

Summary

Native bluestem pastures were grazed from May 8 to July 18, 1984 by steers with an average beginning weight of 553 lb, at stocking rates of 1.7, 1.5, and 1.25 acres per steer. Gains per acre were higher (P<.01) with increased stocking rate (97, 111, 132 lb/acre). Daily gains were similar for the three stocking rates (2.34, 2.35, 2.36 lb/day). Daily supplementation with about 1.5 lb sorghum grain plus Rumensin[®] per head significantly increased gains.

Introduction

Early-season intensive stocking (May 1 to July 15) of native bluestem pastures produces daily gains similar to those made during the same period at normal stocking rates season long. This trial evaluated different intensive stocking rates and the value of self-fed Rumensin^R in a salt-limiting, sorghum grain mixture.

Experimental Procedures

One 63-acre and five 60-acre pastures were assigned randomly to one of three stocking rates: 1.7, 1.5, or 1.25 acres per steer from May 8 to July 18, 1984 with two pastures per stocking rate. Steers in one pasture at each stocking rate received a Rumensin[®] -sorghum grain supplement (Table 2.2), while steers in the other pastures received only salt. The steers, primarily of British breeding, averaged 553 lb initially.

Results

Results in Table 2.1 and Table 2.2 show no differences in daily gain among stocking rates. Supplementation increased (P<.01) gains of steers over nonsupplemented steers for all stocking rates. Steers on the high and low stocking rates showed the best response to supplementation. Economically it makes sense at present cattle prices and interest costs to supplement with low levels of grain, since about 1 lb of added gain was made for each 4.2 lb of supplemental feed containing Rumensin[®]. Gains per acre were increased with both the highest stocking rate and supplementation.

Grass remaining after mid-July was greater at the lowest stocking rate and decreased with increased rates (Table 2.3 and 2.4). Forbs remaining after mid-July were significantly higher for the medium stocking rates than for the high or low stocking rates.
