Farm Management

Mike D. Tokach
Swine Nutrition Specialist

Production Level

Costs per unit and net returns in livestock production are highly dependent on production levels. The following estimated farrow-to-finish swine budget includes three different production levels. Production levels vary for a number of reasons such as livestock quality/genetics, weather, input levels, and management. Budgeting at multiple production levels can help producers examine the financial risk of a live-stock enterprise that is directly related to production risk.

Production levels for farrow-to-finish operations are assumed to vary due to differences in the number of pigs sold per litter, and the number of litters per sow per year. Varying these two factors results in different numbers of pigs sold per sow per year.

Capital Requirements

Capital invested in swine facilities varies greatly for farrow-to-finish swine enterprises. The investment shown in Table 1 was used for the cost return projections. Use your own figures and recalculate the fixed cost before construction.

A central farrowing house with liquid manure facilities and slotted floors is estimated at \$2,300 per sow (66 sq. ft. per sow), with the equipment inside the building costing an additional \$1,150 per sow. A nursery building with total slotted floors will cost about \$127 per pig (3.5 sq. ft. per pig), with the equipment inside the building costing an additional \$11.50 per pig. The gestation building is estimated to cost \$518 per sow (20 sq. ft. per sow), and the equipment inside the building is estimated to cost an additional \$230 per sow. A total confinement finishing building is estimated to cost \$161 per pig (8 sq. ft. per pig), with the inside equipment adding another \$28.75 per pig. Office facilities, site preparation, and miscellaneous items also are included in the capital require-

ments. The capital requirements are assumed to be the same for all production levels, so building and equipment costs per pig are significantly lower for higher production levels.

Returns

Producers receive income primarily from the sale of finished pigs. Additional income is received from the sale of culled breeding stock. In this budget the income from the sale of culls is accounted for by including an assumed salvage value in the depreciation component of the breeding/genetic charge. Therefore, income from culls is entered as a reduction in costs rather than as an increase in returns so that the returns are representative of the true objective of the business (producing finished pigs).

Feed Costs

Feed costs were calculated using corn-soybean meal based diets for the gestation, lactation and nursery diets and grain sorghum-soybean based diets for the finishing phase. The practice of adding fat to diets is becoming more common and something producers need to evaluate on a case-by-case basis. In these budgets the lactation diet includes 5 percent added fat. The first two feeding phases in the nursery use the K-State SEW and Transition diets purchased as complete feeds. Feed requirements at each stage of production are based on K-State swine nutrition guidelines. Table 2 provides a partial breakdown of the different feed ingredients and their relative costs. The breakeven price needed to cover all costs (Line 18) is sensitive to changes in grain and soybean meal prices. The expected breakeven prices for a range of grain sorghum and soybean meal prices for each of the three production levels are presented in Tables 3, 4, and 5 (corn prices remain in the same proportion to sorghum price as in the base budget).

Table 1. New Facility Investment — 1,200 Sows

Building Type	Investment		Capacity	Total Investment
	Per Space	Per Square Foot		
Farrowing Bldg.	\$2,300 / Sow	\$34.85 / Sq. Ft.	220 Sows	\$ 506,000
Equip.	1,150 / Sow			253,000
Nursery Bldg.	127 / Pig	42.17 / Sq. Ft.	4,000 Pigs	506,000
Equip.	11.5 / Pig			46,000
Finishing Bldg.	161 / Pig	20.13 / Sq. Ft.	9,000 Pigs	1,449,000
Equip.	28.75 / Pig			258,750
Gestation Bldg.	518 / Sow	25.88 / Sq. Ft.	1,120 Sows	579,600
Equip.	230 / Sow			257,600
Other (Office, Site, etc.)				242,000
TOTAL				\$4,097,950

Table 2. Feed Requirements and Costs for Three Levels of Sow Productivity

Feed	Productivity Level, finished pigs sold/sow/year						Average cost/ton ²
	17.5	19.5	21.5	17.5	19.5	21.5	
	Pounds fed per pig sold ¹			Cost per pig sold			
Corn (\$2.64/bu)	142.1	132.8	125.2	\$6.70	\$6.26	\$5.90	\$15.89
Sorghum (\$2.30/bu)	472.9	472.9	472.9	19.42	19.42	19.42	49.30
Soybean meal (\$215/ton)	158.4	156.2	154.5	17.01	16.78	16.60	42.60
Other ingredients	22.6	22.0	21.5	4.83	4.73	4.64	11.99
Complete feeds	4.0	4.0	4.0	0.99	0.99	0.99	2.50
Processing (\$10.90/ton)	796.0	783.9	774.1	4.34	4.27	4.22	10.84
TOTAL	800.0	787.9	778.1	\$53.29	\$52.45	\$51.76	\$133.13

¹ Includes annual feed fed to sow and boar divided by finished pigs sold per year.

² Portion of the total diet cost attributed to a particular ingredient.

Information Included in Farrow-to-Finish Budget:

	Productivity level		
Litters/sow/year	2.20	2.30	2.40
Death loss in nursery	3.45	3.12	2.84
Death loss in finishing barn	4.60	4.16	3.79
Finished pigs sold/litter	7.95	8.48	8.96
Finished pigs sold/sow/year	17.5	19.5	21.5

1. **Finished pig sales:** based on a 265 pound finished pig and a market price of \$43.90 per cwt.
2. **Less death loss:** based on death loss in nursery and finisher times the value of market hog (with feed and transportation/marketing cost adjustment).
3. **Grain:** corn and grain sorghum – see Table 2
4. **Protein:** 46.5% soybean meal – see Table 2
5. **Other ingredients:** all ingredients other than grain, soybean meal, and complete feeds – see Table 2
6. **Complete feeds:** SEW and Transition diets – see Table 2
7. **Feed processing:** total tons of feed fed per pig sold – see Table 2
8. **Labor:** based on 7.5 full-time employees at \$35,000/year (salary + benefits) divided by pigs sold/year.
9. **Veterinary, drugs, and supplies:** costs for prevention and control of disease.
10. **Utilities, fuel, and oil:** telephone, utilities, fuel and oil allocated to swine enterprise.
11. **Transportation and marketing costs:** trucking, commissions, etc.
12. **Buildings and equipment repairs:** annual building and equipment repairs allocated to swine enterprise calculated as 2.5% of the total investment.
13. **Breeding/genetic charge:**
 - a. **Depreciation:** difference between purchase price and cull value divided by years of useful life. Based on gilt purchase price of \$213/head and cull value of \$110/head, boar purchase price of \$400/head and cull value of \$123/head. Useful life is estimated at 1.8 years for sows and 2.5 years for boars. A sow/boar ratio of approximately 120:1 is assumed.
 - b. **Semen:** based on artificial insemination charge of \$16.25/litter (2.5 straws @ \$6.50/straw).
 - c. **Interest:** interest is charged on the average breeding herd investment [(purchase price + cull value) ÷ 2] at a rate of 7 percent divided by the number of finished pigs sold per year.

d. **Insurance:** averages approximately 1.0 percent of the total breeding herd investment divided by the number of finished pigs sold per year.

14. **Professional fees (legal accounting, etc.):** business and miscellaneous costs allocated to swine enterprise.

15. **Depreciation on buildings and equipment:** based on the total original cost less salvage value of buildings and equipment on a per pig basis divided by the estimated life. The budget value is based on a total investment for buildings of \$3,281,600 with a salvage value of 10% and an equipment investment of \$815,350 with a salvage value of 0%. A useful life of 25 years is used for buildings and 15 years for equipment.

16. **Interest on buildings and equipment:** interest is charged on one-half the average investment [(initial cost + salvage value) ÷ 2] for buildings and equipment at a rate of 7 percent divided by the number of finished pigs sold per year.

17. **Insurance and taxes on buildings and equipment:** based on original cost times 0.25% (insurance) and 1.5% (taxes, buildings only) divided by the number of finished pigs sold per year.

18. **Interest on operating costs:** calculated on one-half of operating costs at a rate of 7 percent for the number of months per litter.

19. **Average selling price of finished pig to cover total costs:** calculated by dividing total costs (Line C) by finished pig selling weight times 100.

F. **TOTAL FEED COSTS:** sum of all feed costs including processing charge (lines 3-7).

20. **Cwt. of pork produced:** weight of finished pig sold.

21. **Feed cost/cwt pork:** total feed costs per hundredweight of pork produced (line F ÷ line 20).

G. **ASSET TURNOVER:** (gross returns per pig divided by investment) asset turnover is the percentage of investment recovered by total returns. Inverting this measure allows different enterprises to be compared on the basis of capital required to generate a dollar of gross income.

H. **NET RETURN ON INVESTMENT:** [(returns over total costs + interest on breeding herd + interest on buildings and equipment + interest on operating costs) ÷ investment] net return on investment is the percentage return on investment capital (both borrowed and equity). This measure enables comparisons to be made between enterprises as well as other investment alternatives.

FARROW-TO-FINISH COST-RETURN PROJECTIONS

	Finished pigs sold/sow/year			Your Farm
	17.5	19.5	21.5	
RETURNS PER PIG SOLD:				
1. Finished pig.....	\$ 116.34	\$ 116.34	\$ 116.34	
2. Less Death Loss	\$ 6.88	\$ 6.25	\$ 5.72
