Western Kansas grain producers enjoy near-complete planting flexibility under the 1996 Federal Agricultural Improvement and Reform Act. Despite this newly-obtained freedom to select from a vast array of choices to follow wheat in an intensive wheat-summer crop-fallow program, grain sorghum is expected to continue as the number one choice of producers. Because of the arid nature of the area, grain sorghum has been an important crop to Western Kansas for decades. Western Kansas farmers have increased non-irrigated grain sorghum acreage since 1980—an increase largely attributable to expanded use of intensive rotational cropping systems.

K-State research on intensive dryland cropping systems indicates that reduced tillage grain sorghum planted after winter wheat yields higher and more consistent yields and is more profitable than conventional-tillage grain sorghum. Thus, a conventional till wheat-reduced till grain sorghum-fallow rotation might be the preferred rotation for Western Kansas producers.

Yield Goals

Cost per bushel and net returns in crop production are highly dependent on yields. The following estimated budget includes three different yield levels. Yield goals vary for a number of reasons such as soil type or land quality, historical weather patterns, input levels, and management. Budgeting for alternative yield goals can help producers compare the profitability of crop enterprises on farmland tracts with varying yield potentials. Multi-peril crop insurance expenses at a 65 percent yield level are included in this budget as a cost of managing production risk in an area prone to great yield variability.

Variable and Fixed Costs, Return Factors

Variable costs, such as fertilizer, repairs and fuel-oil, are costs that may vary with level of production. The cost columns show the interest on the variable costs (lines 1

through 15) for one-half year. Fixed costs do not vary with level of production and are incurred by virtue of owning assets such as land and machinery. Land values have been adjusted for alternative yield goals. In customizing this budget to fit your farm, attention should be given to using land values representative of your farm's productive capacity. Projections of net percentage return on investment permit comparisons to be made among alternative enterprises or other investments.

Table 1. Factors Used for Cost-Return Budget

Item	Yield Level (bu)			
	60	75	90	
Fertilizer:				
N (Anhy.)	55	75	90	\$0.17/lb
N (Dry)	0	0	0	\$0.31/lb
P	20	20	20	\$0.28/lb

Seed, lbs	2	2.5	3	
Seed price, \$/lb	\$1.05	\$1.05	\$1.05	
Labor hours	1.15	1.20	1.25	
Labor price/hour				\$10.80
Land value/acre*	\$420	\$525	\$630	
Land interest rate				6.00%
Land real estate tax rate				0.50%
Machinery investment**				\$191
Machinery life				10 yrs
Salvage value				35.00%
Interest rate on machinery				10.00%
Insurance rate on machinery				0.25%
Interest on variable costs				10.00%

*All land costs were computed, and then multiplied by a factor of 1.5 to account for fallow land (two crops every 3 years)

**Investment required/crop and fallow acres.
