Kansas is known as the No. 1 wheat producing state. Wheat is an excellent grazing crop, so producers may want to look at income from forage as well as the grain. Producers can consider three basic wheat grain and forage strategies: harvest the wheat as grain only, as forage and grain, or as forage only (graze-out). This guide looks at the graze-out option, which generally follows a spring grazing program. The budget focuses on the last 60 days of grazing since the decision to graze-out wheat should be made independent of previous decisions.

The graze-out period is from jointing until the cattle are removed. That time varies depending on moisture, stocking rate, etc. The government program also may dictate when the cattle have to be removed. The stocking rate is about twice that of fall and winter wheat grazing, or enough cattle to assure uniform grazing. The cattle should be implanted. During lush growth, cattle are susceptible to bloat, so management is important. Including an ionophore with supplemental feed can improve daily gains and reduce bloat.

There are a number of alternative arrangements for wheat pasture leasing: 1) dollar per hundredweight per month; 2) dollar per pound of gain; 3) dollar per head per day; or 4) dollar per acre. The lease may dictate the amount and type of supplemental feed. Producers who graze their own cattle on their own wheat should consider the lease charge as an opportunity cost of their forage.

Cost–Return Budget

This budget estimates short run costs and returns for both a steer and heifer wheat-grazing program. Projected 1997 input and output prices are used for illustrative purposes. Farm Management Association summary reports are used as a basis for estimating other variable costs. Producers should use their own prices and costs when using the budget. Break-even prices are particularly sensitive to changes in average daily gain, pasture rental charge, and feeder cost. Because of this sensitivity, it is important to analyze the feasibility of alternative programs at the beginning of each grazing season.

Production Level

Costs per unit and net returns in livestock production are highly dependent on production levels. The following estimated budget includes two different production levels.

Production levels vary for a number of reasons including livestock quality or genetics, weather, input levels, and management. The two production levels included in this estimated budget primarily reflect production variability due to weather and management. Budgeting at multiple production levels can help producers examine the financial risk of a livestock enterprise that is directly related to production risk.

This wheat graze-out budget includes columns for two alternative performance levels for both steer and heifer grazing systems. Performance varies due to differences in average daily gain. The values assumed are included in Table 1 and are deviations from long-term averages.

Table 1. Factors Used for Cost–Return Budget

Performance level	Steers		Heifers	
	Level 1	Level 2	Level 1	Level 2
Days on feed	60	60	60	60
Average daily gain	2.2	1.8	2.0	1.6
Purchase weight	450	450	425	425
Purchase Price (\$/cwt)	96.30	96.30	85.25	85.25
Sale weight	582	558	545	521
Sale price (\$/cwt)	90.79	92.63	83.31	84.81
Feed				
Pasture (months)	2	2	2	2
Grain sorghum (lbs)	120	120	120	120
Mineral and salt (lbs)	15	15	15	15
Value per head				
Investment in fence		\$2.00		\$2.00
Life of fence		5 yrs		5 yrs
Investment in equipment		\$ 31.00		\$ 31.00
Life of equipment		10 yrs		10 yrs
Salvage value on buildings and equipment		35%		35%
Interest rate on fence and equipment		10.00%		10.00%
Insurance rate on fence and equipment		.25%		.25%
Tax rate on buildings and equipment		1.50%		1.50%
Interest rate on variable costs and purchased livestock		10.00%		10.00%
Labor hours		.35		.35
Labor price per hour		\$10.80		\$10.80

COST-RETURN PROJECTION — WINTER WHEAT GRAZE-OUT

	Steers		Heifers		Your Farm
	Level 1	Level 2	Level 1	Level 2	
VARIABLE COSTS PER HEAD					
1. Pasture (\$2.00/cwt per month)	\$ 18.00	\$ 18.00	\$ 18.00	\$ 18.00	\$
2. Silage (____ lbs @ \$20.35/ton)					
3. Hay (____ lbs @ \$____/ton)					
4. Grain (1.20 cwt @ \$4.52/cwt	5.42	5.42	5.42	5.42	
5. Supplement (____ lbs @ \$____/lb)					
6. Mineral and salt	3.30	3.30	3.30	3.30	
7. Feed processing (____ bu @ ____per bu)					
8. Labor (0.35 hr @ \$10.80 per hr)	3.78	3.78	3.78	3.78
