

ESTABLISHED 1863.

TOPEKA, KANSAS, SEPTEMBER 28, 1881.

VOL. XIX, NO. 39.

THE KANSAS FARMER.

The Kansas Farmer Company, Proprietors. Topeka, Kansas.

Fish as Food.

[From a paper by Professor Atwood.] The proportions of waste matter in different kinds of flesh and in different samples of the same kind in different conditions vary widely. Thus a sample of flounder contained 68 per cent, of waste matter and only 23 per cent. of flesh, while one of the halibut steak had only 18 per cent. of waste and 82 per

cent. of edible materials. Among those with the most waste and least edibles first are the porgy, bass, perch, lobster and syster. Among those with the least waste are fat shad, fat mackerel and dried and salt fish.

[Coming to the edible portion of the flesh, we find this to consist of water and solids or actual nutritive substan

The proportions of water and solids in the flesh of various kinds of fish are much more variable than most people would suppose. Thus the flesh of the flounder had 85 per cent. of of water and only 15 per cent. of solids, while that of salmon 361 per cent. of solids and 631 per cent. of water, and the flesh of dried, smoked and salt fish have still less water. Among the more watery kinds of fish flounder. cod, striped bass and blue fish. Among these with less water and more solids are mackerel, shad, salmon and salt and dried fish. In brief, as compared with ordinary meats, the flesh of fish generally, though not always, contains more water.

comparing the foul or spent fish with the same in good condition. As it becomes lean the fish loses nutritive value in three ways: first, in decrease of weight; second, in relative increase of waste and decrease of flesh; and, third, in deterioration of the quality of the flesh which, in the lean fish, is more watery and considerably less valuable pound for pound than the flesh of the same fish in good condition. Thus the flesh of spent salmon was rated at 85, while that of a fat salmon came up to 108. There is in this a strong argument in favor of legislation against the capture of fish out of season.

The practical application of these facts is of the utmost value. The same nutritive substances in the different samples of fish were found to vary from 40 cents to \$3 per pound. It makes little difference to the man with \$5,-000 a year whether he pays 40 cents or \$4 a pound for the albuminoi is of his food, provided it suits his palate, but to the housewife whose family must be supported on \$500 a year it is a matter of great importance.

As regards the value of fish for brain food continued investigations confirm the statement of a year ago, that fish are no richer in phosphorus than other animal food and worth no more in nourishing the brain.

In Germany, whither we have to look for the best of our definite knowledge of these matters, information like that given above is widely and generally diffused among the people. Tables like those above are published in pocket diaries [a sample of one of these diaries was shown to the audience | and used for constant reference by hundreds of thousands of people, in all ranks and conditions of life.

The Value of Fairs.

Year by year the inducements offered to exhibitors of stock, manufacturers of new and improved agricultural implements and others having something valuable to show, by the officers and managers of state fairs, has rapidly increased. The premiums offered this year by the various associations are larger than ever offered in this country. Chicago and Minneapolis, in their great fairs for 1881, are offering \$1,000 prizes for draft horses alone.

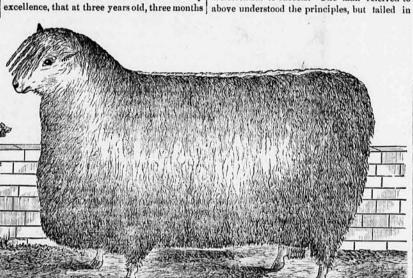

In some of the state fairs, prizes of \$500 are offered for the best herd of the beef breeds; \$500 for the best herds of the dairy breeds \$500 for the best stallions, and the same amount for the best broad mares of the draft breed of ately large prizes for machinery, farming im- since. plements, vehicles, and the produce of the farm

turers, and the still larger attendance of the people. The people go for amusement and instruction. There is no more profitable school for farmers and farmers' sons than to attend both the local and state fairs.

To the dairymen the fairs are equally profitable. When it is known that 40 per cent. of our dairy stock are unprofitable, it deeply concerns the welfare of that industry to secure and breed stock that will yield paying products.

Five years ago, at the New Jersey state fair, we saw a cross breed heifer of extraordinary

followed it from its first introduction into this country, I find the greatest variety of uncertainty in the application of this principle. One man told me that he had for years offered quite a sum of money to any one who would tell him how to construct a furnace that would boil the sap just as fast as he wanted to, regardless of the weather. There is not a manufacturer of cane mills sn the land but whose circulars and handbooks contain the essential principles of the business. The applications of all are essential to success. The man referred to

dure of bichmond hill

butter than nine-tenths of the state of New York. This animal was the produce of a Jersey Bull on an Angus cow.

We also know farmers who have regularly attended the stock fairs, who have so modified their methods of farming and breeding, that their farms now yield them double their former incomes. This is as near a mathematical demonstration of the value of fairs to farmers as it is possible for us to give without the annual footings of the farm accounts of these men for the past ten years.

Even in the great city of New York, there is general demand by the citizens that the American Institute shall inaugurate a grand show of domestic animals for the spring of 1882.

To improve the eagerness of the people to ee domestic animals, even the dog shows are attended by thousands upon thousands of our citizens, among whom are seen our representative people.

To the farmers and their families, the fairs are what clinical instruction are to the medical student, and the blackboard and laboratory are to other students. In fact it is seeing for oneself the great improvements of the age. The great fairs are the agricultural museums of the country, where the most valuable object lessons may be learned by the farmer and the people.

Such fairs awaken the deepest interests in the farmer; creating a demand for better farming, better crops, better stock, better products and better markets. They bring men face to face, create honorable and profitable competition, instruct the people in the social amenities of life, and result in great good to the people and to the nation.

If these conclusions are correct, then it is a duty incumbent upon every farmer to encourage these fairs by his and his family's presence, and by sending the products of his farm to such fairs for competition, and taking away with him such things of superlative excellence as shall by and by enable him also to bear off some of the rich prizes offered as premiums at the great fairs of the country .- American Dai-

Home Made Syrup.

have seen just as good syrup made on a primi- croachment of the salt water, have been levhorses for farm and other use; also proportion- tive outfit of twenty years ago as I have seen eled, submerging the fields of ripening grain,

Some very interesting results are found in after calving, produced more milk and more the application. And so, it is fair to judge, it will be with the man whose object is simply to supply his own table.

> There are, however, a few men who are working at it for the profit they find in making syrup for themselves or for their neighbors. It a man has followed it long he must have the elements of success in him, for there is no poorer property that I am acquainted with than poor, black, thin, bitter sorghum molasses.

> Here and there, in this state, and all the neighboring states, such men have been doing good work, making an article of syrup that would hold its own in the household economy against all competitors, from whatever source, price and quality taken into consideration. The experience of these men is the hope of the sorghum enterprise. What are the facts that have been demonstrated by them?

> 1. That sorghum syrup can be made at a corn syrup to the wall. There has never been enough to supply the demand, and I suppose the state of Iowa to-day could not supply a car load of good quality.

2. That a large per cent. of sugar will crystallize when the conditions are right; that the quality of the sugar as it comes from the centrifugal is worth as much to use at home as the best grades of raw New Orleans. Experts, whose attention has been arrested by these facts, have been analyzing the juices, and their universal testimony is that the per cent, of cane sugar compares favorably with that of the sou-

There are several manufactories in Kansas fitted up with the best appliances, and of large capacity, and the next few weeks are looked forward to by those who are watching with great interest, and the question, "Can sugar be made to pay?" is in a fair way to be answered, as a liberal combination of brains and capital are working at it .- C. P. Hanger, in Iowa Homestead.

The Rice Crop.

The terrible hurricanes which have recently visited the coasts of Georgia and South Carolina has been most disastrous to the rice crop which had nearly been made. The drought and diamonds, £640; a gold crescent of eighthad already injured it materially, and then I suppose that by far the largest part of the came the hurricane—a thing heretofore uncrop is planted and manufactured solely for heard of in the month of August—and great home use as molasses. And the quality of the has been the destruction both of property and product depends more upon the skill and intel- life. On the rice plantations the embankments ligence put into it than to anything else. I protecting the growing crops from the enalmost without an exception. The grain is £10,778.-London Athenœum. Should the gales be lady who wanted a new dress, and he found it severe, the Sea Island cotton and rice crops of to contain phosphorate of lime, chloride of South Carolina will be almost nil .- Food and sodium of water. Ever since reading that an-

Schoolroom Ventilation.

"Experience has shown that if an animal be ept confined in a narrow, closed apartment, so that the air supplied is always more or less vitiated by the carbonic acid which it expires, however well fed that animal may be, tubercle (consumption) will be developed in about three months." If this be the case, a large per centage of the cases of consumption should be met with among inmates of badly ventilated schools. But, fortunately, the disease is comparatively infrequent under the age of 15, and added to this is the protecting influence of the active exercise in the open air usually indulged in by school children. It is upon the teacher that its blighing effects are more apparent, as they are predisposed by age, they neglect exercise in the open air, and their mental labor is years within the limits of one county in Pennsyluania, two died of acute disease, one of an overdose of habitual narcotic, and of nine attacked by consumption, eight died-six ladies and one gentleman; the other, a gentleman, will recover, at least for a time.—Papular Science Monthly.

A Giant Grapevine.

Many of our readers will remember an item we published about a year ago in regard to a monster grapevine of the Mission variety, growing on the ranch of William H. Flinn, several miles from the canon. At that time the reporter took his measurement all by guess, and that, too, from memory after he returned to town. Not a few thought our description of the big vine a stretch of reportorial prerogative, yet we have been assured by Mr. Flinn himself that we failed to do the vine even justice; that its branches were longer and covered a much larger area than was represented. Since then this monster has continued to grow until its accumulated weight of branch and fruit has brought total destruction to one or two large oak trees which supported it, and almost demolished the domicile of its owner. From Mr. Flinn's driver, who visited our office yesterday, we learn that the vine and its fruit have completely crushed the tree, tearing it out by its roots. The size of the vine and the weight of grapes growing upon it may be estimated when we say that the oak tree thus prostrated, which is perfectly sound, is fully two feet and a half in diameter, and upward of of limbs and branches. Mr. Flinn estimates that on that portion of the vine which destroyed the tree there were fully five tons of grapes. -San Diego (Cal.) Union.

South American Jewels at Auction.

One of the results of the disastrous war now being waged in South America has been the sale of a large number of church ornaments set with precious stones, and old personal jewels sent from Lima by patriotic persons in order to procure funds toward the defense of Peru. Of nearly 500 lots, which realized very various prices, the following were sold at the highest rates:

A pair of long pearl and diamond earrings, with four large oriental pearl buttons, and a pair of extraordinary large pearl drops, £135; a curious silver gilt mitre, enriched with scrolls of diamonds, emeralds, rubies and other stones, £273; a magnificent old chased fine gold monstrance, enriched with a large number of precious stones, including fine emeralds, rubies, sapphires, diamords and amethysts, likewise pearls, total weight 378 oz. 10 pwt., £3,000; an old gold monstrance, with a center of large diamonds and topazes, £940; fourteen gold rays for a monstrance, set with topazes een brilliants, £200; an old silver-gilt monstrance, with a gold door and lining, 298 oz., 10 pwt., £200; a life size figure of a pelican, with an enameled gold breast, the eyes and algrette set with large emeralds cut en cabochan, three silver-gilt figures of young pelicans, £380; an old enameled frame in three pieces, enriched with emeralds, £275. Total of the pieces,

Stop this scientific business where it is, and

tear that had trickled down the cheek of a alysis we have lost faith in tears, and no matter what a person is bellowing about, we can only look at the tears as they flow over beauty's cheek and think of the phoshpate of lime, and chlorade of sodium and water. The infernal analysis has knocked all the poetry out of tears for us, and we feel as though we wanted our money back. If the scientist will refund what he has taken from us he can take his old analysis. We would like to throw him in a corner and jump on him. He has robbed us. Oh give us back them other days when tears were tears and not chloride of sodium and other nauseating drugs.-Ex.

Farly Frost in the Garden.

Our gardens are often at their best in early autumn. We have a few days of early frost, in which the very tenderest things are killed off, and then follow days, often weeks, of the severe, and worry of mind exhausting. Of most delightful weather, in which the plants eleven teachers who died during the last eight that escaped the first frost, are at their best. It is very disheartening to the amateur, to see his beds of Coleus, and his Cannas, all limp and useless, while the hardier Geraniums seem to laugh at the disaster. So far as we have noticed, this is the usual experience, and it occurs so regularly each year, that it seems worth while to prepare for these early frosts, in order to prolong the enjoyment of the garden. Those early visitations, though sufficient to kill the tenderest plants, are so slight that they may be easily warded off. Whatever may be placed over the plants to prevent radiation of heat, will answer. The taller the plants, of course the more dificult it is to protect them. We have preserved a bed of tall Cannas, by setting a still taller pole in the center, tying a sheet by its middle to the pole, and letting the sheet hang over the plants, its edges being supported by them. Beds of Coleus and other tender plants may be readily protected by newspapers, held up by sticks placed here and there in the bed. Indeed, in early autumn, the newspaper is a most useful horticultural appliance, not only in the flower garden, but in the vegetable garden. By a proper use of newspapers for a few nights-the early frosts rarely continue for more than three nightsthe crop of tomatoes may be prolonged for several weeks; especially where the plants are trained, as we so often advised, to a trellis or a support of some kind .- Am. Agriculturist Flo. riculture and Gardner

What Does it Signify.

Intelligence received from the Warner Observatory, Rochester, N. Y., announces the discovery of a new comet located in the con stellation of Virgo. It is a striking coincideuce that this new and bright comet appeared at the same hour President Garfield was breathing his last. It was first seen by E. E. Barnard in Nashville, Tenn., who has made claim through Pro. Swift for the Warner prize of \$200 in gold. This makes the fith comet een since May first, and of this number fonr have appeared from almost the same spot in the heavens.

Improved Appetite and Digestion.

One of the first effects of Compound Oxygen is an increase of appetite and an improvement in digestion. A patient writes: "I was unable to digest my food on account of chronic inflamation of the stomach and torpidity of the liver. The treatment had an almost magical effect from the first. My improvement in strength, appetite and ability to digest my food is indeed wonderful." Another says: "Can now eat almost anything I wish, though a month or six weeks ago my diet, even a hygienic one, disa-greed with me." Another: "My appetite, before very poor, is now excellent. Feel an elasticity and courage and strength that I have been a stranger to for years." Another: "Have not felt so well in two years. Appetite good; blood circulates well; pains in back, limbs and legs have disappeared, and I sleep such sound, refreshing sleep that I begin to feel like a new person." And another: "Respiratton, appetite, nerves and sleep all much improved." Our reports of cases and full information sent free. Drs. Starkex & Palen, 1109 and 1111 Girard street, Philadelphia, Pa.

Clover hay is a nutritious food for horses, and, when well cured and put up so as to be free from dust and mold, may be fed with entire

farm Letters.

COPE, Jackson Co., 16 miles northeast from Topeka, Sept. 12.-Since the copious showers of the past two weeks, vegetation that was not entirely parched by the long heated term is assuming a livery of green, and nature seems revived. The farmers have secured a large amount of hay, and it has been put up in good condition.

There is but little preparation made, in comparison with past years for sowing wheat this fall in our county. The short crop of the last harvest has discouraged many from seeding again until the chinch bugs disappear, as they were almost the entire cause of the failure. I think, though, with J. C. H. Swann, that the farmer who sows wheat this fall and does his work well, will reap a bountiful harvest in due season. My observation for many years has been that we hardly ever have two failures in crops in two successive years.

I read with much interest the farm letters that appear in the FARMER, and feel disappointed when I get a number without the heading "Farm Letters," as I miss a treat They keep the readers of the "old reliable" posted in the condition of crops, stock, improvemements, experience of live farmers of the various sections of our state, and other matters equally interesting.

The late drouth has tested the hardiness and durability to withstand so trying an ordeal of what to plant that is, to use a common expression, iron-clad. With me, in my orchard, the Red Astrachan and White Winter Pearmain have suffered the most. Among the various kinds of peaches, I see but little bad effects. The Kittening blackberry seems worse than the Lawton. Among seven varieties of grape vines, I see but little difference; all have stood the drouth well. Among five varieties of straw berries, viz., Wilson, Captain Jack, Col. Chevy, Chas. Downing, and another kind I got for Monarch of the West, but not genuine, all have suffered more or less-old Wilson gone up entirely, Col. Chevy badly damaged, Captain Jack somewhat damaged. The Chas. Downing stood the test better than any other. Let others give their observations. I like to hear from my brother farmers.

J. W. WILLIAMS.

STAFFORD, Sept. 17 .- To-day a meeting of farmers and stock growers met at this place and organized an agricultural association by electing Jos. Cooper, president; Joel Reece, secretary, and M. V. Lamoreux, treasurer. The association decided to give a free exhibition on Friday and Saturday Oct. 14th and 15th, 1881. This will give our citizens an opportunity to exhibit their stock and farm products, and exchange views as to best methods of raising the same. Everybody invited to attend. JOEL REECE.

NEOSHO FALLS, Woodson Co., Sept. 13; 75 season has come to an end. Weather cool and several fine showers followed by bracing north preparing the soil and drilling, some holding back in fear of chinch bug. Not the usual breadth has been sown. Owing to the great drouth and chinch bug we find that we have not more than half an average crop of corn, oats, wheat, and millet, very few potatoes.

Peaches small and indifferent. A large quantity of fine prairie hay has been secured. Corn selling at 45c, per bushel, wheat \$1.00, fat cows \$2.25 per cwt.

The high price and scarcity of corn has caused the cattle market to tend downward and These are all matters of prime importance to become dult. Scarcely any fat hogs in the country. Stock hogs plenty and cheap. Stock understood by the average producer. water scarce and many wells failing.

'Although the past summer has been disastrous and our supply of grain will be short, yet with our large supply of hay and todder, and with better shelter, and by exercising more care, we may winter our flocks and herds succesefully and be prepared in the spring to plant our usual crops, hoping for a better harvest.

Corn will yield from nothing to 40 bushels per acre, wheat from 5 to 15, oats from 10 to 50. There will be corn enough with the old on hand to fatten the hogs and carry the stock cattle through, but there will be but a few cattle fed-none compared with last year.

The farm and Stock.

EDITOR KANSAS FARMER :- I have just finished gathering my Concord grape patch-dimensions, forty by seventy-six feet-vines, five years old on trellis five feet high. I kept a careful account of the weight and price as the grapes were sold, and found that I have sold eight hundred and ten pounds, and received many of our pets in the way of trees, vines, \$48.32. I estimate that we used ninety pounds shrubs and flowers. We may know hereafter in the family, and that the birds and chickens destroyed 110 pounds. In round numbers the patch grew 1,000 pounds, worth \$50. If I have figured accurately, there is about seven hundredths of an acre in the patch; and at the above rates one acre would yield seven tons of grapes, worth \$700. C, BISHER:

Hutchinson, Reno Co., Sept. 14.

Morris County Fair.

EDITOR KANSAS FARMER:-The Morris County Agricultural Fair held its eighth annual fair at Parkerville, Sept. 13, 14 and 15, and considering the very dry season, the exhibition corn, oats and millet usual, wheat light, potatoes average size but few, vegetables scarce. A splendid show of horses and cattle, especially the yoang stock, which proves that our state is rapidly grading up all her stock. The floral display is ahead of anything heretofore exhibited, which again demonstrates the advancement of the people, for with the necessities secured, the beautiful and luxurious can be indulged in. Financially the falr was a failure. second rain, and third cold with high wind. been expected.

What is the Farmers Share?

Health on Farms.

The general health of those engaged in farming, is better than that of persons living in towns or cities who follow in door occupations; and vital statistics prove that the average duration of life in those actively engaged in farm labor is greater than in those employed in the sedentary occupations of city life. This is not so much from the better sanitary condition of the farm, as from the vital vigor induced by the active life of the farmer, enabling him to resist the morbid influence that would lay a feeble man in his bed, or perhaps in his grave. As a general rule, farmers are either grossly ignorant, or recklessly careless in regard to sanitary conditions. A farm residence should have an elevated, airy location and should be surrounded by a lawn of an acre or more, well set in grass and shaded with trees, so trimmed as to admit of a free circulation of air. All marshy, or heavy clay lands in the vicinity of the house should be carefully and thoroughly drained. Timber chips, or sawdust should not be suffered to rot near the house, and barnyards should be cleaned every spring, and the wastes of the winter's feeding, either spread on the fields and plowed under, or put on the compost heap and covered with muck sufficient to absorb the poisonous gases arising from its decomposition.

The cellar should be thoroughly cleansed and white washed with fresh slaked of farm products was truly wonderful. Good lime every spring; and no fruit nor vegetables should be suffered to decay in it during the summer. The water supply must be an object of constant care. If this is a spring, provisions must be made to prevent surface water, in time of heavy rains, from running into it; and if, by accident it should be overflowed, it must be thoroughly cleared as soon as the flood subsides. If water for house use is obtained from a well it should have an embankment around it, at least a foot higher than the gen-First day, good enough weather; but on the eral surface of the ground in the vicinity. Thoroughbred Horses.

There is only one class of horses entitled to the appellation of "thoroughbred," and these are the decendants of the English race horse. It was originated especially to designate these the side of both sire and dam from imported that an out-cross to the Arabian or the Barb garbage, etc. horse does not vitiate the claims of descendants to be considered thoroughbreds, as it ts from these breeds that the English race horse owes a great part of his wonderful powers of speed and endurance. But this is very seldom attempted now, as the English thoroughbred has been bred to such perfection that it really impairs his decendants to cross him with any other breed known.

The early history of the English race horse is very obscure, so far as knowledge of what breed or breeds were used to lay the foundation upon which the Arabian or Barb horses were crossed. The earliest mention of a race course for the testing of the speed of horses runs back to the days of Henry 11. At that time there was a race course just outside the run by horses especially fitted for that purpose. From that date the English kings and nobles always took more or less interest in breeding of race horses, and it was the emulation engendered by racing against each other that led to the use of foreign horses of more speed and endurance than their own to bring their horses to greater perfection. This resulted in the breeding in the English race horse in his present form,-the highest type of the horses known, and the only one extitted to the name of "thoroughbred."-Michigan Farmer.

The Devon is the oldest race of pure blood-

good stand, and it has yielded a good deal of at some conclusion that would form a basis fer In some portions of England they have ever been favorite cattle with the breeder, as they have been and are to-day with the butcher and consumer of beef throughout the world wherever known.

> A century or more ago the spirit of improvement took possession of our English cousins. and they began the upbuilding of other breeds of cattle. This spirit of improvement has brought forth the beautiful Short-horn, a breed of cattle that in a few years filled England with its praises, crossed oceans, traversed continents, and every where met with favor. Wherever they were introduced they left their unmistakable impress on the cattle of the country, so that to-day it must be confessed that no breed of cattle has done so much to improve the cattle and increase the beef production of the world as the Short-horn. While the enterprising breeders on the bank of the Tees, were engaged in perfecting the Sort-horn, those of Hereford and adjoining counties were giving form to the massive, short-legged, round-bodied, and fat-producing Hereford. And these two large and beautiful breeds of fection that this time they are receiving the landations of the civilized world. And far be from me to detract in any way from their well earned reputations, or to pluck one leaf from subject. the laural wreaths that crown them. On the contrary, I am quite ready and willing to render to them fully credit for all their grace and many fine qualities.

With two such rivals in the field, it may seem like presumption in the little Devon to enter the lists, and claim even a passing notice. But while the cattle war is progressing between these two eminent beef-producing breeds, the bred in regions and on lands and under circumstances that the Short-horn cannot. Their beef is of the highest class. They are hardy, active, will feed fat where a Short-horn will not, and live where the latter will starve. Besides, though smaller than the Short-horn, and one year later in maturing, yet when put to feed at pasture at four with Short-horns will make as many ponds of beef per acre as Shorthorns; and their beef will have this advantage, that it will be better in quality than that of the average Short-horns, and will be in smaller cuts to meet family demands.

Now in regions where Short-horns can not go, there is no beast on earth to compare with the Devon to fill them. He can stand Arctic cold and tropic heat. They flourish in Canada and in Cuba. Can anything be said more reccommending? They are good milkers, rich in quality and good in quantity. They make the best and quietest work cattle, and where the Short-horns can not go, supplant all other cattle.-Ex.

Loultry,

Chicken Cholera.

EDITOR KANSAS FARMER:-Not having the holera among chickens seems the exception, so, having lived over 21 years where I now reside without having it, I thought I would tell the conditions under which this has occurred. I will state, however, that a tenant of mine has had it in his flock twice during this periodonce when our chickens ran together-but did

horses, and its application to any other breed er, cold or warm, finds them roosting in that is misleading. Thus it is incorrect to speak of tree. Our house and lots are on a limestone a thoroughbred trotter. It is correct to use the ridge, where there is always abundance of fine. term, a pure bred Percheron, a pure bred Ara- sharp broken stone. We have generally had bian, or a pure bred Clyde. A thoroughbred some old grain about the place all the year, but horse in this country must have descended on not always. We never use any ramedies or English stock. It is generally understood in their reach, such as dead carcasses, swill

will state, however, that a tenant of mine has had it in his flock twice during this periodonce when our chickens ran together—but did not feed nor water them together.

First, then, we have a fair average chicken house, 10x14, 8 feet high, hay roof, but the chickens never roost in it, prefering a large honey locust that stands near by. Any weath er, cold or warm, finds them roosting in that fire. Our house and lots are on a limestome ridge, where there is always abundance of fine, and the stands of the stands are by. Any weath er idea, where there is always abundance of fine, sharp broken stone. We have generally had a moe old grain about the place all the year, but not always. We never allow any filth to be in their reach, such as dead carcasses, swill, garbage, etc.

Here I will state that my tenant lost all his chickens this summer, and all the difference I could see in the manner of treatment from our was thrown into the yard, and their principal drink was leakage from the swill barrel. Our whickens che was to off the house was thrown into the yard, and their principal drink was leakage from the swill barrel. Our whickens have an abundance of good clear water the year around. They are never obliged to go to the hog trough, hog wallow, creek or pond. But few chickens come about the house; still, within ten steps of where I sit writing, I can see an iron heater, an old-fash in the waste of the house was the own of the survival of the same. During all the past hot weather there are some of the different vessels about the place. Only think, then, of their suffering where there are some of the different vessels about the place. Only think, then, of their suffering where there are not a might be a sme. During all the past hot weather there are not a might be a sme. During all the past hot weather there are not all the past of the survey obliged to go to the bedge and past of the survey obliged to go to the bedge and the survey of the survey

WHAT SHE SHOULD DO.

A Few Suggestions of Importance on a Subject of Interest to the Ladies.

And Certain Facts which Should be Known by all Women.

A short time since an article appeared in the columns of this paper, being a synopsis of a lecture de-livered by a prominent woman before a well known New England society. This article dealt so directly with the needs of women, and contained so many hints which were valuable, that it naturally attracted no little attention, and has, we learn, been a sub-ject of comment in social circles in nearly every part cattle have been brought to that degree of per- of the land. Realizing that no subject can be of more vital importance, as well as of interest to all readers, than the condition of the women of Ameriea, we have collected and prepared with considera-ble care, additional facts bearing upon this same

The ladies of this country have been more obserand Europeans always notice their characteristicsusually with admiration. Sara Bernhardt, declared she did not see how any one could resist falling in love with "those pretty American ladies." She might have added, that even her far famed French nation would find it difficult to equal, much less excel, American women in quickness of perception and brilliancy of intellect. The minds and manners of American women are all that cap be desired; but it these two eminent beel-producing breeds, the little Devon would present himself at your far inferior in comparison with their social and men door, and humbly ask permission to be briefly tal characteristics. The women of England are noheard in his own defense. The race can be ted for their florid health: those of Germany for their strong constitutions, and the ladies of France for their exuberance of spirits; but American women possess no one of these qualities in any prominence, and all of them only in a slight degree. The reason for this must be plain to every careful observer. Sedentary ways, devotion to fashion—but above all and more than all, carelessness and indifference to daily habits and duties, have rendered the women of this land far less strong and healthy than it is their duty or privilege to be. This irregular and indifferent manner of living, brings about the most serious results and is both directly and indirectly of untol d injury to the race. The cause, therefore, being manifestly under the control of the women themselves, the power to remove it must naturally be under their control also. American women can possess just as charmed lives as though they lived in Europe or any foreign land, if they only desire and determine to do

> The primary cause of suffering from disease is impure blood. The performance of the natural func-tions of womanhood and motherhood is not a disease nor should it be treated as such, and to maintain one's health the organs which make and purify the blood must be preserved in, or restored to, their normal condition. These organs are the kidneys and

mai condition. These organs are the kidneys and liver.

It is the office of the kidneys to take from the blood the poisonous matter which has been collected from all parts of the body and pass it off from the system. If they are impaired in their action they cannot do this work, the poison accumulates, all the organs in the body, which are sustained by the blood, are weakened and give way and kidneys and contiguous organs become the source of great pain, and without prompt relief death is certain.

It is the office of the liver to extract other impurities from the blood and utilize a portion of them for digestion. If the liver is disordered, all forms of dyspepsia occur, the bowels cannot expel the waste matter, and the most distressing inconveniences follow. This is especially true in the case of women. And if the bowels are thus inactive and overloaded, the neighboring organs, which are particularly dependent for their right action upon the state of the iver, bowels and kidneys, become displaced and the consequences which ensue are too well known to require re statement in a suggestive article of this kind. The secret however, of preventing these manifold disorders is to keep the kidneys and liver in perfect working condition. This is reason; this is science, and it appeals with force to the suffering women of America.

When the body is in a healthy condition, then

Grange and Alliance.

NATIONAL GRANGE.—Master: J. J. Woodman, of Michigata; Secretary; Wm. M. Ireland, Washington, D. C.; Treasurer: F. M. McDowell. Wayne, N. Y. Executive Committee.—Henley James, of Indiana; D. Wyatt Alken, of South Casolina; W. G. Wayne, of New York.

STATE FARMERS' ALLIANCE.

Report of the annual meeting of the Kansas State Farmers' Alliance, held in Topeka, Sept. 14. 1881 :

The meeting was called to order 9 a. m. by President W. S. Curry. Roll of delegates was called, and 31 delegates answered to their names, some representing two or more subordinate alliances.

Minutes of last meeting read, and as delegates were expected to arrive on the noon train business was suspended for a time, and a general talk was indulged in by the delegates on the subject of county organizations.

J. B. Potter of Reno county alliance, J. W. Messer, of Barton county alliance, and T. P. O'Brien, of Cloud county alliance, each gave a lengthy report of their organizations and their workings, all of which favored county organization. These delegates, speaking from experience, thought the county alliance very important for the success of of the farmers' movement.

The reports of the secretary and treasurer were read and referred to the finance committee.

The finance committee elected at last meeting were not present, and on motion of J. D. James the president appointed J. D. James, G. D. Humphreys and J. R. Clark as a committee to act in their stead.

On motion, the president appointed a committee of three on credentials, consisting of N. G. Gill, W. R. Bradley and J. A. Lacy.

On motion, all resolutions were to be put in writing before being presented.

On motion, the meeting adjourned to meet at 2 p. m.

State alliance reassembled at 2 p. m., President Curry in the chair.

The committee on finance reported as fol-

"Upon examination of secretary's and treasurer's book accounts, vouchers, etc., we larged, and broader and healther views are find receipts from all sources whatsoever to be \$167.89; disbursements for all purposes, \$108.24; balance on hand, \$59.65.

"We also find charter rees, \$1.00 each, for charters No. 104, 118, 119, 120, 122, 145, 148, 186, 168, 178, 179, 180, 182, 184, 186, 187, 194, 195, 196, 199, 205, 211, 216, 221, 222, 227, 231 and 236, due and unpaid.

Respectfully, J. D. JAMES, J. R. CLARK,

G. D. HUMPHREYS, Committee."

The report was received and adopted. The committee on credentials reported as follows:

"We, the undersigned committee, find all the delegates named on the secretary's roll entitled James is entitled to represent alliance No. 216, J. A. Lacy No. 58, and E. Harrington No. 157; and we recommend that the secretary place the names of any other delegates on the roll who come properly accredited. We find nothing in our constitution on the subject of delegates from county alliances, and we therefore leave that matter in the hands of thts convention without recommendation.

Respectfully,

N. G. GILL, J. A. LACY, W. R. BRADLEY, Committee."

The report was received and adopted. The order of new business having been called, N. G. Gill offered the following resolu-

tion, which was adopted: "Resolved, That we authorize and urge the members of the alliance in every county in the state to push forward the organization of subordinate alliances in their own and adjacent

counties." J. D. James moved that the course pursued by the president and secretary in issuing charters to county organizations be approved. The

On motion, the following committee was appointed on revision of constitution and bylaws: Messrs. Humphreys, James and Wil-

The committee reported for adoption following as a new article to the constitution:

"Five subordinate alliances shall be a sufficient number in a county to organize a county alliance. The basis of representation shall be three delegates from each subordinate alliance in the county: Provided, That after the county alliance has been organized it shall have the power to fix its own representation."

That by-law No. 9 be amended by inserting the words "or county" in the second line, after the word "subordinate," and before the word

'alliance."

The report was received and adopted.

On motion, the secretary was instructed to notify all delinquent alliances to remit their per capita tax and charter fee.

On motion, by-law No. 7 was amended by striking out \$300, and inserting \$100 instead. On motion, the convention proceeded to the election of officers, with the following result:

President, W. S. Curry, Topeka, Shawnee county; Vice President at large, N. S. Gill, Emporia, Lyon county; Vice President 1st dist., J. D. James, Concordia, Cloud county; vice president 2nd distrct, M. Cottle, Richmond, Franklin county; 3d district, C. Eckles; Secretary, L. A. Mulholland, Topeka, Shawnee county; Treasurer, T. P. O'Brien, Lawrenceburfi, Cloud county.

The president appointed as finance committee, J. D. James, of Concordia; J. R. Clark, Clay Center, and J. A. Lacy, Wakefied, Clay ounty.

On motion, L. A. Mulholland, of Shawnee county, and J. D. James, of Cloud county, were elected as delegates to represent the state alliance to be held in Chicago, Oct. 5. 1881.

On motion, the meeting adjourned until 7:30

Alliance convened at 7:30 p. m., and on motion, it was decided to hold the next annual neeting at Junction City.

The secretary was instructed by the alliance to have the official proceedings published in the KANSAS FARMER. The alliance took a recess of an hour, and

listened to a very interesting address by Jasper Needham, of Missouri. The convention being again called to order,

a vote of thanks was tendered Mr. Needham for favoring the meeting with such an able address. J. D. James thoved the adoption of the fol-

lowing resolution, which was adopted as read: "Resolved, That the secretary be instructed, when making out the semi-annual list of subordinate alliances, to place a cross (x) after the Secretaries' name of all those subordinate alliances which have not paid for their charter, and a star (*) after the secretaries' names of all subordinate alliances which have not paid up their per capita tax.

At 11 p. m., after a session of 14 hours, the state alliance adjourued.

W. S. CURRY. . L. A. MULHOLLAND, President Secretary.

What the Grange Does.

Not only the social amenities and lessons of high morals are taught in the grange, together with the habit of fostering aspirations beyond the monotonous present, but intellectual truths of the first importance and magnitude are disseminated through its agency. The principles of social and political economy are made familiar by its means. The narrow limitations of ordinary practical life are eninculcated. The best methods of legislation impressed on the mind, and the proper topics of it are sagaciously selected. The vital relations of producer and consumer are more clearly understood. Farmers are made to comprehend that they are freemen in the truest sense and for the highest ends.

This is not by any means an imaginary picture. Those who have been in the grange since its formation and establishment will readily testify to the truth of more than we have stated, They will freely admit that the Grange is an educator and a thorough one; that it effectually stops the waste from which the agricultural character so long suffered, and tutors it in the art of saving and satisfying resources on which men in other vocations, when they happen to possess, them, make constant to seats in this convention, and that J. D. drafts for the successful conduct of their lives, and the enjoyment of their mature age. It is well to keep these simple facts in mind, that by so doing this timely organization may have widest scope for the employment of its many and valuable influences.—Massachusetts Plow-

STEEL WIRE FENCE

Is the only general purpose wire fence in use: Being a strong net work without Bars, it will turn dogs, plgs, sheep and poultry, as well as the most vicious stock without injury to either fence or stock. It is just the fence for farms, gardens stock ranges, and railroads; and very neat for lawns, parks, sch ol lots and cemeteries. As it is covered with rust proof paint (or galvanized) it will tast a left time. It is superior to boards or barbed wire in every respect. We ask for it a fair trial, knowl g it will wear it self into favor. The SEDGWICK GATES, made of wrought from pipe and steel wire, defy all competition in neatness, lig thess, strength and ourability as also make the BEST and CHEAPEST ALL IRON automatic or self opening gate. For prices and particulars ask hardware dealers, or SEDGWICK BROS.,

Richmond, Ind.

The leading Scientists of to-day agree that most diseases are caused by disordered Kidneys or Liver, at therefore, the Kidneys and Liver are kidneys or Liver, at therefore, the Kidneys and Liver are kidneys or Liver, at the perfect hoalth will be the result. This truth part of the property been known a short time and for years yeople suffered great agony without being able to gard relief. The discovery of Warner's Safe Kidney and Liver Cure marks a new era in the treatment of these troubles. Made from a simple tropleal leaf of rare value, it contains just the elements necessary to nourish and invigorate both of these greatorgans, and safely restore and keep them in order. It is a POSITATY & Remedy foe all the diseases that cause pains in the lower part of the body—for Tortid Liver—Hendaches—Jaundice—Dizzines—Gravel—Fever, Ague—Maiarial Fever, und all dimeutites of the Kipneys, Liver and Urinary Organs, It is an excellent and safe remedy for females during Fregnancy. SHEEP RANCH

FOR SALE.

One of the most Complete Sheep Ranches in the one of the most complete sheep scales in the state of Kansas, situated in Edwards county, seven miles from Garfield, on the A., T. & S Fe Railroad, containing 1,600 acres in one solid body, as good sheep land as there is in the state. Buffalo grass; the finest winter pasture; two good dwelli gs, 22x30, two stories, firmly built and well finished, large summer kitchens, good wells with pumps, and the best of never failing water; two barns 22x33, one and one-half story, first-class, grainery and harness rooms; one machinery house, one and a half story, 22x30; one wind mill and pump, 12 foot wheel, 28 foot tower, water tank' 140 barrels, well elevated, and inclosed with pipes under ground that distributes water to troughs in all the corrals, to a complete dipping apparatus, and to the kitchen gardens; good substantial wooden sheds and close corrals for 2 000 sheep; good sheds and and corrals for 25 head of cattle; in fact, a complete outfit arranged and located for two broth-

ers or partners.

I will sell with the above property a full outfit of farm implement and working stock; about 20 head of Cows, Heifers and Calves; one pedigreed Durham Bull, about 1,500 Ewes, grade merinos, 250 yearling Wethers, 50° Lambs, 34 Hammond Bucks.

I will also sell with the above property, 500 acres of land on the Arkansas river, only 4 miles from the homo ranch, occupying 5 miles of river front; producing fine hay: and the best of early pasture, with unlimited range through the hills.

JAMES HOLLINGSWORTH, 210 LaSalle St., Chicago, Ill. Or A. HOLLINGSWORTH,

Garfield, Pawnee Co Kas. 15,500

4.500 Lambs.
The above are graded sheep, large and well wooled, raised in Southwest Kansas, and are at Caldwell, Sumner County, Kansas
HASSARD BROS., Caldwell, Kas.

THE KANSAS FARMER.

The Kansas Farmer Company, Proprietors. Topeka, Kansas.

TERMS: CASH IN ADVANCE.

The greatest care is used to prevent swindling humbugs securing space in these advertising columns. Advertisements of lotteries, whisky bitters, and quack doctors are not received. We accept advertisements only for cash, cannot give space and take pay in trade of any kind. This is business, and it is: a just and equitable rule adhered to in the publication of THE FRENCE. TO SUBSCRIBERS.

Subscribers should very carefully notice the label stamped upon the margin of their papers. All those marked 40 expire with the next issue. The paper is ain 40 ways discontinued at the expiration of the time paid for, and to avoid missing a number renewals should be made at once.

Post Office Addresses.

When parties write to the FARMER on any subject whatever, they should give the county and post office both. Some of the new post offices are not put down in the post office directory, and when the county is not mentioned, the post office clerks do not know where to send papers or letters.

It is said that prune culture in California is very successful and profitable.

We notice that some of our exchanges complain of immense numbers of caterpillars on trees. They should not be permitted to remain on any farm house trees. Strip them all off and let the eggs encounter the frosts.

Many persons believed that in case of President Garfield's death and President Arthur's accession to the presidency, there would be more or less fluctuation in the markets. But it will be a relief to all to know that no such an effect has been produced.

Among the pausible hopes of the future is one relating to electricity as fuel. We now cook by gas and steam, and we light by electricity. It is believed, and with good reason, that we will soon have an invention by which we may utilize electric currents in heating houses and cooking our food.

The memorial services in memory of the Ex-President's death, Monday, in Topeka were imposing and impressive. On Sunday, in every church the sermons were on that subject, and in most of them another service was held Monday. The G. A, R. had a meetsng, with memorial ceremonies at the Capitol grounds Monday at 11 a. m.

The railroad wars of the past year or two have demonstrated the proposition that when fare is very low travel vastly exceeds that when fare is high. This is on a general business principle. The cheaper is postage on letters, the more letters are mailed. The cheaper telegraphing is, the more messages are sent. The cheaper goods are, the more are entire confidence of the country. But he is an

Dangerous counterfeit silver dollars, bearing the dates of 1879 and 1880, are in circulation. They are of very nearly the same weight as the genuine, and are heavily plated with silver. They are of a bluish color, but had a fair trial. the only sure way to detect them is by the application of testing fluid to their edges which are less heavily plated than the sides of The Atchison, Topeka & Santa Fe Disthe coins.

Monthly roses, especially the tea-scented, are beautiful window plants. They need rich soil, thorough drainage, trequent washing of foliage with a fine hose syringe, as even a temperature Topeka & Santa Fe display, and nothing on as possible, carefully guarding from draughts of cold air, and smoking with tobacco if the product of special relative products and smoking with tobacco if the product of special relative products and smoking with tobacco if the green fly makes its appearance. They should have the morning sun, but be shaded from the story plainly to every one who looked upon it, that Kansas is an agricultural state of marvelafternoon sun when it has become powerful.

The Dead President.

President Garfield died at Long Branch at 10:35 p. m. September 19, 1881. Up to within thirty minutes of his death, it was still hoped that he might recover. At about ten o'clock he complained of great pain in his chest near the heart; his mind began to wander among the secnes of earlier life on his farm at Mentor, and in a little time he was dead.

An autopsy was held upon his body, and it was discovered that the ball had fractured the backbone, scattering fragments into the surrounding portions of his body. A large pus bed was found near [the heart which had no means of escape. It was this, doubtless, which caused the pain shortly preceding death. The ball was found, not where it was believed to be, implicit faith had the stockholders of this road but just beneath the pancreas, or, what we call in the support it would derive from the cultiin animals the sweet bread, and covered over with new made flesh. It was doing no further harm. The examination, however, proved that the original wound was necessarilly fatal. Nothing but the excellent care, and constant sympathy he received; coupled with his good the results have proved; and now the compa- son for ten thousand acres in a rich portion of humor and courage, prolonged his life. The remains were taken Wednesday to Washington by special train where they laid in state until display of field products from along the line, Friday, when they were removed to Cleveland, labeling the counties wherein the things were Ohio, and on Monday the 26th inst, were buried produced. These carry conviction, and are unin Lake View Cemetery, in accordance with a desire he had often expressed during his life time. It is a beautiful park of several hundred acres, with trees, fountains, streams and it is appropriated. It was purchased with a fund, and is beautified and kept in repair by

means received from sales of lots.

Mr. Garfield. His life was singularly pure. his own home where his old mother, and his wife and children were. Hence he rarely attended social gatherings of notable people. Raised up as he was from the humblest walks of life, he knew what hard, manual labor was, and he never would have been rich. He never forgot the lessons of hard life in the beginning. This always kept him in sympathy with the poor. His first friend was his mother, and she was the last person to whom he wrote a letter. That was on his dying bed. The first person he spoke of after the fatal wound was his wife whom he was going to join amid scenes of happier years.

In the midst of tempting surroundings, in public life twenty years or more, going upward all the time, he never wavered in his attachments to home nor in devotion to its inmates This is the best, the grandest feature of his noble, well-poised character. The influence which his life will exert upon men will be most largely because of his domestic nature. His home was his kingdom. Always in his wanderings during his sickness, he visited Mentor and talked of things that had passed there. Truly his life was a beautiful one.

His death aroused the world. Not only his own people loved him, but the Queen of the proudest nation on earth-Victoria, of England, sent a message of love, and directed her minister at Washington to place a floral tribute upon the dead President's coffin. Bells in most of the parish churches in England were tolled, and business in great cities like London and Liverpool was temporarily suspended. President Grevy of the French Republic, cabled his sympathy, and Paris mourned. Every civilized nation on earth acknowledged the general bereavement.

So a good life went out. It began in poverty. It struggled up through the years to fame and was halted at the top by an assassin's bullet. The world will be better for his having

President Arthur.

Chester A. Arthur, elected vice president last November, was sworn into office at his own house in the city of New York by Judge Brady of the supreme court of that state at a little past two o'clock a. m., September 20. He again took took the oath of office in the capitol at Washington at about noon the 21st, before Chief Justice Waite, of the supreme court of the United States. His first public act was to issue a proclamation setting apart Monday the 26th day of September 1881, as a day of "humiliation and mourning" for the dead presi-

During all the time of President Garfield's prostration, Mr. Arthur behaved most com-mendably. He seemed to dread the responsibilities which the president's death would thrust upon him. His conduct was tender, modest, and manly. He enters upon his new duties under very trying circumstances. He was not, like his predecessor, blessed with the ability. And he is a practical man. It is expected by those who know him best, that he will soon win his way into the esteem and good will of the people. At all events, he is entitled to a suspension of judgment until he has

play at the State Fair.

[Continued from last week.]

No one feature of the state fair attracted more attention and received greater admiraplay is of special value, because it told the ous productiveness. The variety, quality and size of the products in this collection were such as to arrest the immediate attention of every practical farmer, and lead to many inquiries touching the character of the region in which the articles were grown. That is exactly the kind of discussion it is for the interest of our state to provoke—to get men from other states Butler and Rice counties. But it was a diffienthusiastic over the capabilities of Kansas soil, and thus to stir up within their breasts a the several competing counties, the displays of desire to come and share the advantages we

The Santa Fe road evidently believes in results rather than mere promises. Its own two thousand miles of completed track and the ceaseless trains which ply over it, bearing the mighty commerce of a continent, are finished facts, and not simply schemes on paper. Such vated fields as soon as they would make the lands accessible, that they expended millions in pushing the line to the utmost western verge of vestment. But the end justified the means, as settling somewhere upon its land grant, is a

Such being the theory of the "Santa Fe," it systematic display of products of the various hibit them to the visitors of the state fair. The tendency, and is already advertising the agri-

and, as usual, evolved something beautiful and all the drouth-stricken people of the east and He lived at home. The pomp and glory of high practical. He was in no way limited as to the south. life had no attractions for him equal to those of expense or extent of the proposed display, but was instructed to excel, if possible, the famous exhibit made by the road at the Centennial. This was a big and a costly undertaking, but it was wisely planned and successfully carried December next Much will be added in every out. We are certain no such agricultural showing was ever made before by any railroad in this country as that of the A., T. & S. F. R. has had since 1876 in Philadelphia. R. at our state fair last week. The display occupied almost the entire north wing of the main building. At one end the design presented a beautiful allegorical picture representing the various states and territories through which the line runs, and symbolizing one instrumentality has ever done more for the them by noted bits of scenery, or prominent productions of each. The grand old Rocky corporation. True, it has been for their own mountains, snow-crowned and eternal, towering interests to develop its material resources, above all; the singular castellated rocks of the and to advertise its fertility to the Garden of the Gods in Colorado, are faithfully portrayed; and Kansas fields of wheat and that the chief aim of the management is to inoats, literally waving in the breeze, are ingeniously given. A substantial truss bridge, upon know that in times of trial and tribulation which is a wonderfully natural train of cars in miniature, spans the upper foreground, while road has been a true friend and has contributed the massive dome of the temple of Ceres and Pomona, all glittering with grain, rises nearly Had it not been for the aid this company gave to the painted clouds. A rich profusion of field and orchard products lies scattered among the spaces of the temple, its columns bedecked

> Kansas has become tamous. The details of this masterpiece of art show wonderful painstaking and rare ingenuity. Effects of fresco and mosaic are produced by the use of tens of thousands of kernels of oats and wheat, and even smaller seeds, each put whom honor is due," separately in its place by tedious work, but so artistically done that neither painter's brush nor lapidary's skill could show more harmonious results.

Winding around from this gigantic centerpiece upon both sides, the Santa Fe display is extended along the east and west walls of the building a distance of sixty feet, and consists of a succession of Moorish arches, each covering the exibit of a single county.

The architectural symmetry of the whole deserves special admiration, and the general effect to one standing in the center of the hall is not unlike that derived from a position in the rotunda of St. Peter's cathedral at Rome. There one is supposed to be strongly impressed by the spiritual environment of the scene, while here the surroundings are altogether material; but the average American citizen, with his practical ideas and lack of veneration. would gain more real enjoyment from this elaborate temple of industrial art, than from a visit to the magnificent cathedral of Michael Angelo and the popes.

The beautiful Corinthian columns supporting the arches are blown glass of perfect transparency, and are filled with successive layers of grain and seeds, showing at a glance the great variety and excellent quality of the productions of this nature. The capitals of the columns are filled with heads of wheat, barley and rye set upright, which form an exquiste and fitting crown for the graceful shaft. These able, strong man, possessed of rare executive glass columns were found very difficult to obtain, and exceedingly expensive. Prof. Worral visited all the principal glass factories in the country to have them made in accordance with his desires, and found but one company (in Boston) which would undertake the job The same concern made the long glass tubes in which was shown six feet of soil from each of the Santa Fe land grant counties. This is an ty of the lands lying in the Arkansas valley. Every man can see the precise nature of the earth six feet below the surface, just as well as if he took a spade and made the excavation himself, and afterward subjected the soil to a careful chemical analysis. The counties in Kansas which took part in the "Santa Fe Rail-muscular system. If the constitution has not been completely samped. Leis Dandellon Toute taken road" display were Chase, Marion, Butler Sedgwick, Harvey, Reno, Rice, Barton, Pawnee, Edwards, Ford and Sequoyah. Harvey county had a special exhibit besides, and vied with Sumner in the variety and excellence of its productions, as well as the tastefulness of their arrangement.

The land department premiums of \$100, \$50 and \$25 for the best three displays of agriculture were awarded, in the order given, to Reno cult matter for the committee to decide among all were so good. Those not receiving the award deserve favorable mention, and seem entitled to diplomas for the value of their efforts to the general weal of the state. Strangers vis iting the fair (and their number was legion) could not fail to be impressed with the sight of the wonderful array of field and orci;ard products from the Arkansas and Cottonwood valleys; and not a few will date their determination to move to Kansas from the revelations of our state fair of 1881

A real estate dealer from Indianapolis wa so struck with the amazing exhibit of agriculthe state before getting back a dollar of the in- tural wealth on the first day of the fair that he of husbandry. The names of Crain, Lain, Jacobs closed a bargain that very day with Col. Johnny's best argument for coming to Kansas and the company's land-grant. The cash price of the lands bought was nearly \$40,000. Ohio, Indiana, Illinois and Missouri are all so much more seriously affected by the drouth this year than Kansas that we have reason to anticipate an influx of thousands of discouraged farmers Thirty of which averaged 16 lbs. 4 2-5 ozs A greater from those and other states, who will readily part of the ewes had by their side one was deemed best by the land commissioner of take up lands in the fertile counties of souththe road, Col. A. S. Johnson, and his chief central and southwest Kansas and become a walks, specially arranged for the use to which clerk, Mr. Hilton, to arrange an artistic and valuable acquisition to that garden region of the west. The Atchison, Topeka & Santa Fe counties through which the road runs, and ex- Company will not be slow to appreciate this

It proposes to transfer its superb exhibit entire to the great International Cotton Exposition at Atlanta, Georgia, which is to continue during the months of October, November and way to the Topeka display, and Kansas will get the benefit of the best advertisement she

Grumble as they may about railroad monopolies and extortion, we candidly think that the farmers of Kansas have little cause to comlain of the general course of the Atchison, Topeka & Santa Fe towards them. Certainly no other settlement and progress of the state than this world. We know they have lands to sell, and crease the amount of transportation, but we also among the farmers of Kansas, the Santa Fe more real success than all others put together, to the State Fair Association, the first annual gathering and display would not have been the magnificent success we can now record. By with the tall growth of corn and cane, for which direct contributions of not less than \$10,000, by efficient co-operation in all of its departments with the fair directory, and by the reduction of rates to the low price of a cent a mile, the Santa Fe company secured the success of the state fair beyond all peradventure. "Honor to

Answers to Correspondents.

P. M. H. wants to know how to pickle onons. The following is regarded as good:

Peel the onions, scald them; with weak brine, let them stand over night in the brine, then prain them or rinse them in clean cold water. Place them in an earthan vessel, cover with vinegar. Flavor to suit the taste.

Wants to know how to extract the seeds from osage orange apples.

Gather the appples aftea the first heavy frost when the leaves begin to fall, the apples may be gathered at any time. Scatter and leave them where they will thoroughly freeze. When they thaw out usually in January or February, gather them into troughs, or any convenient strong receptacle and pound them into a mush or pulp. Then put in water and stir the pulp well as the thickened water is drained off and loosens the seeds at the bottom. Continue this churning process until the seeds are left clean. Then dry. It will, of course be necessary to

the water occasinually as the process continues

Every farmer ought to have sheep, more or ess, as he can take care of them without injury to other interests on the farm. There is no kind of stock more profitable. The census returns show that the people of the United States do not raise anywhere near all the wool they need for their own use. In 1880 we imported nearly one hundred and fifty millions pounds of wool. We ought to sell rather than buy wool.

Thoroughbred Hereford Cattle.

So. VASSALBORO, MR., Sept. 15, 1831. Nov. 1st, 1881, I shall have removed my herd of Thoroughbred Hereford Cattle to my new Stock Farm in Colony, Anderson county, Kansas, where I shall be pleased to show them to all who may favor me incontestable method of proving the rich quali- with a visit. I shall have 50 head for sale,-bulls cows, heifers and calves.

J. S. HAWES, Mount Pleasant Stock Farm, Colony, Anderson Co., Kas.

Leis Dandelion Tonic, taken persistently in small doses after meals, will effect a speedy and permanent cure. In any case it will afford great relief and can do no possible harm: A bottle costs but one dollar, and can be obtained at your druggist's.

Thoroughbred Sheep.

It is gratifying to all those purchasing thorough bred sheep to have some evidence that they are such as represented. There are Sheep Peddlers who trade over Canada, Eastern and middle states and procure the services of town and city butchers to furnish sheep by the car-load, little in advance of butchers' prices. These sheep are brought west and peddled or auctioned off as thoroughbreds, though they have rarely if ever purchased a sheep from as acknowledged breeder of thorou hbreds In view of this fact. I beg leave to call your attention to my advertisement in another column of the sale of thoroughbred Cotswold sheep, Oct. 6th 1881. the grea ter part being eligib e to the American "Cotswold Record," having been selected with great care from breeders in Canada.

Their importations were from the best known and much highly esteemed flocks of Cotswold in England. The men whose names are connected with the preeding of this flock are justly considered the lead ing breeders of Canada and England, whose exper ence, judgment, skill and integrity are not question ed. They have given their whole time to this branch Cotswold breeders, as Collins, Bates & Co. are with

shorthorn breeders In establishing a flock of Cotswold, my aim has been to get nothing but the very best, having in view size, constitution and quality, together with heavy fleeces. I clipped from forty six ewes and four ram the past spring, 1881, an average of 15 lbs, 31/2 ozs. of the best quality of fine, long, lustrous combing wool or two lambs. My purchases from John Snell's Sons, Edmonton, Canada, in the spring of 1880, were quite liberal and select, so much so, that in giving an account of his stock sales to the stock journals of the country, he stated that he sold me the best lot of sheep he ever sold to one man. I have also a very fine flock of Southdowns which were selected f om some of the best flocks owned by importers and breed The people were wonderfully attached to genius of Prof. Worral was called into play, cultural success of its tributary territory among ereof Canada, and descended from the best flocks of

England. The two flocks took fifty one (51) premiums in 1880, amounting to \$447.50

A PERCHERON VICTORY.

M. W. Dunham's Herd of Percherons takes the Grand Sweepstakes Prize of \$1,000 and Grand Gold Medal at the Great Chicago Fair, 1881, over the Clydesdale horses.

In the great draft-horse contest between the Clydes dales and the French Percherons, the latter were victorious. Mr. M. W. Dunham, of Wayne, Dupage Co., Ill., whose stud of famous horses has elicited the universal admiration of all persons who have visited the Chicago Fair, has won the Grand Sweepstakes Prize, \$1,000, and the Grand Gold Medal for the best herd of draft horses over the magnificent herd of Clydesdales owned by Colonel Robert Hollo way, beyond doubt the finest collection of Clydes the great shows of Scotland and England. For the best draft mare, Mr. M. W. Dunham's renowned mare Mignonette took the Sweepstakes Prize of \$500 and Grand Gold Medal. She has been the winner at nearly all the great shows of France; also taking the highest honors at our own Centennial, and now makes her grandest victory over the finest collection able draft mare of the world, invincible. The Com mittee on Best Draft Stallions, in a ring of forty nine stallions, recommended a special Gold Medal struck for Mr. Dunham's stallion Vidocq Mr. Dunham has taken besides these Sweepstakes Prizes a large per centage of the Class Prizes. The fine display of stock and the liberal and tasty manner in which every thing connected with his exhibit has been conducted has made him hosts of friends, besides adding greatly all draft breeds, Mr. Dunham has made sales during this fair week aggregating in all \$17,000. He has the largest importing and breeding establishment in the world, at Wayne, Ill., where he keeps open house to all, and any one visiting his farm will always be sure of a hearty welcome. - Chicago Inter Ocean

A \$10.00 Bible Prize.

The publishers of Rutledge's Monthly in the prize puzzle department of their Monthly for October offer the following easy way for some one to make \$10,00.

To the person telling us how many verses there are n the Bible by October 15th; 1881, we will give \$10.00 in the Bible by October 15th; 1881, w in gold as a prize. The money will be forwarded to the winner October 15th, 1881. Those who try for the prize must send 20 cents with their answer, for which they will receive the November number of the Month ly, an excellent magazine of 32 pages, in which will be published the name and address of the winner of the prize, with correct answer thereto. Address, Rur LEDGE PUBLISHING COMPANY, Easton, Pa.

Literary and Domestic

The Old Home.

k crystal spring, a sunny hill, A gray old house with mossy sill, Hemmed in by orchard trees With massive trunks and age untold, Whose luscious fruits. like mounds of gold When Autumn nights grew crisp and cold, Lay heaped about their knees,

And when the trees, bare, gaunt, and grim, ed aloft each naked limb, Breasted the sleety rain; When Summer sounds were heard no more, When birds have sought a Southern shore, When flowers lay dead about the door, And Winter reigned again.

Then met the household band beside A clear-swept hearth, a chimney wide, Where roared a maple fire; When all the streams were fettered fast, When flercely blew the wintry blast, And clouds of snow went whirling past, The logs were piled the higher.

How fondly memory recalls The cheer within those old gray walls, Beside that shining hearth! O, peaceful scene of calm content ere happy faces came and went And heart with heart was closely blent, In sadness and in mirth!

I see them all: the aged sire Deep in some book: the glowing fire Gleams on his silver hair. The mother knits; her loving eyes Smile on the children fitting by, And now and then a gentle sigh Tells of her household care.

A group of stalwart boys I see, Brimfull of mirth—as boys wii be— When evening tasks were done: Her small head crowned with auburn braid: Who, when the merry games were played, Was foremost in the fun.

How gay we were! What songs we sang Tul the old walls with echoes rang, While the winds roared without. Again we sat, wide-eyed and pale, And listened to some ancient tale-How witches rode upon the gale, white ghosts moved about.

Twas long ago; those days are o'er, I hear those songs no more; Ves, listen, while I weep. Time rules us all. No joys abide. That household band is scattered wide And some lie on the green hill side. Wrapped in a dreamless sleep.

Time rules us all. The little maid Is now a matron grave and staid. With sober look and air, Treading an old and beaten way, Bearing life's load as best she may-Striving to lift her share

Hints for the Household-How Washing Day is Made Enjoyable.

Blue Monday, that used to harrass the mother, torment the husband and drive the child out doors, is now made comparatively easy.

Soak the clothes over night in warm water with plenty of good washing soap. The next morning wash tnem from the water (with a litthe not poured in) into another of very hot all the patent bluing-and the clothes will be night and sprinkled well, they will iron easily. The best sprinkler is a wisp broom kept for this purpose only. This sprinkles effectually and evenly, without a pool of water in one place and none in others.

To make good starch .- Dissolve two tablespoonfuls of starch in a little cold water; when it is smooth paste, pour in boiling water slowly and stir briskly to keep from lumping. The exact quantity of water will depend on the quality of starch, a pint to each ounce is a fair average; add a good teaspoonful of salt, a drop of bluing, and half a teaspoonful of lard. (Mem. For colored goods put a little alum in the starch.) Boil for twenty minutes by the clock. A clean bright pan and spoon should be kept purposely for making starch. S rain if not perfectly smooth when done, and if it has to stand before using, cover the pan to prevent a seum forming, and keep it hot. It should be used as hot as the hand can possibly bear, in order that it may better penetrate the linen, for the same reason the starch must not be made too thick. It must be rubbed in until the linen is completely saturated, and none is left unabsorbed on the surface. In mild weather starch the clothes from the rinsing water; in cold or windy weather dry them first, as both wind and frost snap out their stiffness. After the linen is perfectly dry, and a couple of hours before it is to be ironed, mix a tablespoonful of starch in a little cold water. Add a little salt and a piece of borax the size of a hazel nut, dissolve in boiling water. Mix the starch prepared with enough water to dip the bosoms, cuffs and collars. Fold these parts

with a clean hot iron, it would be wise for those

done, rub the surface with the damp cloth and European railways. Ready packed lunch basmove the bosom until the ironing is completely dinner. The knives, forks and plates are to be finished and the linen perfectly stiff and dry.

ounces of powdered gum arabic in a pint of made in connection with this promised boon to boiling water; when cool, stir in half an ounce the hungry. One is that the meals thus furof carbonate of magnesia, and after it is settled nished shall be fit to eat, and the other is that bottle the clear fluid for use.

When the shirts are all ironed, put the first one on the shirt board, and with a fine cloth olutionize the business of eating on the rail moistened with the fluid go over the surface of It is true that on many of our leading routes the part to be polished, applying the hot pol- there are meal stations where a fair repast can ishing iron as soon as possible afterwards. If be had during the twenty minutes the train moisten them again and repeat the operation. The polishing iron must be used quickly and lightly. A nickle-plated one is best, and care should be taken not to let it get too hot.

To wash lace edgings.—Cover the outside of a large glass bottle smoothly with soft white cot- travelers take—make this kind of feeding a ton, linen or flannel. Wrap the lace around it, basting each edge carefully with very fine thread. Fasten a piece of thin muslin or net over the outside of the lace. Soak the bottle them. By the lunch basket system the travelin tepid water for an hour or two, then wash in ler, whether alone or gregariously, can eat at soap suds until clean, after which, lay it in leisure and enjoy what he eats far more than if clean water for twelve hours, changing it once he was compelled to cram it down and run. On or twice during that time. To finish, take it a few of our roads a weak attempt has been from the water and dry by wrapping in a tow- made at the lunch system. Greasy oysters in el, then dip the bottle into rice water and rollit paper boxes are brought through the trains by in a fresh towel. When still damp, take the hurrying boys and men, who take away peolace carefully from the bottle, and placing it ple's appetite by the way in which they shout between clean white cloths iron until complete-

Washing nice laces. - Nice laces may be carefully washed and with much more satisfaction than if sent to a lace renovator or washer, by making strong soap suds and filling a shallow platter full of the soapy water. Then double the lace twice and lay it in the water so that every part is completely covered. Put this out in the sun during the day, changing the water several times a day. Lift it out carefully each time, and do not wring or rinse it. When completely clean, starch it on a white cloth in the house, carefully pulling it before it gets quite Smoothing it carefully with the thin blade of a fruit knife will improve its looks, but never iron or starch it. If it's a kind of lace that should be a little stiff, put the least bit of gum arabic in the last water, or a little sugar. Even if you only put it in the soap suds and dry it, it will look very nice. Gasoline washes silk lace very nicely, as it also does handkerchiefs, ribbons and silk stockings.--The Household.

How Some Newspaper Men Live.

A ship building firm in Newburg has just begun the construction of a new steam yacht for James Gordon Bennett. The yacht is to be finished December 15, and is to cost ready for sea \$200,000. She is to be 210 feet long. Below the deck her accomodations are to be more ample and splendid than any yacht ever built in this country, and she will be the largest, except that recently built in Bastimore for M. Henri Say. The principle entrance to her saloons is to be from a broad companion way water. If two can work at this it will be a placed well aft. This will terminate on the much shorter method. Rub these out and put lower deck in a spacious vestibule. On either into a third tub; pour hot water on these to side of this vestibule will be three state rooms, ecald them. Then wring them into a tub of in each of which will be a bath tub. They are clear blue water—an indigo bag is better than also to be fitted with marble wash stands and stance which conclusively demonstrated the piped for hot or cold water. They will be utility of reaping machines. Small cultivabeautifully clean and white. Of course it will handsomely upholstered. Going forward along tors find it advantageous to hire steam threshmot be necessary to have four tubs; two will be the vestibule, a double plate glass door will ad- ing machines. This season they have clubbed enough, and if you have a good wringer it will mit to the ladies' cabin, an apartment fourteen together to secure the service of a reaper. For not take long to do out quite a large washing. feet fore and aft, and twenty feet wide. The tying sheaves, cord appears destined to cut out There is a great difference in wringers, and fittings of this apartment are to be unusually wire and supercede straw bands, although the each time they are used they should be dried elaborate. The main saloon eighteen feet long latter can now be twisted by machinery and cut wheels. Then if the clothes are taken down at sofas, lounges, escretoire, bookcases and sideboard, and at its further end is to be a German silver grate in a tiled fireplace, surmounted by a large mirror. The smoking room will be on last year does not lessen their satisfaction. the upper deck. There will be accommodations for thirty officers and men. It is said to be Mr. Bennett's intention to sail around the world in this yacht.

His Own to Each.

"The world is very small!--So small it is," Smiling said one, "that none need ever miss His own, for it is sure to come, by way Undreamed of, on some happy, golden day."

"The world is very wide!" another sighed:-That one may seek, and journey on alone, From birth to death and never find his own.

"The world is beautiful and bright!" said one; "The red rose opens to the wooing sun: In bosky depths the wild birds flit and sing To cooing mates, with never-tiring wing!

"The world is very sad," the other sighed, "And over full of graves, though deep and wide! The great sea throbs with never-ceasing moan, And only death can give to each his own,"

--Harriet Trowbridge in Lippincolt's.

Hungry Passengers.

It is now semi officially announced that a scheme for the relief of hungry passengers is soon to be set on foot on one of the principal roads of New England. Heretofore it has been the custom on that road, as on most others, to make passengers depend for refreshments while traveling on such meals and lunches as could be inside, and roll the shirts up tight in a clean, hastily swallowed at the wayside eating houses. dry cloth. Iron the back, sleeves, cuffs and How many millions of dyspeptics all over the ments connected with the culture of sugar bands, then put the shirt on a shirt-board and country owe their sorrows and sufferings to this smooth out the bosom. Rub it hard with a fine practice will never be definitely known. It is cloth wrong out of hot water. Iron rapidly one of the worst methods of eating, and must

who are not experienced to do this first ironing medicine man. The new scheme is substan- to plant nurseries in such. In Burgundy, the with a piece of thin muslin spread over the sur- tially that which has been for a long time sulphuret of carbon, save upon shallow soils face. In either case, after the whole bosom is practiced on most respectable British and with an impermeable substratum, has not given iron again without covering, repeating this op- kets are to be furnished at certain designated eration until the work is satisfactory. Do not stations, containing all the elements of a picnic left at any convenient station after the lunch Polishing fluid and irons.—Dissolve two has been eaten. Two bold announcements are they be sold at reasonable prices. If either of those promises shall be made good it will revany part became too dry before the ironing, waits for it. The price charged for such a meal is from seventy-five cents to one dollar, which is not unreasonable if the meal is good, But the hurry and bustle attendant on crowding a dollar's worth of food into the human stomach in ten minutes-for that is what most very unsatisfactory luxury. Besides it is not every traveler who is ready for his wayside meals at the moment it is convenient to serve and yell. There is no certainty as to when the oysters thus brought were fried, the only certainty being that when the frying was done, an abundance of not very nice grease was used. A sad looking pickle is packed in with each oyster fry, and by the time a purchaser has eaten one oyster and thrown its companion out of the window, he is impressed with the worthlessness of the railway lunch system as now conducted. As to the traveler's sandwich, its abomination has been sounded both in prose and verse. Let the new system have a fair show. It cannot be worse than the old, and may be better.-Binghampton Democrat.

European Agriculture.

Messrs, Porion & Mehay have discovered a means by which a residue of maize distilled can be employed either to fatten stock or act as a manure, besides extracting an oil suited for the manufacture of soft soap. The plan rests in the well known fact that the oil contained in the grain remains constantly fixed to the undissolved parts, and the azotised matter rest also for the greater portion is similarly united. The composition of the cake prepared exhibits but little variation, and can be made either in the end for food or a tertilizer. Two cuts of the refuse yield 6½ lbs. of a colored oil, and 22 lbs. of feeding cake. M. Ladureau, of Lille, has tested the products. In point of aliment these products are equal to good linseed cake, and as manure are on a par with ground nut ref-

The excessively high temperature which reigned some fifteen days hastened the maturity of cereals. By this the harvest may be considered as completed. If the yield leaves something to be desired under the head of quantity, the quality is excellent. Nearly all grain crops ripened simultaneously, a circumresult of the harvest as a good mean, and are contented. The certainty that the grain crop of the United States is inferior to that of Foreign crops have severely suffered from drouth, but this drawback will have its lesson even, by compelling farmers to cultivate hasty growing green crops, and in preserving them, cut green in trenches secure valuable fodder, not only throughout the winter, but up to spring. After M. Goffart's system of conservation of green maize, farmers have no excuse for being short of cattle food.

Of all the plants grown for trench preservation in the green state, maize alone appears the most advantageous.

A good distributer of pulverulent manures eems to be still a desideratum. In Prussia and Belgium the machine manufactured by Jaeschke, of Neisse Silesia, is highly spoken of; but it has also its drawbacks. Its capacity is limited to 1½ cuts, and the hopper is not long enough. The running out of the stuff, too, which of course must not be humid to avoid clotting, is very sensitive to jolts from a stone, hard lump of clay, or a furrow.

The prospects of the sugar beet crop are good since the alternation of rain and warmth; mean crop is expected, judging from the manner the roots are at present swelling. Within the last ten days I have taken a run through the north of France, Belgium, the southern and eastern counties of England. Beets, mangolds, turnips, etc., are better in France than elsewhere. In several turnip fields in England, the bald patches are lamentable to see.

Belgium intends establishing a model farm, to be exclusively devoted to testing experi-

Respecting the phyloxera, it is the old, old story. There is a decided tendency to rely on have been devised in the interests of the quack American vines, and some persons commence

satisfactory results. However, in other vine regions chemicals are courageously tried to destroy the scourge. There is more of confidence now than of discouragement among vineyard proprietors. Rich manurings are now in vogue and successfully enable the plant to struggle against the bug .- Correspondence of Rural - Ne-

Paris, Aug. 13, 1881.

The Hand That Rocks The World.

BY WILLIAM ROSS WALLACE.

Blessings on the hand of woman! Angels guard its strength and grace In the palace, cottage, hovel--Would that never storms assailed it; Rainbows ever gently curled For the hand that rocks the cradle Is the hand that rocks the world

Infancy's the tender fountain; Bowers may with beauty flow; Mothers first to guide the streamlet From their souls unresting grow, Grow on for the good or evil, Sunshine streamed or darkness hurled: For the hand that rocks the cradle Is the hand that rocks the world

Woman! how divine your mission Here upon our natal sod! Keep, oh keep the young heart open Always to the breath of God! All true trophies of the ages Are from mother love impearled: For the hand that rocks the cradle Is the hand that rocks the world,

Blessings on the hand of woman! Fathers, sons, and daughters cry: And the sacred song is mingled With the worship in the sky; Mingles where no tempests darken Rainbows evermore are hurled; For the hand that rocks the cradle Is the hand that rocks the world

Worth Trying.

Take half a teaspoonful of black pepper in powder, one teaspoonful of brown sugar and one teaspoonful of cream. Mix them well together and place them on a plate where fles are troublesome, and they will very soon disappear.

Pickled Ripe Tomatoes.

To one gallon of tomatoes, two tablespoons white mustard seed, one tablespoon white cloves, one tablespoon salt, two tablespoons pepper, two tablespoons allspice. Put in a jar, sprinkle the spices between the layers, and pour scalded vinegar over them.

Look out for Sudden Changes of weather, and guard against them by using ner's Safe Kidney and Liver Cure.

THE STRAY LIST.

HOW TO POST A STRAY.

BY AN ACT of the Legislature, approved Feb 27, 1866, section 1, when the appraised value of a stray or strays exceeds ten dollars, the County Clerk is required, within ten days after receiving a certified description and appraisement, to orward by mail, notice containing a complete description of said strays, the day on which they were taken up, their appraised value, and the name and residence of the taker up, to the KANSAS FARMER, together with the sum of fifty cents for each animal contained in said notice."

How to post a Stray, the fees fines and penaltie

for not posting.

Broken animals can be taken up at any time in the year.
Unbroken animals can not ye taken up between the ist day of November and the ist day of April, except when found in the lawful enclosure of the taker-up.

No persons, except citizens and householders, can take up a stray.

No persons, except chizzens and avoidable as fray.

If an animal liable to be taken, shall come upon the premises of any person, and he fails for ten days, after being notified in writing of the fact, any other citizen and householder may take up the same.

Any person taking up an estray, must immediately advertise the same by posting three written notices in as many places in the township, giving a correct description of such stray.

laces in the township, giving a correct example.

If such stray is not proven up at the expiration of ten aixy, the taker-up shall go before any Justice of the Peace of he township, and file an affidavit stating that such stray ras taken up on his premises, that he did not drive not ause it to be driven there, that he has advertised it for ten lays, that the marks and brands have not been altered, also he shall give a full description of the same and its cash value shall give a full description of the same and its cash value of the same and the cash va

he shall give a full description of the same and its cash value. He shall also give a bond to the state of double the value of such array the Pence shall within twenty days from the
time such stray was taken up, (ten days after posting) make
out and return to the County Clerk, a certified copy of the
dee raption and value of such stray,
if such stray shall be valued at more than ten dollars, i
shall be advertised in the KANSAS FARMER in three successive numbers.
The owner of any stray, now well as the succession of the stray shall be the successive numbers.

If such stray shall be valued at more than ten dollars, I shall be advertised in the KANSAS FARMER in three successive numbers.

The owner of any stray, may within twelve months from the time of taking up, prove the same by evidence before any the same of taking up, prove the same by evidence before any the same up of the time when, and the Justice before whom proof will be offered. The stray shall be delivered to the owner, on the order of the Justice, and upon the payment of I charges and costs.

If the owner of a stray fails to prove ownership within sweye months r-ter the time of taking, a complete titleshall vest in the take 'dn.

At the end of a year after a stray is taken up, the Justice of the Peace shall issue a summons to the householder to apport the same of the proof of the p

Strays for the week ending September 28.

Paragraphs of Fun.

"A little nonsense now and then Is relished by the best of men."]

The "shorter" a man is the longer he wears

Pon-gent-a paragrapher. Cold victualsice cream.

Strawberries are having cake walks-short cake walks.

John Isdrunk is the name of a Sucker state saloon keeper.

The right-bower of the wise man this season is his umbrella.

Does a sea captain have to possess a glass optic to cast his eyes aloft?

A well groomed horse and a country parson generally have shining coats.

Many a man with the head of an Apollo has the heart of a poll-parrot.

Esn't a boy at a well, filling a bucket, an example of the son drawing water?

Many a girl who calls her beau "dear John" doesn't know how cheap John really is.

It is well enough to be satisfied with your lot, but suppose there is a mortgage on it. How to make a nosegay-drink rum and mo-

lasses three times a day. Shake well before An Irishman dripks whisky; a Frenchman,

wine; an Englishman, ale; a Dutchman, beer; and an American anything he can get. Bob Ingersoll is afraid that he will be shot

on the stage. Nonsense. Lots of lectuerers never think of going onto the stage until they are half shot.

We offer this paragraph as evidence that color blindness is universal. While to every one who reads it, it will appear black, it is actually read.

Women who can never hope to get to para dise, can at least wear a bird of paradise. That's some satisfaction, particulary if the bird as high-priced.

A house is solid on its foundation, and doesn't move, and a fire is here and there, and everywhere, but we have seen a house catch a fire lots of times'

"Nightshade" is the name of a new wrap for ladies. It is well to know these things, for there are men just mean enough to be suspicious of a name like that.

"Have you any good bridge timber?" "Oh ves," said the lumberman (in hopes of a big order), "what size?" "Oh, I'm not particular. I went a bit for a fiddle bridge."

Here is the latest: A sea side bell left her batking shoes hanging out of the hotel window the other day, and the next day the local paper announced "that such a hotel had put up new awnings of a unique design."

Reader, hast thou ever sat hours by the cooling brook and waited in vain for a bite? And in thy sorrowful and fishless walk homeward did it ever occur to you that in all this wide wide world there is nothing unluckier than ar unlucky fisherman?

Men don't know anything about harmony in colors. The other day a young man at a picnic on Vinegar Hill sat down on a cream colored cus ard pie with a pair of snuff brown pantaloons. Everybody's taste was outraged So was the pre, -Boomerang.

The little ones will keep on saying things Six year old Mabel is industriously engaged in "cleaning out" a preserve jar which her mother had just emptied. Four year old Bobby looks at her for a while and then burst out: "Say, Sis! Don't you wish you could turn it inside out so's you could lick it?"

EDITOR KANSAS FARMER:-The dry weather together with the chinch bugs, has made our corn crop almost a failure. Many pieces will not make anything at all. Perhaps a very few will make half a crop.

Wheat went from four (4) to twenty-five bushels per acre, most of it below ten. It has been so dry that but very little land has been plowed for wheat. Threshing and having have been the order of the day. Wheat is bringing in market from 90 cts, to \$1,07; oats, 40cts; rye, \$1.00; corn, 60cts, to 7flets; and hogs \$5.60. C. W. H.

Ottawa Co. Aug. 31st.

Mothers! Mothers!! Mothers!!!

Are you disturbed at night and broken of your rest by a sick child suffering and crying with the excruciating pain of cutting teeth? If so, go at once and get a bottle of Mrs. Winslow's Soothing Syrup. It will relieve the poor little sufferer immediately—depend upon it; there is no mistake about it. There is not a mother on earth who has ever used it, who will not tell you at once that it will regulate the bowels, and give rest to the mother, and relief and health to the child, operating like magic. It is perfectly safe to use in all cases, and pleasant to the taste and is the prescription of one of the oldest and best female physicians and nurses in the United States. Sold everywhere. 25 cents a bottle.

How to Secure Health

Itseems strange that any one will suffer, from the many derangements brought on by impure blood, when Scoville's Sarsaparilla and Stillingia, or Blood and Liver Syrup, will restore health to the physical organization. It has proven itself the best blood pu rifler ever discovered, effectually curing scrofula, weakness of the kidneys, crystpelas, malaria, debility, billous complaints, and all diseases of the blood. liver, kidneys, stomach, etc. A single bottle will prove its merits as a health restorer, for it acts like a

STOCKS-The stock market opened weak an generalay lower, and in early dealings prices de clined 1/8 to 21/2 per cent., Illinois Central, Missour Pacific. Norfolk and Western preferred, Texas Pa eific, Michigan Central, and Denver and Grande being most prominent in the downwar movement. Subsequently a recovery of ½ to 1 po cent. took place, the latter in Missouri Pacific During the afternoon speculation again became weak, owing to the condition of the President and there was a further decline of ½ to 2 per cent which was most marked in Nashville and Chattanooga, and Hannibal and St. Joe preferred. In final sales some shares recovered a fraction, but the general list closed barely steady.
