated in the annual O'Bryan Ranch Field Day Judging Contest, near Hiatville, in Bourbon County. Former Bourbon county Ag Extension Agent and present

Greenwood Agent, Clarence Hollingsworth received a special award for his leadership in creating this event.

Winners in the adult judging division were: 1) Dennis Brink, Crawford county; 2) Mrs. Harold McLean, Greenwood county; 3) Arlos Rusk, Barber county.

Senior division winners were: 1) Dave McClaskey, Crawford county;

2) Brad Forkner, Horton, Missouri; 3) Dennis Russell, Bates, Missouri.

Junior division winners were: Lance Markley, Elk county; Calvin Clubine, Elk county; Duane Holloway, Anderson county.

Accident reports: Increases from

100 to \$200 the minimum amount of

damage in motor vehicle accident

that must be reported within 15

days.

Habitual violators: Establishes

new act as to habitual violators of

traffic laws and ordinances.

Licenses of persons found to be

habitual violators to be revoked for 3

years.

Learner permits: Extends period

from 60 days to 6 months.

Mileage: Effective July 1, 1973

state mileage allowance increases to

10 cents per mile. Other govern-

mental bodies may pay a lesser

amount.

Sheriffs: Requires surety bond on

\$10,000; requires attendance for new

sheriff and completion of law en-

SKY HIGH

Clyde Morton, Frankfort, is repairing an old corn crib. "I'll probably put hay in it this summer," he said. Morton still had some of last years prairie hay to pick up. "It's hard to believe but round baled prairie hay doesn't rot much," he added.

Many New Laws Affect Kansans

A host of new laws go into effect July 1 — one or more affect almost every Kansan.

Motorcycles: Every person riding operating a motorcycle is required to wear a protective helmet. Operator must wear approved eye protection device unless motorcycle has a windshield. (Previously only those under 21.)

Accident reports: Increases from

\$100 to \$200 the minimum amount of damage in motor vehicle accident that must be reported within 15 days.

Habitual violators: Establishes new act as to habitual violators of traffic laws and ordinances. Licenses of persons found to be habitual violators to be revoked for 3 years.

Learner permits: Extends period

from 60 days to 6 months.

Mileage: Effective July 1, 1973 state mileage allowance increases to 10 cents per mile. Other governmental bodies may pay a lesser amount.

Sheriffs: Requires surety bond on \$10,000; requires attendance for new sheriff and completion of law enforcement training academy course; provides for county to pay expenses to the academy; lowers pay of newly elected sheriff by \$100 a month and makes him ineligible for reelection if he refuses to attend.

Bad checks: Requires the maker of an insufficient funds check to pay the amount of the check plus a service charge not to exceed \$3 within the 7-day period.

Name changes: Soil conservation districts become "conservation districts" and may serve public agencies in any activity concerned with conservation of natural resources.

County agricultural extension councils become "county extension councils" and extend services to cover "community and resource development."

Economic development: Permits any county to establish an economic development program and levy not more than 1/2 a mill.

Open public meetings: All meetings of public legislative and administrative bodies must be open to the public, with provisions for recessed executive sessions by formal action of the governing body.

Kansas, Nebraska Chester White Field Day June 4

The Kansas and Nebraska Chester White Picnic and Field Day will be held on Sunday, June 4, 1972, at SENEK Swine Testing Station, Wymore, Nebraska. Activities will begin with a 12:00 dinner.

The afternoon program will include Harvey Richardson, Elmore City, Oklahoma, with a discussion on "Selecting, Fitting, and Showing of Barrows." Dr. Robert Hines and Willard Olson, both from Kansas State University, will have a type discussion on "Selection of Gilts and Boars."

Johnny Kaw
Says:

"The 'hard-times' during my boyhood are now called 'the good old days.'"

Draft Horse Halter Show Scheduled For G&G Area

What may be the first draft horse show in the G&G area in 30 years is being planned for the Clay County Fair in late August.

Several draft horse fanciers in the area have agreed to bring some of their horses for a halter show Monday, August 28, at the fair at Clay Center.

Draft horse pulling contests have become fairly common in the G&G area in the last few years, but the horse owners say they can't recall a show at halter in more than 30 years.

Virgil Nudson of Randolph, who has four draft horses, has agreed to be chairman of the event. Wendell

Grass & Grain

25

May 23, 1972

Graham of Clay Center is in charge of horse events for the Clay County Fair Association. Entries or questions about the show can be made with either of them.

They say they hope to attract a couple of dozen or more draft horses to the show.

Besides the formal halter showing, the horses will be on display at a parade the night prior as part of a saddle club show. Some of the horses will also be on display as working teams preparing grounds prior to the saddle club show, and Nudson said there would also be unscheduled hitch exhibitions during the four days of the fair.

CATTLE

SONNY DOERSCHLAG

We had another large run of hogs at the sale last Wednesday, May 17, and they were selling on a strong market. Hog market was 50¢ stronger than the previous week.

BUTCHER HOGS 200-220 @ 25.75-26.10; 220-240 @ 25.30-25.55;

HEAVIER HOGS @ 24.75-25.25; FEEDERS @ 23.50-31.00 the head;

BOARS @ 21.00-23.00; SOWS @ 20.00-22.00. We will have an active hog market this week.

The cattle run was some lighter, due to the season, but the market would have to be called very active, steady to stronger.

Sale Barn office and yard will have an attendant on duty Monday thru Saturday for full livestock service. You are welcome to bring your cattle consignments any time before sale day. We have water and feed facilities for your livestock.

NEW HOURS FOR CAFE

The Sale Barn Cafe will be open every day from 7:00 a.m. to 6:00 p.m., but closed Sunday only. Come enjoy good food at moderate prices.

WEED KILLER

Ray Rottinghaus, Seneca, is mixing up a fresh load of weed killer. He is applying the herbicide in front of a tandem disc. "This method helps take part of the load off the planting operation," he said. Rottinghaus farms about 900 acres with his brother-in-law, Gene Holthaus and his father-in-law, Carl Holthaus.

US Trade Alliance Being Considered

Treasury Secretary John B. Connally has raised the possibility that the United States may one day be linked with Canada, Japan, Mexico, Australia and other

countries in a trade alliance paralleling the European Common Market.

The thought is intriguing to Connally and his Treasury Department associates, especially since they think that the European market has grown more restrictive, protectionist and inward-looking in recent years.

May 23, 1972

He said that is is unlikely that Canada or Japan would now want to make such an agreement with the United States, even though he broached the idea of closer cooperation with Canada in recent talks.

Underlying the notion of another common market is a realization that the European version has gained considerable economic clout, forcing some to the view that the only way to fight it economically is to set up a competing trading bloc.

Connally may see the United States, its dominance in world economic affairs diminished with the recovery of Japan and Europe from war, will be forced into joining a trading bloc. Still, he and his people clearly worry about the consequences of a world of competing trade blocs.

McPHERSON SADDLE CLUB QUEEN NAMED

Rebecca Hodgson, daughter of Mr. and Mrs. Irvin Hodgson, McPherson, was named McPherson Saddle Club queen. Runner-up was Ro Ann Fry, daughter of Mr. and Mrs. LeRoy Fry.

G&G Area Ayrshire Produces Over 100,000 Pounds

Jim Struble, Salina dairyman, received a special certificate during the 97th National Ayrshire dairy cattle convention in Rochester, Minn.

Struble is owner of Ayr-Plains Farm. His cow, Ayr-Plains Super Laura, was cited for a lifetime milk production achievement of more than 100,000 pounds.

Laura's record, at the end of 1971, read 103,756 pounds of milk with 4318 pounds of butter-fat.

Saturday, May 27

Starts 12:30 Noon — Lunch Served

Chevrolet - Oldsmobile - Cadillac Dealer

FARM EQUIPMENT SALES
AT CLOSE-OUT PRICES
IN MARION

by us, and all of one deal. sales will be of close-out. I understand there's another one coming, possibly tired of fighting the system, tax structure, county, state & federal. More gummie units starting up here, latest being the make us pay, latest being the unemployment, 1.29% which has already gone to 1.67% because it started. Next year it will be 2.67, next year then 3.67 etc. Social Security 12.67 etc. and goes on and on. Why fight it? Mr. Fred from Andale said I was pickin on his friends Mr. Hoover & Mr. Miller. One now deceased. I really never said they were bad people. All I said was we are getting smothered by the do-gooders, etc. — they happened to be two of them. All I said was that J. Ed. built himself I understand \$400 million building & named it after himself. That costs more than John's eternal flame. Come to Marion & buy farm machinery at close out prices from the writers of this and Tim & Tom's & Hett's. Write by Rusty Longhofer, champion of the do-gooders.

Fred told me in his letter that anyone who had the guts to try to sell Case machinery couldn't be all bad. I have never claimed to be all good or all bad. I used Nixon type manure spreader, still unsold, will take \$399 filled. G. Allis combine like new condition. Will take less than city prices. \$7750 all new, rebuilt. Our governor goes around dedicating new discount houses larger towns. Don't he know this is helping ruin the small town?

11 ft. Krause wheel, discount, less than county assessed prices, only \$345. 9' sealed bearing \$249. Watch out for the gun control register people. They are coming out in force again. We may have to yet bury the guns we own in order to keep them. Nixon Conally putting out new law to keep out the rich short sighters in order to drill oil wells you have to plow back

Still can't believe we paid 450 millions for 246 lbs. of rocks. One Hett-type John Deere 830 tractor, better than Tom's got for less. \$1695. Looks like we had a bad week with our politicians being shot nearly killed off. One of our favorites, Mr. Texas Deep in the Heart of Connally, resigns to go back to Texas & wait to be called so he can run with Dick for Vice's President. Ole Dick off to visit the Russians. Wonder where he plans to go next. We better watch out tryin to drink vodka with those Russians — they drink heavy.

New Case 230 baler, will take less than cost to move out this week. We have had to discontinue stocking many new items due to the high cost of assessment that the tax assessors now pull out of the air. Possibly next year we will have even less. It would seem now that our whole governmental systems are trying to drive businesses out of small towns so they will have to seek jobs elsewhere.

Still have one WD 45 Allis wheel axle tractor with loader & plow, cultivator & mower, will take only \$1250. Write to public servant Mr. Abbott the big wheel of Highway Patrol, about the bad law requiring little truckers etc. to have physical exam etc., including farmers, etc? He said it was federal law. So write Mr. Evans. He's the chaplain, and he'll punch your card. Write Mr. Abbott, tell him it's a bad

MARION, KANS.

Vern says we must obey all laws or vote to change. If Vern would read his book, laws aren't that easy to change, and I tried voting once and it did no good. Used voting machine, coin operated, on dimes, \$37.50. For sale, No. 816 IHC mower conditioner, 9' size, excellent condition, hardly used, \$695 or will trade for late new or used piano.

One used 14 1/2' aluminum boat with 16 HP motor, trailer, etc., only \$449. Should now be in use. Massey Ferguson No. 82 combine, 61 or 62 model, like new condition with near new cab, only \$1895.

IHC 151 combine, runs real good and has near new cab, 14' machine, ready to go \$1495. 600 Case combine, very nice machine \$2250 or take less. New F combine at cost. New G combine at cost or less. Call, write or come in.

We've mined the Hi-Pong harbor, big deal. Someone musta had some mines to sell before the war was over.

Big deal — wonder what they cost per each. Big deal, Dick, so you mined it. What did it cost to prove, except we had a lotta mines that needed "harborin'?"

On sale this week only, one 570 Case gas tractor, all equipped, has 16 hours. Take much less than cost. Give us a call. Rusty or Ray Longhofer, EV 2-2620, Marion below the dam, Kansas.

Ear Specialist Predicts Increased Tissue Transplants

An ear specialist predicts that
increased use of ear tissue trans-
plants soon will mean restored
hearing for hundreds of thousands of
Americans now afflicted with
deafness.

Dr. Eugene L. Derlacki said that
several hundred such transplants
currently are being performed
successfully each year on persons
suffering from certain types of
deafness.

"Once the tissue becomes
available, it will be used more and
more," Derlacki said. He forecast a
growth in the number of banks
storing the tiny bones, cartilage and
tissues used in such transplants to
the point where individual surgeons
would maintain small storehouses.
The Ear Homograft and Temporal

Bone Research Laboratory will have
headquarters at Wesley Memorial
Hospital, one of the hospitals
affiliated with the Northwestern
medical school, and will be funded
by the Mid-America Hearing
Research Foundation.

May 23, 1972

The laboratory will maintain a
first ear tissue bank and transplan-
tation research program in the Midwest.
There are two or three similar
programs elsewhere.

PARTNERSHIP

Lillis Haverkamp and his father, John F. Haverkamp, of Seneca, were setting up their planter to start planting milo. There are two other Haverkamps in the partnership, John J. and Kenneth, (not pictured). Together these four men farm over 1,000 acres and milk about 90 cows year round.

Rural Areas Depend On Railroad Branch Lines

The United States cannot abandon more than 21,000 miles of railroad branch lines without at the same

time abandoning hopes of economic revitalization for rural America, Sen. James B. Pearson (R-Kan.) said.

Pearson predicted that Congress will find an alternative to abandonment of rural branch lines in a speech at the National Transportation Week dinner. The senator said economic studies show U.S.

railroads will suffer massive — perhaps fatal — losses in this decade if reform legislation is not adopted by Congress.

But Pearson stopped short of endorsing the Nixon administration's proposals to permit railroads to cut costs by abandoning up to 10 per cent of their total right of way. He cited guaranteed loans for the purchase of new rolling stock and the adoption of computerized freight car information systems as ways to increase railroad efficiency and reduce rising indebtedness.

"The critical question rests with the need of the railroads for \$3 billion annually in new capital expenditures," Pearson said. "Remedies which have been suggested range from substantial de-regulation of the industry to nationalization. But nationalization would simply transfer responsibility for the problems from private industry to the taxpayer. The profit incentive and drive for innovation — key elements in our private enterprise system — would be lost."

PUBLIC AUCTION OF REAL ESTATE June 2, 1972 — 2:00 p.m.

Minneapolis, Kansas Court House

Quarter section of creek bottom land located 6 miles south and 2 miles east of Minneapolis, being the Northeast Quarter of Section 6, Township 12, Range 3 West, Ottawa County, Kansas.

Tentative breakdown of ASCS records — 156 acres of farmland, 94 acres cropland. 14.2 acres domestic wheat allotment, yield 23 bu.; 41 acres grain sorghum, yield 37 bu.; 3 acres barley, yield 24 bu.; 10 acres soil conserving. Wheat set aside 11.8 acres. Feed grain set aside 11 acres. Government certificates for 1971 wheat were \$523.35, grain sorghum \$299.75. Approx. 61 acres are in crop and acres are certified.

Located on a good road and school bus route. A good livestock farm, or could be a nice place for man who works off farm. Two-fifths share of growing crops to purchaser. Also, all of pasture rent at \$4 per acre.

Possession — Subject to tenant's rights.

Terms — 25 percent down at time of purchase and balance upon delivery of abstract showing merchantable title. For further information contact Willis Darg, Bennington.

- Nov. 14 — Production sale at the ranch northwest of Clay Center, (Bill) Amstein Hereford Ranch.

Taxpayers Want Loopholes Closed According To Poll

A poll ordered by a presidential commission reports strong taxpayer support for closing income tax loopholes and resentment about local property taxes.

A substantial number, although minority, indicated interest in a modified value-added tax, which is a form of national sales tax.

The Advisory Commission on Intergovernmental relations, made the poll public without substantive comment. But it laid out a working schedule bolstering indications that President Nixon will not ask Congress for any new tax action earlier than 1973.

Nixon assigned the commission to study problems of school financing and the possibility of using the value-added tax to reduce local levies.

The Opinion Research Corp. of Princeton, under contract with ACIR, said it asked a scientifically chosen 2,195-adult sample, which would be the best among three possible ways of raising federal taxes substantially, if it proved necessary.

Forty per cent opted for reducing special tax treatment of capital gains and cutting tax deductions, even for such things as charities and local taxes.

The value-added tax was favored by 34 per cent and an increase in income tax rates by 10 per cent. The remaining 16 per cent had no opinion.

For the purposes of the poll, the

KANSAS BULLDOGS

Kansas isn't known for its Bulldog production but Mildred Wandersee, Dwight, doesn't let that fact discourage her. She has eight registered English Bulldogs. Mrs. Wandersee has raised bulldogs for about nine years and hopes to increase her operation.

value-added tax was defined as "a form of national sales tax on things other than food and similar necessities."

In its pure form, the value-added tax is a percentage levy imposed on all goods and services at every step of production and distribution. Deductions are allowed for taxes previously paid, except that the final consumer gets no deduction.

In reply to other questions, 45 per cent named the local property tax as the least fair of existing taxes and 36 per cent chose the federal income tax as the fairest.

For property tax relief, 32 per cent favored use of the value-added tax and 14 per cent supported income

tax. If states had to raise taxes, 46 per cent of respondents preferred a sales tax increase, against 25 per cent for increasing state income tax and 14 per cent for property tax.

ACIR Chairman Robert E. Merriam of Chicago said the commission will take up an analysis of property taxes probably in September and will consider the value-added tax and other alternatives still later.

He said he expects to have recommendations for the President by the end of 1972 or certainly before the new Congress convenes in January.

Cattle and calves on feed are animals being fattened for slaughter market on grain or concentrate and are expected to produce a carcass that will grade good or better. Data not available for periods blank. 3/ Excludes Kansas.

There were 210,000 cattle and calves placed on full grain feed in Kansas during April, compared with 190,000 in March. Number of cattle and calves on grain feed for the slaughter market on May 1 in the seven monthly cattle on feed States was 8,880,000, slightly below that on April 1. In the six States with comparable data last

year (excludes Kansas) the number of cattle on feed on May 1 was 11 percent above a year earlier, compared with 10 percent on April 1. The number of grain-fed cattle marketed during April in the six States was 4 percent above a year earlier. The number of cattle and calves placed on feed in the six States

Grass & Grain

May 23, 1972

during April was 7 percent above the April 1971 placements.

LIVESTOCK & COMMISSION CO.
MARYSVILLE, KANSAS

Kansas Phone Co. To Hike Rates

Dale Saffels, chairman of the Kansas Corporation Commission, said the KCC has granted a nearly \$200,000 rate increase to Kansas Telephone Co.

The firm had requested a gross revenue increase of \$440,914, but the commission approved an increase of \$198,750.

Kansas Telephone Co. serves

28,559 residential and commercial customers on 82 exchanges in rural areas and small towns, mostly in eastern Kansas.

Since filing the application, and effective April 1, the firm has changed its name to Continental Telephone Co. of Kansas, Inc., with headquarters in Gardner, Johnson County.

The company said that because of "inflationary pressures," such as rising property taxes, higher debt costs and wage increases, it needed

the \$440,914 increase.

But Saffels said the commission found that a gross revenue increase of \$198,750 would produce a rate of return of about 4.85 per cent on the rate base, which, "was fair and within the range of reasonableness, and is in accordance with the price commission requirements."

Saffels said the company has been directed to prepare and file new rate schedules to become effective within 30 days.

May 23, 1972

OTTAWA CO. GETS WATER DISTRICT LOAN

The Farm Home Administration announced today approval of a \$88,000 loan to Rural Water District No. 1 in Ottawa County, Kansas. The funds will enable the district to construct a rural water system to serve 70 families in the community of Ada.

LAND SALE

80 ACRES UNIMPROVED MORRIS COUNTY LAND

FRIDAY, MAY 26 — 2:00 P.M.

Selling at public auction the following real estate at the site, located 10 miles east of Herington, Kansas to the Junction of 149, then 4 miles north and 1 mile west, or from White City 6 miles south and 1 mile west.

LEGAL DESCRIPTION: The North 1/2 of the Northeast quarter of Section 33, Township 15, Range 6-E of H 6th P.M.

42 ACRES IN CULTIVATION
20 Acres sowed to wheat 1972 Domestic Wheat Allotment — 9.3 Acres
Required set aside for wheat—7.7 Acres.

CROPS: Buyer will receive 1/3 of the 1972 Wheat and 1/3 of the Milo. Buyer will receive pasture rent due at end of pasture season.

POSSESSION: Wheat ground as soon as the 1972 crop has been harvested and on milo ground. Pasture possession after 1972 season.

MINERAL RIGHTS: Intact, and go to buyer.

ABSTRACT: Showing merchantable title will be furnished.

TERMS: 25% down day of sale. Will sell on contract, \$1,000 each year for a term of 5 years at 6 1/2% interest with pre-payment privileges. Balance due at end of contract.

Statements made day of sale will take preference over any advertised statements.

This is good producing land, and good grass in the pasture. Look this over before sale day. This land has a good tenant, and if buyer wishes to rent this land, present tenant would like to continue farming this land.
