

# American Concepts of “green”

Hilary Dees  
Kansas State University

“It appears that **green** is a term that has become increasingly vague, at worst representing a self-defined symbol for those opposing perceived environmental transgressions with little thought into the practicality of such language and even less thought into the intellectual consequences of creating and using words in a way to describe a field in which intellectual rigor is required”

-Derek Wall

### Framing climate change

OUR readers are evidently fascinated by American attitudes toward global warming and/or climate change. I say "and/or" because it turns out that opinion on the subject is sensitive to the language one uses to refer to the putative meteorological phenomenon. A new paper (ungated) in the scholarly journal *Public Opinion Quarterly* by Jonathon P. Schuldt, Sara H. Konrath, and Norbert Schwarz examined the websites of conservative and liberal think tanks and found that conservatives are more likely to speak of "global warming" whilst liberals are inclined to speak instead of "climate change". The elite conservative usage seems to be a cause or effect (probably both) of conservative public opinion.

*Republicans were less likely to endorse that the phenomenon is real when it was referred to as "global warming" (44.0%) rather than "climate change" (60.2%), whereas Democrats were unaffected by question wording (86.9% vs. 86.4%). As a result, the partisan divide on the issue dropped from 42.9 percentage points under a "global warming" frame to 26.2 percentage*

- Many Asian languages do not distinguish between green and blue

- Many Asian languages do not distinguish between green and blue
- In Thai, green also means 'rank' or 'smelly'

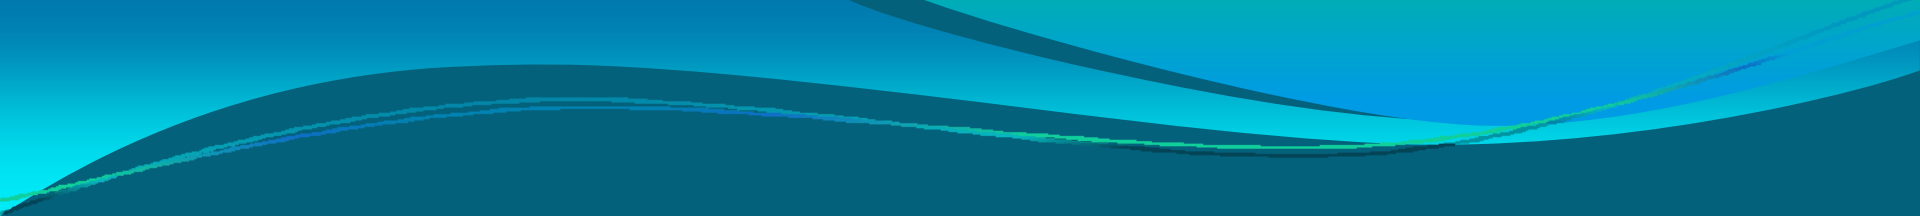

- Many Asian languages do not distinguish between green and blue
- In Thai, green also means 'rank' or 'smelly'
- The color to the right often is associated with Islam

- Many Asian languages do not distinguish between green and blue
- In Thai, green also means 'rank' or 'smelly'
- The color to the right often is associated with Islam
- In SAE green mixed connotations; jealousy, envy and sickness are viewed negatively while money, prosperity, and growth are viewed positively

“Language is a powerful force that shapes people’s and society's opinions, attitudes and ultimately behavior”

The background is a solid dark teal color. At the top, there are several overlapping, wavy lines in lighter shades of blue and cyan, creating a sense of movement and depth.

# Moving forward

# Moving forward

- Change the way we talk about the environment, work towards being more specific
