Livestock Production Economics

Production Level

Costs per unit and net returns in livestock production are highly dependent on production levels. The following estimated budget includes two different production levels. Production levels vary for a number of reasons including livestock quality or genetics, weather, input levels, and management. The two production levels included in this estimated budget reflect production variability due to weather and management as opposed to the quality of the livestock since livestock values are held constant. Budgeting at multiple production levels can help producers examine the financial risk of a livestock enterprise that is directly related to production risk.

This beef backgrounding and finishing budget includes a below-average column as well as an above-average column for both steer and heifer feeding. Performance varies due to differences in average daily gain and feed conversions. The values assumed are included in Table 1 and are deviations from long-term averages.

Variable and Fixed Costs

Variable costs are costs that vary in the short run and can differ on a per head basis from one feeding cycle to the next. The feed requirements used in this budget include additional roughage and grain to allow for waste. Feeding conditions will vary throughout the feeding period, which will alter projected weight gain. If poor feeding conditions are encountered, weight gains will be less than those projected. For this budget, steers and heifers are assumed to be backgrounded on a ration consisting of sorghum silage, grain sorghum, and supplement, and switched to a finishing ration consisting of alfalfa, corn, grain sorghum, and supplement. An allowance for shrink is included in the average daily gain and feed conversion estimates. Hundredweight produced is adjusted for death loss and shrink. Average daily gain may vary depending on the breed of the animals, the ration fed, and the time of the year.

Farm Management Association summary reports are used as a basis for estimating variable costs such as labor, veterinary, drugs, repairs, fuel, oil, and utilities. These cost items may vary considerably between individual producers. Each column shows interest on one-half the variable cost plus the cost of the purchased animal for the length of the feeding period. Producers

who do not rely on borrowed funds should consider the interest charge as an opportunity cost of their own capital.

Fixed costs do not vary from one feeding period to the next, and are incurred by virtue of owning equipment and facilities. Building requirements consist primarily of feed-storage facilities. Equipment requirements include feeding facilities, corrals, handling equipment, and watering systems. A salvage value of 35 percent is assumed at the end of useful life for buildings and equipment. In each column, interest was calculated on one-half the original cost of buildings and equipment.

This budget uses projected 2000 input and output prices for illustrative purposes. Producers should use their own prices when using this budget. The break-even price is sensitive to changes in feed and feeder prices.

Table 1. Factors Used for Cost-Return Budget

	Above Avg. Steer	Below Avg. Steer	Above Avg. Heifer	Below Avg. Heifer
Item				
Backgrounding Phase				
Days on feed	90	111	88	109
Average daily gain	2.2	1.8	2.0	1.6
Feed conversion (as fed)	18.5	19.5	19.0	20.0
Ration:				
81.5% sorghum silage, 14% grain sorghum, 4.5% supplement*				
Finishing Phase				
Days on feed	142	156	144	161
Average daily gain	3.35	3.04	2.95	2.64
Feed conversion (as fed)	7.9	8.7	8.25	9.05
Ration:				
51% corn, 34% grain sorghum, 12% alfalfa, 3% supplement*				
Value per head				
Investment in buildings				\$ 155.00
Life of buildings				20 yrs
Investment in equipment				\$145.00
Life of equipment				10 yrs
Salvage value on buildings and equipment				35.00%
Interest rate on buildings and equipment				9.00%
Insurance rate on buildings and equipment				0.25%
Tax rate on buildings and equipment				1.50%
Interest rate on variable costs and purchased livestock				9.00%
Labor hours				1.75
Labor price per hour				\$ 10.80

* Supplement includes soybean meal, vitamins, minerals, and an ionophore.
