2013 KANSAS SOYBEAN PERFORMANCE TESTS

TEST OBJECTIVES AND PROCEDURES

Soybean performance tests are conducted each year to provide information on the relative performance of new and established varieties and brands at several locations in Kansas.

Seeds for tests are from private seed companies, certified growers, and agricultural experiment stations (Table 1). Seed quality, including factors such as purity and germination, can be important in determining the performance of a variety. Soybean seed used for private and public entries in the Kansas Crop Performance Tests is prepared professionally and usually meets or exceeds Kansas Crop Improvement Certification standards. Relative performance of a given variety comparable to that obtained in these tests is best assured under similar environmental conditions and cultural practices and with the use of certified or professionally prepared seed. All companies known to be developing and marketing soybean varieties or brands are invited to submit test seed; interested companies enter on a voluntary, fee-entry basis.

Companies were invited to enter Roundup-resistant varieties in either the Roundup trials or the conventional/Liberty Link trials at Scandia, Ottawa, or Parsons.

Entries were planted in four-row plots with rows 30 inches apart and were replicated three or four times each. Seeding rate ranged from 7 to 12 seeds per foot of row. The center two rows of each plot were harvested for yield. Harvested row lengths ranged from 11 to 33 feet, depending on location. Cultural practices and rainfall for each test location are presented with each table. Results from this year's tests are presented in Tables 2 through 21. Relative yields of each entry from all locations are shown in Tables 22 and 23. Test results also can be found online at: <http://www.agronomy.ksu.edu/kscpt>

DATA INTERPRETATION

Yields are recorded as bushels per acre (60 lb/bushel); adjusted to 13% moisture content when moisture data are available. Seed yield also is expressed as a percentage of the test average to assist in identifying entries that consistently produce better than the average yield.

Maturity is the date on which 95% of the pods have ripened (browned). Delayed leaf drop and green stems are not considered when assigning maturity. About 1 week of good drying weather after maturing is needed before soybeans are ready to harvest.

Lodging is rated at maturity by the following scores:

1. Almost all plants erect
2. All plants slightly leaning or a few plants down
3. All plants leaning moderately (45%) or 25 to 50% of plants down
4. All plants leaning considerably or 50 to 80% of plants down
5. Almost all plants down

Height is the average length from the soil surface to the top of the main stem of mature plants.

VARIETY OR BRAND SELECTION

Performance of soybean varieties or brands varies from year to year and from location to location, depending on factors such as weather, management practices, and variety adaptation. When selecting varieties or brands, producers should carefully analyze variety performance for two or more years across locations. Performance averaged over several environments will provide a better estimate of genetic potential and stability than performance based on a few environments.

Small differences in yield between any two varieties or brands usually are not important. Within maturity groups at each location, LSD (least significant difference) was calculated. The significance level used to calculate the LSD was 10%. Unless two varieties differ in yield by more than the LSD, genetic yield potential of one entry cannot be considered superior to that of another.

The coefficient of variability (CV) represents an estimate of the precision in the replicated yield trials. A CV of less than 10% indicates a good test with a high level of reliability. CVs ranging from 10 to 15% are usually acceptable for performance comparisons. CVs greater than 15% generally lack sufficient precision to provide any more than a rough guide to cultivar performance. For tests in which the precision was insufficient to statistically compare performance among the entries, the LSD value has been replaced with the designation NS, indicating that seed yields were not significantly different.

Rezac Farm, Onaga, Pottawatomie County; Bill Schapaugh, agronomist

Wabash silty clay, pH n/a

Conditions at planting were optimal, and seeds had adequate moisture for germination. Early season seedling vigor was above-average. The moisture ran out quickly, and conditions were extremely dry until early fall, hurting yields.

Rainfall:	April	May	June	July	Aug.	Sept.	Total
	3.9	4.1	4.3	2.6	3.3	5.6	23.8

Planted 5/13/2013 at 7 seeds/ft; harvested 10/14/2013; 11 ft. by 2-row plot; pesticides: Pre-emerge Authority First (4oz); Post-emerge Roundup PowerMax (32oz)

J.D. Hanna, Erma Harden Farm, Topeka, Shawnee County; Eric Ade, agronomist

Wabash silty clay loam, pH n/a

Rainfall:	April	May	June	July	Aug.	Sept.	Total
	4.5	5.5	2.8	2.5	3.3	6.7	25.3

The growing conditions varied considerably thorough the season, which started out with a little later planting date with wet soils followed by periods of dry and hot conditions until the last week of July. The last week of July/first week of August started a period of rain and cooler temperatures that really helped seed fill. SDS symptoms were throughout the irrigated trial, but not present in the dryland trial.

Planted 5/24/2013 at 8 seeds/ft; harvested 10/10/2013; 27.5 ft. by 4-row plot; pesticides: Pre-emerge Sonic (3oz); Post-emerge Roundup PowerMax (22oz)+Outlook (12oz)+AMS

East Central Kansas Experiment Field, Ottawa, Franklin County: Eric Ade, agronomist

Woodson silt loam, pH n/a

Planted into little moisture but obtained adequate stands. Plants had adequate moisture into growing season. June and July brought heat and drought stress but enough moisture to keep plants growing. Average rainfall throughout reproductive stages, with pod fill and canopy closure having more moisture than vegetative. Overall, higher-than-anticipated yields.

	April	May	June	July	Aug.	Sept.	Total
Rainfall:	3.7	2.9	6.0	2.4	5.2	5.5	25.7

Planted 5/23/2013 at 8 seeds/ft; harvested 10/11/2013; 25ft. by 2-row plot; pesticides: Pre-emerge-6oz Authority XL and 1.5 pt Dual Magnum

Northwest Research-Extension Center, Colby, Thomas County; Pat Evans, technician

Keith silt loam, pH n/a

Very good conditions with no disease or insect problems.

	<u>April</u>	<u>May</u>	<u>June</u>	<u>July</u>	<u>Aug.</u>	<u>Sept.</u>	<u>Total</u>
Rainfall:	0.4	1.6	2.3	2.5	0.9	5.0	12.7
Irrigation:		.96	5.8	6.7	1.9		15.4

Planted 5/16/2013 at 9 seeds/ft; harvested 10/10/2013; 20 ft

Planted 5/16/2013 at 9 seeds/ft; harvested 10/10/2013; 20 ft. by 2-row plot; pesticides: 2 applications of Roundup (3oz)

Table 16. Colby, Thomas County Irrigated Soybean Performance Test, 2011-2013

Values in bold are in the upper LSD group.

Southwest Research-Extension Center, Garden City, Finney County: Monty J. Spangler, technician

Keith silt loam, pH n/a

Planted into adequate moisture, but moisture reserves ran out quickly early into vegetative growth. Heat and drought persisted throughout most of the growing season. Iron chlorosis was an issue due to high-pH soil. High winds and hail on July 31 damaged the top third of canopies.

	April	May	June	July	Aug.	Sept.	Total
Rainfall:	0.3	1.3	1.8	2.2	4.1	2.7	12.4
Irrigation:	.76	4.5	5.7	.99	1.2	13.1	

Planted 5/17/2013 at 10 seeds/ft; harvested 10/18/2013; 23 ft. by 2-row plot; pesticides: Preplant Sterling Blue, Spartan Charge; Pre-emerge Prowl, Pursuit

Table 17. Garden City, Finney County Irrigated Soybean Performance Test, 2011-2013

East Central Kansas Experiment Field, Ottawa, Franklin County; Eric Adee, agronomist

Woodson silt loam, pH n/a

Planted into dry conditions, harming stand establishment. Dry conditions and heat persisted for most of the growing season until late reproductive stages, when moisture and cooler temps prevailed. Varieties were able to make up for early season drought conditions.

	April	May	June	July	Aug.	Sept.	Total
Rainfall:	3.7	2.9	6.0	2.4	5.2	5.5	25.7

Planted 5/28/2013 at 8 seeds/ft; harvested 10/21/2013; 11 ft. by 2-row plot; pesticides: Pre-emerge-6oz Authority XL and 1.5 pt Dual Magnum

Southeast Agricultural Research Center, Parsons, Labette County; Kelly Kusel, technician

Parsons Silt Loam, pH n/a

Hot and dry conditions from planting until end of July. Late July and early August rainfall were extremely beneficial to soybean crop. Frost on October 25 did not affect yield or quality even though not all soybeans had reached physiological maturity.

Rainfall: April May June July Aug. Sept. Total
 5.8 5.9 3.4 4.0 6.0 7.9 33.0

Planted 6/13/2013 at 7 seeds/ft; harvested 11/18/2013; 14 ft. by 2-row plot

1. K-State Soybean Schools scheduled at four locations in February

College of Agriculture
Department of Agronomy
Crop, Soil, and Range Sciences

Kansas State University
NEW - 2014 Soybean Production Schools
'Save the Date'

A series of four Kansas State University Soybean Production Schools will be offered in late February 2014 to provide in-depth training for soybean producers and key stakeholders. The schools will be held at four locations around the state.

The one-day schools will cover a number of issues facing soybean growers: irrigation management, weed control strategies, crop production practices, nutrient and soil fertility, and insect and disease management.

The final dates and specific locations have been set. The focus of the Soybean Schools will be in east central, southeast, northern and south central Kansas.

- **Feb. 24 – Topeka – Washburn Tech Conference Center**
- **Feb. 25 – Pittsburg – Memorial Auditorium**
- **Feb. 27 – Concordia – Cloud County Community College**
- **Feb. 28 – Newton – Meridian Center**

Certification credits will be offered (CCA Credits). More information on this specific point as well as related to the final program for each Soybean School will be provided in future communications.

- Ignacio Ciampitti, Crop Production/ Cropping Systems Specialist

Excerpts from the
University Research Policy Agreement with Cooperating Seed Companies

Permission is hereby given to Kansas State University (KSU) to test varieties and/or hybrids designated on the attached entry forms in the manner indicated in the test announcements. I certify that seed submitted for testing is a true sample of the seed being offered for sale.

I understand that all results from Kansas Crop Performance Tests belong to the University and the public and shall be controlled by the University so as to produce the greatest benefit to the public. Performance data may be used in the following ways: 1) Tables may be reproduced in their entirety provided the source is referenced and data are not manipulated or reinterpreted; 2) Advertising statements by an individual company about the performance of its entries may be made as long as they are accurate statements about the data as published, with no reference to other companies' names or cultivars. In both cases, the following must be included with the reprint or ad citing the appropriate publication number and title: "See the official Kansas State University Agricultural Experiment Station and Cooperative Extension Service Report of Progress 1094, '2013 Kansas Performance Tests with Soybean Varieties,' or the Kansas Crop Performance Test website, www.agronomy.ksu.edu/kscpt, for details. Endorsement or recommendation by Kansas State University is not implied."
