Michael R. Langemeier
Professor, Agricultural Economics

Income and Financial Trends

The following income and financial ratio trends were derived from data provided by farms enrolled in the Kansas Farm Management Association program. The number of commercial farms in this educational program varied from 2,300 to 2,750 for the 10-year period 2000 to 2009. These income and financial trends provide in-depth information for analyzing the farm financial situation and policies affecting agriculture.

Value of farm production and net farm income averaged \$309,230 and \$65,178, respectively, for the period 2000 to 2009. Net farm income must pay for family living, income and social security taxes, and principal payments on machinery and land.

Definitions

Value of Farm Production (VFP): Total livestock, grain, hay, and miscellaneous income minus cost of items purchased for resale, minus cost of purchased feed, plus or minus changes in operating inventories.

Total Farm Expenses: Total cash and noncash expenses plus or minus the associated accrual and expense inventory adjustments. Total expenses do not include cost of items purchased for resale and cost of purchased feed.

Net Farm Income: Return to operator's labor, management, and net worth computed on an accrual basis.
