# YOUR BIRTHDAY

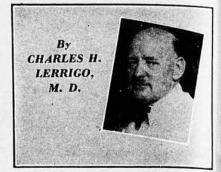

### Time to Check on Health

BIRTHDAY is a time for rejoic-A ing. You may look ahead. If you are wise you may also look back to see whether the year just past was a good year for your physical well-being. Probably it did not bring you wealth; but, far more important, did it bring you health? It is worthwhile to give a little thought to a health inventory that might not only show how you stand, but what can be done about it.

A prominent doctor said recently that "vertical health" was of no great value. He meant the kind of health that just allows a person to be up and about. A man needs something better than the mere ability to drag around. He needs vigor, pep, efficiency. He must be able to anticipate the crises of life and meet them effectively. Instead of just "keeping going" he must have pep enough to love to go. The way of a winning fight is to "step into it." Far too many middle-aged men and women are having nothing better than the kind of health that lets them "keep

"Silent sickness" is the term used to label the rather numerous forms of illness that get in their work about middle age without marked pain or disability, those illnesses in which the patient "keeps going." Chronic kidney trouble is a good example of this type of illness, but it may also be found in heart trouble, disturbances of blood pressure, anemia, and many other

It would be foolish to remind yourself of these matters if nothing could be done. But something can be done if the troubles are discovered before much damage has been wrought. Proper diet, change of habits, more sleep, lighter work, perhaps change of climate or at least a good vacation are among the things to be considered. I am reminding you of this because a birthday is an annual event and an excellent time to take annual stock of your physical condition. Go to the doctor you know best and ask him to check up on you. You may add 10 years to your life and 50 per cent to present

### Oil Softens Ear Wax

Please say what one should put in the ear to soften wax so it can be removed.—T. W. D.

It is rather risky to put anything in the ear, but if you are quite sure the ear-drum is intact and there is hard wax to soften, you may drop into the ear some warm olive oil. After this has had time to operate, the ear should be gently syringed with warm water and peroxide of hydrogen. Remember, that anything you attempt to do with the ear must be conducted gently, and when a doctor is available it is well to engage him.

### Pus Causes Rheumatism

Could nasal catarrh cause sciatica? My doctor says it might.—B. R. G.

It seems likely your sciatica has its real cause in the fact that your system is poisoned by some deposit of pus in your body. Nasal catarrh is sometimes responsible, especially if it affects the large cavity known as the antrum that communicates with the nose, and causes pus to form there. There also is a possibility the trouble is at the roots of your teeth. Dentists cannot tell by an ordinary examination. X-ray pictures are necessary. Have your nose and sinuses examined first. If they show no trouble, have an X-ray made of the teeth.

If you wish a medical question answered, enclose a 3-cent stamped, self-addressed envelope with your question to Dr. C. H. Lerrigo, Kansas Farmer, Topeka.

# **Anti-Bindweed Program Gains**

THERE is no indication of a let-up The war against bindweed. This conclusion may be gathered from the "anti-bindweed generals" who met in 6 district meetings thruout the state to map war plans, early this month.

These meetings, called by T. F. Yost, state weed supervisor, of the Kansas State Board of Agriculture, featured observation of present gains and laying of plans for further destruction of the entwining pest. The meetings were held at Minneapolis, Colby, Lakin, Pratt, Garnett, and Holton.

Besides Mr. Yost, the "generals" included F. L. Timmons, in charge of bindweed investigations at the Hays Experiment Station, and W. L. Kephart who is in charge of co-operative state-federal weed eradication projects thruout the country.

In the meetings at which he was present, Mr. Kephart told the Kansas farmers no other state has a more outstanding bindweed eradication program than Kansas, considering completeness of organization and success with which farmers co-operate in taking responsibility of the job. It was explained that one other state has an unusually effective program, but it is made possible by use of more public funds, along with W. P. A. labor, and does not depend so heavily upon farmers themselves as does the Kansas pro-

At the 6 district meetings, farmers and bindweed officials made use of trenches in the ground, from which they observed the decay of plants in

plots that had been treated with chemicals, or where clean cultivation had been practiced. They observed that roots of bindweed plants decay from the top down. This is a distinct help in the fight against bindweed because about 75 per cent of the bindweed root system is found in the top 3 feet of

Mr. Yost and Mr. Timmons consider clean cultivation by far the best method of control where it can be practiced. Where this can not be done. use of chemicals is advised. Choice of chemicals depend on whether or not it is desired to return the land to cultivation. If so, sodium chlorate should be used, as its harmful affects on the soil will disappear in the course of 4 or 5 years. However, along railroads and similar places it is often desirable to use salt, which permanently spoils the land for plant growth. If salt is used. there is no danger of bindweed returning or spreading from adjoining land owned by a different party.

Mr. Yost reports that clean cultivation was practiced on 7,447 Kansas farms last year, and that the total are cultivated amounted to more than 50, 000 acres. About 11/4 million pounds of sodium chlorate were used on 6,761 farms, and considerably more than this amount was used by agencies other than farmers.

If you would like a copy of Kansas Farmer's leaflet, "Best Method of Con trolling Bindweed," send a 3-cent stamp for postage to Farm Service Editor, Kansas Farmer, Topeka.

LMOST every farm in the eastern half of Kansas has some tired soil on it-soil that is downright weary from being mauled around, year after year, by all the implements of cultivation. On many of these places the farmer himself is tired of this same process. Tired of wearing out machinery on cultivated cash crops that don't always materialize; he is worn from fighting erosion on hillsides harassed by the years of cultivation.

This explains, in large part, the increasing popularity for Brome grass. It is a crop that rests the soil, the farmer and the machinery. That rest might be called a vacation on full pay, because a cash crop can be harvested every year. The cash comes without use of a plow or any other tool of cultivation, while the soil has a bodyguard to protect it from the clutches of "old man erosion."

Such is the type of enthusiasm expressed by farmers in Jackson county, said to be the Brome grass center of Kansas. Jackson county

farmers harvest more seed and have more Brome grass pasture than those of any other county in the state. James McCauley, of Mayetta, has a hillside field that has been growing this crop for 15 years. Thruout that time, it has been one of the most profitable crops on the farm, and it has stopped all soil washing on the field. Mr. McCauley shows a ditch that was present when the field was seeded to Brome grass. The channel and banks of that ditch are now completely healed over with

Five years ago, an old discarded cider press was put into the ditch. It lies there today, totally uncovered by any silt, proving that no appreciable amount of soil has washed down the ditch in those 5 years. Mr. McCauley explains that the Brome grass catches and holds rainfall, causing it to soak into the soil. One day he went to the field immediately at the

close of a hard 3-inch rain, and little water was running down the ditch, altho the field is on a rather steep slope.

Mr. McCauley finds Brome grass especially valuable for use in thin stands of alfalfa. Brome seeded at the rate of 4 to 8 pounds an acre will fill in the bare spaces and gradually increase to cover additional bare ground as more alfalfa dies out. The mixture of Brome grass and alfalfa makes ideal hay, so old alfalfa stands can be fully utilized as hay or pasture for many years. Under this plan, the alfalfa supplies nitrogen to boost a nice crop of Brome grass instead of a crop of Crab grass as usually found in old fields of alfalfa.

The possibilities of Brome grass as a cash crop are demonstrated by Lou Blumberg, of Denison. This year Mr. Blumberg expects a gross return of about \$75 an acre from 53 acres of Brome grass harvested for certified seed. Total the figures on that if you doubt the value of a certified Brome grass seed crop.

It was figures like these that induced John Atwater, of Holton, to devote 130 acres to production of Brome grass. Likewise, Carl Billman, also of Holton, has 90 acres of this crop. Mr. Billman, like Mr. McCauley, Mr. Blumberg and Mr. Atwater, [Continued on Page 13]

Five years ago, James Lou Blumberg, left, McCauley put this old expects the seed crop cider press in a ditch of from this heavy crop one of his Brome grass of Brome grass on fields. It is still uncovhis farm to give a ered by silt, proving litgross return of about tle water has run down \$75 an acre. With Mr. the ditch. M. C. Axel-Blumberg in the picton views the scene. ture is M. C. Axelton. This parade float, below, announces the claim of Jackson county as the "Brome Grass Center of Kansas. Friendly companions are Brome grass and alfalfa. Roy Blumberg, of Denison, poses in a valuable On the farm of James McCauley, Mayetta, County Brome grass crop with 2 young visitors, Carolyn

and Evelyn Axelton.

OME time ago I found printed questions in a farm paper about corporations but failed to get the following copy containing the answers. Could you answer them for me in Kansas Farmer? Also would like to know if there is a penalty for a corporation sending a false report in to Topeka.—M. H.

Q. What is a corporation?

A. Corporations are either public or private. A public corporation is one that has for its object the governing of a portion of the state. Private corporations are of 3 kinds: (a) Corporations for religion. (b) Corporations for charity or benevolence. (c) Corporations for profit.

Q. What is a franchise?

A. A franchise is any special privilege granted by law or by a sovereign to an individual or corporation which cannot be claimed as a common right.

Q. What measures the extent of the powers of a corporation?

A. The statutory provisions under which the corporation is authorized.

Q. What is the purpose of by-laws?

A. By-laws are the rules established either by the members of the corporation at the meetings of the corporation, or by the directors of the corporation for the general conduct and government of the corporation.

Q. What is the meaning of the term "preferred stock?"

A. "It shall be lawful for any corporation now organized under the laws of the state of Kansas, or that may be organized, hereafter, under and by virtue of the laws of the territory of Kansas, or the state of Kansas to issue preferred stock."

Preferred stock is stock that has certain privileges which common stock does not have. A corporation, for example, may declare a dividend on preferred stock which must be paid before any dividend is paid on the common stock. On the other hand, generally speaking, the preferred stock is restricted in its voting powers, altho this is not universal, by any means. For example, the great Santa Fe Railway Corporation issues preferred stock on which is paid out of profits of the corporation, if there are any profits, to the extent of \$5 per share, before any dividends are declared on the common stock.

On the other hand, if the profits of the cor-

### I Love These Dogs

BY ED BLAIR Spring Hill, Kansas

I love the dogs, the little dogs,
The taller dogs and longer,
The thick set dog more like a hog,
The fighting dog still stronger.
I love all these that go carefree
From yard to yard a thronging
And which nobody cares to see
And for which no one is longing.

The front yards here their presence grace Or, augling 'mong the flowers, They wish to visit ev'ry place In sunshine or thru showers. 'Most ev'ry day the scene is paged Bad weather ne'er upsets it, A fresh bone found or one more aged The fighting dog he gets it. I love these dogs, when e'er they stay At home and never come this way!

# By T. A. McNeal

poration become greater than 5 per cent, all over 5 per cent is distributed to the holders of common stock, while the holders of preferred stock can only draw 5 per cent regardless of the amount of profit the company makes.

Q. What is the first duty of a director?

A. The first duty of the directors of the corporation is to carefully guard the interests of the corporation and of its stockholders.

Q. What are the classes of stock a corporation may create?

A. That would depend upon the kind of a corporation. The state of Kansas provides for corporations which are non-profitable—that is to say, religious or charitable corporations that are not supposed to make any profit. On the other hand, private corporations, generally, are supposed to be trying, at any rate, to make a profit. Non-profit sharing stock might be issued.

Q. What may capital stock be issued for?

A. The charter of the corporation must set forth the amount of its capital stock, if any, and the number of shares into which it is divided. A corporation that is organized for purely charitable or religious purposes, would not need to designate any capital stock.

Q. Must there be stockholders' meetings?

A. As the stockholders have the right to vote for the election of the officers of the corporation, such as the president, it is customary to have an annual meeting, altho our own law does not specifically declare that such a meeting must be held at any particular time during the year.

The corporation, must, however, make annual reports, showing the location of the principal office, names of the president, secretary, treasurer, and members of the board of directors, the date of the annual election of officers, the amount of authorized capital stock issued, and the amount of capital stock paid up.

Q. When are the directors of a corporation liable for its debts?

A. Our Kansas statute, 17-609, provides that if the directors of any corporation shall knowingly declare and pay any dividend, when the corporation is insolvent, or any dividend, the payment of which would render it insolvent, they shall be jointly and separately liable for all the debts of the corporation then existing and for all that shall be thereafter contracted as long as they shall continue in office.

Q. Is there a penalty for corporations sending in a false report to Topeka?

A. General statutes 17-1243 provides that no person shall knowingly make or file or cause to be made or filed to the corporation commission any statement, document, circular, or advertisement required to be filed by this act which is false in any material respect or matter.

Violating this act is a felony and on conviction, the persons so violating the corporation law shall be punished by a fine not less than \$100, nor more than \$5,000, or by imprisonment in the Kansas state penitentiary for a term of not less than one year, nor more than 7 years.

### Children Have Share

no settlement has been made between husband and 2 children. Second wife also has money. By second marriage there are 4 children. The 2 children from the first wife are now 34 and 37 years old. Can these 2 children from first marriage, by law make their father still make a settlement on what the husband and wife owned when wife died?

If the title to this 160 acres was held jointly by husband and wife, as it should be, then, in the case of the death of the wife, if no will has been made, one-half of her one-half would be inherited by her surviving husband.

The other one-half would go to her children, qually.

In case of a second marriage, if the second wife has property of her own, and her husband dies, one-half of his property would descend to her. She would keep the property which belonged to her before her husband's death, and as I said before, one-half of her second husband's property would descend to her, and the other one-half to his children. That is, to the 2 children by his first wife, and the 4 children by his second marriage.

### No License Needed

WHAT should be the charges for a license for a motor vehicle, the annual charges being \$4, but said car being out of running order and not moved for last 3 years; also no license plates were bought during that time?

—T. W. J.

Automobile licenses are issued for a year or less. Now the license must be paid up for the time for which it was issued, but suppose that it has expired.

In other words, suppose that this license was issued for a year and paid for, but no application is made the next year for a renewal of that license.

If the automobile is not used at all during that year, no license could be collected, and the same thing would be true, of course, for the subsequent years, if the automobile was not used.

SSURANCE from Wendell Willkie, Republican nominee for President, that the present national farm program will be continued until a better one is worked out and in operation is in line with the farm plank in the Republican platform adopted last June in Philadelphia.

I believe that the Republicans as a party, and Mr. Willkie as the Republican candidate for President, are taking the right attitude, both from the viewpoint of sound public policy and the viewpoint of practical political wisdom.

Politically, the Willkie statement and the Republican platform declaration take the farm problem as such out of the 1940 political campaign. And that is as it should be. The farmer has been made the football of politics too often and for too long a time already.

At the end of the present war-if it does end instead of dragging out over many years, as is a possibility if the Hitler attempt to invade the British Isles fails—there may be a real opportunity for the American farmer to dispose of his surpluses in foreign markets again. Whether or not he will be allowed to do so will depend, as I see it, as much upon our own industrialists as it will upon the attitude of Western Europe toward eliminating trade barriers.

As I see the picture now, the industrialists in the United States will face two main alternatives in the new world that will come into being when the dominant powers of Europe have come to terms, or have reached a stalemate, in the shuffling of boundaries and the readjustment of political and economic rela-

American manufacturers have in prospect two big markets for their products: the domestic market of the United States; a foreign market in South America. Except for a brief period while Europe is shifting back from a war economy to more or less of a peace economy, there is not a big prospective market for our manufactured goods in Europe. Western Europe will continue to be largely industrial; it will be a deficit region as far as foodstuffs are concerned.

If American manufacturing interests decide to go after the South American markets to

any great extent, they can get these only by allowing South America to send to the United States foodstuffs or other raw materials in exchange. That kind of an exchange will be possible only at the expense of American agriculture. Heavy, or even comparatively light, imports of foodstuffs from South America into the United States will ruin the American farmer, and thereby destroy also the power of the Farm Belt to buy products of American

On the other hand, if American manufacturing interests will consent to the lowering of tariff restrictions enough to allow the exchange of a billion or two billion dollars worth of manufactured goods from Europe for farm commodities produced in the United States, then the United States domestic market for American manufactured goods would be increased by from two to three times the value of the manufactured goods imported from industrial Europe. It seems to me that the National Association of Manufacturers would do well to do some real thinking and planning for the future along these lines.

If the program I have just outlined, rather sketchily, should be adopted, we could then give up this economically unsound program of trying to become prosperous by producing less wealth. Continuation of a national program of scarcity-scarcity in agriculture thru control of production; scarcity in industry thru limiting consumption by tariffs and other priceraising devices-for another two or three generations will surely impoverish this nation and the people of this nation.

I think here is something for financial leadership, industrial leadership, farm leadership, labor leadership, and political leadership, to be thinking about.

Right now we are busy preparing a national

defense against military operations. I believe we will be able to build up an adequate military national defense.

But it will be just as fatal to our form of government, to our American institutions, to our American way of life, if we fail to prepare an adequate economic national defense, as if we should

in this critical time of world history neglect to prepare for military national defense.

### The Greatest Neighbor

Y KANSAS friends know how grateful M folks are for a helping hand in time of trouble. The neighborly kindness I have in mind is of common occurrence in Kansas rural areas. When sickness lays the head of a family low, neighbors hurry their own work so they can join forces and plant or harvest the ill neighbor's crops. When flood or fire work their havoc, farm neighbors don't have to be told what to do. They already know. When dark shadows of the unknown black-out that mysterious flame of life, farm neighbors are a never-failing source of strength and comfort.

But when disaster is multiplied into the millions; when fiendish weapons blast whole countries into naked agony; when all that is sane and solid is destroyed in the flash of a bomb; then, friends, who can be the good neighbor? I think you already have guessed it. Yes, indeed, it is the Red Cross I mean. I think it is the greatest earthly neighbor of all. Time or place, race or creed are of no concern to this friend of man. On guard at all hours, no corner of the earth is too remote for it.

And that raises the question, "Just what is the Red Cross?" It is a lot of neighborly folks who wish to lend a helping hand toward alleviating the suffering of mankind. They cannot be on the scene of disaster to serve in person, so they give of their earnings which, after all, really is a part of them. The greatness of mankind is epitomized in the Red Cross. A dollar invested in it is an investment beyond compare.

Washington, D. C.

George Montgomery, Grain; Franklin L. Parsons, Dairy, Fruit and Vegetables; R. J. Eggert, Livestock; C. Peairs Wilson, Poultry.

(Probable changes in feed and carrying costs have been considered in forming conclusions.)

have 24 yearling steers which I wintered last winter. About half of them are whitefaces. They are on Sudan grass pasture and doing well, and it looks like the pasture will carry them about 2 months. What is the market outlook for this class of cattle? Do you think it would be advisable to buy grain and fatten them? -W. M., Cherokee Co.

Smaller supplies of finished steers are expected during the last half of 1940. Increasing industrial activity and employment may increase the con-

should be safe in feeding these cattle prospects are that increased employbut that you should have them on the market before November 15. Use your oats or barley and buy as little corn

I have about 1,000 bushels of wheat in the bin. Should I sell it now or what should I do?-R. M. C., Wa-

price advances 10 to 15 cents. Don't sell at present prices unless you have to. If there is a rally, don't expect it to continue long.

What is the outlook for poultry and eggs for the next few months? -M. J., McPherson Co.

Egg prices usually advance and poultry prices usually decline during the fall months. There was a smaller sumption. This indicates that you hatch of chickens last spring, and

ment will increase consumer purchases of poultry and eggs. This indicates that egg prices may advance

### Trend of the Markets

Hold it until next spring, unless the here are Kansas City tops for best quality offered:

	Week Ago	Month Ago	Year Ago
Steers, Fed	\$11.90	\$11.15	\$9.60
Hogs		6.35	6.35
Lambs		8.75	8.25
Hens, 4 to 5 Lbs		.12	.12
Eggs, Firsts	.151/	.14	.141
Butterfat, No. 1		.23	.19
Wheat, No. 2, Hard.	.701/4	.71%	.683
Corn, No. 2, Yellow.	.67	.681/4	
Oats, No. 2, White	29	.301/4	.33
Barley, No. 2	48	.49	.43
Alfalfa, No. 1		13.00	14.00
Prairie, No. 1		8.50	8.50

more than usual and that poultry prices may decline less than usual during the fall months. The outlook is for an improved poultry situation, but feed costs may remain fairly high in relation to the selling price of poultry and eggs, particularly if corn or other feed must be purchased.

Does the livestock outlook justify buying grain for feeding at present prices?-R. B., Republic Co.

For maintaining breeding stock or growing animals, yes. For full-feeding cattle or hogs, no. Attempt to work out a program based on roughages or grains produced locally. Avoid a program using corn, particularly here in Kansas where corn prices are on a ship-in basis. The renewal of the corn loans does not indicate much improvement in the feeding situation in this section.

# LEARNING FOR EARNING

### In College-By C. W. Mullen

PROBABLY 900 young men in Kansas, it may be a few more or a few less, will be packing up their clothes the first week of September in anticipation of spending the next 9 months studying agriculture at Kansas State College.

That number doesn't include the 3,000 or more other young men and young women who will distribute themselves among the other divisions of the college and will be studying in the field of general science, home economics, veterinary medicine, or engineering.

What becomes of the young men who take the time to earn degrees in the science of agriculture?

Many of them return to the farm. Out of the graduating class in agriculture at Kansas State College last spring, 15 per cent indicated their intention of farming. Fifty per cent of the class said they would like to return to the farm if finances and circumstances would permit.

On the other hand, 50 per cent of the graduates in agriculture reported to the office of their dean that their parents sent them to college to study agriculture for the purpose of training them for employment in a position away from the farm.

Analysis of questionnaires recently returned to the dean's office by 1,300 graduates in agriculture at Kansas State College revealed that 19 per cent of these graduates of former years are engaged in the business of farming.

The same questionnaire indicates that 12 per cent of those who responded to the questionnaire are engaged in county agent and extension work. Ten per cent have become teachers of vocational agriculture, and 21 per cent are engaged in educational work, which includes vocational agriculture.

A TOTAL of 80 per cent of the 1,300 are engaged in some sort of agricultural work. The others have found employment in other fields, mostly commercial.

Twelve per cent of these graduates are engaged in agricultural research, and another 12 per cent have found employment in civil service. Kansas ranks 21st among the states in the number of civil service employes in the field of agriculture and economics.

Soil conservation and farm security have absorbed another 12 per cent of the Kansas State graduates. Others are scattered among many occupations and professions related to agriculture.

The average salary at which graduates in agriculture have been employed in recent years is about \$1,500. There are those who received more and those who received less on their first jobs.

About 20 per cent of the graduates report an increase in pay at the beginning of the second year. The average increase in salary at the end of the first year is \$169.

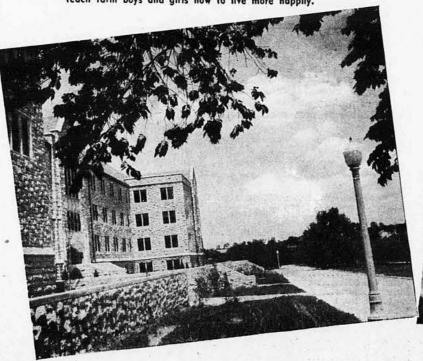

At the end of the sixth year, the average increase of salary among those who reported, has been approximately \$1,000.

Those who have been out of college 10 years have enjoyed an average increase in pay of \$1,340. The graduates of 20 years ago are now receiving an average of \$3,600 more than they were paid the first year after their graduation, according to an analysis of the questionnaire referred to.

Even in these highly mechanized

UST as agriculture is the backbone of all Kansas industry, the training of Kansas farm boys is a vital part of our state's educational system. About 80 per cent of the farm boys of Kansas attend high schools, and in some areas as high as 90 per cent of these boys return to the farm.

This suggests a genuine demand for practical training that will help farm boys to become good farmers and good citizens. Such training is now being given to 5,560 students enrolled in the vocational agriculture departments of Kansas high schools.

As explained by Lester B. Pollom, state supervisor, vocational agriculture is not designed to keep boys on the farm. Instead, it is designed to help farm boys get a start in life and to teach them a trade at the same time. Regardless of whether they choose to farm or to be a doctor, lawyer or something else, the practical experience and the earnings of vocational agriculture work is well worth while.

Vocational agriculture brings practical information in a practical way; it is brought in the natural surroundings. For instance, early each spring the boys study preparation of ground, varieties, and seeding rates for crops to be planted that season.

WHEN the planting season actually comes, they put their knowledge into practice with project work right on their home farms. Likewise, they study about hogs, cattle, sheep and poultry at seasons of the year when certain jobs are important with each kind of stock. They are eager to learn the best management methods so they can do the best job with their livestock projects.

Boys in vocational agriculture do their work in a business-like manner. They keep records on their business; they plan to buy and sell at times most advantageous to their finances. As they progress with their work, different livestock projects are added to the crops projects to complete well rounded farming programs that emphasize marketing of their crops thru their livestock.

To make their farming system still more complete, they obtain practical training in farm shop work and farm mechanics. The boys build feeders, hog houses, wagon boxes and all the other articles used on a farm. They learn the art of welding and blacksmithing. Still more important, they study the mechanics of all commonly used farm machines. Old implements are often bought at junk price and with careful overhauling and painting are made almost as good as new.

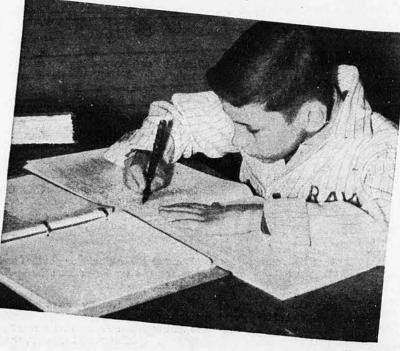

This work is done under the supervision of vocational agriculture instructors, who have farm backgrounds plus 4 years or more of training at an agricultural college. The instructors emphasize practical, common sense methods that are tried and proved in the respective communities.

Results obtained in vocational agriculture speak for themselves. In the course of their work, it is a common occurrence for boys to accumulate \$200 to \$500. Many count their profits in figures ranging up to \$1.000 and above.

Then if they wish to go to college or start in some other line of work, they have at least a start at the job of financing their plans. If they wish to continue in farming, they are already started in a sound way. They are prepared for the landowner who

[Continued on Page 12]

Ray Heikes of the Clay Center high school doesn't have to be told that farming is a business proposition. This picture shows him busy with farm account records as part of his regular work in vocational argiculture.

# **QUACK CURES**

By J. M. PARKS, Manager Kansas Farmer Protective Service

FYOU think you have been bitten by a poisonous snake, but instead were actually stung by a bee or perhaps scratched by a broken weed, you are a fit subject for a quack doctor. Quacks like to work on persons who are scared. The quack will encourage you to believe you are suffering from the bite of a deadly reptile and that unless something is done and done quickly you will surely die. Then he will apply his "sure cure" remedy and you recover. You are ready to pay him liberally for saving your life. If you are scared sufficiently, and the quack will see to it that you are, you will never stop to think that your injury would have vanished soon without treatment.

### Cancers That Never Existed

"Rackets That Get Your Money," a little booklet written by George M. Husser, manager, Better Business Bureau, Kansas City, has this to say about one form of quack remedies: "Here's what really happens in these so-called cancer 'cures.' Many persons, especially those beyond middle age, develop growths which they assume to be cancers. Panic-stricken, clutching at straws, they go to a quack clinic. The fakers solemnly diagnose cancer, but aver the patient can be cured. When simple caustics remove the growth and heal the sore, the patient is overjoyed. These persons go home in fine health to be living advertisements for the 'cure' of a cancer which never existed."

### **Testimonials May Deceive**

The same booklet gives instances which causes one to take with a grain of salt testimonials contained in patent medicine advertisements. "A testimonial by W. L. Thomas was used in exploiting Diabeticine, a nostrum supposed to relieve diabetes. Thomas, one of the owners of the patent medicine business, was praising his own product. But postal inspectors learned that Thomas himself was suffering from diabetes after he had written his testimonial. A fraud order barred the mails to his quackery. Robert Edward Walker, of Louisville, was quoted in a newspaper advertisement stating 'he felt like a new man' after taking Vital-ex. The same issue of the Louisville Times carried Walker's death notice. Mrs. Mary Deemer's testimonial for Natex patent medicine appeared in 1935 on the same page of an Allentown, Pa., paper which carried her obit-

### Find Patients by Trickery

Here is another species of quackery, similar cases of which have been reported to the Protective Service from time to time: "One of the most despi-

### Soybean Recipes

Soybeans for table use have been growing in popularity. A new U. S. D. A. Bulletin, Soybeans for the Table, contains several delicious and simple recipes. Other timely U. S. D. A. Bulletins are listed below. For a free copy of each one, please address a post card to to Bulletin Service, Kansas Farmer, Topeka.

cable medical rackets is worked by confidence men known as 'eye swindlers.' They cheat elderly persons out of fees on the pretense of curing eye ailments. Commonly working in pairs, they prefer to operate in rural districts. From garrulous storekeepers they learn which farmers in the vicin- is not licensed in that state, but as a ity suffer from eye trouble. Shortly thereafter, a big sedan swings into a barnyard and the chauffeur asks for water to fill the radiator. Thus the farmer is engaged in conversation. The observant chauffeur comments on the condition of the farmer's eyes, then confides that he is driving a worldfamous eye surgeon to a medical convention in a nearby city.

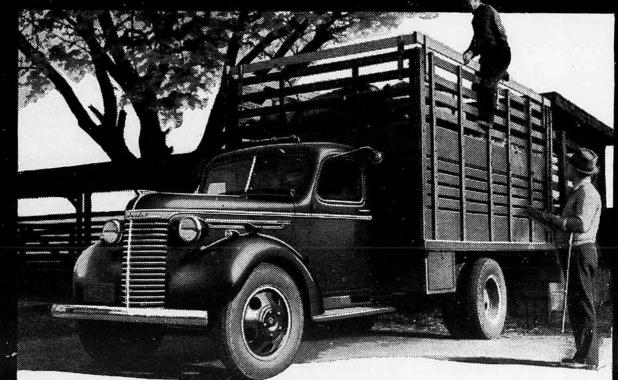

### Cataract Removals Faked

"At the victim's request, the chauffeur obligingly persuades his confederate, the supposed eye surgeon, to examine the farmer's eyes. The 'doctor' behaves quite professionally, speaking in technical terms about mysterious symptoms. The gullible victim is told he has a cataract which endangers the sight of the eye, but removal of the cataract is a simple operation for the surgeon to perform. The frightened farmer usually will beg the faker to save his sight. The 'doctor' pretends he great favor he will remove the cataract, provided the farmer will keep it a secret.

"During the phony operation, the eyes are made to sting with a harmless solution, and by sleight-of-hand a bit of egg membrane is displayed as the offending cataract just removed. The victim is instructed to leave a bandage over his eye for several days. This gives the faker plenty of time to escape."
So-called "Indian doctors" travel

thru the rural districts of Kansas as well as other western states. Not so long ago, one of these found a Wyandotte county farmer who needed "immediate treatment." According to the red man, the proper remedy was to be found in a rare herb not at that time available. On second thought, he recalled that a certain kind of ink used in printing \$20 bills would answer the purpose. The farmer therefore drew \$400 in the form of \$20 bills from the bank. In the process of the cure, the red man made off with the money.

# The Word For Economy Is CHEVROLET

Economy means low cost of operation.

Truck users everywhere say that low cost of operation means Chevrolet.

That is why Chevrolet trucks lead all others in sales year after year; truck buyers choose Chevrolets because of their proved economy and efficiency.

Chevrolet economy means a lot more than just "miles per gallon of gasoline" and "miles per quart of oil." It means also low first-cost . . . it means high efficiency and low maintenance cost . . . it means durability and long life.

Chevrolet's traditional qualities-

those qualities that have put Chevrolet in the lead and kept it there-all add up to low cost of operation.... That is why truck users everywhere say that Chevrolet trucks give the most value for every dollar of money expended.

CHEVROLET MOTOR DIVISION, General Motors Sales Corporation, DETROIT, MICHIGAN

GET YOUR COPY OF CERTIFIED FACTS ABOUT CHEVROLET'S PROVED ECONOMY

Ask your Chevrolet dealer, or write to us, for your copy of "Says Who?"—a 16-page book that gives the facts about truck operating costs, facts certified by the Contest Board of the A.A.A. We printed this book for you—so might have authoritative evidence as proof of w icks can do and what they cost to operate and maintain.

# PIONEER HYBRID CORN SHOW

# to be held at-KANSAS FREE FAIR

TOPEKA, SEPT. 8-14th

If you raised Pioneer hybrid corn on your farm this summer, you are eligible to participate in the Special Pioneer Hybrid Corn Show -offering \$100.00 in cash prizes-and to be held at the Pioneer exhibit (next to exhibit of Capper Publications) Kansas Free Fair, Topeka, September 8-14th.

### Rules of Contest

Every Kansas farmer who raised Pioneer Hybrid Corn as a commercial crop this year—except Pioneer salesmen and their families—is eligible.

\$25.00 cash award for the best 10 ears of Pioneer Hybrid Corn, any variety.

\$15.00 cash award for second best 10 ears of Pioneer Hybrid Corn, any variety.

\$10.00 cash award for third best 10 ears of Pioneer Hybrid Corn, any variety.

\$5.00 cash award for best 10 ears of every different Pioneer hybrid variety entered. All entries must be received at Pioneer exhibit, Kansas Free Fair grounds, by 10:00 A.M., September 8, 1940.

Corn may be delivered in person—by pre-pard express or parcel post. All entries be-come the property of Garst. & Thomas, Coon Rapids, Iowa, Judge's decision will

Get busy right now—pick out the best 10 ears from your field of Pioneer hybrid corn. It is possible for you to win as much as \$30.00 in cash prizes.

# GARST & THOMAS HYBRID CORN CO., COON RAPIDS, IA.

# the wonder crop for pasture

This new wheat-wild rye grass hybrid is creating national interest because of its amazingly fast growth, and its drought-resistant and perennial qualities.

Attains heavy growth immediately after snow melts in spring. Livestock prefer it to other pasture. Supplies heavy cuttings for hay. A "natural" for dry-land farmers.

# Plant Michels Grass This Fall

Michels Grass should be planted early in the fall, and will supply pasture in a few weeks. Use ordinary grain drill for seeding. If seed crop is desired, Michels Grass may be harvested with combine (no special equipment or attachments necessary).

Michels Grass seeds are large and full of plant life. Consequently will produce good stand, where smaller seeds might fail. Produces sweet, tender foliage in great abundance. Livestock go for it in a great way. Plant Michels Grass this fall.

mend Certified Rine Tag Seed or seed of verified origin. This is important. Ask your seed dealer, or write us for free folder and prices.

"Big shots" in the realms of cattle and agriculture were on hand to visit with farmers and breeders at the annual Shorthorn picnic held at Dillard Clark's Elkhorn Ranch. Left to right: A. D. Weber, secretary of the Kansas Shorthorn Breeders' Association; J. C. Mohler, secretary of the Kansas State Board of Agriculture; Dillard Clark; James G. Tomson, noted Shorthorn breeder of Wakarusa; James Napier, superintendent of Sni-A-Bar Farms; and W. L. Blizzard, world famous cattle judge and Dean of Agriculture at the Oklahoma A. & M. College.

Success in producing the type of Regier, president, and A. D. Weber, cattle demanded by market buyers cattle demanded by market buyers has brought recognition to J. L. Gant. veteran cattleman of Barber county. At the 1940 Kansas Shorthorn Breeders' Picnic, held recently on Dillard Clark's Elkhorn Ranch, near Douglas, Mr. Gant received the Shorthorn Award of Merit offered by the Kansas Shorthorn Breeders' Association, This honor is accorded each year to an outstanding Kansas Shorthorn breeder.

The award was presented by James G. Tomson, of the nationally known Tomson Brothers Shorthorn herd located at Wakarusa. It was explained that Mr. Gant has bred up an outstanding grade herd by purchasing good purebred bulls of the right type. Mr. Gant, who operates a 1,080-acre ranch, has been raising Shorthorns and using good purebred bulls for more than 50 years.

On hand at the annual picnic to see this presentation and take part in the day's events were more than 250 farmers and Shorthorn enthusiasts. A featured speaker of the afternoon was H. J. Gramlich, secretary of the American Shorthorn Breeders' Association. Mr. Gramlich suggested that farmers and stockmen of Kansas and Nebraska might be "kidding" themselves by trying to raise too much corn, with too little drouth-resisting feed crops and too few silos. He pointed out that this is the seventh consecutive year when the Nebraska College of Agriculture cattle herd has been forced to start on silage in July. Mr. Gramlich emphasized the security of having feed stored in silos, regardless of whether they were pit, trench, upright or some other type of structure.

Bringing the Kansas breeders an optimistic report of the general Shorthorn situation, Mr. Gramlich announced that more pedigree business had been done in the first 8 months of this fiscal year than in any of the previous 10 years. In those 8 months, 50 new members to the association have been registered from Kansas, indicating that Kansas is rapidly getting back to normal in the livestock business. Hans

secretary of the Kansas Shorthorn Association reported on activities of that group.

Preceding the picnic dinner at noon, was a judging contest in which the Kansas association awarded \$15 to 5 top winners. Clarence Ralston won the first place award of \$5; second prize and \$4 went to E. L. Stunkel. C. F. McIlrath, Beryl Killian and Theda Stunkel won third, fourth and fifth places respectively.

### Fertilizer Does Its Part

Showing what Kansas can do in the way of producing "high-test wheat," J. E. Holden, of Shawnee county, reports a test weight of 65 on 1 load of his Iobred wheat. Seventeen acres of this wheat yielded 552 bushels. Two loads from the field tested 64, and 3 loads tested 63.

Mr. Holden applied superphosphate at the rate of 43 pounds to the acre, at seeding time last fall. Phosphate had been applied to the preceding crop at the rate of 40 pounds an acre. Since the soil is considered only medium to poor, Mr. Holden thinks the fertilizer played an important part in producing the high test weights and good yield.

### School Lunch Menus

What to pack in Mary's or Johnny's lunch pail 5 days a week is often a problem for the mother. Kansas Farmer has a leaflet suggesting 12 menus and several recipes for making wholesome foods for the school lunch. This leaflet is free. Please print your name and address on a post card, addressing it to Farm Service Editor, Kansas Farmer, Topeka, and ask for the School Lunch leaflet.

# **Three Best Vacations**

PIVE dollars and the first prize blue ribbon go to Mrs. D. E. Brunson, Dellvale, in Kansas Farmer's vacation letter contest. As "The Best Vacation I Ever Had," Mrs. Brunson describes a trip thru the Rocky Mountains and Estes Park in Colorado. Here's the winning letter:

"In July of last year, we left for a 10-day vacation in Colorado, going directly to Estes Park. We made our headquarters 5 miles farther up the trail at what is known as Association Camp. Here we found all the beautiful natural scenery for which the West is famous.

"Perhaps the most thrilling trip from this point was the Trail Ridge Road drive up to the top of the Continental Divide. Here were great mountain peaks whose snow-capped tops towered above the clouds; broad multicolored valleys stretching far below, silvered by the clear, rippling mountain streams. Grazing on the green and white slopes were many wild deer. The stately pines and aspens rose high above the brown earth which was carpeted with dainty mountain flowers. What scenery! After a few days in this veritable paradise we started down the north St. Vrain road to Denver and on to Colorado Springs where we spent the remainder of our vacation. Here we visited the famous Garden of the Gods, Seven Falls, Green Mountain Falls and many other places of interest and

"Sunday morning we drove to Denver and, there at the foot of the lofty Rocky Mountains, we attended church where 2,000 people had paused for worship. As the great pipe organ pealed its mellow music in perfect harmony with the inspiring message, I thanked

God for this privilege.

"While we were loathe to leave the spell of the Rockies, we were eager to return home. Perhaps the young chicks had grown bigger—maybe the asters were in bloom—how had Sounder, the dog, and Blossom, the cat, fared—and

had it rained? Perhaps we should drive a little faster, in order to arrive before dark. Rested and contented, we were ready to again assume our duties—yet eagerly planning a visit again next year to America's Playground—Out Where the West Begins.—Mrs. D. E. Brunson, Dellvale."

Second prize and a \$3 check go to Mrs. Truby Adamson, Coffeyville, for her letter telling of her annual trip to the state fair:

"State fair time again! We leave the chores and children to someone else, rrive in the fair city 200 miles away

### Daddy's Little Helper

Daddy's little helper is Benny Earl Brent, son of Mr. and Mrs. W. A. Brent, of Alton, in Osborne county, who was 3 years old on July 3. Benny's father is a large wheat farmer, and Benny thinks he can operate the tractor as well as his dad.

ribbon go to Mrs. D. E. Brunson, Dellvale, in Kansas Farmer's vacation letter contest. As "The Best Vacation look to see what's there."

"We see the races and the grandstand show together. After that until the evening show we are boy and girl again at the carnival. He buys me peanuts, popcorn, cotton candy, and silly souvenirs. He sees how much I weigh and how strong he is, takes me up on the Ferris wheel and other dizzy things to see whether I can take it—I can. We see the evening show, then come back to earth to eat hamburgers and drink coffee before retiring. We sleep like logs until long after cow time—back home.

"The second morning I am on my own again. I study some exhibits, pass up others, rest when my feet hurt and spend lots of time watching people. I seem not to be a person but a recorder of all that goes on about me. I forget myself and my burdens—the purpose of a vacation.

"Afternoon we show each other what we think will be of mutual interest. We compare grand champion cows, hens and flowers with our own. I look over the newest in farm implements, and hubby dutifully studies model kitchens.

"Then we head for home and on arrival are always surprised and pleased

that the kids can carry on without us, that nothing dreadful happened and that in just 2 days there is change—a calf is born, the wheat comes up, and letters arrive with news of company coming—while all had seemed so quiet and humdrum before our trip.—Mrs. Truby Adamson, Coffeyville."

One need not go far to enjoy a complete change of scenery and way of living for an invigorating vacation. A trip to the city was Mrs. Esther Hall Groff's best vacation. Here's her letter which wins \$2 and the third prize:

"Like most 'country kids,' I dreamed of the time I would spend a whole week-end in town; eat in restaurants, walk up and down the streets—both sides—and sleep in a hotel.

"My girl friends and I attended the same country church. One Sunday a meeting was announced in a nearby city. Several planned to attend, and our pastor drove us down. As is customary, the host church entertains the guests, but two of us 'got our heads together' and when we were assigned our place announced we had made other plans.

"We had—with our hatbags we went to the city's best hotel, marched to the desk and ordered a room for the night. We followed, or tried to, the uniformed colored lad who deftly selected our bags and went with them, up elevators and over rugs as heavy as dad's bluegrass pasture.

"Our other dress, hanging in the spacious closet, was viewed with immense satisfaction.

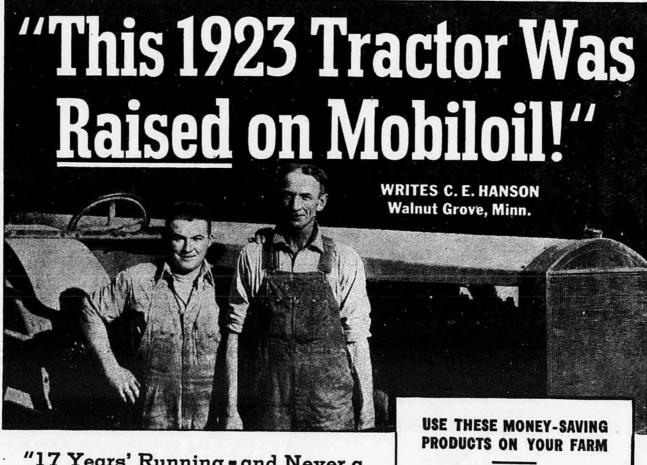

"After spending considerable time washing and powdering we felt ready to go out, but what to do with the key? Discussion followed until we remembered from a movie we had seen that it was left at the desk. So with a worldly wise feeling we descended, left the key in what we hoped was a sophisticated manner, departed for the street and our evening meal.

"Walking along the whiteway, passing various restaurants and eventually gaining courage enough to enter one and order a meal was every bit as thrilling as we had dreamed.

"We were in our 'seventh heaven.'
"I've enjoyed many vacations since, spent more money and traveled farther, but this experience is vivid in my mind as the best, most thrilling of them all.—Mrs. Esther Hall Groff, Atchison."

### Phosphate Gets the Oats

Value of using phosphate fertilizer in production of oats was proved this season by Joseph J. Renyer, of Shawnee county. On a poor field that has never raised legumes, Mr. Renyer harvested an oats crop that averaged more than 70 bushels an acre. At seeding time, 45 per cent superphosphate was applied at 45 pounds an acre.

# "17 Years' Running - and Never a Bearing Changed! That's Protection!"

"ADVERTISING CLAIMS are always interesting—but for downright proof, you can't beat 17 years' successful experience with the same product."

That's how C. E. Hanson of Minnesota—and thousands of other farmers—feel about Mobiloil.

They know from actual savings on oil, fuel, repairs—from actual protection against wear and carbon—that Mobiloil's famous "Balanced Protection" gives farmers their best oil "buy"!

# TOMATO TIPS

By ZOE NIELSEN

EMEMBER how good that first garden-fresh tomato tasted? We watched the first faintly pink tinge appear then, day by day, we watched it jealously and not too obviously, lest someone steal in ahead of us and garner the prize. Then one day, reinforced with the salt shaker, we slipped hopefully into the patch. Yes siree, it's still there and it's ripe! Quite unconsciously we dispense with washing it-what's a bit of dust anywayjust a bit of salt and ummm! that luscious juice! With a sigh of satisfaction and contentment, we once more give our vote of thanks to that intrepid gal who first dared to taste that "poisonous" love-apple. And we could scarcely wait for enough to slice for the whole family.

Now we have served them sliced. aided and abetted with the proper salad accompaniments, broiled-all the usual ways. Somehow we're just a bit tired of tomatoes "as is" and

cast about for other means of including this vitamin-laden fruit in our menus. For fruit it is, the experts tell us, altho good cooks go right on treating it as a vegetable.

Here are some of the ways we like to use to dress up this fruit-vegetable at our house.

### Sarah's Tomatoes

- 2 cups medium white
- sauce
  6 hard-cooked eggs
  2 cup cooked peas
  3 tablespoons catsup or chili sauce
- 1 cup cooked mushrooms, sliced 2 tablespoons minced pimiento 2 large tomatoes 6 toast rounds, buttered

Slice the eggs, reserving the thick center slices for garnish. Chop the rest of the eggs and add to the white sauce; add peas, catsup, mushrooms and minced pimiento. While this mixture is heating, cut tomatoes into slices, three slices from each tomato; broil slightly and place on buttered toast rounds. Top each

with an egg slice; pour creamed mixture over rounds and serve at once.

### Drum Salad

Moisten well-seasoned cottage cheese with mayonnaise, adding minced chives, or chopped walnuts and stuffed olives. Heap on a tomato slice, top with a second slice of tomato. Press strips of green pepper, or pimiento into the cheese diagonally to form the drum. Tiny celery sticks, tipped with stuffed olives make realistic looking drum sticks. Serve "drums" on crisp lettuce.

### Luncheon Casserole

small eggplant 1 egg 1 tablespoon water Salt Pepper

band music with those realistic celery-olive drumsticks.

2 large tomatoes, sliced 1 small onion, chopped 1 small green pepper, minced ½ cup grated cheese

Cut the eggplant in ½ inch slices and pare. Cut slices in half. Beat egg and add water. Dip

PRECERCION

eggplant in egg and brown lightly in butter; season with salt and pepper. Alternate layers of eggplant, tomatoes, onion and green pepper in a buttered baking dish. Cover and bake 1 hour in a moderate oven, 350 degrees F. Remove cover, sprinkle with the grated cheese and return to oven to melt the cheese.

1 tablespoon minced

- 6 large tomatoes 2 tablespoons minced
- onion 1 tablespoon butter
- a butter parsley
  crumbs parsley
  s butter parsley
  Pinch of thyme
  1 bay leaf
  Salt
  Pepper
  1 small clove of garlic cup bread crumbs tablespoons butter diced, cooked chicken

Wash and scoop out the pulp of the tomatoes, leaving the skins whole. Chop the pulp. Brown onion in 1 tablespoon butter. Brown [Continued on Page 11] bread crumbs in 2

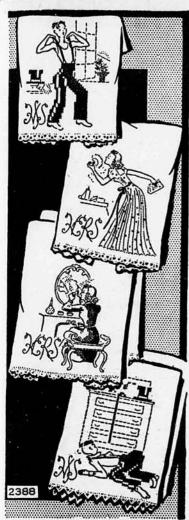

Woven Mats Save Table Linen

be wiped off with the whisk of a damp cloth surely rate as one of the first "first aids" to simplified summer homemaking — as you don't need to be told if you've ever washed and ironed large linen tablecloths. Sometimes these table accessories

are difficult to find, but even that's no problem if you do the making yourself, using material that most any corner store has in stock. This interesting and colorful craft medium is nothing more than crepe paper, which means these mats may be made in an infinite variety of colors and for only a few cents. The paper is cut in narrow strips and pulled thru a small hole in a little gadget called a "crepe paper twister" which you may buy for 10 cents wherever you get your paper.

Our leaflet, "Woven Place Mats," gives directions for three different mats, tells how to make a cardboard loom, and do the weaving. It's your for the asking. Address your request: Ruth Goodall, Woman's Editor, Kansas Farmer, Topeka.

"His" and "Hers" Towels BAZAAR'S BEST-SELLER

Every young housewife would welcome these towels—clever as can be and lots of fun to do. They'll sell like hot cakes at your club or aid bazaar, or be the talk of a shower. Pattern 2388 contains a transfer pattern of 6 motifs averaging 5% by 7 inches; lists materials required and gives illustrations of stitches used. The pattern is 10 cents and may be obtained Tomato Tips from Needlework Service, Kansas Farmer, Topeka.

### Not Found in Books

Bill was ready for college. His parents had saved and provided for a college education, something they had both missed, so their first offspring might drink from the cup of knowledge.

But the air castle fell. At this time of his life, they laid his mother to rest. The heart-broken father faced life alone and an enormous doctor and hospital bill.

There happened to be two other children besides Bill; a girl, 11, and a little boy, 5 years of age. It was Bill who was the hero of the hour, so to speak; stand-ing bravely by his father thru it all. He denounced college and paid the doctor bill, and is staying on the farm with the family, helping rear the younger brother and sister.

I happen to know Bill is not a bad cook, and I hear people marvel at the nice lunches the little girl takes to school. As I see Bill going about on the farm patiently looking after little brother and helping with the farm Work, fate never thrusting him into a situation that he could not master, I am convinced Bill is highly educated, even tho he didn't go to college.

### Anchor Pienie Cloth

By PICNICKER

Playful, cooling breezes are fine for the picnickers, but likely to play annoying tricks with the lunch cloth and food. When we unpack the lunch and spread out the cloth we painstakingly place the olive jar to weight down one corner, the vacuum jar for another, and so on. The olives must be passed, along comes a playful gust and the released corner promptly flies into the lemonade.

Now 4 ordinary clothespins, with legs nicely sharpened, are a part of our regular picnic equipment. When we spread the cloth, each corner is twisted and inserted between the legs of a clothespin; the pins are forced into the ground in a jiffy. Let the wind blow as it will, our cloth stays snugly put. When we are thru the pins are slipped into a small, compact box, already for them justice! the next outing.

### It's Done in a Jiffy

By ONE WHO CANS

Removing seeds and skins from tomatoes when preparing tomato juice and catsup is a tedious and timeconsuming task, usually coming at the height of the canning season, when every moment is precious to rushed homemakers.

Have you ever tried putting the old flour sifter to work? Here's how: Remove the stems from the tomatoes, wash, quarter and cook until they begin to soften. Then put them thru the sifter. You'll be thru so quickly you'll be amazed. Easy? So quick and easy you'll wonder why you didn't try it

### Do Your Shoes Pinch?

By MRS. CLEVE BUTLER

I have a novel method for breaking in new shoes. When I put them on the first time, I run the sewing machine for at least ten minutes. This helps the shoes set to the feet, or the feet relax to the shoes, and they do not pinch as new shoes have a tendency to do.

### Fine for Lunch Boxes

By MRS. WILL BECKER

Waxed paper is invaluable in the school lunch or picnic boxes. Use it to line the kit, to wrap sandwiches, cakes or cookies, to keep juices and flavors from permeating into other foods.

(Continued from Page 10)

tablespoons butter. Add onion, bread crumbs, chicken, ham, beaten egg and parsley to tomato pulp. Season to taste. Simmer gently for about 10 minutes. Fill tomato cups with the mixture, top with additional buttered crumbs and bake 30 minutes in a moderate oven.

This delightful treat we always have called Grandma's Tomato Surprise. She used bread or cracker crumbs for her squash slices, we like to use crushed corn flakes. Grandma sliced a yellow crookneck squash making the slices about 34 inch thick, then pared them.

### **Ideas for Your Club**

Your club will soon be meeting-probably for the first time since spring. What are you planning to do? Perhaps our new leaflet, "Ideas for Your Club" will give you just the help you need. This leaflet includes the History of Labor Day; Autumn poems; plans for a "newspaper" afternoon with brief notes on famous early American newspapers and several newspaper games; the story of Catherine Beecher, the person most directly responsible for giving dignity to the study of homemaking arts and sciences-or the beginning of home economics; a review of Rachel Field's popular book, "All This and Heaven, Too"; and other games and suggestions for inspiring club meetings. For your copy of this leaflet send 3 cents for postage to Ruth Goodall, Woman's Editor, Kansas Farmer, Topeka, Kan.

She fried bacon to crisp curls, keeping them warm in the oven. Next she beat an egg very light and to it added 1 tablespoon of water. She dipped the squash slices in the egg, then into the bread crumbs and fried them golden brown in the left-over bacon drippings. Placing these on her large blue platter, she topped each with a slice of tomato and crisp bacon curls. And did we do

### Tomato Pie

6 large tomatoes
2 tablespoons
minced parsley
2 tablespoons
minced onion
1½ cup diced cucumber
2 teaspoons honey

2 tablespoons butter Salt
Pepper
1½ cups hot mashed
potatoes
½ cup grated
cheese

Peel and slice the tomatoes. Place in the bottom of a buttered casserole. Sprinkle with minced parsley. Add onion and cucumber and dot with the butter. Drizzle with the honey and season to taste with salt and pepper. Make a crust with the hot mashed potatoes. Sprinkle with the grated cheese and bake in a moderate oven, 350 degrees F., until nicely browned.

### Frock and Housecoat

TWO-IN-ONE PATTERN

Pattern 8633—Here's a two-way pattern that will make every little girl who's a fashion-wise little girl simply bounce up and down with joy! You can make your daughter a button-front frock, with two pockets and a lot of braid, and also a swoopy, sweepy grown-up-looking housecoat-both from the very same design.

It's just the type that looks well on growing girls all the way from tiny 6's to lengthening 14's, and wearable the whole year round. Right now make it of gingham, percale, calico, batiste or chambray. Detailed sew chart with pattern. Sizes 6, 8, 10, 12, and 14 years. Size 8 requires 21/2 yards of 36-inch material without nap for short-sleeved frock; 3% yards for short-sleeved housecoat; 1½ yards braid.

Pattern 15 cents. Address: Fashion Service Kansas Farmer, Topeka.

### Capper Publications, Inc., Bonds

A prospectus issued by Capper Publications, Inc., offers the readers of Kansas Farmer the following:

-\$5,000,000.00-

(1) First Mortgage 51/2 Per Cent Bonds payable in ten years. (2) First Mortgage 5 Per Cent

Bonds payable in five years. (3) First Mortgage 41/2 Per Cent

Bonds payable in one year. (4) First Mortgage 4 Per Cent

Certificates payable in six months. The bonds are issued in denominations of \$100, \$500 and \$1,000, and the certificates are issued in denominations of \$50, \$100 and \$500. The present sale price of any of these bonds or certificates is par without premium or

other cost. This announcement is neither an offer to sell, nor a solicitation of offers to buy any of these securities. The offering is made only by the prospectus, copies of which may be obtained by writing to Capper Publications, Inc., Topeka, Kansas. Such requests will be answered promptly.—Adv.

any other make because they get a bigger, sturdier, easier running machine that is guaranteed to do more. And the Papec costs \$25 to \$75 less than other cutters of similar weight and throat width.

### Does More Jobs

A Papec earns its keep the year round,— nakes corn, grass and sorghum silage; chops hay; stores straw after combining or direct from the thresher; shreds fodder; elevates grain. You handle ALL your feed and bedding, with a big saving in time, labor and space.

### Costs Less To Run

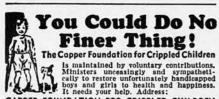

Papec's 3-bearing main shaft and extra heavy cutting wheel make it the easiest running cutter on the market. Saves as much as 25% on gas. Improved self-feeder handles roughage faster and saves labor.

### Six Papec Models

With six Papec models to choose from, ranging from 3 to 30 H.P., there is no need to buy more or less capacity than you can use. Papec knives and other parts cost less and are quickly obtainable for any Papec no matter how old or where located. See your dealer or send name NOW on margin of this ad for full information on the cutter that DOES MORE but COSTS LESS. Papec Machine Co.,

### In High School

requires that his renters have livestock and implements.

In the last 10 years, vocational agriculture work in Kansas has been about doubled, despite unfavorable weather conditions. During this period the enrollment in day schools has increased from 2,515 to 5,560. The number of approved vocational agriculture departments increased from 115 to 160. Last year the work reached 77 per cent of all farm boys enrolled in Kansas high schools, while only 69 per cent were reached in 1929.

Top-notch vocational agriculture boys are first-class material for leading citizens of any community. Bud Bolton, of Smith Center, is a good example. Bud, who has just completed his third year of vocational agriculture, reports a total net worth of \$1,067.61.

During his agricultural training and project work he has selected breeding stock, castrated and butchered hogs, helped remodel and build a straw loft in the poultry house, selected rams, docked and castrated lambs and dehorned calves. He has refloored a hayrack, remodeled a hog house, rearranged the farm shop, repaired fences, and has done countless other jobs to improve the place on which he lives. At the same time, he has found time to be a member of the football and track squads, dramatic club, glee club, band, Hi-Y and other activities in the Smith Center high school.

Vocational agriculture work can be applied in hundreds of ways to improve the profits and pleasures of farm living. John Lawrence, of Winfield, has constructed 2 concrete feeding floors and a 50-ton concrete block silo. He has built an overhead bin in the barn, a hog shed, 2 self-feeders, gates and many small pieces of farm equipment. John constructed a forge blower for the home farm shop; he planned and built an acetylene generator and installed electric lights on a tractor. He built a 2-acre farm pond and installed scales to weigh feed and livestock and other things about the farm.

Altho vocational agriculture work is principally for the purpose of giving farm boys a start, it really affects the entire community. Many fathers adopt the practices of their sons; the worthwhile methods are often copied by neighbors, and so it spreads on and on. It is also a boost to any community to have farm boys with profitable projects being trained to take a position of leadership in good farming methods. Night schools and part-time classes bring the work to many farmers and ture and its related subjects.

young men who are not high school students.

At present, Kansas farm boys enrolled in vocational agriculture are raising 26,651 acres of feed crops, 33,-268 acres of pasture crops, 16,379 acres of cash crops, and 2,327 acres of soil improving crops. They own nearly 2,000 head of beef cattle, 15,000 hogs, more than 15,000 sheep, 3,000 dairy cows and 96,523 poultry. Work of these boys is an inspiration and a guiding hand for Kansas agriculture.

### In College

United States, farming continues to absorb a higher percentage of youth than any other occupational field. Onefourth of all the young men who attain their majority each year must enter farming vocations in order to maintain our present farm population.

In farming there are rewards on the whole for the young man who trains himself beyond his apprenticeship on his father's farm.

There is a tremendous temptation at the end of 4 years in high school to call it quits and close the books, and many do close the books. Out of 100 freshmen who enter high school in Kansas, only 45 become seniors. Out of this 45, only 13 enter college. Out of the 13 who enter college, only 5 go thru for a degree.

There ought to be some encouragement to ambitious young people to know that one way to be rid of competition is to leave behind those thousands who refuse to start on the last lap which leads to a college education.

About 150 were graduated in agriculture from Kansas State College last spring. Competition among them is keen for places on farms and in positions allied with agriculture. But how much less is their competition as compared with the competition among the thousands they have left behind to strive for the poorer farms and for the lesser positions in their respective communities, which positions may or may not be related to agriculture and farming.

Land-grant colleges and universities, such as Kansas State College, are experiencing an increasing enrollment. Their administrative staffs and faculty members are committed to the responsibility of training these young men for the business of farming and for positions related to agriculture where they can render useful service to farming as an industry and a way of life. Our state needs more young men trained in the science of agricul-

# Taking a Rest With Pay

(Continued from Page 3)

purpose of producing certified seed. But he points out that seed is just part of the yearly return.

Brome grass can be pastured at least a month in the early spring, before turning off to save the seed crop. Then after the seed is harvested the grass is in ideal condition for 3 or 4 months of pasturing during the late summer and fall. This gives a total of about 5 months of pasture, even if you take the cash crop.

Mr. Billman has found that Brome may be pastured about 6 weeks earlier than native grass, so it fills an important place in the pasturing system of stockmen who depend on Bluestem and other native grasses. Mr. Billman finds also that Brome grass is more palatable. His cows always show an eagerness for Brome grass after they have been on either Bluestem or bluegrass pastures.

Having lost part of his wheat crop to chinch bugs this season, Mr. Billman mentions another advantage of Brome grass over wheat as a cash crop. He says if Brome grass is seeded in the fall, it is likely to escape serious bug damage because it will be well founded before the time of bug attack the next spring.

Some significant facts about the Brome grass seed market are given by A. L. Clapp, secretary of the Kansas Crop Improvement Association. Mr. Clapp predicts continuation of the good demand for high quality Brome seed produced in Kansas. He says the strain of Brome grass raised in this state is superior to northern grown strains, for the Midwest section of the United States. Mr. Clapp believes the amount of seed we can sell depends almost entirely on the amount of pure seed we have to offer. He expects out-of-state demand to increase as rapidly as Kansas farmers can increase the production of pure seed.

Brome grass is adapted to the entire eastern half of Kansas. C. E. Sweet, of Jewell county, has been growing the crop on his farm for 45 years, having seeded his first 20 acres in 1895. That

is growing Brome primarily for the first seeding convinced him that the crop is worthwhile, and since then, nearly every field on his farm has been in Brome grass at one time or another. He uses the Brome grass in a systematic rotation with his native grasses.

Stock is turned on the Brome grass early each spring, while Mr. Sweet's native pastures are producing a good spring growth. About June 10, stock is transferred to the native pastures, where they remain until a seed crop of Brome has been harvested and green shoots of the Brome begin to appear in the fall. Then the stock is turned back on Brome grass for fall and winter. Resting the native pasture again in the fall helps it to prepare for winter.

A common complaint against Brome grass is that it is difficult to obtain stands. But, according to M. C. Axelton, Jackson county agricultural agent, those who follow a few simple precautions have been successful in overcoming this objection. He says one of the important factors is that of having a firm seedbed. Early shallow plowed or disked small grain stubble makes a good seedbed on medium to fertile soils. If old pastures are to be replanted, shallow plowing or disking usually provides adequate preparation.

Summer-fallowed land is always the best bet for obtaining a stand of Brome grass. The crops grows best on good soil, well supplied with moisture. However, it will do well on thin soil if a reasonable supply of moisture is pres-

Brome grass can be seeded in either spring or fall, but most growers agree the best time is about the middle of September, preferably after September 10, and before September 25. Twelve to 16 pounds an acre is considered about the right rate of seeding under usual conditions.

Seeding is commonly done with a force feed grain drill, set to sow 2 to 3 bushels of oats to the acre. To guard against difficulty in getting the seed to feed down, Mr. Axelton advises purchase of the best certified seed avail-

goods, if you could sell 5 billions more, or upwards?'

They would have the government prorate imports, so no one branch of industry would have to take the competition of foreign produced goods.

Having done this, they use this illustration of what would happen.

The American farmer who today can buy 5 cans of paint a year, all American-produced, would buy 1 pound of foreign-produced paint. But his improved purchasing power would allow him to buy 9 cans of paint. The American paint manufacturer then would sell 8 cans of paint, instead of 5, but would have to see foreign paint manufacturers sell 1 can to the American farmer at the same time. Whether he could stand that agony, even at a profit-well, that seems to be the rub.

The American manufacturer would have to give up his slogan of: "The American market for the American manufacturer."

Baerman and Pickert have this answer to the natural counter question:

"Would you ask the American farmer to give up his slogan, the American market for the American farmer?

You may remember that Secretaries Hull and Wallace supported the illfated reciprocal trade agreements program on the plea that the American farmer ought to be satisfied with 90 per cent of the American market.

"There is this difference," say Baerman and Pickert. "The capacity of the human stomach is limited. The capacity of the human family to use industrial products is unlimited, except by purchasing power."

Kill seed-borne stinking smut of wheat! Reduce certain barley smuts! Cut down losses from seedling blight! Just dry-treat your seed with New Improved CERESAN—the double-acting treatment that generally kills surface seed-borne disease organisms by both coulast and vator. Average isms by both contact and vapor. Average yield increases in tests range from 6 to 18%!In controlling stinking smut, Journal of the American Society of Agronomy says "New Improved CERESAN was signifidisinfectants...in each of the 3 years they were tested." Treat your own seed, or go to an authorized Du Bay Treating Service. Ask dealer for pamphlet.

### By CLIF STRATTON Kansas Farmer's Washington Correspondent

**Better Markets for Everybody?** 

WASHINGTON, D. C.—How many thousands of farm programs have been unloaded in Congress and on members in the last quarter century no one knows. However, Charles Custer Pickert, of St. Charles, Minn., tree surgeon who has been interested for years in economics, and Ralph Berland Baerman, of Rushford, Minn., nursery man and also student of economics, have shown up here with a plan that is attracting a good deal of attention. Senators Capper and Mc-Nary, and Rep. Clifford Hope, of Kansas, for instance, after looking it over, have announced it worth very serious consideration.

### A School "Daze" Party

September and beginning-ofschool go hand in hand, so why not give a school days party for your Septembér entertainment? Instruct your guests to come in costume, promptly on time. Clever invitations, games to play and what to serve for refreshments, are included in the "School Daze Party" leaflet, which we'll be glad to send for only 3 cents to cover mailing costs. Address your request to Leila Lee, Kansas Farmer, ToThe Pickert-Baerman plan goes back to the McNary-Haugen and the Grange debenture plans of the 'Twenties, streamlined, so to speak, for 1940. Part of the streamline is what might be, in case of necessity, barter to dispose of the recurring surpluses of American farm products. It is based on disposal of these surpluses in foreign countries. Mr. Baerman and Mr. Pickert hold the view that the foreign market for American farm products has not ceased to exist-it has just run out of purchasing power. That purchasing power they propose to restore by allowing Europe to import into the United States, under a quota system, manufactured goods in exchange for American farm products.

Putting their program into effect would mean lowering American tariff bars on imports of manufactured products sufficient to absorb the American surplus of farm products abroad.

Baerman and Pickert figure that by allowing imports of some 2 billion dollars of manufactured goods, under this plan, the purchasing power of the American farmer would be increased by something like 6 or 8 billion dollars.

Stating it another way, they say that American manufacturers face this question, in considering their plan:

"Would you rather have 100 per cent of an 8 billion dollar market, or 90 per cent of a 15 billion dollar market? Would it be worth allowing imports of 2 billion dollars worth of

# KILLEFER farm SCRAPER

NOW is the time to make farm improvements and solve your "feed and water" problems by building trench silos, dams, and ponds with a Killefer Farm Scraper—it's a one-man outfit that will handle all your earth-moving jobs.

Tractor-controlled-it cuts and spreads thick or thin, and dumps forvard or backward—the bowl revolves completely. A spring-balanced draw-

bar makes it adjustable to your soil conditions. Every wearing part is reinforced and protected.

Built in 31/2- and 5-foot sizes to match your wheel-type tractor; see the Killefer Farm Scraper at your nearest John Deere dealer's.

### IN THE FIELD

Jesse R. Johnson Topeka, Kansas

E. CORN BROWN SWISS HERD, located at Wichita, is growing in size and producing ability. Cows up to 500 lbs. of butterfat have homes on the Corn form.

JOHN A. VELEK, Milking Shorthorn breeder, of Rexford, writes that his wheat made 15 bushels to the acre and says the cattle are doing fine. It is dry in his section of the state, he says, but

it has probably rained since his letter was writ-

HARRY H. REEVES, secretary of the KAN-SAS MILKING SHORTHORN BREEDERS' AS-SOCIATION announces a consignment sale to be held at Hutchinson, October 3. The day folwill be held. Parties desiring to consign stock should write Mr. Reeves at once,

DEWEY McCORMICK announces Novemb DEWEY McCORMICK announces November 7 as the date for the annual fall sale of the MORRIS COUNTY HEREFORD BREEDERS, As usual, the sale will be held in Council Grove. And, as always, a fine lot of cattle from the various herds of the locality will be sold. More about the sale will appear in later issues of Kansas Farmer.

HOBART HUNTER, writing for the HUNTER BROTHERS, of Geneseo, says, "We are receiving inquiry right along and making sales of Milking Shorthorns. Continue the advertisement." Joe, member of the firm, has been in the

hospital for some time but is expected to be out soon. Recent rains have improved the feed sit-uation in most parts of Central Kansas, and with this improvement has come an increased demand for good breeding stock.

FRANK L. YOUNG, who will have a registered Jersey cattle sale on his farm near Cheney, October 22, plans a novel judging contest to be held the forenoon of the sale. The contest will be open to everyone in attendance. Several classes will be provided and something like 10 cash premiums alloted. That is, definite amounts totaling half the price of the average animal sold. All awards to be applied on animals purchased. That is to say half of a good cow is to be given away. Attend the sale, win a cash prize and lower the actual cost of your cow or calf.

Sixty-five years ago B. F. DOLE, a McPherson county farmer, brought registered Shorthorns to his home near Canton. Shorthorns have been kept on the Dole farms ever since. Now his sons, W. W. AND A. J., both have herds of

horned and polled cattle. The 2 herds number well over 100 head. During the years the Dole Shorthorns have been kept for milk as well as beef. On the A. J. Dole farm up to 20 cows are usually in milk excepting the busy season of the year. The Dole cattle are fed only such feeds as grow on the farms, and no effort is made to breed show cattle. But the brothers agree that but some the start of the destard the season of the year. for the cattle, they couldn't have weathered the

## BERT POWELL

AUCTIONEER

1531 LIVESTOCK AND REAL ESTATE Topeks, Kan.

Jas. T. McCulloch, Auctioneer Employs methods based on experience. Reg. livestock, larm sales and real estate. I have no other business, CLAY CENTER, KAN. depression periods of the last few years. Forty lead of the Polled Shorthorns are direct descendents of a buil from the Achenbach Bros. herd at Washington, Kan. The horned cattle are Browndales and other good Scotch breeding.

Browndales and other good Scotch breeding.

LAWERENCE STRICKLER ESTATE MILKING SHORTHORN DISPERSAL, at Hutchinson,
will be a fine demonstration of what uniformity
can accomplish in founding a herd. All but a
few of the animals that go in this sale carry the
blood fairly close up of the great bull, Otis
Chieftain. The 10 mature cows of this breeding
will probably be the best 10 milking bred Shorthorn cows that have ever gone into a Kansas
sale. Four of them, daughters of Glenside Signet,
have never been defeated when showing as a
group in the get of sire class. These great cows
and their sons and daughters make up the offering. All roads will lead to this sale on October 2. File application now for catalog.

DR. W. H. MOTT announces the following dates of fall Holstein sales: October 21, The Arkansas Valley Holstein Breeders' sale, Newton; Midwest Holstein Breeders' sale to be held at Herington, November 7. Dr. Mott says the demand for breeding stock has improved greatly since the recent rains, in most parts of Central and Eastern Kansas there will be plenty of rough feed. Farmers and dairymen are determined to keep up their breeding herds, and the demand grows better right along for a better class of Holsteins. Outside buyers are coming to look to Kansas now. Parties desiring to consign cattle to the above sales should get in touch with Dr. Mott. Address him at Herington, Kan.

At a recent meeting of the executive board of the KANSAS HOLSTEIN BREEDERS' ASSOCIATION it was voted to celebrate the 25th anniversary of the founding of this association. The celebration is to be held in Herington, March 25, 1941. The association was brought into existence on that date 25 years ago. John W. Johnson and W. H. Mott were prime movers in bringing about the organization. During the years the association has been active and was a great help in bringing to the attention of farmers the importance of the Holstein. A better demand and higher prices have resulted. Now Kansas ranks 8th as a Holstein state. It is probable that a big anniversary sale will be held in connection with the celebration.

J. L. NELSON, owner of the CEDAR DRIVE GUERNSEY FARM located 1½ miles west of Wichita, announces a production sale of registered and high-grade Guernsey cattle on October 7. Mr. Nelson has bred Guernsey cattle for many years and has sold milk to Wichita consumers for more than 15 years. Operating under a heavy overhead, it has been necessary to keep only the highest production cows. The Nelson herd was high herd in their DHIA association for 1939. With an average herd record of 443 lbs. Mr. Nelson says, "If you want high producing cows attend this sale." The animals selling were bred on the farm and are TB and abortion tested. The sale is being made because of lack of room. About half of the offering will be registered cattle; most of the others are virtually purebred but not eligible to record.

LESTER COMBS, secretary and manager of the SOUTHWEST KANSAS GUERNSEY BREEDERS' ASSOCIATION, says the consignments are right up to standard and some ahead of the previous sale held at Parsons. Located in the corner of 3 good dairy states these sales have come to be looked on as a meeting place for some of the best breeders in America. That is, it is possible for several breeders who breed the best to spare a few tops, and altogether this makes an unusually high class Guernsey offering. That these sales are coming more and more to be appreciated by buyers from Kansas, Missouri and Oklahoma is attested by the largest distribution at every sale. Texas is also a good territory, and this season, as usual, Mr. Combs looks for buyers from there. A new consignor this time is The Pine Manor Farm, Goshen, Ind. Every effort is always made to look after the buyer's as well as the seller's best interests in these sales. The sales are conducted on a high plane of business. Write now for catalog and look for information in the next issue of Kansas Farmer.

FRANK L. YOUNG, of Cheney, one of the oldest and most successful breeders of registered Jersey, cattle, announces a reduction sale to be held on his farm October 22. Every animal that goes in the sale was bred on the farm, and their dams have been bred there for many generations. No herd has been tested for butterfat production more consistently. In the herd is one 2-ton cow that has produced more than that amount during her lifetime. A lot of her descendents are on the farm, and a part of them go in the sale. Mr. Young says this is a sale to reduce the herd so what is left can have better care with less labor. The Young farm has one of the best combinations for this part of the state: Wheat and Jersey cows. By breeding at the proper season of the year, the cows can have care during their heaviest production months. And while harvest and other farm work is greatest the cows are resting and making ready for heavy production when fresh again. Mr. Young says he is making a fair division with buyers and putting in a lot of his best cattle. Among them a great lot of first calf helfers that will freshen by sale day or soon after.

### Big Angus Day Soon

The annual Vocational Agriculture Day at the E. L. Barrier farm, 4 miles northwest of Eureka in Greenwood county, will be held Saturday, October 19. Vocational students from all Eastern Kansas schools are invited to spend the day seeing top-notch Angus cattle under actual farm conditions; cattle which invariably top the market at Kansas City. This is the second year for this event. Last year 16 schools were represented, with a total of more than 600 visitors. Indications are that 32 schools will be represented this time and the crowd will more than double. Judging Angus classes will feature morning and afternoon; a barbecue dinner will be served; M. O. Cullen, Chicago, representing the National Live Stock and Meat Board, will give a meat-cutting demonstration; and prominent speakers will include F. D. Farrell, president of Kansas State College, and W. M. Jardine, president of Wichita University.

Kansas Farmer for August 24, 1940

Each month The Household Magazine is welcomed into homes with a population of 6,118,958. These homes, if gathered into one city, would form a metropolis as large as Chicago, Philadelphia, and Cleveland combined.

But in Household's town, there would be no slums and no bread lines. Probably there would be no millionaires. The town would spread over vast acres, with home after home—each a one-family dwelling of middle-class Americans. More than 75 per cent of the families would own their own homes, and there would

be yards with flowers and perhaps a vegetable garden—and a car in the drive.

Household's town, however, is not gathered in one place. Some of its readers look from their windows upon the seas; others upon the majesty of the Rocky Mountains, or the quiet beauty of the Appalachians; many upon the rolling fertile plains of the Midwest. Its more than 1,848,000 homes are along thousands of beautiful streets throughout these United States.

More women living in the smaller cities and towns read Household than read any other women's magazine. It is edited for them; it knows their problems and their way of living. It is practical, down-to-earth and keenly aware that the modern woman wants her information terse, and straight from the shoulder. It long ago discontinued wrapping recipes and household helps in lacy verbiage.

Back of its editors is a practical laboratory—The Household Searchlight—where recipes and all kinds of household equipment are put through rigorous tests by a highly-trained technical staff in order that the editors may know. The staff constantly is developing new ways of preparing foods, new methods of using equipment, and better and easier ways of handling the hundreds of tasks in a family home.

Thus, Household—the largest member of the "Capper family"—is always welcomed by women whose proud degree is Homemaker.
