Resources

Typically fescue hay is cut with a tractor and mower, raked with a side delivery rake, baled with a large round baler, and moved to storage with a tractor and bale fork. Other equipment may include a swather and a trailer for hauling large bales. Labor per acre and per ton vary with size of equipment and distance to storage.

Yield Level

Cost per ton and net returns in crop production are highly dependent on yields. The following estimated budget includes three different yield levels. The three yield levels are intended to represent expected yields of varying land quality for a given level of management. Land values and various inputs vary as yield levels vary.

Variable and Fixed Costs

Table 1 shows some of the assumptions used to develop this budget. See MF-942, *Cost-Return Budgets—Nonirrigated Crops*, for herbicide and insecticide usage.

Variable costs, such as fertilizer, repairs, and fuel-oil, are costs that vary with level of production. Fuel-oil and machinery-equipment repair expenses are estimated by use of factors. Interest on variable costs is estimated by using one-half of the accumulated variable costs for the year.

Fixed costs do not vary with the level of production, and are incurred by virtue of owning assets such as land and machinery. If land is cash rented, the cost of the rent per acre should be listed on line 18 and no taxes or interest shown on lines 16 and 17. If land is rented on a cropshare basis, rent is reflected in yield.

In this projection, the cost of machinery and equipment is allocated to hay production in accordance with the hours the machine was used for this enterprise. Estimated equipment investment, based on 200 acres, for hay production is shown at right, above. Interest on machinery was calculated on one-half the average investment [(initial investment + salvage value) ÷ 2].

Equipment	Investment	% Used for Hay Production
Tractor (85 H.P.)	\$40,000	25
Tractor (65 H.P.)	25,000	35
Mower (9 ft.)	4,500	100
Rake (9 ft.)	3,500	100
Bale Fork	1,000	100
Baler	10,500	100

Profit and Return Factors

Net return on investment is the percentage return on investment. This measure enables comparisons to be made among other enterprises and investment alternatives.

Table 1. Factors Used for Cost-Return Budget

Item	Yield Level (ton)			
	1.0	2.5	3.0	
Fertilizer:*
