Name Six Master Farmers

Six couples have been selected for recognition as Kansas Master Farmers — Master Farm Homemakers for 1971. Dr. Robert A. Bohannon, director of Extension at Kansas State University, has announced.

As guests of the Kansas Extension Service and the Kansas Association of Commerce and Industry, the couples will be honored March 24 at a banquet in the K-State Union.

Winning couples are:

Mr. and Mrs. Clifton Holste,
Rawlins county
Mr. and Mrs. Guy Josseland
Ford county
Mr. and Mrs. Paul Kelly
Atchison county
Mr. and Mrs. Bryce Lamb,
Stafford county
Mr. and Mrs. Leonard Matson,
Washington county
Mr. and Mrs. Earl Reinhardt
Neosho county

Selections were made on the basis of excellence in farming, homemaking, farm living and rural citizenship.

A selection committee in Manhattan picked this year's winners from information submitted on Kansas farm couples by county nominating committees in the five Extension areas. Two couples were selected from the northeast area this year.

The Friday evening program will feature an address by Roy Freeland, Secretary of the Kansas State Board of Agriculture. The six winning couples will be introduced by George Logan, farm director of WIBW in Topeka. Each couple will receive a plaque recognizing their past accomplishments.

Farming 1,010 acres and running a 95-head dairy cow and replacement heifer operation have kept Mr. and Mrs. Clifton Holste busy, but they have still found time to rear and

Mr. and Mrs. Clifton Holste

educate six children. The Rawlins county couple cultivates 688 acres, most going to wheat and feed grains for the cattle. They employ a double-4 herringbone milking parlor for their Holstein dairy program. Their oldest son, James, 26, is finishing up his doctorate in physics at Iowa State University. Kenneth, 24, has a B.S. degree and is teaching math and science in an elementary school in Montana. Jerold, 22, is a K-State dairy science graduate. Betty, 19, the Holstes' only daughter, is a sophomore at Concordia Teachers College in Seward, Neb. Curtis, 17, is a senior and David, 16, is a junior at Atwood High School, and plan on college degrees. Mrs. Holste enjoys sewing, reading, and baking, and wants to learn to knit.

Mr. and Mrs. Guy Josseland of Ford county are agricultural pioneers, gamblers, and innovators. For more than 50 years they have been a moving force in their community, state, and nation, and they're not about to let up yet. Josseland helped complete the first silo, did some of the first terracing, bought one of the first tractors, and was one of the first large-scale swine operators in western Kansas. He

Mr. and Mrs. Guy Josseland

spent four years (1939-44) as executive director of the State Forestry Fish and Game Commission. In partnership with his son, Guy Jr., Josseland owns 1,080 acres, cultivating 350. He produces feed for a 500-sow farrowing operation, feeding around 7,500 pigs to slaughter weight. They also winter 300 calves annually. The Josselands' list of community activities is almost endless. In her spare time Mrs. Josseland writes and publishes family histories. Their daughter, Yvonne, is married to Kansas City, Mo., attorney E. Keith Wilson.

Effective farming means getting the most out of what you have, and that's just what Mr. and Mrs. Paul Kelly have done with their 383-acre farm in southern Atchison county.

Mr. and Mrs. Paul Kelly

They have 273 acres under cultivation, producing feed for their livestock program. Kelly has a 49-head cowherd and 10 sows farrowing. He fed 41 calves to slaughter weight in 1971 and

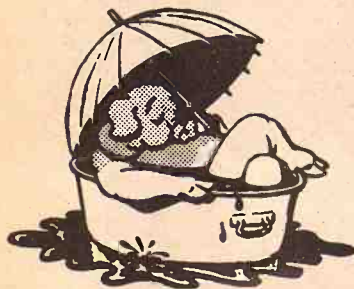

March 21, 1972
marketed 170 hogs. The 383 acres have provided well for the Kellys. They built a spacious new home in 1961, and three of the four Kelly children have college degrees. James, 23, is a K-State graduate and his twin sister, Janet, 23, graduated from Marymount. Colleen, 22, is a graduate of Long Beach State College, and Michael, 17, is a senior at Atchison County Community High School.

Mr. and Mrs. Bryce Lamb

Irrigation is important to Mr. and Mrs. Bryce Lamb of Stafford county. It allowed their two sons, Douglas and Kent, to come into partnership in the operation. Mr. Lamb promotes irrigation in the area "with the hope more farm youth will have an opportunity to stay on the farm." The Lambs own 1,600 of the 2,900 acres used in their operation. They cultivate 2,000 acres. They irrigate 660 acres of corn (250 acres under contract to a hybrid seed company), and also plant around 650 acres to wheat, 35 acres to milo, and 45 acres to alfalfa. The feed is used in a 170-head cowherd operation. They also buy feeder calves for wintering on pasture and corn silage, and feed for slaughter in the spring and early summer. The Lambs' sons were graduated from college. Douglas from Ft. Hays State, and Kent from Kansas State. Their daughter, Lynn, was graduated from Sterling College.

Grain Sorghum?
Forage Sorghum?
Sorghum-Sudangrass?
Corn?

Your Frontier Dealer Has The Varieties To Meet Your Needs.

Frontier (Hybrid Grain Sorghum) Plant some this year and see why 412's big yields have made it a best seller. In fact, no other variety in our history has achieved such a sales record...so fast. High protein and vitamin A make excellent feed. Sturdy stalks stand well. You'll like its high test weight at harvest too.

Frontier (Sorghum-Sudangrass) This year, prove it to yourself: Livestock prefer HI-DAM 35. It has numerous leaves, slender juicy stalk and sweet taste. Low ruscic acid content. Up to 3 times the vitamin A of ordinary hybrid sudans. Can be planted when soil reaches 60°. Tremendous regrowth qualities.

Frontier SUPER 400 A (Hybrid Grain Sorghum) This is the "Super Star" of our well known 400 series. An exceptional hybrid for yield, adaptability, feed value, and resistance to drought, head smut and other sorghum diseases. Consistent high yield...either dryland or irrigated. Early drying allows early harvest.

Frontier SX 255 (Singlecross Corn) Highest yielder in our corn line, this yellow grain singlecross has outstanding uniformity with leaves more vertical for maximum sunlight. Medium tall, combines well at high moisture. Small cob with high shelling percentage. Sturdy stalk and roots offer good resistance to drought and lodging. Before you buy any corn—check SX 255's yield record in your area.

COMPUTERIZED SEED INFORMATION...
An Exclusive Frontier Service.
The characteristics and yield records of all Frontier grain sorghums have been programmed into a computer. Drop by or call your Frontier dealer to find out which Frontier hybrid will do the best job for your soil, water and climate conditions.

International truck books as they

See the optional fiberglass hood can give your International truck a new look. But it can also give you a new look. It's a smart new look. The hood and fender assembly is a one-piece unit that fits right up to the engine compartment. And that, of course, is the way it should be.

A new 5/16-inch frame is standard on all models and available on all. And that's just the beginning. When you do need service or parts, our service and parts departments are ready to help you. With the

International Truck & Equipment Co., Inc. 316 382-2211 MARIETTA, GA.

The 383 acres for the Kelly new home the four Kelly college graduates graduate at 23, graduate at Colleen, 22, is a senior Beach State 17, is a senior Community High School graduate.

When Mr. and Mrs. Leonard Matson of Washington county had four daughters and no sons, they probably wondered where they would find additional help with the farm chores. But they didn't have to wonder long, the girls pitched in and did their share, and more. Matson operates 1,450 acres of land, cultivating 760 acres. He has a 96-head cowherd, and buys additional deer calves for a wintering and fattening program. He marketed 110 cattle in 1971. He also buys feeder pigs for finishing, handling 143 last year. Mrs. Matson manages 100 laying hens and helps with farm chores and errands. Two daughters, Eileen, 27, and Jenell, 22, are college graduates. Irma Jean, 20, is a junior at Kansas State Teachers College, and Hayley Jo, 9, is a fourth grader. The girls have helped with the feeding, drove tractors, and helped with the harvest, in addition to the work in the house.

When most people turn 60 they start thinking of retirement.

Mr. and Mrs. Leonard Matson

When Mr. and Mrs. Leonard Matson of Washington county had four daughters and no sons, they probably wondered where they would find additional help with the farm chores. But they didn't have to wonder long, the girls pitched in and did their share, and more. Matson operates 1,450 acres of land, cultivating 760 acres. He has a 96-head cowherd, and buys additional deer calves for a wintering and fattening program. He marketed 110 cattle in 1971. He also buys feeder pigs for finishing, handling 143 last year. Mrs. Matson manages 100 laying hens and helps with farm chores and errands. Two daughters, Eileen, 27, and Jenell, 22, are college graduates. Irma Jean, 20, is a junior at Kansas State Teachers College, and Hayley Jo, 9, is a fourth grader. The girls have helped with the feeding, drove tractors, and helped with the harvest, in addition to the work in the house.

However, Mr. and Mrs. Earl Reinhardt of Neosho county are not like most people. They're building their swine farrowing program from 1,200 marketed hogs in 1968 to possibly 8,000 in 1972. And that's not all—they've added an 85-head cowherd on top of it. In partnership with their sons, Bill and Gene, the Reinhardts operate a 1,750 acre farm, planting mostly grain

Mr. and Mrs. Earl Reinhardt

sorghums and wheat. They have 1,100 acres in pasture. Their goal is to have 500 sows farrowing twice a year, or 60 sows farrowing every three weeks. Facilities include a 60-crate farrowing house, two nurseries, and six finishing floors with 500 capacity each. They marketed 3,000 hogs in 1971. The Hereford-Angus cowherd may be enlarged to 200 or 300 head in the future. Both sons are college graduates, Bill from Washburn and Gene from K-State. All of this year's winning couples have been and are currently involved in many church, youth and community programs. Without

exception, they have given more than their share to make their communities a better place in which to raise a family.

The Kansas Master Farmer organization had its beginning in 1927 at about the same time the movement was getting under way in 18 other states and Canada. The Master Farm Homemaker Guild began a year later in 1928. The purpose of these projects was to give public recognition for excellence in farming, homemaking, farm living, and rural citizenship.

Herbicide Heist Worth \$12,000

Nearly \$12,000 worth of herbicide was stolen from a warehouse of the Farmers Union Cooperative in St. Marys.

Burglars used a truck owned by the co-op that was parked adjacent to the elevator to haul away 120 boxes of atrazine, each containing 50 pounds of the herbicide which wholesales for \$1.96 per pound.

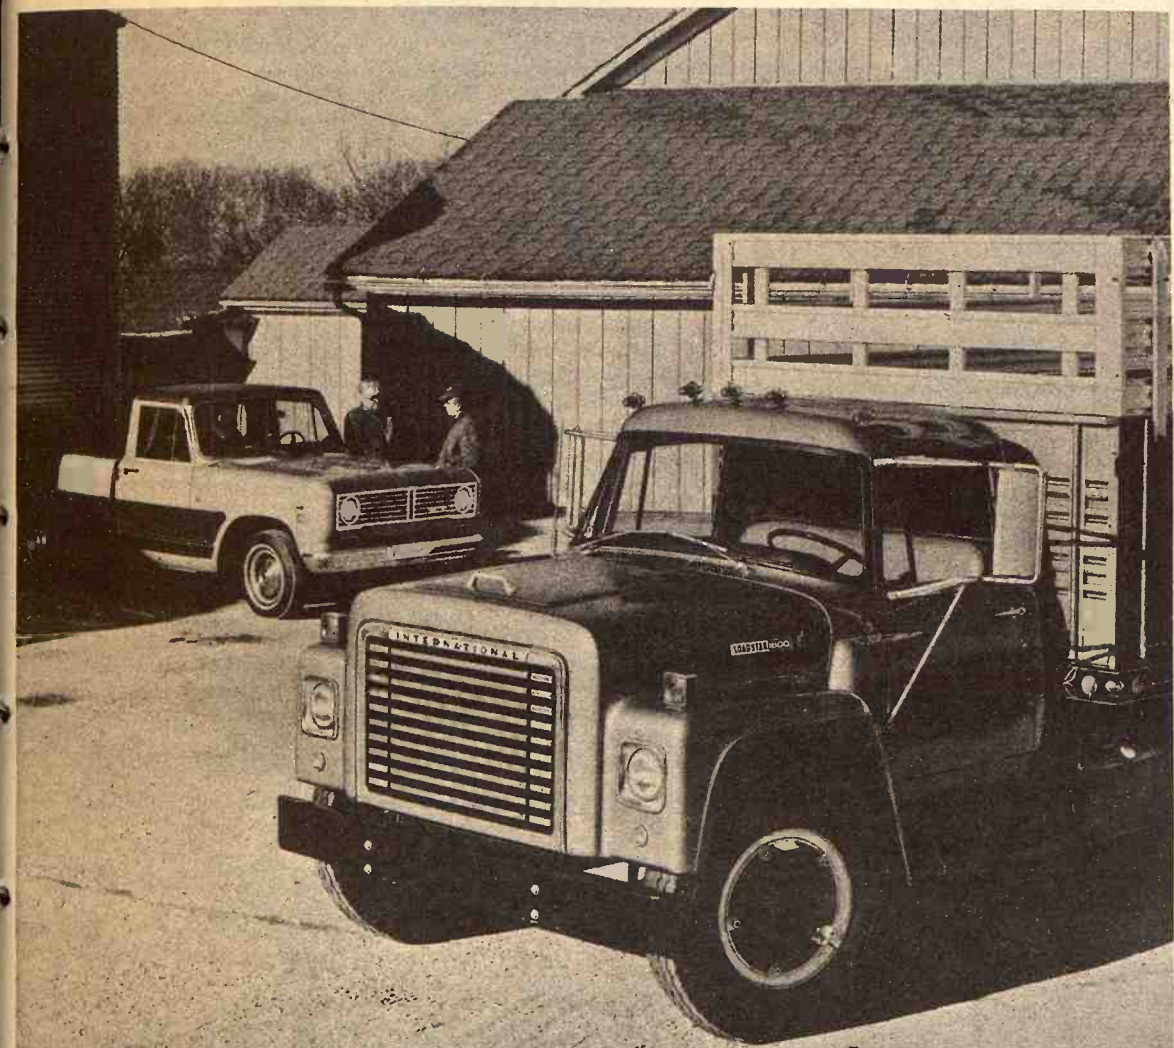

Agents of the Kansas Bureau of Investigation were called in to assist local officials. It is likely that the theft was perpetrated by an organized gang which has an available market for stolen herbicides. Similar thefts have been reported in Nebraska.

Police request anyone who noticed anything unusual occurring at the elevator during the night Sunday to volunteer information.

LOW TIRE

It's plowing time and Eph Blankley is pumping air into his tractor tires before he heads for the field. Blankley has a 40 acre garden patch near Louisville in Pottawatomie county, and says this is the second year in the last ten that he hasn't plowed his ground in the fall.

International trucks look as good on your books as they do on your farm.

Sure, the optional fiberglass hood can give your next INTERNATIONAL LOADSTAR® truck a smart new look. But it can also give your operating expense records a smart new look. Because the tilting hood and fender assembly lets a serviceman walk right up to the engine. That saves time. And that, of course, can save you money.

A new 5/16-inch frame is standard on most models and available on all. And the longer your truck lasts, the less it really costs.

When you do need service or parts, Loadstar puts you ahead again. With the

back-up of the largest organization of heavy-duty truck service centers in the business.

And it's nice to know that this same service is available for your International 1110 pickup truck. Which, incidentally, offers you many of the heavy-duty features you get in the big Loadstar truck. Including the optional 392-cubic inch V-8 engine.

International Loadstar. International 1110 pickup. Built to perform reliably on the job. So they perform beautifully on your expense records. Check them out soon at your International dealer.

Farmers In A Hostile Society

For the first time in American history, farmers are a little-known and disadvantaged minority in a disinterested and often hostile society. As a result farmers are receiving less and less consideration by Federal, state, and local governments.

In the early years of our nation, most of the people were farmers. When the first census was taken in 1790, 95 percent of the population lived on farms and in rural towns. George Washington, Thomas Jefferson, and many of the other early leaders were farmers.

Farmers are a Minority

Today, farmers are a small minority in our population. There are only about 9 million persons living on our 2.7 million farms. Furthermore, about half of these farms produce a very little in the way of agricultural products. The people living on them get most of their income from other sources. Only about 4 million persons, 2 percent of our population, receive most of their income by farming.

Farmers Are Unknown

In earlier years, many of the people living in urban areas were born and reared on farms or in small towns, and they knew something about farmers and their problems. Most of today's citizens were born and grew up in cities or suburbs. They know little or nothing about agriculture or about typical farm people, acquiring much of their idea about farmers from cowboy movies on television; also, from cartoons and articles picturing farmers as employing farm workers for starvation wages, living high on government checks, and profiteering from high meat prices.

Many of our city writers, reporters, and commentators are not acquainted with farmers and know little about agriculture. Consequently, they present distorted views of farmers and their industry.

Farmers Are Disadvantaged

Farmers are a disadvantaged group in our economy. One major

reason is that farming is an industry of decreasing labor requirements; hence, of employment opportunities. Furthermore, in many farming communities there are few opportunities for off-farm employment. Agriculture is also an extremely competitive industry in an increasingly monopolistic society. Strong monopolies are demonstrated when well-paid wage and salary earners strike for more money while other qualified and willing workers are denied employment.

Society Is Hostile To Farmers

Most of our nonfarm citizens would probably deny that they are hostile to farmers. But hostility, or the lack of any serious concern about farmers, is demonstrated by

frequent interruptions of the harvesting, marketing, processing, and distribution of farm products. This attitude is also reflected by the enactment of federal, state, and local laws that farmers and other informed persons consider to be unwarranted, as well as unfair to farmers.

OMAHA
STANDARD

Steel Livestock-Grain Combination

Here's an all-new steel truck body with outstanding versatility to get more work done for you. It's the tightest, strongest body you can buy. And it's available in many sizes with a wide choice of gates to exactly match the work you'll be doing.

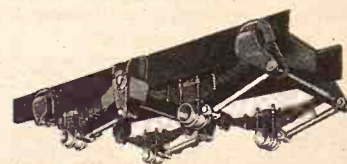

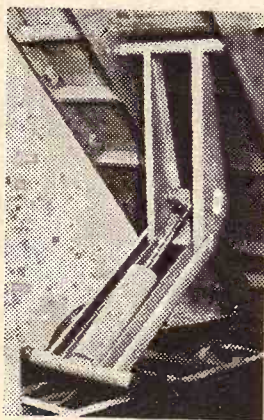

- Heavy-gauge steel sides, specially welded and reinforced for extra strength.
- Livestock racks available in both fold-down and removable models. Fold-down rack features exclusive offset hinge.
- New tarp rail adds strength to body and greatly extends life of tarpaulin. An Omaha Standard exclusive.
- "Tip Top" extension adds 12 inches to height of steel body for additional grain capacity.
- Famous Omaha Standard platform. Choice of wood, safety tread steel or smooth steel floor.
- Interchangeable gates operate smoothly and efficiently.
- Available in capacities from 100 bu. to 500 bu. Lengths 8 ft. to 26 ft. Height 40 in. or 28 in., double vented or solid.

Three New Hoists

Omaha Standard brings new dimensions to truck hoist performance with three new double-acting hoists.

- Double action maintains precise control over load at all times throughout 50-degree dump angle. Permits measured dumps. Eliminates "kickback."
- Low profile design mounts easily under all conventional bodies.
- Beefy, high-quality construction throughout. Lightweight high tensile steel frame, seamless steel cylinders and heavy-duty components.
- Available in single-cylinder models with capacities of 11 tons and 15 tons, and twin-cylinder model with 20-ton capacity.

Salina Farm Show Underway Next Week

Grass & Grain
March 21, 1972
Exhibit space is a
sellout for the annual Mid-
America Farm Exposition, to be

held March 28, 29, and 30 here in
Kenwood Park.

The showing of the latest products
for farms and ranches is free to the
public.

"Exhibit space was reserved
much earlier this year than ever
before, and close to 120 spaces are
taken," reports Don Hamilton,
chairman of the agriculture com-

mittee of the Salina Chamber of
Commerce, a sponsor of the event.

Hamilton said exhibitors from
Missouri, Nebraska, Iowa,
Colorado, Minnesota, Illinois and
Oklahoma as well as Kansas will be
showing their products at the ex-
position.

Exhibits will be open daily from
9:30 a.m. to 6 p.m.

This year, for the first time, a
Tractor Pulling Contest will be held
in conjunction with the event. It will
begin at 10:30 a.m. on the show's
opening day, Tuesday, March 28.
Farmers from anywhere in Kansas
are eligible to compete in one of the
six weight classes. No admission to
the event will be charged.

"Many Kansas farmers welcome

March 21, 1972

this early spring opportunity which
Mid-America Farm Exposition
provides to shop for products which
can cut labor costs or increase yields
and net profits. They're all invited to
attend as our guests," said Paul Zeh
of Wichita, editor of the Kansas
Farmer-Stockman magazine.

What Lobster did for Maine, Old Crow did for Bourbon.

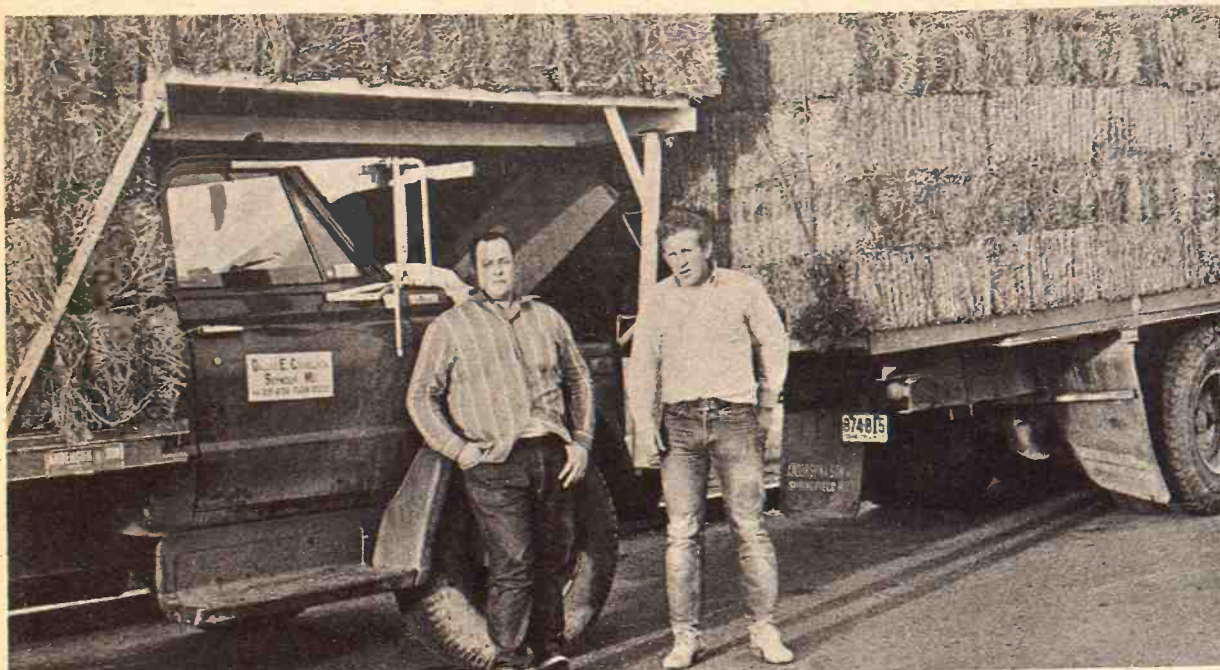

The good taste of Lobster put Maine
on the map. The good taste of Old Crow
made Bourbon famous.

Before 1835, Bourbon was made every

which way. That year, Dr. James Crow
took it out of the hit-or-miss league and
invented the process that gave Bourbon its
mellow taste—and good name: Old Crow.

TRACTOR MAKERS CUTTING NOISE LEVELS

So-called "noise pollution" has caught the attention of tractor makers, many of whom are currently promoting the reduction of noise within tractor cabs as improvements in new models. International Harvester says it has tested noise levels as low as 85.5 dB(A) in IH's new cab with the tractor at full load.

Narka Winner At Mankato Spring Hog Show

Swine producers from eleven Kansas and Nebraska counties exhibited barrows at the North Central Kansas Barrow show held at Mankato on March 7. There were 77 entries in the contest and a total of 100 barrows exhibited.

Barrows were entered in either pen of three competition or in single pens.

Grand Champion Single pen entry was a 230 lb. purebred Duroc barrow exhibited by Vern Ardenberger of Mankato. Reserve grand champion honors went to a 215 lb. barrow owned by Jay Meyer of Palmer.

The pen of three grand champion was a trio of crossbred barrows weighing 735 lbs. owned by Rose Pork, Inc. of Cawker City. The same farm took reserve honors in the pens of three with Rod Rose's entry of barrows totaling 675 lbs.

Other barrows that took prizes belonged to the following producers:

- 1st — Rose Pork, Cawker City
- 2nd — John Porter, Glen Elder
- 3rd — Tom Hull, Asherville
- 4th — Emery Berry, Minneapolis, Kansas
- 5th & Thaine Larson, Athol, Kansas

- Class II — Purebred — Single Pen**
- 1st — Vern Ardenberger, Narka
- 2nd — Floyd Meyer, Palmer
- 3rd — Herman Dohl, Sylvan Grove
- 4th — John Beam, Jr., Esbon
- 5th — Mike Ardenberger, Narka

- Class III — Junior — Single Pen**
- 1st — Jay Meyer, Palmer
- 2nd — Mike Wreath, Belleville
- 3rd — Beam Brothers, Esbon
- 4th — David Crosson, Delphos
- 5th — Diana Berry, Minneapolis

- Class IV — Senior — Pen of Three**
- 1st — Rose Pork, Inc., Cawker City
- 2nd — John Beam, Esbon
- 3rd — Herman Dohl, Sylvan Grove
- 4th — Tom Hull, Asherville
- 5th — Emery Berry, Minneapolis

- Class V — Junior — Pen of Three**
- 1st — Rod Rose, Cawker City
- 2nd — Lorelei Dohl, Sylvan Grove
- 3rd — Norman McMillan, Jamestown
- 4th — Beram Brothers, Esbon

All of the single pen entries will have Carcass information collected

Class I — Commercial — Single Pen

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Don Erikson, Alma, Prize Winner

Mrs. Don Erikson, R 2, Alma: "Here is a new recipe I tried and took to Blue & Gold banquet. Everyone loved it so thought I would enter it in your contest. Enjoy all the recipes so much!"

CHOCOLATE REVEL BARS

1 cup butter
2 cups brown sugar
2 eggs
2 teaspoons vanilla
2 1/2 cups flour
1 teaspoon soda
1 teaspoon salt
3 cups quick oatmeal
12 ounces chocolate chips
1 15-ounce can sweetened condensed milk
2 tablespoons butter
1/4 teaspoon salt
1 cup walnuts
2 teaspoons vanilla

Cream butter and brown sugar together until light and fluffy. Mix eggs and vanilla. Sift flour, soda and salt together. Stir oatmeal into dry ingredients. Combine eggs with creamed mixture then add dry ingredients. Set aside. Prepare filling by combining chocolate chips, milk, butter and salt in double boiler and melting together. When smooth add nuts and vanilla. Spread two-thirds of oatmeal mixture in 13x18x1-inch pan. Cover with chocolate filling. Dot with remaining oatmeal mixture. Bake for 25-30 minutes in 350 degree oven. Let cool and cut into small bars.

To be
twice as big
you'll need
four times
as much
money.

Where's it coming from?

Now, who's likely to have that kind of money? It will probably come from someone who knows the kind of credit a farmer or rancher really needs. Someone like your local Production Credit Association. They make loans to agriculture exclusively.

When you want operating capital, these guys will give you the go ahead. They're not philanthropic, they merely understand your needs.

PCA has offices all over the country staffed with experienced agriculturists. They do more than make loans to farmers and ranchers. They act as a clearing house for crop, stock and marketing know-how. They provide a variety of services including financial counseling, agricultural consulting and practical listening. So, if you want to enlarge your operation; improve your farm or ranch; buy equipment, appliances, seed, feed, fertilizer, stock, poultry; pay doctor bills; or send a son to college; establish a line of credit with your Production Credit Association. Use your earning power as collateral.

Since you'll need four times as much money to be twice as big, stop by your local Production Credit Association office and discuss your plans with your PCA planner. You'll find him cooperative and helpful whether you want a loan, advice or an understanding ear.

Mrs. Ernest Priddy, 5421 S.W.
Auburn Rd., R 9, Topeka: "Here is a
very good recipe for Lent."

TUNA MACARONI & CHEESE

1 package macaroni & cheese
1 8-ounce can tomatoes, un-
drained, chopped
1 7-ounce can water packed tuna,
drained
1/2 cup milk
2 tablespoons instant minced onion
2 tablespoons finely snipped
parsley
1 egg, slightly beaten
Pepper to taste
2 tablespoons crushed cornflakes
Prepare macaroni & cheese as
package directs. Remove from heat.
Add chopped tomatoes, tuna, milk,
onion, parsley, beaten egg and
pepper. Mix thoroughly. Pour into
greased 1 1/2-quart casserole. Top
with crushed cornflakes. Bake in
350-degree oven 35 minutes or until
bubbly.

Mrs. Maurice E. Merritt,
Burlington: "I always look forward
to reading all the delicious recipes in
Grass & Grain. Sending one of my
favorite recipes for gingerbread."

GINGERBREAD

3/4 cups sifted flour
2 1/4 teaspoons soda
1 1/2 teaspoons cinnamon and
ginger
3/4 teaspoon salt
1/4 teaspoon cloves
Mix the ingredients above. Com-
bine:
1 1/2 cups boiling water (I use 1/2 cup
of coffee instead of 1/2 cup water)
3/4 cup molasses (sorghum)
3/4 cup honey
Put into mixing bowl:
3/4 cup oleo
3/4 cup sugar
1 egg, well beaten
Add dry ingredients with honey, a
little of each until all is used. Pour
into pan, 13x9x2-inch. Bake at 350
degrees for 50-55 minutes. Serve
with Dream Whip or Cool Whip or
plain.

+++++

Mrs. Lawrence Winkley, R 1,
Marion: "This makes a very
luscious and full main dish meal."
DELICIOUS CASSEROLE

1 1/2 pounds hamburger
1 small onion
2 stalks celery
Salt and pepper to taste
1 can green beans
1 can tomato soup
Mashed potatoes
Grated cheese

Fry hamburger, onion and celery.
Add green beans and tomato soup.
Bake 45 minutes at 350 degrees. 15
to 20 minutes before serving arrange
scoops of mashed potatoes on top of
casserole (ice cream scoop).
Sprinkle grated cheese on top and
bake 15-20 minutes. Serve steaming
hot.

CINNAMON ROLLS (SOUR DOUGH)

Make biscuit dough; roll out and spread with butter. Sprinkle with cinnamon and sugar. Roll up and slice about 1-inch thick. Place in a greased 9x9x2-inch square pan. Bake 15 minutes at 425 degrees. Yield: one dozen.

+++++

SOUR DOUGH COFFEE CAKE

Mix as for biscuits except add 3/4 cup sugar, 1/2 teaspoon cinnamon and 1 egg. Any of the following may be added: Mincemeat, coconut, nuts, dates, pineapple, raisins, candied fruits. Pour dough into a greased 9x9x2-inch square pan. Cover dough with topping. Bake at 350 degrees for 35 to 40 minutes. Topping: 1 1/2

teaspoons cinnamon, 2 tablespoons oleo, 1/2 cup brown sugar and 1 tablespoon flour. Mix with a fork or spoon.

+++++

Compact Washer, Drier Solve Space Problem

You can have all the comforts and luxuries of a larger home without moving from your small house, apartment, mobile home or trailer. Such convenient items as a washer and drier can be yours even if space or installation restrictions rule out the use of standard-sized appliances.

A mini-pair washer and drier are available which can adapt to any surroundings where 115-volt

10

Grass & Grain

March 21, 1972

household current is available.

The compact, spinner-type washer is only 30 inches high, 24 inches wide and 15 inches deep so it can fit in the bathroom, closet or in the kitchen.

Neither washer nor drier needs special or permanent installation. The washer connects easily to the kitchen or bathroom sink for laundering and the drier doesn't

need special venting.

The drier, like the larger unit, tumbles wrinkles out of easy-care fabrics, furnishing one very much appreciated comfort to homemakers — the elimination of hours of ironing.

The units can be put almost anywhere. They can be stored over and-under fashion by hanging the drier on the wall over the washer, by using the accessory stack rack which holds the drier high enough beneath. Or the drier can be placed on shelf or counter over the washer for convenience.

A clearly written, easy-to-follow instruction booklet for the washer accompanies the unit. The illustrated text is easily understood for proper operation of the washer.

Consider Freezer Space When Buying Beef

Should you buy a quarter of side of beef for your freezer?

Even if you don't consider the cost of a side or quarter of beef, consider your freezer space. You need about three-and-a-half cubic feet of freezer space to store 100 pounds of meat.

Spynoches

Well-groomed spincach comes to market only after being clipped, then washed and put in film bags. The United Fruit & Vegetable Association advises that the early name for spinach was "spynoches."

Power Mad... But Price Conscious?

THEN SEE A CASE DEALER

for the Big New Case 1175

New power-priced 1175 Agri King . . . 451 turbo-cubes. WE'VE JUST MADE YOUR POWER DOLLAR BIGGER

Looking for a brute-strong tractor at bottom dollar in a power range over 120 horsepower? Then compare the new power-priced Case 1175 and the specials of the biggest selling competitors.

The power-priced 1175 is just what its name implies: top power at bottom dollar. No sacrifice of top quality. All the heavy-duty, guts-and-go construction that big power demands as standard equipment.

What do you get in a Case 1175? The bigger and faster work capacity of a Case-quality 451 cu. in. turbo-charged engine — a bigger displacement giant with the kind of muscle that's tough enough for the overloads. Long-life engine speeds: a rated RPM of 2100 . . . no need for this engine to race its heart out to handle your toughest jobs. All the "beef" and efficiency of a super-strong 8-speed-forward transmission with torque-multiplying planetaries.

More electricity for clean air makes a better world.

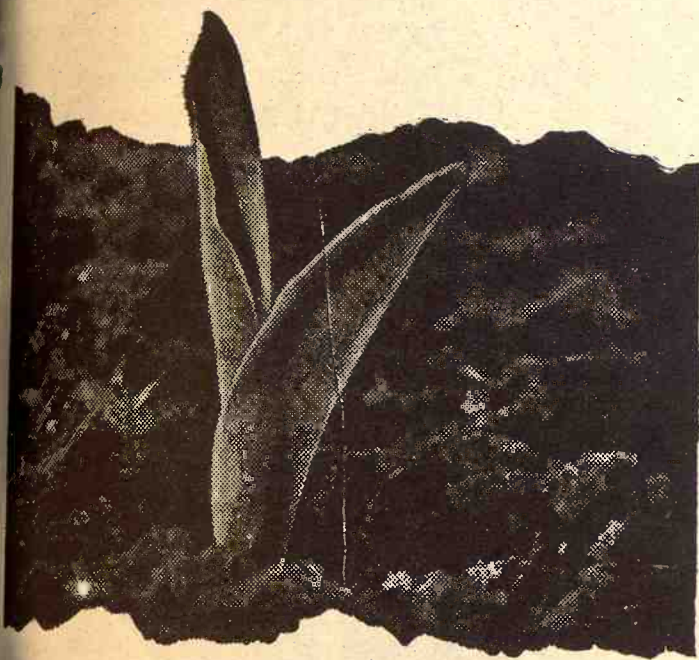

Recently, Kansas has been asking the question: How will Kansas continue to prosper, yet always have crisp, clean air? An important part of the answer is electricity. Electricity provides a clean, non-polluting energy source for air purification systems and industry. Electricity operates the control systems at KPL, generating 12 million kilowatt-hours used in various ways to maintain our state's high air quality. Electricity to keep Kansas the Clean

enting. like the larger les out of eas hing one very mfort to home nation of Potatoes Now Bred and Grown Scientifically

Potatoes are now bred with the care that is devoted to developing fine race horses. Most commercial potatoes today are produced from "purebred" stock, grown scientifically on special farms, the result of careful cross-breeding. This has resulted in a smoother-skinned potato with better flavor, texture and productivity.

**More electricity
for clean air
makes a better
world.**

Lately, Kansans have been asking the question: How will Kansas continue to grow and prosper, yet always have crisp, clean air? An important part of the answer is electric energy. Electricity provides a clean, non-polluted atmosphere in the home. Electricity runs the machinery for air purification systems in business and industry. Electricity operates the air quality control systems at KPL generating facilities. Every year at KPL, we generate millions upon millions of kilowatt-hours used in various ways to maintain our state's high air quality. Electricity to keep Kansas the Clean Air State.

How did potatoes get to be called "spuds?" It is believed that this derives from the Scottish word "spud", the name of a kind of spade or digging fork commonly used in cultivating and harvesting potatoes in that country.

When you come right down to it, potatoes are important in most main meals. They fill you up, give you a feeling of fine satisfaction, and they go with almost any food in the menu. They also offer good nutrition on a day-in, day-out basis. Because of their high mineral and vitamin content, and the large amounts consumed, potatoes are one of our most important protective foods.

Some of our happiest food memories go back to the way potatoes were served at the family table. How long since you have had a fluffy, white baked potato, steaming in its freshly-opened shell? There is a delicious homey fragrance and taste to a baked potato unexcelled by any dish. Then there are old-fashioned Scalloped Potatoes baked slowly in milk, and mountains of mashed potatoes, snow-fulffy, their craters filled with rich gravy from the roast. Whichever ways you like them best, the potato is a menu standby that wears well in the family's affections.

Why Lettuce Prices Vary

Sometimes you start to buy a head of lettuce and then you take a second look at the price and wonder what happened with the price jump.

What causes the variation? Lettuce is one of the few vegetables we can have fresh all year round. About 90 percent of our supply comes from California, Arizona and Texas. If the weather has been unfavorable in these growing areas and supplies are low you likely will pay for your lettuce.

If supplies are good, you probably will find more favorable prices.

Of course, lettuce in the field is not lettuce on your table. It must be harvested and transported to your part of the country. If there is a labor problem somewhere along the way, even a good crop of lettuce may not reach your market and the price you pay will be greater. It's still a case of small supply in the marketplace.

Freezer Owners Watch Calendar

If you own a home freezer, you're probably a calendar watcher. You watch for the time of year when foods are lowest in price to replenish your freezer.

During the winter and early spring months, beef prices usually are the lowest for the year. But look what happens in the summer when everyone wants to grill steaks outdoors. The prices usually rise in

March 21, 1972

response to demand. Then you can take your lower priced steaks from the freezer.

Here's another suggestion to make the most of that freezer space. Freezer storage space costs money so look for beef with a small amount of fat and bone and a high proportion of lean meat.

Well-trimmed and partially boned cuts will be the best choice for your freezer.

NEWSupersweet'sSuper Profit Hog Feeding Program

- Provides special feeds and feeding programs for meat type production.
- Pinpoints nutritional balance at every critical stage of production.
- Maximizes pigs farrowed and weaned.
- Takes advantage of farm grains.
- Provides a coordinated medication program with flexibility for farm use.

Supersweet makes it happen.

Beef Breeds Do Fall Out Of Favor

by Dr. Frank H. Baker
Dept. of Animal Science
Univ. of Nebraska — Lincoln

Will RIP mean Rest in Peace for your beef breed or Reap Investment Profits?

You say your breed couldn't possibly die, but have you checked the names of cattle breeds in textbooks of the early 1900's compared to those in today's books or magazines? An example on the subject can be found by comparing two university live stock classes textbooks — one printed in 1920 and the other in 1969.

Some On, Some Off

The 1969 text lists 21 breeds of cattle while the 1920 text lists 16 breeds of cattle. Seven breeds on the 1969 list are not on the 1920 list. Five breeds on the 1920 list do not appear on the 1969 list. Some animal scientists in 1970 even listed as many as 30 to 35 breeds of cattle for use in beef production — and that was last year.

Variations in these listings emphasize the fact that the use and popularity of individual breeds rises and falls.

Will beef breeds' struggle for survival follow the route of poultry breeds?

Poultry breeding for commercial purposes is handled primarily by less than a dozen firms in the United States. Poultry breeds for commercial purposes are mainly genetic lines controlled by the breeding firms. Many traditional poultry

breeds are raised for exhibition purposes by hobbyists or someone who has no interest in commercial poultry production.

The rapid increase in number of breeds available to United States beef man may result in some breeds suffering a fate similar to the fate of some poultry breeds.

Breeds which have been developed primarily on the basis of economic usefulness will be important in future commercial beef production. Breeds which have emphasized breed characteristics which have little or no value in commercial production will lose favor and perhaps disappear from the scene.

As I travel through the Nebraska ranching area and feedlots, I am impressed with changing color patterns of cattle in the operations. Color blindness is apparently becoming common among feedlot operators and profit-oriented ranchers.

A breed of cattle might disappear from the American scene by lack of use in commercial producing herds. A breed could also disappear through sufficient interbreeding or crossbreeding with other breeds so it no longer had distinguishable characteristics. Distinguishable characteristics have traditionally included color patterns but might not in the future.

This Decade

The 1970's are shaping up to be a period of struggle for survival of breeds on the American scene. Contributing factors setting the stage for this struggle are:

—Availability of beef seedstock from any point in the world.

—Extensive use of crossbreeding in commercial production.

—Low profit levels in beef production and cattle breeding.

—Changes in consumer demand or cattle breeding coming more rapidly than genetic change of cattle can happen.

Let's consider the availability of seedstock from other countries. Air transportation, artificial insemination and the use of the Canadian quarantine station have touched off the most extensive import fad in the history of the American cattle industry. This seems likely to continue because the United States has announced plans for a quarantine station.

At least three kinds of people are involved in importing beef cattle today. These include breeders seeking new germ plasm to improve a breed already in this country, promoters trying to make a few fast bucks by bringing in a new breed to grab the spotlight and some high profits, and researchers who see certain characteristics of a breed in another country which might improve cattle production in the United States.

It is highly probable that in each case some mistakes will occur and cattle will be imported which should

not have been. The result: a breed will appear, perform poorly and then disappear.

Effect of Crossbreeding

The extensive use of crossbreeding offers a change in the normal pattern of commercial and registered cattle breeding.

Geneticists have clearly demonstrated that producing an ideal combination of characteristics in beef cattle requires an optimum combination of many genes and many traits. This is slow and difficult to do when the choices of parent stock are limited to a single breed.

Part of the reason for this is that purebreds — traditionally — have had to hold their own in all the qualities desirable in a beef animal. They have been bred to perform well in as many characteristics as possible.

We might compare them to decathlon athletes competing against one another in ten track events. The athletes are not superior in any single event but are compared on their overall performances.

A beef breed that is essentially "decathlon" in nature is adequate overall but demonstrates no single outstanding quality.

If future commercial beef production is based largely on crossbreeding we are likely to see the decathlon breeds phased out. Greater demand will be for specialist beef animals, breeds which consistently display one or two qualities which are outstanding — mothering, for example, or growth rate or something else. The specialist will provide needed seed stock for crossbreds that a decathlon-type simply cannot provide.

The low level of profits in the beef industry forces commercial and registered breeders to introduce new technology as rapidly as possible to survive. Commercial breeders will base personal preference for breeds on the profit potential of each breed.

Records Important

Registered breeders will have to provide evidence of profit potential through more extensive performance and progeny records. These records are expensive to collect and keep. Breeders or breeds which choose not to keep records to show the profit potential of cattle

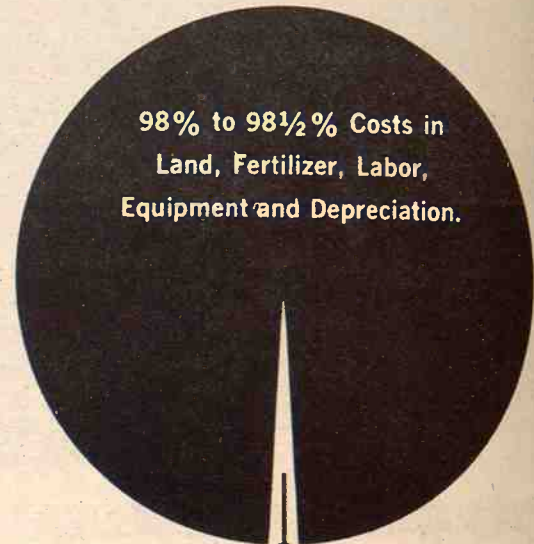

will disappear from the scene.

Traditional breeds and breeders must recognize that they are no longer assured of a market. More cows have been mated artificially to semen from bulls of some new breeds in the past two years than have been recorded by the registry associations of some of the traditional breeds. The ultimate result will be rapid formation of a large reservoir of new breed stock and decreases in the traditional breed numbers. This will happen if

new breeds prove to be of greater economic usefulness in commercial production than the traditional breeds.

Cattle breeders have often commented that they can't afford to change breeding programs because of the low reproductive rate and long generation interval of cattle. Their statement of the problem is correct. However, today's society and today's consumers in making demands for a particular product are not concerned with the breeder's

STOCK TANKS THAT LAST!

from **Hastings**

Heavy-Duty Tanks:

10 sizes, 4' to 11' diameter

Complete choice of sizes, proven in the feedlot and on the range. Available in 1 ft., 1½ ft. and 2 ft. sidewalls.

HEAVY-DUTY MODELS

with strong top rims that take roughest cattle abuse. Sidewalls have two deep, properly spaced corrugations for extra strength and rigidity. Fabricated entirely of 20-gauge galvanized steel and with fewer seams for extra service.

BOTTOMLESS MODELS

Available with corrugated or non-corrugated galvanized sidewalls to give economy, ruggedness. A favorite with ranchers. Four sizes: 15', 20', 25', 30' diameter.

ve to be of great
ness in commercial
in the traditional
ers have
they can't afford
programs because
val of cattle. The
problem is commercial
y's society is
mers in making
particular pro
d with the breed

The availability of com-
petitive protein or meat products
force commercial producers to
must rapidly to consumer demands
face extinction.
When consumer demands change,
has been the case during the last
decades toward leaner, tender,
beef, commercial cattlemen
seek adjustments through a
breed of bull or semen from a
new breed.
Rapid switches of commercial
customers to a different breed of
could cause some breeders and
perhaps some breeds to disappear.

Ongoing Process

The struggle for survival among
breeds or species of animals is not
really new or just beginning. It has
been going on since the beginning of
time! Has anyone seen an eohippus
or dinosaur lately? Of course not,
but remember these animals lived
on this planet and consumed organic
matter much as cattle and horses do
today.

Breeding cattle in the next decade
or quarter century will be exciting
and frustrating. It will be exciting
for breeders who stay attuned to
industry needs and consumer

demands, yet frustrating for
breeders who do not. Use of the most
advanced technology available to
breed cattle for meeting these
demands for the future is essential
to survival.

Some survival tips for beef breeds
and breeders of the future are:

—Be needed for efficient and
economic commercial beef
production enterprises, both
crossbred and straightbred.

—Be superior to other breeds in
one or more important traits such as
mothering ability, cutability, growth
rate, marbling, male fertility or
others.

—Be different from other breeds.
Uniqueness attracts customers.

—Be proud of your strength.
Exploit it and improve it.

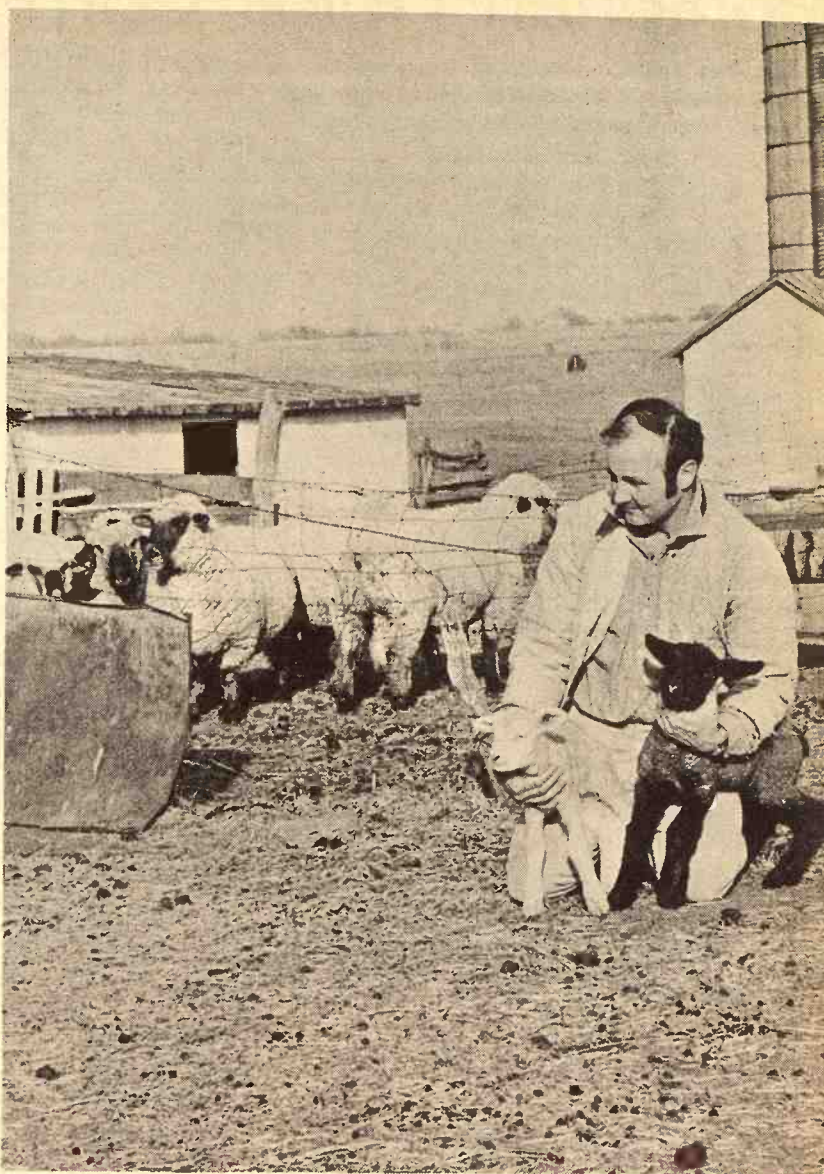

—Prepare proof for your
customers in the form of complete
records of performance in all traits
of economic importance to com-
mercial operators.

—Stay in tune with the probable
production goals for 10 to 20 years in
the future.

—Be flexible and maintain some
ability to adjust to change.

GOVERNMENT GRAZING LAND UP FOR LEASE

Farmers interested in leasing
grazing land on the former Smoky
Hill Air Force Range south of Salina
will have some major fence-building
requirements this year. Bids will be
taken by the Corps of Engineers at
Kansas City up to March 28 for 14
tracts totalling 7,815 acres. The
leases are for five years, limited to 7
acres per grazing unit, and range in
size from a half-section to 1½ sec-
tions each. All but one require ex-
tensive fence replacement or repair.

FARMING INSURANCE AGENT

Scott Sheets, a Topeka insurance agent, can't get farming out
of his blood. Sheets says he has thirty acres and 100 ewes. "I
don't make money on this operation but it gives me a chance to
get outside," he explained.

NEW! MF 124 TWINE BALER... MF 126 WIRE BALER

Increased capacity

These eager eaters from Massey-Ferguson let you
bale in a big way. Big 293 sq. in. throat opening is
the biggest in the industry. Increased flywheel and
shearbolt capacity and heavier clutch keeps you
going faster, longer.

Suretie Knotter

New Suretie Knotter on MF 124 has fewer moving
parts for increased reliability. You get tighter
bales tied with stronger knots.

Superior Infeed

You'll appreciate the unexcelled tractor seat vi-
sion and positive crossfeed of the MF 124/126
baler. And the quick-detach windcover gives you
easy access to the crossfeed and plunger knife.

Superior Plunger and Chamber

Exclusive 3-point roller plunger support is the
most stable plunger arrangement in the industry
... gives you precise knife alignment. And Mas-
sey-Ferguson's tension density control gives you
firm, solid, better-looking bales.

Before you buy your next baler, see the new MF
124/126 balers at your nearest Massey-Ferguson
dealership. You'll be glad you did at baling time.

Wilson	11,000	10,670	10,500	83.0	871,500
Woodson	5,000	4,850	3,700	77.0	284,900
SOUTHEAST	155,000	149,560	131,340	74.7	9,848,900
STATE	1,660,000	1,627,000	1,311,000	92.0	120,612,000

Haskell and Brown counties ranked second and third respectively with both producing over 6 million bushel crops.

Rounding out the top ten producing counties were Stanton, Wichita, Sherman, Finney, Republic, Grant and Thomas.

The western three districts of Kansas, where most corn acreage is irrigated, accounted for 45 percent of the State's corn production in 1971; while the eastern three districts, with mostly non-irrigated corn acreage, accounted for 44 percent of the total production.

The southwest district was the leading producing area with nearly 30 million bushels, followed by the northeast district which produced over 24 million bushels. The State's 1971 corn grain crop totaled 120,612,000 bushels, 51 percent above last year and the largest in four decades.

Record Yields in 78 Counties

New record high corn yields per harvested acre were set in 78 counties, with record yields reported in both irrigated and non-irrigated areas of the State.

In the western half of the State, where most corn acreage is irrigated, 8 counties had yields of 120 bushels per acre or more and 31 counties averaged 100 bushels or more.

Thomas County had the State's top yield with 129 bushels per harvested acre. Gray County ranked second with 128 bushels per acre and Lane County was third with 127 bushels.

On the dryland acreage in eastern and central counties, 1971 yields

Parole Soon For Addington

William H. Addington, former Wichita grainman, has been granted a parole effective April 25 from the Kansas State Penitentiary at Lansing by the State Board of Probation and Parole.

Addington, now serving a sentence of 1-to-7 years, was convicted of making a false entry in the books of a monied corporation. He was a member of the Kansas Legislature from 1959 to 1961 and was an unsuccessful candidate for lieutenant governor in the 1970 Republican primary.

Addington will have served 20 months of his sentence when paroled in April.

Devon Knoll, assistant director of the board, said today that Addington, his wife and son, plan to engage in leasing of dairy cattle.

In granting the parole, Knoll said the board considered Addington's "excellent institutional adjustment," "that he was a first offender having no previous convictions, the 20 months he will have served and a "favorable psychiatric evaluation which indicates further confinement would serve no constructive purpose."

Addington entered prison Aug. 19, 1970, after legal action began when the Kansas Grain Inspection Department detected shortages at the Addington Grain Co. elevator at Hutchinson in 1968. Knoll said that Addington would be placed on parole for two years, the normal period.

Concordia Plant Will Double Size

The C-E Ehrsam Company announced plans to double the size of its Concordia plant and increase employment from 40 to nearly 80 people. Process Equipment Operations, and Combustion Engineering officials said that 24,000 square feet will be added to the present building of 12,000 square feet. The Concordia plant will do light structural and sheet metal work for the company.

The new building should be ready to equip by late October.

were favored by abundant rainfall and were generally well above those in 1970 when severe drought cut back corn yields. A few counties in this area averaged 90 bushels or more and many exceeded 80 bushels. The State yield per acre was a record 92 bushels, 17 bushels above the previous high of 75 bushels in 1968.

Northeast Acreage Leaders

Doniphan and Brown counties in northeast Kansas, with 80,000 and 75,000 acres respectively, ranked first and second in acreage of corn harvested for grain in 1971. Two western counties, Haskell with 52,900 acres and Stanton with 45,100 acres ranked third and fourth.

Farmers in Kansas planted 1,660,000 acres of corn for all pur-

poses in 1971 and of this total harvested 1,627,000 acres for all purposes. Corn harvested for grain totaled 1,311,000 acres, 2 percent more than a year earlier and the largest since 1963. Corn silage was cut from 313,000 acres, 9 percent less than a year earlier.

Corn planting in 1971 began early and progressed well ahead of usual. July precipitation was well above normal and weather was favorable for pollination. Southern corn leaf blight caused some problems in eastern Kansas but overall damage from insects and disease was mostly light. Harvest made good progress through mid-November but wet fields late in the year slowed completion of tag ends of harvest.

CORN - TOP RANKING KANSAS COUNTIES - 1971 CROP				
Rank	Acreage harvested for grain (County)	Yield per harvested acre (Bushels)	Corn grain production (County)	(Bushels)
1	Doniphan 80,000	Thomas 129	Doniphan 7,440,000	
2	Brown 75,000	Gray 128	Haskell 6,865,000	
3	Haskell 52,900	Lane 127	Brown 6,075,000

Marshall County USDA Grain Bins To Be Auctioned

Marshall county, which once had more USDA grain bins than any other county in the state, will have no more government storage after a series of sales by the county ASCS late this month.

The process of selling the bins has been taking place in Marshall county since last spring and only 400 of the original 962 tanks remain, reports Merv Nord, ASC secretary. Since the project began, 1 1/2 million bushels of corn, 500,000 bushels wheat, and 200,000 bushels milo have been moved.

The corn bins, with a 3,200 bushel capacity, have averaged \$450 apiece for the steel structures and \$320 each for aluminum tanks in auctions to date, Nord said. The bins are auctioned at their sites. Bins at the final six sites will be sold during this month.

The land on which the bins set are privately owned and will be returned to their owners after the sales, Nord added. The government secured long term leases on the properties.

The Marietta bins will be sold at auction March 27, Nord announced. Other auctions slated for this month include Herkimer and Bremen, March 21; Marysville, March 22; Oketo, March 27; and Beattie, March 28.

Food Companies Leary Of Organic Food Business

Organically grown foods get a cool reception from most major food concerns.

The foods, which are produced without the aid of chemicals and which have no additives, appear in more specialty shops and some supermarkets.

Still, big food companies refrain from jumping into the business. General Mills says it has looked at organic foods but feels it's too much of a speciality market. "We just haven't seen the economics of it; it doesn't lend itself to massmarketing," says a spokesman.

fears current interest in organic foods "could be a fad, and a couple of years from now there could be nothing."

But some big companies show interest. Rodale Press, an organic food advocate in Emmaus, Pa., says it has received scores of inquiries about the marketing potential. Sacramento Foods, a Borden division, turned out some 800 tons of organically produced tomato juice and whole tomatoes last summer, partly to prove "it could be done." It

plans to repeat the modest effort this year and considers some other products besides tomatoes.

the slaughter market in Kansas, 5 percent below a month earlier, according to the Kansas Crop and Livestock Reporting Service.

Kansas cattle feeders marketed 200,000 grainfed cattle during the month of February compared with 220,000 in January 1972.

There were 150,000 cattle and calves placed on full grain feed in Kansas during February compared with 220,000 in January.

The number of cattle and calves on grain feed for the slaughter market on March 1 in the seven monthly cattle on feed States was

9,021,000, some 3 percent below that on February 1. In the six States with comparable data last year (excludes Kansas) the number of cattle on feed on March 1 was 10 percent above a year earlier compared with 10 percent on February 1.

The number of grain-fed cattle marketed during February in the six States was 10 percent above a year earlier.

The number of cattle and calves placed on feed in the six States during February was 15 percent above the February 1971 placements.

Colorado Reports Cattle Scabies—Kansas, 6 Cases

Colorado reports two outbreaks of psoroptic cattle scabies. It's the seventh state affected by the string of scabies infections that began in late October of 1971. Both cases were found on ranches in Kit Carson County.

The USDA's Animal and Plant Health Service has reported 73 outbreaks nationally. Outside the quarantined areas of Texas, Oklahoma and New Mexico, there have been six Kansas outbreaks, one in Iowa, three in Nebraska and two in Colorado.

More than 230,000 cattle are involved on the infected ranches and feedlots in the seven states.

NEW FERTILIZER PLANT ESTABLISHED IN BELOIT

Beloit has a new fertilizer plant. Boettcher Enterprises, owner, will specialize in custom blending, anhydrous ammonia, and trace elements. The new plant will be managed by Vernon Beebe, formerly of Clay Center. Monsanto and other name brand fertilizers will be handled.

LITTLE AMERICAN ROYAL

Ron McCormick, Yates Center, was one of the 168 Kansas State University students who helped in the Little American Royal last week.

Corp. with copies distributed to other automakers.

The new stipulation, now being worked into a proposed EPA regulation, would permit automakers to replace the metallic catalyst at intervals rather than equip cars with a catalyst designed to last 50,000 miles.

The catalytic-converter system filters exhaust gas through metal, to strain out harmful elements.

Ruckelshaus' other proposal would relieve automakers from assuring that every car coming off the assembly line emits no more than the legal levels of hydrocarbons, carbon monoxide and oxides of nitrogen.

Instead, Ruckelshaus has told the auto makers, EPA will propose permitting the emissions from various cars to be averaged within limits not yet specified. If one car, for example, emits one excess gram of hydrocarbons and another emits one gram less than the legal limit, both cars pass.

Ruckelshaus spelled out his position on the heels of a statement from a National Academy of Sciences panel which said that automakers could not possibly comply with the law by 1975 without the concessions. The panel was composed of academicians and technicians from outside the auto industry studying technological implications of the Clean Air Act.

MANHATTAN FLBA MEETING NEXT MONDAY

MANHATTAN — The annual meeting of the Manhattan Federal Land Bank Assn. will be Monday, March 27, 6 p.m. at the Student

CUSTOMER ORIENTED

ARTHUR W. TIMM

913 257-3495 Woodbine, Kansas

"The Move Is To ACCO SEED"

Automobiles Given Pollution Reprieve

The automobile industry has been given a reprieve by the Environmental Protection Agency. The concessions came in the wake of manufacturers' pleas for a one-year reprieve from the standards

established by the 1970 Clean Air Act, which decreed a 90 per-cent cut in auto pollutants by 1975.

The latest move was spelled out in a letter from EPA Administrator William Ruckelshaus to Chrysler

Union on the Kansas State University campus. Max Fossey, regional supervisor of the Federal Land Bank of Wichita, will be guest speaker. Entertainment will come from Onaga High School. R. Stanley

END OF ABILENE HOME

One of several giant frame homes that have graced the streets of Abilene for many decades is being torn down. It's on North-west 3rd Street, and its razing will make way for a savings and loan building.

The house was owned by Charley Case, who died a year ago. Case was a friend of Dwight Eisenhower, and Ike visited there for three days in 1952 and it was from this house that the political effort to nominate him for president started.

Dairymen Should Explore Emergency Power Sources

Operations on modern Kansas dairy farms stop when electric power is cut off.

The dairyman with a good emergency electrical power source is the one who doesn't get aching hands from milking cows or the ones whose cows don't go into a production slump because they weren't milked, says Elwyn Holmes, Kansas State agricultural engineer.

Holmes suggests the Kansas dairymen make plans for installing an emergency power source.

Many dairymen work the vacuum pumps for their milking machines by connecting it to one of their tractor cylinders. While this practice beats hand milking, it does nothing to supply power to milk coolers, mechanical feeders and waterers.

The answer to the problem is a standby generator operated by tractor power or by an auxiliary stationary engine.

To select a proper sized generator the dairyman must figure the total electrical needs of all equipment, including household equipment, that will be operating simultaneously.

He will need to total the numbers of watts used by such dairy equipment as milking machines, bulk coolers, water heaters, lights, automatic waterers, silo unloaders, and feed augers — plus household equipment like furnace, lights, freezer, refrigerator, radio, range (one element), yard light, water heater, and other appliances that might be used.

Wattage rating for equipment usually will be listed on its identification plate or in its operating manual.

Holmes says that if all the equipment to be used on a farm during an emergency totaled 25,000 watts, the farm would need a 25 kilowatt generator. If only half of the equipment would be needed at one time, a 12 kilowatt generator would be sufficient.

When a smaller-than-capacity generator is used, it is essential that wattage of all simultaneously used equipment not exceed the output of the generator. Otherwise the equipment will be damaged by operating with low voltage.

For safety sake, he also advises installation of a double-throw switch to turn off the power company main line coming to the farm. This prevents over power damage in case the commercial electric power

comes back on while the generator is running.

When operating a generator, follow manufacturer instructions for engine hookup. Turn off all equipment when starting the generator. Start large motors on the electrical line first and start them one at a time. Keep a close check on generator voltage output as the electrical load changes and main-

tain it at 120-240 volts, Holmes concludes.

TEACHER HIKES AVERAGE \$300 AT MARYSVILLE

MARYSVILLE—Base salaries beginning teachers next year in the local school system will go up \$300 a year. But average annual increases will amount to around \$50 each, say USD school authorities.

1962 John Deere "3010" diesel tractor w/wide front, power steering, 3-pt. and double hydraulic outlets, good shape
1959 John Deere "730" diesel tractor w/wide front, power steering, 3-pt., live power and hydraulic, good shape
1955 John Deere "70" gas tractor w/power steering and live power and hydraulic, good shape
1956 Massey Harris 80 Sp. combine, 14-ft., good
1971 John Deere "1240" 4-row planter w/fertilizer and planted less than 150 acres, like new
1971 Lilliston 4-row cultivator, good
1970 New Holland 9-ft haybine swather, pull type
1969 New Holland 275 baler, wire tie
1966 IHC No. 10 16-8 drill on rubber and fertilizer
John Deere 4-14 plow on rubber and hydraulic, pull type

Massey Harris 3-14 plow on rubber and hydraulic, pull type
Krause 12-ft. wheel disc
John Deere 16-ft. springtooth, 3-pt.
John Deere No. 5 mower
John Deere No. 896 A side delivery rake, high arch
1962 John Deere 46 A front end loader, hydraulic bucket
New Idea 4 wheel trailer w/7x14 bed
2-3-section spiketooth harrow
Set of metal stock racks for long wide bed
Tumble bug—side delivery rake on steel
Field sprayer, shop built—2 combine bins

TRUCK AND CAR

1970 IHC 1/2-ton pickup w/V-8, automatic, power steering, long wide bed, good
1965 Chevrolet 1/2-ton pickup w/6-cyl., 4-speed, 61,000 miles and motor rebuilt, good
1950 GMC 1 1/2-ton truck w/13.6 bed and new floor, 2-speed axle, good shape
1959 Dodge car, 2-door hardtop, runs good

HAY AND MISCELLANEOUS

Approximately 400 bales of alfalfa and prairie hay; Comfort cover for 3010; steel post; wire; tarps; wire stretcher; bolts; grease gun; barrels; poles; 150-gal. pickup tank and 2 Tokheim pumps; buggy top; umbrella.

HORSES

Appaloosa 6-year-old mare, registered and well broke
Appaloosa Yearling stud colt
Black 9-year-old mare, well broke, 800 pounds
Bay yearling filly colt

CATTLE

11 Angus and Shorthorn first calf heifers, calving now
8 Angus Hereford cows, 3-6 years old, w/calves
10 Angus and Hereford cows, 4-8 years old, heavy springers
Angus 3-year-old purebred bull

Saturday, March 25

Starts 10:30 a.m. — Lunch Served
Due to the recent death of Dave Rees, the following items will be sold 3 miles south and 1/4 east from Iowa Beef plant in Emporia, Kansas.

Tractors

IHC Farmall 560, wide front end, gas, 1590 hours
IHC Farmall 460, tricycle front, gas
Ford 4000, wide front end, gas, 148 hours
IHC Farmall M
IHC Farmall H with front end loader
McCormick Deering tractor on steel, shedded, in very good condition, starts on gas, runs on coal oil, Ser. No. 2054, Model NX40

Steam Engine

Rumley steam engine, excellent condition, shedded
Rumley threshing machine, wooden, very good, shedded

TRUCKS & CAR

1970 Ford 600 truck, 190 HP, 330 cu. in. V8, 8:25x20 10 ply tires, 15 1/2' economy bed, 730 miles
IHC KB5 truck, 13' bed and hoist, 7:50x20 10 ply nylon tires
1967 Ford 250 pickup, 352 cu. in. engine, 4 speed
1970 Ford Falcon Futura, 2 door, blue, 302 V8, 2090 miles
1932 Ford V-8 truck, shedded & in good condition

COMBINE & BALER

IHC No. 303 SP combine, 12' header, always shedded, excellent condition
IHC 56W wire tie hay baler, always shedded, very good condition

MACHINERY

2 IHC No. 100 balanced 7' trail type mowing machines
Mono Model MD6 wood saw
JD 18-7B wheat drill on rubber, with grass seeder

IHC No. 410 rotary mowing machine, 6' cut

6 wood wheel wagons, 2 with boxes, shedded, excellent condition
IHC No. 37 wheel disc 9' JD side rake on steel
2 junk wheat drills
Wagon water tank
5 water tanks 6' & 7', very good
IHC drag disc, 8'
Ferris wheel bale loader
Metal feed bunk, near new, 3x12
Old cement mixer
Tumblebug scraper
JD No. 896A side delivery rake on rubber
JD No. 55A-B-H 3x16 pull plow on rubber
IHC 3x14 pull plow on rubber
Soil mover No. 325 Model 325SR
5 Star power post hole digger, 14' auger
10 3"x12" planks 16 to 20'
2 section harrow
IHC drag disk
Several wood & steel panels
Wood & steel fence posts
8"x75" grinder belt
IHC 10" burr mill, Type B
500 gal. gas tank and stand
Buzz saw frame
Some hand tools and other misc. too numerous to mention

HOUSEHOLD GOODS

5 rooms of household furnishings including:
2 high headboard wood beds
Brass bed
3 cast iron kitchen stoves
Piano; oak sideboard; pictures; washing machine; pictures; dishes; chairs; upright refrigerator near new; electric freezer; electric cookstove; 500 gal. propane tank.

Other antique items and household items too numerous to mention. Household items will sell before noon.

Cattle Rustling In 1971 Estimated Over \$250,000

Cattle rustling seems to be a calculating but profitable business in the Grass and Grain area. The biggest problem is most of the calves get away, leaving only suspicious owners.

There were almost 1,200 cases of stolen or strayed cattle, valued at more than a quarter million dollars, in the state last year, said Mrs. Cleo Thompson of the Kansas Brand Commission, which registers cat-teners' brands.

She didn't have the exact figures but she is certain rustling is on the increase.

Now rustlers are picking off a few here and a few there. One calf could bring \$50.

Mrs. Thompson said most thefts were in the western half of the state but the thieves are active in eastern Kansas pastures, too.

The most common and easiest form of rustling appears to be leading a calf into a car or camper, said Mrs. Thompson. She said the thieves are not amateurs. They may expect a cow and wait days for her to calve; they may watch a feedlot for the right moment to strike.

They know cattle and are experienced, she said. The rising price of beef is making cattle a choice item to steal, she said.

Mrs. Ann Owens, Wabaunsee County sheriff's radio dispatcher, said rustlers took one five-week-old calf in the county in January.

This week rustlers took a registered Hereford cow from the Garland Gideon farm near Paxico, Mrs. Owens said.

Sheriffs receive reports of other cattle thefts in the state. Mrs. Owens said 12 three-year-old cattle and two month-old calves were taken in Goodland. Thieves also took several head from a sale barn in Wilson County and from one in Norton.

The sparse population and large pastures make Wabaunsee County a prime target for cattle thieves. "The rustling picks up when warmer weather arrives and cattle are shipped up from Texas to graze on our bluestem pastures," says Mrs. Owens.

One of the larger rustling reports came from Greenwood county. About two months ago 29 penned calves were stolen and no clues have been found. The sheriff's dispatcher in Greenwood county theorizes that many calves are disappearing in coyote dog boxes in the back of hunting trucks.

John Patterson, Sumner County sheriff, is in one of the more troubled areas, in southcentral Kansas. He has local citizen's committees

helping his eight-man force patrol 2,200 miles of roads lined with feedlots and pastures.

A recent cattle theft in Wichita netted 46 head of registered Holstein dairy cattle valued at \$20,000, about the only rustling in urban Sedgwick County, Sheriff Johnny Darr said.

Darr said there have been fruitless airplane searches for the cattle and a lead in Texas turned out to be the wrong herd of Holsteins.

Patterson said small-time rustling has become common in Sumner County. Usually the thefts involve someone backing a pick-up or goose-necked trailer to a feedlot and loading one to five animals. The same type problems plague two neighboring counties in Oklahoma.

Sumner County is wide-open to thefts with I-35 going south to the Gulf of Mexico and the Turnpike northeast to Kansas City, Patterson said.

Parts of Oklahoma are only 15 minutes away from Sumner County's largest feedlots, Patterson said. He added that a man taking a truck home to Texas could "pick up" cattle all through the area on his way home.

Branding is mostly just a way to keep neighbors honest when animals stray, Patterson said.

Feedlot owners have such a big turnover in cattle they usually don't bother to brand them, he said.

Patterson recalled one incident where a local feedlot owner habitually counted his lot full of robust steers. He thought everything was okay until time to sell the animals.

Then he found seven scrawny heifers, obviously just recovering from a case of shipping fever, had been substituted for seven of his healthy steers.

Patterson said in Sumner County he has gone to sales arenas and shaved the hair covering brands on animals to expose thieves. Since he didn't have a search warrant,

Grass & Grain

21

March 21, 1972

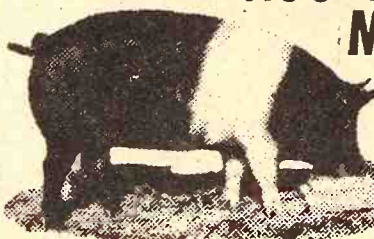

shaving the animals violated their owner's rights. There were no arrests.

He said similar attempts at shaving animals without a search warrant have been blocked by Oklahoma sale barn owners who don't want to lose a sale.

STRESS
DISEASEhelp him
fight backPURINA.
PORK-PLUS
with
TYLAN*-SULFA

Help feeder pigs and finishing hogs fight stress and disease. Mixing just one bag of Purina Pork-Plus® with Tylan-Sulfa per ton of ration gives hogs a boost three ways:

• Helps maintain weight gains and feed efficiency in the presence of atrophic rhinitis. Lowers incidence and severity of Bordetella bronchiseptica rhinitis.

• Aids in prevention of swine dysentery (vibronic).

• Provides supplemental vitamins and minerals to help hogs through stress periods.

You can count on Purina Pork-Plus with Tylan-Sulfa to help get your hogs to market faster and more efficiently. See your Purina dealer or salesman soon for details.

LOST ART

"This has become a lost art" says Dale Disberger as he rolls his own cigarette. "But it's a good way to cut down on smoking." Disberger lives north of Council Grove. He was getting ready to move some hogs and was moving a loading chute into place. He has 40 sows and said he had 300 fat hogs ready to sell.

Monday, March 27

Starts 11 a.m. — Lunch Served

We will sell at public auction the following described property located 8 miles east of Concordia, Ks. and 3/4 mile north, or 4 west of Clyde and 3/4 north.

MACHINERY

1965 Massey Ferguson No. 90 tractor w/diesel, power steering, 3-pt., live power and hydraulic, engine heater, 2,400 hrs.
1961 Massey Ferguson No. 65 tractor w/diesel, power steering, 3-pt., live power and hydraulic and 800 hours on overhaul
1971 Shaffer disc, 13.6, 20" blades and 91/8" spacing
1971 Noble disc harrow, 14-ft., new
1968 Richardson 3-row ditcher
1969 Lundell 12-ft. shredder
1969 Massey Ferguson front-end loader w/hyd. bucket, mounted for 90
1970 field sprayer w/110 gal. fiberglass tank and 3 pt. and booms.
1966 John Deere 4-row weeder, 3-pt.
1963 Dempster 4-row loose ground planter w/J.D. fertilizer and insecticide and atrazine and 3-pt. and gauge wheels
1963 Massey Ferguson 7-ft. mower, 3-pt.
1964 Dempster 4-row weeder, 3-pt.
1964 Dempster 4-row cultivator, 3-pt.
1962 Gehl 2-row stalk shredder, pull type
1962 John Deere 16-ft. springtooth, 3 pt.
1961 Massey Ferguson 4-16 plow, 3 pt.
1964 David Bradley trailer w/7x14 IHC bed and hoist
1962 Grain-o-vator No. 10 feed wagon
1955 IHC 16-8 drill on steel, planted approximately 1,000 acres
IHC 2 M.H. 2-row corn picker w/No. 10 sheller attachments and grease tank w/IHC mids.
2-4 wheel trailers w/100 bu. boxes and hoist
Owston 32" hay and grain elevator w/10 ft. extension
Eze flow 10 ft. fertilizer spreader
Behlen DP38 bin dryer, PTO
IHC grinder
14-ft. one way on rubber
Manure spreader on rubber
Ford dirt scoop, 3-pt.
2-Ferguson 2-row cultivators, 3 pt.
Ferguson blade, 3-pt.
Ferguson 1 shank subsoiler, 3-pt.
Ferguson 2-14 plow, 3-pt.
Ferguson 2-row lister, 3-pt. and rotary moldboards
Ford 9-ft. springtooth, 3-pt.

CATTLE AND
HOG EQUIPMENT

2 stock tanks, 8-ft.
125 bu. metal cattle self feeder
100-bu. wooden cattle self feeder
20-bu. calf creep feeder, wood
Cattle oiler, new in '70
14-ft. hay feeder
Assortment of wooden feed and hay bunks
Johnson propane tank heater
300-gal. Water barrel
9 Metal farrowing crates
2 Pig creep feeders
1 Hog oiler and oil

HOUSEHOLD GOODS
AND GUNS

Ivers and Pond upright piano and bench;
2 rocking chairs; treadle sewing machine;
2 trunks; kitchen table; step stool;

SEEN BETTER DAYS

"The old barn is out of date," says Leon Hahn of Gypsum. "It was built for horses and cows. The same roof area in a shed like the one over there would be worth a lot more to me." Although it's out of date, Hahn keeps it up in good shape. He has a couple of horses around too. "I use them in handling the cattle," he says. He's feeding 250 head of cattle. He plans to grass 180 of them and sell the balance as feeders in the spring.

Thinking Reduces Lightning Danger

The old saying "may lightning strike me down" is often spoken in jest. But for the more than 600 persons killed and 1,500 injured by

lightning in the U.S. last year, lightning was a potent, tragic phenomenon.

Thunderstorms occur in Kansas 50

to 60 days per year.

These are rules to observe when lightning is nearby:

- Don't go outdoors or remain out during thunderstorms.

- If you have a choice of shelter, get into a large metal or metal

SATURDAY, APRIL 1

STARTS 10:00 A.M. — LUNCH SERVED

Selling at public auction the following property, located 5 miles east and 3 1/4 miles north of Canton, Ks., or 1 1/2 miles west and 3 1/4 miles north of Lehigh, Kansas.

40 HEAD CATTLE

frame building. Homes or other buildings which are grounded to protect against lightning are next best, followed by large unprotected buildings and by small unprotected buildings.

- Stay away from open doors or windows, fireplaces, stoves and electrical equipment such as radios, lamps or other plug-in devices.

- If caught outdoors during lightning, you'll have good protection in a cave, depression in the ground, valley or canyon, the foot of a cliff, or the interior of dense woods. In large woods, stand under short trees surrounded by taller ones.

- If caught in the open near isolated trees, crouch down in the open away from the trees.

- Don't use steel or metal items such as fishing rods and golf clubs during thunderstorms.

24

Grass & Grain
March 21, 1972

- Keep away from isolated trees, wire fences, small sheds in exposed places, hilltops, and wide open spaces where you are the tallest object around.

- Stay out of water and small boats

- Stay in your car if traveling in a thunderstorm. Enclosed rubber-tired vehicles are excellent protection.

Release New Inbred Line Of Corn Germ Plasm

A new inbred line of corn with the opaque-2 gene for high lysine and normal genes for normal, hard

starch endosperm has been released to plant breeders by the Kansas Agricultural Experiment Station in cooperation with the U.S. Department of Agriculture.

Released as a germ plasm source, the new inbred corn is to be used in developing hybrids with high lysine that withstand harvesting and processing with mechanical

damage, and thus retain quality during storage.

Called K 816, the new inbred is from a cross between K 41 and an opaque-2 source. It is white with 3.8 percent of the protein in its endosperm being lysine.

Because lysine is one of the essential amino acids for human beings and livestock, high lysine

corn could be used directly as food in countries where children suffer from a disease that stunts growth and prevents children from developing their full brain potential, explained Dr. Floyd W. Smith, experiment station director.

He said Kansas pork producers could omit protein supplements from finishing rations containing

March 21, 1972

high lysine corn.

The new high lysine inbred corn is being distributed in germ plasm amounts (25 or fewer seeds) to corn breeders. The seed is available from the Agronomy Department, Kansas State University. None is available from USDA.

SALE EVERY

Thursday

We had a large run of cattle at our sale last Thursday, March 16th. Green cattle, that is, cattle that weren't showing much flesh were selling at steady prices. Cattle that were showing flesh and had been fed were selling at lower prices.

The cow market was good. We are expecting a good run of cattle for next Thursday.

Following is a partial listing of the sale last Thursday:

A TRUE BELIEVER
IN ORGANIC FARMING

In reference to your article "Organically Grown Foods Labeled Gigantic Hoax," in the Feb. 29 issue of Grass and Grain, I am surprised that anyone could be so ignorant about the facts of a thing as simple as organic foods. The government and even the horticulture department at Kansas State University are starting to experiment along

this line.

First, organic foods are worth all of the extra expense because we feel better after eating them. They are free of problems caused by fertilizers and poison sprays. Organic foods set up their own immunity to the insect world after three years, usually.

In fact, in my own community two women had breast cancer. One lady was treated by a doctor in Manhattan, who

MANHATTAN, U.S.A.

HE'S ON TOP

Glen Bruce is a man that really gets into his work. Bruce operates a service station at Elmo along K4 highway in Dickinson county. He is changing spark plugs in a farm truck.

is a nature doctor of some sort. The other was treated with radium. The one treated with radium died in a couple of years and the organic lady lived for some twenty years. The neighborhood sort of made fun of the woman taking the alfalfa pills, and such.

In case you don't see the facts — organic gardening uses minerals and nutrients as nature intended, not the way aristocratic fertilizer owners intend. Each year people increase their fertilizer and never equal the yields of the organic operator. One reason they can't use the organic growing method here is they don't know how to rotate to help build up the soil. Also the big eight row tractors don't put out much manure to be hauled to the field to decay.

Probably the best example of chemicals is dear aerial spraying. Where are those great grape vineyards that we had forty years ago. Grapes are almost a thing of the past, as are family orchards. Most of this problem is due to the use of chemicals.

There are whole orchards in California that are never touched by spray rigs. Why? Because they saw the light a few years ago and built their orchards up with organic materials. Expensive? Yes, much more than the fertilizer way. But, they will never have to use chemicals as long as they maintain their organic seed beds.

With chemical sprays we deplete the soil so that we have to add more chemicals each year.

Why do you suppose that certain church groups down by Hutchinson, Kansas, are so wealthy? They organic

farm.

Yes, we will have imposters in the organic food business, but they have developed an organic seal to tell the difference.

Our soil is being depleted by poor farming habits and you mention starving people in foreign countries. There are many reasons for that. Very likely the fact that they have so many people per square mile and the rich have all the money.

Caution On Value Of Magnetic Seed Treatment

Magnetic seed treatment may be practical in the future, but for now researchers are only cautiously optimistic.

That's the word from Dr. Richard Vanderlip, associate professor of agronomy at Kansas State University.

Theoretically, says Vanderlip, passing seed through an electromagnetic field stimulates germination and increases yields. But in a recent KSU test involving sorghum, germination was no faster than non-magnetized seed.

Vanderlip says a Canadian agronomist has discovered the seed of Kharkov winter wheat magnetically treated before germination uses oxygen slower and releases less heat energy but grows faster than untreated seed.

Responsible for magnetic seed experimentation at KSU, Vanderlip has been working with wheat, sorghum, corn and soybeans. Seeds are treated by passing them through

a magnetized auger.

"Magnetic treatment of seed on a large scale basis doesn't appear to be feasible at this point because of the cost and time involved," concludes Vanderlip.

Big Switch To Radial Tires

U.S. auto makers are about to force the biggest change in the tire industry since the 1950s, when tubeless tires were introduced.

Modern Tire Dealer, a leading trade journal, says in its March issue that the four major auto makers have told tire manufacturers to speed up production of radial tires. The auto manufacturers are planning widespread use of radials on 1976-model cars, the magazine said. A spokesman for the major tire company confirmed the story for the Chicago Daily News.

Many sources in the tire industry have said the U.S. car makers are considering putting their own corporate name on new tires, rather than using the tire maker's name, as present standard-equipment tires are identified. The auto industry has

come under increasing pressure to include tires on new cars in the new-car guarantee.

CISTERN PUMP STILL WORKS

There may not be many of these old cistern pumps around anymore, but Floyd Beemer of south Dickinson county near Hope, still uses his. An electric pump furnishes water for the house, but he uses this hand pump to stir the water up occasionally and aerate it. He has a good well but the water is so hard it fouls up the pipes. "The cattle do real good on it though" he says. He has 27 head of cows and calves. He used to keep about 100 head but he is "semi-retired" he says. He rents his farm ground to a neighbor.

Free 4H Sow Started Linea To \$10,000

CANEY — When Claud Messner of Caney, was a member of a 4-H club in Arkansas City, 1946 and won a free sow in a 4-H club contest,

he didn't dream a descendant of that sow would bring him \$10,000.

Messner sold his grand champion Duroc boar for that price at the recent National Duroc Congress in Arkansas City.

Reared on a farm near Arkansas City, Messner owns the largest "on farm" boar testing station in the country, and currently has three of the top 10 Duroc boars in the United States.

"I could probably trace all my present stock back to that free sow if I had the time," Messner said.

Messner said his \$10,000 boar, named Wild Triumph, was sired by Wildcat, which was named premier sire at the Duroc Congress in Arkansas City this year.

Another of Messner's boars, Crackerjack, was named national premier sire in 1966. Messner credits his success on his 75-sow ranch with interbreeding to produce desired length, and efforts to combine the physical traits with the efficiency rates he has always studied.

Set July Dates For Junior Angus Show At Alma

The Kansas Angus Association have announced plans for the Second Annual Kansas Junior Angus Heifer and Steer Show.

The show will again be held at the Wabaunsee County Fairgrounds in Alma, Kansas, on July 9th and 10th

1972.

Plans call for cattle to be received all day Sunday with a picnic supper that evening, compliments of the Kansas Jr. Angus Association, followed by the annual meeting of the Junior group.

Early Monday morning a free breakfast will be served by the Alma Chamber of Commerce. The judging will begin at 8:00 a.m. with the steer show, then heifers, climaxed by the fitting and showing contest. The 2 top senior showmen selected will represent Kansas in the National Junior Angus Showmanship Contest

held in Lexington, Kentucky in August.

The judge of the show will be Andy Olson, a prominent commercial cattleman from Council Grove.

Last year's show proved to be very successful with 80 exhibitors entering 48 steers and 70 heifers.

Junior Angus heifer exhibitors should be reminded to have registration papers transferred into the Junior owners name by May 1, 1972. Entries will be available from county agents or write to Lori Hagenbuch, R.R. 3, Lawrence, Kansas, 66044.

New John Deere 115-hp 4320 and 135-hp 4620

Power is up . . .
price-per-hp
is down

Any way you consider these new tractors, you come out money ahead.

From a performance standpoint, both tractors feature a Turbo-Built Diesel engine that delivers an extra margin of power—A Dynamic Power Reserve that increases work output per hour and expands acreage-handling ability.

From a list price standpoint, both tractors are well below the \$100-per-hp rule of thumb. Included in the base price are a 3-point hitch, Independent PTO, double-action cylinder outlet, and adjustable drawbar. Both the 4320 and 4620 deliver a lot of extras at no extra cost to you. Stop in for complete price information . . . and arrange a field test.

"Sales probably will be up by a greater margin than last year," Emerson said. "I'd say they'll be in the neighborhood of 15 per cent above 1971."

The last time the state posted a gain greater than 10 per cent was during the go-go year of 1968 when the increase was 10.7 per cent. The rate of increase in retail sales was 7.1 percent in 1969 and 8.3 percent in 1970.

State sales tax collections for 1971 — based on business transactions from Jan. 1 through Dec. 31 — climbed to \$146.36 million, the first time they have topped \$140 million. And they did this despite a state unemployment rate that hovered around 6 per cent all year, the Sept. 15-Nov. 15 wage-price freeze and Phase 2 controls.

The 1971 tax collections total was nearly \$12 million greater than the \$132.78 million collected in 1970.

totalated an estimated \$10.16 billion, the first time they have gone above \$10 billion. The total for 1970 was estimated at \$8.7 billion.

And although 1971 was a "good" year, 1972 will be even better, predicts Dr. Jarvin Emerson, chief economist of the State Office of Economic Analysis.

Thursday, March 23

Starts 1:00 p.m. — Lunch Served
To settle the estate of Lester C. Marcy, we will sell the following at the farm site located 4 south and 1 1/2 west of Jamestown, Ks., or 4 1/2 east of Scottsville.

State Retail Sales On 10% Rise

Boosted by record new-car buying the final three months of 1971, last year's business volume in Kansas climbed more than 10 per cent over 1970, state sales tax collections show.

Retail sales in the state in 1971

Angus Assn. Ok's "Open" A.I. Registration

The American Angus Association this week moved to allow "open" artificial insemination within the breed. Starting immediately members who follow the proper procedures may sell and use unlimited quantities of semen and Association members may record the offspring from registered Angus cows even though they own no part of bull, Lloyd Miller, executive secretary, announced.

At the same time Miller reported approval by the Association's Board of Directors of a comprehensive National Angus Sire Evaluation program. The program, he said, is designed to help members evaluate the performance of their herd bulls by checking their ability to sire top gaining, high quality, efficient cattle. Progeny results of hundreds of Angus bulls will someday be an important part of sire selection in registered Angus herds, he emphasized.

Both programs fit well together, Miller explained. Extended use of artificial insemination will allow more members to try a larger number of young bulls in their herds, and nationally it will allow more extensive use of proven, high

producing bulls. The sire evaluation program will help prove bulls and help registered Angus breeders improve their breeding programs, according to Miller.

The policy change on A.I. makes the American Angus Association the first major beef breed organization to allow virtual unrestricted use of artificial insemination. Planning for extended A.I. use began several years ago.

Basically, the program allows for sale of A.I. certificates to bull owners by the American Angus Association. A properly executed certificate signed by the bull owner, inseminator, and the owner of the female, must accompany an application for registration.

Any bull registered in the American Angus Association Herd Book which has been blood-typed is eligible, but any bull discovered to have sired a genetically defective calf will be suspended immediately from eligibility for A.I. service certificates.

The new rules also indefinitely extend the A.I. service life of a dead bull, and is retroactive. Owners who have semen from a dead bull and who previously have complied with

the proper procedures may now use this semen and register the offspring.

Applications are now being accepted for the National Angus Sire Evaluation program. The program is designed to measure highly heritable traits that are of the most economic importance to beef cattle improvement and profit. In the years to come a list of the ranking of sires in four separate areas of production will be published. The Angus Sire Evaluation program meets or exceeds the guidelines of the Beef Improvement Federation.

In general, the program allows a breeder to check the performance of calves by his own bulls against the progeny of a set of reference sires that represent a cross-section of the breed. He does this by mating his bulls and several of the reference sires to a randomly selected group of cows from the same herd. The four traits measured are weaning weight, yearling weight, USDA quality grade and USDA yield grade. The information obtained can be used to compare the performance of bulls evaluated.

Answer To Critics Of Meat Hikes

While most people are complaining about the rising cost of

meat at the local market, at least one person is looking at it from a different angle.

Mildred Walker, Kansas State University Extension consumer marketing economist, indicates that in the past 20 years the average retail price of meat has advanced 35 percent, while personal disposable income of U.S. consumers has increased an average of more than 100 percent.

She also points out that the greatest share of the rise in meat prices is not going only to the producer. The income is due primarily to rising costs of labor equipment and supplies.

"Changes in marketing services probably affect it too," Miss Walker continues. "We are going more and more to boning and trimming of retail cuts, which requires more labor."

The economist says part of the rising costs have been offset by greater volume of sales which permits lowering of prices. Increased sales are due to a larger population coupled with greater consumption per person — 183.2 pounds per person in 1968, and 192 pounds per person in 1971.

Angus Sale Tops \$43,000 On 81 Head

The 10th annual production sale of the Green Garden Angus Farms, of Lorraine in Ellsworth County, grossed over \$43,000.

These range conditioned cattle were sold to Kansas, Oklahoma, New Mexico, and Indiana buyers. Forty-one bulls sold for an average of \$610 and forty females went for a \$450 average.

The high selling bull went to Gilbert Deutscher, Ellis, who paid \$1,400. A cow-calf pair topped the female sale at a total of \$925.

Volume buyers in the sale included Clark and Winter, Hoxley, Chapman Angus Farms, and Charles Westerman, Ellenwood.

Good Morning, Feeders . . . and Hi, Mom

By Eddie Collins
Red Oak, Iowa

Oh, what fools we are... as
Producers. We all leaned back and
let a former Secretary of the
American Cattlemen's Association
carry the ball for the opposition
against increased Beef Imports. He
tumbled.

The Ex-Secretary Mr. Bill Mc-
Millian is a real nice guy. A real
chamber of Commerce-Secretary
type of guy. Pleasant, smiling, great
at conventions, excellent speaker!
Who would ever want to oppose such
a Jack Armstrong type of All
American Boy? Well, I would, and
do and have in the past... not as an
individual because I believe he
made a fair Executive
Secretary... But, not to go to
Washington D.C. as the spokesman
for the Livestock Industry. I listened
to his theory on Import four years
ago in North Platte,
Nebraska... listened to him say
"we can do nothing about imports."
and I accepted him as the nice-guy
individual... but it was like
listening to a Dick Butkus, Chicago
Bear linebacker praying that the
next offensive play wouldn't come
through his area... Our leader
stymied!

Last week the USDA dealt the
American Cowman as stiff a control
as could be mustered... An increase
in Import Quotas!! Feeble, feeble
words are "I told you so"... I
apologize, but I've argued. I have
challenged and made headaches for
dozens of hammy-pamby state
executives who are like 97 pound
weaklings chortling about their
Atlas muscle. At meetings after
meeting, on this program... and
I've written dozens of critical
warnings of these complacent
weakness.

What an ironic farce... because
not three weeks ago, Mr. Helming,
an Economic Advisor for the
American Cattlemen, of which all
cattle states have an associate
chapter, was preaching to cut down
all cow herds. Imagine, cut domestic
production... while we allow ad-
ditional imports!!! Ridiculous.
Mom, oh, oh, oh, but we were
outmaneuvered!!! Clark Clifford
who is Senator Muskie's chief
political advisor as well as ex-
Defense Secretary and as well as the
Australian Meat Industries Million
Dollar a year lobbyist is just too
strong for "our" smiling cattle
lobbyist.

Imagine saying on ABC-
TV... Thursday night, "Imports
won't have much effect!!!" Mom, it
opens the door. The Trojan Horse is
inside the gates.
We already: permit over 6 percent
of domestic production. We already
annually overlook a 10 percent error
factor; we already permit (and this
the USDA encourages) quotas to
be exchanged when one nations
shipments falls down. We already
compromised a 50 million pound
allowance to Australia to stop
triangular shipments from down-
under to Canada and to the USA
quota free and incidentally the same
practice continues to be delivered
only in diced and cubed form which
is "quota free".
And now, we open the import
doors again! We are simple minded
patsies... without enough intestinal
fortitude to stand up and fight.
Mom, it is time to phase out im-
ports! Phase 'em out!!!
If American Cattlemen say we
have too many cows, let's build the
domestics and totally eliminate the
imports.
McMillian on TV said it is only
Hamburger Trade!! Mom, they too
are customers and users. Big users.
And, everytime a Customer picks up
a "undiscovered" ground meat instead
of a chuck roast... or your ground
beef... you have been controlled!!!
STABBED!
Good old USDA... the farmers
friend! Not the individuals that we

meet at home, but the policy
makers, the economists, who hide
behind the guise of the Agricultural
insignia; but who actually are con-
sumer orientated. Consumer Pro-
tectors! Why must either the cow-
man, the feeder, the farmer or the
packer lose before these pinkos are
happy?

It is time, fact is, past time, to
come up with stated, outlined plans
that call for:

- 1st. Import Beef Total Phase Out!
20 percent a head decline.
- 2nd. If not eliminated, to call for
rigid tariff charges, and this money
to go to projects for domestic cattle
promotion.
- 3rd. Eliminate all use of artificial
extenders in any meats... If Alpo
for dogs can be all meat, why put the
dog biscuit type substitutes in the
beef counter.
- 4th. Identify Beef and Pork.
- 5th. Absolutely no imported beef
or pork to be purchased by Federal
Food Stamps. If YOUR taxes pay for

welfare... at least keep the benefits
home.
6th. No import meat for the
military.

It is time to attack. The way we
have been... we're like a basketball
team 15 points behind and stalling
trying to hold the score down.

It is time to get away from
pacification... Time to attack... to
demand elimination and then the
worst we can expect is renewal and
continuation... as it is, we exert no
plan beyond handshakes and smiles.
So then get clobbered in the back
room.

Do imports hurt? Mom, the threat
and uncertainty hurts worse than
the actual shipments. It is a means
of price control and is manipulated.
Bess Myerson, New York City
Consumer of Affairs Commission,
now calls for unlimited imports.
Why don't one of you apathetic
cowmen send her a calf to feed? You
can't argue with people like that by
words!!

The TEGTMEIERS of Southeast Nebraska Eleventh Production Sale

CT ROLLO HAZFORD, one of the truly
great sires of the breed. A son sired the
top-selling bull at a National Western
Stock Show and many other sons are in
use in top herds. His sons, grandsons and
granddaughters sell in this sale.

Pax 180-bushel Steel Cattle Feeder

Land Options Set, Oscar Mayer At No Decision Yet

The Oscar Mayer Co. is active in the Manhattan and Wamego areas even though a decision on where to locate its new 5,000 hogs-a-day pork processing plant may be several weeks in the future.

Options on two land packages, one near Zeandale, five miles east of Manhattan on Wabunsee Road, and the other at Wamego, have been put together for Oscar Mayer by a realtor with help from local businessmen.

At first there was some difficulty in getting options on enough land at Wamego but Denny Burgess, president of the Wamego Chamber of Commerce, said there is sufficient land now, with 650 acres under option.

The Wamego site for the processing plant, which will employ 700 workers, includes 125 acres in a V-shaped area between old and new US-24 separated from the eastern limits of Wamego by a county road.

Oscar Mayer has applied to have the 125 acres rezoned from agricultural to industrial land.

Burgess is encouraged, for Wamego since the application has been made directly by Oscar Mayer instead of a third party.

John Roberts, chairman of the Pottawatomie Zoning Commission, said the Oscar Mayer request will be heard by the commission April 6.

He said it is nearly a certainty the 125 acres will be rezoned.

Lud Fiser, secretary of the Manhattan Chamber of Commerce, said similar steps are being taken in Riley County and that rezoning there is certain.

Fiser and Burgess said Oscar Mayer will begin an evaluation of the labor supply in the area within two weeks. They said engineering studies will begin immediately.

"Harold, do you have to buy him
EVERYTHING he wants?"

New Co. Agent For Riley County

32

Grass & Grain

March 21, 1972

Riley County has a new county agent. Dean Davis will succeed Charlie White, who took a job with the First National Bank.

Davis, 29, has served four years as the County Agricultural Agent in

Morris County. He will assume the post of Riley County Agent May 1. Davis has a B.S. degree in animal science at Kansas State. Prior to taking the position with Morris County he had been a ranch foreman for two years.

This bunker silo on the Mark McHenry farm was designed to hold 5000 tons of ensilage. "It has never been completely filled" said McHenry. Last year he put feed from 250 acres in here. He feeds his cattle from 28 to 35 pounds of silage per day, but does not feed any hay.

Feeding cattle is a year-round occupation on the McHenry farm. From 1000 to 1200 cattle are fed here every year. Mark McHenry (left) and his helper Edward Wright stand by one of the fence-line feeders.

Beef Tour

Melvin Zuker explains his cattle operation to the men on tour. Zuker feeds about 350 calves from October to May. He feeds silage and six pounds of grain. His feed bunks are on concrete and are sheltered by windbreaks.

Backgrounding cattle was the theme of a recent cattlemen's tour in Ottawa County. About 50 people were present to visit the farms of Mark McHenry, Melvin Zuker, and Emery Berry near Minneapolis. These cattlemen all buy calves weighing around 400 pounds, feed them ensilage and grain until they have doubled their weight and then sell them to feedlots to be finished out.

The tour was organized by Ottawa County extension agent Ronald J. Seyfert. Dr. Lowell Breeden and Keith Zoellner of K-State were on hand to answer questions and make recommendations. The morning was spent touring the farms and discussing the programs followed by the three cattlemen. After dinner the discussion was continued at the meeting room in the Court House in Minneapolis.

Some of the men on tour gather around Keith Zoellner and Dr. Lowell Breeden of K-State. Zoellner said "Many cattlemen are overlooking wheat as a potential feed source. Wheat certainly has a place in the feed program, however, you should limit it to about one-third of grain portion where used with a silage program." Feed rations at the Emery Berry farm are 60% silage, 11% hay, and 29% milo. Feed costs on the three farms ranged from 16.2 cents to 17 cents per pound gained.

Dr. Lowell Breeden (left) and Joe Jagger of Minneapolis were discussing the use of stilbesterol in feed. Breeden and Zoellner were both concerned with the possible exclusion of stilbesterol by law from use in feeding, contending that it was not nearly as dangerous as recent news stories proclaimed.

MOVED IN AUGUST 3

Dave Sukup, St. Marys, is concentrating his farm operation. All his efforts are directed toward the hog business. He has 400 feeder hogs, 65 starting pigs, and 50 sows. He has 200 acres that keeps his hogs fed.

Hesston Co. Plans \$1 Million Addition

HESSTON, Kan. — Hesston Corp. started construction on a \$1 million plant addition to be completed and in use early in 1973. Construction will add 86,400 square feet to production facilities.

The building is part of a \$4 million, two-year expansion program begun about six months ago. About \$1 million has been spent in additions to the receiving building and engineering spaces.

The building will house about 175 employees and will require hiring additional employees.

Beet Growers Band Together Seeking Common Contract

The Mountain State Sugar Beet Growers Assn., a bargaining assn. of farmers, has broken off negotiations with Great Western Sugar Co., because the firm refused to agree to 1972 contract terms similar to those the producers won in 1971.

"As far as growers are concerned, we have given our final offer and concluded negotiations spokesman. The spokesman said Great Western indicated it may or may not offer contracts to certain growers or to producers in certain areas and for that reason the contract talks broke down.

George E. Wilber Jr., president of Great Western, said his firm agreed to contract beets on the same basis as the 1971 contract. But he said the firm could no longer contract for beets in areas where it is not economical to do so.

"Grower representatives have insisted that Great Western continue to purchase beets in those areas," Wilber said, "even if it is not profitable for the company, in order to keep the growers in business."

He said the grower representatives turned down a proposal that

TRUCK STOP AUCTION Saturday, April 1 Starts 10:00 a.m.

DAIN'S REAL ESTATE & AUCTION SERVICE Agent for Sellers Silver Lake, Ks. 913-582-4520

they share the freight costs to these outlying areas so that it would be more economical for the firm to buy from the outlying growers.

Wilber also said the growers want any changes in acreage to be made on a pro rated basis among all

growers rather than elimination or reduction of acreage in unprofitable areas.

"In spite of the present standstill," Wilber said, "we are hopeful that agreement can be reached as soon as possible."

WHEY WAGON

Dave Poperski, manager of the Bit-O-Gold Cheese plant in Wamego, is heading for the field. He says a ton of whey replaces a dollar's worth of nitrogen, and that doesn't include other minerals.

Soybeans Major Losers To Weeds

Kansas soybean producers lost more than \$9 million from weed damage that reduced yields by an estimated 3.4 bushels per acre last year.

The dollar loss is slightly over one-fifth of the state's income from

soybeans, according to the 1971 National Soybean Weed Loss Survey, sponsored by Elanco Products Co.

Despite the loss, the annual survey revealed that Kansas soybean growers gained ground in the weed war during 1971. In 1971, weed average loss was 12.3 per cent of the crop, compared with 14.9 per cent in 1970.

The survey, developed in con-

junction with agricultural college weed scientists, made personal observations of 514 Kansas fields totaling 894,000 acres of soybeans.

Kansas soybean producers were able to control weeds to the point of no loss in 17 per cent of all fields. Although the average yield reduction percentage in all fields decreased, Kansas losses nearly doubled over the previous year's losses. In 1971, weeds cost an average cash loss of \$10.22 per acre, compared with 1970's \$5.50.

Wet weather, which hampered weed control efforts and favored weed growth, caused the increased losses in yield. In addition, a rise in soybean price resulted in a higher dollar loss even though bushel losses were actually less, the survey pointed out.

Breaking down the Kansas survey, Elanco found 38 per cent of the fields suffered a \$5.88-per-acre loss; 25 per cent had \$11.76-per-acre loss; 16 per cent had \$21.32; and 4 per cent had \$41 losses.

Nationally, soybean producers suffered a crop loss of \$428,167,066 because of weeds. This is equal to 12 per cent of the U.S. soybean crop. The loss was especially serious to farmers in a year of higher soybean prices and lower prices for other grains, the survey said.

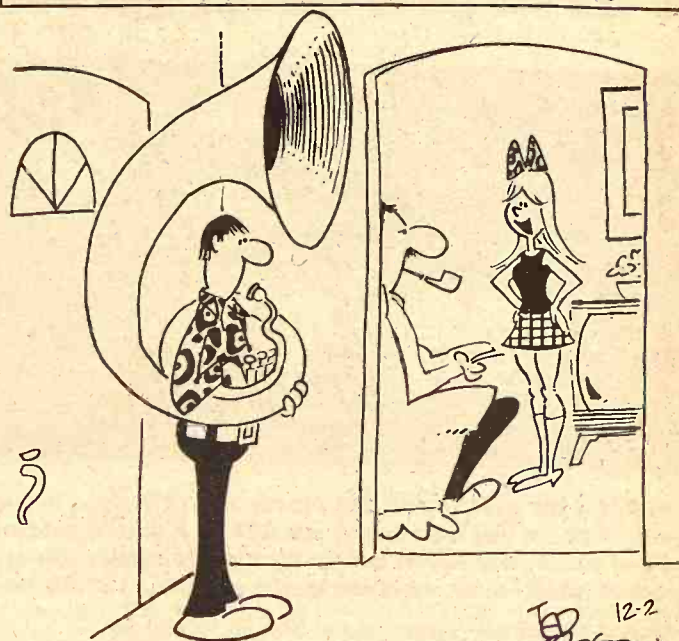

Missouri had an 11 per cent loss, but Nebraska escaped with only a 7.3 per cent yield reduction.

Kansas ranked 12th in the nation in weed losses on soybean yields Texas was 14th.

Showing the lowest loss was South Dakota with 5.2 per cent, followed by Nebraska, 7.3; Iowa, 8.3; and Oklahoma, 9.2.

MANHATTAN MILLING CO. Manhattan, Ks. 778-3217

Attention: Grain & Cattle Producers!

MARCH 22
AT 8:00 P.M.

At the McDowell Creek School, Borth Seeds and Ron Roesler will conduct a wheat meeting to discuss the recent developments which are being made in wheat breeding & production. As you may or may not know, several wheats have been developed to provide high yield and quality grain as well as greatly increased forage. These wheats also have the characteristic of standability under high fertilization and moisture conditions. Performance guaranteed!

Don Epperson of the Kansas Association of Wheat Growers will also discuss some of the latest developments in wheat use research.

Refreshments of wheat will be served. We hope to see you Wednesday, March 22, 8:00 pm.

Invest In Land

160 acres Southeast Mitchell County. 101 acres upland cultivated land, balance pasture with pond and well water. Priced at \$20,800, 20% down, balance over term of years at 5 1/2% interest. Tenant desirous of continuing \$1600 per year cash lease. Excellent investment.

640 acres southeast Mitchell County, 315 acres upland cultivated, balance native pasture with ponds and wells and older two bedroom home. Has great potential for cattle operation, including growing alfalfa and tree protection. Priced for only \$150 per acre, 20% down, balance over 20 years at 5 1/2% interest. Pasture & spring crop land still available. Have cash lease tenant available for the investor, that would provide excellent return.

372 acres Ottawa County, southeast of Tescott. 202 acres of some of the finest river bottom land we have had the privilege of selling. Irrigation potential, 146 acres of fine native grass with excellent pond. Immediate possession on grass & open land. This is the farm that you have always dreamed of owning that is now available.

22 acres located on north Ohio Street inside the dike. Commercial development next to Salina. Owner will sell on contract.

For information call Jerry Knowles, realtor, 913-825-4091.

National statistics indicate land prices are still increasing. All listings are exclusive and realistically priced. When buying or selling rural real estate, call Jerry Knowles, 825-4091.

EXCLUSIVE LISTING

We have just listed one of the finer livestock farms in this area consisting of 563 acres located in the northern part of Riley County. It is well improved with a four bedroom modern home with improvements consisting of several barns and other buildings for a cattle feeding operation. Has 160 acres of good creek bottom land in large fields with about 30 acres of alfalfa. The balance consists of excellent pasture with good fences and water. This farm is well worth the price of \$200 an acre. Let us show you this one. For further information contact

State
to be dis
The 10 new inbred lines a
KS 45 through KS 54 (Kansas
Sorghum with identifying number).
Five of the 10 have stiff stalks (to
resist lodging). Four mature late;
three have medium maturity; one is
early, and two are between medium
and late. Three are tolerant to
chinch bugs. Eight carry genes for
good combine harvesting.
Smith said all result from
research aimed at helping Kansas
maintain its competitive advantage
in beef and pork production, even
more than for cash-crop ad
vantages.
Pedigrees, seed color, and com
plete descriptions of the 10 inbreds
are available to potential plant
breeders from the Agronomy
Department.
OUTSTANDING FARMER,
EUGENE BROCKELMAN
The Holton Lions Club named
Eugene Brockelman their Out
standing Farmer of the Year. The
presentation was a feature of the
Lions Farmers' Night at which each
club member had a farmer guest.

HUNTING ACCIDENTS WITH FIREARMS DOWN IN 1971
Hunting accidents involving firearms showed a decline in 1971 according to figures released by the

47

Kansas Forestry, Fish and Game Department. Tabulations revealed that 40 persons were injured as a result of mishandling of firearms by

hunters compared with 46 injuries in 1970. Three persons died from these injuries in 1971 compared to four the previous year.

Saturday, March 25

Starts 11 a.m. - Lunch Served
As we have sold our farm we will sell on the farm located 4 1/2 miles north of Lyndon, Ks. on Hwy. 75 to Carbolyn Park Road, 1 north on old Hwy. 75, 1/2 mile east.

Farm Machinery

M.F. 65 Dieselmatic Tractor
Multi-power, Hi Arch, 1500 hrs.
Good Rubber, A-1 Condition

Expect To Plant Less Milo, Corn

This year Kansas farmers expect to plant smaller acreages of feed grains than last year but moderately more soybeans, according to the Kansas Crop and Livestock Reporting Service's March Acreage Intentions Survey.

Sorghum plantings were expected to total 4.5 million acres, down 13 percent from 1971 and corn plantings 1.6 million acres or 4 percent less. Intended oat acreage was only 69 percent of last year and barely 57 percent.

On the other hand, prospective soybean acreage was up 6 percent to .9 million acres, and expected plantings of sugar beets were 4 percent higher. The State's intended dry bean planted acreage was up substantially from 1971 but not large.

Hay was expected to be harvested from nearly 2.5 million acres, about the same as last year's fairly large acreage.

The combined acreage of all Kansas crops expected to be grown in 1972, including an increased acreage of wheat was 19.2 million acres, down 4 percent from last year. This compares with a range from 19.2 to 20.5 million acres during the 10-year period of 1961 to 1970.

Feed Grain Plantings Down
If these 1972 early season planting intentions are realized the acreage of feed grains — sorghums, corn, barley and oats — in Kansas will total 6,425,000 acres or 13 percent below 1971 and 3 percent below 1970.

Intended sorghum plantings for all purposes were 4,500,000 acres, down 13 percent from last year but still the second largest since 1963. Expected reductions in sorghum acreage were general over the State.

Intended corn plantings were 1,600,000 acres, down 4 percent from

last year and 5 percent from 1970, but larger than in the previous half dozen years. Decreases in corn acreage were indicated in eastern and northern districts but some further gain was reported in western irrigated areas. White corn plantings are expected to total only 60,000 acres, 41 percent below last year.

Barley sown last fall plus intended spring plantings totaled 125,000 acres, down 43 percent from the 1971 acreage.

Oat seedings of 200,000 acres compare with 290,000 acres planted in each of the two preceding years.

The intended planted acreage of soybeans in 1972 was 930,000 acres, 6 percent more than last year but 13 percent below 1970. Sugar beet plantings were expected to be 43,000 acres, 4 percent more than last year but 5 percent less than in 1970.

Dry beans are expected to be planted on 13,000 acres compared with last year's 8,000 acres and a range from 12,000 to 25,000 acres in the previous half dozen years.

Potato plantings in 1972 were 1300 acres, down 7 percent from 1971.

The acreage of all kinds of hay expected to be cut by Kansas farmers and ranchers in 1972 totaled 2,470,000 acres, about the same as last year.

Spring Seeding Well Underway
Spring field work and seeding of small grains has moved ahead rapidly during mild, open weather prevailing in late February and early March.

By March 13, 41 percent of the State's expected oat acreage had been seeded, considerably ahead of the usual 25 percent for this date.

Spring barley seeding also moved ahead with 20 percent in the ground

compared with an average of 12 percent.

Plowing and preparation of land for planting of corn, sorghums and other row crops has also progressed well. Surface soils are dry over much of the State and a good rain is needed for spring seedings.

United States

Acreage of the Nation's 16 major spring planted crops were expected to total 201 million acres, 5 percent less than last year.

Intended acreage for the four feed grains was 8 percent smaller than a year earlier, including a 13 percent reduction in sorghum acreage, an 8

percent decrease in corn, a 6 percent drop in barley and a 4 percent decline in oats.

Intended soybean plantings were up 5 percent from a year earlier while the expected sugar beet acreage was down 1 percent. Dry bean intentions were 7 percent above last year.

Hay acreage expected to be harvested in 1972 was 1 percent below a year earlier.

The intended white corn plantings for the ten major producing States was 630,000 acres, down 44 percent from last year.

PROSPECTIVE PLANTINGS FOR 1972
(As of March 1)

1/ Acreage for harvest.

2/ Planted previous fall.

3/ As published December 1971.

Sell At St. Marys

Sell Or Buy Cattle & Hogs By Auction Tuesdays

EARLY CONSIGNMENT FOR MARCH 28th:

From the Jesse Southard Farm, Hoyt, Kansas
5 registered 2 year old horned Hereford bulls,
big rugged and ready for service.
English Blended: WR Graf 96 out of Eaton
Drummer cows.

We sold 806 cattle on a good active market. Stocker and feeder steers and heifers were selling rather uneven, some looked 25¢ to 50¢ lower while some looked 25¢ to 50¢ higher. Killing cows and bulls were selling steady.

Following is a partial listing of our sale last week:
