CHISEL PLOW CONSTRUCTION

To date there have been 1,350 Landoll Chisel Plows built. Don Landoll, Marysville, started his business Dec. 16, 1963, in a partnership with Jesse Moffitt which dissolved in June of 1968. Financing was arranged and Landoll became sole owner of Quick Service Welding Company in 1968. Now, at the age of 29 Landoll has a business that grossed \$450,000 last year and 11 full time men working. Two are getting on the job training through a cooperative effort by Landoll and the Marysville High School. Four job trainees have stayed with Landoll after graduation.

PUNCHING HOLES

Don, with the help of his younger brother, Richard, punch holes in the lid of a supplement feeder. Over 3,500 supplement feeders have been built in a variety of sizes. Landoll's goal to enlarge has led to another building which is in the process of being set up.

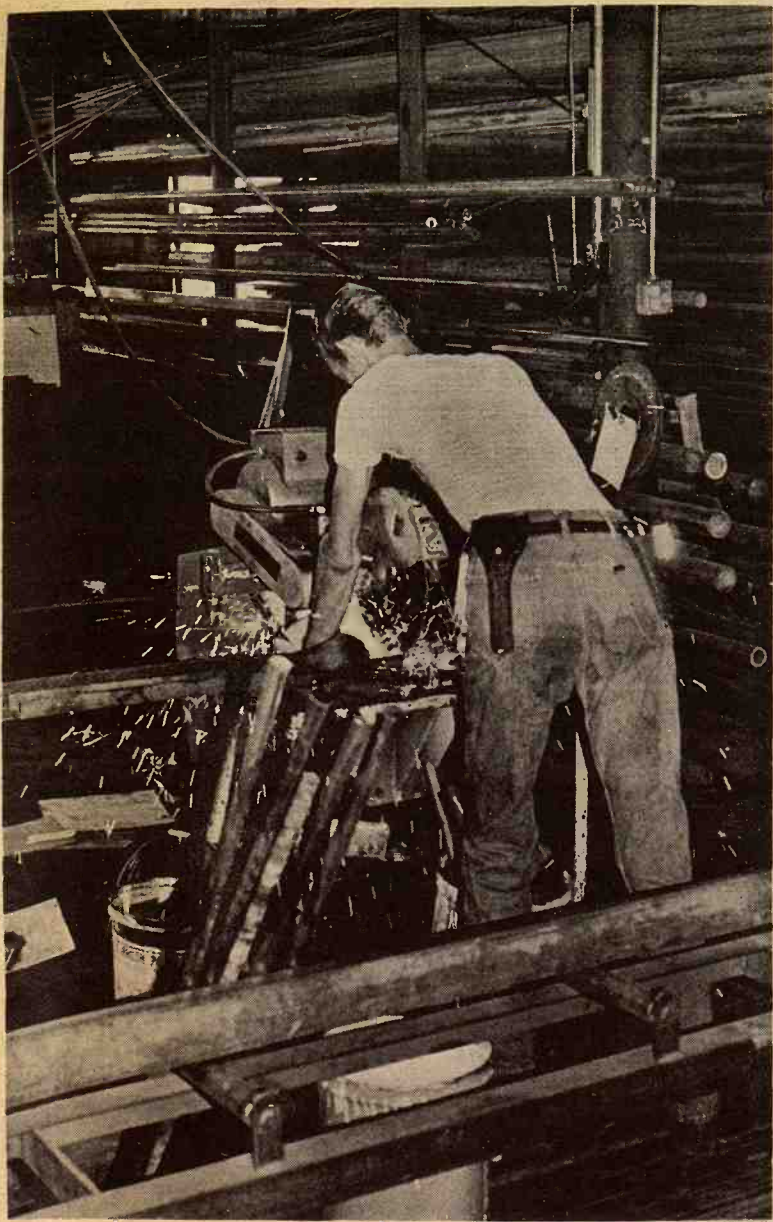

BALER PROBLEMS

Area farmers bring their equipment to Landoll for machine shop repairs. A little welding put this baler back in shape for Bill, Jr., and Bill, Sr., Landoll, Hanover.

FIXING A LEAK

Instead of calling the plumber, the Blue Rapids Co-op brought their spray rig to Landoll hoping it could be repaired. It took most of the morning but the job was finished by dinner. Making repairs and contract fabrication keep several of Landoll's men busy.

SPARKS FLYING

These sparks typify the action in the Landoll shop area. "Everybody around here works hard and knows what they're doing," Landoll said. With supplement feeders, chisel plows, pickup racks, handi-hitches, trailers, farm repairs, and fabrication work everybody has plenty to do.

PRIDE AND JOY

Doug, the youngest brother, and Don look over their latest creation. This Hauloll trailer has built quite a reputation for Landoll. A Hauloll was used in a national tractor pulling contest in St. Louis. The rear wheels slide back and forth distributing the weight that is needed in a pulling contest. Eighteen Haulolls have been built in the last year and most of them were sold to equipment dealers.

No Hard Hats For Amish Sect

Amish construction workers in northeastern Indiana began losing their jobs this spring because they would not wear hard hats.

They said the traditional broad-brimmed black felt hat worn by men of the Old Order Amish sect is an integral part of their religion.

About 400 men were furloughed due to a regulation in the 1970 federal Occupational Safety and Health Act, which became effective Jan. 1.

The law requires workers in all

types of construction to wear protective hard hats. Many of the Amish in this area are employed in construction, usually carpentry.

In May, spokesmen for the Amish asked Auburn attorney John Martin Smith to secure an exception for them.

Smith reported Thursday the U.S. Department of Labor has issued the

exemption, allowing Amish men to work in construction jobs without wearing hard hats.

Smith said most Old Order Amish live in Ohio, Pennsylvania and Indiana.

"The exemption is for the Old Order only and was issued to allow them religious freedom," he said.

Environmental Housecleaning

Twenty years ago, most Kansans took our State's clean air and water pretty much for granted. Yet, KPL already was concerned over the effects of ever increasing energy requirements on our natural resources.

So we started a long-term program of environmental action by installing cooling towers on all of our generating stations to make sure the water we use from nearby streams wouldn't harm fish and other aquatic life. Next came mechanical dust collectors to filter air pollutants from our stacks. Now, 20 years later, KPL has installed the most advanced air quality control system of its kind in the world on the new Lawrence energy center.

These past achievements, however, may not cure future growing pains of progress in Kansas. That's why KPL will continue researching new ways to use electricity for environmental housecleaning . . . planning ahead for the next 20 years, and beyond.

We've been at it for 20 years

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Everett Kniestadt, Marysville, Is Winner

Winner, Mrs. Everett C. Kniestadt, R 3, Marysville: "These hot June days have sent me to my files for a favorite recipe for a frozen dessert. I might add that this is a very old recipe and I would like to share it with the Grass & Grain readers."

ERMA'S FROZEN DESSERT

- 1 quart buttermilk
- 2 cups sugar
- 1 cup crushed pineapple (drained)
- ½ bottle maraschino cherries (chopped)
- ½ of the maraschino cherry juice
- 1 teaspoon vanilla

Beat buttermilk and sugar together until creamy. Then add the remainder of the ingredients. Pour into a 1½-2 quart container that can be placed in the freezer compartment of the refrigerator. Freeze until the mixture is firm (about three hours). Stir mixture once or twice during the freezing period for a smoother texture. Yields 1½ quarts.

+++++

Mrs. Don Banahan, Steele City, Nebraska: "Recently I received this recipe so would like to pass it on to your readers. It is good on bread and also as an ice cream topping."

RHUBARB JAM

- 4 cups rhubarb cut in small pieces
- 5 cups sugar

Let this set overnight; this forms juice. Then cook until done and beat

with mixer to make it smooth then add 13-ounce package of strawberry flavored gelatin. It is delicious. Keep in freezer or refrigerator and be ready to make another batch.

+++++

Mrs. John Hiesterman, R 1, Washington: "I think this is a

perfect recipe for hungry farmers at lunchtime. I find the men really get hungry but do not want something too extra sweet. I know the men around here really like the raisin bars so I sent it to share it with the G&G readers."

RAISIN BARS

- 1 cup raisins
- 1 cup water
- ½ cup shortening
- 1 cup granulated sugar
- 1 slightly beaten egg
- 1¾ cups sifted flour
- ¼ teaspoon salt
- 1 teaspoon soda
- 1 teaspoon cinnamon
- ½ teaspoon nutmeg
- ½ teaspoon allspice
- ½ cup chopped walnuts

Combine raisins and water in saucepan; bring to boiling; remove from heat. Stir in shortening; cook to lukewarm. Stir in sugar and egg. Sift dry ingredients; beat into raisin mixture. Stir in nuts. Pour into greased 15½x10½x1-inch baking pan for 12 minutes in 375-degree oven. When cool cut into bars.

+++++

Mrs. Doris Hett, R 1, Marion: "I would like to share one of my favorite salad recipes. This is exceptionally good on a hot summer

The Latest 'Daily Bread' Prize

MULTI-USE BASKET

USE AS vegetable washer, steam cooker, desk basket, fruit basket, deep fryer, refrigerator storer, planter, bottle sterilizer, colander. Collapsible; folds flat for compact storage.

The winner each week is selected from the recipes printed.

Win one by sending us your favorite recipe—this can be main dish, leftover, salad, side dish, dessert or what have you.

1. Check your recipe carefully to be sure all ingredients are accurate and accounted for.
2. Be sure your name and address are on the entry.
3. Only one recipe at a time, please.
4. Send it to Woman's Page Editor, Grass & Grain, Box 1009, Manhattan, Ks., 66502.

June 20, 1972

day."

7 UP SALAD

- 1 can or 2 cups hot applesauce
 - 2 packages lime gelatin (dissolve in hot applesauce)
 - 1 small package cream cheese
 - ½ cup nuts
 - 1 can or 2 cups crushed pineapple
 - 2 small bottles 7up
- Mix all ingredients and chill in refrigerator until set.

+++++

Permanent Press Travels Well

When packing for vacation this year, you can save on space and headaches by planning a wardrobe that's mostly permanent press.

Then with a side trip to a washer-equipped self-service laundry you will have less luggage to carry, yet your family can wear clothes that look fresh and neat.

The short stop at the laundry won't take long and can probably be

coordinated with Dad's stop for bait and tackle or one of the kid's souvenir hunts.

Anchor Candles With Toothpicks

To put birthday candles into a cake, first stick a toothpick into the bottom of each. This keeps them in place and leaves no gaping holes in the frosting.

Remove Rust Stains

To remove rust stains caused by leaking faucets from porcelain, scrub well with either lemon juice or vinegar. A paper towel saturated with household bleach and laid on the stain for an hour or more is also effective.

When you need
to grow—
grow with a
PCA loan

Farms and ranches, like other businesses these days, operate on a basis of high volume and low profit margin. Many operators who find that they have to grow, choose to grow with a PCA loan.

A PCA's only business is making agriculture loans. Experienced loan officers supply good advice along with loans that are tailored to specific needs and have realistic repayment schedules. The PCA's are owned by the farmer who use them.

If you would rather grow than go, talk over your expansion plans with your Production Credit Association.

Use Canned Salmon To Help Lower Food Bills

In this day of rising food costs it's her family wisely but well and not easy for a homemaker to feed remain within a specific dollar

allotment. But it's not impossible. The bulk of the food budget is spent on main course dishes. Yet, by concentrating on economical protein staples such as cheese, eggs, milk, enriched cereals, cornmeal, dried beans and fish, in preference to meat, the dollar can be stretched to go surprisingly far.

Cornmeal is one of the great food products of the world and has, many times, kept nations from starvation. It is rich in B vitamins, niacin and iron. Salmon is another of the world's most nutritious foods. Its protein is complete, the same as found in eggs, meat and poultry and it contains loads of calcium and the all important vitamins A and D. By combining these two products in a delectable dish you provide your family with adequate protein, vitamins and minerals in a dish which everyone will agree "tastes like more." You'll want to include it at least once a week in your menus.

SALMON SPOON BREAD

1½ cups milk
½ cup cornmeal
½ teaspoon salt
1 teaspoon baking powder
2 tablespoons butter
3 eggs, separated
1 1-pound can salmon

Grease a 2-quart baking dish. In saucepan bring milk just to a simmer. Gradually stir in cornmeal and cook over moderate heat, stirring constantly, for two minutes, or until mixture is thick. Remove from heat and stir in salt, baking powder and butter. Beat in egg yolks, one at a time. Beat egg whites until stiff but not dry and fold into cornmeal mixture along with the salmon and salmon liquid. Pour into prepared dish and bake in a preheated 375-degree oven for 35 minutes or until well puffed and brown on top. Serves six.

Reheated Rolls Taste Fresh

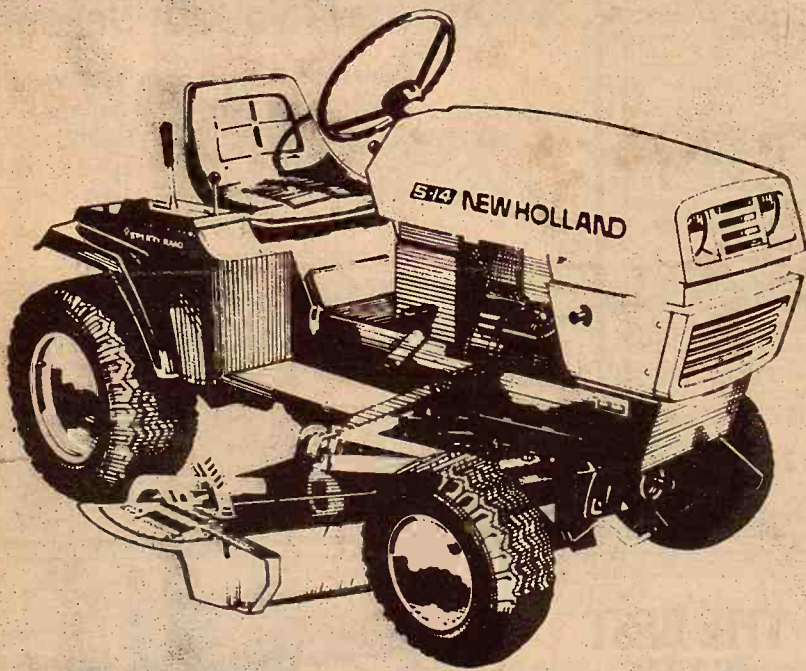

To reheat leftover rolls and biscuits, first place a pan of water in the bottom of the oven and heat. When the steam begins to rise from the water, place rolls in the oven. Let them steam ten to 15 minutes.

When reheated this way, rolls taste almost as fresh as they did when they were first baked.

Holds Bowl Firm

To prevent your mixing bowl or pastry board from slipping while you use them, try putting a dampened pot holder or dishcloth under them. This stops them from traveling and at the same time helps to deaden the clatter which often goes with vigorous beating in a glass or metal bowl.

Save now with New Holland Purchase Plan

Buy a New Holland garden tractor during June or July, and you'll pay no finance charges until March 1, 1973.

That's right. New Holland's free-finance plan is now in effect. If you buy during June or July, New Holland will waive finance charges until March 1, 1973.

And you'll have the satisfaction of owning the garden tractor with all these convenience features:

- Solid structural steel frame
- Clean, unobstructed operator's deck for easy mounting
- Console controls
- Adjustable bucket seat
- Hydrostatic drive
- Quick-mount attachments

Variety of attachments available: Mower, snowthrower, dump trailer, rotary tiller, front blade and more.

Stop in soon for all the details of this free-finance offer.

Can Be Well-Dressed And Stay Within Budget

Time, thought and effort can help you to be well dressed. It doesn't take a great deal of money or a great deal of clothes.

First, think about the different types of clothes you need and take

time to choose the right things. Buy the best you can afford. Be sure that your clothes fit well. Keep hems even and the right length for your particular build.

Different types are becoming to

different figure types. Large splashy prints are good for a tall, slender woman but they make a stout woman look heavier. Straight lines and dark colors make the wearer look slimmer. Choose colors that flatter you and that go nicely with the clothes you already have in the closet.

When buying clothes, look for good material and workmanship. Look for labels that say the material won't stain easily, will release wrinkles. It saves money to buy mostly washables so you can launder them easily and cheaply with soapsuds or detergent suds.

double seam that lies flat. Add ties at each corner to keep it in place. This type of cover is easy to launder.

Anchors Material

Wearing an apron made of terry cloth when you are sewing any kind of slippery material will help anchor it and keep it from sliding off your lap.

Mend Awnings

To repair small tears in awnings, put adhesive tape on the underside.

Quick Dry Job

To make a quick job of drying children's wet boots, invert a card table and place a boot over the end of each leg.

Grass & Grain

5

June 20, 1972

No Waste

There will be no waste and you can get the last drop of shortening out of the can by filling it with boiling water. Set aside and allow to cool. When cool, lift the hardened cake of fat from the top and pour out the water.

Tinted Coconut

Coconut may be tinted with either orange or lime rind. Grate the rind and use 1½ teaspoons rind to 1 cup coconut. Combine in a glass jar and shake until coconut is tinted.

Silk Corn Quickly

You can silk corn quickly by using a small, stiff brush. All the corn silk can be removed from each ear of corn in a jiffy.

Argentine Farmers Get Government Wheat Price Hike

Wheat farmers in Argentina will get a boost in price supports from their government to an average of about \$2.28 per bushel, up 20 percent.

The Agriculture Department, which supports wheat grown by American farmers at a basic rate of \$1.25 per bushel, said the increase allowed by the Argentine government "is designed to cover increased production costs and encourage wheat growing" in the 1973 season.

Corn Belt Weather Cuts Nitrogen Sales

Rod Turnbull
Kansas City Board of Trade

Some major fertilizer distributors in the Corn Belt are revealing they have not sold as much nitrogen for corn this spring as they had anticipated.

The reason is the wet weather which delayed corn planting. Farmers generally like to apply nitrogen just ahead of seeding unless they spread the fertilizer in the fall. This spring, many of them were frustrated by week after week of muddy fields. When a day did come when the soil could be worked, dealers explain, many farmers rushed in with their drills to get the seed in the ground rather than use that day to apply nitrogen.

Throughout the Corn Belt, each local area has a "magic day" which supposedly is the optimum date for having corn planted. Farmers have a feeling of assurance, if they get the seed into the ground before or at least around that date. Last year, in nearly every part of the main corn

country, farmers succeeded in getting the corn planted ahead of normal optimum days. As all now know, the result was the nation's biggest corn crop in history and the highest average per acre yields.

The same kind of weather which permitted early planting last year also allowed farmers to get their fertilizer applied on time.

In much of Central United States, May 5 is looked upon as the "magic day" for corn planting. The assumption is that, generally speaking, the later corn is planted the less chance there is for optimum yields. Some go as far as saying that as every day passes beyond the best planting date, a bushel is cut off the acre yield. Obviously though, weather after the corn has been planted also has major effect on total yield. But last year's results are proof that early planting can be advantageous.

Last year, farmers were determined to plant early in an effort to get corn matured before the onslaught of threatened leaf blight. As

it turned out, the weather cooperated in making conditions ideal for getting the corn seeded early, and favorable weather in late summer inhibited development of the blight.

This spring, fertilizer dealers who have not sold their intended quotas of nitrogen are hoping that farmers will sidedress the growing crop and the assumption is that many will, although they may face certain difficulties. Because of the possibility of side-dressing, no one will know how much nitrogen will have been applied until corn is two to three feet high and all chances for getting into the fields are passed.

No government figures on fertilizer use will be available until fall and by that time a fairly accurate estimate also can be made of the size of the corn crop.

One deterrent to side-dressing is the practice of applying herbicides to corn fields. These herbicides, which inhibit the growth of weeds, are contained in the surface of the soil. Farmers hesitate to break the soil crust holding the herbicides.

Another difficulty with side-dressing is with machinery. Farmers and dealers are well equipped with machinery for pre-plant nitrogen application. The same machines will not work as well, once the corn is growing. While they are available, neither farmers nor dealers have as many machines for side-dressing, the dealers comment.

Because of the increased acreage set aside in the government's farm program this year, fertilizer dealers were somewhat apprehensive about business this year. It would seem logical to assume that if fewer acres are planted, less fertilizer would be used. On the other hand, the fertilizer industry is aware of the fact that fertilizer use in the United States has been increasing year after year, despite government acreage control programs.

Total fertilizer use (nitrogen, phosphates and potash) has increased from 18,343,000 tons in 1950 to 40,988,152 tons in 1971. The biggest increase by far has been in the use of nitrogen and a major part of the total use is on corn.

Traders in grain, such as those at the Board of Trade in Kansas City, have become accustomed to assuming that farmers will apply more fertilizer each year — past experience so indicates. Thus the reported difficulties in getting nitrogen on the fields this spring suggests a surprise element to be considered.

According to some major distributors, farmers have been able to get phosphates and potash applied as this was done at the same time the corn was drilled.

Fertilizer has been a part of the technological revolution along with better seeds, herbicides and modern machinery which has resulted in the tremendous boost in production in grains in this country since the end of World War II.

Percentage-wise, world consumptions of plant nutrients (fertilizers) has increased a little more in the whole world than in the United States alone, but the U.S. still uses

about 25 percent of the world total, and more than any other single nation.

A Pig Reigned Over National Feeder Pig Show

Beauty is in the eye of the beholder and this queen offers a different

June 20, 1972

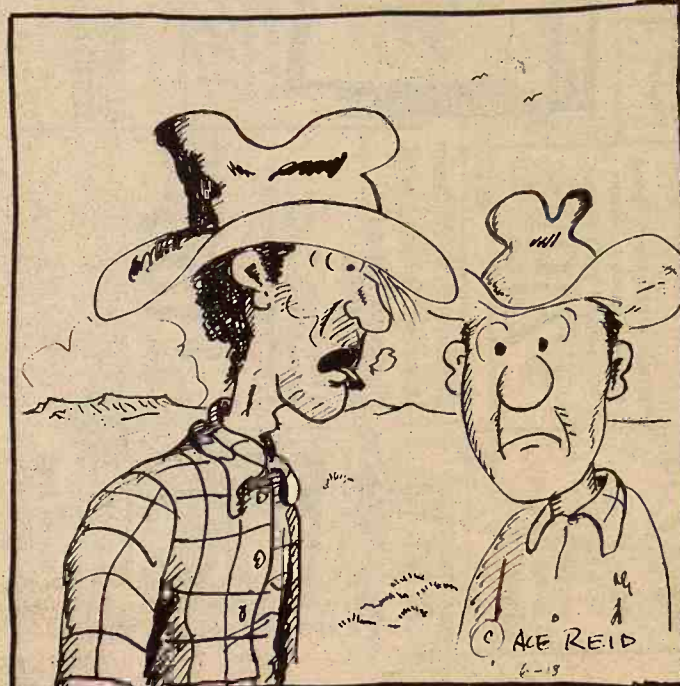

shape.

Missouri's prettiest pig was crowned to reign over the National Feeder Pig Show at West Plains, Mo.

The queen was selected from female feeder pigs entered in the show. "Piggy '72" also met "Arnold", the pig of TV's "Green Acres."

Cattle Feeding Trends

The cattle feeding industry has undergone tremendous change during the past ten years and this change continues. Cattle feeders in the six leading states reported on May 1 that they had 11 percent more cattle on feed than in the previous year. These six states (Iowa, Nebraska, Texas, Colorado, Arizona, and California) account for more than half of the marketings of fed cattle. Reports from these states are available on a monthly basis, rather than quarterly as they are for the twenty-three major feeding states.

As part of the recent concerns about high meat prices, the suggestion has occasionally been

made that cattle feeding has not been expanding rapidly. This is not the case. The marketings of fed cattle have increased from 13.7 million in 1961 (major feeding states) to 25.3 million in 1971.

There are three distinct trends within the industry's pattern of change. They are (1) a growth in volume, (2) a westward shift in location and (3) an increase in the size of feed lots.

Growth in Total Volume

As indicated above, marketings of fed cattle have increased by more than a million per year for the past ten years. Total slaughter (cattle and calves) has not increased nearly that much. The figures are 33.3

million in 1961 and 39.2 million in 1971. But the total production of beef and veal went from 15.9 billion pounds in 1961 to 22.2 billion pounds in 1971. Much of this increased production was the result of the heavier animals being slaughtered. Calf and nonfed or grass slaughter has been sharply reduced.

Westward Shift in Location of Feeding

The westward shift is shown by the location of the states with the greatest increases in fed cattle marketings between 1961 and 1971 and the amount of those increases: Texas, 3.1 million; Nebraska, 2 million; Iowa, 1.4 million; Colorado, 1.4 million; and Kansas, 1.3 million. Illinois marketings were down 207,000 in that ten-year period. Much of this westward increase in feeding came as a result of greater feed supplies, realized through irrigation and improved grain sorghum crops.

Size of Units

In 1962, when the USDA first

collected such information, an estimated 37 percent of the fed cattle marketed were from lots with a capacity of a thousand or more. In 1971, 14.7 million cattle, or a little more than 58 percent, came from such lots; there were 44 lots with a capacity of 32,000 or more, from which 3 million cattle were marketed. Seventeen of these lots were located in Texas, ten in California, and five in Arizona.

Implications

Sharp competition is likely to continue in the cattle feeding industry. Success in large-scale enterprises and the investments committed to them will continue to provide an incentive for high levels of operation. The demand for feeder cattle will continue strong. Feeders in Illinois will continue to face sharp competition in securing cattle to feed.

University of Illinois

Cattle Feeders Conference Set For July 13-14

The Kansas Livestock Association Cattle Feeders Conference scheduled for July 13 and 14 at the Holiday Inn Plaza, Wichita, will focus on issues of immediate importance to the cattle feeding industry of Kansas. "Antibiotics, waste management, consumerism, meat merchandising and labor will draw the 'lion's share' of the attention during the two day meeting", says Lee Stampe, chairman of this year's Feeders Conference.

Keynote speaker for the opening session will be Dr. L. S. "Bill" Pope of Texas A&M University. His message will include a discussion of the reasons for the nearly 200 percent increase in Kansas feedlot capacity since 1965 and the 35 per-

cent increase in cattle on feed as compared to one year ago, as well as his projections for the future.

The recently passed Kansas Agricultural Labor Relations Law will be discussed in detail by Mr. Richard Rock, Labor Relations Attorney from Arkansas City, Kansas. The Kansas Livestock Association was instrumental in the passage of this law, the first of its kind in any state.

The feeders hope to "clear the air" on the subject of the future of low level feeding of antibiotics. Dr. LaVerne Harold of the Food and Drug Administration will present the thinking of the FDA's Task Force Report on low level feeding of antibiotics. Industry reaction to the report will be offered by a representative of the Animal Health Institute, Mr. R. M. Hendrickson, president of the Agriculture Division, Pfizer, Incorporated.

Dr. Dell Allen of Kansas State University will moderate a panel discussion entitled "Meat Merchandising Today and Tomorrow". Panel members will include Dr. Blaire Breidenstein, Stop and Shop, Marlboro, Massachusetts; Ken Coughenour, Swift Fresh Meats, Grand Island, Nebraska; Pete Reere, Fleming Foods, Topeka; E. H. Priceman, Kansas Beef Industries, Wichita; and Jack Andrews, Associated Grocers, Topeka.

The question of how much feedlot waste can be applied without harm to croplands will be answered by Dr. Harry Manges of Kansas State University. His research work at the Pratt Feedlot, Pratt, Kansas provides him with the most complete data available on this subject.

Banquet speaker, Thad Sandstrom, Vice President Broadcasting, Stauffer Publications, and General Manager of WJW radio-TV-FM, Topeka, will present his thoughts on the consumerism issue in a speech entitled "Ralph Who?"

All cattle feeders and other interested parties are invited for the two day meeting that opens at 9:00 a.m. Thursday, July 13 at the Holiday Inn Plaza, Wichita and finishes with a Golf Tournament at the Wichita State University Golf Course Friday afternoon.

Water Seepage From Marion Dam Not Serious Yet

Water is seeping out below the Marion Dam on the Cottonwood River in Kansas. But Army Engineers do not think it will cause any immediate problem.

The seepage was noticed last March in a stretch of the old channel of the Cottonwood. Core drilling since then indicate it is in limestone formation upon which the dam is built.

The spokesman said there has been no increase noted in the flow.

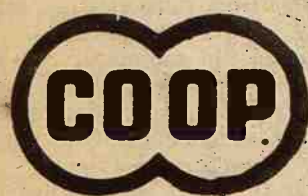

The theory is that there is a outcrop of the limestone formation somewhere in the bed of the 600 acre lake the dam created, and the water flows through cracks and crevices in the limestone.

A crops spokesman today said the seepage is not considered a threat to the dam or to the town of Marion Kan., with a population of 2,600 three miles downstream.

The \$14 million Marion dam is 1.5 miles northeast of Wichita, Kan. It is 8,500 feet long and rises 67 feet above the streambed.

Insecticide Test Reveals No Significant Pollution

June 20, 1972

Chalk one up for the farmer, because insecticides used properly aren't polluting the rivers, lakes or wells in Kansas. What's more most new varieties of insecticides have little residual effects on the soil.

That's the general conclusion of 5 Kansas State university scientists who recently completed a 9-year study of insecticide use in the 6,600-acre Cedar Bluff Irrigation District west of Hays.

It is one of the longest and most intensive studies of farm insecticides and their effect on the environment yet undertaken and is being used by the Federal Environmental Protection Agency in developing guidelines for pesticide use.

The study was directed by Herbert Knutson, head of the Department of Entomology at Kansas State University.

The scientists surveyed 80 percent of the district's farmers and found 10,635 pounds of insecticides were applied in farming operations between 1960 and 1969.

Surprisingly, the study found that most insecticides used were non-persistent organophosphates and carbonates. The insecticides which persist longer in the environment, such as Aldrin and Dieldrin, generally were used before 1965. Then, with more acres under irrigation and more concern with pollution problems, farmers turned to insecticides which disappear quickly.

Knutson said the irrigation district provided a unique laboratory because during the study dry-land farming gave way to irrigation, a trend continuing in many parts of Kansas.

Said the report, "Knowing the distribution, magnitude and persistence in the ecosystem of insecticides residues resulting from normal agricultural practices during such a transition... could help to evaluate the long-range residue potential of these chemicals and to anticipate and possibly prevent negative environmental effects."

The scientists set aside a 29-acre cornfield for intensive study. Each year during the study insecticides were applied to control corn rootworms, fall armyworms and other insects.

Except in 1965, the insecticides were applied at the recommended rates. That year, they applied the insecticides at four times the recommended rates. Soil samples

were taken five times a year from the various control plots.

In addition, several wells were drilled in the study area. They ranged from 13 feet to 71 feet. Other water samples were taken from the smoky Hill River, from the Cedar Bluff Reservoir near the dam and from where water entered the main irrigation canal.

The study concluded that organophosphorus soil insecticides such as Diazinon and Parathion generally disappeared from the soil in two months after application.

But Aldrin and Dieldrin stayed around longer. After the extra-heavy application of Aldrin was applied in 1965, the scientists found the chemical persisted in the soil for at least four years, until the study's conclusion, in small quantities.

Knutson pointed out persistence alone doesn't tell the whole story. Chemicals such as Aldrin, while they are long-lasting, aren't as dangerous upon application as some of the newer, non-persistent insecticides.

"You can't have it both ways. If you put on something that will disappear quickly it's going to be hotter to handle," he said.

The study's regular testing of

drinking water from the wells showed some traces of insecticides, as much as 30 parts per trillion of Aldrin. But the study said, "We concluded that traces of insecticides detected in wells resulted from contaminated hoses used for sampling."

"In addition, residues were not detected in soil deeper than 12 inches from the surface, therefore, ground water at deeper levels would not be expected to contain residues."

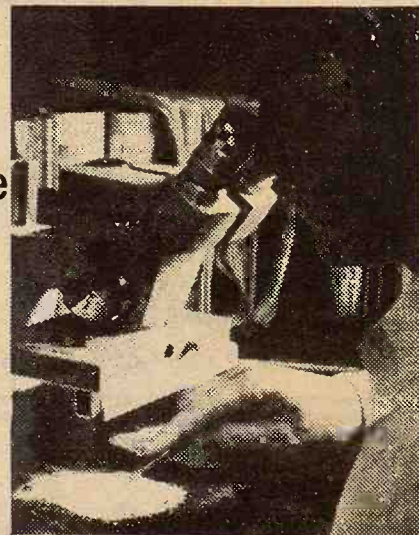

"In summary, our findings substantiate those of others and indicate that insecticides applied at recommended maximum rates for five years did not contaminate ground water."

Samples of water taken from the Smoky Hill River and from the reservoir showed similar results. While Dieldrin and other insecticides were found in some of the water samples, the levels of contamination were considered far from dangerous — only about 12 parts per trillion.

"In summary," the report said, "infrequent trace levels of insecticides demonstrated no significant contamination in any of the surface waters."

Others participating in the study were A. M. Kadoun, T. L. Hopkins and Glen F. Swoyer of K-State and T. L. Harvey of the Fort Hays Experiment Station.

From
microscope
to
milking
parlor...
PURINA
is

built for Milk Production

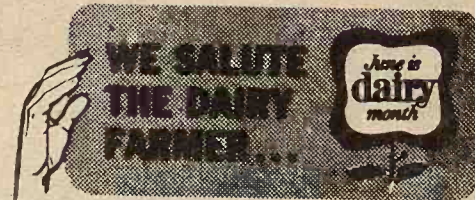

When it comes to building a Purina milking ration, microscopes and milking parlors have a lot in common.

The microscope represents just one of the many painstaking research tests made in checking ingredients, developing and mixing a ration, then re-checking the finished ration.

Each Purina dairy ration is proved in feeding trials at the Purina Dairy Research Center, as well as in exhaustive laboratory tests.

As for milking parlors, each Purina milking ration is built for the production it can help you get from your herd. Today's successful dairymen are proving that good nutrition is far more than just filling the rumen. The level of nutrition you put into the cow's digestive system is what helps her produce up to her bred-in ability.

Drop in soon and let us recommend a Purina research-proved milking ration for your herd. Thousands of good dairymen across the country are taking advantage of the research that's built into Purina milking rations. How about you?

Inheritance Tax Cuts Metropolitan Area Farms

Farmers inheriting land near urban areas are being pinched between a rock and a hard spot when it comes to inheritance taxes.

They are forced to sell their inherited farms to real estate speculators because such taxes are assessed on what the land could be sold for rather than what it is worth as farmland. The blame for this situation some say lies with the Internal Revenue Service's assessment of inheritance taxes.

Over the last decade, the value of agricultural lands in wide sections of the nation within easy access to metropolitan areas has skyrocketed as land speculators have bought up every available piece of property. The value of this land for agriculture, however, has largely remained constant or has declined.

The Internal Revenue service insists on assessing all agricultural land at the "price at which property would change hands between a willing buyer and a willing seller."

The result has been that farmers holding property whose value for development is 5 to 10 times its agricultural worth, have been forced to sell their property to the waiting speculators simply to pay their inheritance taxes, which run as high as 25 percent.

Most of this pressure has been focused on the spreading areas on the fringes of the suburbs where metropolitan American is pushing out to meet rural America — areas such as the farther reaches of Suffolk county, N.Y.; suburban

Phoenix, Ariz.; the extreme northwestern part of Cook county in Illinois, and the Sierra foothills region of California.

In Barrington, Ill., Xavier Schmid, a 72-year-old farmer who is worried about the problem that will arise when he dies, cited the case of a 90-year-old neighbor who died and left a 500-acre farm to his wife.

"They haven't sold the farm yet," Schmid said, "as the wife is nearly 90, and when she dies taxes will be levied all over again and the sons will have to sell the farm for sure to pay taxes."

The fact that the situation became most acute very recently is largely attributable to the newly developing pattern of change in suburban America.

The 1970 census revealed that the fastest growing segment of the United States was the suburbs and the fastest shrinking was the rural areas. But of even greater significance was the evidence that the fastest growing segment of the suburban population was in the so-called "exurban areas" — those counties on the far fringe of the suburbs, between suburbs and countryside.

It is here that the real estate speculators are most busily at work and where the pressures on the remaining farmers are the strongest.

There are no statistics to show how many farms are going to speculators. Many are quietly sold but continue to be farmed for several years, even decades, under

"leaseback" arrangements, until the land becomes so valuable that the speculator finally moves in and puts a halt to the farming.

A spokesman for the Internal Revenue service said, "We've been aware of the problem really for several years and, of course, what it boils down to is that under the law we have no alternative but to set the tax on the value of the land sells for rather than on the value the property would be used for."

"It would take legislation to change the practice."

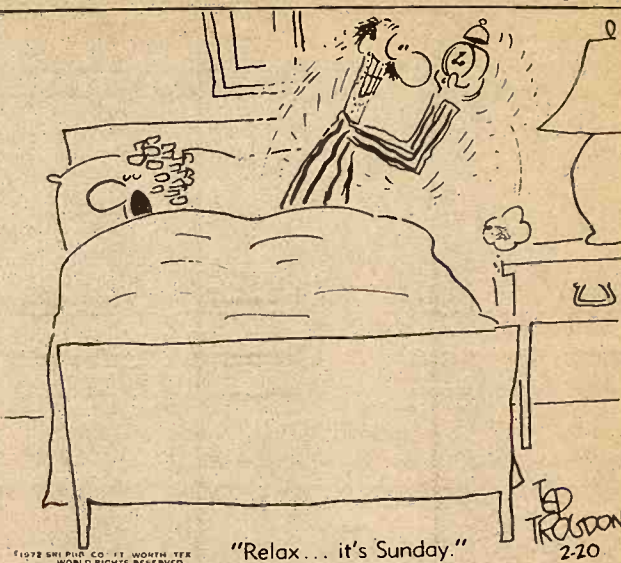

The extent of the problem and the concern it has aroused in agricultural America is indicated by the search for the methods to move around the revenue regulations.

On the Dade county area surrounding Miami, almost all farms by now have been incorporated. The corporate farmer is able each year to transfer a small amount of stock — up to \$3000 apiece is tax-exempt under gift tax statutes — to his children as gifts, easing the final impact of inheritance taxes when he dies.

The California Farm Bureau federation has begun to advise members to make their proper arrangements well in advance of death — giving land or corporate shares in land to their children over the years to take advantage of the gift tax exemption.

"All this is fine," said a New York farmer. "But I can't do this. I need cash loans on my property each year in order to operate. If I go to a bank and say I've given shares to my children, that I don't have clear title, they'll throw me out."

CHOITZ EQUIPMENT

If you want a good light truck,
take the muscle from a good heavy truck.

Take the 392 cubic inch V-8 from a big INTERNATIONAL LOADSTAR®, for instance. And make that engine available as an option in the International 1110 pickup truck.

Then, give the pickup leaf-springs all around. So it has the suspension to handle really heavy loads.

But remember that a heavy truck engine and a heavy truck transmission and a heavy truck suspension don't have to mean a heavy touch. So offer power steering and

brakes. And deluxe vinyl upholstery. Air-conditioning. Even an AM/FM radio. In fact, offer practically any option anyone could want.

Look, any pickup's fine for riding around the farm. But if you also expect it to work around the farm, you want something more. The International 1110. The pickup with the Loadstar muscle.

When you're at your International dealer, take a test drive. In both of them.

Phenomenal Production By Kansas Agriculture

The phenomenal story of Kansas agriculture in 1971 together with facts and figures of a century of production on the farms of the state, are told in the 54th annual report of the Kansas State Board of Agriculture.

The report, covers more than 300 pages detailing Kansas agriculture.

The Kansas State Board of Agriculture was created by the Legislature in 1872. The current report primarily covers the period

from July 1, 1970 to July 1, 1971, but it also is a record of Kansas agriculture as shows through reports issued by the board continuously since 1877.

That Kansas is outstanding in the nation for the efficiency and progressiveness of its farms is shown by this ranking among the 50 states at mid-year 1971:

First in wheat production, flour milling and sorghum silage produced.

Second in commercial grain storage, the area of cropland (29.4 million acres), motor trucks on farms, grain drills on farms and sorghum grain production.

Third in cattle and calves farms, in dehydrated alfalfa processing and land in farms (50 million acres).

Fourth in cattle and calves produced, wild hay production, combines on farms and alfalfa seed production.

Fifth in rye, sweet clover and lespedeza production.

Sixth in grain-fed cattle marketings and popcorn production.

Seventh in cash receipts from farm marketings, \$1.5 billion, red meat slaughter and field forage harvesters.

Ninth in number of hogs produced.

Tenth in alfalfa hay, corn silage and American cheese production.

All of this caused Roy Freeland, Kansas secretary of agriculture, to refer to 1971 as a "phenomenon in productive capacity."

However, he reported in highlighting agriculture for the year, there were economic factors which prevented the year from being a total success. The parity ratio of prices received by farmers for all commodities in comparison with prices they pay dropped to the lowest since the depth of the depression days of 1933.

"Wheat growers, for example," he said, "harvested a record crop from a relatively small acreage. At \$1.28 a bushel, however, farmers received a price which was pitifully poor when compared with \$1.87 in 1950, \$2.09 in

June 20, 1972

1955, \$1.70 in 1960 and the U.S. parity figure of \$2.93 which reflects cost in relation to price.

"Agriculture contributes more to our economy and the American way of life than does any other segment of our population, and at times receives less recognition than any other segment."

But in the matter of production, Freeland said the year was indeed a golden one. He pointed to the all-time record wheat crop of 312.6 million bushels, achieved on only 9 million acres. He called the four milling industry a \$230 million business. The state's sorghum production broke through the 200-million bushel level for the first time in history.

Corn production last year at 208 million bushels was the greatest since 1932 and the average yield of 82 bushels per acre was the highest ever recorded.

Kansas cattlemen, Freeland reported, are finishing more and more cattle for the slaughter market. Packaging of red meat is a \$771 million Kansas industry annually.

"It is estimated that each dollar of value here represents \$6.95 in business activity, which indicates that the Kansas meat industry stimulates economic benefits totaling more than \$5½ billion each year," Freeland's report stated.

The report appears to have missed nothing in covering the wide ranging activities of the state's farmers during the year, reporting on such diverse subjects as cheese-making, which reached an all-time high last year, to a school near Girard which is turning out badly-needed horseshoers.

Soviet Wheat Crop Reportedly Better

A recent USDA report said that prospects for Soviet wheat production this year, in one of the country's most important grain areas is "better than reported earlier" and that winter damage was minimal.

However, the report didn't refer to conditions in the Ukraine, where winter wheat losses have been reported most severe.

Apparently the Russians want to keep an ace in their hand, and not reveal the complete situation. The previous report that indicated the Soviet wheat crop was severely damaged was made late in April by the Foreign Agricultural Service and conditions have changed in at least one area.

Hopes for selling US grain to the Soviet Union seem to be dimmed by this report.

Heat Stress Proven Guilty In Bred Sows

Keeping bred sows cool during the hot summer months could pay dividends in two more pigs farrowed and weaned. The pigs will also tend to be heavier according to research work done at Oklahoma State.

Heat stress in the summer while

Grass & Grain
June 20, 1972

sows are pregnant is the apparent cause of the lower reproductive performance, says Dr. Bill Luce, extension livestock specialist at Oklahoma State University, Stillwater.

Heat stress, often experienced through the Midwest, interferes with implantation of the embryo in the first month of pregnancy. But heat stress a week or two before farrowing is even more critical.

SALE EVERY

Thursday

Consignors from near and far made our sale last Thursday, June 15, one of the largest harvest time sales in our history. The market was strong to very active on all classes of cattle, except cows; they were some lower.

The Manhattan Sale never closes for harvest. We hold our regular sale every Thursday. We'll have buyers and we'll be glad to look your cattle over if you want to sell at this time.

Following is a partial listing of the sale last Thursday:

Officials of the Agricultural Research Service said tests were conducted by veterinary scientists who used the "recommended level" of VEE vaccine. Ten vaccinated horses were exposed to VEE viruses two weeks later and showed no sign of the illness, the department said.

Another group of horses was vaccinated with diluted vaccine, and 20 per cent of them became ill.

The disease killed many horses in southern Texas last year and threatened to spread across the country before it was headed off by a massive immunization campaign.

Officials said horses not vaccinated last year should be treated this season.

Quick Frozen Chickens Tastier, More Appealing

Quick frozen broilers not only are tastier, tenderer, and more appealing than those frozen more slowly, but when deep-fat fried they also compare very favorably in flavor with freshly prepared broilers.

This is reported by two Kansas State University poultry researchers, F. E. Cunningham and Peggy Lohmeyer, on the basis of recent studies in K-State's department of dairy and poultry science.

Panelists rated the quick frozen birds as having better eye appeal and as being more tender than fried chicken that was freshly prepared. And a taste panel had only a slight preference for flavor of freshly prepared birds. Cooking losses were lower for the quick frozen birds than for those freshly prepared.

Cunningham and Miss Lohmeyer compared fryer part samples of both white and dark meat which had been frozen at 8 degrees above zero, at 20 degrees below zero, and at 197 degrees below zero (quick frozen in a liquid nitrogen freezer).

Bone darkening, which was severe at 8 degrees and at 20 below, was nearly absent in fryer parts which had been quick frozen.

Meat from birds frozen at 8 degrees above zero was significantly tougher than meat frozen at colder temperatures.

25-Cent Fee Added To Kansas Hunting Licenses

The Kansas Legislature last session passed a bill requiring that a 25-cent fee be charged for each fishing, hunting and trapping license sold in the state. The new law is to become effective July 1.

In notifying Kansas sportsmen of

the new legislation, Kansas Fish and Game Department officials emphasized that the 25-cent fee is a handling charge which is to be deposited in county general funds in the county where the license is purchased. It is not a license fee increase but rather is an additional charge over and above the basic license price.

In addition, other license vendors, sub-agents of the county clerks, may charge another 25-cent fee to defray handling and processing costs.

PINKEYE, GERMS and "BLAH" HAY

Say goodbye to all three when you pick up on these great new ideas in the Animal Health department at your local CO-OP.

CO-OP Pinkeye Medication. Proven remedy for pinkeye in animals. Now in an opaque plastic container that provides better protection for the ingredients. Comes with handy adjustable trigger applicator. One pint.

CO-OP Kleen. A powerful new all-purpose disinfectant-detergent-deodorant for cleaning and sanitizing hard surfaces. Ideal for use anywhere around the farm or house where germs thrive. One gallon jug goes a long way.

CO-OP Hay Start. A new medicated, vitamin-fortified top dressing for hay that adds palatability to get calves eating hay earlier. Can also be used on grain and concentrate rations. In 25-pound plastic tub with measuring spoon.

GRINDING MILO

Charles Shippy, Woodbine, is mixing up some feed for the 28 feeder cattle he's fattening out. Shippy farms 480 acres and has a partnership with his son Gerald in a stock cow operation. Shippy said the wheat in his area was looking good and believes harvest is just around the corner.

Kansas Indians Get Federal Grant

The U.S. Department of Labor has approved a \$373,767 grant to provide training and employment opportunities for Indians in northeast Kansas.

Indian Enterprises, Inc., an Indian-owned economic corporation, will administer the grant, in cooperation with the employment security division of the Kansas State Department of Labor.

The grant will pay for administrative costs of the program, as well as provide allowances for participants during training.

100 persons will take part in the program, receiving training in building trades, food services and graphic arts.

Haskell American Indian Junior College at Lawrence will provide the training, most of which will last for two semesters and a summer session.

Jr. Livestock Assn. Field Day Scheduled July 8

The Kansas Junior Livestock Association has scheduled its 9th annual field day for July 8, at the

Claude Messner & Sons Duroc Farm, 1 1/4 miles north of Caney on Highway 75.

Registration will begin at 8 a.m., followed by a swine type demonstration and seven judging classes. The afternoon program will feature Willard Olson, sonora technician from K-State, who will discuss the use of the scanogram and on the

Grass & Grain

15

June 20, 1972

farm livestock testing. In addition Robert Hines, swine specialist at K-State, will speak on the swine industry in Kansas. These two men will also serve as contest judges.

K-State Scientists To Study Photos From Ag Satellite

MANHATTAN — Can photos taken from satellites far above the earth help earth-bound scientists study water use and diseases of winter wheat in Kansas?

A Kansas State University research team will soon test this possibility with the assistance of a 14 month NASA (National Aeronautics and Space Administration) contract and data to be provided by sensing devices to be carried by ERTS-A (Earth Resources Technology Satellite) which is going up soon.

Many observers are skeptical that this can be done, but Dr. Edward T. Kanemasu, KSU scientist who is associated with the Evapotranspiration laboratory and is in charge of the experiment, points out that "if it should prove feasible to predict severity of diseases 30 days in advance, Kansas farmers might be in a position to make intelligent decisions which could produce millions of dollars more in farm income annually."

ERTS-A, scheduled now to go up in July, will carry three television cameras, one of which is to be filtered for the near-infrared part of the spectrum and theoretically will provide pictures from which the vigor of plant life can be determined. In addition, the satellite will receive and record messages from ground based transmitters located in fields of cooperating Riley County farmers. These messages will contain meteorological data which will be used to predict disease severity.

Kanemasu says the photos cover an area of approximately 100 square miles, but scientists hope to be able to pinpoint areas as small as an acre.

The satellite will circle the globe at the height of 500 miles and its orbit will enable it to send back photos of the same exact spot on earth every 18 days.

In the meantime, Kansas State University scientists will make intensive studies of actual conditions at test sites in Riley, Harvey, Finney, and Russell Counties. Later they will study the satellite photos, in series, to determine whether it might have been possible to predict the extent and severity of the three major Kansas wheat diseases: soil-borne mosaic, wheat streak mosaic, and leaf rust.

ERTS-A originally was to have gone aloft in April and would have permitted the K-State team of scientists in the departments of agronomy, plant pathology, entomology, agricultural engineering, and electrical engineering to have studied the 1972 crop. Unfortunately the launching was delayed. In an effort to assist the KSU team with its research NASA has provided three U-2 overflights of the Kansas test sites this spring and will provide two additional in the near future.

The application for the NASA contract to study wheat diseases was made through the University of Kansas Center of Research, Inc., and K-State scientists will use sophisticated equipment at the KU Center to help analyze and interpret their data.

Near Total Ban Placed On DDT

Environmental Protection Administrator William D. Ruckelshaus

ordered today an almost complete ban on use of the pesticide DDT in the United States.

Ruckelshaus made the ban effective Dec. 31, 1972, to allow a transition to substitute pesticides.

Under his order, the use of DDT will be permitted in this country only for public health purposes and in three minor uses to protect crops where no effective alternatives available — that is, on green peppers, onions and sweet potatoes in storage.

All remaining crop uses of DDT — mainly on cotton, peanuts, and soybeans — will be banned.

Ruckelshaus' decision was based on a 17-month study by EPA on the effects of the widely used chemical.

The heated debate over its safety has raged for years, spreading from the laboratory to the courtroom and pitting environment groups against farmers and public health groups.

Environment groups have condemned DDT as damaging to wildlife and a potential cancer threat to man. They assert safer methods are available to control

June 20, 1972

pests. Agriculture interests have insisted the chemical is safe and essential for bountiful crops.

The Agriculture Department first began canceling some uses of DDT in November 1969.

It banned DDT on house and garden plantings, shade trees and tobacco crops.

In March and August 1970, DDT was outlawed around water, marshes and wetlands, except for essential public health purposes. Using the chemical on livestock, lumber, buildings, forest trees and more than 50 fruit and vegetable crops also was banned.

The controversy prompted environment groups, headed by the Environmental Defense Fund, to file suit to force a ban on all remaining uses of DDT. Cotton is the major remaining crop on which the pesticide is used.

The suit prompted a federal appeals court to order EPA to control a scientific study and hold public hearings.

BULK DEHY

Dehydrated Alfalfa in Pellets For All Livestock

And Poultry — per ton \$40

BEEF CATTLE

A couple of cents worth of Dehy per day will give a nickel's worth of extra gain per day in fattening cattle rations. Even small amounts of Dehy in a ration resulted in increased gain and feed efficiency.

DAIRY CATTLE

Adding Dehy to your usual dairy mix helps keep production levels up longer, resulting in more milk and a healthier herd. Your cows will maintain their "calving condition" longer, too.

HOGS

Dehy supplies protein, vitamins and minerals needed by breeding animals. It will increase the vigor, health and livability of newborn pigs and increase the percentage of pigs weaned.

SHEEP

Feeding Dehy before and during the breeding season will improve breeding conditions, increase lamb growth, stimulate milk production, produce healthier and thriftier lambs.

To feed modern dehydrated alfalfa . . . put it where livestock can get it like any other feed. You'll reap all the benefits, the low price will insure profits from the start. Come or call — haul yours away today.

Pentagon Cancels Timber Wolf Lined Parka Hood Order

The Pentagon has cancelled an order for more than a quarter million parka hoods lined with wolf fur in an effort to save north America's vanishing timber wolves.

The timber wolf is on the government's list of endangered species. The National Wildlife Federation had estimated that 25,000 wolves would have to be slaughtered to fill the order for 277,502 parka hoods. The Federation said this was nearly one-half of the estimated wolf population in North America, and there was fear the loss would doom the species.

Republican Representative William Whitehurst of Virginia who had protested the initial order, announced it had been cancelled yesterday. He said the US Army Material Command Planned to develop and test a synthetic substitute for the fur that would have similar frost-resistant properties.

Whitehurst said use of synthetic fur is expected to reduce the cost of each hood by nearly four dollars, resulting in a net savings of 1.1 million.

The Congressman had previously introduced legislation to require the Department of Interior to conduct a study of the timber wolf and develop conservation measures.

Whitehurst said the Defense Department is continuing with its

procurement plans for 91,280 flying jacket hoods lined with coyote fur, which already is available on the market. The coyote is not listed as an endangered species.

FARMING SUMMER FALLOW

Vernon Miller, Junction City, just finished discing one of the fields he is summer fallowing. Miller farms 900 acres with his father, Charles Miller. Miller stated that a tractor cab in this area would be torn off trying to work around the trees on the edge of his fields. "I just keep an eye on the clouds and put a comforter on in the winter," he said as it started sprinkling. Miller estimated he would have around 260 acres of wheat to cut if it didn't get hailed out.

Lady Bugs Ordered For Marysville Sorghum Fields

Over three million ladybugs have been ordered by Marysville farmers to combat the greenbug infestation in sorghum fields in the area.

According to the Marysville newspaper Mrs. Walter Dean Iles, reports she received 15 bags of ladybugs and ordered another 20 from a California firm. The total number of lady bugs in 35 bags are approximately 2,590,000.

Clarence Toedter, rural Marysville, ordered seven gallons, approximately 518,000 bugs.

Mrs. Iles said she ordered her lady bugs to combat the dense infestation of green bugs on milo.

"We thought we would be better off with the lady bugs than with a poisonous spray," she said. The poison would also kill the predators and there would be none left to combat the green bugs next year, she commented, predicting a worse plague could result next year.

"Jack Dwerlkotte ordered them (the ladybugs) last year. He said he had good luck with them."

Although nobody knows exactly how many lady bugs are needed per acre, most farmers are using one bag for every 15-20 acres.

Opposing Opinion

On the other side of the fence, Dell Gates, extension entomologist, says persons who send for packages of ladybugs from California are wasting their money.

"It's a point of controversy but we have found that you can just plaster a field with ladybugs and they won't stay there," he said.

Gates said the ladybugs evidently want cover. He has seen fields where ladybugs have kept the outside four to five rows picked clean of green bugs but the rest of the field is still infested. The ladybugs apparently were willing to venture only a short distance from weeds around the field.

The common ladybug possesses an appetite for the green bug but isn't quite as efficient as the wasp, Gates said.

Gates said a tiny parasitic wasp may turn the tide against the green bug in the next two weeks. The wasp looks like a gnat to most persons but it packs a wallop for the green bugs, he said.

Gates said the wasp lays a single egg in the body of a green bug aphid it contacts. The larva from the egg will destroy the green bug within three to five days, he said.

1971 Green Bug Figures

In 1971, according to State Department of Agriculture figures, one-fourth or 1 million of 4.3 million acres of milo planted in the state were treated with pesticide to kill green bugs.

K.O. Bell, an entomologist with the agriculture department estimated an additional 200,000 acres that needed treating for green bugs received no treatment. He places the cost of green bug control plus the cost of crop losses to green bugs at \$3.8 million in 1971.

Milo is the state's leading feed grain.

Allen Travelute

state's entomology division, said it appears the situation could be more serious this year because the green bug is increasing its numbers earlier in the year.

The pinhead-sized aphid is more likely to kill young milo than mature plants, he said.

The green bug sucks juice on the underside of leaves, while injecting a lethal poison into young plants.

Bell said the infestation is mainly in the east central and north central areas of the state. It is early enough in the year that milo in the northwest has not come up yet. Milo in much of southern Kansas has not germinated because of dry conditions, he said.

Texas Grabs Lead In Cattle Fattening Race With Iowa

The Texas-Iowa cattle fattening race continues, with the lead changing hands again on June 1, according to Agriculture Department feedlot inventories.

On June 1, the USDA figures show, Texas had 2,045,000 head of cattle being fed for slaughter, compared with 1,819,000 for Iowa. A month earlier Iowa led 2,003,000 to Texas, 1,848,000.

Early last year Texas jumped ahead of Iowa for feedlot cattle

honors and remained in the lead for several months, until the big 1971 corn crop gave the traditional big midwest feeding area boost.

The feedlot race was indicated in an inventory report for half a dozen major beef producing states. The total inventory for those on June 1 was more than 7.9 million head, up more than 100,000 from May and 12 per cent or more than 800,000 head above a year earlier.

Texas cattle feeding showed a 22 per cent boost from June 1 last year while Iowa numbers were up only 3 per cent.

Others in the six state inventory included: Nebraska 1,363,000 head in feedlots on June 1, up 10 per cent from a year earlier; Colorado 1,020,000 up 12 per cent; Arizona 546,000 up 10 per cent; and California 1,132,000 up 16 per cent.

Kansas, which did not show up in year-earlier inventories, had 1,150,000 head in feedlots on June 1, making a seven-state total of 9,075,000 cattle on the date.

Looking ahead, the June 1 figures show Texas may continue in the lead for a while. Placements of cattle in feedlots during May — which will affect the July inventory — totaled more than 1.6 million head, up 17 per cent from the month last year.

Texas feeders put 557,000 head on feed during May, an increase of 42 per cent from a year earlier, while Iowans added 156,000 head, a 16 per cent increase, the report showed.

HELPING GRANDPA

Mark Swanson, Des Moines, is helping his grandpa, Milton Ruhnke, Junction City, spread some screenings from a local rock pit on drive-ways around the farm. Ruhnke says the screening are better than rock because of the smaller size. He farms 400 acres and handles 100 head of Angus.

Sharp Food Price Increases Could Cause Rationing

Major retail food chains and their trade organizations are quietly contacting consumer organizations to warn that a sharp rise in food prices is under way and to ask that retailers not be blamed.

The retailers are saying that the new round of food price increases is being generated by a rise in the carcass price of meat even steeper than those that caused consternation in February.

As a result, they warn, meat prices will go to record levels at retail outlets and other food prices will rise as well.

The chairman of the Price Commission, C. Jackson Grayson Jr., declared in an interview

Thursday that the commission was concerned about the increase in food prices and is considering options for dealing with the problem. It is not, however, ready to take action at this time.

"The actions we could take are so undesirable that they will only be taken as a last resort," Grayson said.

Grayson reported that the commission had decided at its last meeting on June 6 not to move against food prices until more evidence came in that prices were actually going up. The commission will take up food prices as a top

priority issue when it convenes again next Wednesday.

The commission is considering "all the options our staff can dream of" to deal with food prices, including direct control of food prices and possible rationing, Grayson said.

"But we hope we don't have to go that route," he added. "We are still watching the price situation, and we haven't reached a trigger point yet."

The retailers are reporting that wholesale beef prices are substantially higher than they were in February when rising retail prices were causing an outcry by consumers and worrying officials in charge of the administration's economic stabilization program. The retailers also point out the pork prices are very high.

Beef and pork and other agricultural products are exempt from price controls at the farm level.

Timothy D. McEnroe, director of public relations for the National Association of Food Chains, one of the groups that has been meeting with consumer organizations, said that wholesale prices would have to be passed along to consumers and that "we are afraid that the consumers are not going to like it."

"We know the retailers will be blamed for it; it happens everytime," McEnroe told a questioner.

However, he insisted that retailers were not increasing their margins and that in fact they had been absorbing some of the meat increases. Grayson at the Price Commission corroborated this contention, saying his staff's investigations had found no profit margin increases by the food chains.

Meat Shaping Machine Loaned To Kansas State

Several unusual machines are on loan to Kansas State University's meats research and teaching program, according to Dr. Harold Tuma, animal science and industry.

One of the machines can shape muscle into a cylindrical mass one to two feet long while another machine cleaves it into individual slices. Several sets of dies can be used to shape various retail cuts of meat.

There are very few of these muscle-resaping machines in the midwest, Tuma explained. He said they are more numerous on the east and west coasts where they have been used to prepare meat for hotels and restaurants.

"Consumers and processors are placing more emphasis on shape and uniformity of the muscle rather than on the size," Tuma said. "These machines provide the uniformity, consistency, and portion control that the consumer wants in the marketplace. With these machines it is feasible to use unit pricing," Tuma added.

Two other machines will be used in the packaging and freezing process. This process utilizes liquid nitrogen or carbon dioxide.

"These machines, on loan from various companies, are a part of the total meats research system program at K-State," Tuma said.

DOUGLAS CO. MARIJUANA HARVESTING STARTS EARLY

The marijuana harvesting season in Douglas County arrived about six weeks early this year, the sheriff's department reports today.

Three persons were picked up on illegal possession charges. Two of them were "harvesters" and the other person is charged with possession with intent to sell it.

Nebraska Gasohol Tests Burn Wheat

20

Grass & Grain

June 20, 1972

The slogan "Gasoline and alcohol don't mix" may be out of place in Nebraska.

The Nebraska Legislature took a first step to put alcohol on the road in its last session, and now plans are underway to set up six gasohol pumping stations.

Gasohol is a mixture of 10 per cent alcohol and 90 per cent non-lead gasoline.

Ken Snowden of Lincoln, retired from the marketing end of the oil business is working to set up gasohol pumps in six towns to prove that gasohol is feasible economically and technically.

Proposed sites are Lincoln, Holdrege, McCook, Alliance, Norfolk and Omaha. Snowden said there are plans to have six cars using the gasohol at each location.

Most of the vehicles will be public, he said, but some may be private. Drivers will have keys to the pumps, and the machines will record how much fuel each driver uses.

If gasohol replaced gasoline in Nebraska, motorists would consume alcohol from 90,000 bushels of wheat a day in their vehicles.

That would amount to 252,000 gallons of 190 proof alcohol, or 5,400,000 loaves of bread a day.

It would eliminate the grain surplus problem in Nebraska, Snowden said. Other crops such as potatoes or corn could also be used.

He said the use of gasohol would help maintain the price of grain and urged farmers to support it.

Present tests are being conducted in Nebraska with alcohol purchased from Atchison for about 65 cents a gallon.

The present project is supported by the Nebraska State Legislature.

The Legislature has also approved a three cent a gallon refund effective

January 1, 1973 for motorists using gasohol in their motor vehicles, Snowden said.

Snowden is one of two men hired to promote gasohol, and put the test into effect.

The Agricultural products Industrial Committee Utilization Committee is in charge of the program.

Dairy Improvement Awards Announced For Solomon Valley

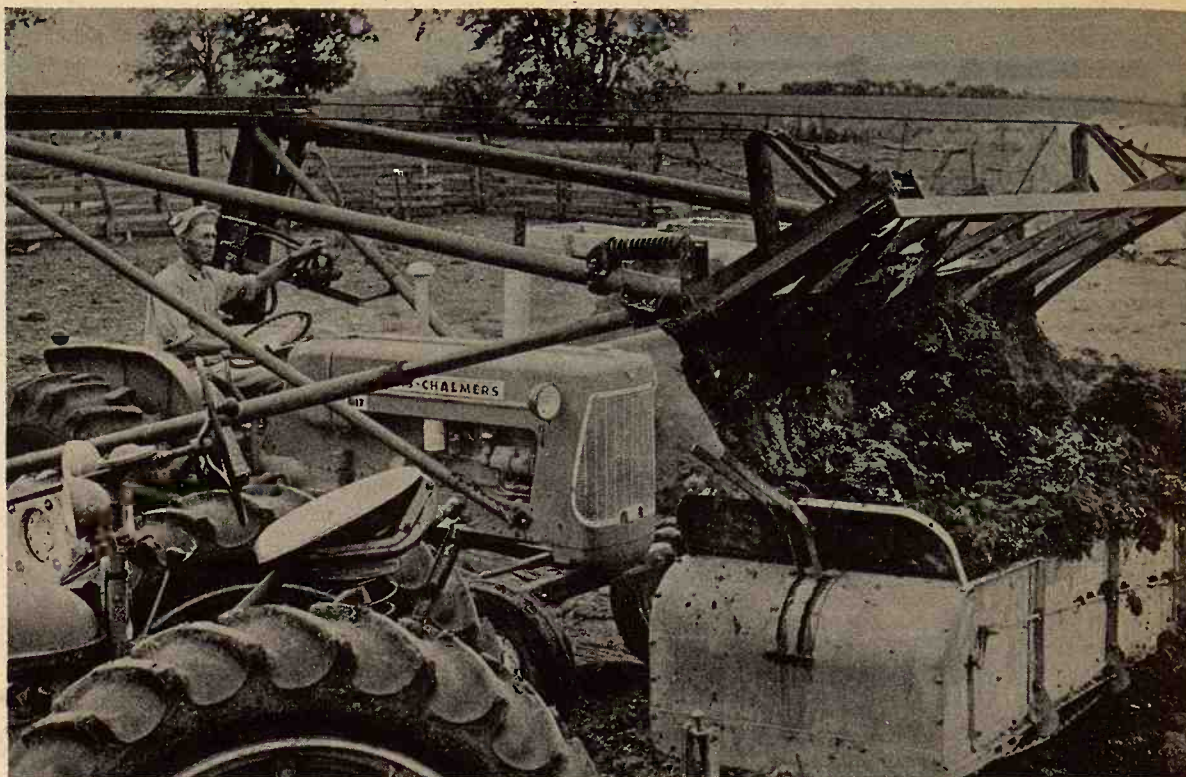

Wilson Brothers, Lincoln, maintained the top producing dairy herd in the Solomon Valley Dairy Herd Improvement (DHI) association for the period running January 30-March 30. The Wilson herd produced 46.8 pounds of milk per cow daily and 1.9 pounds of butterfat.

Second highest producing herd was owned by Leo Wallace, Barnard, with an average of 40 pounds of milk and 1.7 pounds of butterfat.

The highest producing cow in terms of milk producing belongs to Lloyd and John Pruitt, Barnard, with an average daily production of 100 pounds.

The DHI program, sponsored by the Kansas State University, Manhattan, supervises production records and matches feed requirements with the cow's production.

Lincoln, Ottawa, Russell, Mitchell, and Osborne counties make-up the Solomon Valley DHI.

CLEANING UP

Butch Richter, Alta Vista, loads this manure spreader with three scoop fulls. "All I need is a couple more men with spreaders and I'd have this job done in no time," Richter said. He works for Warren Zimmerman and has worked on various farms since he sold out in 1967. With his farm experience Richter makes judgments on how things should be done. "The only thing that bothers me about hauling manure is getting on and off tractors. A day of that wears me out."

Dairy Import Restrictions Get New Enforcement

Government sources say the Nixon administration is prepared to step up U.S. Customs enforcement of dairy product import restrictions, particularly new cheese quota rules announced recently.

Further details of the cheese quota revision were released by the Agriculture Department. Although less than dairy groups and milk-belt members of Congress had wanted, the new plan is aimed at moving more currently exempted cheese under quotas.

To back it up, according to one source, the administration is clearing the way for a beef-up this year of U.S. Customs inspection to see that foreign suppliers observe the rules more closely.

At least \$250,000 in additional funds have been earmarked for the Customs job, according to the source. The money will be used partly to hire new agents at ports of entry to keep tabs on cheese imports.

For some time, it was reported, foreign cheese shippers have used a variety of loopholes and have taken advantage of shorthanded U.S. port authorities to bypass quota regulations. Phony invoices, complicated papers showing misleading buyers and sellers, and mislabeling have been used, the source said.

The cheese quota revision involves a raise to 62 cents a pound of the "pricebreak" formula used to apply restrictions to imports. Cheese costing 62 cents or less will be regulated while the more expensive types, considered gourmet varieties, will be allowed into the United States without quotas.

A modified 62-cent pricebreak will be in effect the remainder of 1972 and will be applied fully next year. Further, the level will be allowed to float with government cheese price

support rates, meaning that it can be adjusted upward to keep pace with the market.

Until now, since late 1968, a 47-cent quota price break has been used. But as cheese became more expensive on the world market, more of it came into the United States outside quota restrictions.

Northeast Kansas Jr. Angus Heifer Show June 23

Members of the Northeast Kansas Junior Angus Association will sponsor a Junior Angus Heifer Show June 23 at the fairgrounds in Holton, Lynn Hagenbuch, Lawrence, secretary of the junior group reports. There will also be a livestock judging contest during the day.

Following the show the Northeast Kansas Junior Angus Heifer Club will conduct its annual meeting. All youngsters interested in owning and showing an Angus heifer or in becoming members of the Club are invited to attend.

Three From One, Pretty Good Odds

Gene Dodd, who farms north of Green, is tickled with his threesome milk cow. The cow calved a brown and white bull calf, then two weeks later calved two black and white calves.

Clay County veterinarian Dr. C. E. Noffsinger says its very unusual for two calves to be born late as happened here. He also says the three aren't triplets.

Call 'em what you will, but with the calf market as high as it is, it's sure a lot of bull.

GYPSUM MAN CUTS FIRST SALINA CO. WHEAT

The first 1972 Saline county wheat is in the bin at the Carlton elevator.

The load came from the Gottleb Ade farm in the Gypsum community. Ade cut a load of Super Triumph Friday afternoon. It tested 13.5 percent moisture.

First in the county is no new experience for Ade. His wheat has reached an elevator first the past 4 years.

WINDROWING

Vern Nicklin, Council Grove works on a farm and at Monarch Moulding, both owned by Charles Rowsect. We have a lot of orchard grass in the alfalfa since it's the first cutting, Nicklin said. Previously Nicklin farmed in southern Lyon County but decided it would cost too much to expand his operation and rented it out.

Musk Thistle Problem Spreading

McPHERSON — The musk thistle is spreading over parts of western McPherson county this year and the county weed department recently found this type of thistle in bloom in wheat fields. This thistle has been declared a noxious weed in Kansas, and when the county weed supervisor, Curtis Walline, discovers it in a field he gives the owner 3 days notice to get rid of it or the weed department will move in and spray the field and charge the farmer with the cost. Farmers may get the 2-4D LD-4 solution at half the cost from the weed department if they want to spray their own fields. "The musk thistle plant must be removed from the wheat fields before the combines start harvest," Walline said. "The combine can spread the thistle seed as fast as the wind."

BANKRUPT JEWELRY STORE
Thursday, June 22
Starting at 1:00 P.M.
Under order of the Court of Bankruptcy U.S. District Court, I will sell all of the stock of goods, merchandise & fixtures of Goodell's Jewelry Store, located at 318 North Broadway, ABILENE, KANSAS.

Kansas Feeder Cattle Numbers Up 70,000

On June 1 there were 1,150,000 cattle and calves on grain feed for slaughter market in Kansas, up 70,000 head from a month earlier and the highest total of record, according to the Kansas Crop and Livestock Reporting Service. Kansas cattle feeders marketed 190,000 grain-fed cattle during the month of May, compared with 180,000 in April 1972. There were 260,000 cattle and calves placed on full grain feed during May, compared with 210,000 in April. Seven-State Total The number of cattle and calves on grain feed for the slaughter market on June 1 in the seven monthly cattle on feed states was 9,075,000, slightly above that on May 1. In the 6 states with comparable data last year (excludes Kansas) the number of cattle on feed on June 1 was 12 percent above a year earlier, compared with 11 percent on May 1. The number of grain-fed cattle marketed during May in the six states was 11 percent above a year earlier. The number of cattle and calves placed on feed in the six states during May was 17 percent above the May 1971 placements.

Controversial DES Ban Planned

The Food and Drug Administration disclosed it will convoke a public hearing on the controversial livestock drug DES which has been illegally invading the nation's meat supply at an increasing rate despite tighter curbs. The agency said it will propose a formal ban on diethylstilbestrol this week, the only way it can legally invite a hearing.

"It is apparent that additional action must be taken," FDA Commissioner Charles Edwards said. But the government is not convinced a total ban is the answer. The hormone, fed to about 25 billion steers annually to speed weight gain with less feed, has been shown to cause cancer in laboratory animals. It also has been linked to vaginal cancers in a small group of young women whose mothers took the drug during pregnancy to prevent miscarriages.

Agricultural economists have estimated that a total DES ban could boost consumer meat prices about \$3.85 per person annually.

KLA Opinion

Virgil Huseman, director of cattle feeder services for the KLA, said when he was in Washington in May the FDA seemed to be standing behind former statements that DES was safe, and trying to avoid a public hearing.

Huseman said, "Apparently they

had pressure applied to get the proposal out for discussion." The FDA announcement was coupled with an Agriculture Department disclosure that it has found 15 new cases of illegal DES (diethylstilbestrol) in cattle. DES residues in meat are illegal because the hormone is a carcinogen and studies have shown it to cause cancer.

Jim Petr, director of the Meat and poultry Inspection Division of the State Agriculture Dept., explained that federal law requires feeders to remove DES from cattle fed seven days prior to slaughter so the hormone has ample time to pass from the animal's system.

In state-inspected plants, cattle are required to sign a withholding certificate saying that this has been done.

Monitoring meat inspections are done continuously, Petr said. He said no illegal levels of diethylstilbestrol have been found in Kansas beef.

Petr and Huseman said that nationally only residues in liver tissue have been found and skeletal tissues that make up most meat from hamburger to steaks have been free of DES.

Petr said most of the residue discoveries in liver have been on levels such as five parts per billion parts of tissue.

Huseman said at these levels, for a persons to consume the equivalent of a five milligram-dose of DES sometimes given by doctors therapeutically, he would have to eat 5,500 pounds of liver daily. "So as far as the consumer is concerned, there is nothing to worry about," he said.

Huseman said it is contradictory for the consumer to fight both DES and high meat prices. He explained that loss of DES to the 90 per cent of Kansas and national feeders that use it would increase meat prices an average 20 cents a pound.

DES has been used since 1954, during a period when only added efficiency has kept farm prices down while everything else went up, he said.

Huseman said estimates show that during the 18 years of DES use, 40 billion pounds of cattle feed have been saved, a money savings of \$1 billion. He said DES increases the efficiency of cattle gains by 15 per cent while the animal uses 10 per cent less feed for the same gain.

Huseman contended that most persons consume much higher quantities of estrogens in daily life than they could get from DES in liver. Diethylstilbestrol is an estrogen, one of a family of substances that is present in food items like meat, milk, eggs, apples and alfalfa. It is manufactured in every person's body, Huseman said milk has 3 to 5 parts per billion estrogen and eggs have 1,500 to 2,000 parts per billion.

Huseman noted that at one time regulations only required taking cattle off DES 48 hours prior to slaughter. When the time was extended to seven days Kansas cat-

tleman were agreeable to continuing to work with the FDA, he said.

"Many cattlemen have gone the extra mile to be sure they have no DES residues. They are conscientious and have gone to considerable expense. These feedlots, on their own, send samples of withdrawing rations to labs to make sure there is no DES in them.

target for developers from the milling facilities, feedyards and feed trucks for DES rations and withdrawing rations. It takes care to keep such minute quantities from the meat."

as a two-week price war continued.

At Colby, Kan., about 40 miles to the east, the store manager at Larry's IGA supermarket said his milk prices were back at their normal level — \$1.11 per gallon.

At the height of the price war, he said, the price per gallon in his store had been as low as 10 cents.

The manager at the IGA market in Colby said distributors were splitting the cost of the price war with the stores.

MONDAY Hogs & Cattle

Hogs sell at 10:30 a.m. followed
by our regular cattle sale as they are
unloaded.

THURSDAY Cattle Only

Selling starts at 10 a.m. Cattle
will sell in the order they are consign-
ed on the books.

MONDAY SALES ONLY UNTIL AFTER HARVEST Selling Both Cattle And Hogs

Receipts Monday totaled 1461 cattle and 1767 hogs, including
924 feeder pigs. Fat hog top was \$26.00. Local and out-of-state
buyers bought feeder cattle at \$1.00 to \$2.00 higher prices.
We need more feeder cattle on Mondays; consign them early
so we can get them advertised.

SALE ON FARM EQPT. TO HELP LONGHOFERS TO PAY THE TAX

1032 Case tractor, a big 3 pt. hitch tractor, 23" tires, diesel, power steering, like new paint, tax saving \$4995.

Some people having floods, some having drouths. Marion Kansas USA could have a flood worse than Rapid City. We have a big Corpe earthen dam that is now leaking through limestone formation in side of hill. Corpe of Engineers says no danger, just slight leak. At times in past years we have had 10" of rain in 24 hr. period, then 5 more inches the next day, almost enough to put her over the top of earthen dam.

Really I've never understood what the Marion Corpe Lake was built for except recreation. At dedication the politicians said irrigation, which we have none, flood control which is not true, we still have floods (since they forgot to dam up the other three streams they said), water supply for towns below which is not available.

I always thought when you had a leak in your reservoir you drained it and made the necessary repairs.

One used Nixon manure spreader, full size, \$5.99, or will buy one more at same price.

John Deere 830 diesel tractor, big plow tractor, \$1750. 930 Case Comfort King tractor, a big plow tractor, \$2750.

Watch out for the dogooders, mainly Teddy Kennedy and friends, they want to fill us up with compulsory health insurance. I think we are about all filled up with compulsory things by bureaucratic government in DC of Washington.

One-bottom sulky plow, came west at early age, only \$19.99. Set of 4 matching dump rakes, good for yard fence, \$59.99 all four.

13' mtd. chisel, fits on D17 or D19 Allis, \$299. Cultivators for C Allis \$29. Cultivator for WD Allis \$29. Rear mounted 2 row cultivator for D15 or D17, \$179.

Mr. Nixon off & running, at least he's still got Martha & John on his side. Not sure what he's worth \$60 or \$100,000. Really Martha Mitchell ought to be the one for president. She has the biggest mouth.

Allis Chalmers C tractor with 2 row cultivator, \$379. IHC B tractor with rear mtd. mower \$379, a steal. WD Allis tractor with mounted mower \$499.

Allis WD tractor with 2 row cultivator \$449. XT 190 Allis diesel tractor, new engine, \$4450

IHC 3 section springtooth, 12', like new \$69. Massey Harris rotary hoe, 3 pt. hitch, \$199. Allis 3 bottom mounted plow, \$29. Allis 3 btm. wheel plow \$69.

IHC 3 bt. fast hitch plow \$119. John Deere very late 3x14 wheel plow, \$259. IHC No. 8 3x16 plow, very good condition \$199. IHC No. 8 3-btm. plow 3x14 like new \$199.

Case 4x16 A Series high clearance plow, very good, \$679. Case 4 bottom plow, high clearance \$459.

I understand in small towns in Kansas school teachers can qualify for food stamps. How about that for progress in small towns. The whole program of the federal bureaucratic government is to put the small towns out of business & small farmers off the farm.

Late model Allis 5x16 plow, 3-pt. hitch, like new \$791. New Case 6 bottom 16" plow, will take less, \$1399. New Case 5-bottom 16" plow, will take less if necessary.

Case 4 btm. wheel plow, works good \$149. IHC late model 816 mower conditioner \$695.

300,000 troops in Europe, Kissinger & the Penny-gone says necessary, anything to keep the generals in shape and the rich to quicker get. This is usually the reason wars are fought.

Dick still windin down the war & sent Kissinger back over to look for an honorable way to make peace. Why not just concede a bad deal and get out & go home.

Three Blair feed wagons for sale, must sell at once. Forgot to cancel order and received unexpectedly.

JD No. 45 12' combine, runs good, \$785. Case 600 combine, 13 footer, will take \$1975 this week.

D-14 Allis tractor, very nice little tractor, take \$1095. 900 Case diesel tractor, a big plow tractor, \$1690. 830 Case LPG tractor, Eagle hitch, \$2450. 1964 Model Case 730 gas tractor, Eagle hitch, very low hours, \$2585.

1962 Case 930 LPG big plow tractor, \$2595. 931 Case row crop tractor, 3 pt. hitch, 1800 hours, new tires \$4695.

Soybean Contest Forms Available

Time is running out for Kansas producers interested in entering the 1972 soybean production contest sponsored by Kansas processing plants.

Entry forms are available at each county Extension office. Here are the 1972 soybean contest rules:

- An entry must consist of a field of at least five acres in size (judging will be based on net profit per acre).
- ASCS measurements will be used if an entire field is used in the contest. If yield check is limited to five acres, measurements will be taken by the contest committee.
- At least one soil sample from the field must be analyzed by July 15.

Final field designation will be by August 1, or by August 15 in case of double crop planting.

• A record sheet on the entry form will be used and completed as part of the contest. All contest records will become the property of the contest committee when yields are compiled.

• An incomplete record will disqualify the entry.

• Elevator scale tickets will be used to verify weight of threshed soybeans. A minimum of five acres must be checked, but weight from the entire field may be taken if desired.

• Representative moisture samples will be taken at weighing time and yields adjusted in 13 percent moisture.

• Time records must be kept on custom work, and on the con-

testant's work.

• Each contestant must notify the county Extension agent in his county when harvest is to begin.

• Contest records are due in the county Extension office December 5.

• No district prize will be awarded unless at least five entries are received from the district.

District boundaries are included on the entry form.

The sponsoring processing plants are Kansas Soya of Emporia, Archer-Daniels-Midland of Fredonia, and Cargill of Wichita. The Cooperative Extension Service at Kansas State University is assisting with the contest. Any soybean producer in Kansas is eligible to enter.

Last year's winner was Albert Kientz of Wamego, who produced 61.3 bushels per acre.

This provides financing which does not have to be paid for 40 years, an arrangement many officials regard as virtually an outright grant.

Pakistan also is negotiating for \$10 million of Canadian wheat.

It is part of the paradox that Pakistanis have been smuggling foodgrains, mostly rice, into Afghanistan, where drought has created shortages and high prices. Also, with half its population gone in the secession of Bangladesh, Pakistan seems now to need more wheat than ever.

To development experts the Pakistan plight shows the frustration of maintaining progress in a poor country. They say food production still chases a 3 per cent annual birthrate, virtually unlimited despite a family planning campaign.

According to a report which the Ford Foundation found too critical to show the government, the country has allowed its research programs to collapse. Funds designed for research as well as for subsidizing new seeds and fertilizer disappeared into military spending.

Sardar Ghaus Bakhsh Raisani, the food minister, said two years of water shortages harmed the crop, although production in both years has been about 6.3 million tons. This is less than the 1970 boom crop of more than 7 million tons, but better than the old yields. He said also consumption has risen at least 500,000 tons since last year, to an estimated 7.7 million.

While he was governor of the border province of Baluchistan, he permitted the transfer of rice near the frontier, knowing it would be smuggled into Afghanistan. "It was a humanitarian gesture," he said.

The rice was part of a 300,000-ton crop designed originally for shipment to East Pakistan. That area stopped being a major market for poor-quality, par-boiled West Pakistani rice when it became Bangladesh.

Under P. L. 480, the U.S. cannot provide food help to a country exporting food, even illegally. But the U.S. has agreed Pakistan can export rice, and the government is trying to

sell it legally to Afghanistan.

President Zulfikar Ali Bhutto's administration has announced it wants the imported wheat to build stocks as a buffer against price increases.

Russian Firewater Public Enemy #1

Vodka, the Russian national drink, is being given a new image — Public Enemy No. 1.

A two-week campaign against alcoholism reached a climax this weekend with announcement of new regulations reducing vodka production and banning its sale almost everywhere large numbers of Russians gather.

From now on the colorless but fiery beverage can't be sold in or near factories, construction sites, schools, children's institutions, hospitals, sanatoriums, recreation sites, transportation terminals or ports, museums, theater and outdoor recreational areas.

Factory officials have been ordered to stop workers from drinking on the job, in order to reduce enormous losses and defects in production, the regulation said.

Vodka production is to be reduced by an undisclosed amount and its place taken by increased supplies of beer and wine.

The regulations were front-paged by Pravda, the most authoritative newspaper in the Soviet Union.

\$60 Million U.S. Wheat Sale To Pakistan

Once acclaimed for nearing self-sufficiency in foodgrains, Pakistan now wants to buy one million tons of American wheat to feed its people next year.

The country is strapped for cash and faces a deficit because of military spending after the December war with India. It wants long-term loans from the U.S. to purchase the grain.

Despite its Green Revolution, Pakistan essentially is back where it started in 1967-68 when it imported 1.4 million tons of wheat, most of it under U.S. commodity assistance. High-yield seeds developed as part of the Green Revolution boosted wheat production 50 per cent, from 4.2 to 6.3 million tons in the season of 1968.

"It's a paradox," said an American official negotiating the sale of \$60 million of U.S. surplus wheat to Pakistan.

The sale will be under Public Law 480, the Food for Peace program.

COMBINES

We have as complete a stock of used combines as anyone in Kansas. A lot of them have been reworked last winter and are ready to cut your wheat.

1968 JD 95, 16' platform, cab, local owner (not custom). Last Series 95 built \$8250

MOVING GRAIN

Mark Roeser, Junction City, helps his dad, Martin, farm about 800 acres during the summer and goes to Kansas State University in the winter. Mark takes care of about 350 hogs and some Holstein feeder stock. He's getting ready to transfer milo into this bin and will grind it later for the hogs.

Ground Up Money Used As Drilling Mud In Kansas

GREAT BEND — Ground up money is now going down a hole, an oil or gas well hole that is.

David Mud and Chemical Co., Great Bend, is now purchasing ground up money from the federal government to use in the drilling of oil and gas wells.

The Federal Reserve Bank, Dallas, Tex., currently is the only source of ground currency but other Federal Reserve Banks are expected to begin similar operations soon.

A Davis official said the ground money will be used to make drilling mud, a mixture used to seal lost circulation zones during drilling operations. The thick slush is vital in the drilling process.

Davis currently is storing the ground money in a warehouse at Dallas. When there is enough to make a truck or train car load it will be shipped to Great Bend and put into use.

Currently, all types of ground materials, from walnut shells to newspapers are used to make drilling mud, the Davis official said.

Federal reserve banks are beginning to grind cash instead of burning it, because many localities have enacted antiburning laws to

protect the environment, according to an Associated Press story from Washington.

Treasury officials say grinding eventually will be the only way they will dispose of old paper bills.

What to do with the end product — a fine, light green fluff — has presented something of a problem. The treasury is now trying to sell it. Davis currently is buying all ground money produced by the Dallas Federal Reserve Bank. The firm also may purchase ground bills from other reserve banks too, if it proves economical.

The Federal Reserve banks at Cincinnati, Philadelphia, Cleveland and Minneapolis will begin shifting from burning to grinding later this summer.

The treasury said it also is investigating selling the former

greenbacks to a roofing company for use as roofing felt, but no sale has been worked out yet.

The government destroys about 2,500 tons of currency a year, about two billion notes with a face value of \$12 billion.

Treasury official say they would like to make old dollars into stationery, but it is out of the question because of Secret Service regulations.

Someone might get the idea that they can use the recycled bills as paper for counterfeiting.

It still has the distinctive fabric that could cause problems to the Secret Service in its counterfeiting detecting operations. O.H. Tomkinson, the department's management analysis officer, told the Associated Press.

The wide-awake bank makes it all so easy.

Kansas Milk Production Drops Slightly In May

Kansas milk production during May totaled 160 million pounds, 2 percent below the same month last year, according to the Kansas Crop and Livestock Reporting Service.

Cumulative production during the first five months this year totaled 722 million pounds, 2 percent below the same period a year earlier.

The number of milk cows on farms in Kansas during May totaled 190,000, compared with 195,000 in May 1971.

Milk production per cow in May averaged 840 pounds, equalling the record high for the month set last year.

U.S. milk production during May is estimated at 11,307 million

Feed Grains Top List Of Possible Soviet Imports

Grains, feedstuffs, and breeding stock seem to top the priority list for U.S. agricultural exports to Russia — in addition to current shipments of hides, skins and almonds, says the USDA.

"Much of this potential stems from Soviet plans through 1975 to substantially increase the protein portion of the Soviet diet," the report said.

It said that only 8 per cent of the diet now is devoted to the consumption of meat and fish, compared to 21 per cent of the U.S. diet, while more than half the Soviet diet is devoted to grains and potatoes, compared to 25 per cent of the U.S. diet.

"In order to improve the protein content of the Russian diet, The Soviet Union is aiming for a 27 per cent increase in the production of livestock by 1975," it said.

To do this, better breeding stock is needed. More than 300 U.S. bulls and heifers already have been purchased.

"More grain and oilseeds also probably will be needed, especially

in the form of high-energy feeds such as corn or grain sorghum and high protein feeds such as soybeans or soybean meal. The Soviet Union now uses mainly roughages as feeds, with only a minor portion of concentrates. The use of more concentrates, such as soybeans, will enable more efficient expansion of meat production," the report in Foreign Agriculture said.

More than any other country, the United States, with above normal supplies of corn and other grains currently on hand, easily could handle any large volume grain purchase which the Soviet Union might need for animal feeding. Also, it is the only country which produces a sizable quantity of soybeans for export.

Potential Soviet markets for other U.S. agricultural products appear to be limited at present, for several reasons.

"Russia plans to increase consumption of fruits and vegetables by 1975, but this increase does not appear to have the priority now placed on increased consumption of meat.

"Most of the Soviet Union's fruit and vegetable imports now come from Eastern Europe and from developing countries with which the Soviets have bilateral trade agreements. Thus, hard Western

currencies do not have to be used to import these commodities," the report said.

Reynolds Sale Barn

ABILENE, KS.

Selling Every
FRIDAY

Starts 1:00 p.m.

SALES EVERY FRIDAY DURING SUMMER No Interruption For Harvest

The Reynolds Sale Barn will be open for business every Friday as usual through harvest. We have the best feeder order buyers any market could ask for, and they depend

on this auction for their supplies. Prices are high and they need cattle every week, therefore, we will be open as usual every Friday starting at 1:00 p.m.

A big run of cattle for this time of the year sold Friday, June 16. Again many buyers paid strong to higher prices for all classes, except cows which looked steady to 50¢ lower.

Listed below are some of the representative sales of Friday, June 16.

DINNER TIME

Roy Wiggins has been plowing on 40 acres of summer fallow ground that he has infested with shatter cane in the last couple of years. His wife, Eva, and Kent Miller stopped by to pick him up for dinner. Wiggins farms 420 acres and milks about 15 Holsteins along with a small Angus herd he handles.

First - Second Class Post Offices Send Mail To Topeka

Fourteen first and second-class post offices in the Grass and Grain area will be sending all their out-of-town mail to a Topeka sectional processing center beginning June 24.

Mail from first-class offices at Hiawatha, Holton, Junction City, Ft. Riley, Manhattan and Marysville, along with out-of-town mail from the eight largest second-class offices; Horton, Lyndon, Ogden, Osage City, Sabetha, St. Marys, Seneca, and Wamego will be affected.

Robert Domme, Topeka Postmaster, said the remaining second- and fourth-class offices

among the 94 stations served by the Topeka sectional center do not now generate enough volume to warrant their inclusion in the new program, which is dubbed Area Mail Processing System, or AMPS.

He explained the program is intended to speed mail delivery by use of a new electronic letter-sorting machine recently installed in the North Topeka Detached Mail Unit. "By bringing mail to a central point, we can give this area's postal customers faster deliveries while cutting our costs," he predicted.

Ralph Kingman, acting superintendent of mails, estimated 26 man-hours per day will be saved within the 14 first-and second-class offices involved, or a saving of \$135 to \$136 per day.

Under the plan, local postmasters in the affected offices will continue

to sort and distribute mail within their own community. But all out-bound mail — including, for example, a letter mailed in Seneca and destined for Hiawatha, will be forwarded to Topeka without processing. Here, it will be faced, canceled, sorted, bundled and dispatched to its destination.

The total is expected to amount to about 100,000 pieces of first-class mail daily, Domme indicated. Of the affected offices, Manhattan has the largest volume, at 20,000 to 22,000 pieces per day. The smallest have a volume of about 1,800 — the cut-off level for inclusion in AMPS at this time.

"These smaller offices don't generate enough volume to provide a savings by handling it here," explained Kingman. He added in most third and fourth-class offices,

the postmaster is the only employee. Those offices will continue to operate as they have in the past.

The result could be quicker arrival of mail sent from Ogden to Chicago, for instance. "The earlier we get it in here, the better chance it has of going out," Kingman said. He noted "some of this mail will get in quite a bit earlier in the evening than we're getting it now," and said in some cases it could be up to a 90-minute saving.

Domme emphasized although there may be some later transfers of personnel, he has been assured by K.W. Cooley, manager of the Wichita District, that the change will not cost the job of any career employee, and all seniority rights will be respected.

Only substitute employees will be affected, and the result will be a cut in the number of hours they are needed, said Kingman. "Manhattan has been operating short-handed, anyway," he reported. "It's the same way with most of these other offices."

evaporated milk.

In 1971, the per capita consumption of fluid milk was 223 pounds, far below that recommended by nutritionists. The consumption of 2 percent and other low fat products has increased from 15.6 pounds in 1950 to 57.7 pounds in 1970. Cheese is one of the good guys in the dairy industry. The per capita sales of cheese rose from 4.4 pounds in 1932 to 11.8 pounds in 1971. As for ice cream, the average consumption was 3.8 gallons in 1971, double that of 1933. Ice milk sales have likewise increased, up to 1.5 gallons per person in 1971, which was 14 times the 1940 figure.

NEW MANAGER FOR ABILENE CO-OP

Lawrence Henderson has been named manager of the Abilene Co-op succeeding Herbert O. Wetzel who will go to Greensburg to manage the Co-op there.

Henderson has been with the Co-op four years running the Abilene fertilizer plant.

Dairy Producers Schedule June As Dairy Month

June is Dairy Month, sufficient reminder that Kansas is noted for the high quality of its milk production.

Much of the milk and manufactured dairy products from Kansas are exported to other states which bring trade dollars back into the state's economy.

Thousands are employed in the dairy industry in Kansas. Other businesses flourish because of the dairy industry.

Many Kansas dairy plants are among the most modern in the U.S. They process milk from farms into fluid milk, cream, cheese, cottage cheese, sour cream, flavored milk drinks, ice cream, butter, milk powder, and condensed and
