VESTOCK AUCTION
With ACTION

Barn Phone
TA 5-0211 Salina, Kansas

CHEAP?
A "For Lease" sign just barely pokes through flood waters along Highway 140 west of Salina. High water from Mulberry Creek covered thousands of acres in the area. The highway was closed; one car stalled in the water was almost covered. The railroad which parallels the highway was washed out in one place.

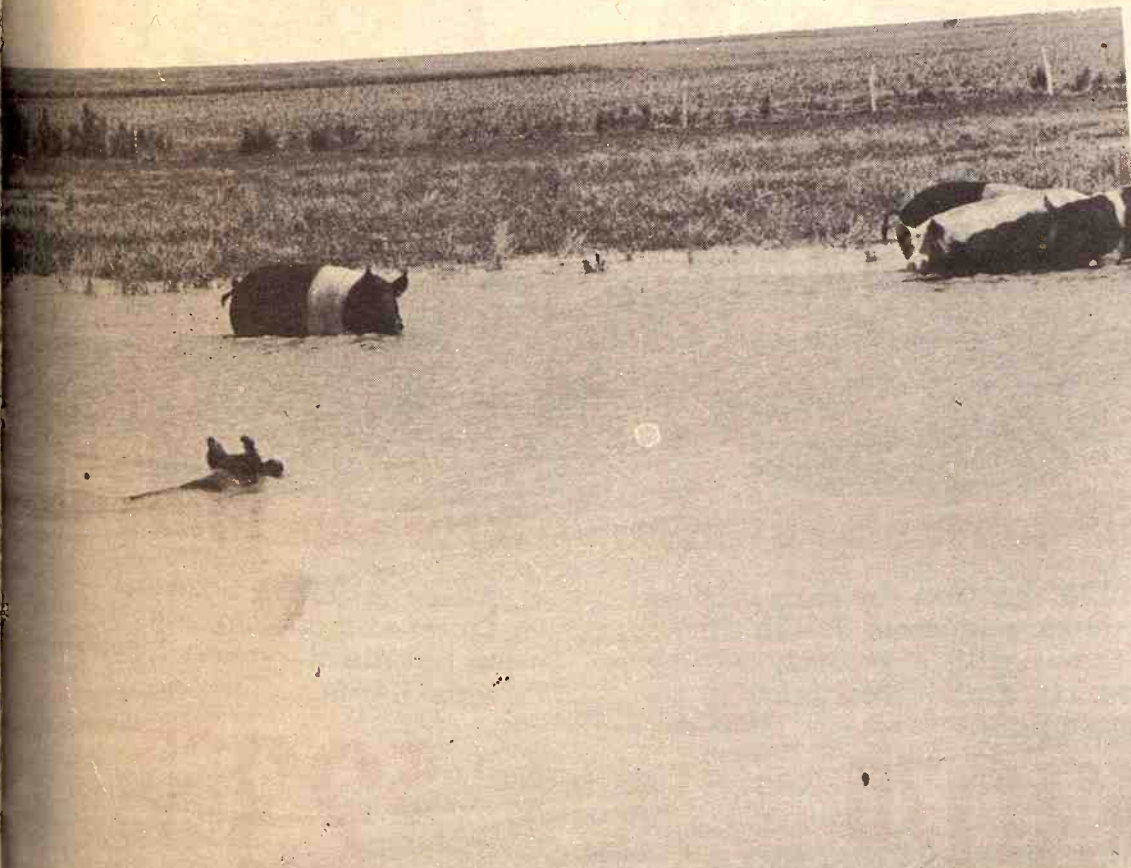

MOVING TO HIGHER GROUND

Alan and Ralph Larson help their father Howard O. Larson move dairy stock from flooded feed lot near Tescott. Cattle were moved to a pasture on higher ground.

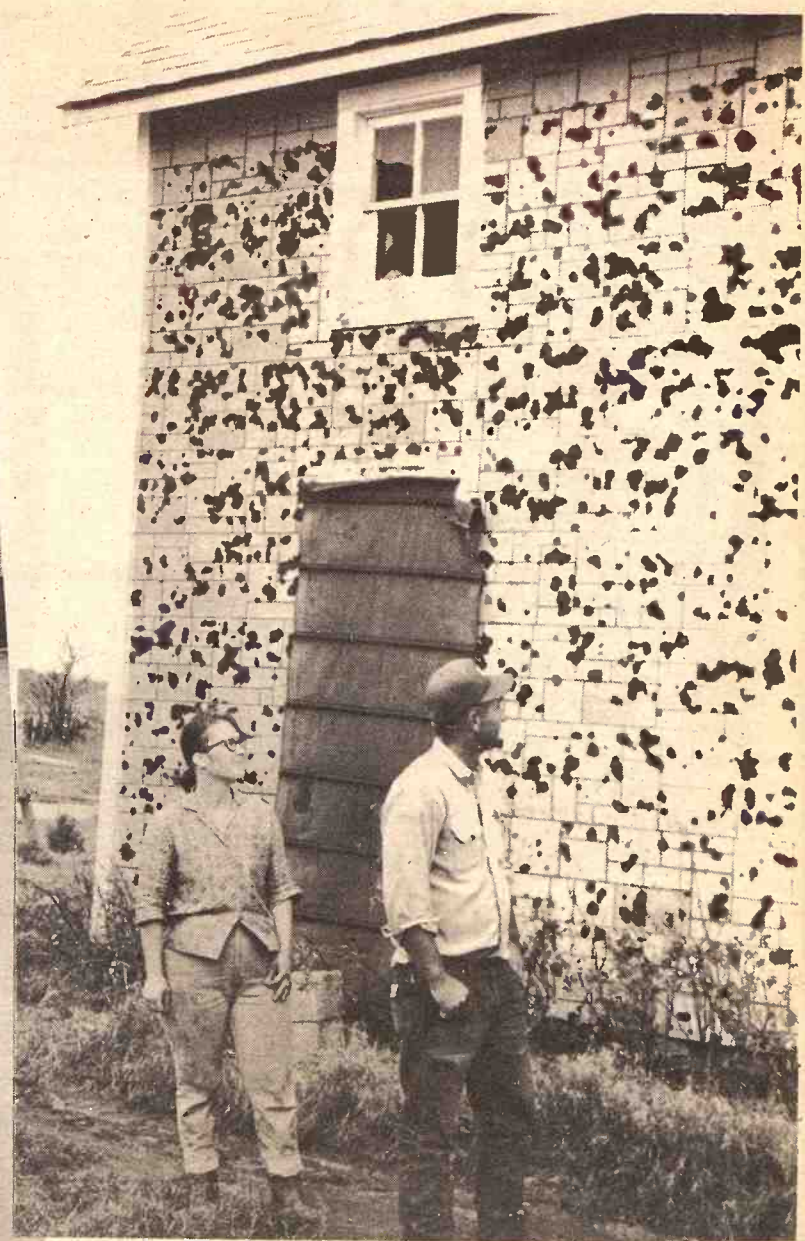

When The Streams Overflow

G&G area farmers couldn't complain about not getting enough moisture in May. It was a month that produced more than its share of tornado warnings, steady procession of grey days, some hail storms that devastated pockets of the G&G area, and finally an accumulation of rainfall that sent many streams out of their banks. Some of the places that got the worst of it are shown here and on page 14, with pictures by Kenneth Greene.

SUNDAY AFTERNOON SWIM

Hogs belonging to Floyd Gawith at Tescott go for a Sunday afternoon swim in flood waters from the Saline River.

RIDDLED

Mr. and Mrs. Danny Srna of Culver inspect their hail damaged home. All windows on west side of house were broken and siding was badly damaged. A new roof installed just last winter was also damaged. Srna said his alfalfa was beat into the ground and recently planted corn and sudan would have to be replanted.

Miracle Fertilizers? KSU Dose n't Know About Them

Contrary to claims which appear in some publications, there is no miracle fertilizer or soil conditioner, point out two Extension specialists at Kansas State University.

"Investigate such exaggerated claims before investing in a product," advise Dr. Leslie Tobin, soil fertility specialist, and Claude L. King, plant pathologist.

Here are some examples of common claims, with each claim accompanied by the facts as supported by scientific evidence:

CLAIM — Our product, if properly applied, will reduce the incidence of corn blight and or other plant diseases.

FACT — Although it has been established that adequate fertility is

essential for healthy plant growth and high yields, fertilization will not insure the absence of disease. If disease is present, a nutrient imbalance or a deficiency of one element can increase the damage.

CLAIM — Our product stimulates the release of locked-up nutrients in the soil by feeding the soil bacteria that breaks down soil organic matter and minerals. This results in improved tilth.

FACT — The soil is already filled with millions of microbes which carry out certain activities, such as decomposition of organic matter and ultimate release of nutrients. Adding a few pounds per acre of such a bacterial product would not change the soil microbial population to any degree as most Kansas soils already contain 1 to 3 tons or more of bacteria, fungi and other organisms per acre.

CLAIM — Our liquid fertilizer is more available than dry fertilizer.

FACT — It would seem reasonable

to assume that nutrients dissolved in a liquid would be more available to the plant. However, once these fertilizer salts are in the soil, they react exactly the same as the salts of dry fertilizer. The elements undergo changes which in some cases make them less available. The decrease in availability occurs whether the nutrient is in a liquid or dry state. Kansas State University tests show that liquid and dry fertilizers perform equally in the field.

CLAIM — Foliar applications are a more efficient way to fertilize a crop than with soil applications.

FACT — Because of the large amounts of the three major nutrients (nitrogen, phosphorus and potassium) required by a high yielding crop, it would be impractical to attempt to feed the crop solely by foliar applications. Foliar feeding is confined primarily to applications of some of the micronutrients (trace elements). Deficiencies of certain trace elements such as zinc and iron can be corrected by foliar applications because only small amounts are needed per acre.

CLAIM — Our seed coating product furnishes nutrients that promote soil bacteria and earthworm activities that cause a release of soil nutrients the natural way.

FACT — There is no scientific proof that the small amount of bacteria applied in this manner will change the microbial population sufficiently to have an effect on breakdown of soil minerals or organic materials.

"What farmers need to remember is that there is no substitute for standard fertilizer," says Tobin. "There simply is no such thing as a

miracle product."

Tobin and King believe farmers approached by salesmen should:

— Insist upon an explanation of the exact analysis of the product. If it contains little or none of the plant nutrients, it is of questionable value as a fertilizer.

— Ask for results conducted by an experiment station or other unbiased research organization. Generally, a salesman of a "super" product bases his sales pitch on testimonials or opinions rather than on facts.

2

Grass & Grain

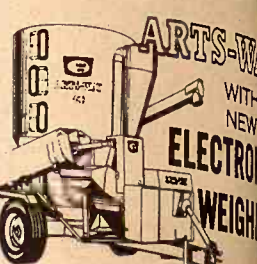

June 1, 1971

— Compare the cost of plant nutrients in the fertilizer with the cost of equal nutrients in standard fertilizers. Some fertilizers or 5 times more per pound of food than standard fertilizers.

— Confer with a county agricultural agent before any large investment.

SAVE FEED DOLLARS

Model 425

You'll never waste costly feed with an Arts-Way 425 or 325 and the optional new Arts-Way Electronic Scale. Ends ration guesswork. You weigh each ingredient electronically as it goes into the mixer. There's no waste of protein or supplement. And you can weigh exact rations out to your animals. Come in and see it in action!

Grocers Quit Trading Stamps

Never legal in Kansas, the trading stamp has about passed from the scene in Kansas City, nearest spot to the G&G area in which they have been used.

At one time nearly all major supermarkets in Kansas City (on the Missouri side) passed out stamps with grocery purchases. A&P quit in 1965, Krogers two years later. A local chain, Milgrams, dropped out in 1969. This spring United Supers and then Safeway dropped the stamps as an inducement to shoppers.

Only major outlet now is at some Thriftway stores, members of the Associated Wholesale Grocers group.

Supermarkets have dropped the trading stamps generally with a fanfare that prices were being discounted. Most store operators appear happy that they are no longer handling stamps.

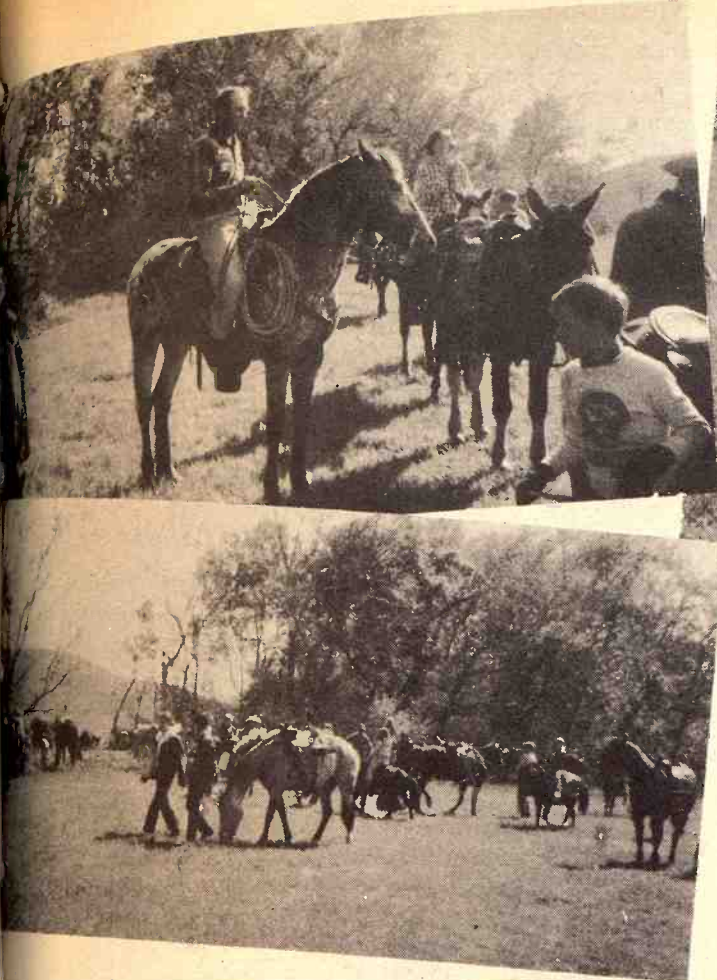

Some of them say that inflation pressures made it necessary to cut expenses in any way possible. Estimates generally are that stamps added 1 1/4 to 2 cents per dollar spent by the consumer.

Not all grocery managers, however, were sure that the stamps won't make a comeback. The bigger the store, the more important is total sales volume.

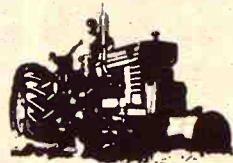

"When you operate on a one per cent profit on sales," said one chain advertising man, "anything you can do to gain volume becomes important. Stamps have helped volume before. They will again, if everyone else isn't offering them."

A PLEASANT DAY FOR A RIDE

Several hundred horsemen in the G&G area think there is little as pleasant as a nice Sunday ride for several hours with a saddle club. One of the more active groups is one at Barnes, in Washington county. This group often gets close to a hundred people for weekend rides. Many in the G&G area will recognize the group by its association with Lyle Weiche, who farms south of Barnes in the Chepstow hills. Weiche often is astride his mule Chico on the rides, and he has taught dozens of Washington county youngsters to ride, train, and appreciate horseflesh.

LETTERS—

A Picture Idea

From A Hope Reader

My husband and I enjoy Grass & Grain and get a lot of service out of its use. We are in the grade A dairy business, have been for 16 years. Also my husband, our hired man and our son (who attends KTI at Salina) operate custom swathing with a Hesston swather. My husband built a trailer to haul the swather so they are able to cover more territory in a short time. Thought G&G might like to get a picture of this outfit and to find something about some

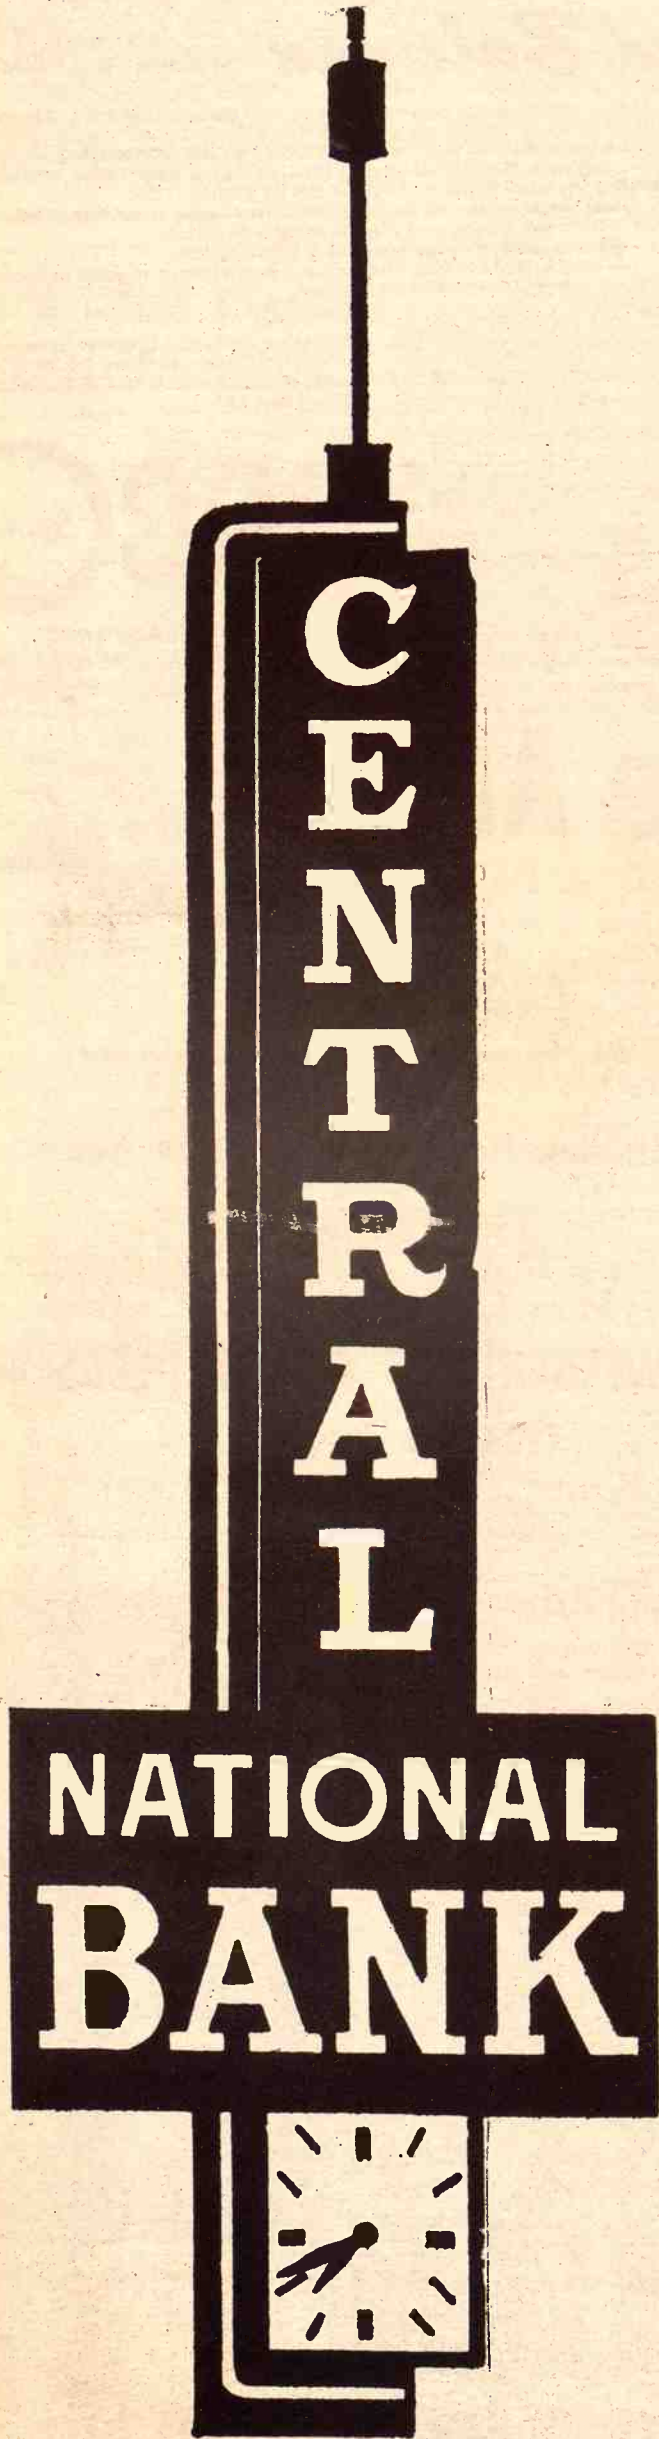

from the G&G Area

people living in Jefferson township in Dickinson county. Thank you for your excellent paper.

Lois Orth
Rt 3, HOPE, KANSAS

G&G likes to get picture ideas from readers. Many of the picture suggestions have merit, and we try to arrange a photographer's schedule to include the idea. We might commend our own classified section if the Orths would like to make their custom swathing services better known.

JUNCTION CITY, KANS.

Women Resist Giving Up Smoking

Women have more trouble quitting smoking than men do.

No one knows why, but figures from the Kansas Tuberculosis and Health Assn. say that the percentage of men smokers in the decade from 1955 to 1965 actually decreased but that percentage of women smokers went up.

Figures for both men and women are now tapering off, says the association in a release aimed at noting the dangers of smoking to women.

Smoking among teenage girls is now about 40 percent, about the same as for boys.

The association says that women who smoke spend more time sick in bed than nonsmokers and have three times the rate of chronic bronchitis and emphysema. The number of women dying from these two diseases has doubled in the past decade.

Firemen Give Up 35-Year Project

MANHATTAN—Manhattan firemen have discontinued refilling of fire extinguishers of business firms here, a project they have undertaken for 35 years.

Tom Woodhouse, fire chief, cited

"public pressure" from an unnamed Manhattan commercial business which felt the firemen were in competition with the firm.

Profits from the project were used to sponsor a summer youth baseball team, provide donations to charity and purchase small recreational equipment for use by firemen.

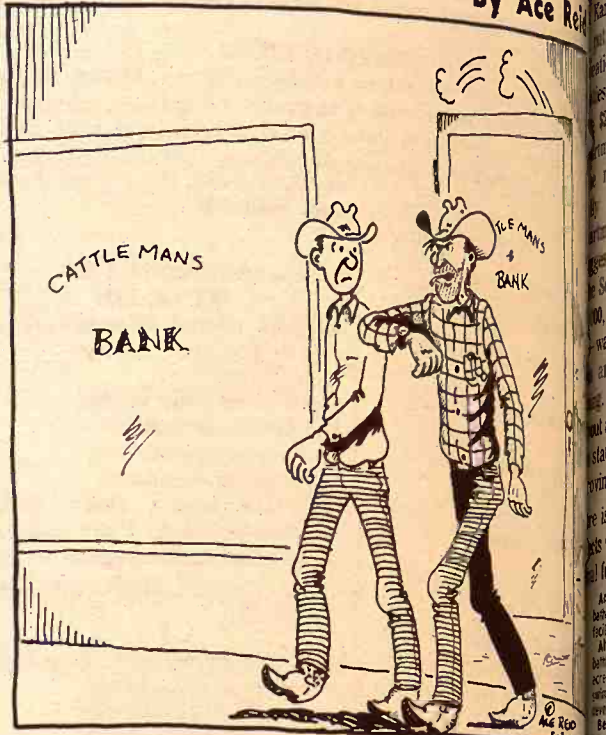

"We hate to discontinue the work, but feel we must," Woodhouse said.

EXTENSION AWARD TO FORMER KANSAN TRIER

One of nine Extension Service awards from the year is Sykes Trieb, a former marketing specialist at State University. Trieb has with Georgia Extension since but his award was for work in Kansas.

COW POKES

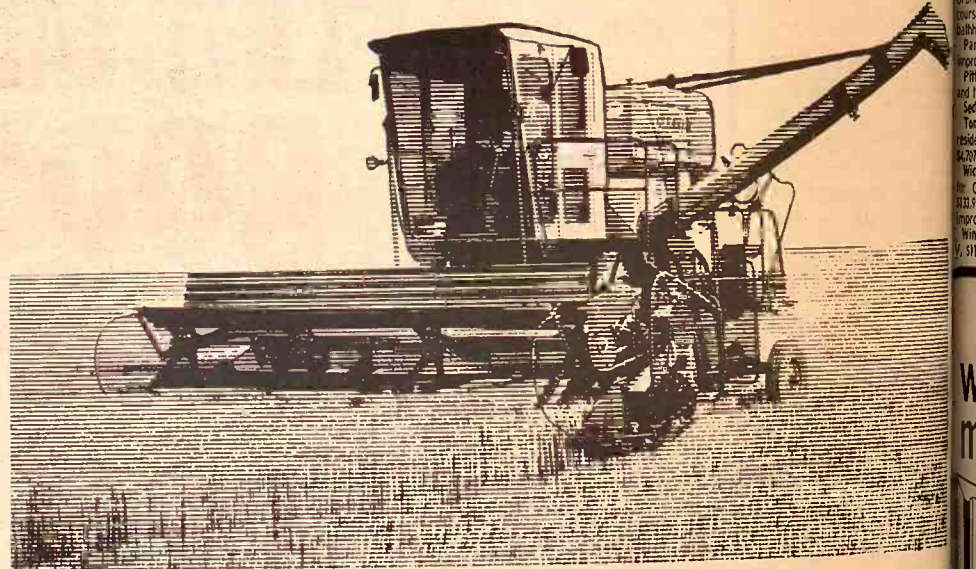

By Ace

"So, I said to him!, all right, so you won't let me have a loan, would you give me the time of day? — look it's 11:45!"

HURRY THROUGH YOUR HARVEST

without sacrificing yield

YOU can't hurry maturity . . . but once your crop is ready, you can lose part of your yield with each day's delay. On the other hand, haphazard hurrying at harvest time can cost you more than you save.

That's why you shouldn't push your combine beyond its capacity. And if yours can't stand the pace, trade it for the keep-ahead capacity of a Gleaner combine. Then you can hurry through harvest without sacrificing yield . . . without compromising the quality or cleanliness of your crop.

If you've ever operated a Gleaner combine, you know what we mean. The "Sure-Feed" system with down-front cylinder eliminates the need for long feeder chains and conveyors in front of the cylinder—the chief causes of choking and plug-ups.

With the cylinder down-front, a Gleaner combine has more area behind for separation and cleaning. Those extra bushels go in the bin . . . not back on the ground. A Gleaner combine gives you extra capacity wherever it touches the crop . . . lets you hurry without worry.

Consider Cutting Courses On State Campuses

Duplicate schools of engineering,
journalism and architecture at
Kansas universities are probably
not in jeopardy, but there are in-
dications that the Board of Regents
is looking hard for programs and

courses that can be cut at KU, K-
State, Wichita State and the three
state colleges.

Max Bickford, executive officer
for the Regents, told a legislative
subcommittee that "hard decisions"
on eliminating unwarranted courses
will be made.

He cited a case of a graduate
course at one state school that had
an enrollment of almost 60 percent
foreign students.

"Unless there is a demand for a
program from our own area kids,"
Bickford said, "Then those
programs are on their way out."

Bickford also indicated that there
was some opinion that a school
should not be allowed to get larger
than 12,000 students. He cited the
size of the town and other factors
which could bear on the problems
that a larger university had. KU
presently has close to 18,000 students
and K-State about 13,500.

"I'm a big defender of the right of

a kid to try, but I don't know if they
ought to have the right to go to any
school they want," Bickford told the
legislative subcommittee chaired by
Sen. Joe Harder, R-Moundridge.

Charolais Sale At Hays Hits \$136,000 Gross

The Bluestem Charolais Assn's
spring sale at Hays grossed over
\$136,000, with 15 bulls averaging
\$1382 and 145 female lots \$736.

The top price was \$4350 paid by
Glen Jordon of Coldwater for a 1969
full French bull bred by T. H.
Neilson of Overhill Farm.

A half French bull, consigned by
H. D. Shawver of Wichita and owner
of Blue River Hills Ranch at
Manhattan, went to Colberg's
Charolais at Lyons for \$2200.

Ganoung Charolais of Plainville
paid \$1500 for a bull consigned by
Walter Doll of Healy.

A double-bred Bette cow, a fifteen-
sixteenths female, with a good heifer
calf at side, went to the Flying A
Ranch for \$3700. The pair was
consigned by Spain Ranch of
Richards, Mo.

Heifer prices topped at \$1400 on a
consignment of John Ewing of
LaSalle, Colo., that went to Ganoung

NATIONAL HONOR TO G&G AREA TRAPSHOOTER

CLAY CENTER — Phil Frigon, a
17-year marksman, has been named
to a Junior All-America trap-
shooting team in Sports Afield
magazine. Frigon tied for the junior
championship at Vandalia, Ohio,
won a junior doubles championship
at Reno, Nevada, besides winning
state titles in Kansas and Nebraska.
Frigon averaged .963 on 3300 target
during the season. He's the son of
Mr. and Mrs. R. Frigon.

First to serve the farmer.
Your International Harvester Dealer
can show you 615 and 715 combines
that should cost more. But they don't.
Why wait?

Check the power, prices and capacities of our new 615-715 combines
with comparably sized machines.

You'll find that we're determined to give you more combine for
every dollar you invest.

For example, we give you up to 107 hp in the 715. Up to 96-bushel
capacity in the grain tank. Capacity features you can count on in any
crop or condition.

Of course you get Quick-Attach platforms and corn heads. Variable
speed cylinder and fan drives. Choice of belt propulsion or Hydrostatic

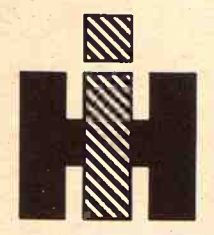

All-Speed Drive.

Naturally, some things we wouldn't think of changing. Like our
full-width threshing. Practically plug-free fin-and-wire racks. Op-
posed-action cleaning.

These new 615 and 715 combines can be equipped with 10½-
to 18½-foot platforms, or 2-, 3-, and 4-row corn heads. See your
International Harvester Dealer. Compare them with any other like-
sized combines. Then decide how you want your 615 or 715—finance,
rent or lease.

Last Link On I35W To Wichita Slowest, Toughest

Interstate highway 35W won't be completed to Wichita for another three years, highway planners say.

The superhighway is destined to link I70 at Salina to the Kansas Turnpike at Wichita. The road is completed between Salina and McPherson and a 19.6-mile run from 21st street in Harvey county is to be opened at midsummer.

Another 5-mile stretch in Harvey county has just been completed.

The final section that will slow up completion to Wichita is a 5.4 mile thru Wichita, from 17th street south to Pawnee. The link up with the south Wichita interchange of the Turnpike has already been completed.

The 5.4-mile run thru Wichita will be the slowest and most expensive miles of I35W. The 3-year schedule presumes favorable weather and the federal money remaining available.

Except for that final stretch one should be able to travel the 89 miles from Wichita to Salina by mid-1972. The cost: about \$1 million a mile.

Wichita County produced 4.9 million bushels of corn grain in 1970 to rank first among all Kansas counties, according to the Kansas Crop and Livestock Reporting Service.

Doniphan and Stanton counties ranked second and third, respectively, both with over 4 million bushel crops last year.

Brown County, a perennial production leader, was fourth, and others in the ten top producing counties were Sherman, Haskell, Finney, Grant, Republic and Gray.

The western three districts of Kansas, where most corn acreage is irrigated, accounted for over half of the State's corn production in 1970. The southwest district was the leading producing area with nearly 22 million bushels, compared with less than 2 million bushels produced 10 years ago.

The State's 1970 corn grain crop of 79,670,000 bushels was 13 per cent smaller than last year's, but still the third largest output in two decades.

High Yields Irrigated Fields

Highest corn yields per acre were

Western Irrigation Shows Up In Figures

Farmers in Kansas planted 1,689,000 acres of corn for all purposes in 1970 and of this harvested 1,637,000 acres for grain.

KANSAS - ALL CORN AND CORN FOR GRAIN - 1970 COUNTY ESTIMATES

Why It Pays To Supplement Pasture With Good Formula Dairy Feeds

Grass alone cannot give your cows all the food values they need for sustained high production.

When you are feeding cows bred to be top milk producers, the need for proteins, minerals, vitamins and unidentified factors in the ration is very important. This need is even greater in late summer and early fall when pasture may be close-cropped and dry.

CO-OP Nutritionists know that dairy farmers must have proper feed to get maximum results at lowest possible costs. That's why CO-OP Dairy Feeds are Profit Checked for results. CO-OP Dairy Feeds are formulated to give a ration that will best supplement the shortcomings of the dairymen's forage program and will produce 100 lbs. of milk at the lowest feed costs.

• CO-OP Dairy Feed-12 is a high TDN, well-fortified dairy ration that contains essential vitamins and minerals. It is

recommended to be fed with excellent, high protein pasture or with liberal amounts of high quality all-legume hay.

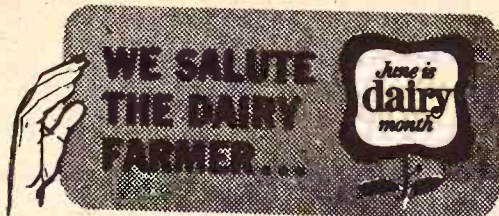

• CO-OP Dairy Feed-14 should be fed to producing cows, dry and freshening cows, heifer or bulls on very good pasture or very good quality legume hay.

• CO-OP Dairy Feed-16 is a well-fortified, well-balanced ration that is preferred by thousands of dairymen who demand an efficient dairy feed for a variety of feeding conditions.

• CO-OP Dairy Concentrate-32 can be fed on top of the grain to dairy cows or may be mixed with farm grains to produce a well-balanced and fortified ration.

• CO-OP Dairy Concentrate-50 is designed for mixing with farm grains to produce an efficient, high production ration.

Come in and let us show you the CO-OP Dairy Feed best suited for your dairy herd.

in 1970 and of this
1,637,000 acres for

1970 COUNTY ESTIMATES
Corn harvested for grain totaled
1,637,000 acres, 4 per cent above 1969
largest since 1963.

Corn silage was harvested from
1,637,000 acres, 36 per cent more than
earlier.

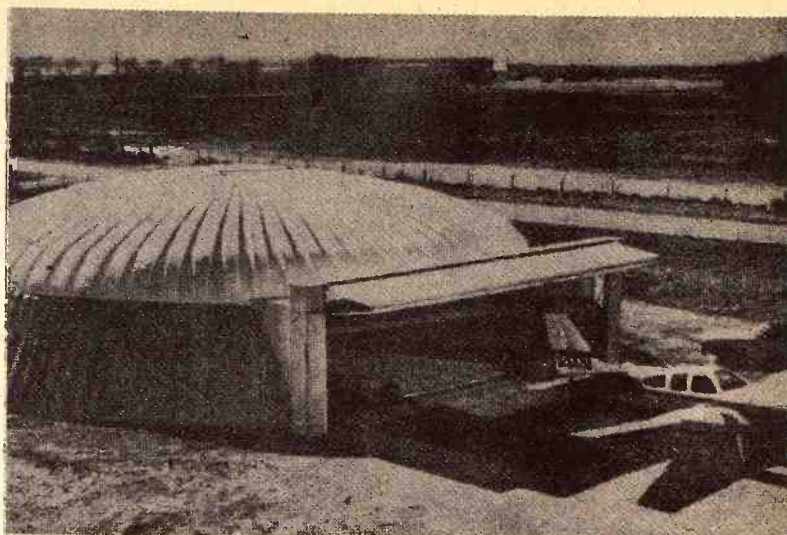

Planting of corn in 1970 started
in April but moved rapidly
May and most of the crop was
ground by June 1. Some

plantings in eastern areas were
delayed by wet weather. Most fields
emerged with good stands but
during July and August suffered
from heat and lack of adequate
moisture.

Irrigated acreage made mostly
normal progress through the season.
Corn grain harvest progressed well
ahead of usual, despite some wet fall
weather and most of the crop was
out of the field by early December.

CARPENTERS BACK ON JOB AT MANHATTAN

A 4-week strike of carpenters in
Manhattan has ended. A 2-year
contract was signed between local
918 and contractors which will put
workers back on jobs which had
been idled since the strike started.
Included on the shutdowns were a
building on a new veterinary
campus at Kansas State University
and an office and dressing facility at
the K-State football stadium.

ROUNDHOUSE FOR AIRPLANES

A new concept in aircraft storage, based on the principles
of the railroad roundhouse, has been unveiled by Aerodome
Industries Inc., a new firm in Wichita. The round, dome-shaped
structure shown is made of fiberglass and has a rotating floor
which makes it ideal for storage and maintenance of planes.
Planes inside are instantly accessible by using the rotating floor.

Last Of Great River Log Drives

One of the classic images of in-
dustrial Americana, the transport of
logs down a turbulent river to a
sawmill, has about disappeared.

The last major sawlog drive in the
nation, down the Clearwater river in
northern Idaho, has its last run this
spring.

From now on the logs will be
brought in to Lewiston, Idaho,
millponds from the Potlatch Forests
by truck and rail.

A lake formed behind Dworshak
dam will close the Clearwater to
river drives.

This particular sawlog run started
in 1929 and has required nimble-
footed loggers to keep it moving
each spring since.

Some of the logs start stacking up

along the river late the previous
summer, waiting for spring snow
runoff and a rise in the river. In late
April the last drive started, with
some 51 million board feet of logs
dumped into the Clearwater for a 90-
mile journey to sawmills.

This year's drive took 21 days,
shorter than average. Floods in 1938
carried the logs to their destination
in just five days, but it took a long 80
days in 1950, when thaws were slow.
Average over the years has been 30
days.

Through the first 41 miles of the

drive home to the rearing crew was
a 3-section raft, called a wanigan,
containing two bunk houses and a
cook house.

On the lower end of the drive the
men, most them year-around em-
ployees of Potlatch, spent the night
at their homes in the Lewiston area
and commuted by car to the
"sticks" each day.

"The men took to wanting to stay
home, rather than at camp,"
Harvey Spears, a cook, said as the
drive was completed. "The lum-
berjack of today is a family man."

Good Eating for Everybody...
and Good Business for You,
Mr. Dairy Farmer

Thanks to dairy farmers, dairy foods help everyone eat well, gain needed nutrition, enjoy
great flavor. So it's mighty important to keep milk production up.

And it's good business!

Thanks to our profit-proved feed, your dairy herd can eat well...and right. We have
scientifically-formulated, balanced and blended feeds right for milking cows, dry cows,
calves, heifers. Look to us for the feeds you need in your complete feeding program.

Thank You, Dairy Farmers...It's our privilege to serve you

Good (Meat) Fences Make Good Neighbors

Is our good neighbor Canada importing beef from Australia and New Zealand, eating it, and then shipping its own beef to the U.S.?

Some cattlemen think so, enough that Clifford Hardin, Agriculture secretary, says he's sending a scout into Canada to check into it.

There's nothing illegal about it, if the report proves to be so, but it isn't neighborly.

Canada did not sign the voluntary restraint agreements in 1964 regulating the amount of beef that can be exported to the U.S.

It was not thought to be in the U.S. or Canadian interest to include Canada in the agreement, for livestock flow is a two-way street between the two countries. U.S. ranchers buy stocker cattle from

and New Zealand beef. Its own beef that normally would be consumed at home perhaps is being shipped to the U.S.

Whatever the source of the beef, the situation is hitting ranchers like Bill House of Cedar Vale, Kas., and other where they live. House, a former president of the American National Cattlemen's association and currently a member of the National Beef Advisory committee, said the import situation injures not only hundreds of thousands of U.S. cattlemen, but in the long run the food budget of the U.S. housewife and even the national economy.

"It is an economic tragedy to import agricultural commodities to that can be produced in this nation," he said. "We have the capacity; we have the idle acres to produce the

beef this nation needs. "All we are doing by this is to promote a further balance of payments deficit."

As far as the consumer is concerned, House pointed to a similar situation existing between England and Argentina. Ironically, the one who suffers most is the British family living in a country that is home to most of the world's leading breeds of beef cattle.

For years Britain has imported tons of beef from the Argentine, which, it cannot be denied, was produced and shipped more cheaply than it could have been produced in England. Over those years England came to depend on the beef. Its own cattle industry suffered.

Suddenly, a new government in Argentina cut Britain off. A

beef-eating nation itself, Argentina claimed it needed the beef at home. As a result, the retail price of beef has jumped 40 per cent in England in the last month, House said.

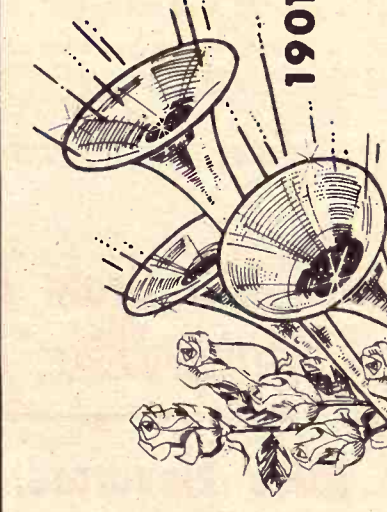

"England is typical of a country that grows dependent upon another for the supply of one of its major commodities," House asserted.

"The thing involving this nation and Canada is that American agriculture should be developing the beef industry. Here we sit with all of our idle acres. There is no economic excuse to let this happen."

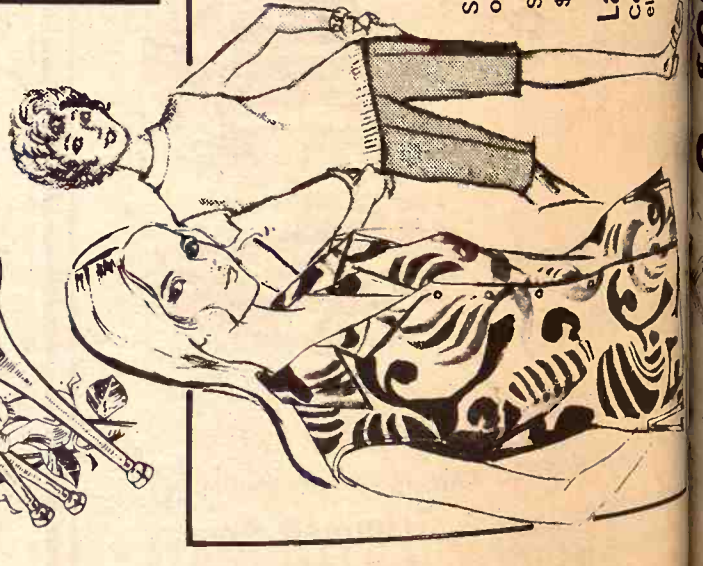

"I want that development. I want those ranching, packing, transportation and selling jobs — all of which combine to market our beef — here in the United States. If we don't do this, it will be an economic tragedy for the producer and

eventually for the consumer." Last year's situation came to the fore on reports that unregulated Canada was shipping more of its own meat into the U.S. market, while receiving like amounts from Australia and New Zealand for its own consumption. In the first quarter of this year, Canada shipped an estimated 19.4 billion pounds of beef to the U.S. That was a boost of nearly 32 per cent above the first quarter of 1970.

But House's estimates are that the 1969 total in imports from Canada was 30 million pounds and in 1970, about 70 million pounds. House concluded that most of the 40-million-pound increase might have been third-country beef, or its equivalent.

Number Of Changes In State Game Laws

Good Kansas fish catches have been made by accidental snagging of game fish, and some good fights have been experienced by anglers because fish, hooked in the tail, can put more pressure on the line. But after July 1, accidentally-snagged fish must be returned to the water.

This release of snagged fish is required by the new four-hook law which becomes effective in July. The law stipulates that a fish not hooked in the mouth must be immediately released.

The same law legalizes use of artificial lures for ice fishing on Kansas lakes. Only baited hooks were legal previously.

Another law regarding snagging was passed by the 1971 Legislative Assembly. The law, sponsored by the Kansas Forestry, Fish and Game Commission, authorizes the commission to set a snagging season for specific rough fish such as the paddlefish, better known as the spoonbill catfish.

The law does not establish a season, but allows setting of a season when and where the commission deems proper. In addition to paddlefish, the snagging law in Kansas also covers muskellunge, white sturgeon and

licensing for sportsmen from 70 to 65. Persons under 16 years of age also may hunt and fish without license as in prior years.

There has been widespread confusion about the law which reduces the license-bearing age, deputies at G&G area county clerk's office report. Numerous residents have indicated belief the law goes into effect July 1.

A House bill, which did not pass, set the effective date at July 1, but the Senate bill which passed makes the law effective Jan. 1.

Indian residents who can establish required blood ties and enrollment on a tribal American Indian membership roster also are exempted from buying hunting and fishing licenses. This law returns to the Indian his heritage of free hunting and fishing on the Kansas prairie. It is mandatory that persons using this provision to participate in field sports must exhibit on demand a certificate of Indian relationship, obtainable from the Bureau of Indian Affairs.

Residents exempted from purchasing licenses under the new laws must still buy a hunting license and deer permit to stalk deer in season, according to game commission law enforcement chief Fred Warders, Pratt. A federal duck stamp also is required for waterfowl hunters over the age of 16. Still another new Kansas law will require hunters to get written permission for hunting on private land.

JUNE IS DAIRY MONTH...

Treat yourself to delicious, nutritious milk, cheese, butter, and ice cream during June Dairy Month!

An extra glass of cold, refreshing milk can taste mighty good at dinnertime. And, another slice of cheese, pat of butter, or scoop of creamy, rich ice cream will add important nutrition to your regular diet.

We're glad to help dairy farmers in our community produce these high quality products through the use of Purina Dairy Chows. Won't you help support one of our basic food industries—the dairy business? Include milk and milk products in your meals this month . . . and all year 'round.

Annoy Motorist Into Using Seat And Shoulder Belts In New Cars

The styling and engineering won't change much, but the 1972 cars will have one of the most noticeable new features in the history of the automobile industry.

At government orders, the industry has designed devices to induce every driver and front-seat passenger to wear a seat belt.

When the driver gets into next year's automobile and starts the motor, a light on the dashboard will tell him to fasten his seat belt, and an annoying buzzer will sound. Neither device will stop operating until the seat belt is fastened.

Under the passenger side of the front seat will be a sensor that will activate the light and buzzer when someone sits on the seat and the car is started. The sensing system of the driver's side may be connected to the seat belt or to another underseat sensor.

According to studies, only about one-third of drivers use their lap belts, and a smaller fraction use the shoulder harnesses now required in all new cars. The aim of the new system is to make people buckle up and save lives, and it is the first instance in which the government

and the industry have tried to annoy the citizen into a safety act.

The General Motors Corporation plans to put the new light-buzzer system into all its 1972 cars. The Chrysler Corporation plans to make the change around Jan. 1, 1972. The Ford Motor Company and the American Motors Corporation say they are not sure whether they will install the system at the beginning of the model run in late summer or on Jan. 1 as required by law.

A combination of the soaring costs of retooling, the large variety of models and the money and manpower needed for the safety and pollution work has doomed much of the annual model change, which used to cost up to \$2 billion a year.

"Another new way of cutting costs is to de-emphasize annual model design changes," said Ford in its annual report to stockholders this spring, adding that in the future the styling changes would come "less frequently and less extensively."

Next fall, said an automobile advertising man, "we'll be saying 'not newer but better.'"

The outlook in styling for each of the car makers is as follows:

At General Motors, which created the annual model styling change, no important change is planned for 1972, only grill and tail light modifications.

Ford has the most extensive styling changes in the industry for 1972, particularly in its in-

June 1, 1971

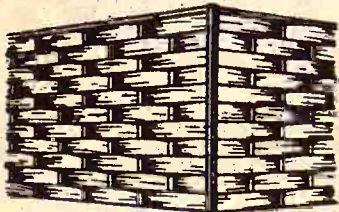

intermediate-sized and luxury cars. The large Mercurys and the only modest grill and headlight changes.

At Chrysler, the big Plymouth, Dodge, Chrysler and models will get new looks. Plymouth and Dodge models will have look-alike grilles for time.

At American Motors, the run from a switch in the paint striping on the small to new grilles on the larger "we're concentrating on next year," said one Motors official.

CHOICE OF 4 COLORS

OUR DAILY BREAD

— by G&G Area Cooks

Miss Lena Rago Of Junction City Wins

Winner, Miss Lena Rago, 814 Barnhill Drive, Junction City: "I enjoy 'Our Daily Bread' section of G&G very much and try many of the recipes. As rhubarb season is here I am sending you one of my favorite rhubarb recipes."

EASY RHUBARB COBBLER

Mix 3 to 4 cups cut-up rhubarb in a 9x9x2-inch pan. Cream ¾ cup butter and ¾ cup sugar. Add ½ cup milk, 1 cup flour, 1 teaspoon baking powder, ¼ teaspoon salt. Pour over rhubarb. Sift 1 tablespoon cornstarch and 1 cup sugar. Sprinkle evenly over batter. Pour 1 cup boiling water over all. Bake one hour at 375 degrees. When gooseberry season is here substitute gooseberries for rhubarb.

+++++

SOUR CREAM APPLE PIE

4 apples, peeled. Slice in raw crust in 8-inch pan
1 cup sugar
1 cup thick sour cream
2 tablespoons flour
1 teaspoon vanilla
½ teaspoon cinnamon
Stir cream, sugar, flour, vanilla, cinnamon together. Pour over raw apples, bake in 375-degree oven 45 minutes or until apples are done. "Very good."

+++

Mrs. Sharon Snyder, Beverly, is the sender of this recipe:

HUSH PUPPIES

1 cup yellow cornmeal
¾ cup unsifted flour
4 teaspoons baking powder
1 teaspoon salt
¼ teaspoon garlic powder
two-thirds cup milk
1 egg, well beaten
¼ cup minced onion
Peanut oil
In large bowl combine cornmeal, flour, baking powder, salt and garlic powder. Add milk, egg and onion.

Mix until well blended. Drop by teaspoonsful into shallow 375-degree peanut oil. Fry until golden brown, about three minutes. Drain on paper towels. Serve hot with fried fish. Makes about 36 hush puppies.

+++

Mrs. Mary Fichtner, Summerfield: "I'll send a recipe that's a first class salad among many folks."

FIVE CUP SALAD

1 cup mandarin orange segments or slices
1 cup pineapple tidbits
1 cup flake coconut
1 cup miniature marshmallows
1 cup sour cream

+++

Dry Lace Cloth On Curtain Stretchers

To make your square lace tablecloth look at its best, stretch it on curtain stretchers after laundering.

Washable Wallpaper Is Versatile And Fashionable

Today's washable wallpaper is so versatile and fashionable that it has become the Cinderella of the decorating world. In fact, wallpaper isn't always paper anymore. It may be vinyl fabric or paper treated with a vinyl coating for durability and quick and easy cleaning of any household soils.

And the colors, patterns and finishes don't look like paper either. Available now on the market are the "wet look" papers that resemble patent leather. In stripes, patterns

and bold designs, they add polish and color to a small area or room.

Also available are washable flocks which make the rich look of velvet practical, even for the kitchen or bathroom.

Hangmen will appreciate the ease of hanging many of the new wallpapers. Pre-pasted and strip-pable wall coverings require a minimum of skill for installation. And easy subsability makes them practical as well as beautiful.

Ord Baleman

HYDRAULIC STACKING BALE WAGON

Fast, easy way to move & stack up to 100 bales per load. Hydraulic lift bed tilts to 98 degrees angle, placing bales in a tight 3 bale wide-7 or 8 bale high weather tight stack. STACKS STAY STANDING ALSO. Load with FARMHAND bale fork, pull type bale loader, or pull behind the baler to load. UNLOADS IN 4 MINUTES. Horizontal hydraulic pushoff ram pushes against bottom 6 bales to move Baleman wagon and tractor away from stack. Mounts on farm wagon gear or 2 wheel trailer. ORD BALEMAN may also be used year around as grain or forage wagon. Very ECONOMICAL to own.

For Demonstration on your farm, name of nearest dealer, or more information write or call (collect) to Cal Maxwell 308/384-8135

Enzyme Products Can't

Remove All Stains

While enzyme laundry products represent a significant advancement in stain and soil removal, there are still some stains that may not be removed by the products.

The enzymes used in pre-soaks and detergents are not directly effective on inorganic stains like rust, ink or graphite, on fat-based stains like cooking oils, salad

dressings, motor grease or lubricating oils or on highly pigmented stains like coffee, tea, mustard or dyes which have bled from one garment to another.

The addition of some enzyme pre-soak products to the regular amount of a non-enzyme detergent will help remove stains.

Chlorine bleach will tend to deactivate the enzymes in laundry

products when used simultaneously. However, when using an enzyme product in a pre-soak period, chlorine bleach may be added to the wash cycle. This will permit each ingredient to perform its specialized function satisfactorily and in sequence.

When using an enzyme detergent in the wash cycle, delay adding bleach until the last half of the wash cycle.

Oil, Heat Treatment Revitalizes Hair

Professional treatment for weather-beaten hair can be done at home with great results. Dry, stringy, lifeless hair will respond to an oil and heat treatment. Shampoo thoroughly and rinse again and again until hair is clean. Warm equal portions of olive and castor oil and massage gently but thoroughly into scalp and every strand of hair.

Then make a turban of aluminum foil and seal in your hair. Apply a hot towel and let the warm vapors do their work.

Then apply shampoo again directly to the hair without rinsing first. Use several sudsings, rinse, towel dry and brush.

Keep Tape Dispenser In Kitchen

You will find it handy and time saving if you keep a transparent tape dispenser on the kitchen wall. Use it when sealing packages for mailing, taping an air-tight plastic cover on a bowl of leftovers and for innumerable purposes.

Prevents Knots

When thread has a tendency to knot, run each needleful of thread through a piece of paraffin.

Begin Peeling Onion At Root

Always begin at the root when peeling onions. Then cut from that point.

Medical Information For Campers

Before sending your child off to camp this summer, be sure he has had a complete physical examination and that the examining physician furnishes the institution will all pertinent information. Failing to provide sufficient information for the institution to give adequate medical treatment in the "absence of parents" could prove fatal. Information should include pre-existing health defects, a record of pertinent past illnesses, allergies and sensitivities, the child's immunization status and any current treatment.

Wash Mop Head In Nylon Stocking

Put a soiled mop head in a nylon stocking, knot the end of the stocking and let it spin in the washer with the mop comes out clean. The stocking prevents its spreading.

According to a recent study, modernization remains the popular major remodeling project. When you think of remodeling a kitchen you naturally think of a spanking clean range, a refrigerator, maybe a dishwasher or a waste disposer. But how about the heating? Yes, you do need heat in your kitchen... for those times when the range is not helping with the warmth.

Kitchens present a special chore remodelers—whether you do-it-yourself, or call in an experienced contractor or remodeler. Usually kitchen space will be almost completely taken up with cabinets and appliances so that there's very little space left for heating equipment. But, don't worry. Electric heating equipment adapts more easily than any other type for kitchens. Since the controls are on or near the electric units, the kitchen is more comfortable, too.

That type of electric heating equipment should you consider for your new kitchen?

Here are some suggestions which give you a kitchen that's pleasant to work in or eat in or for never else you want to use your kitchen. More and more the kitchen is becoming the gathering place for family or friends.

Area often overlooked, which

can be used for installing heating equipment is the kick space below base cabinets. A fan-driven unit can be installed there or you might consider a fan-driven wall unit.

You might think about a valance heater which will deliver both radiant and convected heat and will perform well even in a tight area.

Or you can install the ever-popular baseboard heater. Put it along an inside wall. This is most satisfactory because the kitchen gains some heat from appliances and because cabinets on outside walls provide a little extra insulation value.

Since remodeling kitchens is so popular, chances are someday soon you'll start planning yours. When you do, don't forget electric heat is the best type for this room which will be your most used area.

Chicken Is Easy To Digest

What makes a meat easy to digest? Short fibers rather than long fibers are a big factor, making the meat easy to chew. Chicken is a short-fibered meat and is appropriate for many diets, including those for children and elderly people who may have difficulties with their teeth.

Remove Lint From Dark Bath Towels

If you have gotten lint on dark-colored bath towels, rinse the towels separately through two waters. Add vinegar, a tablespoon to a gallon of water, for the third rinse. When dry, towels will be fluffy and lint-free and there will be no vinegar odor.

Spray Starch Trousers Creases

Spray the pressed edges of trouser creases with a spray starch for a stay fresh appearance.

Keep Appliance Booklets Together

Have one large separate envelope to hold all your how-to-use booklets for appliances so you always will be able to locate them easily.

Treat Jewelry That Discolors Skin

Costume jewelry that discolors the skin needs a good brushing with warm soapy water. Rinse and dry thoroughly and then coat with colorless nail polish.

Use Cleaning Wax On Piano Keys

Use a good cleaning wax rather than soap or detergent to clean piano and organ keys. The wax eliminates the danger of too much water being used, causing wood to swell and warp.

Substitute Tablecloth

A laundered colored sheet makes a fine substitute tablecloth when company drops in and all your tablecloths are soiled.

Riley Co. Names New 4H Agent

Dennis Droge has been employed as the Riley County Extension 4-H Agent, according to Dr. Bob Newsome, County Extension Director. He will begin work on July 1, 1971.

Dennis grew up on a livestock and grain farm in Nemaha County, Kansas. He spent 10 years as a member of 4-H carrying livestock, grain and photography as projects. He graduated from Bern Rural High School in 1960 and came to Kansas State University where he completed a BA in Sociology in 1964.

From 1964 to 1966 he was a Peace Corps Volunteer in Brazil working in

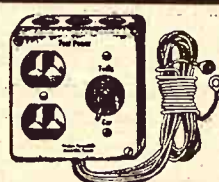

Agricultural Extension in the frontier state of Mato Grosso.

After returning to the USA, he married Karen Sue Mitchell of Wichita, also a 1964 graduate of KSU. They now have three children, Christopher Paul and Jennifer Lynn, 2½ years, and Wendy Lou, 14 months.

He was a member of the 69th Infantry Brigade which was activated in May of 1968. He spent his active time as an officer in field artillery. This past December he completed a BS in Agronomy and is presently working on his MS in Agronomy. Dennis and his family are members of the Blue Valley Memorial United Methodist Church.

VO TECH HOUSES SELL FOR \$20,000 EACH

BELOIT—Two 3-bedroom homes built by carpentry students at the North Central Kansas Vo-Tech school here have been sold at auction for a total of \$40,000. The school has sold 11 houses in six years from vo-tech projects. Both 1971 houses will be moved. Buyers were Edgar Tietjan of Hardy, Nebr., and Merle Willars of Delphos.

TOOL POWER

110 VOLTS ELECTRICITY FROM ANY CAR, TRUCK, TRACTOR or PICKUP ALTERNATOR

Operates heavy duty drills, saws and lights. Charges all batteries fast. Does good arc welding on plate steel. Starts cars with dead batteries instantly. Eliminates jump cables. Output is 3000 watts or 0 to 45 amps. Installs in 5 minutes. Guaranteed 5 years. Post paid \$22.95 or C.O.D. \$22.95 plus charges. Complete installation instructions with shipment.

More Water, Hail Damage In G&G Area

GREENHOUSE IN A HAIL STORM

John Rayl (left) and Carolyn Smith, employees of Briscoe Floral Company in Lincoln, look through the broken greenhouse roof. Hail on May 17 shattered all glass on the north side of three greenhouses. Broken fragments have been removed to prevent further hazard. Owner L.J. Briscoe said building was insured but not the \$4000 worth of plants destroyed in the storm. Additional hail ruined another \$400 worth of plants.

Briscoe has suffered continuous storm damage this year. Heavy snow in the winter caved in the glass roof. High winds blew off a fiberglass roof. This had just been replaced with glass the week before it was hailed out.

BOATING ON THE BACK FORTY

Marty McCool (left) of Tescott; Wesley Phelps, Beverly Stanley Wohler, Tescott take advantage of flood waters for fun. This plowed field, now become lake, is west of Tescott on the Saline River.

WE'RE OUT TO WIN YOU

Maybe you're not ready for that new tractor this spring. But ready or not, you owe it to yourself to discover this brand new concept of power, comfort and protection. Your Case dealer's Golden Opportunity tractor is ready for a no-obligation demonstration.

Big Case cubes . . . we've unleashed more of their power for '71. You'll plow faster, disk faster, handle any big load faster. And you'll do it smoothly and easily. Why? Big Case cubes . . . up to 451 turbo in the Case 1170. We've poured on more power in our Agri Kings . . . up to 12½% more. But we've still maintained the high-torque reserve power of big-displacement engines and moderate engine speeds.

MODEL	CUBES	RATED RPM	HP INCREASE*
770	267 cu. in.	2000	+ 12.5%
870	336 cu. in.	2000	+ 10.0%
970	401 cu. in.	2000	+ 9.4%
1070	451 cu. in.	2100	+ 7.0%
1170	451 Turbo	2100	+ 7.8%
1470	504 Turbo	2000	No change

*Manufacturer's rating

Now the best in comfort is even better. Tomorrow's tractor, but yesterday's cab? Not with Case! We'll show you a whole new concept of comfort. A cab that's extra-tight, sealed from dust and dirt . . . a new filtration system that

surrounds you with fresh, clean air in the dustiest conditions. And throw away your ear plugs. It's as quiet inside as your living room with the kids away at school!

We value your safety too. You're far more relaxed and alert at the wheel of a new Case Agri King—especially after a long day in the field. And a comfortable operator is a safer operator! Our cab, too, offers super protection—with a rigid frame that resists front crushing or overhead collapse, and supports the entire weight of the tractor on a complete rollover.

Are you ready to meet the "Black Knight?"

Your Case dealer's 1971 Golden Opportunity demonstrator is standard production, except for the paint—and reserved for you to drive. Test it in your fields with no feeling of obligation. But by all means try it—and see why we say "A tractor's just a tractor until you've driven a new Case!"

CURRY IN MILO TRADING

When trading in milo futures started on the Chicago Mercantile Exchange this spring, President Everett Harris had a couple of pretty Japanese faces do dress up the occasion. Japan is the primary export market for milo.

Thus far, trading in milo futures has started slowly but there appears to be enough activity that it will become a permanent part of the commodities futures markets.

Lossing Of Intangible Tax Exemptions Don't Touch Bank Stockholders

Stockholders are the only escapees of payment of an ending new tax on intangibles in Kansas.

escape surfaced as State

Department officials

on the new tax, but were

to estimate the amount of

new money it will generate for county governments.

"Basically, you could say that, yes, bank stock is the only stock that is still exempt," said E.M. Heald, head of the intangibles tax division of the revenue department.

Heald said his office is certifying

Not Responsible for Accidents.

intangibles returns now, and will have them in the hands of county clerks by June 30. The new taxes will be due in November at Property tax time.

A 1970 law that went into effect in January swept away exemptions for intangibles (investments) in all Kansas corporations and savings and loan associations, but it retained the exemption for bank stockholders.

An estimated 60 Kansas lawmakers have banking interests. Gov. Robert Docking is a banker from Arkansas City.

Under the new intangibles taxation schedule, taxpayers must pay 3 per cent of the income off investments in savings and loan associations and corporations.

Under the old law, only foreign (out-of-state) companies paid either 5 mills on the value of the intangible holdings, or 3 per cent of the income off the holdings. Most opted for the 3 per cent, since a holder would have to make roughly 18 per to gain favor on the 5-mill schedule.

By federal law, all income off federal securities is state tax exempt. Most income off state municipal securities is exempt, too.

Cooperative organization dividends still are non-taxable; so is interest on mortgages on which the registration fees already have been paid.

Heald said "quasi-federal organization members also can escape payment of the new intangibles tax.

"It probably isn't right to put too serious a stress on the fact that banks are the only ones that don't pay. There are a lot of special little groups under the law," Heald said.

Kansas insurance company stockholders must pay the 3 per cent tax on income, but there is no tax due on policy "dividends."

"That is considered an overpayment of premium in the first place, and is not considered an income when a persons gets it back," Heald said.

He said the Legislature apparently believed that bank stockholders pay enough taxes because they are not under the same privilege tax shelter laws as savings and loan associations have been.

The bank stockholder law does not apply to the average citizen, who must pay taxes on the interest he

might draw from a bank. It applies only to the stockholders' return on their investment.

DuPont's Corfam Shiny, But Its Profits Weren't

Corfam, the DuPont product once hailed as a replacement for leather, is being phased out of production.

DuPont says Corfam just didn't do well enough commercially, so the company is closing out production this year.

Corfam was invented by DuPont about 10 years ago and went on the market in 1964. The company says it has about \$100 million invested in the product but it has never become profitable.

When the product was launched, it was ballyhooed as an innovation that was "to do for shoes what nylon did for stockings."

Eventually about 100 million pairs of Corfam shoes have been sold, most of them around 40 bucks a pair, but DuPont said there was never sufficient volume to turn a profit.

Corfam is extremely durable, water repellent, and easy to care for, and is priced about the same as highest quality leathers.

Since Corfam was introduced, footwear has been extremely sensitive to style and price in the

Grass & Grain

15

June 1, 1971

marketplace. The use of softer leather in shoe styles hurt Corfam, as did competitors — about 30 of them, nearly all of them lower priced than Corfam.

As long as two years ago, DuPont was openly talking about dropping Corfam, although the impact on the company's image was feared. This year, however, profits had dropped, and DuPont apparently decided it could lose a little face if it lost a little less money.

About 600 workers have been involved in Corfam production, most of them at a plant at Old Hickory, Tenn.

Inmont Corp., which makes a competitor to Corfam called Forvair, figures its product is fundamentally different than the DuPont synthetic and will continue to sell. Goodrich also makes a synthetic shoe material. Another shoe distributor, Wolverine World Wide Inc., has quit marketing a Japanese-made synthetic shoe material, called Clarino, but another company has taken it over.

BOYS STATE AT LAWRENCE THIS WEEK

About 1100 boys are attending Kansas Boys State at Lawrence this week. The American Legion, which bills the event as a "citizenship training program," has sponsored Boys State for four decades.

Saturday, June 5

Starts 10:30 a.m. — Lunch Served

I will sell at auction at the place, Adams Welding, Plumbing & Hardware at Lanham, Nebr. & Kansas.

Building Material

100 steel basement windows for 8" poured walls (new)
Galvanized roofing, new & used
New house doors; new window screens; new storm windows; new windows; door locks, lat-ches.

Grade stakes; cabinet hardware; hinges; screen; 2000 new bolts, nails; cement Anchors; toggle bolts.

Stanley hardware for 16' over-head door; door tracks; lots of other items not mentioned.

K-State Block And Bridle Passes Honors Around

MANHATTAN—Two Kansas ranchers were honored by the Kansas State University Block and Bridle Club when their portraits were added to the club's "Hall of Fame" gallery recently.

The portrait of Harry Darby, a Hereford breeder from Kansas City and former senator, was added to the gallery of living livestock leaders, while that of the late Sherman Mertz, formerly of Wabaunsee County, was added to the gallery of deceased livestock leaders.

The "Hall of Fame" presentations were a highlight of the annual Block and Bridle banquet.

Darby, besides being involved in ranching and politics, is an industrialist in the steel business. He is a former Republican National Committeeman from Kansas.

Sherman Mertz was active in livestock feeding of cattle, hogs and sheep in Wabaunsee County.

Other honors announced at the banquet included the selection of Sam Marcus, a meat packer and cattle feeder from Wichita, as the Block and Bridle Honorary Member for 1971. He was selected for his contributions to the Kansas livestock industry and his leadership in the field. Marcus is currently chairman of the board of the Kansas Beef Industries.

The KSU Block and Bridle senior merit trophy award to the top student in animal husbandry this year was presented to Tim Benton, Garnett; and Herbert E. Ramsey III, Hutchinson, was awarded the junior scholarship award, a \$150 scholarship.

Both students were selected for the awards on the basis of scholarship, Block and Bridle activities and other campus activities.

Benton has been president of Block and Bridle Club, president and vice president of Collegiate 4-H, and a member of both the meats and livestock judging teams.

Ramsey, president-elect of Block and Bridle, has been a member of both the meats and junior livestock judging teams.

The recipient of the Dr. Richard A. Pickett and Greta Bauer Pickett Memorial Scholarship was Ken Conway, Natoma. He received a \$250 award.

The Pickett scholarship was established in memory of Dr. and Mrs. Richard Pickett who were killed along with two of their children, in an automobile accident in Argentina in February, 1968. An outstanding 1955 KSU graduate in animal husbandry, Dr. Pickett completed his Ph.D. in animal nutrition at Purdue University, became an assistant professor in 1962 and an associate professor in 1965. He was sent to Latin America by Purdue on a Ford Foundation contract with the University of the South, Bahia Blanca, Argentina.

Conway was selected for the scholarship on the basis of character, activities, scholastic record and financial need.

The F. W. Bell Memorial Livestock Judging award went to Arden Peterson, Assaria. The award goes to the outstanding member of the senior livestock judging team. Selection of the recipient also is based on performance at the major judging contests, attitude, cooperation and scholastic standing. Peterson received a wrist watch.

Special recognition at the banquet went to Dr. Rufus Cox, KSU professor of animal science and industry, who is retiring. A leather-bound book of all his activities with K-State students was presented to him by the Block and Bridle Club members.

Tuesday, June 8

Starts 9:30 a.m. — Lunch Served

Having sold our farm and quitting farming will sell at public auction on the farm located 3 1/2 north and 3/4 west of Hanover, Kansas, or 4 south and 3/4 west of Lanham, Ks. on State Line.

Halstead Company In New Quarters

HALSTEAD—A G&G area plant which makes rubber slats and cleats for various farm and industrial machines is now handling all its production from a new plant. It's the Legg Co. Inc., a longtime producer of rubber slats for harvesting machinery which now includes rubber cleated belts for industrial use and parts for street sweepers in its production.

Legg has 55 persons on the work force and runs around the clock five days a week. The new building is 80 feet by 200 feet. An old building is now used as a warehouse.

Cliff Knauss is president of the firm. He says his firm has had a 25 percent gain in sales this year.

European Farm Productivity Improving

A comparison of farming in the United States and the European community covering the 1960s has been completed by the United States Department of Agriculture.

It shows generally that agricultural production has increased at a higher rate in the member European nations than in the United States. But there are explanations for that and the U.S. farmer by no means has fallen down on his job.

In Europe the mere creation of the community of nations unified

agricultural economics and resulted in higher producer prices. Through most of the 60s, meanwhile, the U.S. attempted to maintain a policy of balancing supply and demand and keeping surpluses at an acceptable level. That resulted in a lower rate of production increase.

The nations of France, West Germany, Italy, the Netherlands, Belgium and Luxembourg together are about the size of Texas, Kansas Oklahoma and Louisiana combined. Of the European nations, Holland has the most efficient agriculture;

Italy the least efficient.

Backdrop for this report is a series of demonstrations by European farmers this spring seeking price increases. **AT THE HEART OF THE PROBLEM IS THE FACT THAT TOO MANY PERSONS ARE WORKING TOO MANY SMALL FARMS AND EARNING TOO LITTLE MONEY FOR THEIR EFFORTS.**

According to news accounts, unrest is high in many poor farming areas throughout Europe. Farm prices have remained fairly stable for several years, while the prices of manufactured goods and imports have risen. The analogy to the U.S. farm scene is perfectly obvious.

Some highlights of the USDA comparison:

- The 1969 gross national product totaled 411 billion dollars in the E.C., compared with 932 billion in the U.S.

- Farming employs more than 14 per cent of the labor force in the E.C., compared with 4.8 per cent in the U.S.

- European producers farm more labor-intensively than U.S. producers and use considerably higher applications of fertilizer.

- Total livestock numbers are larger in the U.S., except in the number of dairy cows. Similarly, U.S. production of livestock products is much higher, except for milk.

- Per capita consumption of grain for food is higher in the E.C., but overall grain utilization is higher in the U.S., where much grain is used to feed livestock.

- U.S. meat consumption is considerably more than in the E.C., particularly for beef and poultry.

- Milk consumption is greater in the U.S., but the consumption of butter on a per capita basis is larger in the E.C.

- European housewives spent 26.5 per cent of their family's disposable income for food, compared with 16.8 per cent in the U.S. in 1969. (It is now 16.5 per cent).

- One U.S. farmer produced enough food and fiber for 45 persons in 1969, compared with a 1-to-16 ratio in the E.C.

- Both total and agricultural trade continued to expand in the E.O. and the U.S. However, E.C. agricultural exports more than doubled from 1957 to 1969, while U.S. exports increased at a slower rate.

The fact that European agriculture is becoming more efficient is demonstrated by the number of workers engaged in farming. In 1958, for example, 22 per cent of the E.C. labor force was out tilling the soil, a percentage that declined to 14 per cent a decade later as the number of tractors, combines and other farm machinery replaced older, inefficient methods. In the same period, U.S. farm workers dropped from 8 per cent of the total labor force to less than 5 per cent.

Italy, the most agrarian of the E.C. member nations, continues to have the least efficient farms. Of that nation's labor force 22 per cent are engaged in farming. Consumers must spend approximately one-third of their disposable incomes on food. One reason for the relative inefficiency is the tiny size of Italian farms. They average approximately 17.75 acres in size, compared with the European average of about 29 acres.

European farms, of course, are measured in hectares (2.471 acres). Incidentally, there is currently under discussion a proposal to switch U.S. weights and measures to the metric system under which our land acres would be measured in hectares eventually.

The USDA reports the average farm in the United States during the decade under study was 146 hectares, or approximately 351 acres.

The small size of farms in the E.C. is a major limiting factor on income, the USDA points out.

"Many operators must pursue an intensive operation such as dairying to obtain an adequate income," the report said. "Still others supplement their incomes by off-farm employment."

"More than 85 per cent of the E.C.'s 5.6 million farms in 1967 were smaller than 20 hectares. These farms accounted for only 45 per cent of the farmland. Conversely, only 3 per cent of the farms in the E.C. are 50 hectares or larger, but they contain more than one-quarter of the total farm land."

Of all the farms in the E.C., Italy has 44 per cent; France, 28 per cent, and West Germany, 22 per cent. However, only 27 per cent of the E.C. farming area is in Italy, compared with 47 per cent in France and 20 per cent in West Germany.

In sharp contrast to the U.S. trend, farm size in Europe is increasing at a very slow pace. The average E.C. farm has grown only about 1 hectare since 1960. However, in general terms about 60 per cent of the farm land in Europe is classified as tillable soil, compared with only one-third of arable land in the U.S.

The European community is a big importer of U.S. grains. One understands why that is so in a study of land use here and in Europe. Land used for all grains is three times larger in the United States than in the E.C. — 65 million hectares

June 1, 1971

versus 21 million. Two European nations, France and Italy, account for more than 80 per cent of wheat grown there.

In only one grain crop European acreage exceeded that of the U.S. That crop is barley, production increased nearly 50 per cent during the decade, while U.S. production dropped by 35 per cent.

The soybean, the wonder crop of U.S. agriculture, is not adapted far to the climate and growing conditions in most of Europe. The huge demand there for U.S. oil seed. Some raises have been raised in Europe, but not enough to satisfy the demand.

Holland and Belgium lead in average crop yields. These are due to soil differences, of course. Generally speaking, the report indicates the high reflects a heavy application of fertilizer.

In cattle, numbers increased significantly in Europe during the 1960s, while only beef populations increased in the U.S.

"During the period," the report continued, "dairy cow numbers in the U.S. were reduced by 30 per cent while E.C. dairy cow numbers expanded 17 per cent. Since dairy cows in the E.C. are generally raised for milk and meat, the count for most of the beef production expansion in numbers has been aided by the increasing demand for beef and favorable returns on milk."

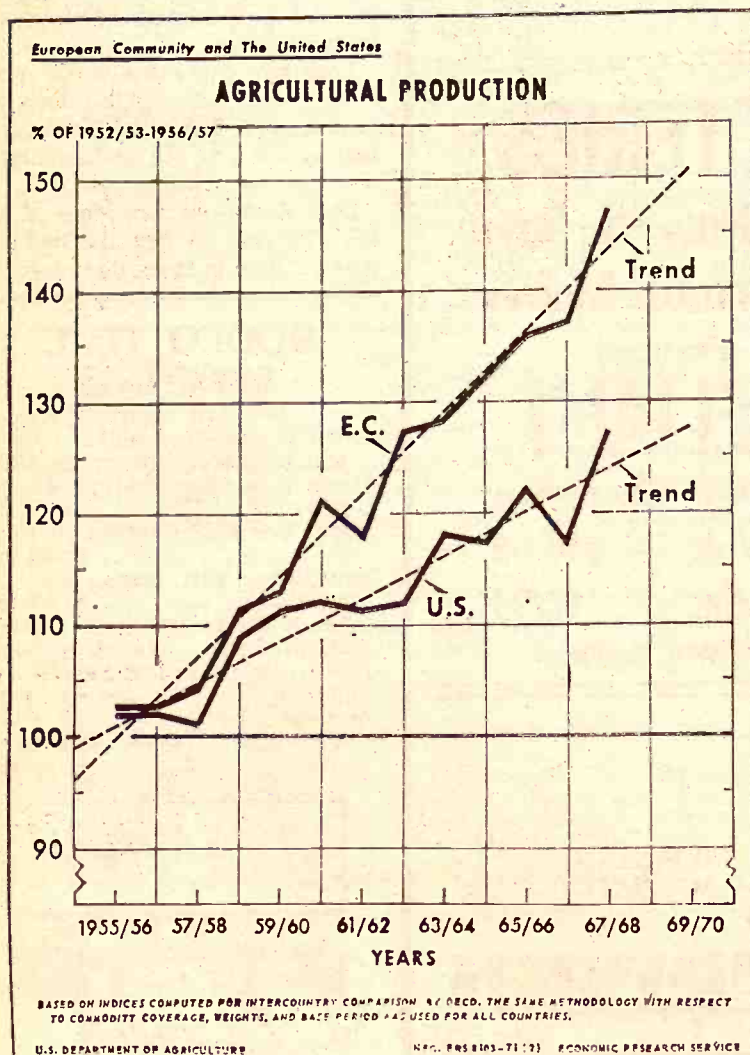

Much of the improvement in European agriculture is due to the lowering of national barriers which have solidified production through mechanization. The universal use of machinery, of course, was well advanced in the 1960s in the U.S., but during that decade that machinery really took over European farming. In that span, the number of bines there quadrupled and numbers doubled.

The report had little to say about farm incomes here and in Europe because of the differences in the sizes of the operations plus that most Europeans need other jobs to make a living. Of course, it is a fact of life on many farms in the U.S., too.

In three selected commodities, No. 2 wheat, corn and oats, prices rounded off to the nearest dollar a ton revealed that comparisons, in No. 2 wheat, farmers received \$90; in corn, \$101; Italian, \$105; Dutch, \$107; U.S., \$108. In oats, French, \$83; Italian, \$87; U.S., \$88. In corn the U.S. was \$48. In oats: French, \$44; Germans, \$87; Italians, \$87; U.S., \$44.

"Large export subsidies to make E.C. grains competitive in world markets," the report said. "In recent years, agricultural exports have accounted for 10 per cent of the E.C.'s exports, whereas U.S. agricultural exports have constituted almost one-fifth of the total exports."

"U.S. agricultural exports have constituted an important share of European community exports. U.S. farm products exports about 23 per cent from 1957 to 1969."

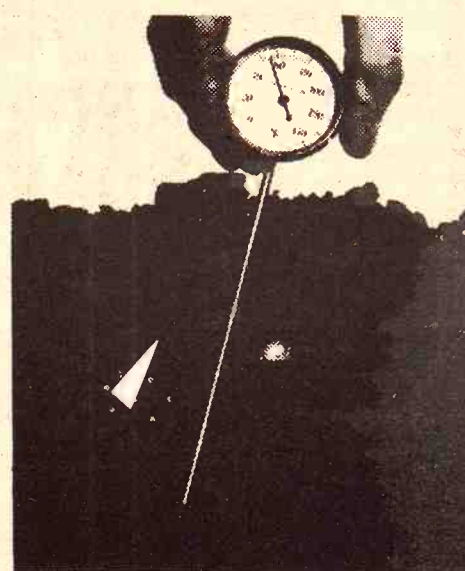

EUROPEAN FARMERS IMPROVING

Farm productivity in Europe is up about half-again over levels of about 15 years ago. This chart shows production as a percentage of levels of the mid-1950s. U.S. production in that time has gone up over 25 per cent.

Of course European farm output, compared to that of the U.S., had room for improvement. Even now a European farmer produces enough food for 16 persons. His U.S. counterpart produces enough for 45 people.

Headstart:

a new fertilizer idea to get extra yield from early planted corn.

There is growing evidence that cold soil temperatures (below 60° at 4 inches depth) make some nutrients temporarily unavailable to seedlings. That's why we want to tell you about the new, exclusive Gulf Headstart fertilizer program. It is designed to help your corn get off to a fast, early start, even in cold wet soil.

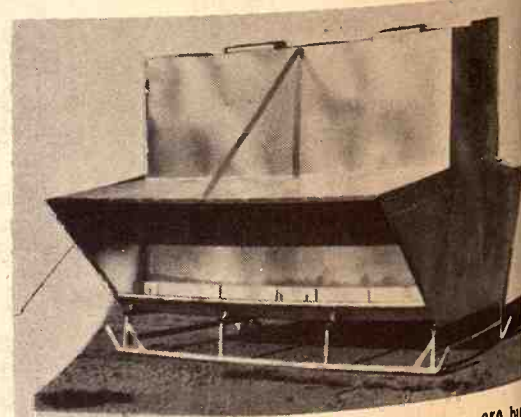

If you plant early, be sure to ask about our "Headstart" fertilizer program

versus 21 million. Two European countries, France and Italy, or more than 80 per cent of wheat grown there.

In only one grain crop, U.S. That crop is barley. Production increased nearly 100 percent during the decade. U.S. production dropped 10 percent.

The soybean, the wonder crop of U.S. agriculture, is not alone. Far from it, the climate and conditions in most of Europe are the huge demand there for U.S. oil seed. Some European countries, but not enough to satisfy the demand. Holland and Belgium lead in average crop yields. The gross is total income from sales, government payments and earnings from farm operations.

In cattle, numbers increased significantly in Europe in the 1960s, while only beef populations increased in the U.S. During the period, "dairy cow numbers were reduced by 17 percent. Since 1960, the E.C. dairy cow herd has increased 17 percent. Since 1960, the E.C. dairy cow herd has increased 17 percent. Since 1960, the E.C. dairy cow herd has increased 17 percent.

Much of the improvement in European agriculture is due to the lowering of national tariffs which have solidified production through mechanization and universal use of machinery. The course, was well advanced in the 1960s in the U.S., but during that decade that really took over European production. In that span, the number of cattle there quadrupled and numbers doubled.

The report had little to say about farm incomes here and there because of the difference in the sizes of the operations and the fact that most Europeans need jobs to make a living. Of course, U.S., too.

In three selected crops, No. 2 wheat, corn and soybeans, prices rounded off to the dollar a ton revealed comparisons. In No. 2 wheat, U.S. received \$90 a ton, compared with \$101 in Italy, \$106 in France, \$101 in Italy, \$106 in France, \$101 in Italy, \$106 in France.

"Large export subsidies to make E.C. grains competitive in world markets," the report said. "In recent years, agricultural exports have accounted for 10 percent of the E.C.'s exports. Agricultural exports accounted for almost one-fifth of U.S. agricultural exports. European community has instituted an important new U.S. farm products export program about 23 per cent from 1969."

SELF-FEEDER

Had a large run of hogs last Wednesday with 200 to 240 lb butchers at 17.00 to 17.75; 240 to 280 lbs 16.25 to 17.00; 260 lbs & over 14.75 to 16.25. Sows 12.50 to 15.00. Slaughter boars 13.00 to 13.25 with 1 red boar at \$81. Some feeder pig sales were: 29 Mix pigs at 15.75, 21 Mix pigs at 17.25, 59 Wht pigs at 13.25, 30 Mix pigs at 15.00, 38 Mix pigs at 12.00, 13 Mix pigs at 12.25, 48 Mix pigs at 14.75, 42 Wht pigs at 14.25, 24 Mix pigs at 14.25, 32 Wht pigs at 14.75, 36 Wht pigs at 11.75.

The U.S. Agriculture Department, taking a springtime look at the nation's economic situation, says there are rosier times ahead this year for farmers — at least for those surviving until next New Year's.

The assessment was made in a quarterly report, the "Demand and Price Situation." It includes a review of price trends and an outlook for the coming months.

In the first quarter of 1971, the report said, farm incomes dipped to an annual gross rate of \$56.1 billion, down slightly from the first three months of 1970. The gross is total income from sales, government payments and earnings from farm operations.

But for all of 1971 the gross was predicted at around \$57.5 billion, up about \$1.3 billion from last year's record of \$56.2 billion.

The most sensitive question, however, is net income or the amount of money farmers actually take home after paying their expenses. Last year the nation's farm income net was \$15.8 billion, down about \$400 million from 1969.

During the first quarter of 1971, reflecting the reduced rate of gross income, the annual rates of net income slumped to \$14.7 billion, the report said.

Although total net income may be

report showed. For all of 1971, however, the economists predicted that farm net income will be only a little below last year's \$15.8 billion.

The main reason, of course, is that farm expenses are continuing to gain more rapidly than gross income. While the gross is expected to increase \$1.3 billion this year, expenses — the costs of operating the nation's farms — are rising at a rate of \$1.5 billion or more.

"Although first quarter incomes were depressed, farmers can look forward to a progressively improving income picture during the rest of the year," the Outlook and Situation Board said in its report.

The January-March slip resulted primarily from a large increase in livestock marketings accompanied by a sharp drop in prices paid farmers. In all, for the quarter, sales receipts dropped five per cent.

Sales of crop commodities, by contrast, brought a four per cent increase in gross during the first quarter, due mainly to higher prices for grains, soybeans and cotton.

"A number of signs point to a stronger tone, particularly in the second half," the report said. "Hog producers have already indicated plans to cut output later this year."

"And with meat supplies declining, prices should strengthen materially. Milk producers, too, will receive stronger prices during the balance of the year because of the increased support price for manufacturing milk."

Growers are expected to expand 1971 output moderately, the report said, but with relatively low stocks the price picture will be pretty well maintained into the 1971-72 season, the report said.

Although total net income may be

Grass & Grain 19

June 1, 1971

down this year, the economists said net income per farm will hold close to the record high levels of nearly \$5,400 the past two years because of a continuing decline in the number of farms.

On a broader plane, the USDA said the nation's economy "is moving forward once again after pausing in 1969-70."

"But unemployment and inflation persists despite the rebound in real output," the report said.

K-State Veterinary College Hires Dean From Own Staff

Kansas State University, which like other state schools has generally been hiring administrators from out-of-state, has picked its dean of the College of Veterinary Medicine from the staff.

Dr. D. M. Trotter will get the official appointment July 1 after serving as acting dean since April 1, when Dr. Charles Cornelius left the post to head the veterinary school at the University of Florida.

Trotter has been on the K-State veterinary staff since 1956. He served as acting dean for a short period before Cornelius' appointment in 1966. Trotter, a graduate of the K-State veterinary college, has taught also at Iowa State, Missouri and Oklahoma State. He also has industrial experience.

For 10 years Trotter was head of anatomy at the K-State veterinary college and after Cornelius' appointment was titled associate dean.

The Kansas State College of Veterinary Medicine has a plan to build new facilities north of the present area. Some of the funds have been appropriated by the legislature and the first major building is under construction. The work on the building has been halted for several weeks because of a strike in Manhattan by unions, who have been seeking new contracts after expiration of 3-year contracts with building firms in April.

NEW TIRE NUMBERS

All passenger car tires made after May 22, 1971, are required by federal law to have the new-type serial number shown above. "DOT" means the tire meets or exceeds Department of Transportation safety standards. "WY" is the code number assigned by DOT to the manufacturing plant. "L9" is the tire size (G78-14, in this example). "ABC" is a group of up to four symbols, optional with the manufacturer, to identify the brand or other significant characteristics of the tire. "261" means the tire was made during the 26th week of 1971.

Drugs 'New' For Selling, 'Old' For Testing

When they're selling, drug makers may tell the public of a "new" product, but describe the same thing as nothing new to the Food & Drug Administration.

The FDA has been thwarted in some efforts to test a product described as "new" in sales promotions, because the pharmaceutical firms have gone to court to block efforts by the government to seize the product to test claims, particularly nonprescription medicines.

Excedrin P.M., Asper Sleep, and Ornex are three products cited as evidence by the FDA.

"Each of the products was launched with a major promotional campaign designed to convince the public that it was something 'new' that had not previously been available," said Charles C. Edwards, FDA chief.

"But when charged in court with a failure to comply with the 'new drug' requirements of law, each manufacturer contended that the product was nothing new at all — that it consisted of only well-known ingredients," he said.

Federal drug laws permit marketing without government clearance of old drugs — those "generally recognized as safe" by

experts.

But manufacturers, Edwards said, "have in fact sought to have it both ways, consumer acceptance of a 'new product' without compliance with legal requirements demanding substantial evidence that every new drug will have the effectiveness claimed."

State Pressure On Insurance Company Service

Fletcher Bell, Kansas insurance commissioner has warned all fire and casualty insurance companies licensed in this state to improve service.

Bell said he has sent the companies a list of procedures implemented by his department to improve service.

"In return, I expect the insurance industry to improve its service," Bell said.

Bell said he recognizes the need for insurance companies to exercise reasonable and effective controls over the volume and characteristics of the risks they assume, but added: "It is becoming increasingly apparent that many of the underwriting restrictions imposed by some companies bear little relationship to the loss potentialities of an individual risk."

Bell listed various examples of practices which he said must be corrected. These include:

- Refusal to accept or renew automobile liability insurance regardless of the degree of exposure presented by the owner or operators of the vehicle.

- Refusal of many companies to make their facilities available on a statewide basis.

- Withdrawal by companies from agencies unable to produce an increased volume or a certain "mix" of personal lines of insurance and commercial business.

- Refusal to write fire and homeowners policies in certain areas of the state and certain portions of some of the larger cities regardless of an individual risk's characteristics.

- Unrealistic minimums for

coverage of older low value property.

- Unnecessary and unreasonable application of large deductibles for property insurance policies, especially in relation to public buildings.

NOTHING NEW AT TESCOTT

Although the flood was not as high in Tescott as predicted, some basements were flooded and some people moved out. Having been flooded before, all precautions were taken. Furniture was moved to higher levels and nearly all cars were driven out of town to higher ground. The Tescott Cheese Company was not affected by high water, but was closed down one day so employees could work at home. Cheese making resumed on Sunday when normally they are closed.

Hot Weather Tips For G&G Area Dairymen

It's time for dairymen to consider management procedures for hot weather.

Ralph Bonewitz, Extension

dairyman at Kansas State University, believes cow comfort in hot weather may be as important as proper feeding for maximum production.

Milk production may drop as much as 20 per cent during hot weather. High humidity and high temperatures affect cows even more than when humidity is low.

Hot weather not only lowers milk

volume, but also reduces the percentage of fat and solids-not-fat in the milk, says Bonewitz.

When temperatures go above 75 degrees, cows eat less and body weight and milk yields decline.

Bonewitz recommends these hot weather management practices:

Shade: Scientists believe summer milk reduction is due more to side effects of hot weather than to direct action of heat upon the cow.

If natural shade is not available, provide artificial shade. A simple, inexpensive pole-type shelter 10 to 12 feet high and open on all sides will prevent crowding and allow air to circulate freely.

Feed: Research has shown that fiber content of the ration should be reduced during hot weather. This is done by feeding less high quality roughage and more concentrates high in energy.

Grain is not a "hot" feed. Therefore, heavy-fiber roughages are more difficult to digest and produce more heat than easily digested grain. The KSU dairyman says a wide roof over the silage feed bunk is a good idea. It protects feed in bad weather, provides shade and protection for the cows, and encourages cows to eat more silage on hot or rainy days.

Bonewitz has another hot weather tip: Give cows the best pasture at night, when they do most of their grazing, or provide for heavy feeding of roughages at night, because temperatures are lower and cows eat better.

Water: Clean, cool, fresh water should be available at all times. Many experts say a sun shade over the water tank is a good investment.

The daily water requirement of a dairy cow ranges from approximately 12 pounds (15½

gallons) to 350 pounds (44 gallons) per day. The variation is due to differences in milk production, growth rates, temperatures, and the moisture content of the feed.

Cows drink often, averaging about 10 times per 24 hours. Approximately two thirds of the water is consumed between 5 a.m. and 5 p.m.

FARMLAND \$400 GRANTS TO FOUR AT KSU

Scholarships worth \$400 each are given by Farmland Industries for the next school year to Larry Loren Berger, Hanover; Oplotnik, Scammon; and Sauerwein, Walton.

RESCUE SQUAD AT WORK

About 25 to 30 people were evacuated by the Saline County
Rescue Squad (shown here) from their flooded homes west of
Salina. Longtime residents said this overflow from Mulberry Creek
was even worse than the "Big Flood" of 1951. Rains totaled over
6 inches in Salina.

Five boats were used by the Rescue Squad in evacuation
work. In addition to the people, one wedding cake was carried
out. It was made by Mrs. Eddie Weis for a wedding in Salina.

AFTER 8.8 INCHES OF RAIN

Flood waters caused Art Breneman (shown here) to leave home
with his wife and two boys. Heavy rains and overflowing Mulberry
Creek at Hedville filled basement and part of the walls fell in.
Breneman said all basements in Hedville but one were full of
water. They received 8.80 inches of rain between 5 p.m. and
2:30 a.m. Two and one-half inches of this fell in 40 minutes.

CHANGE IN PLANS

Baccalaureate Service at Tescott High School Sunday night was
cancelled. However, water had receded enough by Monday night
that graduation ceremonies took place as scheduled.

"BAD FAITH" BY GARRISON

Jim Garrison, the New Orleans district attorney who involved himself in a succession of charges against others after the assassination of President John F. Kennedy seven years ago, acted "in bad faith" in perjury charges against Clay Shaw, New Orleans businessman, a U.S. District Judge has ruled. He said "Irreparable injury, which is great and immediate," had been done to Shaw by Garrison's charges. Garrison, right, charged in 1967 Shaw, left, with conspiring to assassinate Kennedy.

Statistician Stuck On Average Farm

You remember the after-dinner speaker's story about the three sisters. One of them was a spinster (which is not the same as a bachelor girl, but then that's another after-dinner story), one was just ready to deliver a child, and the other was three months pregnant.

A government statistician studied the family and concluded that the family average was four months pregnant.

Perhaps the statistician was from the USDA, which in a recent Farm Index magazine, built a mythical farm, based on averages if each family got its share of all the farmland in the country.

If all the farmland were carved up and parceled out to all citizens, each family would have 27.5 acres and earn a net of \$316 each year.

In that 27.5 acres, only 22 acres would actually be a family's individual share. The rest would come from government grazing land, which would average 5.5 acres per share.

On the basic farm of 22 acres, slightly less than 9 would be for crops; nearly 10 pasture or range; about 1.5 woodland and 1.5 for farmstead, roads and nonfarm uses.

Of the nine acres of cropland, only six would be planted and the other three would be held out for government programs or fallowed for other reasons.

From the cropland, about 3.5 acres would be in grains, more than of it corn and wheat. An acre would be in hay, and eight-tenths of an acre in soybeans. The rest of the cropland would be in tiny patches of garden.

The average farm would have only one-fourth of a cow but she would produce 2300 pounds of milk. There would be 1.8 head of beef cattle, producing about three-fourths of a calf.

The average farm's lone hog would have two litters of pigs, and there would be four-tenths of a sheep

roaming around.

The average farm would have 6.4 hens and they would lay 113 dozen eggs. There would have been 58 broilers but only 2 1/4 turkeys.

The value of the farm would be \$4086, the gross income would be \$1086 and expenses would be \$752. What's left would be the \$316 net income.

\$2.5 Million Gift For KU Scholars

The University of Kansas has received a \$2.5 million bequest from the estate of James Davis Jr., Wichita oilman who died in 1969. Income from the gift will be used to provide scholarships for deserving students.

The amount of the gift is comparable to large gifts from Mrs. Elizabeth Watkins, the Spencer Foundation, and Frank G. Crowell.

Davis graduated from KU in 1931 and was in the oil business all his life. He was last head of Solar Oil Co. The first scholarships from the gift will be awarded for the coming school year.

Add St. Joseph For Deliveries On Hog Futures

CHICAGO—St. Joseph, Mo. has been added as a delivery point for the Chicago Mercantile Exchange live hog futures contract in a C.M.E. board action, Everette B. Harris, exchange president announced.

"St. Joe is the third largest terminal hog market in the U.S. and is a key shipping point for the movement of hogs to the eastern and western consuming areas," Harris said. Deliveries made at St. Joe will be at

a 50 per cwt. allowance. The new changes are effective with the April 1972 and later futures contracts," he said.

Futures trading volume in live hogs in 1971 more than doubled the figures for 1970 period. From January through April, 94,329 contracts were traded compared with 46,931 trades for the same four months a year ago.

Harris attributed the surge in futures trading to increased forward contracting of hogs on the cash market and the subsequent hedging of the committed animals. He also noted that speculators who trade pork belly futures have begun to realize that many of the same fundamental factors that affect pork belly futures prices also affect hog prices. "In fact, there are fewer fundamentals to look for in hogs compared to bellies," Harris said.

Peoria, Ill. is the par delivery point for C.M.E. live hog futures with additional delivery points at East St. Louis, Ill., Omaha, Neb., Sioux City, Iowa, and St. Paul, Minn. at allowances of 25 cents per cwt., and at the Kansas City, Missouri-Kansas Stock Yards at an allowance of 50 cents per cwt.

520 Acres Grass Near Manhattan Bring \$123,050

MANHATTAN — The sale of 520
acres of land just northwest of
Manhattan brought \$123,050 at
auction May 29. The average for the
entire acreage was \$237, but the
seven tracts sold in range from \$186
to \$760 per acre.

Located on both sides of US24 a
the northwest edge of Manhattan
and about one mile west of Tuttle
Creek Dam, the land sold in seven
tracts. There were no bids for the
entire acreage.

The land was all native pasture,
although some, if not all, of it will be
used for commercial or residential
development.

The land belonged to the Blanche
E. Forrester Estate. Mrs. Forrester
was the widow of a former
Manhattan druggist. The buyers of
the land were all Manhattan men.

The buyers:

• Charles E. Elliott, Manhattan
jeweler, who paid \$40,500 (\$202
average) for 200 acres of pasture.

• Ron Innes, district judge, who
bought two tracts, one of 91.5 acres
for \$17,000 (\$186 average), and one of
40 acres for \$12,000 (\$300 average).

• Edward Polley, Manhattan
florist, who paid \$25,000 (\$282
average) for 88.5 acres.

• Donald R. Hummels, K-State
professor, who paid \$11,750 for 37
acres (\$320 average).

• Harold Carlson, Manhattan
insurance man, who paid \$13,000
(\$250 average) for 250 acres.

• Angelo Garzio, K-State professor
of art and well known for his pottery
productions, who paid \$3800 for 5
acres (\$760 average.)

Soil Mosaic Hurting Wheat In Wichita Area

When combines quit rolling after
wheat harvest in the Wichita-
Newton area of south-central
Kansas, the area will be 3,500,000
bushels or about \$6 million short —
because of soil-borne mosaic
disease.

That's the estimate of Dr. Charles
L. Niblett, Kansas State University
plant pathologist. A team headed by
Dr. Niblett found 53 of 100 fields
inspected in that area infested with
soil-borne mosaic.

Each of the 100 fields inspected
was judged from 0 to 100 per cent
infested. Niblett said that the half of
the fields infested would have yields
reduced, conservatively, 10 per cent.

South-central Kansas contains
leading wheat counties of the state
that normally produce around 70
million bushels of wheat annually.
Only 5 percent of that would be a 3.5
million-bushel reduction for that
area, so Niblett thinks his estimate
is conservative.

The loss is one that could be
avoided with relatively light in-
vestments in research, he said,
because new wheat varieties that
resist soil-borne mosaic already are

in Kansas State breeding nurseries.

"Unfortunately research and
education funds have been forth-
coming from neither federal or state
sources," he said.

Varieties that have some
resistance to the disease are
Chanute, Pronot, Satanta, and
Shawnee.

Niblett suggests that farmers who
had soil-borne mosaic this year use
one of those varieties for seed this
fall.

William
E. Cox

CRAWFORD CO. AGENT TO WICHITA JOB

William E. Cox will become
Sedgwick County Extension
Director June 30, replacing Don
Ingle, who is retiring. Cox is 39, has
been extension agent in Crawford
county for 13 years.

See Fort Riley Buildup To 21,000 By Midsummer

FT. RILEY — Military strength at
Ft. Riley will be 21,000 men by the
end of June, post authorities said in
issuing an appeal for housing
listings.

Included will be 18,000 men, which
is the authorized strength of two 1st
Infantry Division brigades
headquartered here, support
elements, and personnel at the
Correctional-Training Facility
(CTF).

Present strength of the post is
17,500 men, including the CTF.

The buildup started earlier this
month after the fort reached a
manpower low because of troops
being sent to Vietnam. With per-
sonnel demands diminishing there,
the Army has started to rebuild the
division and its support elements.

The post has 2,081 sets of family
quarters, all of which are filled, in
addition to barracks for single
personnel. Soldiers, including of-
ficers, are living within a 60 miles
radius of Ft. Riley.

Expected to complicate the
housing situation will be two sum-
mer ROTC training camps which
will bring 4,000 men to the post.

Most of the cadets will be housed
in barracks at Camp Forsyth but a
large number will bring wives and
families with them.

Motels in Junction City,
Manhattan and other areas expect
an influx of Army officers who will
serve as trainers for the camp.

The ROTC camps begin June 6,
with two groups of trainees
overlapping in six-week periods.

Runoff From Weed Poison Kills Fish Food At Milford

Residue from weed spraying at
Fort Riley has killed large quan-
tities of plankton in Milford Lake
and will affect fish supplies in the
lake on the Republican river north of
Junction City within a few years.

That's the opinion of William Cole,
regional biologist for the Kansas
Fish & Game Commission. Cole says
the weed spray — 2-4-D used against
musk thistle at Fort Riley last
month — killed up to 90 per cent of
the plankton in at least half the lake.

He thinks the loss of the plankton
— a source of food for fish — might
cut the lake's fish population by as
much as 50 per cent in a few years.

Members of the Fish & Game
Commission, Milford Lake
Association, and the Geary County
Fish & Game Assn. had met with
Fort Riley officials and were
assured that care would be taken in
using chemicals that might wash
into streams feeding the lake.

The 2-4-D spraying at Fort Riley
was done in April by an aerial spray
firm. About 45,500 acres were
sprayed against musk thistle.

Cole said plankton should be
coming back now in affected areas
of Milford Lake. Cole says plankton
need clear water for growth, and
therefore muddy water at Milford or
other lakes is a more likely inhibitor
of plankton growth than the leaking
of weed poisons.

Spuds And Flour Dominate Diet In Russia

Finding a "meat and potatoes"
man at an American table isn't
difficult. But in Russia one is more
likely to find a "potatoes and
potatoes" trencherman.

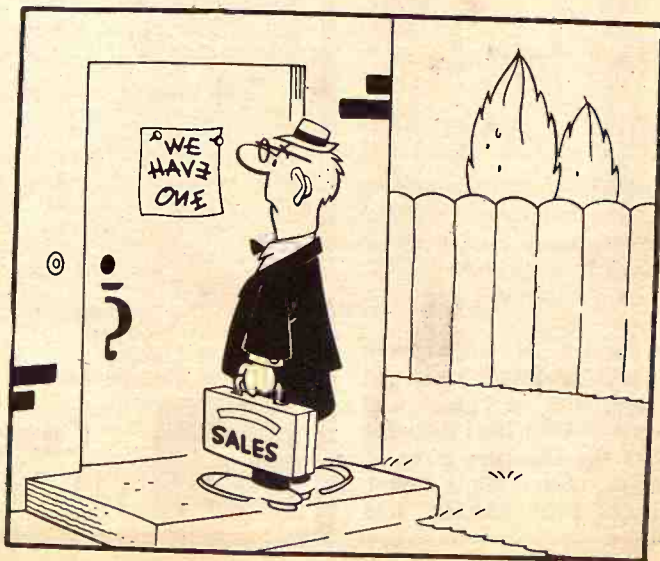

A recent USDA study noted that
while per person meat consumption
in the U.S. is much higher than in the
Soviet Union, the Russians put away
close to three times more potatoes.

The comparisons are in
kilograms. The meat comparison
was U.S. 96 kilograms, Russia 50.
But the Soviets push 127 kilos per
person across the table, while in the
U.S. the figure is 48.

In grain products the Soviets
consume 149 kilos each, compared to
66 in the U.S.

The report said there has been an
upward trend in consumption of
high-protein foods in the Soviet
Union, however, particularly since
1965. Then the per capita meat
consumption was 41 kilograms, nine
less than last year. "The recovery in
livestock production in 1970 im-
proved the food situation to a great
extent," the report said. "Per capita
meat consumption resumed an
upward trend and the availability of
eggs improved significantly."

As the protein foods increase,
officials said, Soviet consumption of
potatoes goes down. The per capita
rate of 127 kilograms last year
compared with 143 in 1960 when
there were less meat and eggs.

A Turn Up On Farm Prices

Prices received by Kansas farmers at mid-May 1971 were up slightly from April this year and were somewhat higher than in May 1970, according to the Kansas Crop and Livestock Reporting Service.

The index of prices received for all farm products was 259 per cent of the 1910-14 base period compared with 255 in April and 251 in May last year.

Prices received for most meat animals and grains were up some from April, while prices for milk, butterfat, hay, seeds and eggs were down slightly.

Compared with a year ago, prices for grains, hay, beef cattle, lambs and milk cows were up while prices for hogs, sheep and eggs were down.

Crop Prices
The crop price index was 166 per cent of the 1910-14 base at mid-May, 2 points above April this year and 22 points above May 1970.

Wheat at mid-May averaged \$1.33 per bushel, 2 cents above the

previous month and 16 cents above May a year ago.

Corn was worth \$1.35 per bushel, unchanged from a month earlier but 18 cents above a year ago.

Barley at 97 cents per bushel was 1 cent above the previous month and 11 cents above a year earlier.

Sorghum grain was \$2.18 per cwt., 10 cents above April this year and 46 cents above May last year.

Soybeans averaged \$2.83 per bushel compared with \$2.77 a month earlier and \$2.44 a year earlier.

Meat Prices

The livestock and livestock products price index at mid-May was 365 per cent of the 1910-14 base period, compared with 360 the previous month and 372 the previous year. The meat animal price index was 443 per cent in May compared with 431 in April and 451 a year ago.

Hog prices averaged \$17.30 per cwt., \$1.30 above a month ago but \$5.40 below May 1970.

All beef cattle brought \$29.60 per cwt., 40 cents above a month earlier and 80 cents above a year earlier.

The dairy price index was 329 in May compared with 342 in April and 330 a year earlier.

The preliminary wholesale milk price of \$5.40 per cwt. was 35 cents below the previous month but unchanged from the previous year.

Eggs averaged 22 cents per dozen, 1 cent below a month ago and a year ago.

Prices Paid

Prices paid by farmers for protein supplements and mixed feeds were moderately higher than in May 1970.

United States:
The index of prices received by the Nation's farmers for farm products at mid-May was 286 per cent of the 1910-14 base period, up 4 points from

COMBINES

We have good used combines on our lot. Most have been worked over the past winter and are ready to cut wheat. See us before making a deal. A few are as follows -

- 1961 HILLO with cab, reconditioned engine.
- 1962 45 John Deere with cab, motor overhauled \$2175
- 1954 Oliver, excellent condition.
- 1957 John Deere 55, repainted, motor rebuilt.
- 1963 Super 92 Massey Ferguson.

We can finance.

After down payment, no payment until Fall of 1971

TRACTORS

- IHC M, new tires, real sharp
- JD 70 standard diesel. Excellent plow tractor. Priced right.
- JD 720 diesel standard. \$800 spent on this tractor \$1875
- Minneapolis Moline on propane with hyd., excellent \$475

MISCELLANEOUS

- 4 row JD rotary moldboard lister
- 4 row 3 point Dempster top planter with fertilizer. Real good
- 4 section 3 point John Deere rotary hoe.
- IHC No. 57 heavy duty wire baler, excellent \$795
- John Deere 37 pull type mower, good \$425
- 15 foot Sunflower V plow.
- 36A JD loader for 3010-3020 tractor
- IHC late series 3-14 pull type plow with trashmasters, excel.
- Front mt. 4-row JD cult., fits 3010-4020 with wide front end.
- Loader for 8N or 9N Ford.
- 34 JD chopper & pickup attachment, little use.
- 38 John Deere chopper.
- Krause one way.
- JD 42 foot elevator with PTO
- Oliver side delivery rake, real good \$225
- 1966 No. 268 New Holland wire baler \$845
- 3 point Ford mower. Excellent.

End Red Ink At Hillsboro Co-op

HILLSBORO—After a struggle to get out of the red since 1966, the Cooperative Grain & Supply put a saving of \$16,700 on the books in 1970. Sales at the Hillsboro co-op were \$3.3 million.

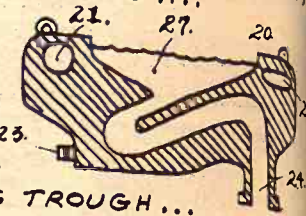

In the period of adjustment, mergers with another co-op at Hillsboro and ones at Lehigh and Marion were effected. Bert Regier is manager of the Hillsboro co-op. A new board member is Elgin Bartel, and Milton Schlotthauer was reelected.

dubious distinction which eats its way through an estimated quarter of a billion dollars in wooden structures every year in the United States.

It is the swarming tendency of the termite — the males and queens pair off to establish new colonies — that makes this destructive pest easy to spot.

The swarming termite is not to be mistaken for flying ants and homeowners should learn to tell the difference. Termites have two pairs of wings that are silver or whitish in color and are the same length. Flying ants have two pairs of wings which are transparent and of different lengths.

Termites have a fat waistline, while ants have a thin one. Worker termites have no eyes. Ants' eyes are easily seen. And termite antennae are slightly curved, while ant antennae are elbowed.

Termites become more numerous in moist, warm soil containing an abundant supply of food in the form of wood or other cellulose material. They often find such conditions beneath buildings where the space below the first floor is poorly ventilated and where scraps of lumber, stumps or roots are left in the soil.

Dirt-filled porches and terraces account for many termite infestations. Leave these spaces open for inspection. Termites can gain access to a building over the edge of the slab, and through expansion joints, openings around plumbing, and cracks in the slab.

dotted line is recommended by a Kansas State University economist.

Contract farming is a contractual arrangement between a farmer and a company specifying conditions of production and marketing of products.

These agreements allow a farmer to increase his volume while relying less on market conditions, explains Dr. John Sjo.

The growth of contract farming is reflected in the high percentage of poultry and dairy production accomplished under such an arrangement. It is estimated that 30 per cent of all fed cattle slaughtered and 10 per cent of all market hogs

are covered by contracts.

Advantages include shifting of financial risk to the contractor, fixing of farmer income, reduction of responsibility and decision making, and sharing of production risks.

On the other hand contract farming limits profit opportunities, deemphasizes initiative and management ability, limits contact with the market and reduces benefits arising from increased production efficiency.

Sheepmen Vote On Checkoff Of Promotion Funds

Kansas sheep producers and feeders will have an opportunity between June 7 and June 18 to continue or discontinue support of sheep and wool promotional and educational programs of the American Sheep Producers Council (ASPC).

U.S. Secretary of Agriculture Clifford Hardin has called for a national referendum by sheepmen to see if they want the ASPC's efforts continued four years through 1974.

Ballots will be mailed to all sheepmen before the referendum. All sheepmen are eligible to vote who have owned sheep or lambs, six months old or older, for any 30 days period since January 1, 1971, reports D. George Ahlschwede, Extension sheep specialist at Kansas State University.

Ballots should be marked and mailed or delivered to the local county Agricultural Stabilization and Conservation Service not later than June 18. Mailed ballots must be postmarked not later than June 18, he reminds.

Ahlschwede explains that a sheep producer's "yes" vote means he would like to continue ASPC

promotional and educational programs for sheep and wool products.

These programs include the Make It Yourself With Wool contest, the Miss Wool of American program, and educational programs for consumers, teachers, home economists, and students.

The ASPC motion pictures are seen by million of persons each year, telling them about lamb, wool, and the sheep industry.

A producer's "no" vote means he would like to see all such promotional and educational efforts discontinued.

Approval by two-thirds of the voting sheepmen or approval by sheepmen controlling two-thirds of the total sheep production represented in the referendum is necessary for passage.

If the referendum passes, the USDA will continue to withhold 1½ cents for each pound of shorn wool and 7½ cents for each 100 pounds of unshorn lamb from the government incentive wool payments made to producers through provisions of the National Wool Act.

Since 1954, the nation's sheepmen have approved four referendums similar to the one this year.

Lawrence. Judging of the heifer classes will begin at 11 a.m. sharp and all entries must be stalled by 10 a.m.

The official judge for the show will be Virgil Huseman, farm editor for WIBW Radio and T.V. at Topeka. In addition to the placings, he will also present a type demonstration prior to the judging classes.

All interested cattlemen are urged to attend and support the activities of the junior organization and

anyone desiring information about entries can contact Lori Hagenbuch, Route 3, Lawrence, Kansas 66044.

Feed Sunflower Soybean Pellets and watch winter weight snowball.

It's a long drive to market bloom and few cattlemen can afford to sit out the winter. So, to finish ahead of the other herds this spring, feed Sunflower Soybean Meal Pellets this winter.

During winter months, most of the feed your cattle will eat merely goes to meet basic energy requirements. Most herds will be doing well to hold their own. That's why you need a super-charged protein supplement if you're looking for a substantial winter weight gain. The best one you can buy, and feed, is Sunflower Soybean Meal Pellets.

This is a supplement made from nature's richest source of protein.

Prime soybeans. They're carefully processed to preserve vital protein content while actually increasing their palatability and digestibility.

Feed Sunflower in 40% soybean meal pellets or as 36%, 32%, or 22% formulated range cubes.

Don't let cold weather hold up your herd's drive toward market bloom. Keep them moving. Supplement winter grasses with Sunflower Soybean Meal Pellets and pack on the pounds. That way, winter feeding will be more than just dead wait.

Three Out Of Four Seats Empty On Average 747 Trip

Some airline executives say they are confident the 747 jumbo jetliners will prove to be big moneymakers although they flew with most of their seats empty in the first year of operation.

Boeing's 360-passenger 747 took to the skies early in 1970 when the economy was in a strong downdraft.

With the recession cutting into sale and profits, corporations grounded a lot of their executives, and individuals cut back on vacation trips about the time the 747 came along.

As the business recovery picked up since the first of this year the passenger load of the 747s rose, and industry leaders said they expected a robust economy would produce a sharp increase in air travelers.

Since 747 service was inaugurated there have been stories, perhaps apocryphal, of coast-to-coast flights with fewer passengers than stewardesses — 14 — or rest rooms — 12.

But there is no doubt that vacant seats yawned line gaping teeth in the plane's plush nine-across seating.

The Civil Aeronautics Board says that in the last three months of 1970 the passenger load of 747s on the New York-Los Angeles flights averaged only about 25 per cent. This has built up to a bit above 30 per cent but the break-even point is around 37 per cent, according to the CAB.

The total 747 domestic and international load factor in January was 34.7 per cent, compared with 49 per cent for all planes flown by the 11 major trunklines, the CAB said.

Boeing has sold 204 and delivered 99 of the \$22-million planes. Thirteen airlines are flying them.

A Boeing spokesman said that because of the economic sluggishness United Air Lines has pushed back delivery of four 747s until 1972 and Pan Am has deferred

delivery of two until next year. He said no orders had been canceled.

When Boeing announced physical details of the 747 in 1966, it said: "Our studies indicated that an airplane of this type is required as the most logical step in order to meet the projected growth in air

June 1, 1971

transportation."

Earlier, the company had said that market forecasts indicated 1975 passenger level three times of 1965 and a 10-fold cargo

Gap Turns Motorist Off Low-Lead Gasoline Pumps

campaign to get motorists to use unleaded gasoline has gone over a lead balloon, sales figures

no-lead and low-lead gasoline were introduced about a year ago, their sales have attained a fraction of service station sales—estimated by one industry source at 5 per cent of sales.

1971 model cars operate on unleaded gasoline, but older models perform adequately on gasoline from which additives have been partly removed—the so-called low-lead

service station operators report many motorists shun the lead and low-lead brands because manufacturing costs mean a gallon more than for unleaded brands.

the usefulness of the new unleaded gasoline is being curbed by some in the oil industry.

in the industry say no-lead gasoline could be a real boon in curbing pollution only when mufflers, which change pollutants into harmless become required in new cars 75 or perhaps later. Lead in the would clog these mufflers make them inoperative.

has been added to gasoline almost 50 years as a means of increasing power. With public attention increasingly centering on the environment, leaded gasoline has become a target of criticism.

Texaco introduced lead-free gasoline about a year ago its price—cents a gallon above the leaded brand. The price gap contracted as other oil companies entered the field. Still some companies have not gone beyond marketing in limited areas.

Atlantic Richfield may cut its wholesale price of unleaded gasoline by 1 cent a gallon,

which still left it 2 cents higher than the leaded gasoline.

Standard Oil company of Ohio, which introduced its low-lead gasoline last November, said it accounts for only about 2 per cent of sales.

Union Oil company of California discontinued its regular-grade leaded gasoline in favor of low-lead fuel a year ago in California, where pollution has been a controversial problem, in parts of Nevada and Hawaii. The company said low-lead gasoline accounts for 39 per cent of its total volume in those areas.

"Eventually everyone will have to have a no-lead or low-lead gasoline," a Union Oil spokesman said. "We decided to go ahead. Other companies give their customers a choice; we don't."

American Oil company said lead-free gasoline sales amounted to about 5 per cent of the total in its Mid-West area. Atlantic Richfield, which sells lead-free gasoline at 3,100 service stations, put its average of sales at 1 to 2 per cent. Shell Oil company said unleaded gasoline accounted for 3 to 4 per cent of its sales.

The American Petroleum Institute reports that production costs for unleaded gasoline may be about 2 cents a gallon higher than for leaded gasoline. Marketing costs are higher too, because special pumps must be installed.

What about the future?

"Many motorists haven't found the link between lead-free gas and clean air," says A.B. Groh, director of marketing research for American Oil company. "They haven't defined their trade-offs—how much they're willing to spend in time and inconvenience to get clean air."

But, he said, "There's no doubt that there will be substantial demand for lead-free gasoline by 1975 and we're well into the transition now."

Suit Against Drug Companies Includes All

You may not know it, but you probably have sued American Cyanamid, Pfizer, Bristol-Meyers, Olin-Mathieson, and Upjohn.

The State of Kansas has filed a lawsuit against the pharmaceutical firms, contending that they monopolized and overcharged for aureomycin and terramycin products from 1954 to 1966.

The lawsuit was a class action, and swept into the lawsuit as plaintiffs anyone who might have bought the drugs in the time

specified. A mass mailing was made in the state, advising everyone of the class action and giving notice that they were included in the implications of the lawsuit unless they filed a written request to be excluded from the suit.

- July 11-12 — 1st annual Kansas Angus Junior Show at Alma, Ks., George Crenshaw, Rt. 3, Manhattan, chairman.
- July 12 — Farm sale north of Glasco, Ks., Lee R. Stanford. Auct. Foster Kretz.
- July 14 — Farm sale south of White City, Ks., Mr. & Mrs. Ervin Davis. Auct. Foster Kretz.
- Aug. 2 — Farm sale south of Greenleaf, Kansas, Bernard Diedrich. Aucts. J. T. Dickson and Foster Kretz.
- Aug. 24 — Third annual Sunflower consignment sale of regis-

tered Holsteins in Salina, Kans. Sale mgrs. John Carlin and Doug Fellers.

Sept. 4 — Kansas Classic 3-breed horse sale at Manhattan. Bob Wilson, St. George, sale mgr.

Nov. 20 — Production sale of Johnson Hereford Farms, Smolan, Ks.

Nov. 23 — Annual production sale of Amstein Herefords, Bill Amstein, Clifton, Ks.

Inflation Cut Income Gains To Zero

The purchasing power of the typical American family did not increase last year, for the first time in nine years, the Census Bureau has reported.

The median money income increased \$440 a family in 1970 over 1969, to a total of \$9,870. But this gain, the bureau found in its annual survey, was erased by increases in the rate of inflation.

The report paralleled one issued earlier that showed that the number of poor people in the nation increased last year, for the first time in a decade.

Analysts said the figures in both reports reflect general economic sluggishness.

The stagnancy of the income figures was evident in almost every breakdown presented in the new report.

Women who worked full-time continued to earn about 60 per cent as much as men.

Blacks continued to earn about 65 per cent as much as whites.

College graduates, with \$16,000 median income, continued to earn about three times as much as persons with less than a grade school education.

Wage earners in the South, with an \$8,500 median income, continued to lag about \$2,000 behind those in the North, north central, and western regions.

Wages of fulltime workers, employed year around, also stood still, the report showed. Their income increases, like those of all families, were completely offset by inflation.

The census report in fact showed that family incomes not only did not keep up with inflation, but fell slightly behind during 1970.

The median income gain was 4.7 per cent, but inflation rose 5.9 per cent during 1970, meaning a 1.2 per cent loss in purchasing power.

But this difference is not statistically significant, census analysts said. Because of possible sampling error, only changes of

38

Grass & G

June 1, 1971

more than 2 per cent are considered meaningful.

A total of 25.5 million families per cent of the total — now incomes exceeding \$10,000 report showed. As recently as there were only 20 million families — 40 per cent — in this category.

Of the nation's 52 million families, 14 per cent had money income between \$4,000 and \$4,999; 11.1 per cent earned between \$4,000 and \$4,999; 12.3 per cent earned between \$5,000 and \$5,999; and 8,000; and 13.6 per cent earned between \$8,000 and \$10,000.

A total of 12.7 per cent earned between \$10,000 and \$12,000; 12.7 per cent earned between \$12,000 and \$15,000; 17.7 per cent earned between \$15,000 and \$25,000; 4.1 per cent earned between \$25,000 and \$50,000; and half of 1 per cent of all families earned \$50,000 or more.

J.C. LIVESTOCK SALES SALE EVERY SATURDAY

WE ARE GOING TO HAVE OUR SALE EVERY SATURDAY
AT OUR REGULAR TIME, ALL THE WAY THROUGH HARVEST.
We are expecting a good run of cattle this week.

We had a real good sale for this time of the year. A good run of cattle made the cattle market very active and strong on all classes. Fat hog market had 5 packer buyers competing the auction way, with fat hogs selling at a top of \$17.90.

Following is a partial listing of our sale last week:

FEEDER STEERS

Radios In Every Room And Car —But No 'Made In USA' Labels

U.S. radio manufacturers have signed off.

General Electric company, the last major manufacturer with extensive radio production in the United States, recently surrendered when it decided to phase out all domestic radio production and move overseas. The flight is ironic in one sense. U.S. domestic sales of all AM-FM radio receivers, excluding those for cars, are expected to grow 28 per cent to 45 million units by 1975.

But the "Made in U.S.A." share of that market will be minuscule. U.S. manufacturers, including the GE plant in Utica, N.Y., garnered only 7 per cent of the 35 million-unit market in 1970 and the industry estimates that will shrink to less than 5 per cent this year. The chief beneficiaries of the growing U.S. market will be radio manufacturers in the Far East, including Hong Kong, Taiwan, Japan and Korea.

U.S. manufacturers have either opened their own plants in those locations or are putting their private brand on a foreign supplier's products. U.S. manufacturers have blamed the rise in imports on a combination of soaring U.S. production and labor costs and cheap costs overseas.

A spokesman for General Electric said U.S. producers began looking for production sites overseas about five years ago, when good-quality,

low-priced Japanese radios made their presence felt.

While U.S. manufacturers are generally willing to concede the radio market to the overseas producers, they are showing increasing concern over the future of more sophisticated consumer electronic products.

The color-television market still is dominated by U.S. manufacturers, but Joseph S. Wright, chairman of Zenith Radio corp., said recently Japanese brand-name producers could take as much as 15 to 17 per cent of the market by 1975.

The Japanese are also beginning to make substantial inroads in the black-and-white TV market, boosting their brand-name share to 31 per cent last year from 6 per cent in 1966. Nearly half the 63 million black-and-white TVs sold in the United States last year were made overseas.

The ultra-sophisticated electronics market — such as closed-circuit television systems — still belongs safely to U.S. manufacturers, for the time being.

But the U.S. electronics companies are beginning to worry. Talk of trade restrictions is a recurrent theme in most industry speeches.

Zenith's Wright told analysts recently: "Our Japanese friends maintain an almost feudal control over their own market and lecture us about our trade restrictions. Every time one of our newspapers or political figures makes a story of speech decrying protectionism, the Japanese are led to believe they can continue to dump their products here and shut us out of Japan. This is no way to build a lasting trade relationship and we must make the Japanese understand."

Ford Options As Standard Costs

Ford Motor company has made some optional equipment standard on its full-sized models and has raised prices to cover the cost of the options.

The prices of the cars involved will be increased from \$1 to \$16.

All full-size Ford products will now have power steering and automatic transmission as standard equipment. Power front disc brakes will be standard on all full-sized Mercurys.

On the Lincoln Continental, AM radio and white sidewall tires will be included as standard and six-way power front seats will be made standard on the Continental Mark III.
