CHARACTERIZATION OF INJURIES

AMONG ACTIVE DUTY PERSONNEL

BACKGROUND

IMPORTANCE OF PHYSICAL TRAINING Physical training important for health May reduce risk of: Cardiovascular disease Type 2 diabetes **Obesity** Anxiety and depression **Injuries**

IMPORTANCE OF PHYSICAL TRAINING Physical training is a necessary component of active duty personnel's overall training¹ Active duty personnel must maintain a high level of fitness: ► To carry out job-related duties^{1,2} \triangleright To be ready for combat at any time^{1,2}

RISKS OF PHYSICAL TRAINING

- Physical training often results in injuries³
- Injuries: Greatest threat to military readiness and soldier health^{1,4}
- 50% of active duty personnel develop a musculoskeletal injury
 25% of injured personnel develop a second injury
- In Basic Training, 25% of men and 50% of women are injured
- For each death due to unintentional injuries:
 - 33 injury-related hospitalizations
 - 4,000 outpatient medical encounters

RISKS OF PHYSICAL TRAINING

Injuries often result from:

- Activities such as long distance running and road marches with heavy ruck sacks¹³
- Overtraining caused by repetitive and/or forceful movements associated with strength training, running and other aerobic exercises⁵

FIVE LEADING CAUSES OF INJURY HOSPITALIZATIONS AMONG ACTIVE DUTY PERSONNEL, DOD⁴

Cause of Injury	Number of Hospitalizations	Rate per 100,000 person- years	Percent	
Falls and miscellaneous	1,483	129.5	34.3	
Land transport accidents	824	71.9	19.1	
Athletics and sports	567	49.5	13.1	
Medical and surgical complications	348	30.4	8.0	
Intentional injuries (non-battle)	222	19.4	5.1	

INJURIES DEFINED^{4,5}

Injuries are defined as:

Intentional or unintentional damage (trauma) to the body caused by an external force or exposure

Non-traumatic damage to the body, or inability to function properly as a result of continuous or repetitive movements (as commonly seen with training-related injuries)

Excludes casualties resulting from hostile actions in combat

INJURIES DEFINED^{4,5}

ICD-9-CM Codes
710 to 739 (Musculoskeletal disorders)
800 to 999 (Injuries and poisonings)
Injuries and poisonings categorized by Barell Injury Diagnosis Matrix
Musculoskeletal conditions categorized using modified Barell Matrix

The Barell Injury Diagnosis Matrix, Classification by Body Region and Nature of the Injury

based on 5 digit icd-9 CM codes

Mat	based on b digit in									1-9 CM codes

Snecial diamostic codes for trauma: Flail Chest (807.4) Pneumothorax (860) For purposes of classification, head injuries are labeled as Type 1 TBI if there is recorded evidence of an intracranial injury or a moderate or a prolonged loss of consciousness (LOC), Shaken Infant Syndrome (SIS), or injuries to the optic nerve pathways. Type 2 TBI includes injuries with no recorded evidence of intracranial injury, and LOC of less than one hour, or LOC of unknown duration, or unspecified level of consciousness. Type 3 TBI includes patients with no evidence of intracranial injury and no LOC.

COST TO THE MILITARY Annually, injuries result in: >\$340 million in disability costs, approximately 1/3 of all disability costs $(1999 \text{ estimate})^7$ ► High medical attrition rates^{1,2,6} 25 million limited duty days^{1,2,6} ► Two million sick call visits^{1,2,6}

MAGNITUDE OF THE INJURY PROBLEM⁴

Injuries across DoD in 2006:

- Affected nearly I million (87%) active duty personnel
- Resulted in 1.95 million medical encounters
- Caused 11,591 hospitalizations
 - 68,000 hospital bed days

Injury medical encounter rate for DoD (2006)

- I,600 per I,000 person-years
- Medical encounter rates highest for Army (2006)
 - 2,200 per 1,000 person-years

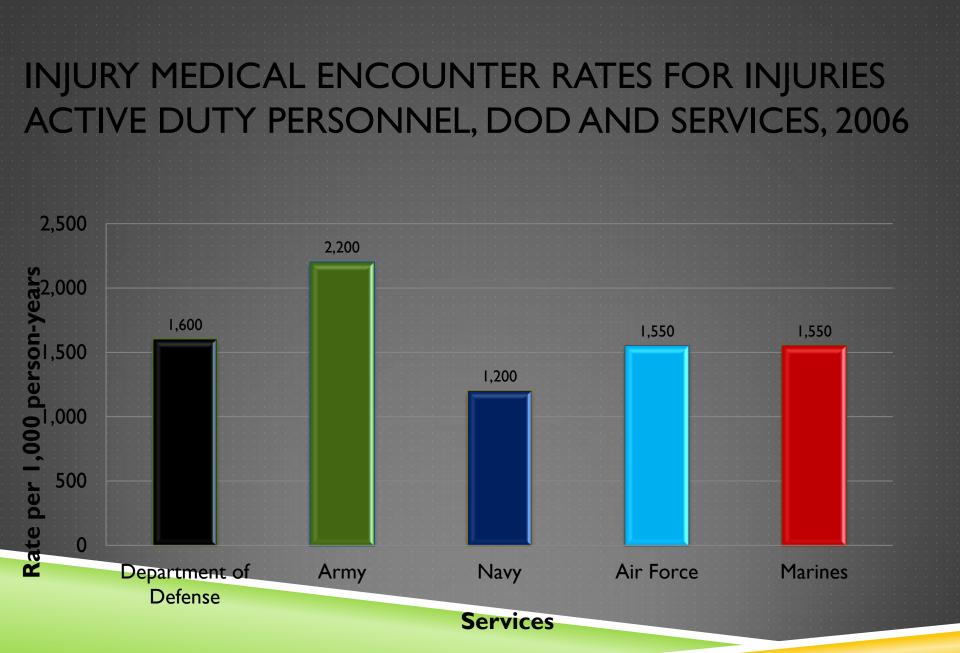

Chart adapted from Jones, et al. (2010). Medical surveillance of injuries in the U.S. Military: Descriptive epidemiology and recommendations for improvement. *American Journal of Preventive Medicine*, 38(1S): S42-S60.

MAGNITUDE OF THE INJURY **PROBLEM**⁴ Most common injury: Lower-extremity overuse Medical encounter rate for DoD >900 per 1,000 person-years Medical encounter rate for Army I,200 per I,000 person-years

MEDICAL ENCOUNTER RATES FOR LOWER-EXTREMITY OVERUSE INJURY RATES, ACTIVE DUTY PERSONNEL, DOD AND SERVICES, 2006

Chart adapted from Jones, et al. (2010). Medical surveillance of injuries in the U.S. Military: Descriptive epidemiology and recommendations for improvement. American Journal of Preventive Medicine, 38(1S): S42-S60.

RISK FACTORS FOR TRAINING-RELATED INJURIES

Intrinsic risk factors

- Age (oldest and youngest personnel)^{1,10}
- Gender (female)¹
- Anatomy (leg and foot structure and stature)¹
- Physical activity level/fitness level (lower level of fitness)^{1,10}
- Weight/body mass index (BMI) (higher weight and BMI)¹⁰
- Smoking status¹

Extrinsic risk factors

- Time spent in physical training¹
- Type and intensity of training¹
- Shoe type¹
- Training surface¹
- Season^{3,11}

INJURY PREVENTION12,15 In 2003, the Secretary of Defense issued a directive to reduce injuries by 50% Defense Safety Oversight Council (DSOC) was formed to oversee injury prevention DoD Military Injury Prevention Priorities Working Group (DMIPPWG) created to evaluate injury prevention efforts already in place and to make recommendations to reduce injuries

INJURY PREVENTION12,15

DMIPPWG recommendations:

- I. Prevent overtraining
- 2. Perform more exercises that develop body movement skills
- 3. Wear mouthguards during high-risk activities
- 4. Wear semi-rigid ankle braces for high-risk activities
- Consume nutritional supplements to restore energy balance within one hour of high-intensity activities

INJURY PREVENTION¹⁵

Further recommendations:

Educate leadership about injury prevention
 Enforce policies and programs in place to reduce injuries

CHARACTERIZATION OF INJURIES AMONG ACTIVE DUTY PERSONNEL AT FORT RILEY, KANSAS

PURPOSE

To determine the incidence of injuries among active duty personnel at Fort Riley through surveillance of existing medical records.

OBJECTIVES

Determine the incidence of injuries among active duty personnel at Fort Riley, KS, over an 18 month period

Determine the most common injuries among active duty personnel at Fort Riley, KS, over an 18 month period

Make recommendations for interventions based on study results

POPULATION Non-deployed active duty personnel Average monthly population: 12,299 people

METHODS

Study reviewed and approved by Kansas State University IRB Medical records requested from Irwin Army Community Hospital (IACH) for injury diagnoses for all non-deployed active duty personnel stationed at Fort Riley between April 2010 and September 2011

METHODS

Records included:

- Medical diagnosis (ICD-9-CM codes)
 - 710 to 739 (Musculoskeletal disorders)
 - 800 to 999 (Injuries and poisonings)
- Date of medical encounter
 - Medical encounter = emergency room visits, outpatient visits, hospitalizations
- Demographic data (race, gender, age)
- Disposition (released with or without work limitations, hospitalized, etc.)

METHODS

- Brigade and body mass index information were obtained from the Office of the Assistant Chief of Staff, G I
 Barell Matrix used to categorize injuries
 Frequencies, percentages, and rates were
 - calculated to determine the most common
 - injuries

```
RESULTS
```

RESULTS

Between April 2010 and September 2011:

12,940 injured active duty personnel
35,128 injury diagnoses
62,318 medical encounters

Descriptive characteristics of Army active duty personnel at Fort Riley, Kansas, with an injury diagnosis between I April 2010 and 30 September 2011

(N = 12,940).

Characteristic	Value	SD	Characteristic	# of people	%
Age (years)			Race		
Mean	28.07	7.2	White	2,933	22.7

Male	11,215	86.7	30.0 and higher	1,247	9.6
Female	1,725	13.3	Not available	4,245	32.8

[†] All other injuries include burns (98); poisonings (69); foreign body injuries (66); toxic effects (51); crushing injuries (39); late effects of injuries, poisonings, toxic effects, and other external causes (22); early complications of trauma (16); nerve injuries (11); amputations (2); blood vessel injuries (1); and unspecified injuries (2,298).
 *TBI diagnoses also fall under the fractures and internal injuries categories. These injuries are shown separately due to the importance of TBI prevention in the military.

Top Five General Types of Injury Active Duty Personnel, Fort Riley, KS April 2010 to September 2011

Injury Rank	Diagnosis	Number of injuries	Percent of all injury diagnoses ^a	Incidence rate per 1,000 person- years ^b
I	Overuse (Inflammation and Pain)	15,289	43.5	828
2	Sprains and strains	3,769	10.7	204
3	Joint Derangements	908	2.6	49
4	Fractures	785	2.2	43
5	Open Wounds	694	2.0	38
Total		21,445	61.0	1,162

a Total injury diagnoses during specified time period = 35,128.

b Calculated using average population of non-deployed active duty personnel at Fort Riley (12,299) for April 2010 to September 2011.

Top Five Injury Diagnoses Active Duty Personnel, Fort Riley, KS April 2010 to September 2011

Injury Rank	Diagnosis	Number of injuries	Percent of all injury diagnoses ^a	Incidence rate per 1,000 person- years ^b
I	Low back pain	4,082	11.6	221.3
2	Pain in joint, lower leg	3,445	9.8	186.7
3	Pain in joint, shoulder region	1,575	4.5	85.4
4	Pain in limb, not specified	1,486	4.2	80.5
5	Pain in joint, ankle and foot	1,133	3.2	61.4
Total		11,721	33.4	635.3

a Total injury diagnoses during specified time period = 35,128.

b Calculated using average population of non-deployed active duty personnel at Fort Riley (12,299) for April 2010 to September 2011.

Top Five Injury Diagnoses by Gender, Active Duty Personnel, Fort Riley, KS

April 2010 to September 2011

Rank	Male			Female		
	Injury	Number of injuries	Rate per 1,000 person-years ^a	Injury	Number of injuries	Rate per 1,000 person-years ^a
I	Low back pain	3,497	213.5	Low back pain	585	283.2
2	Pain in joint, Iower leg	2,995	182.8	Pain in joint, lower leg	450	217.9
3	Pain in joint, shoulder region	1,403	85.6	Pain in joint, pelvic region and thigh	244	118.1
4	Pain in limb, not specified	1,255	76.6	Pain in limb, not specified	231	111.8
5	Pain in joint, ankle and foot	956	58.4	Neck pain	206	99.7
Total		10,106	616.9		1,716	830.8
gender ^b	of all injuries by	33.8	= 1.277) populations for	April 2010 to September 20	32.9	

b Percent of injuries among males and percent of injuries among females. Total male injuries (n = 29,916); total female injuries (n = 5,212).

Injuries among active duty personnel by brigade, Fort Riley, KS April 2010 to September 2011

Unit	Number of injuries	Percent	Incidence rates* (per 1,000 person-years)			
		· · · · · · · · · · · · · · · · · · ·				
I st Brigade	4,942	14.1	1,259			
2 nd Brigade	3,541	10.1	1,254			
4 th Brigade	6,229	17.7	1,595			
САВ	3,776	10.7	1,852			
Support Units	7,085	20.2	1,231			
No Unit Designated	9,555	27.2				
Fort Riley	35,128	100	1,904			
*Incidence rates calculated using average non-deployed population for Fort Riley between April 2010 and September 2011. Average population for Fort Riley = 12,299; 1 st Brigade = 2,618; 2 nd Brigade = 1,883; 4 th Brigade = 2,603; CAB = 1,359;						

Support Units = 3,836.

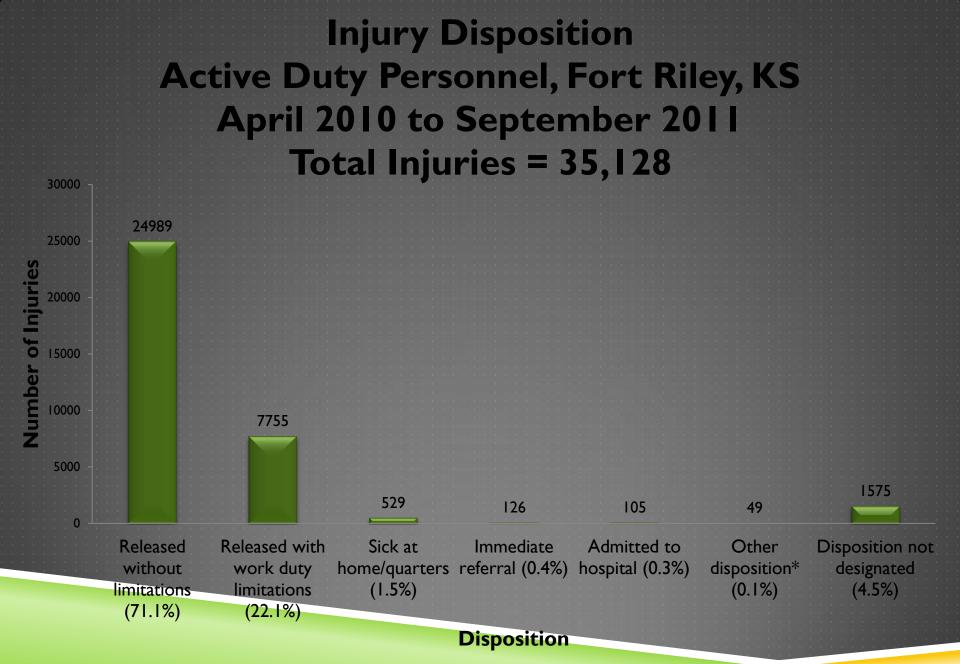

Injury-related medical encounters among active duty

personnel by brigade, Fort Riley, KS

April 2010 to September 2011

Unit and population	Number of medical encounters	Percent	Incidence rates* (per 1,000 person-years)
I st Brigade	8,187	13.1	2,085
2 nd Brigade	6,110	9.8	2,163
4 th Brigade	10,965	17.6	2,808
САВ	6,730	10.8	3,301
Support Units	14,160	22.7	2,461
No Unit Designated	16,166	26	
Fort Riley	62,318	100	3,378

*Incidence rates calculated using average non-deployed population for Fort Riley between April 2010 and September 2011. Average population for Fort Riley = 12,299; 1st Brigade = 2,618; 2nd Brigade = 1,883; 4th Brigade = 2,603; CAB = 1,359; Support Units = 3,836.

*Other disposition included: referred for appointment (n = 16), continued stay (n = 14), discharged home (n = 7), left against medical advice (n = 6), transferred to another hospital (n = 4), transferred to another clinical service (n = 1), and expired (n = 1).

Top Five Injury Diagnoses and Disposition Active Duty Personnel, Fort Riley, KS April 2010 to September 2011

Injury	Diagnosis	Number	Disposition					
Rank		of injuries						
			Released	Released with	Sick at	Admitted	Other	Disposition
			without	limitations	home/	to hospital		not
			limitations		quarters			indicated
-	Low back pain	4,082	3,041	689	74	0	10	268
			(74.5%)	(16.9%)	(1.8%)	(0.0%)		
2	Pain in joint,	3,445	2,212	1,076	22	0	4	131
	lower leg		(64.2%)	(31.2%)	(0.6%)	(0.0%)		
3	Pain in joint,	1,575	1,125	365	4	0	6	75
	shoulder		(71.4%)	(23.2%)	(0.3%)	(0.0%)		
	region							
4	Pain in limb,	I,486	1,018	393	11	1	6	57
	not specified		(68.5%)	(26.4%)	(0.7%)	(0.07%)		
5	Pain in joint,	1,133	752	313	9	0	4	55
	ankle and foot		(66.4%)	(27.6%)	(0.8%)	(0.0%)		
Total		11,721	8,148	2,836	120	1	30	586
			(69.5%)	(24.2%)	(1.0%)	(0.009%)		

- Types of injuries consistent with Army:
 - Overuse injury diagnoses most common (43.5% of all injuries)
 - Most common injuries were low back pain and lower extremity joint pain (24.6% of all injuries)
- Injury medical encounter rates at Fort Riley higher than Army
 - > 3,378 compared to 2,200 per 1,000 person-years
 - Reason for higher rates may be that Fort Riley is an infantry post (training involves more weight-bearing activities and long-distance marches)

Based on observed rates for the top five injuries, females appear to have slightly higher injury incidence rates than males

Women in the military more at risk for injuries

Usually less fit when entering Basic Training

Anatomical differences

4th Brigade and CAB had highest observed rates of injuries (1,595 and 1,852 injuries per 1,000 person-years, respectively) Recent 4th Brigade intervention:

- Building a Soldier Athlete Program
- ► 4th Brigade physical therapist

Most injuries resulted in no prescribed limited-duty Pain can still result in limited ability to

perform duties

STUDY LIMITATIONS

- Migration bias
- Many unknown variables in data set
 - Brigade and BMI not readily available for approximately 30% of injured personnel
 - Age and BMI for entire population during 18 month period not obtained
 - Smoking status not available
- Causes of injuries not provided for nearly all injury diagnoses

CONCLUSION & RECOMMENDATIONS

Continued routine surveillance of injuries

Educate leadership on recommendations for preventing injuries

Monitor for adherence to injury prevention guidelines

CONCLUSIONS AND RECOMMENDATIONS

Evaluate effectiveness of Building a Soldier Athlete program and presence of physical therapist in 4th Brigade

Further analysis of data
