Still A Horseman At 80

SNYDER'S PRIDE

Truly the pride of the Rev. Leroy Snyder of Abilene is his registered American Saddle stallion, Snyder's Pride. A minister for 53 years, Rev. Snyder came to spend his retirement years at Abilene, site of one of the many pastorates of his lifetime.

TRAINING A COLT

A young colt gets a foreleg lift from the 80-year old Snyder. At that age, Rev. Snyder still breaks and trains his own horses.

LISTENING CARE

One of the joys of Rev. Snyder's life has always been tending and training good horses. He celebrated his 80th birthday in early May. Rev. Snyder likes to restore old saddles and horses in his spare time.

Jobless Rate, Inflation Closely Tied

With 5 million Americans jobless and the civilian labor force growing by 2 million a year, the most serious economic — and political problem facing the administration is how to reduce unemployment.

In April, even after the bounce back from the General Motors strike and the onset of steel inventory building against a possible steel strike, unemployment was still in the 7 per cent zone — as it has been for six months.

New labor department vacancy data show how tough it is to find a job. In durable goods industries there were only three job vacancies for every 1,000 jobs this spring — compared to eight per 1,000 a year earlier.

In nondurable goods industries, there were five vacancies per 1,000

jobs this March — against nine in March 1970.

And in all manufacturing industries, the number of longterm vacancies — jobs that had remained unfilled 30 days or longer — amounted to only one per 1,000.

Unlike earlier slumps, many white-collar workers, business managers, scientists, engineers, and professionals, have been fired, and are finding it hard to get new jobs.

Is there something peculiar about the job lag, despite the general business recovery? Employers are normally slow in adding workers in the early stages of a recovery. They seek to meet rising orders by getting more productivity out of their existing work forces and thereby widen their profit margins.

But there are reasons for concern that the re-employment lag may persist longer than usual this time because of the persistence of inflation.

Recently, Frank W. Schiff, vice-president and economist of the committee for economic development, told the congressional joint

economic committee that in the present highly liquid state of the United States economy, "a further substantial injection of liquidity runs a double risk: It may fail to be of much immediate aid in reviving the economy but provide the fuel for serious inflationary pressures at a later date."

Schiff holds that, if the economy needs extra stimulus, this should come not from the monetary but from the fiscal side from government expenditure increases or tax reduction.

He contends the administration is preventing itself from using an adequately stimulative fiscal policy by sticking to a conception of the full-employment budget that is static and rigid.

It was Schiff's organization, the C.E.D., that first formally developed and publicized the full-employment budget in the early postwar period—although it was Herbert Stein, now a member of the President's Council of Economic Advisers, rather than Schiff, who did much of the initial theoretical work on the concept.

Schiff now favors what he calls a "dynamic approach" to the full-employment budget.

He would accept bigger deficits when the economy needs extra stimulus, as the administration would not, but would if they exceeded the full-employment revenue estimate devise spending or taxing programs in such a way as to return the budget to balance or surplus when the economy actually returned to full employment.

Thus Schiff would develop "self-liquidating" stabilizing measures. If

the tax-reduction route to full employment were to be taken now, Schiff would favor the idea, first proposed by Arthur Okun, President Johnson's last chief economic adviser, of moving up to this year the personal income tax cuts already scheduled for 1972 and 1973.

However, given the acute social problems affecting the nation, the C.E.D.'s chief economist would prefer to get any needed fiscal stimulus from the expenditure side, by such measures as these:

- Earlier-than-scheduled initiation of proposed new programs, notably the family assistance plan.

- A public service employment program that would vary in volume with the level of unemployment.

- An extension of unemployment benefit periods, and a more liberal system for triggering benefits when unemployment rises.

- Special emergency grants to states and localities, or temporary changes in grant matching formulas, geared to national economic conditions.

Start Memorial Fund For Sedan 4H'ers

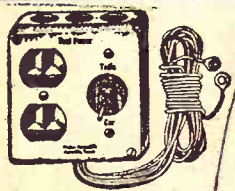

SEDAN — More than \$800 been given to a memorial fund started for the five 4-H youth their leader killed May 15 in a car crash 15 miles east of Wichita on K15.

Suggestions have been made plaques be set in the Cherokee County Extension Office and at the Springs 4-H Ranch. The balance of the money would be put in a trust by the 4-H council, which would be used to send one or more deserving 4-H junior leaders to a leadership camp at Rock Springs near Junction City as a memorial.

A steering committee was selected from the extension executive board, the 4-H council, the extension homemakers group.

Donations payable to Cherokee County Memorial Fund may be made at any of the three banks in the county — Sedan State Bank, First National Bank, in Sedan, Cedar Vale State Bank — or any 4-H leader.

Refurbish 90-Year Old Stone Church Near Glasco

GLASCO — A rural stone church, built east of this Cloud county town in the 1880s, has been refurbished and rededicated.

The Bethel Church, a 36 x 48 foot structure with 20-inch stone walls when built 90 years ago received about \$6000 worth of improvements and four months' of volunteer work. The project was headed by Mrs. Jesse Barker of Salina.

The church, with a seating capacity of about 200, has been used only for funerals since the 1930s.

"We had a contractor look the church over and bid on the project," Mrs. Barker said. "We thought it would make a memorial chapel and a place to meet on Memorial Day each year," she said.

Now, inside the small church that had been badly deteriorated, there is a new front door, electricity for the first time, interior paneling and refinished floors and pews.

Carpet is at the front of the church, at the back and in the aisles. A new roof tops the church.

A white pine cross, made and donated by contractor Jay Farrell of Concordia, hangs behind the altar.

Speaker at a dedication ceremony May 30 was Rev. Richard Willars, rector of the Holy Nativity Episcopal church in Los Angeles. He was born on a farm near the church in 1921.

Drop Sterile Screw Worms On Puerto Rico

Special planes from the Tactical Air Command will begin dropping sterile screw worms on Puerto Rico this month in a joint program to eradicate the parasites, the Pentagon announced.

Planes will fly over screw worm-infested areas where they will release screw worm flies, bred in laboratories, to mate with the native flies.

The idea is to use the sterile insects to break the reproduction cycle of the screw worm which lays its eggs in sores or wounds of warm-blooded animals. The larvae bore into the flesh causing serious and often fatal results.

The screw worm eradication program in Puerto Rico long plagued by the parasite, is a joint project of the Agriculture department, the Air Force and the Commonwealth of Puerto Rico.

The planes, from the first special operations wing at Hurlburt field, Fla., will release the sterile flies "at intervals and rates required to overwhelm the native screw fly population," the Pentagon said. The program will begin June 1 and last about 20 weeks.

The United States also conducts a similar program with Mexico to control screw worms along the U.S.-Mexican border.

Artillery Thunder Around Ft. Riley

There's plenty of banging around Ft. Riley right now.

Artillery batteries are firing in Army Training Tests. The firing tests started May 17 and will continue thru June 9. Firing usually lasts around 12 hours and may occur anytime during the day or night.

WAMEGO BANK IS BUILDING NEW QUARTERS

WAMEGO—The First National Bank here is starting to build a new banking office. Completion is set for the spring of 1972.

Gloomy Figures From South Central Farm Management Association Report

Tell it like it is — that's what farmers want, say Farm Management Association fieldmen. And things are tough down on the farm.

The Kansas farmer found himself sunned by a primeval force — the weather as climatic conditions in 1970 trampled Kansas farm income nearly in half and the state's milo crop became victim to the marauder.

Based on compilations from 453 Farm Management Association farmers — representative of the largest, most efficient operators in

southcentral Kansas — farm income dropped nearly 50 per cent in 1970, compared with the previous year.

These farms, nearly twice as large as the average in the area, returned only a \$3,349 average for labor and management, down from last year's \$7,737 average return. This doesn't include a six per cent return on land and capital investments.

Talking about the gloomy recording at their Farm Management Association No. 2 office at 30th and Main, fieldmen HoBart Frederick and Bill Collins, KSU Extension economists, pointed

to poor crops, particularly the milo crop, as factors behind low farm income.

Collins and Frederick compared the 1970 milo crop average on association farms to the 1969 average, when farmers had a yield of 57 bushels per acre. Because of bad weather involved in the 1970 milo crop, yields on a comparable 150-acre average crop dropped to 27 bushels per acre, primarily accounting for the drop in farm income for association farms in an 11-county area.

The records were compiled from farm members in Barton, Harper, Harvey, Kingman, McPherson, Pratt, Reno, Rice, Sedgwick, Stafford, and Sumner Counties.

Market prices were another contributing factor. Hog prices, which tumbled last year, have failed to recover to previous levels.

"Wheat harvest prices were sad, but they came up later in the year," Frederick said.

Member farmers upped wheat yield averages a little over the preceding year, harvesting an average of 34.1 bushels in 1970, compared to 3.5 bushels in 1969.

Gross crop production per crop acre earned by members averaged \$45.55. This includes diverted acreages and certificate payments, but excluded land designated as waste acreage.

Out of the gross crop production figure, farmers, operating on rental land, had to pay land-owners a third, or \$15 per acre.

Landowners had to pay \$3 to \$3.50

in taxes out of that sum, plus approximately \$1.50 on their share of fertilizer costs, gave the landowner a net return of four per cent on his land, valued at an average of \$250 per acre.

The farm operator received as his share of crop production \$30 per acre, but he had to pay out \$25.56 per acre in operating costs to produce that crop, giving him \$4.50 per acre return for his labor.

Farm Association fieldmen said it took approximately three hours of labor per acre to produce the crop. In other words, the farm operator earned \$1.50 per hour.

Livestock operators also found that weather cut silage and hay production across the area, upping feed costs.

Gross income was down seven per cent, while farm expenses climbed two per cent, Frederick said.

Farmers combining crops with livestock operations were able to record better incomes than those farmers concentrating mostly in wheat production, fieldmen agree.

Stabilization and Conservation service, which deals in farm subsidies. Traditionally the salaries range up to \$10,000 a year, are hired by state and local committees which in turn are by each new administration.

In some states, at least, have been treated as rewards each time a new administration assumes control.

The Nixon administration, for example, has seen 129 new hires since taking office. USDA sources confirm, the administration formally asked to convert those political career appointments, thus locking in those who qualify.

The request was initiated by ASCS in the Agriculture Department. The agency has responsibility for carrying government's billion-dollar subsidy programs. There public announcement proposal.

One spokesman said the Civil Service status was overdue.

Water From Power Company Keep Catfish Feeding—And Growing

Catfish be grown in Kansas year around? You bet, says Gross. The Electric Company, and Gross, El Dorado oilman, have combined forces to develop a revolutionary catfish farm originated by Gross.

And to prove it, Gross and KG&E have combined forces to develop a revolutionary catfish farm originated by Gross.

The facility uses excess hot water

discharged by a KG&E electric generating plant to heat the farm's water so the fish will feed and grow the year around. In Kansas, because of the cold winters, catfish normally become dormant during the winter months and neither eat nor grow.

Gross' system keeps the water in the farm ponds between 72 and 83 degrees at all times, providing the fish with an environment in which they eat and grow during the entire year. The Grosstrol system also aerates the water, feeds the fish automatically and harvests them when they reach marketable size, about 1 1/4 pounds.

Gross and his associates believe the system will revolutionize the fresh fish farming industry. "It will do for the fresh fish industry what feedlots have done for the cattle industry," Jim Eaton, Gross marketing director, said.

The first "pilot" plant is being constructed adjacent to the KG&E Gordon Evans Station between Maize and Colwich in northwest Sedgwick County. KG&E is providing Gross with the land and hot water, while the former oil producer is footing the bill for buildings, equipment and fish ponds. He reportedly has invested more than \$100,000 in the project thus far.

The heart of Gross' system is a water aerating wheel he invented. The giant paddle-type wheel aerates the water at a rate of 90,000 cubic feet per hour, circulates the water in the feeding, harvesting and spawning areas and in the holding ponds and helps maintain the water

temperature near 72 degrees even in hot weather.

The hot water coming out of the electric plant is in a deoxygenated state and the wheel adds 90,000 cubic feet of air to the water each hour.

When in full operation, a half million catfish will be used in the process. Work on the facility is expected to be completed by June 1 and initial stocking to take place a short time later.

Gross said the first crop of fish should be ready for harvesting by September.

The implications of Gross' system are enormous.

It may be a means of increasing the world's food supply, a critical item on some parts of the Earth, a KG&E official pointed out. Catfish are very efficient converters of protein into useful food, he said.

Where it generally requires eight or nine pounds of feed for a steer to produce a pound of beef, as little as 1.3 pound of fish food will result in a pound of catfish.

It can aid Kansas' economy. Most fish farming is done in the South where the water stays warmer longer. With warm water year around, the catfish farm no longer is a seasonal industry.

And it uses hot water, which in some parts of the nation is being returned to lakes or rivers and killing many forms of life, including fish. Though this is not a serious environmental problem in Kansas, it is in some areas of the U.S.

Gross said the system also should lower the consumer price of catfish.

He has patented the system in the U.S. and a half dozen other countries.

Initial production at Gross' farm will be wholesaled to out-of-town processing plants, but Gross plans to build his own processing plant to dress the fish at the farm. Other hot-water fish farms are being planned by Gross.

Far-Mar-Co Plans For St. Joseph Soybean Plant

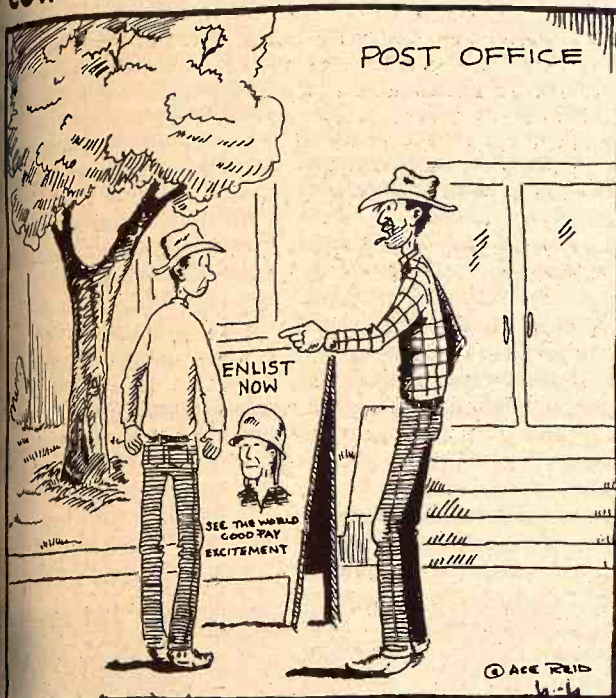

Far-Mar-Co, the Hutchinson-based grain storer and processor, is going to expand and improve an existing soybean processing plant at St. Joseph, Mo.

J.H. (Jimmie) Dean, general manager of Far-Mar-Co, says that expansion of the St. Joseph plant will allow the Hutchinson facility to move into new manufacturing areas.

Dean reported that plans for expansion in the protein and foods area are contemplated at Hutchinson. He said these will be geared to research programs being conducted at Hutchinson.

"More Than Bright Lights To Keep 'Em Down On The Farm"

Electric Co-ops Hustling For Rural Development

The rural electric co-op, which drove the kerosene lamp from the countryside, is now bent on becoming the catalyst of improving life in other ways in rural and small-town America.

And it's making headway, suggests a recent article in the Wall Street Journal, which says the electric co-op is the aggressive mover in improving rural life, partly by shedding the farmer image and becoming activist in community.

Saying that electric co-ops are finding that it takes more than bright lights to keep people down on the farm, the Journal cites numerous examples, though none in the G&G area, of electric co-ops steering smalltowners to new home financing, lobbying for state projects to be built in small towns, enticing new industries, providing community leadership.

The co-ops are sponsoring and promoting, and in some cases building, new houses, schools, parks, golf courses, swimming pools, hospitals, resorts and factories in the rural areas.

Sampling of scores of the nation's 1000 rural electrics indicate that at least three out of every 10 are involved in such nonpower projects in the regions they serve, and the trend appears to be snowballing.

"We've got to make the rural areas more palatable to stop the migration to the cities," says W. V. Thomas, general manager of the Wisconsin state association of rural electrics.

Growing evidence suggests the migration already has stopped and perhaps reversed. With new highways and the clean air of the countryside beckoning, more urbanites are moving to smaller towns and commuting to jobs in the cities. Many others are building weekend and vacation homes in the rural areas. "Everybody wants his five acres in the country," says a Texas

co-op official.

Obviously, the rural electrics are beginning to benefit. Nationally, these co-ops have 6.5 million meters linked to their lines and are expected to add at least 150,000 more this year.

More than half of the 20 million to 25 million people provided power by the co-ops, based on four persons per meter, already are "non-farm" (electricity users who may live on the farm but don't make their living there), and seven out of eight new customers of the co-ops fall in this category.

The metamorphosis in membership rolls is reflected in part by the changing attitudes of the co-ops.

"To say we took the lantern off the farm means nothing to most of our members now," says Ronald J. Knouse, manager of member and community services for Blue Ridge Electric Membership Corp., Lenoir, N.C. He notes that only 10 percent of Blue Ridge's customers derive most of their income from farming today, versus 90 percent 25 years ago.

Even so, the so-called investor-owned and municipal power companies are continuing to cut into the territories of the co-ops, leaving many of them only with still-sparsely settled regions. And many of the residents of these regions are among the nation's poorest.

Uniquely Equipped Catalysts

An estimated 14 million impoverished Americans live in the rural areas. Some 50 percent of all rural housing is said to be substandard, compared with an estimated 14 percent in urban America. One South Carolina co-op surveyed just one of its counties and found that 40 percent of the 7,000 houses had no toilet facilities.

Armed with such evidence, South Carolina's rural electrics are launching "Stand Tall" programs throughout the state to develop jobs and job training and to provide

housing, water and sewer systems, schools and recreation for the rural poor.

"These are the people who would go on to the slums of the cities if not helped and become dope addicts," says a spokesman for the state's electric cooperatives.

The co-ops have their own interests at heart, of course. J. U. Gajan II, director of power sales for Slemco, Lafayette, La., notes that the co-ops can increase their electricity loads by improving the lot of their customers. "We're not really looking at it moneywise—it's hell to be poor—but if we can move someone from a \$2 a month house to a \$5 a month (electric bill) we're helped too," he says.

Whatever the motive, the rural electrics appear to be uniquely equipped to become catalysts for a turnaround in rural America. "The co-ops, usually the largest single business organizations in their communities, have a corporate citizen interest in this whole matter," says Robert D. Partridge, general manager of the National Rural Electric Cooperative Association.

"Many millions of future Americans," he adds, "are going to have jobs and live in what are now rural areas. The cities can't absorb them, and the co-ops need these additional consumers to offset their loss of farm consumers."

A Push in Housing

Other observers agree. "It's the greatest development idea beyond the city limits," says David A. Hamil, administrator of the Rural Electrification Administration, which still provides financing of around \$345 million a year to the co-ops but only for power purposes.

The biggest push by the co-ops is in housing. Their national association lobbied through Congress a liberalization of lending

policies as well as additional funds for the Farmers Home Administration.

On the home front, the co-ops began vigorously rounding up home-buyer prospects to use up the \$1.5 billion the Farmers Home Administration has available this fiscal year.

Some co-ops are going even further on housing. Wisconsin's rural electrics set up a statewide housing cooperative that is using government grants and loans to construct homes for the rural poor.

Similarly, at Wilburton, Okla., a nonprofit housing co-op recently established by Kiamichi Electric Cooperative is constructing more than 600 homes for low-income families. It is only coincidental, the co-op says, that the houses are all electric.

But houses alone aren't enough, the co-ops figure. So they are pressing for some amenities, too.

In Texas, the rural electrics have helped establish several hundred water districts and are involved at the moment in developing LBJ State Park, named after the former President.

In New Mexico, electric co-ops rode to the rescue of the narrow-gauge railway abandoned by the Denver & Rio Grande Western Railroad. A resulting two-state joint venture begun by New Mexico's rural electrics has salvaged a 67 mile stretch of scenic route in Colorado and New Mexico. It will be reopened this summer for tourists and narrow-gauge railroad buffs.

Clinton County Electric Cooperative at Breese, Ill., helped establish a junior college at nearby Centralia and then got behind community campaigns to improve medical facilities.

One of the co-op's officers headed a financing drive that resulted in a new 100-bed hospital. Now he directs

a group that's trying to get more doctors and nurses to the organization already has netted a new doctor with its campaign year.

Jobs are important, too, and why the co-ops are hustling industries for their areas. Shiflet, executive manager of Virginia's statewide association of electric cooperatives, now half his time making special trips to plug the industrial attractions of rural Virginia.

North Carolina's Blue Electric says it has brought industries to its area in the months. They include woodworking, metalworking, furniture plants and provide jobs.

At Medford, Wis., Taylor Electric Cooperative puts money to get new industries. It's also keen on airport improvements, perhaps because year-old manager, Charles Berglund Jr., got his pilot's last November.

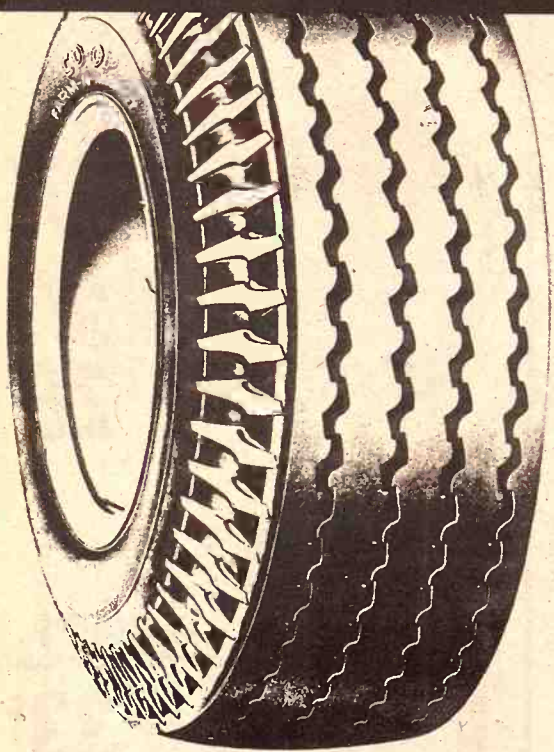

Georgia's statewide association recently hired industrial-development specialists who's trying to fill the state's buildings with new firms. "We're dead," says a spokesman for Georgia co-ops, "and there are a lot of vacant warehouses."

Eastern Maine Cooperative parlayed a warehouse, its own, into a new industry for Calais, Maine, industry, a shirt factory, and it has moved into its own new building.

Now the co-op is trying to get someone else to occupy the warehouse, and a winemaker paint-brush manufacturer expressed interest.

"This is the grass roots," Robert V. Clark, manager of the co-op, adding: "If it doesn't start, it doesn't start."

Emphasis On Carcass At Area Hog Shows

A market pig with bulging muscles of lean meat and only a small amount of fat puts better pork in the supermarket for consumers—and it's also worth more to the farmer who produced it.

Two good reasons Kansas pork producers are striving to improve the quality of the pigs they produce, says Wendell Moyer, swine specialist for the Cooperative Extension Service at Kansas State University.

Moyer believes the average pork producer is unaware of the efforts made by pork producers and extension agricultural agents to improve pork.

For instance, most consumers probably think pig shows are strictly for the benefit of farmers. While it's true that at shows farmers do win prizes and gain valuable information about the quality of their pigs, ultimately it is the consumer who benefits from more economical, more wholesome pork in the meat market.

Moyer explains that at most shows the state today pigs are evaluated on foot and later their carcasses are evaluated at the packing plant.

"Shows with both live and carcass contests help farmers learn what progress, if any, they are making toward producing more marketable pork and lets them see the kind of live pigs that produce high percentage of lean pork in the favorite retail cuts," Moyer says.

Extension personnel throughout Kansas play a major role in planning and carrying out swine live and carcass shows. Moyer explains that it is another way Extension serves all people, both rural and urban.

Major shows of this type in the state include the North Central Kansas Barrow Show and Carcass Contest at Mankato, Barton County Area Carcass Show in Great Bend, Kansas Spring Barrow Show in Arkansas City, Wichita Barrow Show in Wichita, the East Central Kansas Barrow Show in Ottawa, and the Southeast Kansas Swine Evaluation Seminar in Pittsburg.

In addition many counties or combinations of counties have similar shows on a lesser scale. Some of the shows add social and educational dimensions such as swine production seminars and films and pork cookout and new pork

recipe contests.

Moyer points out that carcass statistics from Kansas Swine shows prove that the state's hogmen are learning to produce better pork.

Summary figures from 13 carcass show this spring show that all the champion carcasses scored high in amounts of consumer preferred pork cuts—hams and loins (chops)—and low in amount of fat.

The 13 champions had hams averaging 17.4 percent of live weight. Their loin eyes (pork chop centers) averaged 6.30 square inches. The average carcass length was 30.6 inches, meaning more pork chops and more bacon.

In contrast, they averaged only 1.04 inch of backfat. A pig in Marshall county had the lowest backfat average of only .7 inch.

A pig from the Washington county show had the highest ham percentage, 19.95 percent. Two pigs from Meade county had the best loin eye area and carcass length—7.50 square inches and 32.7 inches respectively.

Another indicator of improved pig quality is the carcass ham-loin index. Moyer explains that the index was established approximately 10 years ago to evaluate swine carcasses.

The initial index was set up with a base score of 100 which meant a carcass had five square inches of loin eye and 15 percent ham.

"In our carcass shows today around 90 percent of the entries

index more than 100. This means the average pig today yields about 15 pounds more lean pork than the average pig 10 years ago. That's about like getting a 'third' ham out of today's pig," Moyer notes.

In the 13 carcass shows this spring ham-loin index of the champion pigs averaged 137.8. The top index was 162.2.

Moyer emphasizes that pork from the meatier, leaner pigs of today has 36 percent fewer calories and 57 percent less fat than food consumption tables once indicated.

And pork promises to become even more nutritious in the future as Kansas pork producers continue their efforts to improve their product, he concludes.

are 12 national lines, eight regional and 89 commuter services.

The major lines serving the G&G area — TWA, Braniff, Frontier, and Continental — all took the increase.

Air Midwest vice president of marketing and corporate planning James A. Pickett, Wednesday pointed out that if passenger boardings do not increase as a result of the action, the airline will be forced to take the fare increase along with everyone else.

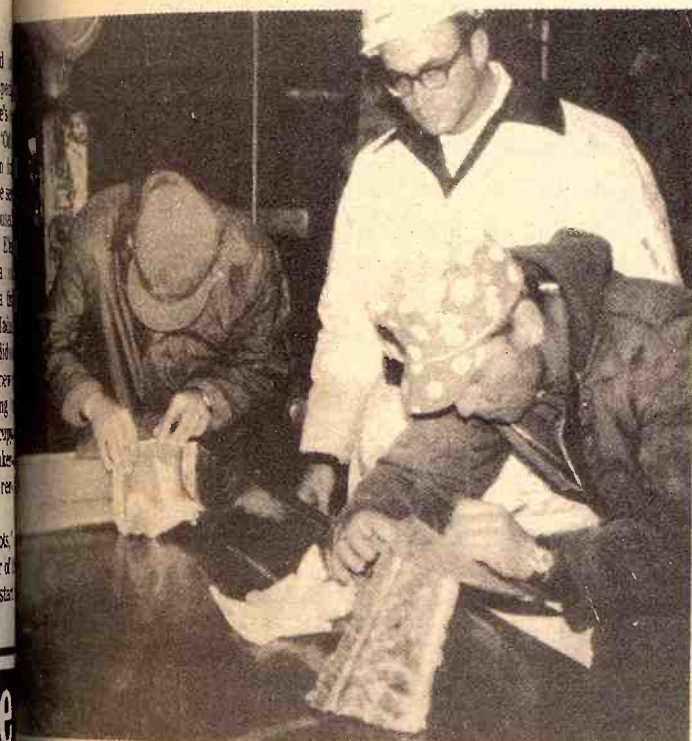

The present fare level will remain the same for an indefinite period, Pickett said, adding, "We feel by holding our fares at the present level we will be able to attract more people into using air transportation in the smaller cities we serve."

Pickett said the move would represent an approximate \$2 to \$6 savings on a round trip between Dodge City, Garden City, Great Bend, Hays and Hutchinson to Denver and Kansas City.

"It's just this simple," Pickett said, "We would rather increase our passenger boardings by 6 per cent than increase our fares by 6 per cent."

Also, the airline announced it would continue its Discover America 30-day excursion fare, which gives travelers a 25 per cent reduction when traveling for seven but not more than 30 days.

Most major airlines discontinued their excursion fare earlier this year. "We are continuing our discount fare structure because we feel we will pick up additional passengers during the upcoming summer vacation," Pickett said.

CAREFUL CARCASS CHECKING

GENERAL TIRE... GOES A LONG WAY TO MAKE FRIENDS

Tractor Noise Cuts Farmer's Hearing

Tractor noise is not only bothersome but damaging to hearing as well. Research is providing new information almost each year on tractor noise and its effect on hearing.

Farmers taking part in a South Dakota study found that acoustical ear muffs reduced tractor noise to "comfortable and acceptable" levels.

A Canadian study showed farmers have a greater loss of hearing than most people, and that hearing loss

increases as time spent on tractors increases.

Scientists have placed the level at which noise becomes potentially damaging at 85 decibels (units of sound wave intensity or pressure).

A tractor will have a noise level of about 98 decibels, depending on size and type. For comparison, ordinary conversation is at the 60-decibel level, the average radio at 70, and a pneumatic drill at 90.

Farmers should protect against hearing loss by purchasing earmuffs or earplugs, or by soundproofing their tractor cab. Soundproofing may cost \$100 or more; acoustical earmuffs cost less than \$10.

BEST**

**is helping you
TALK UP PORK**

"Hogs are Beautiful—Pigs are Pretty." But, "money talks louder" to educate homemakers that today's pork is lean, protein-rich red meat—and a very sound buy.

JOIN THE TEAM EFFORT! GET TWO GOOCH PAYOFFS!

Join in NOW. Help yourself by cutting pork production costs. Here are extra dollars of profit for you. Also money to promote the pork you produce.

\$4 OFF EACH TON

During June, Gooch will give you a special \$4 off of each ton of Gooch Pig Growing and Hog Finishing Grain Balancers—Gooch's Best Super 40 and Gooch Pig Mixer 1000 with ASP-250.

Gooch urges hog raisers to contribute all or part of this special \$4 savings per ton to pork groups promoting increased use of pork. Gooch will even do it for you in your name—ask your Gooch Dealer for details.

\$1.50 IN FEED SAVINGS PER HEAD

Gooch's Best Super 40 is the higher powered concentrate, computer designed to fully balance grain for efficient pork building. Using Gooch Super 40 as your grain balancer can:

- save \$1.50 in feeding costs, even more on each hog finished.
- shorten hog finishing time 5 days and more.
- help hogs produce meaty carcasses that turn out the pork cuts which will encourage more frequent pork use in the modern family's diet.

YOU CAN TALK UP PORK—JOIN IN NOW!

See your Gooch Dealer during June! He can supply the Gooch's Best Pig Growing and Hog Finishing Grain Balancers you need. He has free colorful posters and displays to help you "TALK UP PORK" in your community.

Tax Collectors Gamble That Italians Can't Keep Winnings A Secret

Italy, where the sly art of tax evasion is becoming increasingly disreputable and perilous, has a new champion of tax dodging.

He is the anonymous winner of a \$700,000 jackpot in the national soccer pools. It was the biggest prize ever paid out by the legalized gambling system since its introduction 21 years ago.

Among millions of bettors the winner correctly guessed the results of 13 championship soccer games February 28. Each passing day improves his chances of not getting caught by the tax collector.

Mr. Half A. Billion, as the unknown winner is enviously called by Italians (the jackpot was 441,396,700 lire), has only to keep his

secret.

Somewhere in Italy, probably in or near Bologna, the winner apparently goes about his job in exactly the same way as before and resists the urge to tell his friends, maybe even his wife or girl friend, about his luck, or to buy a flashy car or go on a vacation. Thereby he may save up to \$480,000 in taxes.

Under Italy's tax laws the winner would have to enter his soccer pool gains as "miscellaneous income" in his 1971 tax return and turn over almost two-thirds to the state.

But the government deprived itself of the most obvious enforcement tool by allowing the soccer-pool agency to pay out prizes to anyone who produces the winning

10

Grass & Grain

June 8, 1971

slip without further identification. Trusting in human nature in general and in the outgoing character of their fellow countrymen Italian tax officials seem to have reasoned that any big winner would betray himself sooner or later.

In fact 16 of the 24 biggest winners in the system's history became known immediately, and almost all of the remaining were identified — and heavily taxed — later.

The chance of avoiding taxes has added to the popularity of the pools. Many Italians fill in dozens of the 32 cent betting slips every week.

DES Statement From Proxmire Stirs Cattlemen

"Sen. William Proxmire, D-Wisc., is grossly misinformed about the use of diethylstilbestrol (DES) in finishing beef cattle in the United States." This observation was made by W.D. Farr, president of the American National Cattlemen's Assn.

Farr, a prominent Greeley, Colo. cattle feeder, responded to the senator's charge that the use of DES should be cancelled by the Food and Drug Administration.

"The consuming public receives much more reasonably priced beef than if DES were not used. DES use in U.S. cattle feeding means at least a 10 per cent savings in beef production costs which are passed along to the consumer. At the same time, consumers need not fear any residue of the drug because adherence to required withdrawal times assures that DES has completely metabolized out of the animal's system."

ANCA, along with the Animal Health Institute, American Feed Manufacturer's Association and other organizations, formed the National Animal Drug Certification Committee which has been endorsed by the Food and Drug Administration and the U.S. Department of Agriculture. The Committee's main objective is to carry out an intensive continuing educational program so that users of animal drugs (including DES) will do so properly.

Two major results of the certification program are: An assured wholesome beef supply for consumers; and the continued use of important production efficiencies which mean savings in cattle production costs that ultimately are passed onto the consumer.

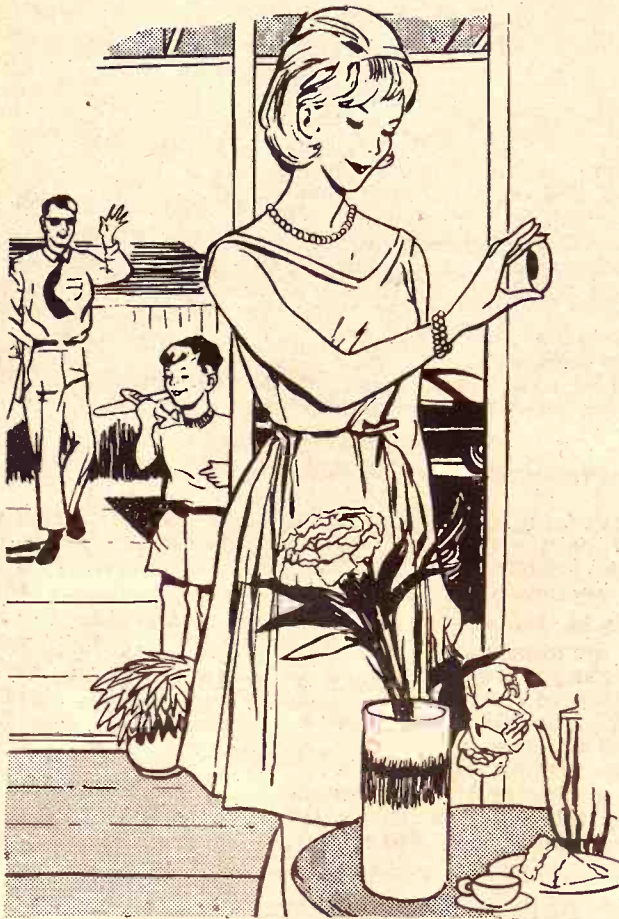

"Contrary to Senator Proxmire's statement, I am unaware of any alternate drug to DES which will promote cattle growth, feed efficiency and provide a wholesome beef supply," Farr said. "Additionally, his reference to the non-use of DES in other leading beef producing countries is highly misleading. The production and feeding methods used in the United States do not exist in other nations,

with the exception of Canada. Therefore, DES does not lead to use under their conditions. That other nations do not use DES is irrelevant."

In noting that Senator Proxmire quotes an "authority" from Canada, Farr stated that "it is the ANCA that Sweden is using a ban merely for a non-tariff barrier, similar to that being by other countries in Europe."

TINY POPULATION GAIN IN ELLSWORTH COUNTY
ELLSWORTH COUNTY — Ellsworth county's population for 1970 was certified at 7108, up a fraction from the 7082 in 1970. The county gained 41 to a new total of 7149. Thirteen of nineteen lost population. New county towns: Ellsworth 658, Kanopolis 734, Lorrain 658, Wilson 929.

Come Live In THE ELECTRIC CLIMATE and Make Yourself a Home

How do you turn a house into a comfortable, healthy home... a place where your family will want to spend time doing things together? A good start begins with the clean, quiet, draft-free atmosphere of electric heat. Whichever activity in whichever room, individual temperature control provides the perfect climate... the electric climate.

Here you spend less time cleaning walls, floors, and drapes.

Here there's a world of convenience such as an electric range that cleans itself flamelessly, a refrigerator that defrosts itself... plus many other electric servants to give you more time with your family.

Find out all the facts from your KPL representative. He has a plan that could put you in the electric climate less expensively than you think.

Canada Hopes New Grading Will Earn More Wheat Sales

There is significance in more ways than one to U.S. farmers and the trade in Canada's decision to trade a system of grading wheat which will include a measure of protein content.

There is significance also in the fact that Australia is talking about the same thing.

The United States has had a system in this category for 50 years.

Canada is making its move to increase its export sales and to make its wheat more competitive with that from the United States.

Canadian authorities are thinking the same lines. Incidentally, in case they are talking about wheat.

Canada and Australia are the major competitors of the United States in world wheat trade. Any steps taken by these countries to make themselves more competitive, obviously are of concern to U.S. farmers and the grain trade.

But competition aside, U.S. grain interests may be justified in more than casual curiosity in the fact that Canada is turning to a grading system that in many respects will follow the pattern established in this country.

Farmers and members of the trade will recall that a few years ago, an international controversy arose or was promoted, on the quality of U.S. wheat put into the export trade.

The word from buyers overseas was that the U.S. wheat was trashy, that they did not get what they ordered, and that other countries, namely, Canada, supplied a more uniformly high quality product.

U.S. exporting firms bristled with replies. Members of the Kansas City Board of Trade were quoted at the time as saying the overseas importers got just what they paid for — if they wanted the highest quality wheats, they could get them by paying the premium prices quoted.

Farmers in the wheat belt expressed concern. A feeling existed in some groups that this country was losing sales in world trade because of the way exporting firms were doing business. Groups of farmers went to Europe, where they heard complaints directly from the importers. European buyers came to this country to tell their story to wheat organizations. All the while, the U.S. exporting firms kept insisting that buyers would get just what they paid for. Emotions rose. Charges were made. It was in-

timated that the exporters mixed poor quality grain with the good, and even actually added trash. The exporters contended they shipped wheat that they bought from farmers. They also countered that some farm groups were being overly influenced by expert European buyers who were conducting a campaign which would permit them to buy high grades of wheat at low grade prices — legitimate effort if they could accomplish results.

Eventually, the controversy faded away and all the talk ended. The U.S. grading standards remained the same.

Canada, which does produce a high quality wheat it has marketed solely on the basis of visual grading factors, in seeking to put its new grading system into effect in parts of the country next August 1. It may be August, 1972, before it applies to the whole country, because many complications are presented in making a change-over to the new system. Incidentally, one reason Canada is adopting the new grades is that European bakers, going more and more to machine baking, need to know exactly the wheat they are buying (no matter the grade), so they can maintain established blends. This has been true in the United States a long time.

Australia now sells its wheat F.A.Q. (fair average quality), a mixture of any kind of wheat grown in the country. But the producers of

hard wheat are arguing that their product should be graded for protein content so it could better compete on world markets.

Meanwhile, this year U.S. exports of wheat for dollars are the biggest in all history, and the United States sells more wheat in world trade than any other nation. All of which suggests that this country's grading system cannot be all wrong.

Welfare Checks To Come Straight From Topeka

A plan to mail welfare checks direct from Topeka rather than from the county courthouse is apparently working out, and all in the G&G area receiving welfare checks should get them direct from Topeka starting in July.

Persons in Miami and Wyandotte counties received welfare doles that way in May, and Reno county mailings were shifted to Topeka this month. The schedule is for all checks to come out of Topeka starting in July.

The new method of payments applies only to individuals receiving cash payments — old age, dependent children, blind and general assistance payments. It does not include payments to grocery stores or to suppliers of utilities.

Persons receiving welfare and social security payments will have welfare payment cut by the amount of the Social Security increase which will be realized this month. The

Grass & Grain

11

June 8, 1971

increase is roughly 10 per cent.

County directors have instructed those on welfare that the checks they get from the central payment operation might be missed, get their check late, or get the wrong amount the first time through. If this should occur, the person should get in touch with his local social worker.

The Social Security increase is retroactive to January and the January through April payments will come in a separate check toward the end of June.

Early information was that this amount would also be deducted from welfare payments. However, a later directive states that the retroactive payments will be considered additional income and will not be deducted from welfare payments or considered in determining need.

50 BUCK FEE TO PARK AT KU NEXT YEAR

It'll cost \$50 for a universal parking permit at the University of Kansas next year. Scales for specific lots range from \$10 a year to \$40. A space in a visitor's parking lot will cost 15 cents per stop, a hike of nickel from the current rate. Discussion at KU has also included the possibility of raising parking fees at athletic contests—currently \$1 for football and 50 cents for basketball.

Old Crow's good taste begins with men who love to work with their hands.

Anthony Clark has a big responsibility. One false move of his hands and he's mixed the wrong measure of grain for the Old Crow formula. Does he ever miss? The proof is in the good taste of our Bourbon.

Making Bourbon which tastes good, bottle after bottle, made Old Crow famous. Back in 1835, our people figured out the formula that took Bourbon-making out of the hit-or-miss category. Later, they handmade the first sour mash Bourbon. We still use our hands in making Old Crow.

After work, most of our men keep on using their hands. Anthony Clark calls on the same craftsmanship mixing grain as he does tying fishing flies.

Over the years, craftsmanship like this has made Old Crow America's best-tasting Bourbon.

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Corwin Freeman, Simpson, Sends Winning Recipe

Winner, Mrs. Corwin E. Freeman, Simpson: "A recipe you might like to try with the barbecue season coming on."

BARBECUE SAUCE

- 2 bottles catsup (14 ounces each)
- 1 bottle chili sauce (12 ounces)
- one-third cup prepared mustard
- 1 tablespoon dry mustard
- 1½ cup brown sugar
- 2 tablespoons pepper
- 1½ cup wine vinegar
- 1 cup lemon juice
- ½ cup A-1 steak sauce
- dash tabasco sauce
- ¼ cup worcestershire sauce
- 1 tablespoon soy sauce
- 2 tablespoons salad oil
- 1 can beer
- garlic salt to taste

Combine all ingredients. Store in refrigerator. Very good for barbecued chicken, steak, ribs, hamburgers or hot dogs. Makes 2 quarts.

+++++

Mrs. Effie Frank, R 2, Wamego, describes her recipe as, "very good."

FOUR HOUR RYE BREAD

- 2 tablespoons sugar (white)
 - ½ cup warm milk
 - 2 packages yeast
 - ½ cup rye flour
- Mix above ingredients and let stand a few minutes to raise. Boil the following together:
- 1 cup water
 - 1 cup milk

- 1 cup white sugar
- ½ cup molasses
- 2 tablespoons salt
- 2 tablespoons oleo or lard

When this is cool put in a large bowl and add the yeast sponge mixture and 1 cup more of milk and 1 cup more of warm water, 5 cups rye flour and 7 cups or little more of white flour. Mix and knead well then let raise until double in size. Punch down again then work and form into loaves and places in greased pans.

12

Grass & Grain

June 8, 1971

Let raise until double in size. Bake in a 350-degree oven for one hour or until loaves sound hollow when tapped with finger. Remove from oven and grease top of loaves with butter or milk. Cover with waxes paper and cloth and cool. Yield: Four loaves.

+++

The following recipe is from Mrs. Ernest Priddy, R 9, Topeka:

CARROT PINEAPPLE CAKE

- 1 cup oil
 - 2½ cups flour
 - 1 cup honey
 - 1 teaspoon soda
 - 1 teaspoon salt
 - 3 eggs
 - 2 teaspoon vanilla
 - 1 teaspoon cinnamon
 - 2 cups grated carrots
 - 1 cup nutmeats
 - 1 cup crushed pineapple
- Mix shortening and honey. Add eggs and vanilla. Blend in carrots and pineapple. Sift cinnamon, salt, soda and flour together and blend in batter mixture. Add nuts. Pour into greased 9x12-inch pan. Bake at 350 degrees for one hour.

+++

Moisture Is Enemy To Every Homeowner

Moisture makes paint peel, plaster crack, metals rust and timber rot. Moisture causes condensation and mildew and destroys insulation efficiency causing heat loss. Moisture is expensive.

Contrary to popular belief, very little moisture originates within the home, from cooking, washing, bathing, etc. At least 80 per cent or more of the destructive moisture comes from the ground and migrates up into the home because of insufficient water and vapor-proofing.

To be really effective, a permanent waterproof-vaporproof barrier must be installed during construction. Once the house is built without it, it's too late. So check with your builder before you buy or build your next home.

Electric Dryer Can Save You Time And Money

You don't have to move to the Land of the Midnight Sun in order to wash and then dry clothes sunshine bright at night. All it takes is the purchase of a flameless electric clothes dryer.

With clean, flameless electric power taking over the clothes drying job from sun power, you can conveniently do your laundry and dry your clothes at any hour of the day — or night.

The flexibility is especially important at a time when almost half of all women in the U.S. are working women. (after all, who wants to work all day and then slave over a drafty clothesline by the dark of the moon?)

Flameless electric clothes dryers also help busy homemakers—whether they are working mothers or not—to take full advantage of the permanent press clothes and linens available today. The happy combination of permanent press and electric clothes drying can be both a time-saver and a money-saver.

Because permanent press clothing comes out of the electric dryer ready to wear within minutes after it is washed, you don't need to waste money on extra sets of clothes that might be outgrown before their time.

And with both permanent press sheets and an electric dryer in the house, you don't have to stock up on

extra sheets and pillowcases or day, at your own convenience you can strip dirty linens from beds and wash and dry them for immediate re-use, if you have a electric laundry.

Wash Hands To Prevent Infection

A routine but through washing hands before every meal may be old-fashioned, but it's still one of the best ways to prevent the transmission of germs. Recent studies by physicians and public health authorities indicate that increasing incidents of infectious diseases. Accordingly, proper washing by both adults and children can be a big help in cutting illness.

To Store Paper Bags

A wire napkin holder tacked back of a cabinet door makes a place for storing paper bags.

Save Money — Only The Look Need Be Expensive

Choose your new shelving with care and no one will be able to tell it's a cabinet door. Today's newer systems have all the beauty of solid wood, but because they're a combination of solid woods and tempered hardboard, sell for much less. The system shown is one of these.

TRY New PURINA RANGE & PASTURE MINERAL

...the high phosphorus supplement

Phosphorus and calcium make up more than 70 percent of the minerals in cattle. For good body condition and maximum performance, cattle require an adequate supply of both at a ratio near 1:1.

Range and pasture grasses are very low in phosphorus content. Grazing cattle may get only 50 to 60 percent of their phosphorus needs in summer, and as little as 40 percent under drought or winter conditions.

Purina Range & Pasture Mineral, with its 16% phosphorus level, is formulated specifically to supplement mineral deficiencies of pastures and range.

Fed free choice, Purina Range & Pasture Mineral supplies all the known mineral requirements for cattle in amounts exceeding the National Research Council's recommendations. Phosphorus is supplied from three sources to insure availability; all trace minerals are present in readily available form.

Purina Range & Pasture Mineral contains organic iodine to help prevent foot rot and soft tissue lumpy jaw, iron in highly available sulfate form giving it a light instead of red color, cobalt, manganese, zinc and copper.

Stop by at the sign of the Checkerboard to find out what this quality mineral supplement can do for your cattle.

Finally! Car Insurance Rates Coming Down?

Your auto insurance comes up for renewal next month, and after three years of steady rate increases, you're braced for another big rise. But this year you may be in for a surprise — and a pleasant one for a change — because auto insurance rates are beginning to fall.

During the past two months, with little fanfare, hundreds of auto insurers have cut rates, and more reductions are on the way. The trend appears to be nationwide.

In Illinois, for example, more than 48 companies have reduced some of their auto rates since the beginning of the year, according to the state insurance department. "It's mostly the small companies," an official says. But he implies that big companies may follow. "The little companies frequently move first."

In New York, a few large auto insurers already have lowered rates. Hartford Fire Insurance Co., the nation's fifth-largest auto insurer, cut its auto-liability rates in the state on April 20.

As a result, when Hartford Fire's 185,000 New York auto policies come up for renewal, rates for bodily-injury liability will drop by an average of almost 7 percent and property-damage liability by nearly 5 percent. This should mean savings of \$7 or \$8 for the average

policyholder on his liability coverage. In some states two other large insurers, Continental Corp. and St. Paul Cos., also have reduced rates.

"Unconscionable Profits"

Why the reductions? The apparent reason is that auto coverage, which for several years has piled up heavy underwriting losses for the companies, suddenly turned into a profitable business around mid-1970. Confides an official of one of the nation's auto-insuring giants: "Frankly, since the middle of last year, we've been turning up unconscionable profits on auto coverage." This company says it is considering filing, in stages, for rate reductions.

In the first quarter of this year, another company, Nationwide Corp., the nation's fourth-largest auto insurer, turned up its first auto underwriting profit since 1959. The company says that if its "great experience" continues, it will lower its rates, although it hasn't done so yet.

Neither have the nation's two largest auto insurers—State Farm Insurance and Allstate Insurance Cos. But both say their underwriting

14

Grass & Grain

June 8, 1971

business this year has been "excellent." A spokesman for State Farm says the company is reluctant to cut rates during an inflationary period, which could suddenly bring higher costs to the companies.

Most rate cuts and requests for reductions so far have come in bodily-injury liability, the portion of auto coverage that a policyholder buys to protect him from claims resulting from injury to other persons in his own car or elsewhere.

Some companies are also cutting rates for property-damage liability—that is, coverage against damages to another person's property. In other cases, however, some companies are still increasing rates for property-damage liability and for collision insurance, which covers the policyholder's own auto.

A Dramatic Reversal

The emerging rate cuts mark a dramatic reversal from the past few years. "This is the first time we've seen any filing for rate decreases in a number of years," says a New Jersey insurance official.

The Insurance Rating Board, which represents several hundred companies, is also requesting certain rate reductions on a nearly national basis. In some states the board advises member companies on rates, and in other states the

board filings officially represent rate changes for its member companies.

Some insurance concerns are apparently cutting rates first in so-called file-and-use states, which don't require state approval before rate changes can be implemented, although in some cases the changes are subject to later review.

File-and-use states include New York, Illinois, Indiana, Ohio and 11 other states. In these states, the insurers would be free to raise rates if costs should begin to soar. In other states, where approval of changes must first come from the insurance commissioner, insurers indicate they fear they might become "locked in" with rate declines.

Why the sudden burst in auto underwriting profit? Apparently because of a reduction in claims from highway accidents and because last year insurers received permission for long-pending rate increases in states where such approval was necessary.

Economic Losses Decline

Economic losses from highway accidents fell by nearly \$375 million last year, according to the Insurance Information Institute, a trade group, which said declines in deaths and injuries were the key factor. Says an official of Hartford Fire: "We believe that we're beginning to feel the cumulative impact of improved safety features in cars, such as safety belts."

But safer driving doesn't appear

to be the full explanation for claims by policyholders of superficial damage to autos.

Don Brown, head of the Insurance Group's rate department, says that Kemper's results on coverage are better than anticipated, although he can't give a planation.

Privately, some insurers say that the reduced claims may be a result of policyholders' "phony" or exaggerated reports. A 6-man team at the University has been studying ways to wage claims and in insurance expenses, a key question in lower auto-insurance rates affect current moves for insurance laws.

Twenty-eight states are considering so-called no-fault insurance bills, designed to reduce rates for bodily-injury liability. The cost of coverage had been rising until the past few months. In fault, each driver's company would pay for bodily-injury expenses, thus the question of liability courts.

Insurance officials deny newly lowered rates are to take the steam out of the drive, although some believe the drop could have effect.

Note First '71 Cases Of Blight

The Agriculture department says a virulent form of Southern corn leaf blight has been confirmed in Illinois and Kentucky.

Officials said the infestation in Illinois was confined to a half-acre field in St. Clair County, and apparently was related to a shelling operation of old corn stored nearby.

"Illinois extension plant pathologists reported that some 1970 stored corn believed to have contained blight fungus spores was shelled on a wet, windy day," the department said in its weekly blight report.

"The spores are believed to have been carried downwind from the shelling site to the half-acre field," the report said.

The Kentucky outbreak was described as an isolated case in Todd County. A spokesman said no further information was available.

In addition to the one confirmed Illinois case of "Race T" blight, the most damaging kind, other suspected infestations have been reported. Those involve "volunteer" corn plants growing from scattered seeds from the 1970 crop in Champaign and Marion Counties in Illinois, the department said.

"But laboratory tests have not been completed on samples from those counties" to determine if the blight is the most dangerous kind, officials added.

In the South, where blight originated last year, the disease developed is well behind the rate of a year ago, officials said.

Everything For The Horse And The Rider
Largest Stock Of Saddles In Mid-Kansas

1810 North Buckeye
ABILENE, KANSAS

Open Daily 9 a.m. to 8 p.m.
Sundays 1 p.m. to 5 p.m.

First to serve the farmer.

Your International Harvester Dealer can show you 615 and 715 combines that should cost more. But they don't. Why wait?

Harvest Is Close At Hand

Check the power, prices and capacities of our new 615-715 combines with comparably sized machines.

You'll find that we're determined to give you more combine for every dollar you invest.

For example, we give you up to 107 hp in the 715. Up to 96-bushel capacity in the grain tank. Capacity features you can count on in any crop or condition.

Of course you get Quick-Attach platforms and corn heads. Variable speed cylinder and fan drives. Choice of belt propulsion or Hydrostatic

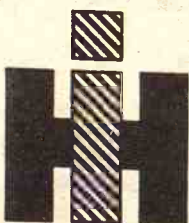

All-Speed Drive.

Naturally, some things we wouldn't think of changing. Like our full-width threshing. Practically plug-free fin-and-wire racks. Opposed-action cleaning.

These new 615 and 715 combines can be equipped with 10½- to 18½-foot platforms, or 2-, 3-, and 4-row corn heads. See your International Harvester Dealer. Compare them with any other like-sized combines. Then decide how you want your 615 or 715—finance, rent or lease.

See the new combines at:

Most Wild Hemp In Fence Rows

you want to find some wild hemp growing in the G&G look for it in the borders of cultivated fields. Or along roadsides and ditch edges.

At least that's the conclusion of the pioneer projects in control of wild hemp in the nation. Called Kansas Marijuana Control project, the effort is now nearly a year old. A 6-man team at Kansas State University has been studying the best ways to wage war on wild hemp in Kansas. Part of their project has included walking over 20 percent of the county for patches of marijuana.

The project was authorized by the legislature in 1970 and funded by a \$100 federal grant. The K-State team is trying various methods of control, including biological and chemical, biological and conventional war against wild hemp. The project is directed by Benny Eaton, a 27-year-old Oklahoma State University graduate who has just received his master's degree at K-State.

Each of the dozen persons, many from the area counties for harvesting wild hemp, have been arrested in the past few months. Although the Kansas law is not supposed to be as strict as the Mexican variety, arrests drew some attention to the law, and there have been estimates of 60,000 acres of wild hemp growing in the state. Most of it, is thought to be in the central and northeast parts of the state.

The Riley county study might

suggest the acreage estimates are valid. Eaton's crew found 625 locations of marijuana in the county. Most were patches of a few feet, but one was six acres in size.

Over half the stuff was found in the borders of cultivated fields. About 20 percent was found along road and railroad right-of-way. In native grass, about 17 percent was found, with smaller amounts found in tame pasture and cultivated fields.

Because of its most common locations, Eaton thinks marijuana cannot be controlled by hoeing or plowing. But it is generally accessible to tractor-mounted spraying or flaming.

The team also began revegetation research last fall. The team members are trying to establish plants in marijuana infestations that can eventually crowd out the marijuana, provide shelter and food for wildlife, and convert the land to something that has economic value. Some plants produce toxins which inhibit growth of marijuana.

"Unfortunately, we haven't found any cure-all yet, but we have some good leads," Eaton said.

One possibility mentioned last year was black walnut trees. It would be a valuable crop, Eaton said, and walnut seeds, in a laboratory situation, inhibited the growth of marijuana.

However, Eaton said, similar experiments in the field have had no effect on the growth of marijuana.

Effectiveness Questioned

"As of now, I'm afraid I can't put much confidence in the effectiveness of black walnut trees," Eaton said.

Currently under way are control experiments on about 59 to 60 plots of marijuana throughout the county. Team members are seeking to find out which control methods work best at which stage of growth of the marijuana.

The control measures being experimented with include mowing, to determine the optimum date of mowing and height of clipping; liquefied petroleum gas flaming; herbicides, and tillage. The experimental plots range in size from 10 feet square to a half acre.

Biological Control

Another part of the project is investigation of the feasibility of various types of biological control of marijuana.

Team members are experimenting with a parasitic plant which attaches itself to the roots of cultivated hemp and eventually kills the plant.

They also are experimenting with insects found on marijuana growing in the field.

Ecological studies being carried out include marijuana seed dormancy and germination; abundance, persistence and viability of marijuana seeds; germination and growth inhibitors, agents of seed dissemination, and analysis of narcotic resins.

Significant Reduction

Eaton believes it is not feasible to eradicate all wild marijuana growing in Kansas. But he says that if it is reduced significantly—especially the infestations which are accessible to would-be harvesters—then harvesters may not find Kansas so attractive.

involving self-service gasoline sales by Kwik Shop Inc., Judge Stephan said the section of the state fire marshal's regulations supposedly violated by the company was "vague" and therefore unconstitutional.

The regulation governing the operation of self-service gasoline stations must be considered in the light of the entire set of regulations, he said.

Kwik Shop, which operates 30 stores in Kansas, installed the self-service gasoline equipment at one of its stores here as a test, according to John Baldwin, Hutchinson, Kwik Shops director.

Following the installation, a deputy state fire marshal personally filled the tank of his vehicle March 4 at the store and charges were filed by the county attorney.

Baldwin said the service is in operation today as a result of Judge Stephan's ruling.

The county attorney said he will soon decide whether to appeal the ruling to the Supreme Court.

Plans To Expand Cudahy Salt Plant At Lyons

LYONS — The Cudahy Co. has announced plans to expand its American Salt Corp. subsidiary here, nearly doubling the plant's granulated salt processing capacity.

Cudahy is negotiating construction agreements with the contractor, said C.J. Brude, Cudahy vice president for public relations.

Brude said the project should begin within a month or two and be completed in two to three years. The "step" expansion calls for construction of another bank of salt water evaporating pans and additional warehousing space.

Cudahy, an Arizona-based firm, said the expansion was necessary to keep pace with sales demand. A slight increase in employment is expected when the project is completed.

LAND AUCTION ANNA O. NORDIN ESTATE

115.1 acres of good bottom land, lying south of the east end of McAdams Road, Salina, Kansas. — Sale to be held at the east end of pavement on McAdams Road, on

Friday, June 11
Starts 2:00 p.m.

The Southeast Quarter (SE 1/4) of the Northwest Quarter (NW 1/4) and the North One (1) rod of the east 410 feet of the Southwest Quarter (SW 1/4) of the Northwest Quarter (NW 1/4) and the South Half (S 1/2) of the Northeast Quarter (NE 1/4) south and west of the river, and the North Half (N 1/2) of the Southeast Quarter (SE 1/4) west of the river, less 19.6 acres for levee, in Section Nineteen (19), Township Fourteen (14), Range Two (2) West of 6th P.M., containing approximately 115.1 acres. (McAdams Street Farm)

Remember the above date and time. Very seldom is this close in land offered for sale at auction. Your opportunity as part of this land is protected by a levee for future development.

Buyer to receive the landlord's two-fifths share of the growing wheat crop, and government payments if any.

Ft. Riley Thinks Its Retraining Center Working On Soldier Misfits

FT. RILEY — As it nears its third anniversary the Army's correctional-training facility here shows that taking an enlightened approach to rehabilitating military offenders pays off not only for the Army, but for society as a whole.

The only one of its kind in the Army, the Correctional-Training facility is getting better-than-hoped-for results in halting a pattern that frequently leads to civilian penitentiaries.

Not a stockade detention prison in the traditional Army sense the facility is a 9-week retraining course that 84 per cent of the trainees complete successfully. The rest receive undesirable discharges or are returned to regular Army stockades.

Col. James C. Shultz, jr., facility commander, believes the most

important statistic in follow-up studies is that 57 per cent complete their Army duty without further disciplinary trouble. From regular Army stockades only about one man in 10 is returned successfully to active duty.

When the Army decided to undertake a retraining program with an emphasis on counseling, training and motivation it believed that returning 50 per cent of the inmates to regular duty would make the investment worthwhile.

Of about 100 to 150 trainees who arrive each week 91 per cent are in trouble for taking unauthorized leave and many others have committed assault or have secondary problems manifesting themselves in use of drugs or excessive drinking.

None of them faces serious civilian criminal charges, is known

to be psychotic or is a narcotics addict. However about 65 per cent have at least experimented with marijuana or other drugs, Colonel Shultz said.

The trainees are brought to the Camp Funston area on the east side of Ft. Riley from all over the country, posts in Europe and the Pacific and Vietnam.

Once they are in retraining many of the men are found to have personal debts, domestic difficulties and other personal problems that help account for their misbehavior. An early step in retraining is working out these problems.

The average trainee is a 10th grade high school drop-out and is 21 years old. Forty-two per cent come from broken homes.

Eleven of the Army's 150 social workers are stationed here at the facility.

The racial breakdown of offenders brought here is 73 per cent Caucasian, 24 per cent Negro and 3 per cent of other races.

Chaplains and legal assistance officers as well as social workers are available to the men in between regular Army training duties such as K.P., artillery fire and policing their barracks and grounds.

A follow-up study of the trainees done with 200 facility graduates in 13 Army installations indicated the former trainees thought the attitude and concern shown by the correctional staff was the single most valuable aspect of the program.

Civilian penal authorities are showing an increasing interest in the rehabilitation results. One facility officer noted that a critical difference between the Ft. Riley program and most civilian prisons was that trainees here were under a constant but helpful supervision while many prisons concentrated their personnel merely on maintaining security.

Most College Openings In State Schools

If you are having difficulty finding a seat at college don't overlook the nation's state college systems.

Although applications across the country are up 4 per cent there are indications that a number of state colleges have room for more students.

A survey by the American Association of State Colleges and Universities predicted state colleges would reject 54,865 qualified ap-

plicants, but said 42 per cent of the rejections would occur in New York, New Jersey, Pennsylvania, Massachusetts and Connecticut.

On the other hand, 134 of the 201 schools participating in the survey said they expected all qualified in-state applicants to be accepted.

More than half the institutions said they were not planning to accept more qualified applicants.

The 277 AASCU institutions account for 27.3 per cent of the students seeking bachelor's degrees in the United States outside California and Eastern states to students in fewer schools, lower cost and lack of student aid funds increases and declines in the national economy.

Participating schools received 421,642 applications in April 1, compared with 400,000 a year before when applications surged upward 10.7 per cent, AASCU said.

The survey also showed that budgetary considerations and frequent causes for enrollment ceilings are the most frequent causes for rejecting qualified students.

Out-of-state applications declined 1 per cent.

—32 schools showed declines in both resident and non-resident applications.

—Freshmen applications increased 4.7 per cent, from 247,977.

INTERNATIONAL FLEETSTAR-D

DIESEL POWER
ALL THE WAY

THE VALUE-PACKED SOLUTION TO SPACE- SAVING DESIGN

The job-proved Fleetstar 2000-D series offers large-displacement diesel engines in a 92-inch BBC. Tilt-hood maintenance convenience is combined with conventional cab-behind-engine design to create a low original cost truck for modern fleets and multiple uses. Economically powered with heavy-duty diesel engines, the Fleetstar-D series is ideally suited for use with 40-foot or longer trailers—and big loads. It's just right for tough jobs, too. Many are outfitted as transit mixers or with dump bodies.

Five popular Detroit Diesel and Cummins diesel engines, ranging from 218 to 270 hp, are available as standard or optional power sources. Featuring dependability and long life, these high-output engines are the answer to operator's demands for large displacement engines in compact trucks. Numerous transmissions are available to match power and load to road, some with optional aluminum housings.

More power—less weight! Fleetstar-D slashes dead weight

through the extensive use of lightweight but strong aluminum. Heat-treated steel channels that carry greater payload are utilized, as well as a tough fiberglass tilt-hood-and-fender unit that's hard to damage but easy to repair. It all adds up to extra payload, greater dollar savings!

Within the 92-inch BBC, a spacious cab provides the driver with both clear view and easy truck control. The cab is functionally designed. All controls and instruments are positioned for safety and ease of operation. No unnecessary frills to confuse, confound or repair. The Fleetstar-D simply offers the maximum driveability and comfort required to make every trip, long or short, a safe and profitable haul.

Fleetstar-D models are available in capacities from 32,000 to 46,000 pounds GVW in either tandem or single rear axle models, and GCW ratings of 65,000 or 79,000 pounds. Diverse needs for line-haul tractors or straight truck applications are easily met.

Quinter Firm Gets First Loan To Add State Jobs

A corporation formed to put Kansas money into Kansas industry has made its first loan to a western Kansas farm manufacturer.

The \$225,000 loan to Ideal Industries at Quinter was made by the Kansas Development Credit Corp. as part of its "Kansas Funds Promote Kansas Jobs" program.

Ideal will use the money for expansion of facilities, increased production, and more jobs, says its president, James A. Boone.

George Doak, executive vice president of the KDCC, said the loan is a result of team effort by state

banks and industry, the Small Business Administration and the investment of Kansas Public Employees Retirement Funds, all cooperating thru the KDCC.

KDCC packages the loan arrangements which are referred to the agency by a local bank member on behalf of its client.

Kansas banks provide the original loan money pooled by KDCC to assist and maintain industrial operations, mostly of small firms. The loans now total more than \$4 million to nearly 50 firms scattered throughout the state.

The SBA also makes loans to industry in the state, and guarantees loans in cooperation with banks and the KDCC.

The new program of "Kansas Funds Promote Kansas Jobs" involves the purchase of SBA-guaranteed loans from Kansas banks for resale to pension funds such as Kansas Public Employees Retirement System.

Doak said the program greatly increases the potential of Kansas capital investment by using Kansas pension funds for investment in the state's economy; by increasing the lending power of Kansas banks by releasing funds committed to present SBA-guaranteed loans and providing additional funds for new loans, and by increasing the SBA-guaranteed activity of expanding the Kansas economy. Investments made by pension funds in the SBA guaranty program will be protected by the full credit of the U.S. government.

Revised Law Cuts Population In Geary County

JUNCTION CITY — Geary County will lose 4,500 in population this year because of a 1971 state law which provides for a return to use of the county clerk enumeration instead of

Grass & Grain

17

June 8, 1971

the federal census.

A preliminary report by County Clerk Guy Day showed a tentative Geary County population of 23,611 compared to 28,111 in 1970.

The federal census counted persons residing in certain portions of Ft. Riley as part of the Geary County population. The 1971 enumeration does not include persons at the military posts.

Junction City, Grandview Plaza and Milford, the county's three incorporated cities, had 1971 increases of 303, 87 and 77, respectively.

The tentative 1971 population figures are Junction City 19,974, Grandview Plaza 882 and Milford 350.

Junction City's all-time high population was 20,975 in 1965. It dipped to 16,809 in 1967 after the departure of the Ninth Infantry Division to Vietnam.

The federal census was used only one year.

Extension Honors Former Director Harold Jones

Dr. Harold E. Jones who was director of the Kansas Cooperative Extension Service for 12 years (1956-68) was honored at a portrait unveiling ceremony in Umberger Hall Wednesday morning.

The portrait of Jones, painted by Elfreda Peterson of Manhattan, was presented to the Extension Service by Extension associates and friends of the former director. It is located in the foyer of Umberger Hall near the portraits of two other former Kansas Extension directors, L.C. Williams and Harry Umberger.

Many of Jones' friends were on hand to congratulate him and listen to special tributes given him by Dr. Robert A. Bohannon, present director who represented the state and area personnel; Herb Bulk, Shawnee County agricultural agent, Topeka, who spoke for members of Epsilon Sigma Phi, national honorary Extension fraternity; and Mary Lee Edwards, Woodson county home economics agent, Yates

Center, who represented the coordinating committee of the Kansas Extension agents associations.

Jones, who voluntarily stepped down from the director's position for health reasons, still is an active member of the KSU Extension faculty. He is serving on a special committee to develop an Extension program for fighting pollution. He also is doing soil science studies and works with county agents in increasing soil fertility. Always a strong booster of 4-H, Jones also is developing a geology program for the youth as he seeks to improve and conserve the state's natural resources.

Bohannon praised Jones for many innovations in the Kansas Extension Service. The former director broadened the scope of the Extension program by studying the state's needs and then providing specialists to help meet them. Among programs strengthened by

Jones were those in resource development, herbicides and pasture management.

Jones, Bohannon said, emphasized in-service training for Extension employees and encouraged programs of professional advancement. He always maintained an "open door" policy and often implemented suggestions of employees into the Extension program.

Bulk told the gathering at the unveiling ceremony that Jones set an example for the people who worked for him. "He had a true sense of integrity and a rigid adherence to a code of soundness which he used as he worked untiringly toward his goals."

Jones, a native of Concordia, became director of Extension in 1956 after serving as an extension soils specialist at the University of Minnesota for seven years. While at Minnesota he was recognized as one of the outstanding organizers, productive workers and innovators in the country's Extension Service. Prior to his work at the University of Minnesota, Jones taught courses in soils and soil conservation at KSU and conducted research in those areas. In 1968 he received an award from the Kansas Association of Soil Conservation Districts for outstanding contributions to soil and water conservation.

Following the unveiling ceremony Wednesday, a luncheon was given in honor of Jones and his wife, Alice.

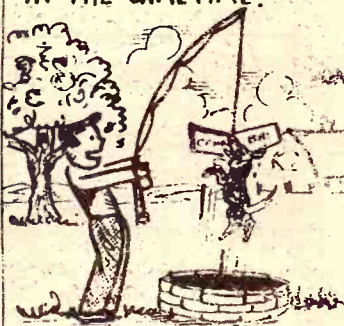

SHARE DAD'S HONOR

Members of Dr. Harold E. Jones' family were on hand June 2 when portrait of the former director of the Kansas Cooperative Extension Service was unveiled in Umberger Hall at Kansas State University, Manhattan. The portrait was a gift of Jones' Extension associates and friends. He served as director of KSU Extension from 1956-1968 before voluntarily stepping down for health reasons. Jones still is a member of the Extension faculty assisting in pollution, geology and soil research work.

Members of the Jones family, left to right, are: Allan, Dennis, Ronald, wife Alice, and Dr. Jones. Also present for the ceremony were Dr. Jones' oldest brother, John and his wife from Concordia and Ray Steiner, Dr. Jones' brother from Lafayette, Ind.

START ON HERINGTON SALE BARN

A new sale barn is coming at Herington. Here, Lee Remy, one of the owners of Herington Livestock Inc., digs the first dirt to start the new facility. With him at left are Joe Clemence and Irvin Christiansen and next to Remy is Ed Tolle. They are principal owners of the livestock auction with Remy. In the center is James K. Smith, president of the Herington Chamber of Commerce. The auction barn itself will be a steel building 100 feet by 220 feet with space for offices and a restaurant. Remy says the new facility will handle 2500 to 3000 head of cattle. The new market will be on the east side of US77 a mile north of the US77-US56 intersection. Gay Construction Co. of Abilene is the builder.

Cash Store Of Surplus Foods G&G Area Welfare Trial

A new concept in distribution of surplus commodity food to low income families through a self-service market, but with no cash involved, has been launched in Topeka as a pilot project that will receive statewide attention. The project is a co-operative effort of the State Department of Social Welfare, the Shawnee County Welfare Department and the Food and Nutrition Service of the U.S. Department of Agriculture. The Topeka no-cash store is the first in Kansas and one of the few in the nation. It is intended to give needy families a more dignified choice of shopping for surplus foods and an opportunity to get foods more adaptable to the local diet. It works well there likely will be more centers like this set up in other parts of the state. "The 18 Kansas counties that participate in the federal surplus food program," Dr. Robert Harder, director of the State Department of Social Welfare, said, "will serve about 125 household heads went

through the two check-out lines Wednesday in space set up at the Mid-America fairgrounds.

The center is expected to serve 1,500 families in Shawnee County, or about 6,000 residents, that have been certified as eligible for federally donated foods.

Under the plan any family that feels it does not have money for essential foods may make application for participation in the surplus commodity program at the county welfare office. If the family meets the requirements, the head of the household is issued a card showing eligibility and the number of persons in the family.

The card is presented to the receptionist at the store. The person then is given a card showing which foods are available and the number of cans or packages of food the family is allotted under the distribution regulations. The recipient takes a grocery cart, picks up the items and goes to the check-out stand where the items are checked against his eligibility card.

John Summers, director of the emergency food and medical program of the office of Economic Opportunity, who was supervising the initial run, said he does not expect a particular change in the number of families to be served. The supermarket approach, however, should be faster and easier for the low income families and the system should reduce the amount of labor involved, he said.

Dr. Harder said the plan also will take some of the stigma out of obtaining surplus commodity food for a family and give the feeling that persons actually are shopping and making a choice.

In the past needy families obtaining such foods simply have received a box shoved across the counter of the distribution center, with the box usually containing a nondescript assortment of items. At the store the recipients also are

given a card explaining how best to store the foods, hints on menu planning and how to stretch the meals. This information is provided by the Kansas State University Extension Service.

At the check-out counter the

recipient signs his eligibility card as payment of the bill.

Twenty-three items, including canned chopped meat, fruit and vegetables, flour, butter, dry beans and cheese are currently available at the Topeka store, Dr. Harder said.

BOBBED FINGER DOESN'T STOP YOUNG PIANIST

A mower accident which cost him a bobbled finger and crushed hand hasn't stopped the piano ambitions of Danny Buerki, 14, of Goddard. The accident happened last summer — the finger being torn and hand crushed in the belt of a mowing machine — but Danny overcame the problems and was the accompanist at middle school graduation exercises at Goddard and for the 7th and 8th grade mixed chorus that took three honors at a district music festival.

Next year Danny Buerki figures to try out for the accompanist job of the Goddard High School chorus. He's the son of Mr. and Mrs. Lynn Buerki.

Ping Pong Opens Diplomatic Door, But Sales Lag

Table tennis may have done a lot for diplomacy, but diplomacy doesn't seem to have done much for table tennis.

Sales of table tennis equipment were not notably stimulated by the publicity surrounding the U.S. table tennis team's goodwill tour behind the bamboo curtain to China last month.

However, equipment manufacturers and sporting goods stores said a visit by the Chinese table tennis

team later this year could change that picture. The Chinese were invited by the U.S. team.

"It was the most publicity the game has had in 30 years, but the U.S. trip came at the worst time of the year for us," said Ed Heller, sales manager for the Harvard Table Tennis company, Cambridge, Mass. "There may have been a slight improvement, but it's hard to tell."

Heller, whose company is one of the top U.S. manufacturers of table tennis equipment with annual sales of 1 million dollars, said table tennis is a fall-winter sport.

Wood products in Los Angeles, which manufactures more than 100,000 table tennis tables a year,

said it had been inundated by inquiries from stores and sporting goods shops that had never carried table tennis equipment before.

But while some stores might order now for sales later, most retailers apparently were wary that public enthusiasm for the sport might wane over the summer months.

"There was much external enthusiasm, but it has not been reflected in sales," said a spokesman for Sears, Roebuck & Co. in Chicago. He added, however, that a visit by the Chinese team could refresh public enthusiasm and spur sales later this year.

Parker Bros., Inc., which coined the name Ping Pong in the 1920s but was forced out of business in 1970 by low-priced Japanese imports,

nevertheless was watching public enthusiasm for the sport with interest. "We still have the protected," a spokesman said, "we're considering several go."

A spokesman for Wilson Sporting Goods company of River Grove, Ill., said he didn't believe table tennis equipment would be a big seller.

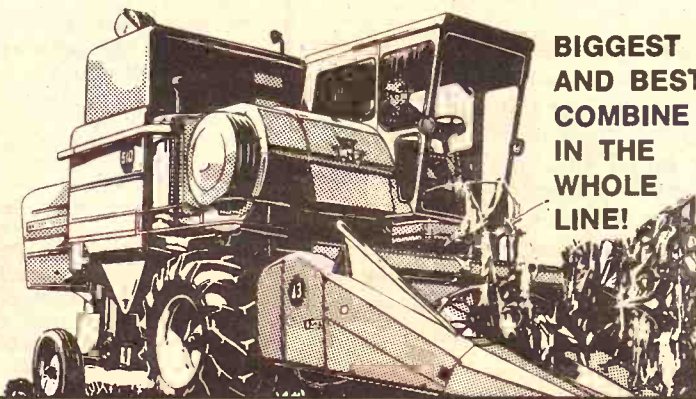

There are about 10 table tennis equipment manufacturers in the country, and industrywide sales are estimated at about 5 million a year.

Tables range in price from \$75; rackets cost \$1 to \$9, and balls run from 10 to 35 cents.

WHAT THE NOISE WAS ALL ABOUT

A G&G area farmer, Lynn Buerki of Goddard, got a little extra fanfare — and a chilled bottle of champagne and a crock of Cheese — when he signed in at Racine, Wisc., as part of a farmer visitation program of the J.I. Case Co.

Buerki was the 5000th farmer to register at the Case plant as part of a company plan to get big farmers to visit tractor production facilities. Buerki was one of about 100 farmers from the G&G area to fly to Wisconsin and tour the plant. His dealer is Joe Adams of the Case Power & Equipment at Wichita.

Buerki farms 1270 acres near Goodard, growing wheat and milo and managing a sizable dairy herd. He is vice president of the Kansas Soil Conservation Assn. and chairman of the Sedgwick County SCD. He owns three tractors and one of them is a Case.

producers. He further stated that its benefits will be felt by purebred breeders and commercial operators as well as feeders. The station will consist of a 140-day feeding period with a sale at the end of the test, on November 17, to give cattlemen an opportunity to buy tested bulls to use in their own operations.

"We are pleased to have a part in this Bull Testing Program at a time when the livestock industry is placing a great amount of emphasis on producing a lean, high quality product for the consumer", stated Fred Germann, Dwight, president of the Kansas Livestock Association. "This type of effort by the industry should certainly be of great help to identify the type of cattle that can

produce a superior product for today's housewife."

The bulls that are entered in this first test were born from August 1 to October 31, 1970. Only the upper two-thirds of the bulls at the completion of the test will be eligible for the sale. Following the test and before sale, ultrasonic measurements will be taken to determine fat thickness and rib eye area.

Max Deets, Beloit, manager of the Solomon Valley Feedlot stated that it should be of great merit to have the test station located within a commercial feedlot so the bulls would have an opportunity to perform under normal feedlot conditions. He said the rations were designed to develop the genetic

potential of the bulls and still keep them in a condition to make them useful to the industry.

The Solomon Valley Feedlot, a commercial lot, is located east of Beloit. Still in its first year of operation, this attractive feedlot has the most modern equipment for feed processing which includes a "popper" to process grain. The lot also has modern pollution control facilities to handle runoff.

MOWING ACCIDENT INJURIES

G&G AREA TRACTOR DEALER
MARYSVILLE — Oscar J. Brauchi, Massey and Case dealer, had his left heel almost severed in a lawn mowing accident at his home here.

Beloit Feedlot Used For Kansas Bull Test Station

June 1 marked the opening of the Kansas Bull Test Station located in Solomon Valley Feedlot near Beloit, Kansas. The station is jointly

sponsored by the Kansas Livestock Association and the Kansas State University Extension Service.

Open to all breeds and crossbreeds, this first test has over 150 bulls consigned.

Clair Parcel, a Coldwater, Hereford breeder and chairman of the Beef Improvement Committee of the KLA, said this station will be a great asset to Kansas beef

\$600,000 Building Set For 4H Ranch At Rock Springs

Contracts have been signed at the Rock Springs Ranch Kansas 4-H Center south of Junction City for construction of the new \$600,000 4-H Citizenship building at the ranch.

The signing took place at the "Friends of 4-H Day" at the center, with the three contracts signed by Dolph Simons, sr., of Lawrence, chairman of the Kansas 4-H Foundation.

At the same time it was disclosed by J. Harold Johnson, of Manhattan, executive director of the Kansas 4-H Foundation, that A.D. Jellison, of Junction City, currently in a Presbyterian home in Topeka, is providing a \$200,000 contribution for construction of the building.

"Mr. Jellison is responsible for starting the project about a year and a half ago when he issued his challenge to the board of trustees for raising of the remaining funds," Mr. Johnson said. "His offer was for \$200,000, with the remaining amount to be provided through fund raising."

The contracts, for approximately \$600,000, were awarded to the J.S. Frank Construction Co., Salina, for general construction; Electric Equipment Co., Salina, for electrical work, and Vaughn Plumbing and Heating Co., Wichita, for plumbing and mechanical work.

Mr. Johnson said the bids were taken in May.

"The contract total of about \$500,000 means that we dropped out several alternates, to come within the available funds," he said. "This means that we still will have to raise some \$75,000 to complete the building. We expect to raise the additional money during construction and to put the alternates back in, for completion of the building."

"We feel sure that when the people of Kansas know the building is under construction they will provide the

funds. The board members expressed that opinion Friday, and are sure the necessary money will be raised," he added.

In addition to the Jellison gift, Mr. Johnson said Mrs. Kenneth Spencer, Kansas City, and the Kenneth and Helen Spencer Foundation of Kansas City, are providing money for the auditorium portion of the building in memory of Mr. Spencer.

Other major contributors are the Kresge Foundation, of Detroit, Mich., and Farmland Industries, of

Safety Record Improving But Farmers Still Shy From Expense Of Protection

Kansas farmers are becoming more safety conscious, but there still is an alarming number of deaths caused by accidents on the farm. This is evident in preliminary figures compiled for the 1970 Kansas Agricultural Accidental Death Report from the Kansas Department of Health.

The number of deaths in tractor accidents declined from 22 in 1969 to 18 in 1970. But the tractor — coupled to carelessness — remained the chief killer, causing 52.9 per cent of the accidental deaths on Kansas farms last year.

Overturning of tractors accounted for 11 of the deaths. Falls off tractors caused four deaths and other tractor accidents three.

Statistics compiled from 1961 to 1970 show 236 tractor-involved fatalities in the period.

Fatalities involving farm machinery other than tractors declined from 11 in 1969 to three in 1970. Other machines than tractors caused 56 fatalities in the 1961-1970 period, the department reported.

Over-all death toll in farm accidents was 34 in 1970 compared to 46 in 1969. The fatalities also involved hayloaders and tractor discs.

Accidental deaths on the farm figured at 38.6 per cent of the state's industrial deaths in 1970.

Danger hours on the farm were

from 11 to 11:59 a.m. and 2 to 2:59 p.m., the department reported.

Encouraging news came recently with the announcement that Deere & Co. has released to its competitors,

without charge, its patents on protection of tractors against the dangers of overturning.

The company said it is taking this step with the hope it will lead to

increased use of protective roll frames.

The frame limits the roll to a 90 degree angle and prevents the usual 180 or 350 degree upset, according to a Wichita Deere & Co. dealer.

"Farmers are reluctant to spend the money to buy them (roll guard frames). I would like to see them as standard equipment on all makes of tractors," said Wayne Chesney, manager of Western Implement Co.,

John Deere dealer, 2256 S. West.

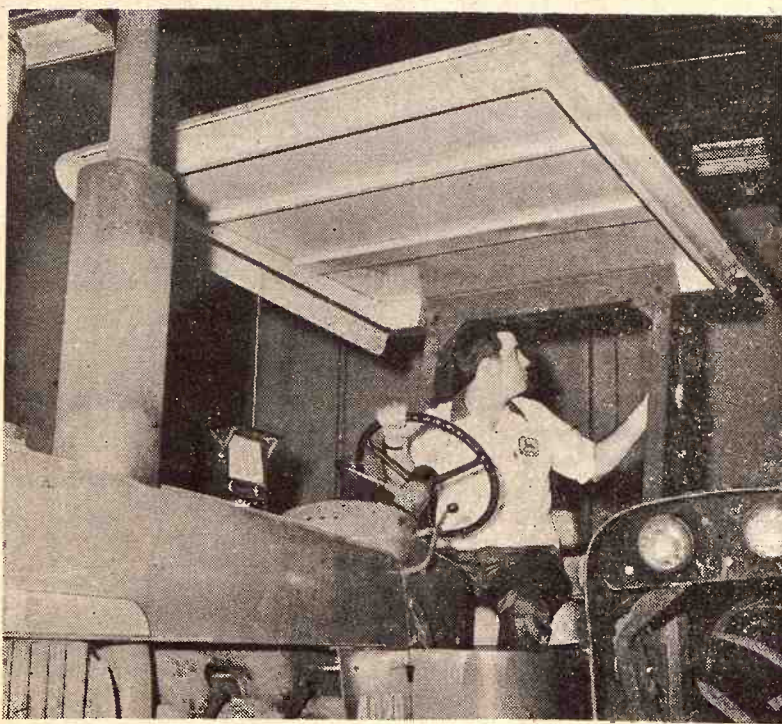

Don Hommertzhim of the company said that film taken of roll-over with dummies show only a few bruises with the guard and seat belt equipment.

Cost of roll guard equipment installed is about \$300, he said.

Farmers who have installed the roll guards praise them highly, a Deere representative said.

"I think they are great," said John Lauber Jr., Derby farmer who has experienced a tractor accident. "I wouldn't be without them. It's a good insurance policy."

"The guard and canopy stick up in the air so far that they are actually a protective device on the highway. Motorists can see them."

SAFETY FRAME

Don Hommertzhim of Western Implement at Wichita checks over a roll-guard frame installed on the tractor of Dick Bolinger of Cheney.

Man Killed In Fire At G&G Area Soybean Plant

The five-story extractor plant was knocked out of operation.

Rescue workers evacuate injured men from the plant. One man was killed and three others injured.

Hoses were trained on a large chamber called a desolventizer-toaster mounted outside the extractor plant. Firefighters were able to extinguish a fire in and below the toaster by spraying water over the machine and lowering the temperature of the vapor and liquid inside. Firefighters estimated that 1.3 million gallons of water were used in controlling the fire.

One man was killed and three others injured in a fire at a soybean oil extraction plant at the Kansas Soya Products plant at Emporia last week.

Dead was Griffith Humphreys Jr., 45, of Emporia, who suffered burns over most of his body.

The fire apparently was started by an explosion from a solvent used to extract soybean oil which was ignited by an open fire in a boiler room.

The five-story extractor plant was closed for several days while repairs were made.

Besides Humphreys, six men were in the immediate area of a flash fire after the explosion. Three of them escaped injury. Injured were Keva Cunningham, Neosho Rapids; R.B. Hedrick, Neosho Rapids; and Victor Hickey, Emporia.

About 20 firefighters and five trucks were involved in controlling the blaze. Some of that effort was directed in keeping down the temperature of a desolventizer-toaster which could have exploded with more devastating results.

LAB HIGH SCHOOL TO CLOSE

College High School at Pittsburg, a laboratory school set up in 1912 to help train teachers, is going to be closed. The Board of Regents had ordered the school closed and the space given to the department at Kansas State College at Pittsburg, the school's largest department.

College High had 153 students in its last school year just ended. The cost of operating the lab school and changes in methods in training student teachers were cited as reasons for closing it.

A laboratory high school at Emporia State was closed several years ago.

No Local Bus Service Around Fort Riley

JUNCTION CITY—Local bus service between Junction City and Manhattan, Kan., will be discontinued after June 22 by the Junction City-Ft. Riley-Manhattan Transportation Co., president Coleman Bruce said.

The Kansas Corporation Commission has announced approval of an application by the company to discontinue the Ogden-to-Manhattan route. Buses will stop running after June 12.

The company last April notified Ft. Riley authorities its Junction City-to-Ft. Riley service would be discontinued June 22. No KCC authorization was needed.

KCC Chairman Dale Saffels said the commission approved the recommendation from examiner Robert Pilton that discontinuance of Ogden-Manhattan service be approved.

Saffels noted the company had provided proof that the route was losing money and that no protests had been entered in a public hearing on the company's application. Current service includes hourly buses to the Custer Hill area of Ft. Riley and every other hour from Junction City to Manhattan via Ft. Riley.

After June 22, there will be no local bus service between the two cities or on the military post.

The Junction City firm discontinued local service in Manhattan in January. Junction City has no local service.

Bruce said the company will continue its contracted school bus service with Geary County Unified School District 475 and offer charter and special service.

USDA Says No Cattle With DES Trace Hit Market

An Agriculture department official has challenged a senator's charge that consumers are being sold beef contaminated with a cancer-causing chemical.

Richard E. Lyng, assistant secretary of agriculture, said no red meat containing detectable levels of diethylstilbesterol (D.E.S.) has reached the market. D.E.S., a synthetic hormone used to fatten cattle, has been found to cause cancer in laboratory animals.

Sen. William Proxmire (D-Wis.), said earlier that between 100,000 and 150,000 cattle with D.E.S. residues are being slaughtered each year because the Food and Drug administration has refused to ban the hormone.

Lyng, who did not mention Proxmire by name, said those figures may have been reached by inaccurately projecting test samplings. He said of 30.9 million head of cattle inspected and passed last year, 192 were tested for D.E.S. and only one showed traces of the hormone in the liver but not in the red meat.

Most of the test animals, Lyng said, "were suspect to start with, picked from herds where we thought the producers might not have followed the FDA requirements to withdraw the drug 48 hours before slaughter."

A new program begun this year will sample 6,000 animals annually for D.E.S., he added.

drinks and all the free pizza they could eat.

Every high school graduating senior had received a printed invitation—hand-delivered at commencement exercises.

The Geary County Republican Central Committee had publicized the event in the local newspaper and on the radio.

The weather was warm and humid outside but inside the air-conditioned Municipal Auditorium it was pleasant.

There was no other major youth activity competing for attendance.

But only about 50 young people showed up. Forty-five of them registered to vote.

"It's a mess. I've had more kids than this in my home," said a disappointed Mrs. Maurice Meseke, whose idea it was to have a young voter registration party.

"What do you have to do to get them out? I don't know where they are," grumbled Frank Duffy, Geary County GOP chairman.

The party was sponsored by the Republican organization but invitations had gone out to more than 400 young people—Democrats and Republicans alike.

They had tried to make it as convenient as possible. Registration books were open all evening in an office right next to the huge hall where no one danced.

The new voters just stood or sat in small groups, unable to talk to one another because of the too-loud band.

The party that started at 8 p.m. was almost deserted at 9:45 p.m. Even the pizza was not all eaten.

Mrs. Meseke had hoped to show that the Republican Party welcomed the young people into its political fold and, being the first to do it, hoped the youth would look kindly toward the Grand Old Party, rather than the Democratic party.

Somehow they didn't put it all together.

That the senior party members wanted the party to go over big was evident by the presence of William Falstad, state GOP chairman, Secretary of State Elwill Shanahan, Brian Harris, president of the College Republicans and Rep., Robert Miller R-Wellington, president of the state Young Republicans.

David Bowers, executive director of the Sedgwick county GOP headquarters, and Michael Murray,

a field coordinator on Bowers' staff, had come out of curiosity—and to learn something.

They are planning to have a young people's voter registration party next month in Sedgwick County. They were hoping to learn how to draw young people together.

What went wrong? In post-mortem conversations, some people thought the location was all wrong—sandwiched between city offices on one side and police and fire stations on the other. Not a site the youngsters would have picked.

Some said the election campaigns are too far off to arouse any interest at this time with voters, young and old.

But the consensus seemed to be that the affair should have been planned and staged by the young people themselves. Senior party sponsorship may have been interpreted by the youth as a patronizing gesture.

New Technical Weapons Zeroing Against Thieves

The technology of the second half of the 20th century, the detection devices of Vietnam and the modern miracles of communication are zeroing in on thieves.

The old burglar alarm, which always seemed to ring in stores when there were no burglars, is passe.

The vendors of security are now pushing ultrasonic devices that fill a room with invisible waves to detect movement, telephones that automatically call the police, sen-

sors that spot an intruder by body heat, cameras that flash dark, flashlights that shine plastic handcuffs, keyholes and television cameras at the corners of stores and homes.

Unfortunately, the more sophisticated the equipment, the more sophisticated the thieves. "Can always get away with it," says a private investigator.

And the security measures they have new problems. Computer thieves who can steal data from a computer. But they also are taking weaponry in the future.

following:
o The use of radio materials and blasting enable a detection device concealed bomb or gas.
o A pack of phony money given to bank robbers, up in a getaway car.
o Magnetic markings goods that, unless removed, make an item subject to theft if left the store.
o Credit cards that can tell the merchant if a card is stolen or counterfeit.

Manhattan Shows Off Water Facilities

MANHATTAN—This started its own water has unveiled its new expansion of city water its customers.

An open house was show off the new water plant. The total package million: a new plant, three million gallons ground and underground pumping facilities, six and a new sludge disposal.

Manhattan voted in 1887 to build a pumping station and the was operational in 1922. The treatment plant, constructed and a storage enlarged in 1937 and 1950 new plant, Manhattan million gallons per day distribution capacity.

Another Loss For National Alfalfa

National Alfalfa Dehydrating & Milling Co. of Kansas City expects to post a loss for the fiscal year ended April 30 of \$100,000 to \$200,000, compared to a loss of \$574,000 a year ago. In fiscal 1970 the company had sales of \$8.1 million.

Charles R. Peterson, president, said the company's operations had been hurt by rising costs in its Nebraska farming and cattle-feeding operations.

The company also experienced a loss in its futures trading activity in the fourth fiscal quarter, he added.

National Alfalfa also produces alfalfa meal and manages cattle herds.

How's Your Wheat?

And is your maize in the soil? ... Whatever you need, Ol' Ev's got the machine to help you. If you've been just horsing around looking for a better deal, you've horsed long enough. When better trades are made ... Ol' Ev's making 'em.

Only 14 Pay Hikes Listed At KU

Pay raises at the state universities, all but automatic and well over inflation rates in the past two decades, have all but disappeared at the University of Kansas after the Legislature set the upcoming budget on a "hold the line" basis.

The Lawrence Journal World said that it can discover only 14 pay hikes on the faculty at KU and the KU Med Center for the coming year.

All 14 involve changes in job status or contractual commitments. Seven of the pay raises were for career development grants, which carried obligations from previous contracts. These averaged over \$2000 and amounted to about 10 per cent pay hikes to affected professors.

Four of the pay raises went to profs who got higher appointments. One of them went to Martin Dickinson, new head of the law school, a job which earned him a raise went to Martin Dickinson, new head of the law school, a job which earned him a raise from \$18,500 to \$26,500. The latter figure is less than the \$27,800 paid to his predecessor, Lawrence Blades, who went to the University of Iowa as head of that university's law school.

Three other increases went to individuals assigned to the Kansas Geological Survey and each pay hike had been committed before the new budget was set.

The pay at KU goes to Chancellor Laurence Chalmers and Dr. William Rieke, who directed the Med Center as acting vice chancellor the past year. Both make \$40,000 and neither got a raise.

No pay hikes went to five vice chancellors and 10 deans either. Their pay ranges from \$22,000 to \$30,500.

The Journal-World also listed 13 administrators and 100 professors whose pay was \$20,000 or more. None had pay increases in the coming budget.

Grass & Grain

35

June 8, 1971

and malicious — mischief coverage, or fires resulting from those categories, the deductible amount will be \$50,000 for each occurrence instead of the present \$100,000 deductible provision.

The deductible amount will remain unchanged with respect to vandalism and malicious mischief or fire losses resulting from those causes.

"While the committee indicated that it was generally pleased with the new premium and deductible provisions, it was still not completely satisfied with the deductible provisions applicable to windstorm, hail and other 'act of God' perils," the committee said in a prepared statement.

"In view of this fact, the committee said that it intends to continue its discussion with the company in an attempt to obtain further improvements in the deductible amounts applicable to these perils."

The reduction of the premium was attributed to the lack of violence and property destruction on college and university campuses the last year.

Rossville Ready For Centennial

ROSSVILLE — This western Shawnee county town of 1000 is going to celebrate its 100th anniversary in July. The town, having grown from little over 200 a few years ago, has already started pressuring its men to grow beards for the occasion.

The town plans a 4-day birthday party July 22-25. Two buffalo calves are being fattened for a barbecue July 24. They are bed fed at the Leo Gannon farm three miles west of Rossville after being purchased from Carl Stich at Wamego.

K-State Works Premium Cut From Insuror

The state committee on surety bonds and insurance has announced a substantial reduction in the cost of insurance on buildings at Kansas State University.

Premiums reduction for the forthcoming year were obtained through negotiations with the National Union Fire Insurance Co., which insures buildings at K-State valued at nearly \$33 million.

The commission said the annual premium on the policy will be reduced from \$86,216 to \$70,000 annually.

G&G AREA GIRLS AT JUNIOR OLYMPICS

The G&G area produced a number of female winners at the Kansas Junior Olympics at Lawrence. Among them were, at left, Carole Schreiner of Frankfort who won the senior 880-yard run,

and, at right, Carole Goeckel of Washington who won the senior high jump at 5-3 1/2.

Among the other G&G area girls who qualified into the Missouri Valley AAU meet at Kansas City June 26 were Diane Nissen of Carlton, Diane Grout of Mankato, and Leesa Wallace of Barnard.

'We Followed Directions,' Says Army Over Weed Spraying Near Milford

The Army was complying with Kansas law when it sprayed more than 42,000 acres of the Ft. Riley military reservation for musk thistle early this spring, public information

officers at Ft. Riley said yesterday.

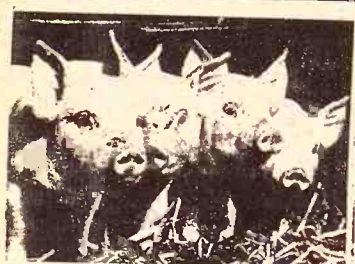

The chemical 2-4 D, used in the aerial spray operation, was washed into Milford Lake after heavy rains and killed 85 to 90 per cent of the

plankton in half of the lake, according to William Cole, regional biologist for the Kansas Forestry, Fish and Game Commission. Plankton provides food for small fish.

Ft. Riley officials said 14,688 gallons of the weed killer was used between April 26 and May 6, applied at the rate of 3 pints an acre as recommended after studies conducted at Kansas State University, Manhattan.

The project was approved by Ft. Riley and 4th Army officials. The final approval was granted by the working group of the President's Cabinet Committee on Pesticides, which has sole responsibilities for making final decision on any government project that might affect the ecology.

Military authorities said care was taken not to spray areas along the borders of the reservation or within 300 feet of Milford Lake or within 100 feet of any ponds or streams that flow into the lake. Representatives of Ft. Riley, the 4th Army and the Kansas Noxious Weed Department of the State Board of Agriculture were present during the spraying to monitor all aspects of the program.

HAY, GRAIN & SEED

App. 350 square bales alfalfa inside; some baled wheat straw; some baled prairie hay; 500 ear corn; 300 bu. oats; 1000 milo seed; 1 bu. seed corn.

A FEW HOUSEHOLD ITEMS

Terms — Cash Day Of Sale

Mr. & Mrs. Elmer Hartzeim

Aucts: Foster Kretz Auction Service, Clay Center, Ph. Morganville WA 6-4422

Clerk: Community Bank, Hanover

The early spring date was for the spraying because it was most tender and the weeds could be obtained. Mid or late summer would have little effect on the weeds.

Kansas law requires owners to eradicate weeds. Local, state and federal land is included. County weed departments are to spray land where weeds comply and assess the property as a tax.

To settle the estate of Mrs. Seilkopf, located at 415 W. WAMEGO, KANSAS

SUNDAY, JUNE 13
Starts 1:30 p.m.

Farmer Eye On Chinese Grain Trade

If absolute hostility between the U.S. and Red China subsides, many politicians and businessmen see some sizable commercial markets available. One who thinks that the U.S. farmer might gain more than anyone out of such a change is John Schnittker, a native of Kingman, later a K-State professor and undersecretary of agriculture. Schnittker returned to K-State after his sojourn in Washington but has returned to the capital as a farm consultant. This article was written by Schnittker with Muriel Allen, who covers Washington for the New York Journal of Commerce. The article first appeared in the Des Moines Register.

American farmers may have the best chance of any large U.S. economic sector to turn people-to-people beginnings with China into dollar export sales.

U.S. farmers are far more trade-conscious than most Americans, generating nearly 15 per cent of all U.S. exports, while producing only 3 per cent of the Gross National Product.

U.S. grain farmers had a bit-tersweet taste of selling to Communist markets when Russia's wheat crop failed in 1963.

Nearly 2 million tons of U.S. wheat were sold to the Soviets for cash — a needed windfall in an era of world wheat surpluses and low prices. Farmers were disillusioned, however, when they learned that the Russian sale was a one-shot deal, and that government rules had virtually shut the U.S. out of the Soviet market.

Maritime unions and shipowners, dependent even more than farmers on federal subsidies, had insisted that half of any sales of wheat to Russia and Eastern Europe be transported in American vessels at costs about 50 per cent higher than prevailing world shipping rates.

This scuttled chances for further U.S. sales, and Canada picked up nearly the entire Soviet wheat market.

The restrictive shipping policy is

still in effect, and maritime interests are as adamant as ever that U.S. grain not feed Communists unless it has been purified by an ocean voyage on an American ship. This federal policy is currently under review, along with the question of what products we will ship freely to China. Chances of changing it, however, are remote.

With nearly 750 million people, China requires a massive food supply. Edgar Snow, the American writer and friend of Mao Tse-tung, noted in his book, Red China Today, that the Chinese needed grain and soybeans in 1960. Grain and oilseed crops in China probably reached a little above 200 million tons several times in the 1960's, and may have hit a new high of 230 million tons in 1970.

The Chinese have not been starving, but they faced serious shortages in the past 10 years, just as they have periodically throughout their long history. Crop failures during the Great Leap Forward in the early 1960's, and admitted difficulties with production during the more recent Cultural Revolution, made it imperative to import grains in record volume.

Even so, China's food imports probably never have amounted to more than 3 to 4 per cent of her total food requirements. This volume of trade has been immensely important to Canada and Australia, and in some years to Argentina.

Starting with the importation of 2 million tons of wheat and some other grains in 1960-61, China's wheat imports peaked in 1965-66 at more than 6 million tons. This was the equivalent of 40 per cent of a normal Canadian crop, 50 per cent of an Australian crop, and 15 per cent of an average U.S. wheat crop.

Until this year, Canada had from 20 to 50 per cent of the China wheat trade. Australia did even better in

the mid-1960's, getting nearly half the China market each year after 1960.

This year, however, Canada has cornered nearly the entire market, through one huge sale negotiated in Peking by the chairman of the Canadian Wheat Board in October, 1970.

This took place within weeks after Canada had recognized China diplomatically. Canadians were euphoric over the sale and the political move, feeling that their country had moved far ahead of the U.S. in trade relations with Asia, and that this would open other new markets in the Far East.

Australia, which had been the largest supplier of grain to China, has not made a new sale in 1971, and probably will not. Hard feelings in China over their role in Vietnam may have cost the Aussies dearly this year in wheat sales.

It is too early to judge how the people of the U.S. will respond to the prospect of trade with China.

It is safe to assume, however, that the agricultural community, despite its native conservatism will actively seek Chinese sales. Henry H. Wilson Jr., president of the Chicago Board of Trade, recently urged the President to allow generally open trade in agricultural products with China.

This is almost certain to be the view of farmers and their market development organizations.

It is clear from the 1963 Russian trade experience and the warmth with which farm groups now regard trade relations with Eastern Europe that farmers will not react dogmatically against the idea of China trade.

There is another kind of barrier that may have to be overcome, one with long-range implications for U.S. China diplomacy.

If China buys grain or other products from the U.S. sometime in the 1970's she probably will buy less from Canada, Australia, Europe and Argentina. Reactionary elements in the U.S. government fear that better relations with China will mean worse relations with other exporters.

This country has the widest range of agricultural products of any country. Importing countries count on the U.S. policy of keeping large stocks of grain on hand.

Corn, barley, grain sorghum, soybeans, cotton, tobacco, flaxseed, and canned fruits and vegetables present the most diversified agricultural export inventory of any country in the world.

One special trade opportunity for the U.S. and China arises out of the wide range of wheat types we have for export compared with Canada and Australia. Asian wheat markets, Japan excepted, do not require the high protein, hard wheat kernels so essential to flour milling and mass-produced bread in the U.S. and Europe.

Canada has had considerable difficulty supplying the low-quality wheats China wanted to buy, at prices she wanted to pay. Canada has had such grades to sell only after adverse harvesting weather has damaged a large part of the western Canada crop.

The entire debate over agricultural trade with China is academic, however, unless the shipping rules can be changed. Representative Paul Findley (Rep., Ill.) has challenged the Administration to end this self-imposed discrimination against American farmers.

Unless it is ended we will continue to handicap ourselves in Eastern Europe, and to bar bulk commodity exports to Russia and China.

NOTICE OF PUBLIC AUCTION

Notice is hereby given that by mutual agreement of the undersigned, all the heirs-at-law of the late J. B. MOORE and DORA M. MOORE, they will at the Moore home place, 2 1/2 miles north & 2 1/2 west of Green, Kansas, or 6 miles north on Highway 15 (Morganville corner) & 4 1/2 east of Clay Center, on:

FRIDAY, JUNE 18

Commencing at 10:00 o'clock

offer for sale and sell at public auction to the highest bidder the following farms in Clay County, Kansas, legally described as:

TRACT I (Home Place)

SE 1/4 of Section 1, Township 7 South, Range 3 East
This is an improved farm, has 8 room 2 story modern frame house; large metal covered barn; chicken house; also other buildings; has good well with water piped around farmstead; REA; 110 acres broke, balance pasture and farmstead; 36.7 acres growing wheat, 15 acres alfalfa, balance for spring crops & set aside, this farm lays good, is known as the "Moore Home Place," and lays along County Road No. 376 (black top).

TRACT II

NW 1/4 of Section 1, Township 7 South, Range 3 East
This is an unimproved farm, all broke with approx. 45 acres growing wheat, 8 acres alfalfa, balance for spring crops & set aside, corners with the home place to the northwest, lays gently rolling. Is ready to terrace, the water ways are completed.

TRACT III

N 1/2 of NE 1/4 of Section 10, Township 7 South, Range 3 East
50 acres grass with good fences, balance good laying farm land; 14 acres growing wheat, balance broke ground for spring crops. This farm lays along blacktop County Roads Nos. 837 and 376.

All these are good farms, well located in a good community. They will be sold at the "Home Place," Tract I, and sold in the order they are listed.

TERMS:

Possession of said premises will be given day of sale, subject to tenants' rights, Buyer to get landlord's share of all growing crops and all government payments except rent share of wheat and oats and the government wheat certificates. Sellers will convey said premises by warranty deed, furnish an abstract of title certified to date showing marketable title (including Dora M. Moore estate), and pay 1970 and prior years taxes; 25% of sale price to be paid down day of sale, unpaid balance due and payable upon closing of the Dora M. Moore Estate which will be about December 1, 1971. Written contracts containing all terms to be signed when property is knocked off, same together with executed deed to be deposited in escrow with THE PEOPLES NATIONAL BANK, Clay Center, Kansas.

Statement of wheat allotment, feed grain base and conserving base to be announced at sale.

For further information contact administrator of Dora M. Moore Estate, the Auctioneer of the heirs.

Nov. 23 — Annual production sale of Amstein Herefords, Bill Amstein, Clifton, Ks.

TEACHING SKILLS AT 4H ROUNDUP

Macrame, a popular craft has the attention of two Riley County 4-H'ers during a workshop teaching the skill at State 4-H Youth Round-up on the Kansas State University campus, June 1-4. Kathy Meyer, Extension home furnishings specialist, KSU, left discusses a display on Macrame with Donita Whitney, Keats, and Susan Shandy, Riley. The girls were among almost 1,100 teenagers participating in the 47th annual Round-up.

equipment can be included. Loans can be made for storage needs based on two-year production of a producer's crops which are eligible for price support. In the G&G area these may include barley, oats, grain sorghum, corn, rye, soybeans and wheat.

The interest rate on loans has been lowered to 50 cents per \$100 a month which is a 6 per cent annual rate. The loan rate has been 7 1/2 per cent.

The maximum amount on loans has been increased on \$25,000 to \$35,000. Items eligible for loan include equipment essential to the practical operation of the storage or drying unit. Included is the cost of foundations and electrical wiring.

These program changes will not only help farmers install needed on-farm storage but also will help them modernize facilities to keep up with new harvesting conditioning and storage techniques.

Bigger Loans, Lower Interest For Farm Storage

A lower loan interest rate and an increase in the maximum loan amount are the principle changes recently announced by the Agricultural Stabilization and Conservation Service in the loan program for farm storage and drying equipment.

Drying equipment and storage facilities for grains, soybeans and other storable crops are as necessary for many modern farms as is specialized planting and harvesting equipment.

Modern on-farm and commercial storage and handling facilities are needed to promote efficient marketing and provide for an orderly flow of goods from producer to consumer.

Under the farm-storage and drying equipment loan program, eligible farmers can obtain Commodity Credit Corporation loans through the ASCS office to buy or build on-farm storage and drying facilities. Other essential operating

Farmland Last To Settle Asphalt Suit With State

Farmland Industries became the last of 12 companies to settle with the state of Kansas on charges of price-fixing of asphalt used in road projects. Farmland paid \$420,812 to the state in settling the 6-year old suit.

Another suit on behalf of 74 Kansas counties is pending against Farmland.

The Farmland settlement with the state included over \$25,000 in at-

FERRY TO LUNCH

Flooding of the Cottonwood river over K99 didn't keep workers at the Fanestil Packing Co. of Emporia from lunch. The company put a tractor and hay rack to work transporting workers across the closed section of the highway during early June heavy rains.

Psychiatric Treatment In The Garden:

MANHATTAN — A new Kansas State University curriculum in horticultural therapy, to be offered by the department of horticulture and forestry in cooperation with The Menninger Foundation in Topeka, has been approved by the Kansas Board of Regents.

"For this new program we will broaden the current curriculum in horticulture to include 28 additional credits in psychology, sociology, family and child development, and design, as well as 15 credits of field study courses to be provided

by the staff of Menninger Foundation," according to Dr. Ronald W. Campbell head of the K-State department of horticulture and forestry in the College of Agriculture.

"Activity therapy is an important part of treatment in psychiatric hospitals, correctional institutions, and geriatric centers. Horticultural therapy students can involve patients not only in practical work in plants and plant production but also in floral arrangement and other areas allowing for individual development," he said.

The idea originated as a result of a survey of hospitals and clinics throughout the country taken by members of The Menninger Foundation staff. "This survey indicated a great demand for people trained in this area. To our knowledge, this is the first undergraduate program in horticultural therapy in the United States," Campbell said.

Students in the program will receive a bachelor of science degree in agriculture. Course requirements will include seven semesters of course work on the KSU campus and one semester of field study during the senior year at The Menninger

Foundation.

"The semester at Menninger's should help the student therapist understand how plants and gardening can be a therapeutic tool in the treatment process of a patient," according to Rhea McCandless, horticultural therapist at The Menninger Foundation. "During field study, the student will apply the skills and knowledge gained in classroom work in the treatment setting. Further use of training and skills depends on the ingenuity and imagination of the student, of

course," she explained.

"The curriculum is people-oriented, without a doubt," Campbell commented.

The K-State department will enroll students immediately in the curriculum with the first seniors possibly taking field study next spring. Several students already enrolled in horticulture at KSU will change into the new curriculum, he said, picking up the necessary social science and art courses required so they will be ready for field study by next spring.

Wednesday, June 16

Starts 5 p.m. — Evening Sale
I will sell at public auction the personal property of the late Cleveland J. Fear at his farm located 10 3/4 east of Clay Center or 1 north and 3 1/4 west of Leonardville, Kansas.

Selling Every
FRIDAY

SALE EVERY FRIDAY NIGHT STARTING AT 7:00 P.M.

We had another nice crowd and a very good run of cattle made last Friday night's sale an exceptionally good auction all the way through.

Prices looked \$1.00 to \$2.00 higher on cows; stocker and feeder heifers \$1.00 or more higher; stocker and feeder steers steady to stronger.

Following is a partial listing of the sale last Friday:

Cattle & Hogs

By
Auction

Tuesdays

It is the time of year our cattle receipts get lighter. We sold 332 cattle on a steady market, except for cows which were \$1.00 lower. We also sold 453 hogs, 400 of these were weaning pigs. The bulk of these sold from \$10 to \$15 with a few small pigs down to \$7.00.

Following is a sampling of our consignments:
