He came, He spoke, He left

"It is time for responsible university and college administrators, faculty and student leaders to stand up and be counted."

"It's an honor that we have him."

"The demonstrators helped to fortify Nixon's speech."

"I don't think he said anything that wasn't said before."

"We were used exactly as planned."

"Rules as far as demonstrating were one-sided."

Well now really, how often do you get the chance to see the President of the United States in person? Where was the charisma? He looked and sounded exactly like he does on television.

Preparations for the "communicate with students" visit began weeks before. Men in gray flannel suits were everywhere. Yes, they were security officers of varying degrees. When they said plastic IDs and fee receipt cards would be checked — they meant it.

The big day arrived and Nixon drew a standing-room-only crowd. But the handful of hecklers changed the complexion of the Landon Lecture.

Following Nixon's visit K-State Students were stereotyped by the national news media. We were billed as "corn-husking cow-milkers" and cartoons portrayed K-Staters as ten-year-old morons receiving lollipops from the President.

On the other side of the coin, President McCain received an avalanche of reactions from adults across the country. Phone calls, letters and telegrams ran in the "restored my faith in American youth" vein.

"He won't listen, he won't change."

"He tried for a lot of brownie points."

"He doesn't have any other place to come."

"It was a good speech."

"I hope he came for the students rather than to use the students."

"On the whole people supported what he said."

"Welcome secret police."

"I liked the points of his speech."

"I didn't agree with everything he said — not enough solutions."

"I feel the student body was responding to the charge to work out solutions to our own problems."

"We were duped into a good PR job for him."

"Yet we can maintain a free society only if we recognize that in a free society no one can win all the time; no one can have his own way all the time; and no one is right all the time."

"But we cannot stand successfully for the rule of law abroad unless we respect the rule of law at home. . . . willingness to listen to others without trying to shout him down."

Landon Lectures, Convocations present current issues

Shirley Chisholm

Appearing as a Landon Lecturer, former Chief Justice of the Supreme Court Earl Warren told K-Staters that domestic peace in the United States is dependent upon the realization of the nation's 200-year-old promise of equality for all citizens. Otherwise, he said, the "alternative is chaos."

University Convocations, in addition to the Landon Lectures, also offered students an opportunity to hear outstanding speakers.

Akabar Abdul Haqq, an associate of Billy Graham, spoke to K-Staters on "Man's Struggle for Relevance," explaining it in terms of man's continual search for God and the spiritual part of himself.

Other convocation speakers relied on diagnosing the ills of society. Shirley Chisholm, the first black woman elected to Congress, expounded on the social revolution in America as minority groups demand their rights in society and reject tokenism as a substitute for equal opportunity.

Imperialism as an instrument of world politics was castigated by V.K. Krishna Menon, former Defense Minister of India, in a discussion of the rise of Asian nationalism and the "political situation in Asia."

Bill Russell, basketball star, spoke on the racial problem. He urged everyone to work together.

Student Senate elections generate Humanity Party

For the first time in a number of years a political party made an active appearance during the SGA election campaign. A group of students who knew each other and previously had worked together on other projects, decided to try to gain a majority of Senate seats in order to form a voting block. This group of students called themselves the Humanity Party.

Remaining true to tradition the majority of the student body did not vote during the elections. Only 23 per cent of the spring enrollment decided who would represent the entire student body in Senate. The newly formed Humanity Party captured 20 of the 41 available Senate seats.

Fee receipt plus plastic identification cards allow students to

vote in spring elections. A low total of 2591 votes were counted.

Members of the newly formed Humanity Party spend tense hours

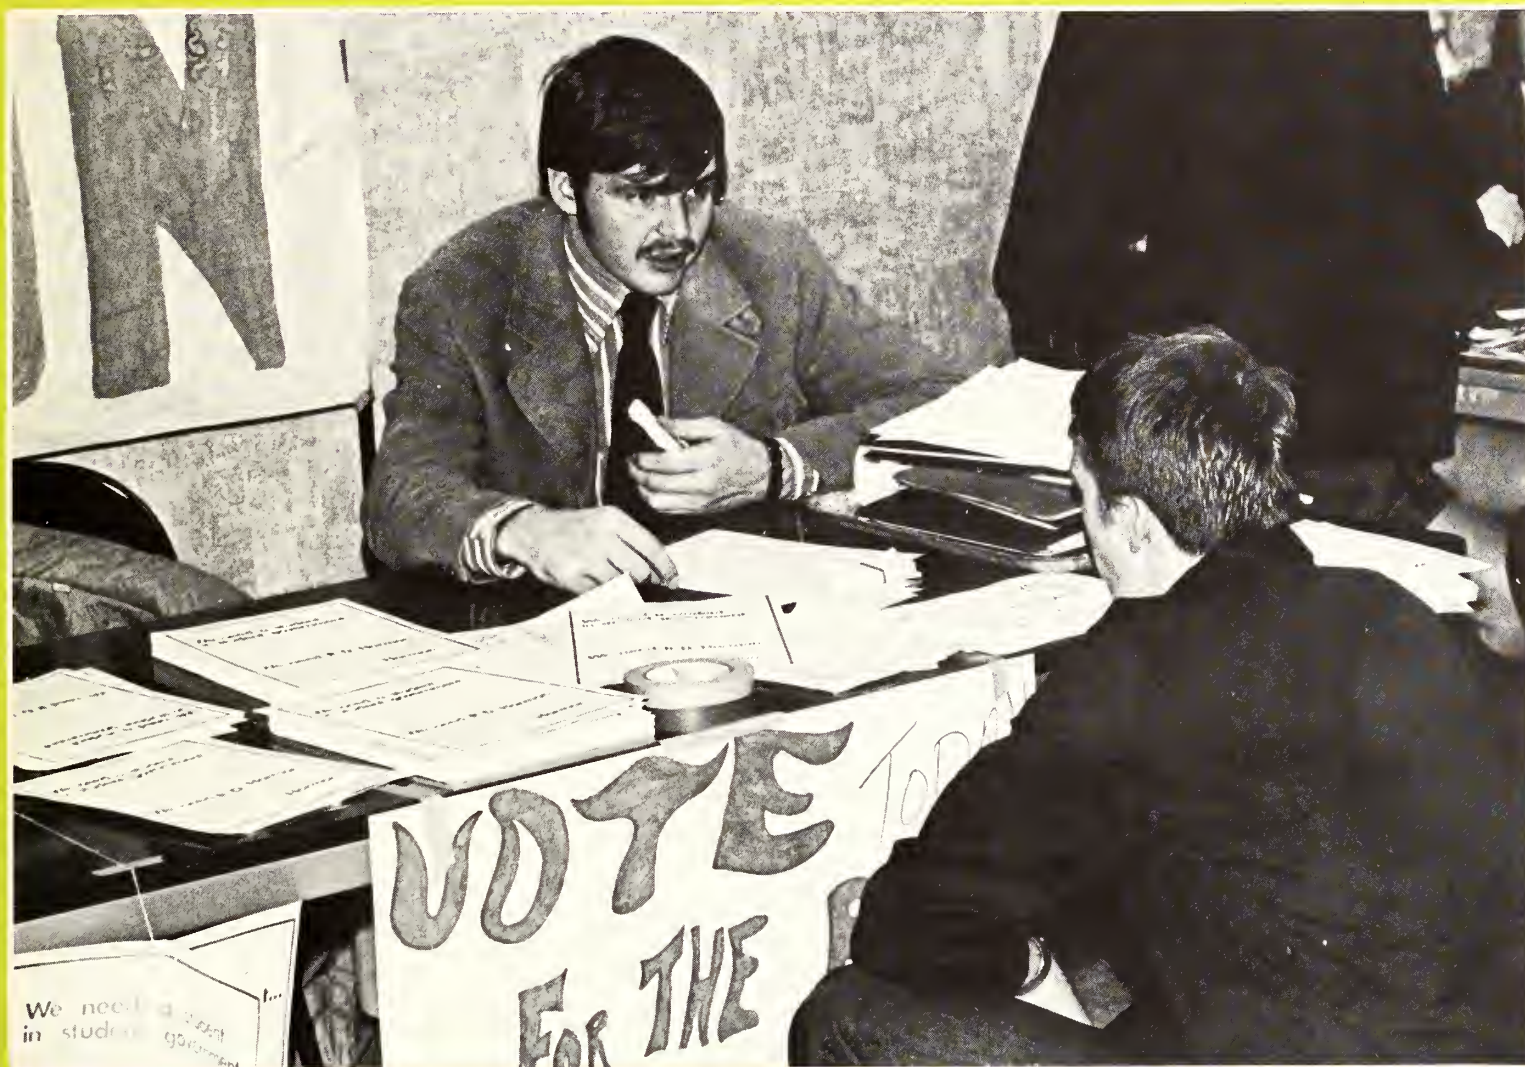

waiting for the results of the spring election by rehashing the strategic

methods which they used during campaigns for positions in senate.

Tables placed in the Union hallways next to the polling booths,

encourage students to vote for the candidate of their choice.

These tables also aided in informing students on party platforms.

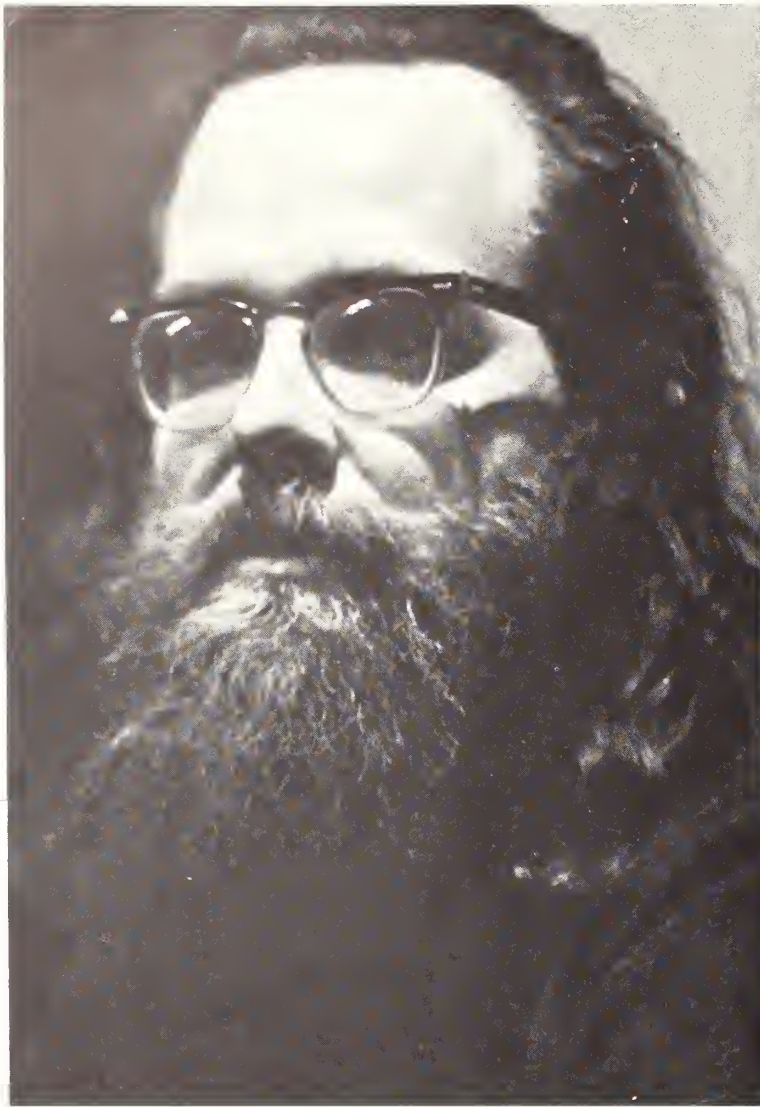

The student body presidency was decided in a run-off election in which R. D. Harmon narrowly defeated John Ronneau by 89 votes. Once again only 20 per cent of the student body voted. The newly elected student body president, R. D. Harmon said, "I was really surprised at the large number of people that came out again to vote."

Using voting as an indicator, it can be assumed that many students either don't care about or are totally unaffected by Student Senate legislation. To many students it is simply a group of fellow students distributing activity fees each semester with not much power beyond that. If students don't take an interest in or care about SGA, can it perform a meaningful function?

Survivors of the general election for student body president, John Ron-

nau and R. D. Harmon, debate issues prior to the run-off contest.

Music department creates a theater and concert series

Broadway Theater Series, Manhattan Artist Series and the Concert Series brought 12 productions into the new K-State auditorium.

Both the Broadway Series and the Concert Series are new to K-State with only the Artist Series being held over from previous years.

Auditorium manager Mark Ollington indicated that the reason for establishing the Theater Series was to bring touring Broadway shows to K-State. He also said the purpose of starting the Concert Series was to attract a variety of music such as opera, to the University community.

"George M" initiated the Theater Series, followed by "40 Carats," "Hadrian VII" and "1776."

Manhattan Artist Series began its season with a chamber orchestra from Yugoslavia, I Solisti Di Zagreb. Metropolitan opera singer Eileen Farrell appeared next, followed by the choral group Gregg-Smith Singers and pianist Van Cliburn.

In the Concert Series, the opera "Marriage of Figaro," by the Kansas City Lyric Theater, headed the list. Following was Les Ballets Africains a Republic of Guinea dance group, an India sitar player Debu Chaudhuri, Emlyn Williams with a solo reading of "An Evening with Dickens" and Nelson-Gadd a violin and piano duo.

Founded in 1964, The Moscow Trio performs as part of the Chamber

Music Series. The trio consists of Moscow Conservatory professors.

Tony Tanner, musical and comedy star from England, makes up for a performance of "George M." at the newly completed auditorium.

Les Ballets Africains, a company of African dancers, singers and

musicians, perform one of four musical story-telling dances.

Coffeehouse atmosphere enhances Catskeller guests

Ewing Street Times, a four piece country-folk rock group, open for a two night stand at the Union

Catskellar coffeehouse. Ewing Street was the first group to appear in the new Union concourse.

Butcher block tables, captains' chairs, orange and black carpeting and exposed beams give the Catskellar a night club atmosphere.

The Catskellar was designed to bring new talent to students in an inexpensive, intimate way. From morning until around nine o'clock in the evening the Catskellar is used as a lounge for students. On weekends however, it is transformed into a coffeehouse where live entertainment is presented.

Complementing the furnishings, special lighting systems make it possible to provide different moods for the coffeehouse.

Potato chips, coffee and soft drinks are sold during the coffeehouse hours with hopes that sometime in the future, beer can be sold.

Entertainment for the coffeehouse is provided by artists who like to perform close to their audience. From New York to Los Angeles, rock and folk singers expressed themselves in the Catskellar. The list of performers included The Dean Davis Company, Robin Williams, Freedom Road, Bill Saniford and The Cottonwood.

Popular as well as folk songs denote the style presented by the Dean Davis Company at a Catskellar coffeehouse. The group has appeared in four USO tours and draws from a variety of songs.

Sand County, a folk singing duet, performs during a Catskellar coffeehouse. Groups for the coffeehouses are contacted through the Campus Entertainment Committee and various coffeehouse agencies.

Brewer and Shipley in concert add humor to their folk arrangements.

Late arrival doesn't prevent The Three Dog Night from giving a 90-minute show that ended with the crowds running up to the stage.

Performing before a Parent's Day crowd of 1,500, The Cowsills provide the evenings entertainment.

Preceding the family rock group in Ahearn Fieldhouse, were the folk duet, Maffitt and Davies.

Entertainment committee schedules increased quantity of performances

More campus entertainment appeared at K-State last fall than had during all of the 1969-70 year, and the spring semester looked even better, according to Gary Sebelius, chairman of the Union Campus Entertainment Committee.

During the fall semester, Campus Entertainment presented three major concerts plus numerous Catskellar Coffeehouse concerts.

Beginning in the fall, the first major concert was the Association. At the concert, more than 3000 students filed into Ahearn Fieldhouse to hear the back-to-school show.

Following the Association, The

Cowsills appeared before a slight crowd of 1700 on the evening of Parent's Day.

Rounding out the fall semester's major concerts were the Three Dog Night. At this show, 10,500, the largest concert crowd in K-State's history, listened to the 90 minute program on Homecoming night.

During the spring semester, two more concerts were given. One by Brewer and Shipley and one by the Temptations. The Temptations were brought to K-State by the Black Student Union and the Union Programming Council, in conjunction with Black Awareness Week.

Maffitt and **Davies** add a touch of comedy to their folk entertainment performance given as a part of Parent's Day activities.

Gary Alexander, a member of the Association, quips with 3000 students on blankets and chairs during their early fall concert.

University explores Black culture through Black Awareness Week

Trying a black thing or getting involved and exploring the black man's experience presented a challenge to K-State and the Manhattan community during Black Awareness Week. The activity attempted to better student-faculty relations.

Beverly Oliver, BAW chairman, stated, "This event was a week long emphasis on the black man's culture such as his food, fashions, speakers and gospel and soul programs."

Four departments on campus and numerous university organizations jointly cooperated in sponsoring the events of BAW.

"Three aims this soulful happening attempted to achieve," explained Orson Powell, BSU economic advisor, "were to provide a black exposure to white society while also as-

sisting other blacks in appreciating their own black inspirations and to give recognition and pay tribute to heroic blacks."

BAW played a constructive role in the life of black students and has been instrumental in helping to relieve racial tension on this campus.

"Also, the kick-off for BAW, the Black Speak-Out, gave black students something to relate to, as well as a chance to express their views openly," David Hall, writer, director and producer, stated.

"Besides presenting the needed information about the black man and his culture, the Black Speak-Out also provided a flow of communication between the Manhattan community and the black students of K-State," Hall said.

Cool and slow she moves accenting her soul in this striking outfit.

Black art and sculpture from the Hank Smith Art Gallery in Kansas

City is displayed in the Union as a part of the Black Art Workshop.

According to Veryl Switzer, assistant to the Vice President for Student Affairs, "The overall participation and cooperation of BAW was tremendous. The work and effort put forth by those involved made the event very successful.

"I felt the black and white participation at the Soul Food Banquet was the main highlight of BAW," he added.

Various "letters to the editor" in the Collegian were printed in favor of and against BAW. A small minority felt that the event was "discrimination in reverse."

However, it is only through opportunities such as BAW, as well as progressive efforts throughout the year, that the true value and awareness of the black experience can be realized.

Nationally celebrated, BAW was first started in 1926 during February and known as Negro History Week. Ten events were scheduled for the third annual BAW presented by the BSU. Pan Africanism Progressing, or the progressive idea of African descendants identifying with each other, was the theme for 1971 BAW.

flicted bullet in the production of "Big Whitey." The play was staged last summer at Abilene.

"**Don't** Look Now" debuts as the K-State Players' first '70 program.

Players perform 12 dramatic shows including one-act productions

K-State Players performed 12 productions during the 1970 season. In addition, the summer repertoire company gave 144 performances over the 10 week summer season.

During the summer performances, the actors did "Big Whitey," "Marriage Wheel," "10 Nights in a Bar Room" and "East Lynne" at the depot theater in Old Abilene town. Also during the summer, a group of players did "A Horse of a Different Color," a children's show which they presented at K-State.

During the fall semester, the K-State players presented "Don't Look Now," "Man of La Mancha," "The Hobbit," "The Country Wife" plus

two series' of one act plays. The spring semester began with "A Thousand Clowns," "The House on Prince Edward Street," "The Underpants," "Little Mary Sunshine" and two more series' of one act plays.

Throughout the season, the K-State Players rehearsed from four to seven weeks on each production. During each week, rehearsal time required from 25 to 30 hours.

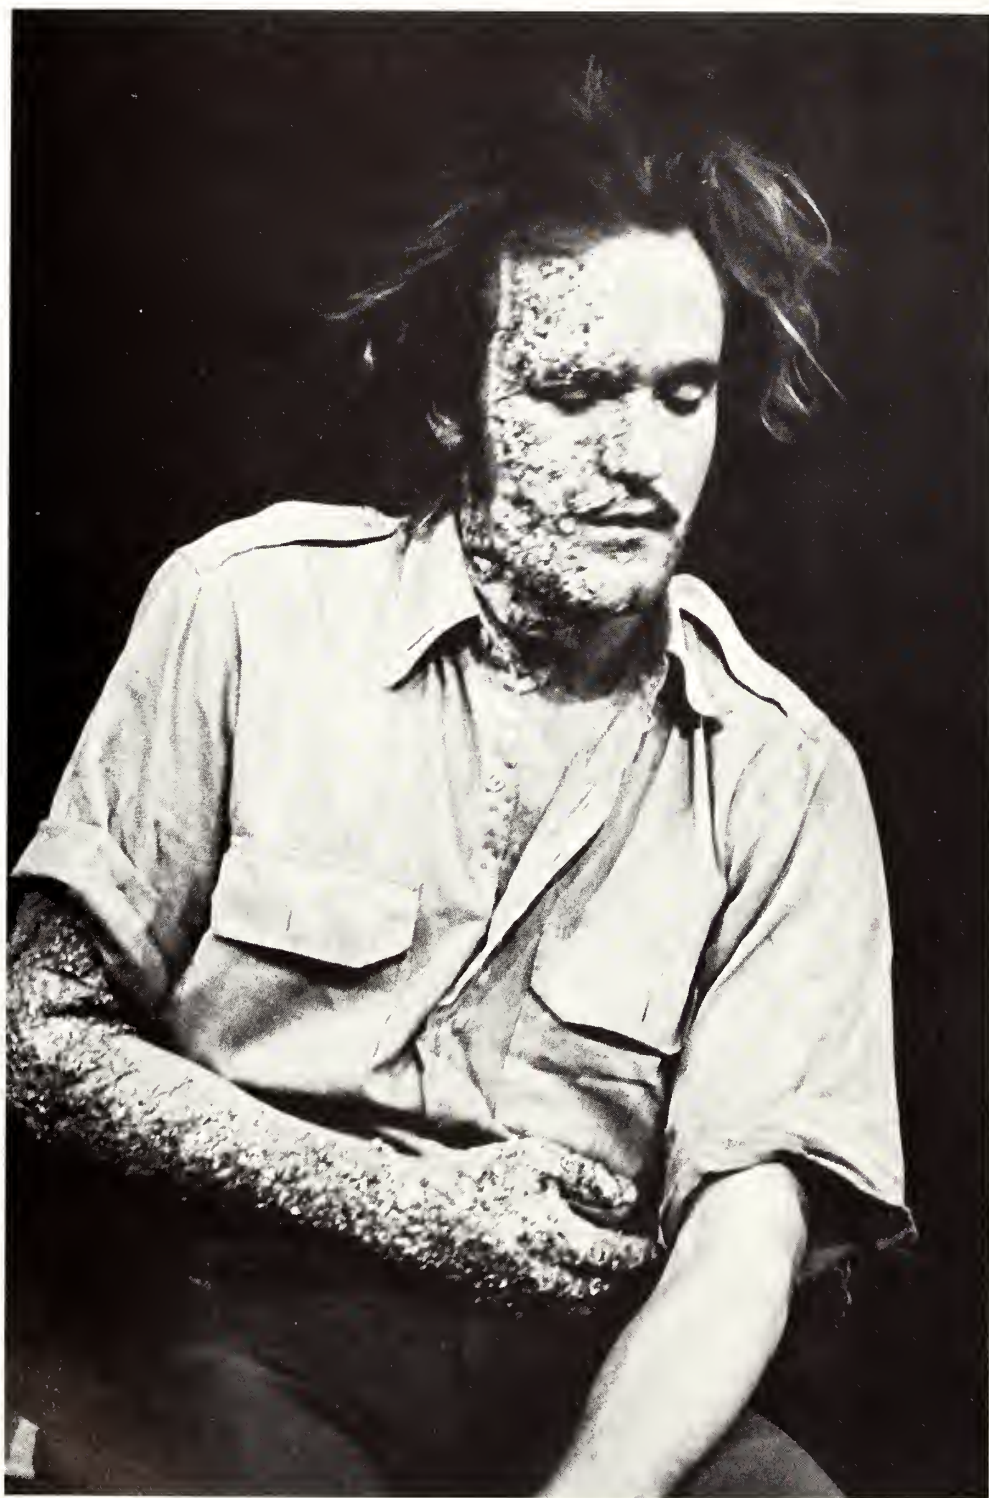

Paralleling the major productions, the department of speech continued its experimental theater. The department gathered 12 original full length plays, and acted them out. The sound portions were taped and then sent to the playwrights.

interim semester 1970-71

New semester calendars provided a two week interim semester for students staying in Manhattan over the break. The 20 classes were jointly sponsored by the offices of Continuing Education and Educational Resources. Every college offered at least one course during the interim semester.

This two week period allowed some of the classes to meet off campus in a laboratory situation. A journalism practicum worked on Kansas newspapers and a marine biology class was conducted on a floating sea lab off the coast of Mississippi.

Many of the interim classes such as Black marketing and intuitive geometry had never been offered at K-State. Students were able to request that certain subjects be offered. Classes tended to be unstructured and tailored to the needs of the students.

All reports indicated that the interim was a success and will be continued during the spring interim after second semester ends in May.

Merely running a program through the computer takes a fraction of

Four bits and ownership of a horse determines Horse Show eligibility

Fifty cents and a horse made any K-State student eligible to participate in the third annual Horse Show organized by the Block and Bridle club.

During the first evening's performance of the two-part show, preliminaries for the selection of finalists were run. The following night, finalists competed for award buckles, ribbons and trophies.

Returning contestants discovered a new event added to the program. Rope racing, a type of musical chairs on horseback, involved a number of racers going after a set amount of

ropes. The rider coming up empty-handed was eliminated each round.

Timed events such as rescue racing, ribbon roping, pole bending and barrel racing were regular attractions on the schedule.

Judged events included such things as English or Western pleasure and reining or showmanship in halter classes. Pleasure classes test the horses' training that make them pleasant to ride. In showmanship classes the contestant rather than his horse is judged. This is done through his ability to present a horse to its best advantage, on a halter.

Riders walk their horses for the judge in a western pleasure class.

Entrants in the Ladies' Western Horsemanship contest await their

turn to enter the center of the arena to be judged and evaluated.

Working against time, an entrant in the ribbon roping contest prepares to throw his loop. Assuming he makes the catch, the only problem he has left is to remove a ribbon tied to the calf's tail.

Calves and cowboys, prime ingredients for any rodeo, inspect the

arena grounds as they prepare to clash in the annual K-State Rodeo.

City girl enjoys reign as state rodeo queen

By MARY HASSIG
Collegian Reporter

Kristi Osborne, a freshman from Leawood is the 1970-71 Miss Rodeo Kansas. Since Miss Osborne doesn't live on a farm, she is taking agriculture courses this semester to gain a better understanding of farm life.

WHILE MOST freshmen were buying new clothes for school, Kristi was preparing her wardrobe for the Miss Rodeo America Contest in Las Vegas, Nev., Nov. 28. She had to buy seven riding habits. The Miss Rodeo Kansas Contest was a feature of the Flint Hills Rodeo in Strong City this summer. Since then, she has appeared in rodeos across the state.

"I've gottent to know the people of Kansas very well and I want to represent them as best I can. Everyone has been so great to me," she exclaimed. To become a rodeo queen, each contestant must have a broad understanding of the show. "PROMOTING THE rodeo to the public is the main purpose of being Miss Rodeo. The public doesn't realize what goes into the making of a rodeo. Cowboys entering must finance themselves and it's a lot of hard work for them," Miss Osborne said.

Kristie Pearson, Chi Omega, and Lance Saylor, Alpha Tau Omega, combined resources to walk off with Beauty and Beast honors at the football game Saturday.

Coach Vince Gibson selected the couple with the most original costumes. Trophies were awarded to Russell Stading, Haymaker Hall, and Jan Townsend, Gamma Phi Beta.

THIS IS the second year the marching band has received the proceeds from the Beauty and Beast contest. The money is used to replace equipment lost in the Nichols gym fire two years ago. Junction City coed is Miss Agriculture

Joyce Roesler, a blue-eyed, brown haired junior from Junction City, is the new Miss Agriculture of K-State.

Miss Roesler, a member of Kappa Alpha Theta sorority, was crowned Saturday night at the agriculture Autumn Fall Festival.

"I was proud to represent the house and I am looking forward to representing the agriculture school of K-State," Miss Roesler said.

Among her duties will be presiding over the Little American Royal and an awards banquet along with other dinners and functions.

SHE LIKED her week of competition. "I really enjoyed the competition and interviews leading up to the crowning and have met a lot of the agriculture students. This will be a very rewarding experience," Miss Roesler said.

Miss Roesler knows the field of agriculture. "Growing up on a farm, I have done a lot of farm work," she said.

Miss Roesler's selection as Miss Agriculture is somewhat ironical. In choosing a representative, the girls at the Theta house chose her as their second choice. When the number one could not represent the house, number two, Miss Roesler, became the darling of the agriculture department.

Evelyn Ebright, junior in music composition, was crowned Kansas Wheat Queen in December.

Library tours duties galore Kansas wheat queen

The new Kansas wheat queen is a very busy girl—so busy she had to leave crowning ceremonies ten minutes after receiving her title.

The new queen is K-State junior Evelyn Ebright. She was crowned in early December as a highlight of the annual meeting of the Kansas Wheat Commission and the Kansas Association of Wheat Growers in Hutchinson.

Miss Ebright is a member of a singing trio, The Cottonwoods, which performed at the Union Catskellar Dec. 4 and 5, the same two days as the Hutchinson conference.

"Friday night, I drove to Hutchinson and then drove back to sing. Saturday, I had to charter a plane back to Manhattan ten minutes after I was crowned," she said.

THE BROWN-EYED brunette, who grew up near Lyons on the farm of her parents, Mr. and Mrs. Wendell Ebright, will assist in promoting Kansas wheat in Kansas and throughout the country during the year. Among her duties will be speaking engagements at various conventions.

"I have my choice between going to Minnesota in the summer or Oregon to speak at national conventions," she said. "These are the two biggest trips."

She also will speak to the House of Representatives in Topeka and attend a Farmlands Industries Show in February.

The Kansas Wheat Queen must be recommended by a county agricultural agent and win contests at the county and district levels. Five districts were represented in the state contest, Miss Ebright said.

Part of rehearsal time for the Pratt Miss Kansas pageant is devoted to becoming familiar with the stage and practicing turns.

Linda Edds reigns as Miss Kansas; acquires the fame and recognition

An overwhelming honor was bestowed upon me this summer on the night of July 11. This day marked the onset of my reign as Miss Kansas 1970. Wrapped up in the aura of photographer's lights, press microphones, hands waving and arms hugging, I tried to gather my thoughts. It must have been amusing to see my composure melt at the sight of friends shrieking beside the runway. We laughed and cried in disbelief.

A title was handed to me within a matter of seconds and the role and image of a queen were at a moment's notice in my possession. My opinions were suddenly important and people were staring at me. My signature

transformed into an autograph! The phone rang incessantly and mounds of telegrams, letters and flowers tied up the Edds' residence for several days. A celebration and parade given by the Manhattan Jaycees were in store for me upon my arrival home.

If I had to single out one personal satisfaction being Miss Kansas has brought me, it would be the happiness I feel it has brought to others. While student teaching and through my travels, I have heard so frequently, "I know Miss Kansas." I am the celebrity!

Michele Hester named queen by "Esquire" editor

Photogenic beauty was the sole criteria used in the selection of the 1971 Royal Purple Queen. Black and white formal portraits of the 29 contestants were submitted to the judge. On the basis of these pictures a queen and four attendants were chosen. The entrants represented each coed living group on campus.

Harold Hayes, editor of "Esquire" magazine chose Michele Hester as the Royal Purple Queen.

The five finalists were announced in the initial second semester issue of the Collegian. Miss Hester was presented to the student body at Harlinquinade.

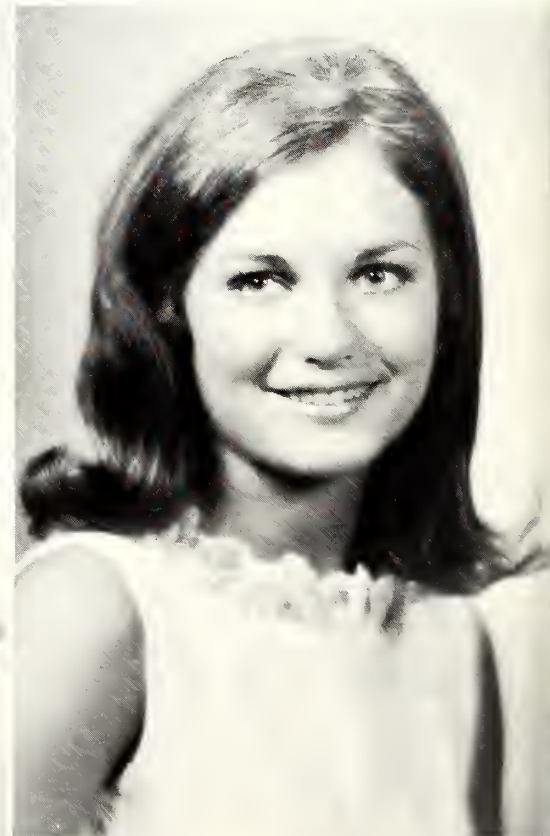

Finalists were Debbie Brown, Boyd hall; Rosemary Meade, Alpha Delta Pi; Terri Henderson, Delta Sigma Theta; Marie Hurst, Smurthwaite Scholarship House; and Miss Hester representing Boyd hall.

Events accent Homecoming theme: 'Purple Power-Pride of the 1970's'

As presented yearly in honor of alumni, this year's homecoming "Purple Power-Pride of the '70's" began with the crowning of Kathy Mertes, family and child development junior from Prairie Village.

Following the crowning, the week-end activities began with a car caravan through Manhattan touring the homecoming decorations of participating living groups.

Following the car caravan, the Three Dog Night rock group presented the homecoming concert. This group along with Danny Cox, folk singer, drew 10,000 persons into Ahearn Field House.

After the concert, a pep rally and bonfire in preparation for the home-

coming football game, were held on the baseball field of the City Park. At the rally, candidates for homecoming queen were introduced and living group decoration awards were presented.

Decoration winners included the grand prize which went to Chi Omega and Delta Tau Delta. The best theme award was given to Pi Beta Phi and Kappa Sigma while best design went to Kappa Kappa Gamma and FarmHouse.

Overall fraternity award was given to Phi Kappa Theta, overall sorority to Kappa Alpha Theta, outstanding men's residence to Haymaker and the outstanding women's residence award was given to Clovia.

Representing Putnam hall, she was K-State's 40th Homecoming Queen. Miss Mertes was crowned by K-State's President of the Endowment Association, Ed King.

Of the 40 nominees, 12 semi-finalists were chosen on the basis of interviews. Five finalists were then named after Homecoming previews. The five were chosen on the basis of their skits, poise and beauty by a panel of judges selected by Blue Key, senior men's honorary.

Homecoming finalists were Rebecca Campbell, Cindy Thompson, Linda Smith and Sharon Hachenberger.

After the previews, the queen was chosen by student body vote.

Miss Mertes was announced as queen by football coach Vince Gibson at the traditional cape turning ceremony in front of approximately 150 people on the Seaton hall steps. She then presided over Homecoming events.

Television releases were sent out across the state and she and her attendants made television and several civic group appearances.

Band and cheerleaders add to 'Pride in Wildcat Land'

"Pride in Wildcat Land" was the idea invented by the Wildcat Marching Band as the year's band theme. The K-State bands, K-Steppers and cheerleaders worked to build this idea.

With two-hundred twenty members, the marching band, under the direction of Phillip Hewett, promoted the "pride" theme.

Each band routine was geared to get students more involved in what was happening out on the field and to increase and boost Purple Pride spirit.

Pep Band also did its share in building "Pride in Wildcat Land." Formerly the Pep Band played only at basketball games. However, this year it operated at all Big Eight varsity spring sporting events.

Involving the crowd in athletic events was the major goal of the cheerleaders and K-Steppers. Their cheers, tumbling acts and routines helped to promote the excitement of the crowd and pride in the team.

K-State cheerleaders are chosen each spring. This year, eight

men and nine women were selected to lead cheers for the Wildcats.

Tradition encompassed in football as parents, bands and alumni visit

Tradition emphasized the football game themes this past gridiron season.

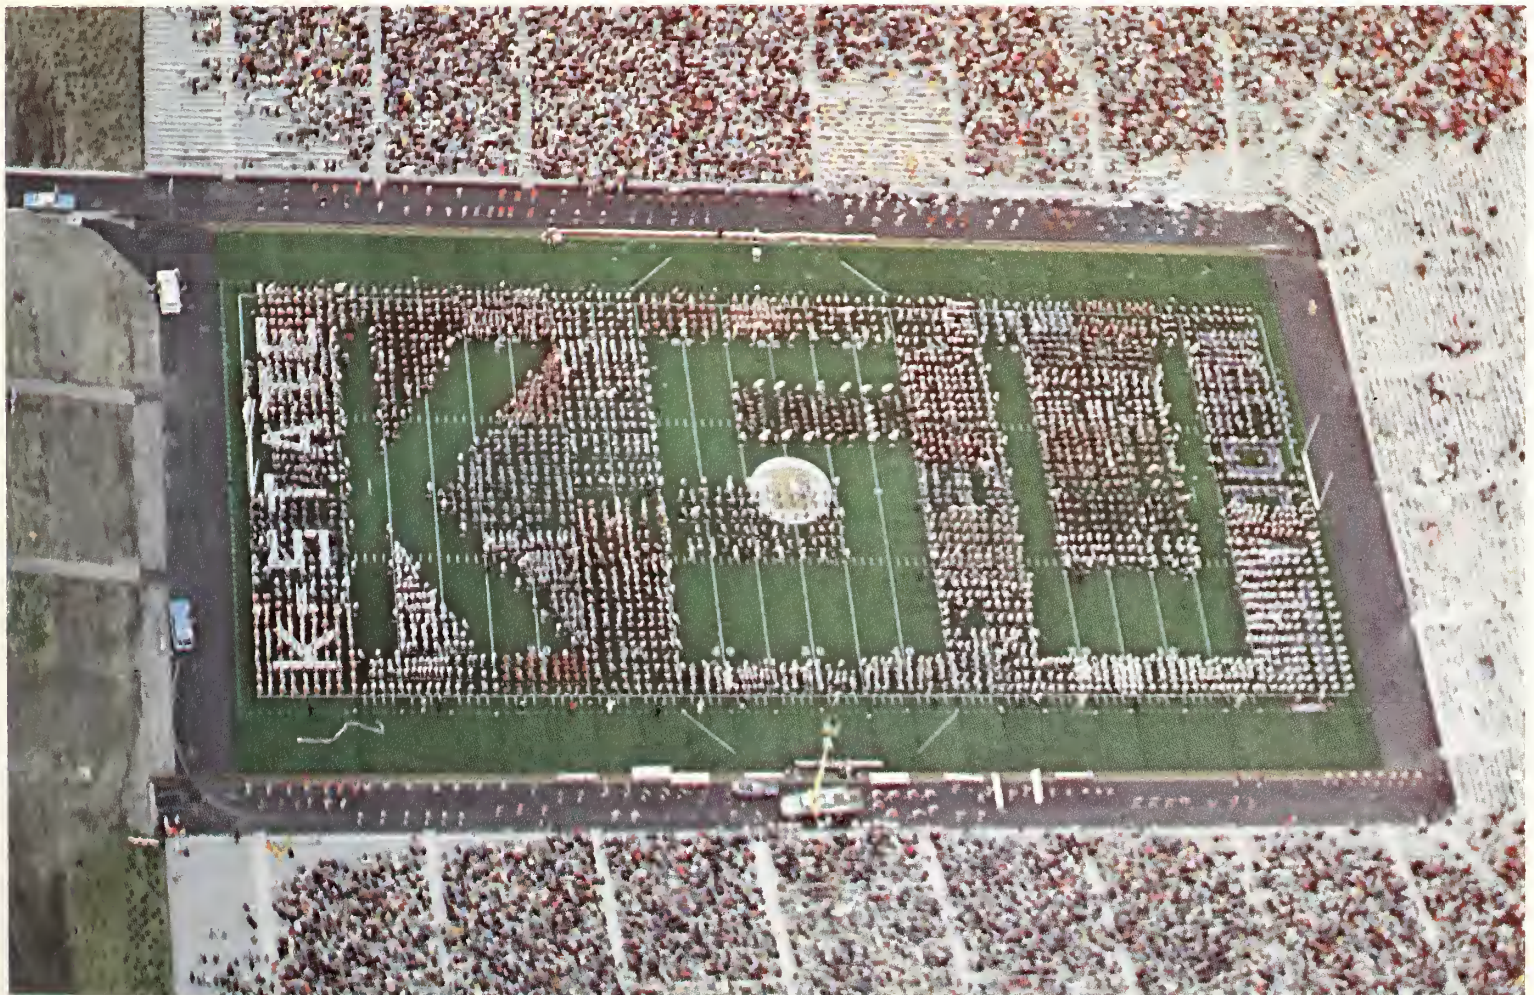

This year marked the 36th annual Band Day activities. More than 3500 band members, representing 46 Kansas high schools, plus the Wildcat Marching Band, combined musical talents during four numbers of the half-time show of the K-State-Utah State football game. One hundred sixty-one twirlers from the schools were present for the event.

Editor's Day has also become a traditional game theme. Newspaper editors, publishers and their wives from around Kansas visited the campus to become better acquainted with the Journalism Department. In addition to the K-State-Colorado football game, they also attended

special programs sponsored by the Journalism Department. Featured speaker for the day was graphic arts expert Edmond Arnold from Syracuse University.

Since 1928 Parent's Day has been a traditional theme. This year Mr. and Mrs. James Schlosser of Derby, Kansas represented all parents of university students. The goal of Parent's Day was to make parents feel that they are a part of the University. By attending various meetings with representatives from the different colleges, the parents were able to voice their opinions on certain University matters.

After the football game, a concert featuring The Cowsills and folk duet Moffit and Davis provided additional Parent's Day entertainment.

Lines of communication between freshmen and upperclassmen open

up during informal discussions. Summer orientation leaders give

advice about classes and school and answer students' questions.

President McCain promises an exciting year during the student

convocation held for the first time after classes had resumed.

Summer orientation indoctrinates frosh to college life and enrollment

Confused freshmen begging directions from upperclassmen are on their way to obsolescence at K-State. The freshman year began before classes started with an expanded three day orientation during the summer months.

During this orientation period, each entering student was acquainted with aspects of the environment he would encounter during his first year at K-State.

This program also familiarized new students with all phases of the university community and what it has to offer.

Another objective of this summer session was advisement and enroll-

ment in classes for the fall semester. Also during these sessions, students completed physical examinations and speech and hearing checks.

Also at orientation, freshmen and transfer students were split into small groups.

Led by a trained undergraduate, the students were encouraged to seek answers to any questions they might have had about campus life.

This same group seminar motif was available for an hour credit to interested freshmen during the fall semester.

Parents were also asked to join with the parent groups meeting monthly by way of telephone.

Building a closer relationship with students, having fun and earning one hour credit, freshmen meet in seminars once a week.

Freshmen seminar groups often sit and discuss any problems that one of its members might have about campus life. Members also become aware of the position they hold within the university community.

People want to form lines is the conclusion that must be made due to the fact that the Union's scatter system does not run smoothly.

With an expansion unequaled in the Union's history, the recrea-

tion facilities have all moved to the lower floor. Sixteen bowling

alleys and 18 tables for pool and snooker are open for daily use.

Bookstore, postal center included for expansion of student services

Planning for the new Union addition began two years ago by six interior architecture students. Their expansion project increased the building size by 102,000 square feet at a cost of \$3 million.

One surprise to the architecture students came when the bid for the main part of the building was lower than the University's stated budget.

Because of that, more money was available for furniture and flourishes. Much of this money was also directed into outlets to expand student services such as the new postal center located across from the Forum hall theater on the ground floor of the

new Union addition.

Furniture for the Union came mainly from Denmark. In choosing the type and quality of furniture, stability and durability were considered.

Other than the self-service postal center, the Union addition contained more meeting rooms, the first full-facility campus bookstore and the Forum hall theater and stage.

There are no immediate plans for building further, but Richard Blackburn, Union director, stated the future trend may be toward decentralization and smaller, satellite unions near the dormitories.

Auditorium acoustics can be changed by moving the walls and ceiling.

New Auditorium opens to Campus; facility uses multi-functional design

Multi-purpose, modern and mobile describes K-State's new auditorium.

Lacking the speed with which its predecessor came down, due to a fire seven years ago, the \$3 million auditorium was opened for University and community use last fall.

With multi-function as the key word in design, the auditorium served as theater, concert hall and opera house.

Unique is the word for a ceiling that can change an auditorium's seating capacity from 900 to 1,850 by raising itself. The ceiling has three

positions which adjust the auditorium's acoustics and seating capacity for concert, dramatic and opera productions.

Pseudo-walls are actually adjustable curtains used in acoustics and the three level orchestra lift is used for a stage extension, orchestra pit or additional seats.

In addition to the dressing rooms, scene shop and green room (where actors await their cues and meet the audience after performances), the building also houses the music department and practice rooms.

Dedication of K-State's \$3 million auditorium lures a capacity

crowd into the facility. At the dedication the audience heard

the Minnesota Orchestra and Gail Kubik, an award winning composer.

High atop Ackert hall stands the biology department's new greenhouse. Featuring convenience, it is used for teaching and research.

Principles of biology students listen to each week's taped lec-

tures at one of the 90 audio-tutorial stations in Ackert hall.

'Come together building' centralizes biological research

Nixon talked about it, the Beatles sang about it, but Ackert hall got the job done — it brought people together.

Named in honor of James Edward Ackert, a faculty member at K-State for 37 years, the \$3.5 million biological science building opened in the fall of 1970.

This building made it possible for biologists of all types (bacteriologists, botanists and zoologists) to chase paramecium and peer at bac-

teria under a centralized roof.

Standing five stories, capped off by a greenhouse, the "come together building" utilizes half its space for classes and laboratories for students and half for research by graduates, undergraduates and faculty.

Before the completion of Ackert, research was conducted over the entire campus. Researchers rarely had the opportunity to discuss their studies, but becoming centrally located changed this diverse scene.

Even newer and more unique than the building itself is the audio-tutorial course that taught 800 students the principles of biology.

Students donned earphones approximately four hours per week to learn by tape and work in the laboratories according to recorded instructions.

Also, each student attended a one hour quiz section each week, where a teacher quizzed them on questions accumulated from the week's tapes.

Innovation of self-service prevails as Farrell addition opens to students

Self-help was the idea behind the construction of the five story addition to Farrell library. Lack of money prompted this self-service innovation as the library did not have the funds to hire extra help for jobs that students themselves could do. For example, students can now help themselves to the books in the general reference and reserve departments of the library.

Richard Farley, library director, explained the addition as several libraries within one large library. Ideally, students became acquainted with the librarians in their field and were aided in searching for various

materials needed for research.

New aspects of the library included multi-colored floors for easier book classifications and a variety of study rooms. In addition to the 250 open study carrels available for individual study, the library provided a more relaxed area in the basement for students who preferred to snack while they studied. Also 21 discussion rooms were made available for "heavy rappers." Six of these rooms may be converted into seminar rooms for small classes of twelve persons.

Therefore, with the added room in the library, the concept of self-sufficiency is being put to use.

Alternatives Conference examines substitutes for existing life styles

Twenty-five cent meals, a "bitch board," Gay Liberation, day care centers, inexpensive living units like domes and the idea of a free university in Kansas City are only a few of the ideas that were presented at the University For Man Alternatives Conference held in the Union.

Basic aims of the conference, which was presented jointly by University for Man, University Learning Network and the Union Program Council, were to show that there are social, educational and philosophical alternatives to the present systems.

Varieties of activities were represented by a number of booths. Edu-

cational booths offered information on the Study Afloat program, free kindergarten, day care centers and free universities.

Another booth offered information on summer jobs and the possibilities of working abroad.

Survival was of special interest. Diets, inexpensive dwelling and the ideal of working at jobs that one enjoys rather than to just make money were also discussed.

One of the speakers at the conference was Bill Wyman, former president of the Phoenix Society for Individual Freedom, who discussed homosexuality as a lifestyle.

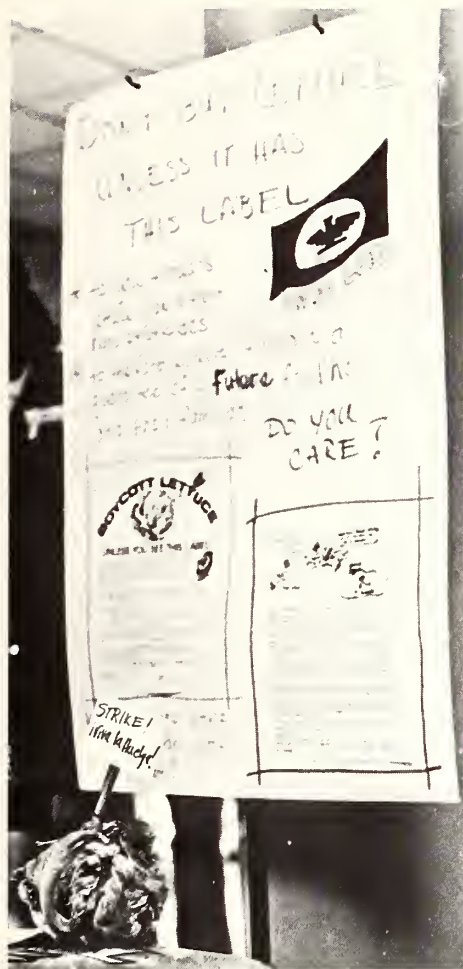

Soaps, not enzymes; bottles, not cans; white tissue, not colored;

K-State's free university works for total education

In this free love, free speech, anything goes world, where everyone, everywhere is doing his own thing, University for Man makes it possible for K-State students to do their own thing.

UFM, K-State's free university, believes in the continuing education of the whole individual.

"Education is a means of changing, growing and sharing. We will always be learning and getting an education," said Sue Maes, full-time coordinator of University for Man.

"We don't believe in a lot of requirements," she said "people have to have some say in what they are doing, some freedom of their own."

Freedom! That's what UFM is all

about. Not only is it financially free to participants, but it is also intellectually free. Students are free from requirements, prerequisites, tests and grades.

Unofficially initiated in the fall of 1967 with only two courses, UFM became officially approved in the spring of 1968 and had a total of eight classes. This year K-State's free university is one of the largest of its kind in the country.

This program offered 85 widely varied courses and served some 1,600 K-State students and Manhattan residents.

Coordinators of UFM believe that the structure of a curriculum oriented university has a tendency to

stifle creativity. People should "be free to do what they want," is the UFM philosophy.

Ever thought you would like to learn to make homemade bread? Some people did this year so a UFM course was formed. Other courses range from handwriting analysis to yoga, from film making to wine tasting and from singing and praying to just sitting and rapping about whatever interests UFM students.

As for future directions of UFM, the goal is to remain as flexible as possible.

"We are always changing and want to do whatever is relevant and of course, whatever the students want," Miss Maes explained.

Sculpturing, a UFM class lead by Chester Peters, Vice-President for

Student Affairs, is available to only six persons each semester.

Animals and birds are a part of the various objects created and designed in the UFM course, origami, the art of paper folding.

Macrame, a UFM course, is the ancient craft of tying simple knots in order to create a work of art.

Participating in the current UFM day care course, students work with and entertain local children.

Mike Wareham, as editor of *Dimensions*, used stories pertaining to school and advertising to present an overall view of K-State. The University Directory, edited by Ben Wheatley, included information for students and faculty.

Censorship obligation self-imposed; student publications need freedom

How much control should a university extend toward its student publications?

Student publications at K-State are published by and for the students — without administrative or faculty censorship.

This is the way it should be.

The most effective censorship, and the most meaningful, is self-imposed. Students at K-State, for the most part, have shown they are both willing and capable of carrying the burden of responsibility.

Student publications were created in the interest of providing students with the opportunity to develop their

own writing and journalistic skills. But the creation of form does not give birth to the power to mold its substance.

It is both lawful and proper, I believe, to restrict publication in a campus press to articles written by students. But to tell a student what thoughts he may communicate is another matter.

It would be inconsistent with the basic assumptions of First Amendment freedoms to permit a campus student publication to be simply a vehicle for ideas the state or the college administration deems appropriate. Students publications, however, operate under the same laws of libel and obscenity as private publications.

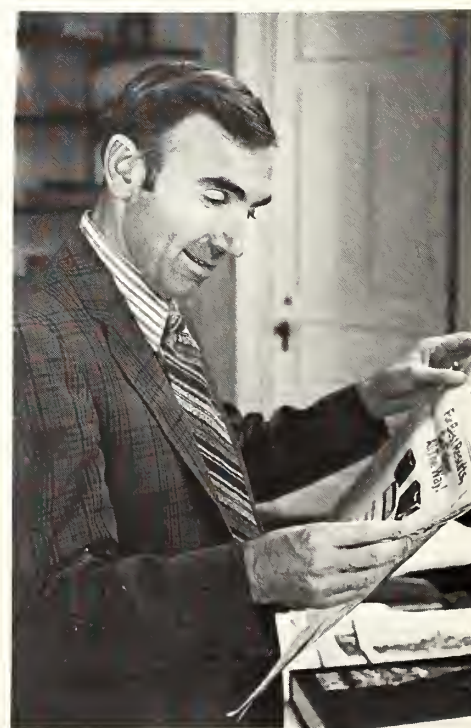

A student press must be free, and therefore must be responsible.

Royal Purple brings about changes; strives to increase student readership

Reverting to a spring delivery book, the 1971 Royal Purple eliminated the previous underclass section to decrease the book to 608 pages. The underclass section was dropped in order to avoid duplication of individual pictures.

Changes in the 1971 book were made in an attempt to increase readership of the Royal Purple. To personalize university administrators

each official was asked to respond to a question relevant to his office and students.

Living group copy was personalized for each group. The division and opening pages were given a new look using fewer pictures and more color.

Approximately 50 students worked on the book this year. Staff positions were assigned in the spring and production was started in the summer.

Collegian assumes new layout style; magazine format allows white space

K-State's student newspaper, the Collegian, again received an All-American rating from the Associated Collegiate Press. The paper also received first place awards from the professional Journalism society, Sigma Delta Chi, for feature stories and sports coverage.

Editors of the Collegian instituted style changes to make the paper more attractive. One way they achieved this was by adopting more of a magazine format. News stories were interspersed with more white space to give a less crowded appearance to the daily paper.

Also, writers outside the journal-

ism department were recruited for the first time. This tended to give a broader range of opinions and views to the editorial page. To permit maximum freedom for the staff in writing editorials, no editorial policy was created and editorials reflected the opinions of the writer.

Second semester the Collegian type setting operation changed to "cold type." This change allowed the paper to be printed earlier in the evening. The staff was reorganized and resulted in investigative and editorial writers. More in-depth stories such as drug use in Manhattan appeared.

Ad staff increases advertising to absorb printing costs

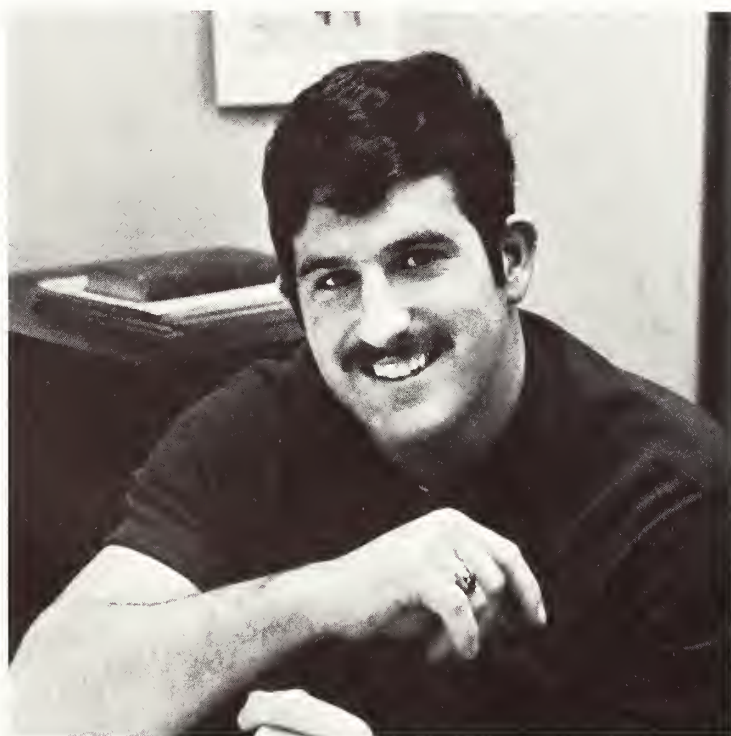

Collegian ad salesmen layout the paper a day in advance and files

are kept on all advertising that has appeared in previous papers.

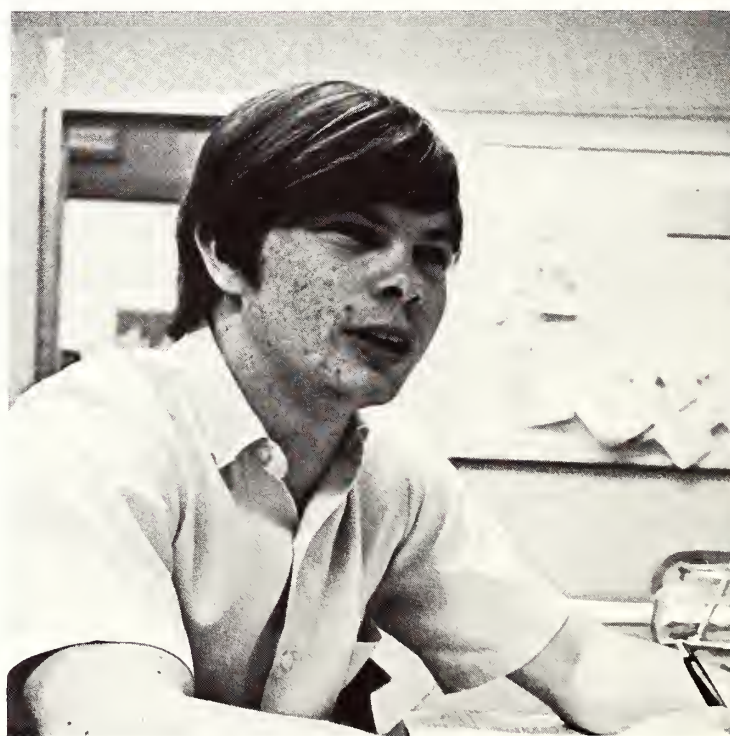

New and greater responsibilities were handed to the advertising department as the Kansas State Collegian attempted to become a self-supporting operation. Although the newspaper is supported by student fees as well as the income from advertising, the advertising department tried to accept a greater share of the cost. It did this by selling more advertising to local merchants.

Size of each issue of the daily paper was determined by the amount of advertisements available. The advertising staff in addition to selling the space to the merchants, also created an ad for him. Salesmen were able to offer advertisers standard characters from a national mat service, color and reverse lettering.

Membership in the advertising department was strictly voluntary. Staff members worked on a commission basis and were offered academic credit for their work.

Fifth floor Farrell houses new KSDB-FM equipment

Beginning its 20th year of operation, the KSDB-FM student-manned radio station was newly located on the fifth floor of the Farrell library addition.

Professor Richard Farley, administrator of the library, offered KSDB-FM the new space after a fire had earlier destroyed the station's facilities in Nichols gymnasium.

With more than \$70,000 of new equipment purchased since April 1970, KSDB-FM now employs five separate modules in their operation.

Maintained primarily by student fees, KSDB-FM was operated by approximately 40 students each semester and broadcasted Monday through Saturday for 52 hours. The student broadcasters, primarily journalism radio and television majors, served on various staff positions and composed their own broadcast material.

KSDB-FM provided coverage for minor university athletic events as well as sponsoring coverage for all football and basketball games. Vari-

eties of music were also played ranging from classical to "Top 40."

Student broadcasters also added coverage to cultural events of the University. New equipment in the auditorium allowed speakers and musical concerts to be taped so that

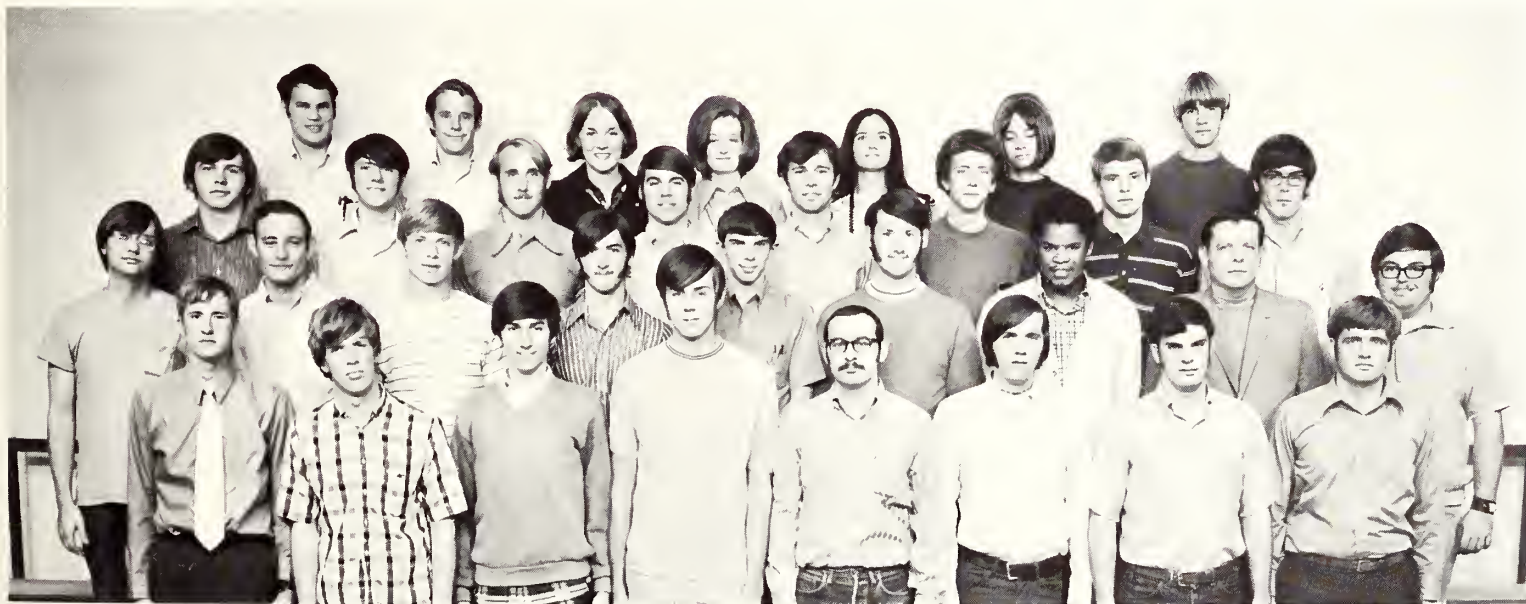

students could hear broadcasts of these events.

Kenneth Mrozinski, journalism advisor for the station, stated that through KSDB-FM students familiarized themselves with all aspects of station operation.

Without a permanent home since the winter of 1968, KSDB-FM be-

came a silent radio station and waited for funds to be granted.

"I'll not be intimidated by a violent, destructive minority"

The overwhelming majority of today's youth are fair-minded and responsible — but not necessarily satisfied with the status-quo. They see need for reform. Their broad objective is to improve conditions in American life.

While the majority of students are trying to better themselves and their surroundings, a small group of young people seem determined to destroy the very institutions and freedoms which have been the strength of the democratic process.

It is because this small group chooses to throw stones, break windows or burn buildings that I have found it necessary to employ a show of force in the city of Lawrence.

My decision to move Kansas Highway Patrolmen and National Guardsmen into the city and campus areas was made because I believe one of the first duties of government is to provide protection for the individual. An act of arson nearly destroyed the KU Student Union Building, there were fires, fire bombings and sniper fire reported in the Lawrence area; I believe the curfew was necessary. The curfew was imposed not as a restrictive measure, but as a protective measure.

I believe it is a minority of persons who break the law, who disrupt our schools and communities. As Governor, I have taken steps I believe necessary to prevent the lawlessness and to maintain order. I will not be intimidated by a violent, destructive minority.

I will protect the rights of the majority of students who wish to seek and attain an education in an atmosphere free of fear and disruption. I also will protect the rights of the students who seek to reform our system through the democratic process. Ours is a nation in which if you have a better way to do something, the people will accept it. Our entire system is based on a "better-than" philosophy.

The destructive, violent minority has commanded our complete attention for too long a time. It is time for us to direct our attention to the 98 or 99 per cent of our nation's young people who are concerned. If we are going to hold our nation together now and in the future, we must realize that we are first Americans, and we must stand together. Criticism by young and old is necessary. But a thorough knowledge of the pros and cons of public questions is essential for any useful appraisal — and this always is aided by practical experience.

Today, the members of our generation have called many of the ideas of the youth impractical and we have said many of their views are overdrawn. But there is no question of their energy, ability and above all of their honest commitment to a better world for us all. Perhaps it is time that we now make an effort to take the causes of the majority of our youth and to lend to their idealism and daring, the insight and wisdom of our experience.

"Student concern add dimensions to President's duties"

What role should a university play in student activism?

The unprecedented concern of today's university students over the plight of the world off the campus and the quality of their education on the campus has added a new dimension of responsibility to the duties of the President.

Student activism on the whole is an admirable development. The university administration should foster this development in a variety of ways. Improved communications should be sought to assure students a forum for their ideas and access to persons capable of responding to them. Speakers should be brought to the campus who can discuss authori-

tatively the issues that concern students most. Wherever possible, the relevance of instruction to these issues should be stressed in the classroom. Above all, the administration must maintain a steady commitment to the concept of a university as a free market place of ideas where

must enjoy in order to fulfill its mission.

When such a confrontation arises and the normal processes of student and faculty actions are ineffectual, the administration has no choice but to seek the assistance of law enforcement agencies from off the campus.

people dare express repugnant views without fear of reprisal.

But this heartening wave of student activism has its negative aspects as well. In their fanatical rejection of the institutions of our society, a tiny minority of activists has employed violence in order to achieve their ends. Not only have they outraged the general public, but they have resorted to force in order to impose their will on persons within the university community. Thus, they pose a serious threat from within to the freedom which a university

The alternatives are interruptions of educational and other essential activities, the destruction of property and, — most of all in the long run —

the substitution of force for reason in the resolution of differences within the university community.

What is the most important goal to be achieved in the educational process?

To assist students to cultivate such qualities of mind and spirit as an appropriate sense of values, the capacity for logical thinking, respect for the worth and dignity of the individual human being, the capacity to relish man's highest achievements in the realm of the arts and such professional skills as are to contribute to the improvement of society.

What changes have taken place in recent years concerning the kind of information the public wants to know about K-State?

In general, the public is far more interested in all facets of the University than was the case five years ago. Parents want to be assured their children are receiving a high quality education in an environment that is conducive to preparing them to be intelligent and productive citizens. Sports fans, including those without

particular ties to K-State, have never been more interested in athletics than they are today.

By far the heaviest output of information is in the production of educational materials, including publications, news stories and radio and television broadcasts, for the Extension Service, which has the responsibility of taking the knowledge and resources of the University to the people of the entire state.

KEN THOMAS
Director of Division of
University Information

What are international activities at K-State?

K-State has been expanding its international complexion and international interests. It has been engaged in formal and informal international affiliations, exchanges and contracts, and it has considerably strengthened its capacity for transnational activities.

It has many faculty and students abroad, has stepped up training of Americans for work abroad, has served as host to an increasing number of visiting foreign scholars and is providing education and training for several hundred students and professionals from other lands.

It also is promoting exchanges of educational materials and professional collaboration of transnational nature. The university has empha-

sized curricular developments in area and language courses, and courses concerned with international or foreign affairs, international relations, intercultural studies and comparative studies, as well as research focusing on transnational topics, functions and processes.

What is the state legislature doing for K-State?

K-State prides itself on its excellent relationships with the legislature. Through the years the legislature has approved almost entirely the requests made to it by the state Board of Regents in support of K-State and the other state higher institutions as well.

In recent years many legislators have taken a personal interest in support of the K-State building program in veterinary medicine, and in support of the library (including new acquisitions) and new auditorium as well as other major campus improve-

ments. The legislature also has been sympathetic to the needs of K-State in terms of additional faculty and in faculty salary increases.

The legislature has responded magnificently to the emergency needs of the University following the fires which destroyed the old auditorium and gymnasium. More than any other group of its kind I know, Kansas legislators are sensitive to student needs, patient with their concerns and tolerant of their views.

What does inflation do to college costs and what can be done to control them?

Increased costs due to a rising price level cannot be controlled by the college or university. However, the university, like industry, is continually reviewing its methods and procedures and adopting new techniques and labor saving equipment to lower its costs.

Because approximately 67% of the total operating expenditures for the university is for salaries and wages, the best way to control costs is to adopt techniques and labor-saving methods that will help increase the efficiency and productivity of its staff. We have done and are doing several things to accomplish this

end, including continually increasing the use of automatic data processing for budget, accounting, personnel and student records and automating, where possible, the operations of the library.

We are also using additional labor-saving equipment and machinery in physical plant operations and large self-service dining halls which have reduced the amount of labor necessary for preparing and serving meals.

If the past is any prediction of the future, inflation will continue in the decade of the seventies and everyone in the university will have to work diligently to find new ways of controlling costs without reducing the quality of the services that are provided to the students.

What are the trends in educational methods?

At present there seems to be a trend toward programs of individualized instruction and programs of individualized design utilizing technological advances such as computers and dial access tape retrieval systems.

Recent developments in communication capability will allow resources on a world wide basis to be brought into the classroom and the laboratory. The trend to utilize on a daily basis distant resources will become more pervasive as appropriate communication equipment and technical developments become wide spread. People, their ideas; computers; libraries will be readily accessible re-

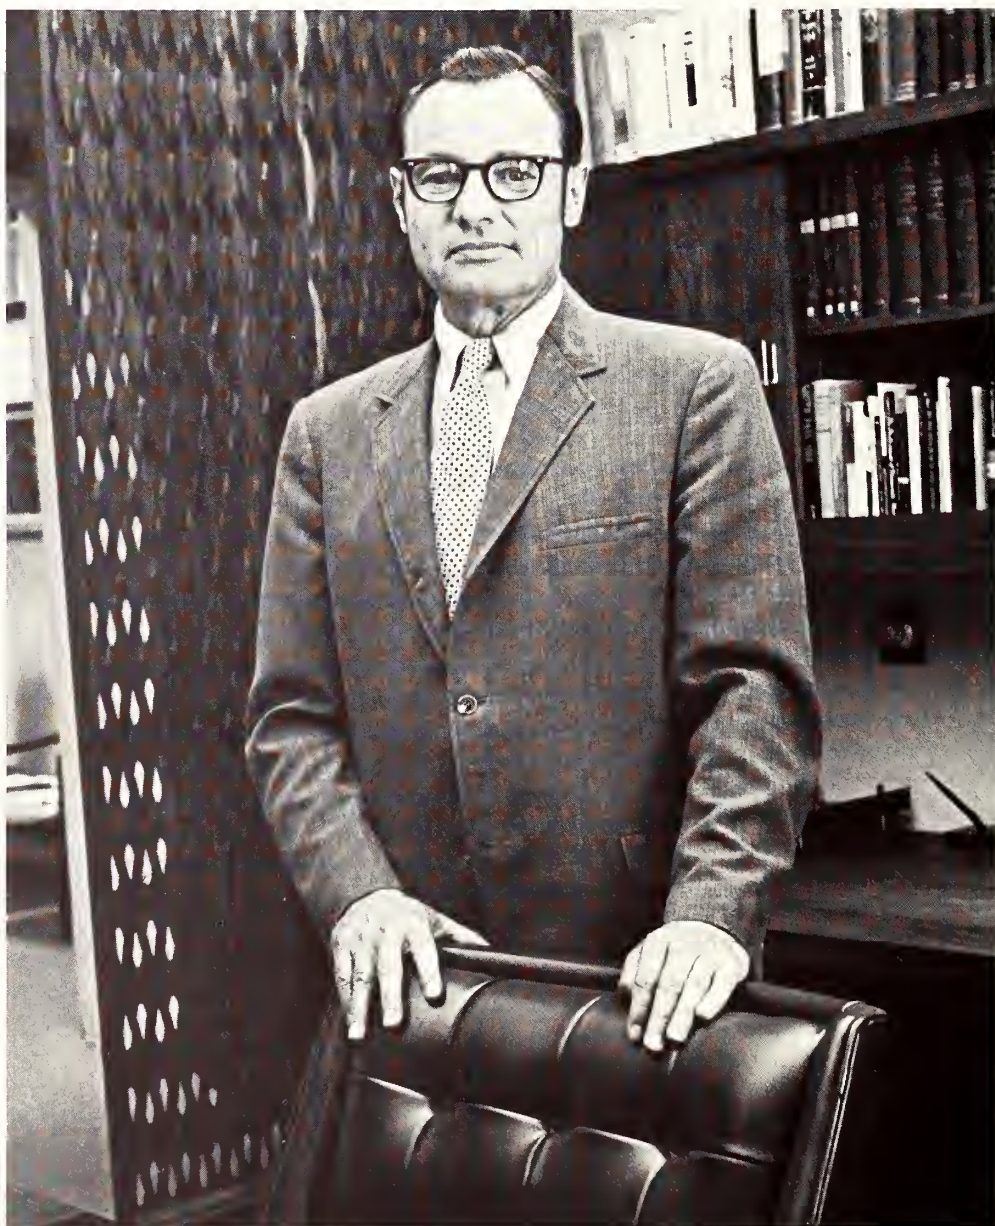

gardless of their location.

There is a trend toward more student participation in the design and presentation of educational material. This will lead to a larger portion of the students' education occurring on an independent study basis. Students will also be spending more time in practicum situations where there will be a balance between learning, research and practical application. This is closely related to a

trend where students will be expected to relate their particular discipline and study to the social and cultural surrounding.

Effective educational methods of the present will tend to be retained. Those that are ineffective will be replaced with ideas resulting from social and technological advances.

What will the campus look like in ten years?

We are extremely fortunate, our campus can continue to expand, grow and mature and we will be able to retain most if not all our heritage, the green spaces, the trees and the naturalness that for most of us has always been K-State!

Some old structures which have served the University well, will be gone, in order to provide the best sites for new structures, Nichols gym of course will be gone. The chemical engineering building will have been razed to provide eventually for additional library expansion.

The industrial engineering shops will have been razed and we will be considering the erection of a new multi-story building for undergraduate work in humanities on this site. New facilities will have been constructed for plant science north of Weber hall to allow for the expansion of King hall on the site presently occupied by greenhouses.

How much control should a university allow a large financial contributor?

A donor contributes to a university because of the mutual interest which he shares with that university. Contributions are a response to needs — on one hand those of the donor and on the other, those of the university.

In proffering a gift the donor should make clear any conditions which must be fulfilled in accepting the gift. These conditions and their implications for the university must be carefully reviewed before the gift is accepted. Where the purposes of the university are served, the gift may be accepted but where they are not, the gift should be diplomatically declined.

Once a gift is accepted the univer-

sity must act in good faith to carry out the conditions under which it was received. This is a moral as well as a legal obligation; therefore, each gift offered must be reviewed prior to acceptance and its effect on the total university program evaluated.

Every university would prefer that each gift be unrestricted. However, donors respond to specific needs, their own or those of the university, and hence, their gifts may be restricted in one way or another. Each case must be considered on its own merits. There is no general rule which can be applied in the evaluation of the way in which the gift meets the needs of the university and is directed toward the attainment of goals of the university.

Due to the ecology movement, what impact will agriculture have in the future?

Long before Silent Spring, when environment was the boys and girls one chummed with, the Kansas Agri-

cultural Experiment Station had a world-wide reputation in pollution control, so it is in excellent position to expand that work.

The Ag Experiment Station, more than any other segment of K-State, is the major research organization to protect Kansans from pollution. K-State long has been the world

leader in developing plants that resist insects, which eliminates using poisonous chemicals to save crops from insects.

Probably no other agricultural research facility in the United States is so renowned as the Erosion Laboratory at K-State, where the U.S. Department of Agricultural Research Service, the Soil Conservation Service and the University cooperate to protect streams from sedimentation and the air from dust-particle pollution.

Kansas cropping systems, developed through the years by the Ag Experiment Station, are such that herbicides are seldom needed for the State's economic crops.

The Department of Plant Pathology already has evaluated organic fungicides to replace the more harmful mercurial compounds. That department and the Fort Hays Branch of the Station have demonstrated for 20 years that only hot water (no chemicals) was needed to control loose smut in two of Kansas's all-time great wheats, Kiowa and Bison.

Intensive research at Iowa State and K-State, since 1964, has made them the two leading centers of excellence in research on proper handling of animal wastes.

K-State's long history of outstanding anti-pollution research means that the University can furnish business, industry, and government graduates well trained to cope with current pollution and environmental problems.

FLOYD SMITH
Acting Vice President for
Agriculture and Director of
Agricultural Experiment Station

To what degree should a university be responsible for its students' actions?

The student must build an increased tolerance to ambiguity; he must develop concern for others and take responsibility in that concern; he must enlarge his ability to deal with the critical issues as they become critical issues; he must increase his degree of self-determination over his future; he must increase his capacity for self-criticism and insightfulness; he must be sensitive to others and their value system; he must develop an ability to keep a dialogue going and to develop a personally viable value system; and he must broaden his participation in current affairs.

If a student can accomplish these tasks, then the University and its staff become the vehicles through which the student develops himself for the future. It is a welding together of the academic and non-academic in a growth process, enabling the student to reach new heights in a behavioral pattern which enhances himself and his environment.

The age-old concept of in loco parentis (the university serving in the place of the parent) has met with considerable ridicule in the past few years. Students have been vocal

usually in stating "My life is my own. Do not interfere with my freedoms. I have the right to make mistakes; and rules and regulations should not restrict my out-of-class freedom." The University has endeavored to listen with an open mind to these expressions, sometimes to the consternation of concerned and loving parents.

In recent years, the thrust in student affairs has been to move from a controlling environment of rules and regulations to an environment of student self-discipline and self-responsibility. This is initiated at K-State with summer orientation programs for new students and parents, and is followed by fall freshmen seminars and leadership training under competent counselors. We continue to facilitate the student's growth and development in his years at K-State by programs which utilize the student's potential.

The University takes the stance of providing maximum guidance and assistance to the students' developmental process while in the university community. This developmental process should enable the student to become responsible for his own actions.

Student Affairs

What financial support does the Endowment Association provide K-State?

An organization chartered by the State of Kansas as a nonprofit corporation, the Endowment Association seeks to promote private giving from alumni, friends, corporations and organizations interested in extending the University's influence.

To what extent should students be involved in planning of campus appearance?

No comment.

CASE BONEBRAKE

These contributions, amounting to well over a million dollars annually, are used to help meet critical needs of the University not met from public funds. Typical examples are scholarships, loans to students, loans for physical plant improvements, certain kinds of research, additions to library facilities and similar activities.

KENNETH HEYWOOD
Director of KSU Endowment
and Development Association

What is the Alumni Association's position in regard to student activism?

The Board of Directors has determined that it shall be the policy of the association to staunchly defend freedom of expression since it is part of a good education for people to hear all sides and be free to express their opinion on any subject. This academic freedom is the cornerstone of true education.

We urge the use of necessary disciplinary powers to keep discourse and action within the bounds of order, but we will neither condone violence nor accept disruption of university

activities. Vandalism, assultive vicious speech, incitement to violent action and bullying, whether simulated or actual should not be tolerated.

What segment of the Kansas population is extension reaching?

Extension clientele, as defined in the original provisions of the Smith-Lever Act which created the nationwide system, was primarily rural and ag-related. But times, situations, programs and clientele are changing.

As Extension has become more efficient and proficient in performing its tasks in agriculture, home economics and 4-H youth programs over the past half century, the rural

segment of the population has declined.

However, an increasing number of urban and suburban citizens recognize the value of information that Extension has to offer. Also other people-serving groups and agencies are asking Extension to provide educational programs focused on their specific needs.

ROBERT BOHANNON
Director of Cooperative
Extension Service

How far reaching are international agricultural programs in foreign countries?

K-State has agricultural programs in Asia, Africa and Latin America which are financed wholly by funds from outside the University.

The largest of these is one in Nigeria where 24 K-State faculty members are assisting in development of colleges of Agriculture and Veterinary Medicine. In India we have 12 faculty members located at a new Agricultural University. Many students and short-time trainees are sent to K-State each year from all areas of the world for training.

R. V. OLSON
Director of International
Agricultural Programs

What role does the engineering experimental station play at K-State?

The Engineering Experiment Station at K-State is an administrative branch of the office of the Dean of Engineering. Experiment Station personnel are not involved in research, but rather provide clerical, accounting and duplicating services to the faculty and students, both graduate and undergraduate, who carry out the various projects.

While a number of institutions have established separate research institutes outside the university structures to take advantage of increased flexibility provided by relief from state fiscal and financial restrictions, the College of Engineering has maintained a close coordination of the administration of research and academic matters.

How does educational research function within the university?

Last Fall, K-State established a new all-University unit, the Office of Educational Resources, to help K-State provide educational experiences with maximum efficiency and effectiveness. There are three inter-related units in the office — Educational Innovations, Educational Improvement and Educational Research.

Educational Research provides consultative and professional assistance to the other units and conducts applied educational research relevant to other university problems. It is ultimately responsible for the evaluation of each new program which is coordinated by the Innovations office.

DONALD HOYT

What segment of the student body can use summer school effectively?

Summer offerings are diverse enough that any student who wants to spend one to eight weeks in school can probably find a selection of courses to fit his particular need. He can regard the summer semester as a regular part of his work in a degree program. He may speed progress toward a degree by taking up to nine undergraduate credit hours or six graduate hours, or he may elect to ease his work load by spreading the customary 30-plus annual credit hours over three semesters rather than two. These are traditional approaches to the summer semester.

An alternative is to use the summer semester as a time of exploration — to become involved in a summer program which involves other-than-usual approaches to learning. For example, there are one-week in-depth workshops, study tours such as the home economics tour to Europe, practicums such as Art in Situation. There are University for Man programs which, although not directly associated with the summer semester, may correlate with university summer programs.

Since the addition, how does K-State's library rank in the Big Eight?

I hear this question quite often. Each time I hear it I am startled by the implication that a library is a building. It is a little like saying that since we have a new stadium we now lead the Big Eight in sports.

Now that we are settled in the building addition, we realize, however, that the building part of a library is very important. We see service improving at every point.

Although I have few facts to substantiate this statement, I will go out on a limb to say that K-State now leads the Big Eight in the percentage of the student body that can be seated in the central library building. This is a tenuous lead, however, since Nebraska has a six million dollar building addition on the drawing boards.

In all other ways we are still near the bottom. Our library has the smallest collection, the smallest staff and the smallest total budget. Perhaps this is not surprising since we also have the smallest student body. I shall quickly add that this is no reason for hanging our heads. We have made remarkable progress in the past five years. We know where we are going. We will get there as fast as our financial resources permit.

What are the functions of the Computing Center.

The Computing Center serves the university community as a resource of computer expertise. We serve primarily the instructional and research computing activities.

Presently, the faculty and students at Kansas State University are using the computer to aid in the solution of problems which arise in such diverse fields as athletics to music and physics to sociology. The computer can be used to a significant advantage in innumerable fields.

In the future computer technology will impinge strongly on our society — its use seems to be limited only by the imagination of the users.

Office of Admissions and Records — Jerald Dallam, assistant director of records; Donald Foster, director of records; Ellsworth Gerritz,

dean of admissions and records; James Lewis, director of admissions, Richard Elkins, assistant director of admissions.

What will the post-high school educational opportunities be for youth in the 1980's?

It is anticipated that there will be far-reaching changes in higher education as it is now constituted. In all probability more attention will be given to the solution of problems than to the gathering of volumes of knowledge in a particular discipline. And education will have to cut across disciplines, as simple solutions of problems within a discipline can create even greater problems, as is the case of indiscriminate use of DDT.

We must seek to educate, at all levels, individuals who can help to solve the major and minor problems

of the day and for the future. This means that post-high school educational opportunities of a technical, trade and service nature must be enhanced and supported for a growing proportion of high school graduates. The task will be to strive for the best educational opportunity for each young man and young woman within a much more diversified spectrum of schools, institutes, colleges and universities. Better assessment of human potential, improved guidance and counseling, greater diversification of educational opportunity and improved instruction will all contribute to an expanded and better choice for individuals rather than restricting that choice.

ELLSWORTH GERRITZ
Dean of Admissions and Records

How will the federal cut back on individual aids to education affect K-State students?

The federal restriction of funds, as well as general restriction of federal spending, is reflected in the job market for students as well as their parents, and in many instances the lack of summer jobs and lay-offs of stu-

dents' parents has also increased the demand for already short financial assistance.

This means that many students will have to eliminate some of the personal expenses they have been allowing themselves in the past and use their money more wisely to see that it covers the educational essentials of fees, books and room and board.

I would estimate that 40% to 50% of students at K-State are directly affected by federal cutbacks and another 10% to 20% are affected indirectly. This would have a tremendous impact on the total student population and one that is a source of great concern to this office.

GERALD BERGEN
Director of Aids, Awards

To what degree should a university be responsible for feeding and housing its students?

We are still considering the question at K-State. We have tried through the years to provide a high quality program of residence hall living and food service to permit the maximum university growth by building to accommodate the volume which was not provided by fraternity, sorority and apartment growth in the community.

THORNTON EDWARDS
Director of Housing

How successful are students in acquiring jobs through the placement center?

A one-word answer to this question, would be "Very!" However, that is not a very complete response. Since candidates do not always inform us when they have accepted employment, it is hard to give a precise answer. However, we can safely say that one hundred per cent of the students who use the Center receive some help in acquiring their positions — even if the actual hire is made by someone not contacted through the Center.

Guidance obtained through our registration process, the self-awareness gained in making out a resume, the poise and knowledge developed through interviews at the Center and through plant-site visits is invaluable.

In recent years, approximately sixty per cent of all degree candidates have voluntarily registered at the Career Planning and Placement Center. The vast majority of those who worked diligently through the Center did obtain employment in this way — at salaries that were very likely superior, on the whole, to those whose job searches were independently made.

How much control should students have in the Union's operation and policies?

College unions have, from their earliest beginnings at Oxford and Cambridge, placed heavy emphasis on self-directed activity by their users. A basic objective of the K-State Union is to give students the opportunity to become meaningfully involved. This means involvement not only in program planning and presentation, but also in union policy development.

This is achieved primarily through the Union Governing Board, which is composed of representatives of component groups of our university community — students, faculty, and alumni. Because students are the primary component, the majority of the board voting membership (9 out of 13) is student, one of whom is chairman. The Board is directly responsible for the broad policies under which the union functions, and within which the union staff implements daily operating procedures. The union operates within the framework of general university policies, with ultimate responsibility resting with the President of the University and the Regents.

Director of K-State Union

What health services should a university provide to its students?

A student health center, such as ours, should be a resource area for students seeking advice on any matter regarding their well being.

By being a resource area for the student, Lafene Student Health Center can supply doctor care for all students, beds in the case of short term illnesses or injuries, referral resources for more complicated cases that require medical specialties, environmental surveillance over all campus activities with an emphasis on health and safety and research in areas which would be beneficial to both students and staff.

Lafene Student Health Center has

more than adequate physical facilities. It is an accredited hospital and because of this accreditation our services are under constant surveillance from national standard organizations. Most student health centers in the nation don't reach this level of sophistication.

Students use the health center because they can reach a certain level of rapport with the doctors who are treating them. This rapport would have to exist even if we did not have our better than average physical facilities. By reaching this level of rapport with students we feel that we are fulfilling our obligations to the student body of K-State.

What is the future of the Greek system at K-State?

For more than half a century sororities and fraternities have played an important role on the K-State campus. Today, with enrollment increasing steadily, the smaller living unit provided by the chapter becomes even more important to students

desiring the close fellowship provided by these groups.

Greek attitudes and programs are changing, and the groups are striving to increase their effectiveness by helping individual members realize the potential within themselves. By adapting their programs to meet individual needs and realizing that unity can be gained through diversity tempered with responsibility and understanding, the future of K-State fraternities and sororities in the seventies can be an exciting one.

MARGARET L. NORDIN
Associate Director of Center
for Student Development

Why was the Center for Student Development created?

The Center for Student Development was created last year from the combined staff of the Dean of Students Office and the Counseling Center. Historically, a Dean of Students' role had often been viewed as that of campus disciplinarian and a counseling center was often viewed as the place to go only if you had serious emotional problems. The new combination and the name change symbolize the fact that our staff works in a wide range of areas of human growth and development such as: leadership skills, study skills, development of personal, vocational and ethnic awareness, interpersonal communications, program development, research and publication about student development, as well as support through personal crises.

The new Center is made up of four specialities: Evaluation and Research which will continue longitudinal studies of college students and publish Higher Education Briefs; Individual Development and Training which will specialize in counseling services and individual skill development; Minority and Cultural Programs to serve especially minority students and their needs; and Program Development and Implementation, providing new student orientation services.

Higher education is in transition. The Center for Student Development is an attempt to take a fresh look at how the student personnel worker can most effectively become involved in both the individual development of a student and in creating an environment conducive to educational growth.

How does college life alter students' values?

Students are somewhat more liberal when they graduate than when they enter college and they are somewhat more liberal than their parents.

This is because they feel more confident of their ability to deal with their world than they felt as freshmen; it is also because they are more aware of the complexity of life, so they are less content with black and white absolutes. Because they are

translating the spirit of an earlier age into a new era, their positions tend to move beyond the status quo of their parents.

CARROLL KENNEDY

What is the future of the campus judiciary system?

I feel that campus judicial bodies are at a critical juncture. They seem to feel they have two alternatives — to develop a highly legalistic system within the University or to be guilty of denying students due process.

I see this as a false dilemma with the greater danger lying in the first alternative because the latter can — and should — be prevented by law.

Carried to its logical conclusion, an attempt at replication of criminal court procedures on campus will squeeze out students. Student representatives will not be expected to face professional lawyers; student judges will not preside over professional courts; students at best might find themselves impaneled as jury — providing they are over 21, are citizens, own taxable property and are legal residents of the county.

Universities now are in real danger of losing a degree of the autonomy I feel they need in order to fulfill their purpose. It would be a supreme irony if the campus judiciary opened the door to outside involvement which could penetrate to the very heart of the University.

CAROLINE PEINE
Assistant Dean of Students

What have student development programs accomplished?

Involving students in the planning and execution of student programs enhances the possibility of meeting the real rather than the assumed needs of students.

As students make their first contributions they are involved in "life in process." Because they are given responsibility in college, they are better prepared to assume the responsibilities of a job. The feeling that life is beyond the ivy walls and the "I'm not ready" graduation panic are lessened.

What efforts are being made to involve foreign students in campus activities?

Let me reverse the question and ask, "What are you doing to become more internationally 'aware?' Do you really care?" Are you making an effort to know and understand all the world about you?

Let me quote from a Guideline published by the National Association for Foreign Student Affairs; "The development of American-foreign student relationships is a process, not a program. A relationship involves individuals in personal interaction. The development of American-foreign student relationships is, however, a cyclical process that needs 'programming' to generate the process."

We are all sharing in the "process."

What programs are provided for minority groups?

The primary objectives of the Special Services Program are to provide low-income minority group students additional financial and academic assistance and to provide a social outlet which would reinforce their cultural heritage while attending K-State.

The services being provided in this project are: individual guidance and counseling; academic advising; individualized instruction and other tutorial services; leadership training programs; specialized financial as-

sistance; coordinating supportive services of other university agencies and departments; career planning and placement, part-time and summer employment; modification of probationary policy to help insure longer retention; and supervision of Cultural Center operations.

JERELYN BOOKER
Director of Special Services Program

How extensive is black student recruitment?

As a result of recruiting efforts during the 1969-70 school year, 70 new minority students enrolled at K-State for the fall term of 1970. Prospective students recruited include Afro-American, Mexican-American, and American-Indian students. Recruiting efforts have been confined to the Kansas high school communities.

Recruitment methods primarily consist of: (1) visitation trips to high schools by university recruiting teams, (2) campus visitations by prospective students, (3) personal contact by upperclass university students and (4) mailing candidates literature relevant to university life.

The special recruitment program for minority students added another dimension to the University's regular recruitment program by placing greater emphasis upon the financial needs of those students with college potential.

Do I really have what it takes to be an effective _____ (fill in the blank: committee chairman, grade getter, husband, lover, Freshman Seminar leader, educator of my parents, carpenter, etc.)? What does my head and my gut tell me about where I am in relation to abortion, drugs, the pill? Who am I, where am I headed and do I really want to go there? How weird is it for me to feel this full of joy and excitement? Can I trust this sense of accomplishment? How can I share it? Are my questions stupid?

What services are there? You might choose to talk with a counselor individually or join a counseling group, study skills group, or vocational awareness group; you might do some reading, fill out an interest inventory, or a variety of other ideas you and your counselor may have. A "walk-in" counselor, whom you can see without an appointment, is free 6 hours a day, weekdays.

How does college life alter students' religious beliefs?

Perhaps one of the first noteworthy assessments of how and why students change in college is to assess the kind of religious baggage they bring to campus in their freshmen year. Six years ago when incoming students were asked to fill out a religious preference card at the beginning of school, the vast majority not only complied with the giving of religious information about themselves, but would give a denominational identity to themselves as well. The religious no-preference list was very small six years ago. Since 1965 the no-preference list has grown ever larger. Summary — "the student of today is less concerned about religion in the traditional sense and willing quite honestly and openly to declare this "new" attitude to any and all who ask."

But what of religious significance can we say about the student of the 70's. Everyone has said it, I find no reason to disagree. This student generation is very religious, very open to the religious search but the form and pattern of that search is what is new.

What it means for the established religions Prot. — Cath. etc., is anybody's guess. Many parents and others have suggested that the "religious rebellion" is a natural stage of human development for the person of college age and "they'll come back"! Maybe so ... it will take a while to research the process of this student generation and what institutions they will choose to renew by their presence. Presently they are noticeably absent from the traditional religious patterns. I am inclined to suggest that they will not return to the religion and religious habits of their parents but rather will choose to establish a new way by which the questioning and searching after ultimate questions will be carried out.

The religious establishments in 1970 wait and wonder. The student waits and wonders, too! In the meantime — campus life and religion meet head on in almost every conceivable form and faith. For many if not for all — it is the faith to "doubt" that the campus world really supports. And the list of those choosing to "doubt" grows larger and larger.

"Why isn't Listerine getting any more calls for dates?"

Why are we sitting in classes, listening to dull lectures?

"This is a University,
not a school that puts
primary emphasis on
undergraduate
liberal education
... it has much special-
ization which doesn't
leave much room for
independent study. This
must be learned."

Mix boxes, clay and paint, add
18 students involved in intra-
grative studies and create an

art happening. Group partici-
pants can experience what happens
in spontaneous class situations.

Will the independent studies program bring the answer?

You are sitting in a dull lecture class imagining yourself in a "more interesting, thought provoking" class situation. You are asking yourself why should I be sitting in this dull class when I could be learning something really practical?

This is the line of thought that runs through many students' minds as they go, day after day, to their regularly scheduled classes.

In some cases, however, students

"students want food, shelter and a pleasant university environment, but they don't want to work for this situation"

and faculty have tried to alleviate these thoughts by starting independent study programs and integrated studies curricula.

In some instances, this "move from the usual" has worked, in some it hasn't.

The question then presents itself ... "Is independent study the answer?"

Many people think so ... IF such a project is handled correctly; while others have tried them and found that many students, while asking for the privilege to deviate from the structure, aren't capable of handling the situation.

Kenneth Hagen, professor of history and one who worked with an independent semester group in the spring of 1970, feels that "students want food, shelter and a pleasant university environment, but that they don't want to work for this situation."

Hagen got into the act when some students who felt stifled in lecture classes asked him to be one of the faculty members for an independent

semester. They tried it and while several students in the group really did something, others found that the program never got off the ground.

The students that did get something out of it numbered six of 25. Those six students took a trip to California and gained a lot of experience, but the other 19 found it was hard to establish a goal.

Dave Chamberlin, professor of political science, started in independent study with University for Man.

After experimenting with UFM, Chamberlin came to believe that it was not the total answer. It still wasn't hitting the unstimulating classes on campus. It was like, "so here's UFM ... take it in your spare time."

As a result, Chamberlin established the experimental semester of 1969. It was set up for a small group.

Chamberlin, who has experienced both success and failure with such programs, now uses a more structured format with a single thrust for 15 hours credit.

He feels that the University should provide a format for such situations ... rather than just rigid classroom structures.

Hagen agrees that the administration should support such programs, but he doesn't feel they are. He cited the instance of the spring '70 program. The University wouldn't cancel dorm contracts so students involved could live as a group. Hagen received no money for the class, no travel expenses for field trips and no expenses for the faculty involved.

Potential exists in intragraded studies, Hagen feels, but he suggests that students should be screened by their faculty and peers, or by writing an essay.

There is the aspect to consider that some students take advantage of the independent study situation for "three hours of easy A." This is a reason Hagen feels some sort of

screening is necessary.

Chamberlin's idea of independent study could best be pictured by saying "if students don't respond to the current situation, change the nature of the situation." A new shape (a new class structure) promotes discussion, and breaks down the authoritarian situation.

When asked if he thought there was real potential in all areas of the campus for independent study programs, Chamberlin answered that "This is a University, not a school that puts primary emphasis on undergraduate liberal education ... it has much specialization which doesn't leave much room for independent study. The basics must be learned."

As Linda Shiek, a student who took logic as an independent study class said, "It didn't work. Logic was too exacting, we had to really understand it. We ended up back in a class situation."

Richard Marzolf, professor of biology, stated that he was opposed to

"so here's UFM ... take it in your spare time"

blind progress. That in order for such a program to be a success you have to know where you're going.

Marzolf feels that the independent study programs are important to get people working together toward a goal. But he feels that it is often hard to get people to work together because of jealousy, tradition and administrators.

Independent study is something that obviously has to be worked at. Many students think that the words "Independent study" are golden words. What they have to realize is that PEOPLE have to make these "golden" words work ... there's no magic in independent study.

Ag judging teams compete at meets; evaluate and compare ag products

Teams work for a winning goal and to develop spirit. In this respect, all teams are somewhat alike including agricultural judging teams.

K-State's five judging teams, livestock, meats, soils, dairy products and dairy cattle also work for these goals.

"A feeling of team spirit is definitely there," said a member of the meats judging team. "It's a team effort, we're all working for the same goal of winning."

Judging teams' practices were called workouts. A team of four to 10 men worked-out regularly to compete in one or two regional or national contests.

During a dairy products team workout, members tasted butter, milk, cheddar cheese, ice cream and cottage cheese samples that deliberately contained faults or came

straight from a grocer. Team members were expected to recognize and categorize the defects.

Other teams were shown, for example, five animals and were given 15 minutes to evaluate them giving a short oral justification for their judging.

If possible, workouts were on campus, but occasionally were held at a feed company, packing plant, livestock show or at a state or area fair.

Practical experience also came from working on "The Agriculturalist", a student published magazine about agricultural events at K-State.

Last year was the first time that the magazine was not financed by advertising. "The Agriculturalist" is published on campus three or four times a semester and is distributed over the campus and the state.

College of Agriculture focuses on teaching, research and extension

Four major areas served as the focal points for the College of Agriculture, Carroll Hess, dean, stated. These areas consisted of teaching, research, extension and international agriculture.

In teaching, K-State was the only college in the state that offered degrees in Agriculture. Within the College, faculty members initiated new techniques to improve teaching effectiveness.

Equipment procured by the College enabled instructors to tape themselves giving a lecture before the actual class meeting. This allowed the teachers to change and adapt their lectures to become more effective in the classroom.

In the research field, Hess explained that all research done at K-State aids the rest of the state. Research in Colleges other than the College of Agriculture is partially

supported by the Kansas Agricultural Experimental Station. For example, the Division of Biology and the College of Veterinary Medicine each received a large amount of support for agriculturally related research.

Research was also conducted by outlying branch experiment stations and experimental fields around the state. Besides research, state extension specialists and county agents, helped disseminate information to extension classes.

Presidents of each of the departmental clubs within the College, plus two elected members from these same clubs comprised the Agriculture Council.

This council, through its student representatives, aided in planning college course and curriculum matters and organized special all-college activities, such as Agriculture Science Day.

Computer system tools complicate effective agribusiness management

What changes have occurred in agricultural technology and management needs?

The responsibilities of management in businesses serving production agriculture are increasing in both scope and complexity. These added responsibilities stem in part from the growth and development within the agricultural industries. The changing structure of the agricultural industry has had a major impact on how food and fiber are produced, marketed, processed and consumed. The operations of individual organizations are larger and more diverse than a few years ago, and managerial responsibilities have increased accordingly. The job of management is made still more complex by: 1) the changing requirements of agriculture, 2) new technology in marketing and processing and 3) computer age management tools. These changes in agribusiness operations have thus had an impact on the agricultural sector of the economic system.

For example, requirements for marketing and farm supply services by crop and livestock producers in Kansas and in the nation are more exacting each year. Farming is becoming a precision industry with little room for mistakes or guesswork. The requirements of agribusiness to support this kind of agriculture are more precise as well as more complex.

Expanding technology in marketing and processing industries adds further to the complexity of agribusi-

ness. The innovations enable agribusinesses to do a better job, but increase the demands upon management.

Life in agribusiness is complicated further by the rising stream of computerized management tools and techniques. Today's manager needs to know how to use linear programming, automated management controls and other tools in the kit now called the "systems approach to management." All of these things combine to make effective agribusiness management far more complex than was true a few years ago.

Acute awareness of society's needs replaces the era of scientific interest

How will the "knowledge explosion" affect the College of Architecture and Design's curriculum in the future?

The role of the "professions" is changing. The era of scientific study following World War II was given added impetus by the Space Program and has been replaced by an awareness of the acute needs of society to provide a better physical environment for us here on earth.

Our future cities and the redevelopment of existing urban areas will be designed and built by an aggregate of professional associates working together and not as in the past — each professional doing his individual "thing."

Buildings and building groups to satisfy our demands for more built-in livability are becoming very complicated. Clients are demanding more comfort and sophisticated equipment in their structures and professional offices are becoming larger and more complex to satisfy these demands.

The "business" of building our environment for the future demands a knowledge of the computer, systems design integrating heating, cooling, lighting and sound control with aesthetic and structural considerations. Traffic problems, better recreation facilities and, most important of all, a better understanding of people's needs, their living habits and physical requirements are additional areas of concern.

The College of Architecture at K-State, foreseeing these needs, developed curricula in Landscape Architecture, Architecture, Building Construction, Interior Architectural Design and Community and Regional Planning. All of these closely related professional areas are directly re-

ed professional areas are directly responsible for the improvement of our environment.

Other universities recognize the interdependence of these professions and are beginning to combine these academic programs in a single college.

To date, however, only 12 schools in the U.S. have succeeded in combining accredited programs in Architecture, Landscape Architecture and Planning in a single college. The College of Architecture and Design not only includes these three important disciplines but has recognized the professional demand for graduates trained in the specializations of Interior Architectural Design and Building Construction.

We are indeed in an enviable situation here at K-State.

Architects use classroom know-how by planning buildings in community

Architecture is not just buildings, but buildings and their relationships with people. Buildings are for people, and should be planned according to people's needs. This planning comes through research on how people react to different shapes, textures, temperatures, sounds and lighting.

Aiding in researching the light problem is the heliodon. Enabling students to picture their model buildings during any time of day, any season of the year, the heliodon shows not only the effects of sunlight, but also skylight. Having the only heliodon in the United States that combines sunlight and skylight, gives K-State Architecture College a special distinction.

Observing activities around Sea-

ton hall made architecture students aware of the needs a building must fill. To answer these needs students relied on a culmination of material learned.

Putting their knowledge into practice, in the form of real projects, gave students an idea of what architecture is like outside a classroom.

Stagg Hill Golf Course outside Manhattan acquired plans for a new clubhouse as an end result of such a project. Architecture students also planned and worked on the new addition to the Union. The Douglas Center was part of a study done of the south side of Manhattan by architecture students. Included in the study were plans for a cultural center, meeting area and health facilities.

How will the "knowledge explosion" affect the College of Arts and Sciences' curriculum in the future?

The "knowledge explosion" is a reality which faces not only highly technical areas of study but all levels of education and all segments of the University. All programs in the College of Arts and Sciences have felt and will in the future continue to feel the impact of this reality.

It starts with the incoming freshman, who is better prepared than freshman students have ever been before. The content of many courses traditionally taught at freshman and sophomore levels in college is now taught as a matter of common prac-

Arts and Sciences programs feel impact of "explosion"

tice in the high school curriculum. At the other end of the scale, increasing numbers of students find that the traditional four-year program is inadequate as preparation for the professional careers which they desire to pursue.

As the fund of knowledge in individual disciplines increases, it becomes necessary to select more carefully the content of courses and take advantage of new methodology and experimental procedures in teaching. Automated techniques which utilize advanced technology — itself a product of the "knowledge explosion" — will be increasingly important in

Arts and Sciences instruction during the years to come. The use of technological advances to enhance the instructional competence of teachers should enable us to continue to improve the quality of education, for our educational goals require more of us than simple excellence in the preparation of specialists.

There is as much as ever — perhaps more than ever — a role for liberal education in the development of individual values and we intend that advances in knowledge and improvements in technology shall contribute to these values. A subtle impact of the "knowledge explosion" may be an unfortunate tendency to forget some of the virtues of tradition. In the years to come at K-State, the Arts and Sciences College will be dedicated to both an imaginative response to the "knowledge explosion" and an intelligent preservation of tradition.

Arts and Sciences College changing: art pushes toward Fine Arts degree

William Stamey, Arts and Sciences dean, stated that the College is constantly changing and updating its programs. He cited one major example in the Art Department. In past years, art was located in both the Home Economics and Architecture colleges.

But, a few years ago, they combined into one department and are now planning for a degree in Fine Arts.

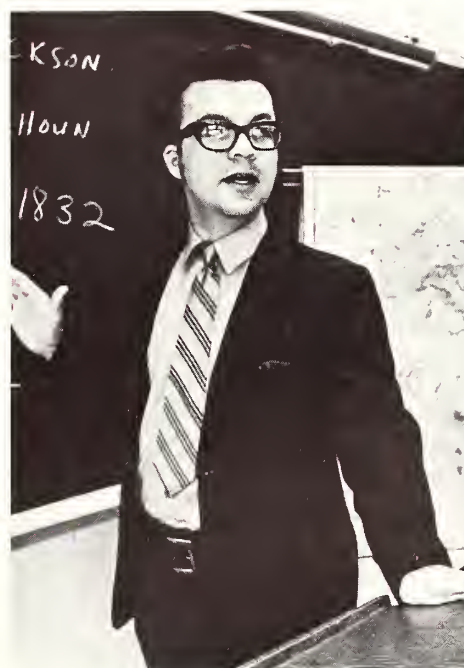

Bachelor of Fine Arts degree is being created in order to give the student a more oriented degree in art. This degree is being designed for those who want to become artists and art teachers.

This degree differs from the ordi-

nary Bachelor of Arts degree in that it places a greater emphasis on art rather than the liberal arts as a whole. There would be more actual work in the Art Department.

When the Bachelor of Fine Arts degree is approved by the Board of Regents, it will be the accepted degree before the Master of Arts degree. The Master of Arts would be the terminal degree in art.

Answering the call to wide open spaces, these deer, plus the entire Fairchild museum, moved to other museums around the state.

Honors Community, what's that? A place, a house or something especially for the honor students?

Well not quite, instead it's an organization comprised of students from the honors programs in the College of Arts and Sciences, Engineering, Business Administration, Agriculture and Home Economics.

This community, still in it's beginning stages, was organized for the students who were interested in doing something about the honors program.

In it's second year of existence, the community worked on a student evaluation of the honors classes. Also, students in the community asked that a section of the library be reserved especially for the honors

community. It would be a gathering place for the honors students, stated Max McClanahan, vice president of the group.

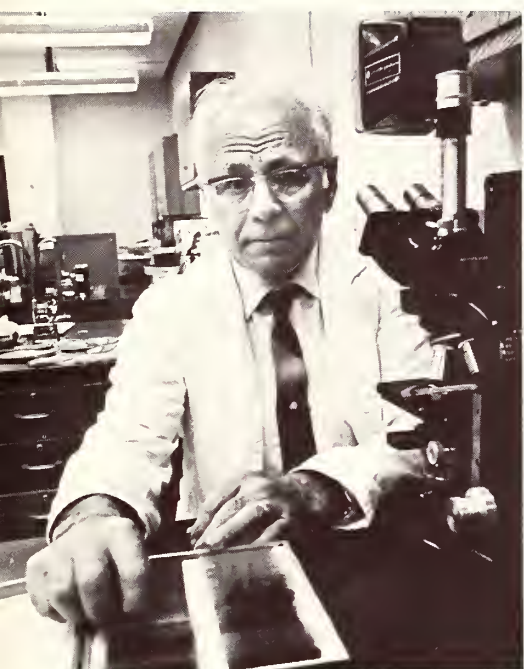

Most students associate the word honors with the stereotype of a person who makes straight A's and always has his head in a book. Members of the honors community tried to eliminate this negative attitude.

They tried to achieve this by offering and planning social events, discussions and seminars as well as academic functions.

In October, several members from the community attended an Honors Council seminar in Colorado to exchange ideas with representatives from other honors councils in colleges across the nation.

Business careers become a reality with internships

Industry is the villain within the social problems facing our nation. "Littering by individuals is not the prime source of pollution," stated associate dean Eugene Laughlin. A solution to pollution will have to come from industry. Today's business student will lead these industries in the coming future.

Drawing on their liberal arts education, business administration students will be on their own to answer social problems in accordance with business objectives and costs.

Business administration professors brought examples of actual business situations to marketing, industrial relations and auditing classes. Several programs in the College of Business Administration placed students in on-the-job training.

Life span of administrative techniques becomes shorter

How will the "knowledge explosion" affect the College of Business Administration's curriculum in the future?

As the pace of discovery and change accelerates in both technology and the broader society, business is inevitably caught up in the dynamic environment. The life span of specific types of business organization and of many management techniques has become increasingly short.

To prepare students to succeed and even to survive in this sort of business world the need is for a curriculum that will not promote premature obsolescence, but which will instead encourage individuals to adapt themselves to the new and to grow continuously.

Courses associated with the study of existing institutions will have less value, and even the study of the newest techniques is likely to be short-

lived in its value. Our courses will need to be firmly based in analysis of basic human needs and the principles that underlie human functioning, for it is in the satisfying of these needs through the use of available resources by man that the fundamental justification of the business system exists.

We will not so much seek understanding of the way in which present needs are served and business problems met as we will seek insights into the nature of the problem-solving process itself.

To the extent that we succeed in this, our graduates will be better prepared to play a major constructive role in the business system. They will be able to handle the constantly new information that the "knowledge explosion" presents without being unnerved as old ways are upset and without being confused about how to approach the new.

Also under the program, student teachers studied ways of making education more relevant for previously neglected children.

Currently a CUTE program is conducted in Wichita in cooperation

with several Kansas colleges and the Mid-Continent Regional Educational Laboratory in Kansas City.

Plans were underway by the Education Council to propose an orientation course to be offered to freshmen and sophomores. Being taught with a team teaching effort, the course would be similar to a seminar.

Teachers cope with continuing increase of knowledge

How will the "knowledge explosion" affect the College of Education's curriculum in the future?

Perhaps the College of Education is affected more by the "knowledge explosion" than any other college on the campus since it is their primary responsibility to see to it that teachers are able to cope with the continuing increase in knowledge that exists throughout the total field of educating youth in our society.

The effect of this has many ramifications. Among them are the following: 1) The teacher himself must be thoroughly informed in fields in which he is teaching. For the elementary teacher this seems like an impossible task. Other areas of the curriculum are difficult at best. 2) It is the responsibility of teachers to transmit knowledge and information through our educative process. People cannot be educated in a vacuum but need the knowledge that exists as a resource and a tool to educate

children. Knowledge is only data until it is useable. 3) This compounds the problem of selection of knowledge which is most pertinent to a particular child at a given time in his various stages of development. 4)

Teachers must be aware of ways in which knowledge is stored and made available to the learner on demand.

Interdisciplinary studies may help engineers improve social conditions

"Technology", as a word, has acquired certain overtones. To enhance the technical image, the College of Engineering sought to prove that through engineering, students could strive to improve today's social conditions.

"Engineers need to be socially aware," said Assistant Dean Kenneth Gowdy. This issue came into focus as more administrators looked to engineering for practical solutions to today's social problems.

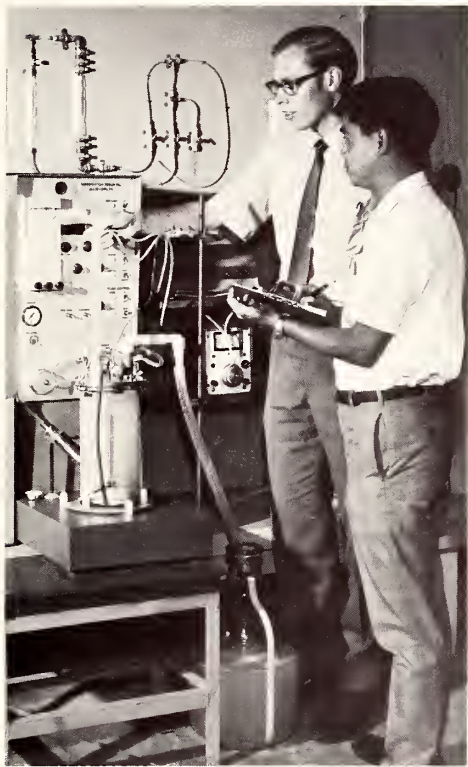

In order to accent this theme, the college introduced an interdisciplinary course concerning the impact of engineering technology on society. Open to all students, the course featured guest lecturers and considered such pressing technological issues as "If we stop building power plants because they pollute, can we still keep our rock music?"

In the past many entering engineers have become discouraged from lack of contact with engineering course work in their freshman and sophomore years. To alleviate this problem, the college opened an introductory course in engineering concepts.

Gowdy stated that the concepts course is an attempt to inform freshmen engineering students of the breadth, variety and character of the engineering profession.

Engineering Council also attempted to reduce the dropout rate by placing more emphasis on practical applications in the required math courses.

Engineer's task defined as providing "what is needed but doesn't exist"

How will the "knowledge explosion" affect the College of Engineering's curriculum in the future?

Since engineering is the profession which "develops ways to utilize economically the materials and forces of nature for the benefit of mankind," the knowledge explosion impacts directly on the engineering curriculum.

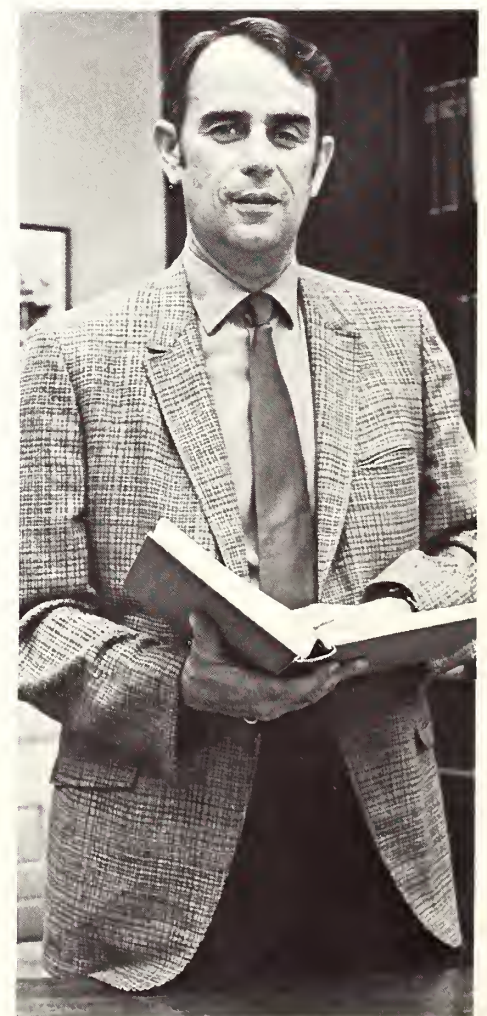

Since the task of an engineer is "to create that which is needed by society, but does not exist" it is important that he have a basic understanding of science and mathematics, but more important, that he be prepared to apply creativity and innovation to the current needs of society. The solutions to society's problems are not found in the text books.

The engineering program will

emphasize how to obtain new knowledge needed for a given task, how to create, invent or "design," how to organize the design task so that all available factors are considered. Technical details will be delegated to the computer, to the handbook, or to the supporting technical personnel.

In the past, engineers, responding to a need, have judged their solution as technically feasible, and economically justified. In addition, today, the engineer must evaluate the impact on society, be prepared to justify use of diminishing resources, and establish priorities. The addition of these considerations will have direct impact on engineering curricula of the future.

"Mini-Carnival" aids in acquainting new students with Home Ec College

"What's happening in Home Ec" characterized Justin Freshmen Aides' first "mini-carnival" held to acquaint Freshmen and transfer students with the College of Home Economics.

Justin hall lobby was transformed into a mid-way of booths with information concerning the various interest groups and clubs open to the new students.

With a \$6000 grant from the Sears Roebuck Foundation awarded to the college, eight students participated in an internship program with eight Kansas county extension offices. As a cooperative venture between the college and the Kansas Home Economics program, the "amateur agents" from K-State and other Kansas Colleges worked directly

with people from different ethnic, cultural and economic backgrounds. Each student was assigned to a particular county where her activities were coordinated with those of the county extension agent.

Continuing its stress upon individual freedom within the college, the College of Home Economics curriculum committee included eight students who voted on course or curriculum changes.

Informality set the pace for the annual Christmas Tea sponsored by the Home Ec Council. Held in Justin lounge, a style show was featured with Fashion Merchandising majors modeling the season's "midi look" in clothing they constructed. The council included elected officers and interest group presidents.

Attention focuses on factual ideas; knowledge for its own sake recedes

How will the "knowledge explosion" affect the College of Home Economics' curriculum in the future?

The "knowledge explosion" will have a profound affect on the program in the College of Home Economics in the future. Emphasis on mere dissemination of knowledge will recede into the background and will be replaced by concentration of attention on the best possible use of the great fund of information that will be available. Faculty will guide students in developing a keen sense of analysis of the many facts and advancements in knowledge that will occur.

Relationships between facts that are known will be stressed more than ever before. The search for clues that have relevance in the solution of complex problem situations will be a normal part of the university student's experience in the home economics field of tomorrow.

More sophisticated tools of communication will be provided for students to use in the transfer and application of knowledge. These will be utilized both in and out of class time and will give greater recognition to different abilities of students.

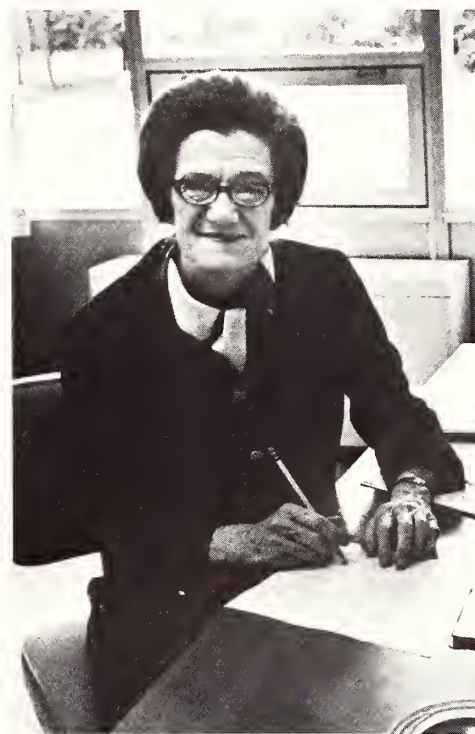

Home economics subjects have been taught from the very beginning of the field of study nearly 100 years ago with close integration between principles and their application in the laboratory learning situation. This method of instruction takes on increasing importance as knowledge expands rapidly because it provides opportunity for closer personal contact between student and faculty in the selectivity of the most pertinent knowledge.

Summer clinic class allows seniors to conduct research

During the summer of 1970, 11 College of Veterinary Medicine seniors participated in a special summer clinical program. Under this program the students took the clinical medicine course during the summer instead of during the regular fall and spring semesters.

By doing this, participants could take advantage of other educational opportunities during the regular school year.

Most of the students involved in this summer program conducted research under the guidance of staff clinicians. Also, several students participated in a special class in advanced surgical techniques. This supplemented the basic surgery skills they learned during their regular surgical training.

Courses available to students tak-

ing summer clinics were not limited to veterinary sciences. Any subject was open to students whether related to veterinary medicine or not.

Direction for the College of Veterinary Medicine was provided by the Faculty Council. Student representatives served as regular members on certain faculty committees in which students have a particular interest. Working through the committees, students have expanded their participation in decision-making. New policies resulted from recommendations made by faculty and students.

Veterinary Medicine held its 14th annual Open House on Parents Day, 1970. Operating with the theme "You, Your Veterinarian, Your Changing Environment," the Veterinary students presented possible solutions to the environmental crisis.

Veterinarians feel society's pressure to help solve the world's problems

How will the "knowledge explosion" affect the College of Veterinary Medicine's curriculum in the future?

The exponential increase in both biological and medical information has profoundly affected the kind of information that graduate veterinarians should know.

The new world of molecular biology must be integrated at the cell level and then correlated with whole animal systems. In addition, there have been so many new techniques developed in the clinical specialties of ophthalmology, gastroenterology, cardiology, dermatology, etc., that more specialization in the curriculum must soon be developed.

There is a new demand on the part of society that a veterinarian should be sensitive to society's needs and after six years of education be ready

to actively contribute. This will require a total revision of veterinary medical curricula to allow for in-depth studies in food animal medicine, small animal medicine, equine medicine, laboratory animal medicine, international veterinary medicine, and the many clinical specialties.

Due to the world's population crisis and resulting massive starvation which is predicted to be at a crisis level soon, there is a real obligation and accountability of veterinary medicine to contribute to international medicine.

Dietary animal protein deficiency must be recognized in our educational process as the number one health problem in the world. Only through the solution of this problem can national security and world peace be approached.

Graduate programs cross boundaries combining diverse research concepts

Desire among students to do more advanced work might explain the 10 per cent increase in Graduate School enrollment this year, according to John Noonan, associate dean of the Graduate School.

Because research ideas aren't always limited by departmental boundaries, other patterns of organization were needed for scholars with common interests.

Recently initiated, a program in food science involved faculty from such diverse departments as biochemistry, animal, dairy, poultry and grain sciences and foods and nutrition.

Preventing the diversion of nuclear reactor fuel to weapons or other unauthorized uses was the task of a combined physics and political sci-

ence graduate study. A \$231,000 grant by the National Science Foundation made the research possible.

Students in the Institute for Environmental Research program, carried out environmental studies under faculty from a variety of university departments.

From this they earned degrees in the appropriate disciplines such as psychology, mechanical engineering or clothing and textiles.

In the Graduate School, 67 master degrees and 32 Ph.D. programs were offered.

Identifying problems and trying to solve them defines the purpose of the Graduate School student council. Composed of 16 members, the council strived to give graduate students as a whole an identity within the university complex.

Kruh sees higher education becoming pattern for all

How will the "knowledge explosion" affect the Graduate School's curriculum in the future?

Although a current-day graduate student or faculty member might agree that "the growth of knowledge is having a more profound effect than is generally recognized," the sentiment is not new, with the quote having come from Dean F. J. E. Woodbridge of Columbia University in 1912. True words then, their prophetic note could not have comprehended the explosive and prodigious tide of new knowledge that has shaped graduate education in the years since World War II.

The generation and dissemination of knowledge now represents over 30% of our gross national product, reaching out to cover university, industrial and governmental research; education at all levels; and the activities and output of the publications and communications media. Clearly, knowledge has become more than an end in life, now appearing as an active, consuming and, times, unmanageable part of life itself.

Schools alone involve more than 60 million of our people, a 50% increase over the last decade. In higher education more than 7.5 million are enrolled.

With higher education becoming increasingly a pattern for all, and with the need for special knowledge ever more apparent, the nation faces profound social change. At one extreme, society will have to face the difficult problems of not having enough jobs for the unskilled; and, at the other, more and more highly trained people will be needed in a proliferating variety of careers. Their training will be extended to the graduate level to a greater extent than ever, and they will also require continuing professional study.

Graduate schools are just beginning to respond to the need for post-degree updating, and new patterns will certainly multiply to assist in what is becoming a life-long educational process. For the very reason that such education is based on specialized knowledge, graduate schools and graduate faculties will need to create more awareness of interrelationships between fields and a better appreciation of the cultural and

human context in which the life of the future is to proceed.

133 ways to win friends and influence people

Senate strives to "get government back to individuals"

Call it obscure, call it vague, call it hilarious Thursday night entertainment. Call it K-State's government of the people, by the people, and for the people or call it Bosco's Bureaucracy, but however viewed, it is student senate, the legislative branch of student government.

Senate's major theme, initiated by Pat Bosco, student body president,

for the 1970-71 year was "getting government back to the individual student." In efforts to complete this ideal, senate meetings were open to all students, minutes were posted in dorms, representatives from each floor in each dorm were invited to attend senate meetings, and living groups experienced Pat Bosco first hand when he made personal

appearances at residence halls.

Senators also attempted reaching students through "Rap with a Senator" sessions in the Union and an All-University Student Governing Association Conference. These conferences, designed for an exchange of ideas between students and their senators, at best only developed better relations between senators, as student attendance and/or interest was practically nonexistent.

But whether or not senate, its functions and goals, ever became "perfectly clear" to the majority of students on campus did not slow legislative action. Senate was responsible for introducing visitation hours in dorms, interim semester, (classes offered during a two week period between semesters), possible senior exemption from final exams and the investigation into the extension of the number of pass-fail courses offered to students each semester.

Teacher-Course Evaluation, a system whereby each student has access to other students' evaluation of a specific course and its teacher, was pushed, and special interest was devoted to minority groups and the possibility of setting up a studies department in Farrell library.

President's Cabinet — Richard H. Miller, Keith M. Stutterheim, Mark A. Fenton, Gregory Fontenot, Linda S. Trueblood, Victoria L. Miller, Pat J. Bosco, Michael D. Lynch, Lothar R. Papenfuhs.

Senate also dealt in depth with funding, examining the amount and use of allocations.

However, summarization or condensation cannot adequately cover the extent of student senate legislation and advising. As Bosco himself will explain, "I've talked with the President of the United States and today I fixed a sidewalk in front of Smurthwaite — that's the vast range of student senate."

Pat Bosco's President's Cabinet is usually comprised of nine appointed student members. The number varied with the present needs of the SGA chief.

Each cabinet member had a particular area for which he was responsible, such as attorney general, housing, academic and campus affairs.

This cabinet was formed to allow the student body president to apportion out duties of research and bill preparation in designated areas. Findings were submitted to him upon their completion.

Senators and committee members take time out and decorate the

Student Senate's Union office at their all-SGA Christmas party.

Student Senators, to make student government more relevant to

the student body, present "Rap With a Senator" sessions. At

these sessions students and senators exchanged ideas and views.

What has SGA accomplished?

K-State Student Governing Association has taken great strides in the realm of true representation through communication.

Student government, in order to fulfill its responsibility to the student body, must be able to provide the input as well as the output to facilitate the kinds of programs which will benefit the total University. Distribution of Student Senate minutes to living groups, visits by the student body president, living group liaisons to Student Senate, and periodic action sessions have all been designed to allow maximum input of ideas, problems and suggestions.

Student government at K-State must continue to tackle the kinds of problems that encompass the entire university community. If it fails to continue in this regard, then SGA becomes ineffective in its goals.

Goals must be set to develop and improve educational standards, to advance student rights and responsibilities and to foster an understanding as well as an awareness of student needs.

True student representation, communication and understanding

are the real answers to a continuation of positive constructive educational reform at K-State through its Student Governing Association.

Pat J. Bosco
Student Body President

What should SGA be doing?

SGA — What the hell is that? This attitude is where the problems of Student Senate lie. The vast majority of students, in all probability, still believe that SGA is a social club whose biggest event of the year is when Senate gets in a philanthropic mood and allocates hundreds of thousands of dollars of student fees.

The first problem of SGA is that it is a living legend, and the legend in this case is of a notorious do-nothing organization ... save giving out

money.

The checks and balances system in this governing body is not effective because it is not used as it should be.

The constitution which gives each of the branches its power is so poor and seldom if ever abided by one wonders if it is worth having. It is very similar to the Articles of Confederation.

The legislative branch is so bogged down with trivia and unnecessary parliamentary procedures that the sessions are rapidly beginning to resemble the sessions of the state and federal legislatures, with personal feuds and bickering.

These are only some of the basic problems one finds in evaluating SGA. The constitution needs to be rewritten to include provisions for a bicameral legislature. SGA needs to realize its limitations and perhaps develop a system of rewarding SGA officials for doing a good job.

Basic changes need to be made or SGA is destined to become a bigger joke than it is today and will die a death in obscurity.

Frank (Klorox) Cleveland

Faculty Senate, Tribunal direct, govern student affairs

All colleges, extensions, administrative departments and the library are represented proportionately on faculty senate.

This year the senate considered problems of the interim semester and the new university governance proposal.

Tribunal consisted of five students and two faculty members.

Other than ruling on the constitutionality of student government decision, Tribunal exists for students who wish to appeal a university related act.

Students who feel they have been unfairly dealt with in a living group case, for example, may appeal to University Tribunal.

College Council, Student Review handle problems

All nine of K-State's colleges, including the graduate school, were represented on the College Council. At its monthly meetings the presidents of the various college councils had an opportunity to discuss problems of their colleges.

New ideas were brought out and discussed and each member then disseminated any new information to the students within his college.

College Council functioned as the only organized body on campus specifically designed to bring together the branches of study within the University.

Student Review Board was established as the second highest court of the Student Governing Association's judicial system. It heard original cases as well as cases appealed from lower courts, such as residence hall judicial boards.

Student Review Board handles incidents in which the student may have violated one of the codes governing student behavior. Its decisions only affect the status of a person as a student.

Recommendations for disciplinary action against a student may extend up to dismissal from the University. All decisions of the five member panel may be appealed to Tribunal and if necessary to President McCain.

Fine Arts Council, ICC set up cultural communication

Striving to increase and improve existing programs was the aim of the Fine Arts Council and the International Coordinating Council.

University Fine Arts Council, formed in the spring of 1967, was composed of an equal number of faculty and students from the performing and graphic arts plus the K-State Auditorium manager. The Vice-President for Academic Affairs served as council chairman.

Throughout the year the Council worked at coordinating the University Fine Arts program, providing a cultural enrichment in the performing and graphic arts at the University and sponsoring cultural programs off-campus.

This council also explored sources for additional funding for fine arts program development.

Presidents of organized foreign student groups on campus composed

the International Coordinating Council. ICC was developed six years ago to further communication between the different international groups and to schedule activities between these clubs.

This council held special events and trips and sponsored a Pakistan Relief Fund. ICC also continued investigation into establishing an International House so international students could live together.

Groups consider controversial issues on the campus

Concerning themselves with issues which effect the University, the Council on Student Affairs and the Board of Student Publications were basically governing bodies.

The Council on Student Affairs existed for the advantage of individuals and groups on campus in need of assistance, recognition or guidance in student oriented matters.

Issues which were encountered by this council involved the senior "to have or not to have" final exam controversy, a greek organization wishing to colonize on campus, credit-no-credit courses and the liberalization of university dormitory visitation policies.

Board of Student Publications was strictly a governing body for the three major student publications, the Royal Purple, the Collegian and Dimensions magazine.

This board did not concern itself with censorship but instead, left censorship up to each individual publication.

The board appointed editors, allocated funds and adjusted pay scales. As chairman of the board, the head of the Journalism Department worked with two faculty members, and three students who were elected to the board through the all-university general spring elections.

Union Program Council, presented various art exhibits, entertainers and speakers. One of the most noted authorities on the New Left, Murray

Levin, was introduced to K-Staters by the UPC committee, News and Views.

New within the Council was the organization of Members at Large, an independent group of four program council members who worked with the Manhattan Environmental Awareness Committee.

Union Governing Board, to provide for complete use of the expanded facilities, approved a \$2 million budget which was nearly twice that of the previous year. Working with Richard Blackburn, Union director, the governing board also established guidelines for daily operation of Union services, such as cashing checks.

UAB, IM Council favor student demands for facilities

University Activities Board and the Intramural Council worked for the improvement of existing as well as future programs and facilities.

K-State's Intramural Council was successful in backing student demands for additional facilities for the non-varsity athlete on campus.

Council accomplishments included the new tennis courts and the lighting added this year on the courts. The council also set salaries

for coaches in inter-collegiate competition and continued to probe into the proposed indoor intramural sports complex.

Intramural Council also acted as an advisor to those participating in its programs, answered to the groundsmen for field conditions after competitions and approved budgets from different intramural sports before sending the requests to senate.

Operating with a revised constitu-

tion, the University Activities Board assisted new campus organizations with their programming and organizational procedures.

By the 1970-71 policy, all organized fund-raising projects exceeding 200 dollars were reviewed by the board to determine their consistency with written university policies.

Emphasizing change, UAB encouraged all campus organizations to re-evaluate their objectives for the year.

Music groups tour Kansas; help dedicate auditorium

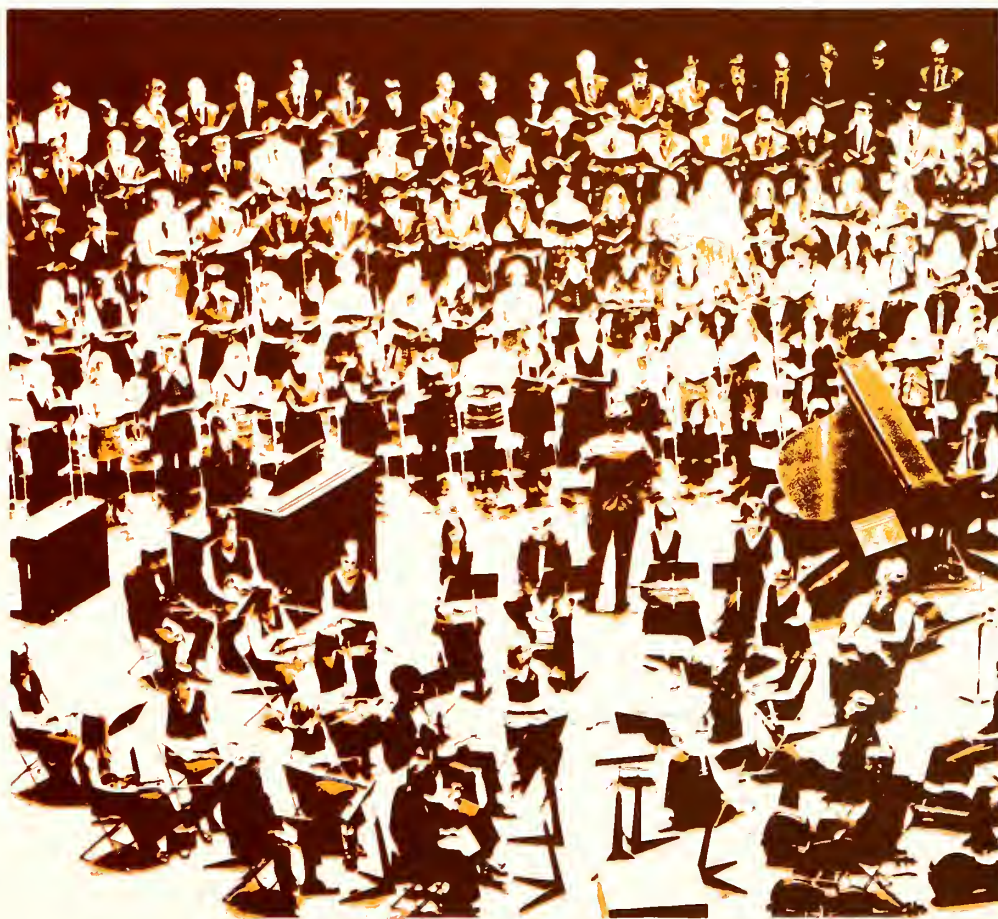

In addition to their regular schedules, three K-State music groups, Collegiate Chorale, Concert Choir and Symphony Orchestra, performed at the dedication of the new auditorium.

Featured with the Minnesota Symphony Orchestra during dedication ceremonies for the new auditorium, Collegiate Chorale performed Gail Kubik's "Record of Our Time." The group, composed of 114 undergraduates, presented the annual Christmas program "A Festival of Nine Lessons and Carols."

Touring western Kansas, the K-State Concert Choir sang for Junior Colleges, high schools and junior high schools in Great Bend, Hays, Colby and Garden City.

Besides their Kansas tour, the choir also performed with the Minnesota Orchestra at the dedication of the new auditorium. The choir was also selected to sing in March at the national convention of American Choral Directors.

K-State Symphony Orchestra also toured Kansas this past year. Their tour took them to Topeka, Lawrence, Emporia and Salina.

K-State Symphony Orchestra, Women's Glee Club and the Collegiate Chorale combine to present

"A Festival of Nine Lessons and Carols." President McCain helped narrate the Christmas show.

Singers perform show for servicemen during USO tour

Rehearsing the same song day after day can sometimes be a drag. For members of K-State music groups, the pleasure derived from singing is enough to keep up interest. However, some groups offered variety.

This spring the 14 members of the K-State Singers performed for United States servicemen in Greenland, Iceland, Labrador and Newfoundland for their sixth USO tour.

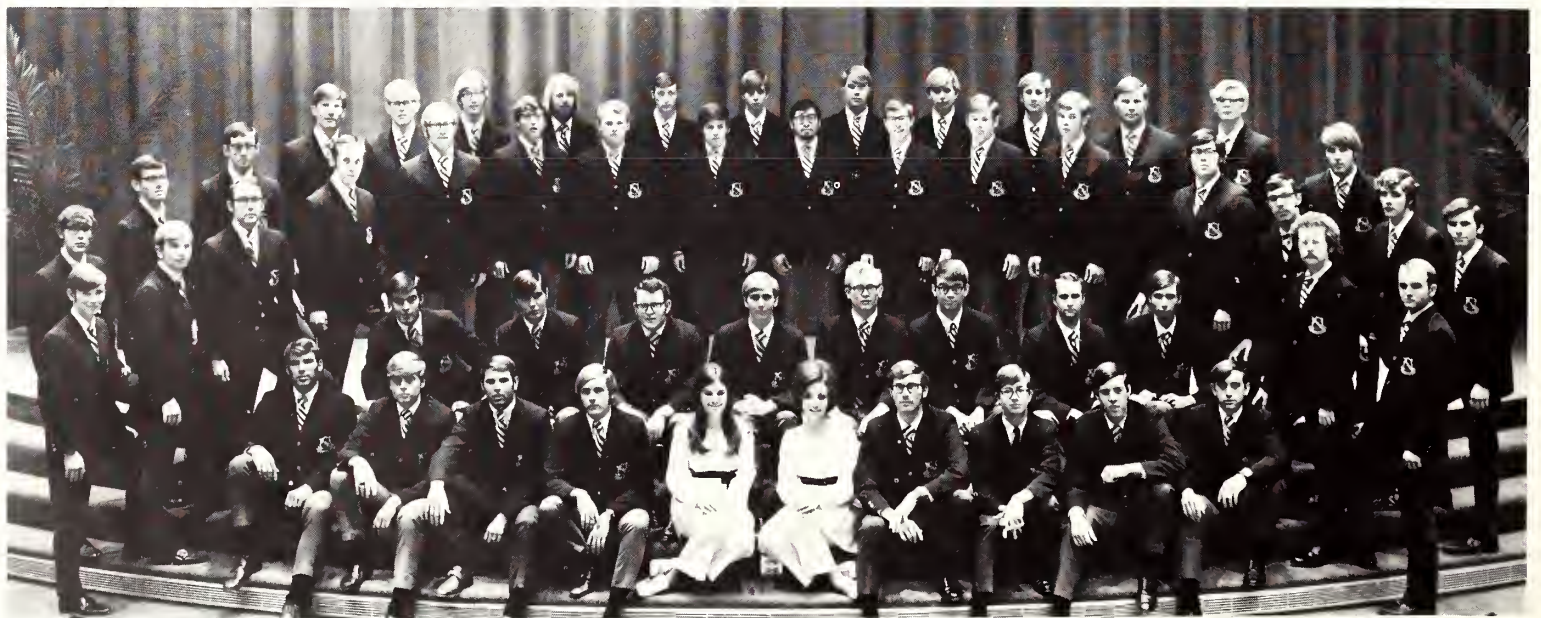

Men's Glee Clubs from South Dakota State University and Oklahoma State University performed with K-State's Varsity Men's Glee Club at the Inter-collegiate Music Council's convention in Manhattan. The spring Glee Club national convention was the first held in the Middle West.

Women's Glee Club sang the "Festival of Nine Lessons and Carols" for the Union's Christmas Feast of Carols. The women also sang for 900 fellow students enrolled in the music listening laboratory.

Recently organized, Black Voices Choir practices in the Union Lit-

tle Theatre for an upcoming musical presentation in Kansas City.

Groups satisfy UAB requirements constitution, membership dictated

Any group wishing to organize on campus must seek provisional approval from University Activities Board. The board has set up certain requirements which organizations must meet in order to obtain university approval.

At least 51 per cent of the member-

ship must be K-State students, faculty, staff or their immediate families. The organization must have a faculty advisor and a constitution not in conflict with stated university policies. Membership requirements cannot be based on either race, creed or national origin.

New dimension in Wildcat athletics emerges with K-State purple power

During the past four years a new type of spirit became instilled in the athletic program at K-State. It created not only traditional support for the football and basketball teams but carried over into the minor sports as well.

Banners, buttons, window stickers, clothes and umbrellas all proclaimed the regeneration of pride, Purple Pride, in K-State athletics. Beginning with Vince Gibson and his "We Got Pride" philosophy, it soon spread to basketball under former coach Cotton Fitzsimmons with the phrase "Cotton's 'Cats Are Tops'" being coined. And from there club as well as university sponsored teams

picked up the Purple Pride theme. Even President Nixon, on a Landon Lecture visit, capitalized on K-State pride by sporting a purple and white tie.

But the success of Purple Pride was not only due to K-State's coaches and avid student followers. Manhattan residents, merchants and school children of all ages, supported the cause by exhibiting K-State's colors of purple and white. Purple Power weiners, eggs and milk became common household foodstuffs. While thermos bottles of purple punch and the advent of purple toilet paper added impetus to K-State fans during chilly afternoon football games.

Astro Turf, larger seating capacity enhance K-State's athletic facilities

How do Big Eight athletic facilities compare with other major conferences?

The decade of the sixties showed great advancement by the Big Eight Conference toward updating its athletic facilities. This advancement was encouraged to maintain the demand for competitive teams and reflect favorably the attitude of educational excellence in all the Universities. "Athletics have long been recognized as the window in which the total University is viewed." It's a challenge to keep this image alive.

K-State led the way in the Conference with physical improvements. A new stadium was built that since has been enlarged to seat 43,000 (fifth largest in the Big Eight). K-State also followed the trend by building a new athletic dormitory — and — was the first in the conference to install synthetic turf. Now four of the eight have the turf with others to follow.

Every member of the Southwest Conference has installed AstroTurf with four schools in the Big Ten and several schools in the Southeastern Conference going to the new surface.

Practically every Big Eight school has enlarged their football seating capacity. Yet very few stadiums in this Conference compare with the huge capacities of Big Ten and other Eastern Conferences. All schools are cognizant of the rising costs in athletics, and one way out is to increase attendance by enlarging facilities.

Where K-State was the leader with a fine basketball facility two decades ago, Missouri and Iowa State will move into new arenas in 1971, with Nebraska, Oklahoma, and Colorado anticipating new coliseums in the near future.

This aspect of intercollegiate athletics, until new facilities are built, really lag behind in the total Big Eight picture. It's a trend that we will see change even more in the 70's.

To compare totally the Big Eight Conference facilities with other major Conferences is a tremendous task. Every sport is different and treated differently in every institution.

Pride and tradition have brought K-State athletics to the threshold of greatness. This is only a reflection and compliment to the University.

Top 20 pre-season poll rank causes Wildcats to start year with pressure

1970 — Labeled as the "Year of the Quarterback" was a prediction only too true for many of the nation's top collegiate football squads, including for the first time in many years, the K-State Wildcats.

Playing a role unfamiliar to a team which has not had a winning season since 1954, the Wildcats were ranked within the top twenty in pre-season polls by *Pro and College Football*, The AP, UPI and *Playboy*. Coach Vince Gibson accepted the publicity with a casual — "Pressure is something we need at K-State," — and pressure is what K-State had.

'Cat fans expecting no less than a winning season raised \$250,000 for artificial turf, bought 22,000 season tickets, and spent additional dollars on paraphernalia ranging from purple ties to purple prophylactics, all in support of Vince and the K-State football team.

But on opening day it appeared more like the year of the defense, as defensive end Mike Kuhn aided a stalled offense by blocking two

punts, and destroyed the Big Eight Skywriters myth of a weak K-State defense as the 'Cats swamped Utah State, 37-0.

On the road against Kentucky the bruised ribs of Lynn Dickey and, according to Gibson, "the failure of the offensive line to hit anybody," allowed Kentucky to play the spoilers role as K-State fell by a two touchdown margin.

Sitting out his first game since early in his sophomore year, the injured Lynn Dickey saw only limited action as a place-kick holder in K-State's game against the Sun Devils of Arizona State.

Backup quarterbacks Max Arreguin and Dennis Morrison divided the signal calling, though with only a limited degree of success. A fumble and an intercepted pass set the stage for two Arizona touchdowns in the final three minutes of the first half, and K-State was never able to recover as they lost their second straight football game on the road by a score of 35-13.

Big Eight places K-State football under restriction

Chosen as Big Eight Back of the Week for his performance, Henry Hawthorne dazzled a home crowd as well as the Colorado defense in sparking the 'Cats to a 21-20 thriller over the Buffaloes.

Hawthorne gained 291 yards in total offense, including 128 yards on nine rushes, four pass receptions for 96 yards and one kickoff return for 67 yards and scored what was eventually the winning touchdown.

After the victory Vince Gibson credited the team with giving 110 per cent effort, while CU head coach Eddie Crowder reflected his feelings by having the Buffalo squad run post-game wind sprints.

Between the Colorado and KU football games a bombshell was dropped on the coaches, players and fans of K-State, as the 'Cats were placed on probation by the Big Eight and the NCAA for football recruiting and testing violations. The three year probation restricted K-State from participation in any post-season competition, prohibited the televising of any game in which they played and publically censured head coach Vince Gibson. Yet this ruling was not a fatal letdown as the players set the Big Eight title as their goal.

As in the past the "Snob Hill" — "Silo Tech" rivalry generated much excitement both in the stands and on the field and 1970 was no exception. On the playing field K-State committed a series of costly mistakes including a fumble on a punt snap and an illegal procedure penalty which nullified a potentially winning touchdown, in dropping a 21-15 decision to the KU 'Hawkers. K-State piled up 27 of 39 first downs, rushed for 387 yards as compared to 232 for KU, and controlled the football for 100 of 157 executed plays, yet the 'Cats inability to score when within the KU twenty-yard line was the crucial factor in the game.

'Cats lift Big Eight record to 4-1, beating ISU, OU, MU

K-State's conference mark was boosted to 2-1 in league play and 3-3 overall, as the 'Cats bounced back after the KU loss to stop Iowa State 17-0. The Wildcats capitalized on an intercepted pass returned by Clarence Scott to the ISU one-yard line, a stout defense which limited the Cyclones to only 13 yards rushing in the second half and the kicking game of John Duckers, who averaged 40 yards per punt.

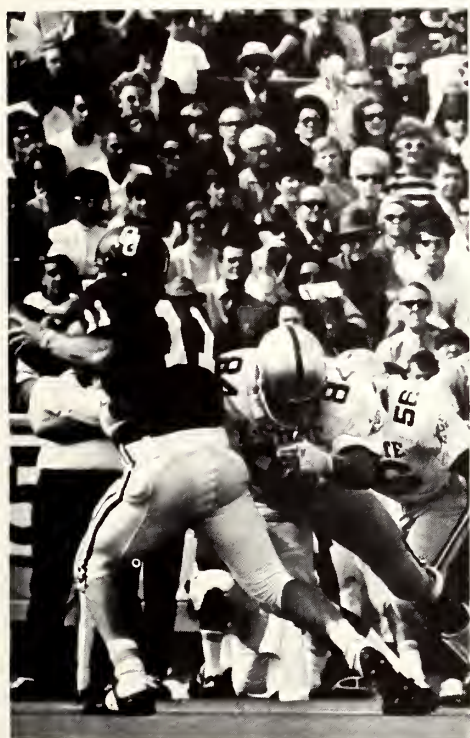

Extending a winning streak which started with last year's drubbing of Oklahoma, 59-21, the Wildcats topped the Sooners 19-14, in a game marred with three interceptions and two fumbles in the first half of the contest.

But in the second half K-State scored on a fumble recovery in the end zone by Rick Ferguson, and Lynn Dickey hit Henry Hawthorne for a 28 yard touchdown pass which gave him 26 T.D. tosses surpassing the late Paul Christman's conference mark of 25.

Against the Missouri Tigers the following week, Lynn Dickey set another conference record surpassing

Bob Anderson's total offense mark in leading the 'Cats to a 17-13 come from behind victory. In addition, the win provided the seniors with a victory over every Big Eight team since their eligibility began as sophomores two seasons ago.

K-State's winning touchdown came on a Dickey aerial to Mike Creed, who with a little help from his friends, notably John Goerger, was shoved into the end-zone from the Missouri two-yard line to record six points for the Wildcats.

'Cats tie for second in Big Eight; compiling a 5-2 conference record

Tying the mark of five league victories, last set in 1934, the 1970 Wildcats disarmed the OSU Cowboys, 28-15, before a Homecoming crowd of 38,300.

Although rolling up 477 yards of total offense to 304 for O-State, the 'Cats nearly gave the game away with five costly turnovers. But the "Big D" showing stiff, heads-up defensive play managed to limit the Cowboys to a field goal and a pair of TD's.

For the K-State offense Bill Butler picked up 130 of 249 rushing yards to

compliment the 189 aerial yards of Lynn Dickey, in posting the fifth Wildcat league victory.

Having no post season bowl game in sight, due to the Big Eight and NCAA probations, K-State played what most considered the next best thing as the 'Cats met Nebraska in a battle for a possible conference championship.

K-State-Nebraska game tickets were scalped for \$15 to \$20, while many students journeyed to Lincoln without tickets and eventually climbed over fences and mingled with 'Cat band members to gain admittance. One enterprising spectator went so far as to assume Athletic Director Ernie Barrett's identity to receive a game pass.

On the field, the "Big Red" were as impressive as scouting reports had shown. Scoring two early touchdowns on an intercepted pass by Jerry Murtaugh and the powerful running of Joe Orduna, NU built a 14-0 first quarter lead. K-State's offense was never able to become untracked as Lynn Dickey threw seven interceptions and Mike Montgomery was ejected from the game on a controversial incomplete pass ruling. The 51-13 loss left the team with a 5-2 conference mark and the non-conference contest with Florida State yet to play to finish out the season.

Being somewhat let down after the NU game the K-State defense gave up 424 yards of offense to Florida State and were called on four personal fouls for roughness.

Lynn Dickey, the greatest passer in Big Eight conference history completed 20 of 38 attempts for 225 yards of offense. Dickey ended his third year of competition with 2,008 passing yards for a career total of 6,208. His career total offense, also a league mark stands at 5,779 yards, as K-State closed the season with a 6-5 overall mark, and sent 11 players to six post-season all-star bowl games.

Injuries plague K-State freshmen throughout season

Although posting a 1-3 season K-State's freshmen football squad produced several seasonal highlights. The running of halfback Issac Jackson showed time and time again his ability as a potentially great running back. Issac proved his ability to K-State coaches and fans in the frosh game against MU where he rushed

for 228 yards and scored two touchdowns.

Defensively, linebacker Greg Jones turned in an impressive seasonal performance, as did monsterman Steve Nicks, before being side-lined with a knee injury in the freshmen game against Oklahoma State.

K-State's freshmen team opened

the season with a big win against arch rival KU by a score of 23-13. The frosh demonstrated solid defensive play in containing the highly touted KU quarterback, David Jaynes, and offensively were able to move the football.

Meeting Oklahoma State in their second game, the K-State freshmen were soundly beaten by an O-State squad rated as one of the better teams in Oklahoma State history. The freshmen took a physical as well as a mental beating, losing six defensive starters during the game. This loss of player personnel did much to weaken the defensive squad for the remainder of the football season.

Against Missouri and Nebraska in their final two games the 'Cat frosh were unable to improve upon their won-loss record as the squad dropped both contests by scores of 41-34, and 63-29, respectively. Leading 21-13 at the half the 'Cat freshmen gave up three third period touchdowns to MU in that losing cause. While against Nebraska the 'Cat defense gave up touchdowns on Nebraska's first three possessions and were never able to overcome the deficit.

Wildcats topple Texas Christian in Coach Hartman's home debut

K-State basketball underwent a drastic change in 1970-'71, as former head coach Cotton Fitzsimmons moved up to coach professional ball and was replaced by Jack Hartman from Southern Illinois University. Also the 'Cats found themselves lacking an experienced guard to replace last year's play-maker Wheeler Hughes.

Yet according to Hartman, "a good defense can keep you in a game regardless of the offense," and this is what was concentrated on during pre-season practice.

Opening the season with what many considered a lack of depth, the Wildcats demonstrated that they could win as the 'Cats downed TCU in Coach Hartman's home debut. K-

State's record was evened at 1-1 the following week as top 10 ranked Indiana bypassed the 'Cats 75-72, ending a Wildcat Ahearn winning streak at 17 games.

Playing Wichita State twice in one weekend, the 'Cats lost the initial contest 64-51. While in Manhattan, the following night, Bob Zender flipped in an 18 foot jump shot with four seconds remaining to propel K-State to a 75-74 win.

Team inconsistencies hamper 'Cats in seasonal play

As pre-season play continued throughout mid-December K-State's lack of a take charge guard and bench depth became evident as the 'Cats were unable to generate a sustained series of wins. The Wildcats dumped Vanderbilt and placed third in the Kentucky Invitational, but lost an erratic contest to former coach Tex Winter's Washington Huskies.

At the Big Eight Tournament in Kansas City, K-State once again demonstrated inconsistency as the Wildcats lost in first and third round play for a sixth place position in the pre-season tournament.

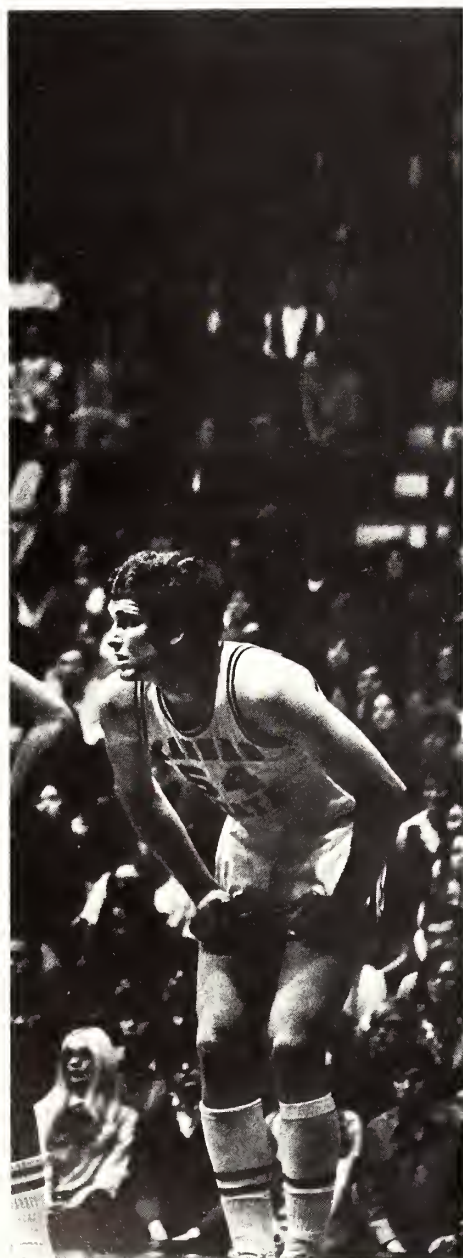

In an effort to find a winning combination and with an ankle injury to Eddie Smith, coach Hartman varied his line-up giving Terry Snider, David Hall, Steve Mitchell and Ernie Kusnyer plenty of playing time, while substituting Jack Thomas, Lindbergh White and Bob Zender freely.

Going into conference play the Wildcats were still lacking in some areas, but had achieved one of Hartman's goals; that of relatively balanced scoring, in posting a 5-6 pre-season record, and K-State's lowest finish since 1956 in the Big Eight pre-season tournament.

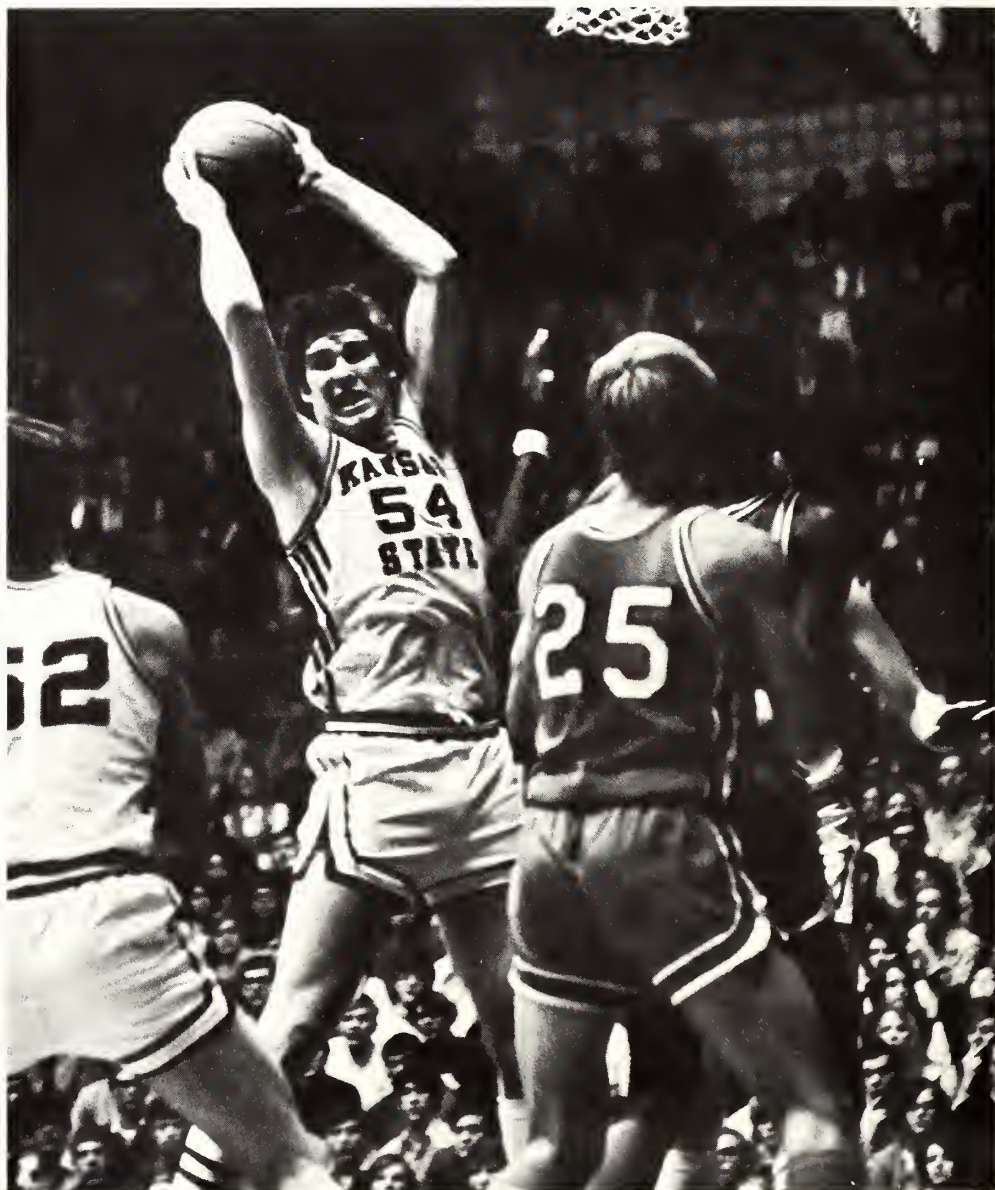

With the opening of conference

play at home against the Nebraska Cornhuskers, the 'Cats surprised NU by eking out a one point, 70-69 victory. But the Wildcats were unable to develop a victory streak as K-State dropped two following contests with Oklahoma and the Missouri Tigers by scores of 68-75 and 72-80.

Following the Mizzu game the 'Cats met last year's midwest regional rival, Houston. K-State managed to stay close throughout the game by breaking the Cougar full-court press, but even the 33 point performance of Ernie Kusnyer was not enough as Houston sophomore Steve Newsome flipped in a last second shot for a 73-71, Cougar non-conference victory.

Oklahoma was the next Big Eight opponent to invade Ahearn Fieldhouse and do battle with the Wildcats. Sporting a 21 game losing streak in Ahearn, the Sooners saw the series extended to 22 as David Hall grabbed a K-State school record number of rebounds and Terry Snider tossed in 26 points to lead the 'Cats to a 78-70 win.

K-State then took to the road, but with little success as the Colorado Buffaloes dropped the Wildcats 86-72, and Kansas defended their fifth place national ranking by pulling out a tight, hard fought 79-74 triumph. K-State kept the game close by hitting their first ten shots from the field and 61% overall, but second half turnovers proved to be the 'Cat's downfall.

Iowa State provided the 'Cats with an end to their winning drought as Steve Mitchell fought a collapsing defense to score 29 Wildcat points, and Bob Zender chipped in 17 points to spark a 96-81 K-State basketball home league play.

Heading into the season's final stretch the Wildcats found pressing defenses and costly turnovers less prevalent in their games. Lindbergh White and Jack Thomas took over much of the starting duty at guards and demonstrated effective ball handling.

But K-State could not put everything together consistently as the 'Cats fell to Iowa State, Kansas, Oklahoma State, Nebraska and Missouri. While Colorado and a second contest with Oklahoma State provided K-State with victories for a 6-8 conference record.

For the season as a whole, the Wildcats had a rugged time adjusting to Coach Hartman's style of play, but the ball players readily identified with the head mentor and as Ahearn crowds showed, so did 'Cat fans.

Freshmen cagers post 8-4 record for 1970-71 campaign

K-State's freshmen squad, coached by Larry Weigel, came into the 1970-71 season with one of the more talented teams in several years. Proving their potential throughout the year, the squad posted an 8-4 record and created excitement with their precision and sometimes razzle-dazzle play.

Northern Oklahoma Junior College was the first opponent of the season, which the 'Cats blitzed 84-55, following strong performances of forwards Danny Beard and Larry Williams.

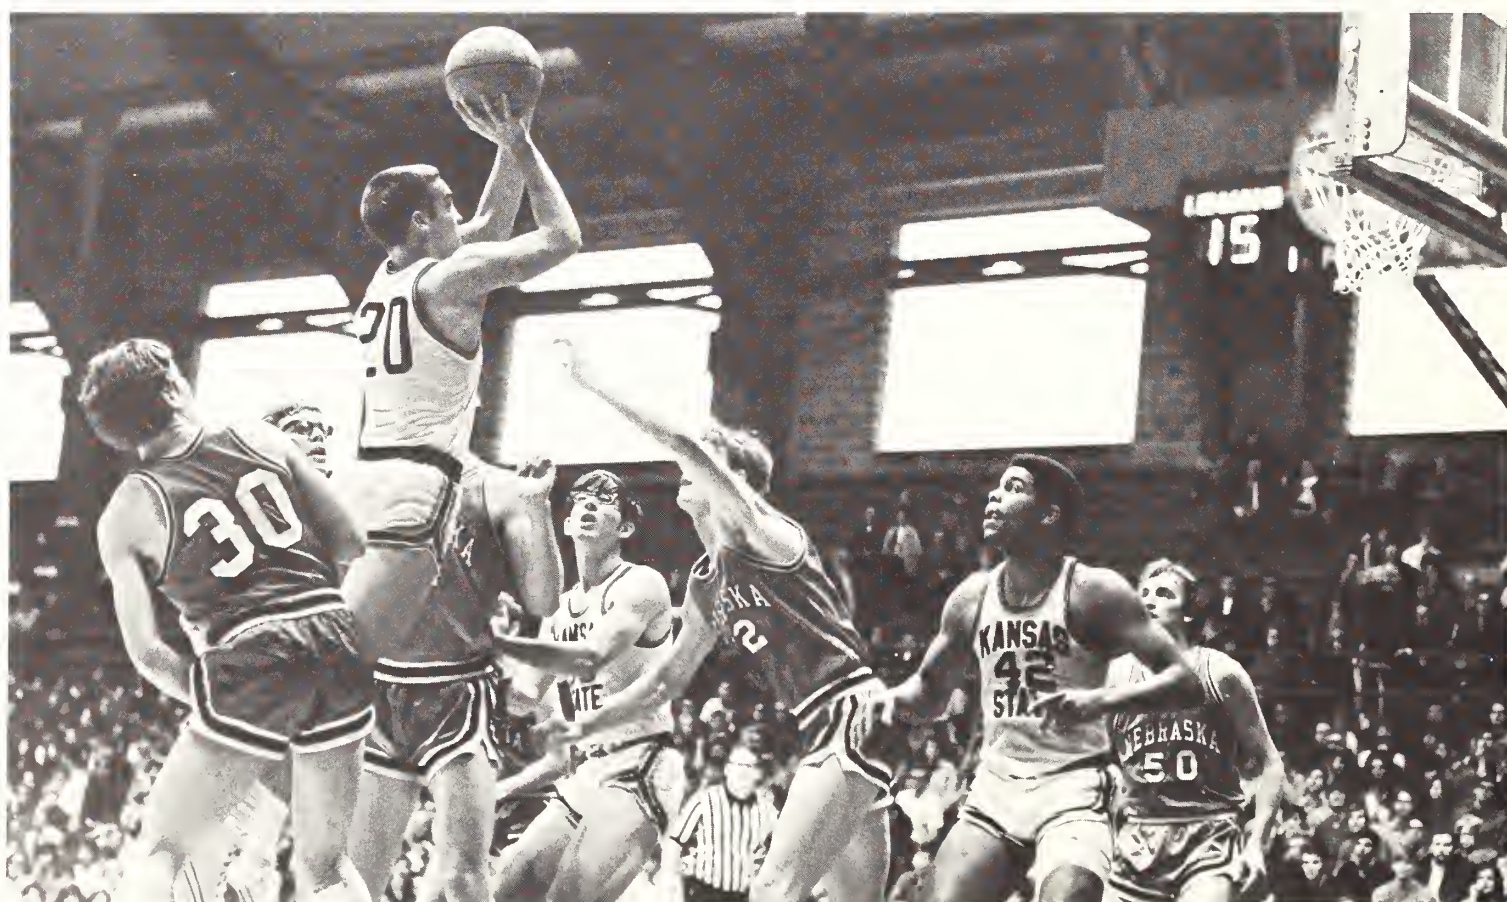

Coming off their first victory, the frosh went on a hot streak winning their next four games in a row and seven of the following eight. All around efforts by Lonnie Kruger, Gene McVay, Danny Beard and Larry Williams carried the freshmen 'Cats through mid-season play.

But after eight convincing victories, by at least 13 point margins, the frosh ran aground losing the final three games of the season to Oklahoma State 67-75 and two contests to Nebraska 70-78 and 62-75.

Harriers win third place in Big Eight Conference meet

K-State's cross country team led by junior All-American Jerome Howe and sophomore Rick Hitchcock opened the 1970 season with one goal in mind, taking first in the Big Eight. On the way to the Big Eight meet the cross countrymen won all five meets they entered and had record-breaking performances in three of the five. The team was bolstered by returning lettermen Howe, Chuck Copp, and Don Henderson, as well as JUCO transfers John Corman, Jim Graham and promising sophomore, Rick Hitchcock.

In the 'Cats first two meets against Southern Illinois University and University of Nebraska, solid performances were turned in by Howe, Copp and Hitchcock. The highlight of the two meets was Howe's record breaking 19:21 clocking in the four mile race at Nebraska setting a new school record. The Wildcats were victors in both meets defeating SIU 21-39 and Nebraska 22-37.

With their record at 2-0 the K-State team racked up two more big wins over Drake and Wichita State in a triangular meet and University of Missouri in a dual meet. The 'Cats put together a solid team effort to pull out both of the first place wins. An outstanding performance was turned in by Howe in the Missouri meet as his first place finish won it for the Wildcats by a 27-30 margin.

The final two meets of the season were the State Federation meet in Wichita and the Big Eight meet in Stillwater, Okla. In the State Federation meet the Wildcats again came away with first place honors, winning over Ft. Hayes State, Wichita State, and arch-rival Kansas University. After picking up that win, the 'Cats headed into the Big Eight meet undefeated. But despite a record breaking 18:55 clocking in the four mile by

Hitchcock setting a school and course record, K-State fell short ending up in third place.

The biggest honor of the season followed the Big Eight, where at the NCAA meet at William and Mary University K-State's Jerome Howe finished eleventh in the six mile with a school record time of 28:43. By his eleventh place finish, Howe was named an All-American in cross country for the 1970 season.

Eight returning lettermen bolster K-State gymnastics team potential

With the graduation of last year's outstanding all-around gymnast, Ken Snow, K-State's chances for an improvement in conference competition rested on seniors John Howland and Dave Mawhorter, and eight returning lettermen. The squad, coached by Dave Wardell, battled Indiana State, New Mexico, and Southern Illinois, all ranked among the better gymnastic teams in the country, as well as tough Big Eight conference opponents.

K-State gymnasts opened the sea-

son with a victory over Mankato State, but then demonstrated marked inconsistency as the team dropped two of the next four duel meets. Wardell attributed the early season ups and downs to the relative youth and inexperience of his squad.

In overall season competition the Wildcat gymnasts compiled a rather disappointing 4-9 record and could not improve upon last year's second place conference finish as they placed fourth in the Big Eight meet at Boulder, Colorado.

Depth and youth broaden K-State indoor track team

Youth and inexperience were the terms used to describe the 1971 indoor track team. Yet this was made up for by a greater amount of depth, ability and talent than ever before, according to head track coach DeLoss Dodds.

Despite the loss of premier middle distance runner Ken Swenson, Dodds felt the Wildcats had better overall depth in the running events than last year's squad. While in the field, the loss of high jumper, Ray McGill, caused a slight vacuum which left the 'Cats at a disadvantage.

Holdover standouts from the 1970 squad included speedster Luci Williams in the hurdles, Dale Alexander, second in the Big Eight 600 yard run last year, and Tom Brosius in the shot put field event.

Rick Hitchcock, K-State distance runner, sprints to get the inside

lane at the start of the two-mile run during the conference indoor.

Hitchcock finished second in the contest with an 8:54.8 clocking.

Senior 'Cat runner Dale Alexander receives the first place trophy

for winning the 600 yard run at the Big Eight Indoor, while team-

mate Mike Lee, who placed second in the event, awaits his medal.

Runners capture third place in Big Eight Indoor meet

Wildcat runner Danny Fields vies for position in the 440 yd. dash

at the Big Eight Indoor meet held in the K.C. Municipal Auditorium.

K-State thinclads opened the 1971 indoor season in late January at the Oklahoma City Invitational. Spurred by the placing of Dale Alexander, Chuck Copp and Dean Williams, the 'Cats collected 38 points for a strong third place finish behind Kansas and the O-State Cowboys.

Following a duel meet with Wichita State, which K-State won overwhelmingly 110-21, the Wildcats traveled to the Astrodome Federation where they failed to finish in the top five. But Houston did hold one bright spot as Rick Hitchcock set a school two-mile mark with an 8:42.6 clocking. Meeting MU the next week the K-State squad primed itself for the Big Eight Indoor, as the 'Cats swamped the Tiger runners by an 83-39 score.

At the conference indoor the trackmen won the 600 yard run and the mile relay, and collected 36 points for a third place finish.

Running the third leg of the 'Cat mile relay, Mike Lee strides down

Wildcat wrestlers finish year with 9-3 duel meet record

K-State's 118 pound grappler Roger Fisher counters his opponent's

moves for a take down by forcing him away with a hand to the head.

In his 18th year as head wrestling coach, Fritz Knorr had eight lettermen and a number of high school state champions with which to form the nucleus of the 1970-71 Wildcat wrestling squad.

Anchored by returnees Ron Tacha, Alan Maestas, Gary Walters and Dwight Hemmerling, the 'Cat grapplers opened season competition in November against non-conference opponents. In pre-Big Eight activity the Wildcat wrestlers won nine duel meets, while losing only three times. At the Big Eight Championship meet the 'Cats had a relatively poor seeding as well as a crucial injury to Ron Tacha, and were only able to garner three points for a last place finish. Yet coach Knorr was not overly disappointed with the showing since six K-Staters wrestled in the number one seed's competition bracket.

To close the season three 'Cat wrestlers qualified for the NCAA meet in Ames by finishing fourth or better in the District V Regional.

Former high school state champion Roger Fisher struggles to prevent

his opponent from making an escape to the side of the mat, and

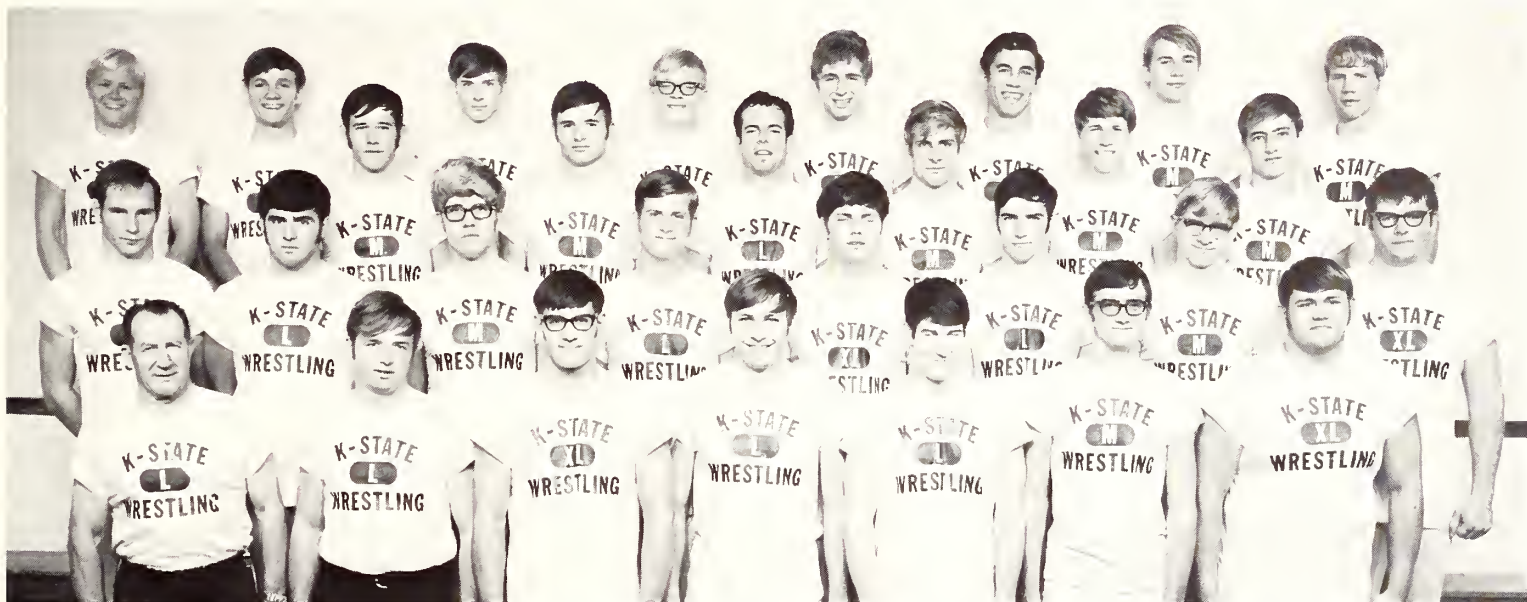

looks for an opening to put his man on the mat for a winning pin.

Using a turk-ride to keep an opponent close to the mat and wear

him down at the same time, a 'Cat grappler gains riding time which

can provide the winning margin in a hotly contested wrestling meet.

Bowlers compete against ten teams in postal league

Backed by the K-State Union, the Wildcat bowling team battled Kansas, OSU and Wichita State for position in the Kansas-Oklahoma Bowling Conference.

Beginning competition in September and continuing through early March, both the men's and women's squads traveled about every two weeks meeting conference opponents. The team also participated by mail in an Air Mail League containing ten additional squads.

In tournament play the Wildcat bowlers participated in the Association of College Unions Tournament where the men's squad placed second and the women captured third. In an individual effort team captain, Mark Janssen won the men's all around championship which entitled him to a trip to the national tournament in Detroit. At the Mid-State's Bowling meet held at K-State, 'Cat bowlers once again placed high with a men's third and a women's second place finish.

According to Jerry Mock, bowling team advisor, although the 'Cat squad was young the members improved much throughout the season after gaining confidence and timing.

team member Ruth Jansen steadies her Winchester 40X before firing.

Competing in the Central Kansas League, the K-State Rifle Club challenged city rifle teams as well as university squads. Shooting small bore 22's the rifle club sponsored the K-State Turkey Shoot and drew 56 team entries, making it the largest riflery match held in the nation.

During season competition the four man varsity team took 15th place at the Oklahoma State Invitational and 19th at the Turkey Shoot, while the women's squad was fifth at O-State and third in the Turkey Shoot in first semester action.

Competition for the second semester included the Old Trooper Small Bore Rifle Tournament, where 'Cat shooters Stephan Brooks, Alan Townsend, Angela Wenger and Patty Barnett placed in the top two positions in their shooting events. And at the N.R.A. Sectional match in Rolla, Missouri, the squad showed its overall balance as K-State captured third in the international and fourth in the conventional course of fire.

Coed tennis and basketball finish high in seasonal play

At the start of the second half of play Karen Sigel stretches to

Stephanie Branca uses her hockey stick in battling three Wichita

coed opponents for possession of a stray cross-field hockey pass.

In the second year of intercollegiate competition K-State women battled opposing female teams in the sports of tennis, field hockey, volleyball, basketball, gymnastics and softball. Vying with various area colleges in the Association of Kansas Women's Intercollegiate Sports League, the women felt that their participation would not hurt, but enhance their femininity.

Coed teams practiced early in the morning as well as late at night as not to interfere with the men's varsity sports and were often aided by the men's teams.

Coached by members of the Women's Physical Education Department and sponsored by the Intramural Department, the teams of field hockey and volleyball posted losing seasons, going 1-1-2 and 0-4 respectively, against female opponents. While the tennis team was victorious in three of four encounters, beating Wichita State once and Marymount College twice, and the coed basketball squad made a strong showing in their league and were invited to two post-season collegiate invitationals.

Soccer Club posts 2-2 record in first semester play

Losing five of eleven starters from last year's soccer squad, Coach Ahmed Kadoum spent much of the first half of the season rebuilding and shaping the 45 members of the K-State Soccer Club into one of the better teams in the Big Eight Conference.

In his second year as coach, Kadoum led his squad to 1-0-1 records in both conference and non-conference play. Opening the season against non-conference opponents, the 'Cat soccer club was tied by the Wichita Soccer Club 3-3, before posting their first season victory over Hesston College 4-0.

Against conference opponents the 'Cats tied last year's conference champion, Colorado, 2-2, and then went on to beat ISU 4-1, for a 2-0-2 first semester record.

Other season play included the Ottawa Tournament where three 'Cat players, Douglas Albers, Rudy Sauerwin and Karl Frank, were chosen to the all-tournament team.

K-State women enter ten different intramural sports

Unlike men's intramurals, the K-State women's intramural program consisted of one division in which sororities, residents halls and independents competed for the overall championship.

Coeds competed in 10 different sports ranging from the individual contests of bowling and table tennis to the more strenuous team sports of kickball, volleyball and basketball.

Supervised by graduate assistant, Barbara Hintz, the women's intramural division was the sight of close overall competition. The first semester of action ended with Goodnow II recording 308 points, and Clovia and Pi Beta Phi not far behind with 297 and 274 points respectively.

'Cat intramural program celebrates Golden Anniversary during 1970-71

Celebrating its fiftieth year of existence, K-State's intramural program has expanded from three intramural sports for men in 1920-'21, to 16 sports for men during this year.

Under the supervision of director Don Rose, the Department of Intramurals and Recreation has enlarged K-State intramural facilities to accommodate an increase in participation by continually developing the

L.P. Washburn Recreational Area.

Intramural competition included fraternity, resident hall and independent divisions, while participation varied on an individual, dual or team basis. At the end of fall competition for team sports Beta Theta Pi led the fraternities, the men of Van Zile headed the residence halls and A.V.M.A. showed a narrow lead over other independent squads.

Rushees are picked up by members of their prospective houses and taken to meet the other members.

Informality goal in rush; individuality emphasized

Sororities at K-State rushed 437 women this fall. With a changing emphasis from the group to the individual, sororities tried to become more informal in their rushing activities.

"This year during rush week, rushees were more mature and they were aware of what a sorority might have to offer them," Eunice Pickett, Panhellenic Council advisor, said.

Mrs. Pickett also pointed out that the rushees seemed to be interested in the house that best suited them as an individual, and that they listened, watched and selected on a personal basis.

During rush week, rushees were housed in West and Ford halls. Members of Panhellenic Council indicated that the two dormitory housing plans were more difficult to handle than the previous single dorm housing.

Although they were scattered, this rush week living proved worthwhile since more girls were placed in their permanent rooms.

Rush week parties were tightly scheduled throughout the week. On the last day of rush, 320 women were pledged to the eleven national sororities on campus.

"What's your name? Where are you from? What's your major? and Who do you know?" are some stand-

by questions asked rushees by sorority members during women's formal rush held each fall term.

Afternoon football games on television encourage several Delta Tau Delta members to attempt their

skill at a few of the plays. Many Delts claim to be professional amateurs when they play the game.

Pledges of Delta Tau Delta present their annual Paddle Party to the actives of the fraternity.

Each senior active receives a paddle with an inscription or poem developed especially for him.

Long dorm evenings pass more quickly when dormies meet for several hands of cards. This means

of recreation provides opportunities for lively conversation and chances to meet other residents.

Clothes, cosmetics, popcorn poppers and other paraphernalia cluttering desks rarely hinders the studious Ford co-ed. Sliding desks together affords more floor space, but — whose junk is whose?

Refrigerators can be rented from the housing office to store food in individual dormitory rooms.

Up-dating residence hall policies and coordinating dorm activities comprise some of the responsi-

bilities of KSUARH. The association is composed of delegates from dorms and scholarship houses.

Kitchen appliances are provided on every floor of the dormitories for those who like to fix snacks late at night. Many also use the kitchens to cook Sunday night meals when food center lines close.

Special dinners help dorm residents prepare for the Christmas holiday season. Similar dinners are presented by the food centers before every holiday such as Thanksgiving and Valentines Day.

KSUARH coordinates activities for 4200 residents

"Getting acquainted" was the theme of many of Kansas State University Association of Residence Halls' planned activities. KSUARH, working for 4200 students, represented student feelings concerning housing and university activities besides acting as the controlling and activities board for the residence halls.

At the beginning of the year, Association members compiled lists of useful information containing the available dance bands in the area. Also on the lists were a directory of floor and hall officers and merchants who honor the halls' charge account.

KSUARH's first planned activity of the school year was a blanket movie "The Comedians." This movie allowed new acquaintances to be made and old ones to be renewed.

Two leadership conferences were held for all hall officers. The first was designed to orient officers in their new positions. It helped acquaint them with the people they would be working with throughout the year.

Learning general leadership techniques was the primary objective of the second conference. What went wrong first semester and what could be done to improve hall governing second semester were the topics in question.

During the year Association members attended other conferences throughout the area. Delegates were sent to the State and Midwestern Residence Hall Conferences.

Plush carpet and soft furnishings offer Ford hall residents comfortable living as they hear sound from the dorm's new stereo. The stereo room and its furnishings are a new addition to the dorm.

They shared and learned new ideas with representatives from area residence halls.

KSUARH's job was not to plan activities for individual halls. Instead, its job was to provide activities for all residence halls combined. Dances, rap sessions and game nights were some of the activities KSUARH provided for dorm residents.

Sooner or later, every guest at an apartment party wanders into the kitchen for food or conversation.

Off Campus Housing

Off-campus housing — the great escape.

Whatever you're running from — stringy roast beef, rules and regulation, or an ill-fitting life style, off-campus housing can probably serve as the great escape. Five-thousand seven-hundred and sixty-eight students turned to off-campus apartments, houses, trailers and communes this year — a percentage that, as in past years, was greater than the percentage of students living in university housing or organized living.

One apartment dweller commented, "My attitude is this — I like to think that if I'm going to have for instance, a lousy hamburger, I will have been the one to louse it up — not some cafeteria crew. Furthermore, it will have been loused up at my convenience — 4 a.m. if I prefer, not at a scheduled hour."

Apartments or trailers were not the only escape routes to freedom K-State students sought; communes offered another alternative. The type of roof hanging overhead was really secondary — a farmhouse outside Manhattan or a big house near Aggieville — it really didn't matter. Sharing and caring served as the shelter according to commune philosophy.

Commune life centered around working together and helping each other to reach self-understanding and the realization of others as individuals. "Actually, commune living is family living, but you're a family because you want to be, not because it happened that way."

Not all K-State students could be found in such obvious places as apartments, trailers, or communes, however. Stashed away, behind the smoke stack in the

Townees combine college life with close family contacts. Some townees have found it hard to be

involved with the university community while living at home, but most of them manage to adjust.

physical plant, were seven campus firemen and hidden in Dykstra Veterinary Hospital were four students living-in as part of their intern training.

On duty 5 p.m.-8 a.m. at the physical plant, the five firemen and two trouble shooters (called out for dorm emergencies such as faulty heating) puttered about their three bedrooms, kitchen, bath and laundry room awaiting a fire. This year the firemen, who obtain their position on scholarship, were only called upon once. To keep in practice a fire drill was staged every Sunday.

Meanwhile at Dykstra, conditions were slightly busier. Four interns, on call 10 p.m.-8 a.m. took care of emergencies and attended hospital patients. One vet student commented, "Some nights this is all right, but lots of times I've missed studying for a test because I was up with seven pups that needed feeding every hour."

UFM is planning another type of great escape for off-campus students — the food co-op. Organized as a food buying club, members of the co-op would buy food at wholesale prices and distribute it at the same price, thus avoiding absurd local prices. Every co-op member would work in one of four areas — ordering, distribution, membership, or bookkeeping. One attitude is, "Better living through better cooperation."

Independent Student Association, a new organization, replacing Off-campus Women, attempted to unify off-campus students. Composed of 70 co-ed members, the organization met once a week having programs and a few service projects. ISA representatives served on SGA, Associated Women Students, SGA Campus Affairs Committee and sought a place on Judicial Review Board. ISA president Pat Nelson said, "ISA is still a new organization and this year was spent mainly deciding what activities to get into."

waving
goodbye
for
the
last
time... maybe

Will your final goal be achieved with your degree?

Graduating — what does it mean? Completing the 120 — or was it 124 — hours? Facing the 8-5 rat race? Or realizing that you learned just as much in beer drinking conversations as in lecture halls?

Will you be able to say that college gave you all the answers? As an engineer will you construct another Golden Gate Bridge? As a social worker will you solve the drug problem? As an economist will you become a presidential advisor?

Or will you have just a start toward finding the realistic answers — ones that will get you through each working day? What will you do when you are given a room to remodel or are asked to visit the home of a mother who beats her children?

You're thinking that you are ready to get out of the sheltered university community — you're ready to be a "professional" — maybe?

Senior Class Officers — James A. Patton, president; Frances A. Fonnannon, secretary; Richard A. Boomer, treasurer; Benjamin H. Wheatley, vice-president.

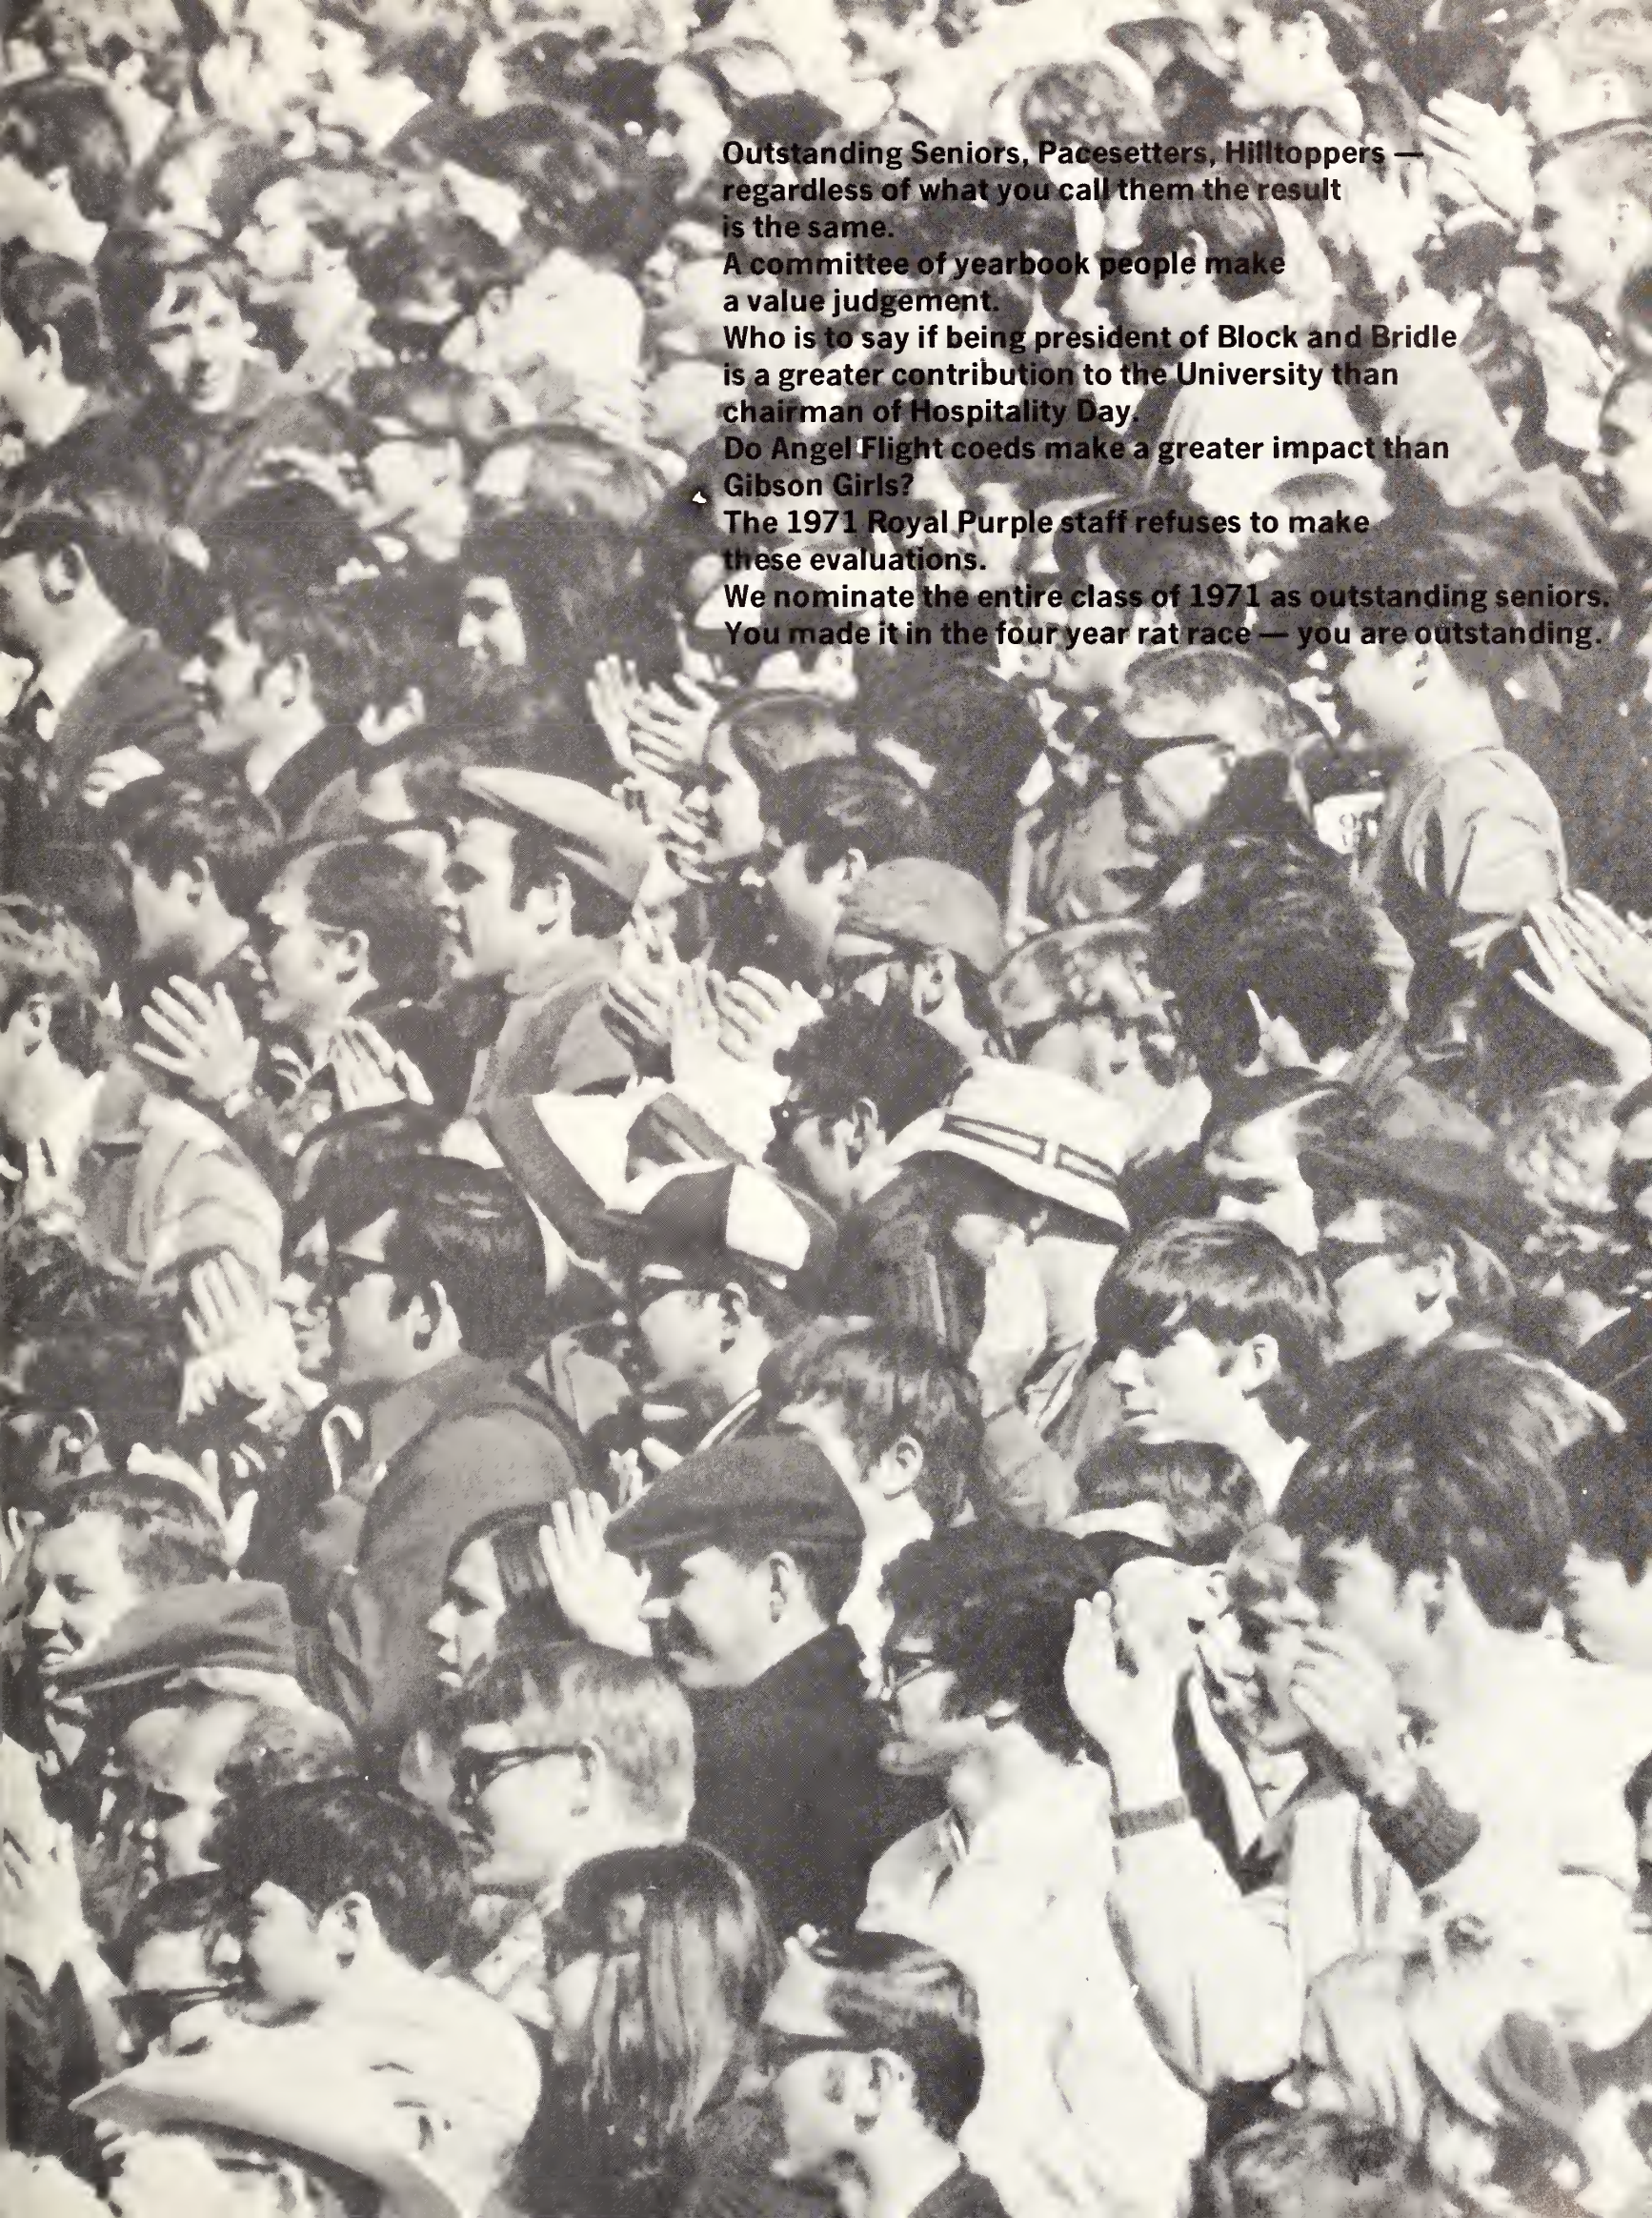

Seniors begin their "senior day" at the Main Gate from 9 to 11 a.m. before the last football game.

Introducing students to the many career opportunities available with civil service, the Union

is the site for the Government Careers Conference which brought various officials to the campus.

**Outstanding Seniors, Pacesetters, Hilltoppers —
regardless of what you call them the result
is the same.**

**A committee of yearbook people make
a value judgement.**

**Who is to say if being president of Block and Bridle
is a greater contribution to the University than
chairman of Hospitality Day.**

**Do Angel Flight coeds make a greater impact than
Gibson Girls?**

**The 1971 Royal Purple staff refuses to make
these evaluations.**

**We nominate the entire class of 1971 as outstanding seniors.
You made it in the four year rat race — you are outstanding.**
