WATER WITCHIN'

Alex Sabin is best known in his home Marshall county area for "witchin' water." Alex uses pliers for his dousing rod, carrying them like this as he wanders over an area. They turn in his hands and point down to the spot where water can be located, according to Alex' theory.

Not everyone has the touch but age makes no difference. Roger Johnson, 8-year old son of Kenny and Linda Johnson, has the witching touch, says Alex.

"Witching" can be done by two if they are both believers, the partner in this case is Kenny Johnson of Blue Rapids.

Some sniff their disbelief; some cite chapter and verse of accomplishment. Whatever the varied reactions to "water witching," the folk belief persists that some gifted people can locate underground water by patrolling an area with a dousing rod, willow switch, peach tree bow, or some other mystical instrument that will "turn right in the hands" and point to the spot where the driller can start his hole.

Such a performer is 75-year old Alex Sabin of Blue Rapids, who says he doesn't need anything more than an ordinary pair of pliers to locate water. Alex says he has about an 80 percent record of success, based on drillers bringing in wells where he locates them.

The pliers can locate metal too, as Alex demonstrates over his mail box. Sabin has retired from farming but he still runs a custom corn-shelling service in Marshall and neighboring counties.

A 4-foot elm switch can be used to determine the depth of the vein of water. Alex claims the switch will dip once for every foot of depth and he "usually comes close."

Push For Car Inspections, Regular Driver Tests

Campaigns to promote highway safety often seem to show endless effort and little effect.

Claud McComment, director of the safety division of the Kansas Highway Commission, admits that there seem to be few avenues that men in this job can take to cut down on highway accidents and deaths.

Finally, the object is safer cars and safer drivers. McComment agrees that pressures on automakers to add safety devices to cars have put the emphasis on that side for several years but that the greatest factor in driving safety is the individual driver.

McComment thinks that two laws, mistrusted by many who fear mandatory rules, would help make for safer cars and drivers.

"The two major administrative

initiatives we need most, and two which most other states have in one form or another, we don't have in Kansas. These are periodic driver examinations and vehicle safety inspections."

McComment says the state needs a system of vehicle inspection that would affect all vehicles on the road and assure that the vehicles were free of serious safety defects, such as faulty brakes, tires, lights and exhaust systems.

"In addition to the pure safety factor, we also have found that Kansas is becoming a dumping ground for other peoples' clunkers," the safety director says. He explained that persons who want to sell older cars that probably would not pass safety inspections in their home states, such as Nebraska or Colorado, can bring the cars into Kansas for sale, where there is no inspection.

McComment said it would be up to the Legislature to pass mandatory vehicle and driver examinations. He added that the legislators have shown no great interest in the

programs. "The periodic driver examinations scare them (the legislators) I think," McComment said. "Most people think the idea behind periodic driver checks is to remove old people from the roads, but that isn't necessarily the case."

McComment said driver examinations have repeatedly turned up some vision defect in an individual that the person did not know he or she had, such as glaucoma, "lazy eye" and other defects, and slow reaction time, that might not show up on a standard physician's checkup.

"We have a pretty good number of youngsters and teenagers turn up with such problems in school tests and driver examinations," McComment said. "Almost all of the problems are correctable, and the corrections help the person not only in driving but in other areas, especially in school."

"So the idea is not to find something wrong with a person and get him off the road, but to find out if there is a defect, and get it corrected so he or she can drive more safely," McComment said.

Under the present system, drivers in Kansas take one driver examination and physical when they take their test for a drivers license. They never have to take the test again.

On the other hand, if it is necessary to remove a driver from the road because of a defect, McComment said that would be better than to allow a potential accident factor to go unchecked.

"It doesn't make sense to me that somebody who is incompetent to drive should be allowed to drive as dangerous a machine as a car or that he should even want to drive and risk the possibility of killing himself or others."

"If periodic examinations turn up

drivers with problems that are not correctable, then they should be taken off the road. That's perfectly fair, not only to the thousands of other drivers on the road, but to themselves," he said.

On his desk, McComment has stacks of individual driving records attesting to the failure of the system to deter incompetent drivers from committing the same mistake again.

A random selection from the stack revealed one Kansas driver who had 20 offenses between July, 1968, and May 1970, including careless driving five times; failure to obey traffic signs and controls three times; three accidents; speeding, driving on the wrong side of the road, defective exhaust system and suspension of his license, which later was reinstated.

Another individual report listed 25 offenses, including speeding, running stop signs, several counts of driving while intoxicated and four separate license withdrawals in four years. The driver is less than 25 years old and was involved in several accidents.

A third record showed a person with a list of traffic convictions and license revocation. The last entry on the record reads in sterile, statistical language: "10-22-71—FA1—Violation of a motor vehicle law resulting in the death of another person."

McComment said repeated traffic offenders should be treated as criminals, but are given only fines

and short driver's license suspensions.

"I think almost any driver can be expected to make a mistake now and again," McComment said. "There are mistakes and most drivers learn from them and not make them again."

"But persons who repeatedly are convicted of dangerous and potentially fatal offenses are criminals and sooner or later end killing or maiming themselves and other innocent persons."

Out Of Jail To Feed Cattle

Gary Johnson ought to spend some days in jail for his wild driving, a Phillipsburg judge figures, but he's also got 400 cattle to feed.

So Phillips County Judge Martha Kellogg is letting Johnson, age 25, out of jail from 7 a.m. until 1 p.m. each day, to feed his cattle.

"I just couldn't see those cattle going hungry," said Judge Kellogg. Johnson got the 30-day jail sentence for disorderly conduct following a wild 35-mile ride with Nebraska law officers in pursuit. Johnson, who was on parole from another driving charge, was charged with reckless driving, driving while license suspended, driving while intoxicated, and attempting to elude police officers.

Ellsworth County Not 'Mining' Water, Study Says

The Kansas Geological Survey has investigated the geology and ground-water resources of Kansas counties since 1940. The most recent addition to these investigations is a bulletin authored by Charles K. Bayne, Paul C. Franks and William Ives, jr. "Geology and Ground-Water

Resources of Ellsworth County." In Western Kansas, ground-water is being mined—that is, the total quantity of water pumped each year is greater than the available recharge from natural sources. As a result, the water table is declining. This is not the case in Ellsworth county. According to the investigation, recharge has been equal to discharge and consequently, the water levels in Ellsworth remain about the same. Large scale pumping has not created an imbalance. Hand-in-hand with the water

storage investigation goes an analysis of that water. While the water in this county is "hard," the concentrations of iron and manganese are low. Chloride which would cause weight loss in cattle remains low, too. The study shows low levels of both nitrate and fluoride in the waters of Ellsworth county. If the water contained too much nitrate, for example, some parents would notice that their infants were sick. Cyanosis (blue baby) or oxygen starvation, is the result of high

nitrate concentration in drinking water. Another example is fluoride which in small amounts helps to prevent tooth decay. Too much fluoride however, results in mottling, or color spotting of children's teeth during the formation of permanent teeth.

Farmers, who intend to build wells, would find this a valuable catalog of rock formations which are good as aquifers. In Ellsworth county, the best location for drilling wells is in those areas of the Dakota formation. Maps supplied at the back of the bulletin show this particular formation in the county.

Besides good water storage, Ellsworth county has excellent mineral resources. Ellsworth is one of 5 counties in Kansas that mines salt. Oil and gas also are present.

A mineral resource currently being exploited and which has potential for additional development is ceramic material—clay and shale. In production now are bricks, drain tiles, and sewer pipes. In addition to clay and shale, there is mining of sand, gravel and limestone for roads and other base-course construction.

A potential industry in Ellsworth county is volcanic ash. Although the ash is not presently exploited in the county, future demands may be such that the county would benefit from commercial production of the mineral. Volcanic ash is an ingredient of tooth paste and powders; the abrasive is also used in cleaners and in the polishing of plate glass. Ash when mixed with portland cement will produce a concrete resistant to disintegration by sea water. This is of immediate value to off-shore drilling rigs, harbors, and future sea construction projects.

The value of this research is enhanced by records of wells and springs including such pertinent information as owner, well diameter, casing, geological formation, method of water lift and yield.

An increasing number of farmers are turning to ground-water for irrigation. Such information will be useful to water users who have or plan major investments in irrigation or other ground-water developments and to state and local agencies

responsible for planning and guiding the development of the state's water and mineral resources.

Kansas Sixth State As Exporter Of Farm Foods

Kansas exported farm products valued at \$392 million in 1971, ranking sixth in the nation, the Agriculture Department Statistical Reporting Service has announced. Illinois, with \$655 million, was first.

The service reported Kansas led the nation in exports of wheat and flour, which totaled \$240 million. Kansas also was a major shipper of feed grains, soybeans and animal products.

The region including Missouri, Kansas, Iowa, Minnesota, Nebraska and the Dakotas exported farm products valued at \$2.3 billion, nearly one-third of the \$7.8-billion national total.

The region produced half of all wheat, flour and dairy products exported, 40 per cent of the feed grains and one-third of all livestock products.

Japan was the biggest buyer of all U.S. farm products—\$1.2 billion worth.

JUST A LITTLE DIFFERENCE

Plattsburg, Mo. residents were astounded to see this sign at US 169 and M-116 north of Kansas City. Before a vandal changed an F to an R, it read "Beef Capitol of Missouri."

Finger At Locomotives For Prairie Fires

Dale Saffels, chairman of the Kansas Corporation Commission, said he is "amazed" at the large number of prairie fires allegedly set in Kansas by sparks from railroad locomotives.

Saffels said testimony from railroad officials during two days of hearings showed there have been 1,217 prairie fires attributed to locomotives during the 2½-year period between Jan. 1, 1968, and June 30, 1971.

The KCC chairman said railroad

officials reported a total of 46,737 acres burned as a result of locomotive-triggered prairie fires during the period and commented, "This is not the total acreage involved because of the difference in reporting used by the railroads."

"Some report all fires attributed to their locomotives and others report only those which result in claims against the railroad."

"I was amazed, and I think the commission was surprised at the extent of the problem."

The corporation commission convened the hearings to determine whether it should draft rules and regulations to prevent the start of prairie fires by locomotives, and Saffels said the commission probably will draw some specific

4

Grass & Grain

January 18, 1972

rules on the subject to take effect in January, 1973.

He said the state only has general regulations on the subject now.

Most of the fires affected pastureland, Saffels said, and railroad witnesses said they compensated landowners at the rate of \$6 per acre for land burned by locomotive-caused fires. This is what ranchers and farmers would have to pay to move cattle to other grazing land, Saffels said. At the \$6-per-acre cost, locomotive-caused prairie fires would have done an estimated \$280,422 in damage during the 2½ year period.

Saffels said 12 public witnesses, most of them farmers or ranchers, testified at hearings on the locomotive prairie fire problem. One group of witnesses was represented by William Ferguson of Wellington, a former Kansas attorney general.

The KCC chairman said evidence from railroad engineering personnel was heard on what the companies are doing to minimize fire hazard from their locomotives.

"Some of the railroads, but not necessarily most, are already at work on the problem," Saffels said.

He said testimony was being received from six of the railroads operating in Kansas, including the Santa Fe, Missouri-Kansas-Texas (Katy), Chicago, Rock Island Pacific (Rock Island), Missouri Pacific, St. Louis and San Francisco (Frisco) and Union Pacific.

Saffels said the hearings were recessed after conclusion of testimony last week, and resumed for three final days in February.

Soviet Interest In U.S. Hybrids

An agricultural firm headquartered in Des Moines says hybrid corn varieties developed in the United States will undergo extensive testing in Russia.

Dr. William Brown, vice president and director of research for Pioneer Hi-Bred International Inc., said the testing is the result of a visit to the firm in mid-December by Russia's minister of agriculture.

Pioneer officials said the Russians are also interested "in purchasing several dozen beef breeding bulls...

and some laying stock," from the firm.

Regarding the corn, Dr. Brown said the Russians "are most interested in our early or shorter season varieties."

"The growing season there is quite short. However, they do use some varieties for silage which would be in the 115 to 120 day class here."

Stockmen Resolutions Cover Full Range

In one of the busiest sessions in many years, the Kansas Livestock Association adopted 21 resolutions in the closing business session of their 99th annual convention held in Wichita.

In pooling their thoughts, the livestock producers went on record

as having a policy position in many major agricultural areas. Included was a resolution encouraging the adoption of a school finance plan involving an income tax base instead of the local property base. Under this plan the state would collect and redistribute the income

to the school district of origin, it would eliminate the local income tax option of local governmental units and it opposes any additional statewide property tax levy. It would also eliminate the county school foundation fund levy and it opposed the distribution formulas of state aid to schools that use a property valuation index to determine the relative need of schools.

Affirming their concern for the protection of the environment, the producers resolved that the unique

nature of agriculture should be considered before any producers are prohibited from operation. They opposed class action pollution suits because they tend to encourage "crank" or "harrassment" actions. In addition, they urged state and federal government to provide funds to Kansas State University and other research organizations for the purpose of improving the present technology of agricultural pollution control. They also favored a federal investment tax credit as an economic incentive to encourage construction of pollution control facilities.

In light of recent happenings involving agricultural labor, the KLA adopted a resolution seeking legislation to set forth rights and corresponding responsibilities of agricultural employers, employees and employee organizations within the state.

The group pledged its complete cooperation for a seven-day withdrawal and mandatory certification on the use of diethylstilbesterol (DES). However, they opposed the

complete banning of DES and other feed additives or drugs without scientific research and objective facts determining the effects of any drug residue and what level of residue, if any, might be safe.

Real estate assessment was another major item warranting a resolution at the livestock convention and the group favored legislation that directed real estate appraisals be made on the basis of its ability to produce net rental income, capitalized at seven percent interest. Also, they pointed out that the assessment ratio study is invalid for comparing assessments between counties and should be discontinued. They asked that taxation on personal property be eliminated except licensed motor vehicles and categories of real property treated as personal property under state law.

The livestock group stressed the excellent conservation practices of the range lands and asked that the beauty of the Flint Hills be shared with all Americans by extending the Prairie Parkway system. They would include a drive-through route advertised for sightseeing complete with campsites and observation points.

The excellent meat inspection program in Kansas was endorsed by the KLA and they urged the preservation of the locker-type slaughter and processing operations. The group adopted a resolution calling for legislation that would increase federal funding of state meat and poultry inspection programs from the present 50 percent to 80 percent.

In another major area, the livestock group resolved that the federal highway trust fund should be left as established by Congress for use as originally designed. They also asked that special attention be given to the completion of the Interstate Highway System and the further development of the farm-to-market system.

Other resolutions included positions on open burning, state executive reorganization, marketing of livestock, ports of entry, predators, estate taxes, brand inspection, transportation, and the financial situation of the experiment station and extension service.

NO-FAULT INSURANCE BOOST FROM AETNA

No-Fault insurance has been endorsed by Aetna Life & Casualty Co., the nation's fourth largest writer of auto insurance and a major insurer in the G&G area. Aetna has recently released a booklet, "The Case for No-Fault," expressing its support for the concept.

Winter Is Coming To The Rangeland. What Do You Plan To Do About It?

When your cattle go on Winter pasture soon, what will you use to supplement their ration? A successful calf crop next Spring depends on a ration that provides extra protein, vitamins, minerals and energy.

CO-OP Range Feeds supply all those vital nutrients with protein levels from 12% to 39% and vitamins, minerals and energy levels adaptable to your area. Ease of feeding is an important factor, and CO-OP Range Cubes and Protein Blocks require a minimum of labor while providing built-in consumption controls to eliminate waste and over-feeding.

Your CO-OP Feed Expert can help you get more out of your range feeding program. Stop by and talk to him before your cattle go on Winter range.

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Marvin Gehrke Of Delphos Is Prize Winner

Winner, Mrs. Marvin Gehrke, R 2, Delphos: "I enjoy your recipes every week and would like to share one of my favorites. This is a very rich but very easy cookie recipe made with only one pan. No dirty dishes!"

HELLO DOLLYS

Melt 1 stick oleo in 9x13-inch pan. Add remaining in layers on melted oleo:

- 1 cup graham cracker crumbs
- 1 cup coconut
- 1 small package chocolate chips
- 1 small package butterscotch chips
- 1 can (small) Eagle Brand condensed sweet milk (do not substitute)
- 1 1/2 cups ground nuts

Bake at 350 degrees for 30 minutes. Cool and cut into bars.

+++++

Mrs. William Stauss, R 3, Junction City: "I am sending in a salad recipe that's so easy, tasty and quick to make and yet attractive to serve. I enjoy the recipes that appear in

Grass & Grain." **RASPBERRY GELATIN SALAD**
1 small package raspberry flavored gelatin
1/2 cup sugar

When you have a mattress problem
Consult the experts

MANHATTAN MATTRESS CO.
Headquarters For Fine Bedding

BIG SAVINGS

"We make and service everything here"

414 South 4th • Phone 778-5302

1 small can crushed pineapple
Heat until sugar and gelatin dissolve. Cool but do not let jell.
Add:
1 small carton cottage cheese
1 small carton Cool Whip

+++++

Mrs. Glen Benyshek, Cuba, sent the next recipe:

EASTER EGG

1/4 pound butter
1 pound powdered sugar
1 tablespoon vanilla
2 to 3 tablespoons cream or milk
Cream the above ingredients and shape in an egg shape. In double boiler put 1 12-ounce package chocolate chips, 1 1-inch square paraffin wax. Let creamed mixture stand overnight in refrigerator. Roll egg in chocolate mixture. Do not mix chocolate and wax much and do, not have too hot, either.

+++++

Mrs. Raymond James, R 5, Clay Center, sent this recipe:

GRAPE JELLO

BLUEBERRY DESSERT

1 package grape and 1 package lemon gelatin mixed and dissolved in 2 cups boiling water; 1 medium can crushed pineapple (1 number 4 ounce) 1 can blueberry pie filling. Pour all in 9x13-inch pan. Let stand to congeal. Melt 6 large marshmallows with 1/4 cup milk and add 1 small carton of cottage cheese and 1 small carton whipped topping or 1 package Dream Whip or 2 cups whipped cream. Spread on congealed blueberry mixture and let stand 6 hours or more. "Very good."

+++++

A gentleman has requested a recipe for Wheat Cakes, so we are printing the following:

FAVORITE PANCAKES

Heat griddle slowly while mixing batter.

Beat well:

1 egg
Beat in:
1 1/4 cups buttermilk or sour milk
1/2 teaspoon soda
Then beat in:
1 1/4 cups sifted flour
1 teaspoon sugar
2 tablespoons soft shortening
1 teaspoon baking powder
1/2 teaspoon salt

Beat with rotary beater until smooth, then bake. For sweet milk pancakes, follow the recipe for Favorite Pancakes except substitute sweet milk for buttermilk, add an extra 1/2 teaspoon of baking powder and omit soda. For extra lightness, beat egg yolks add milk, etc. Fold in stiffly beaten egg whites. Amount: 16 4-inch cakes.

+++++

OLD-FASHIONED BUCKWHEAT CAKES

Dissolve 1 cake compressed yeast in 1/2 cup lukewarm water. Add 2 cups cold water. Sift together and stir in:

1 cup sifted flour
2 cups buckwheat flour
1 1/2 teaspoons salt
Beat vigorously until smooth. Cover and place in refrigerator overnight. In morning stir in:
1 tablespoon molasses
1/4 cup butter, melted
1 teaspoon soda dissolved in 1/2 cup hot water

Let stand at room temperature for 30 minutes before baking. Amount: 36 4-inch pancakes. To use batter as a starter for another batch: Save out .1 cup of batter (before adding molasses, butter, soda). Add .1 cup cold water, cover and place in refrigerator until night before you wish to use it. Then pour off water which has risen to top. Blend in the amount of flour and salt as in original recipe. Add .2 1/2 cups cold water, cover and let stand that night. In morning, stir in the molasses, butter, soda and hot water as in original recipe. Let stand 30 minutes and bake.

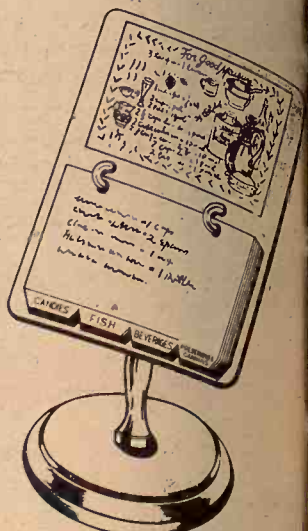

+++++

Thank-You Note

This letter of thanks was received from Mrs. Lawrence J. Orsborn, R. 2, Wamego, a recent winner of the

"Our Daily Bread" recipe contest. "Thanks so much for the prize received from Grass & Grain. Judging from the number of friends who saw the recipe, Grass Grain must have a sizable circulation."

The Latest 'Daily Bread' Prize

RECIPE LECTERN

HANDSOME WOODEN stand holds recipes for easy reading. Categories marked to eliminate searching. Rings make it possible to remove or add recipes. Handy measuring guide at top of stand. A product of Victor Goldman, Inc.

The winner each week is selected from the recipes printed.

Win one by sending us your favorite recipe—this can be main dish, leftover, salad, side dish, dessert or what have you.

1. Check your recipe carefully to be sure all ingredients are accurate and accounted for.
2. Be sure your name and address are on the entry.
3. Only one recipe at a time, please.

4. Send it to Woman's Page Editor, Grass & Grain, Box 1009, Manhattan, Ks., 66502.

Here are 10 Good Reasons Cows & Calves Need DEHY

Okay, count 'em—

- 1 Dehydrated alfalfa contains more total NUTRITION than any other natural feed-stuff.
- 2 Improved UTILIZATION of poor quality roughage.
- 3 Have specific protein GUARANTEES.
- 4 High levels of CAROTENE (Vitamin A source)
- 5 Fits into any ration NATURALLY.
- 6 Stored under scientific conditions to PRESERVE the Vitamin A.
- 7 Alfalfa's nutrition is in the leaf, and all the leaves are IN THE PELLET.
- 8 Closest available feeds to GREEN GRASS.
- 9 An excellent source of PHOSPHATE.
- 10 Produced from our own fields of the best varieties of alfalfa which have been heavily fertilized with phosphate and potash.

How To Redecorate In Bedroom On Budget

The first room in the house to be redecorated usually is the living room, with kitchens and baths coming a close second. The last is generally the bedroom when the family is on a budget. However no room in the house is more personal or has more need for decorator touches than the bedroom,

for it is the first and last room you are in each day. In redecorating the bedroom, replace basics such as dressers and night tables and indulge in do-it-yourself touches. Good bedding is definitely one of the basics. It's the foundation of a beautiful bedroom.

Grass & Grain

9

January 18, 1972

For the decorator seeking budget ideas, how about tie-dyeing curtains or bedspread? Start with white sheets and dip them into your chosen colors. When the sheets are dry, make curtains, spread or a slipcover for a bedroom chair.

Change the hardware on doors and drawers. Consider wrought iron, clear plastic or ceramic instead of metal. And lighting makes a difference. Change the bulbs you are using not to either stronger or dimmer and put on new shades.

Another inexpensive way to add interest is to wallpaper the ceiling. Or sew fringe around the hems of the bedspread and curtains.

You can accessorize any room with a green thumb. Leafy plants, lots of them and colorful blooms, whether real or artificial, can be important accent pieces. Choose them carefully for size and scale and show them off in interesting containers. You might suspend a basket of flowers or ferns from the ceiling in front of a window or mirror.

You can create a canopied effect with fabric on the wall behind the bed caught up with decorator hooks. And splurge on one important new thing, such as a brass bed, an oversized mirror or an antique armoire.

offers neck and head protection for safety and comfort.

Other features of the new chair are removable crotch and waist straps which can be used separately or together as a T-strap to hold the child comfortably and securely in place.

It folds easily for storage and

travel but cannot fold when occupied. It also features a convenient towel bar in the rear and an adjustable footrest to grow with the child. The high chair is luxuriously cushioned and easily wiped clean with a damp cloth. A deep tray is designed to help mother keep spills off the floor.

Check Quality, Durability Of Upholstered Furniture

When the investment in furniture is major, as far as chairs or sofa, there are standards of quality and durability for upholstered furniture which are important.

When you choose upholstered seating pieces, look for good basic construction. A well-made sofa should have a one-piece frame.

Arms should not be bolted to the rest of the sofa, but the entire frame should be made in one piece. The corners of a sofa should be reinforced by triangular pieces of wood or metal. Spring and webbing underneath the cushioning should also be reinforced.

Another mark of quality is the self-decked sofa or chair; lift the cushions to see whether the upholstery fabric has been used to cover the underside of the seat. The cushioning should be latex foam rubber. It outlasts all other types of cushioning and will not set or hollow out after repeated use. Nor will the latex cushions soften or lose their resiliency.

Choose upholstery fabrics with great care. Look for durability and synthetic fibers and a soil-resistant fabric finish.

Use Starch To Replace Body

When laundering a linen tablecloth, use just enough starch to replace the body and smooth finish that was lost in the laundering.

Tint With Coffee

Give lace or nylon panel curtains a new look and tint them a cream color by dipping them in a weak coffee solution.

More Wear From Child's Trousers

When a child's trousers start binding him but are still in good shape, add a piece of elastic to each end of his suspenders.

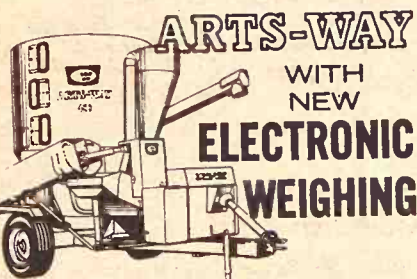

TICKLE BOX® by Ted Trogdon

"Excuse the peanut butter and jelly... my kid wrote it for me."

SAVE FEED DOLLARS

Model 425

You'll never waste costly feed with an Arts-Way 425 or 325 and the optional new Arts-Way Electronic Scale. Ends ration guesswork. You weigh each ingredient electronically as it goes into the mixer. There's no waste of protein or supplement. And you can weigh exact rations out to your animals. Come in and see it in action!

Reader Requests Information

Mrs. Raymond James, R. 5, Box 150, Clay Center, 67432, has asked for some information from G&G readers. Anyone who has the answer to Mrs. James' question may either send it directly to Mrs. James, or to the G&G Woman's Page Editor.

"Can you or your readers give me the directions for making the paper logs to burn in fireplaces? I know you wrap them tightly in bundles and soak them in some kind of a solution. One thing that is used is sulphur. These are best made in the summer when it is hot and they absorb the liquid and then are burned in the winter in fireplaces giving off various colors in burning, such as red, green, blue, etc. Do you or your readers have these directions?"

Folding High Chair Offers Many Safety Features

Safety features abound in a deluxe folding high chair with extra wide legs and an extra high backrest. The legs resist tipping and the back

- IF Sickness (or death) had not drained our savings;
- IF rains had not flooded out our crops; or drouth burned 'em up;
- IF disease had not caused us heavy loss in our livestock;
- IF for any of a number of reasons unforeseen events had not crippled or temporarily obstructed our progress in farming.

The IFs in farming are the primary factors in guiding a Federal Land Bank Association Loan. Ordinary, conventional loans often mature at inconvenient times. Terminal dates often bring undue pressure, force panicky decisions upon you. FLBA gives practically a working lifetime to work out your security... if you need that much time.

Corduroy Now Year-Around Fabric

Corduroy has come into its own as a year-around fabric and the variety of patterns and colors available will inspire home seamstresses.

One important look has the knitlike appearance of geometrics and jacquard. Victorian prints, tapestry and wallpaper patterns, liberty-type florals and dark ground calicos can form the transition from summer into fall.

Printed patchworks and denim looks are also featured. The pinwale, medium wales and no-rib constructions offer a wide range of color effects. The most important is the ribless corduroy with its rich, velvety look. Colors are classic, earthy and vegetable hues.

No Slips

Prevent the broom handle from slipping around and sliding when you lean it against a wall. Cut a finger from an old rubber glove and slip it over the end of the handle.

Dry Round Cloth On Flat Surface

A round tablecloth will keep its shape after laundering if it is dried on a flat surface over papers or an old sheet. Do not fold it while ironing but press it by beginning at the center and working toward the outer edges.

Treat Rug Spots With French Chalk

Rub French chalk with a small brush into dull spots left on rugs by furniture pressure. Let stand 30 minutes and then vacuum the area.

Turkey Crop Was Down

There were 307,000 turkeys raised in Kansas in 1971, 6 percent less than in 1970, according to the Kansas Crop and Livestock Reporting Service.

Of the 307,000 raised, 299,000 were heavy breeds and 8,000 were light breeds.

Kansas turkey producers had 28,000 breeder hens on hand on December 1, 1971, some 8 percent more than a year earlier. Of this total, 27,000 were heavy breed and 1,000 were light breed types. This compares with 25,000 heavy breed and 1,000 light breed hens on hand January 1, 1971. The estimated value per head on December 1 was \$5.60 and the total value of turkey breeder hens \$157,000. This compares with \$5.50 per head on January 1, 1971, and a total value of \$143,000.

United States And Major Turkey States

Turkey growers in the United States raised 120,085,000 turkeys in 1971, four percent more than a year earlier. This included 106,312,000 heavy breed turkeys and 13,773,000 light breed turkeys.

Grower's intentions in 20 major turkey states indicate the number of turkeys raised in 1972 would be 1 percent more than in 1971. If producers carry out these early intentions, the 1972 turkey crop in the 20 States would total 116.6 million birds compared with 115.0 million raised in 1971.

ALTA VISTA, KS.

Producers in the 20 States intend to raise 102.9 million heavy breed turkeys, 1 percent more than in 1971 and 13.8 million light breeds or 5 percent more. The number of turkeys actually raised in 1972 may vary somewhat from early intentions of growers, depending on reactions to this report, price of feed, supply and price of hatching eggs, poults, and turkeys.

Turkey breeder hens on farms December 1, 1971, in 26 States totaled 3,375,000; 1 percent less than on January 1, 1971. The number of

breeder hens on farms consisted of 3,001,000 of heavy breeds, 374,000 of light breeds. The number of heavy breed hens was virtually unchanged from January 1, 1971, the number of light breed hens was 1 percent smaller.

The December 1, 1971, value of breeder hens on farms in the States totaled \$20,964,000 compared with \$20,217,000 on January 1, 1971. The average value per bird was \$5.94 on January 1, 1971.

FOR THE TRUTH ABOUT LIFE INSURANCE

UNITED INVESTORS
Life Insurance Company

More electricity for conservation makes a better world.

KPL is a pioneer in the development of important energy conservation systems. Here, electrically operated equipment captures interior heat energy from lights, machines ... even people! This heat energy is then recirculated, as needed, to warm all parts of the building.

Now, thanks to electricity, this otherwise wasted heat can be put to efficient use, so that less of our precious natural resources are consumed in the production of energy.

Research constantly discovers new methods like this to use electricity for conservation and the improvement of our environment. Naturally, the demand grows higher.

Yet this is the challenge we accept at KPL ... to provide power whenever the need arises ... power to make your world a better place.

Need To Keep Up With New Safety Requirements

While all of the effects of labor safety programs on agriculture haven't been determined, farmers could be wise to keep up with developments.

Elwyn S. Holmes, Extension agricultural engineer at Kansas State University, points out that for the first time farmers who employ workers are required by law to provide working conditions meeting federal standards.

Under the Occupational Safety and Health Act of 1970, the Department of Labor must issue and enforce safety standards applying to all occupations, including farm

employment. Of the dozens of standards issued under this act, only four apply to farmers—slow-moving vehicles, pulp wood logging, temporary labor camps, and anhydrous ammonia handling.

"But the labor department has made it clear that it expects to issue additional standards applying to other hazards on farms," says Holmes.

Farmers may offer suggestions on farm safety regulations to Robert Gilden, executive secretary of the USDA Task Force on Safety in Agriculture, USDA, Washington, D.C. 20250.

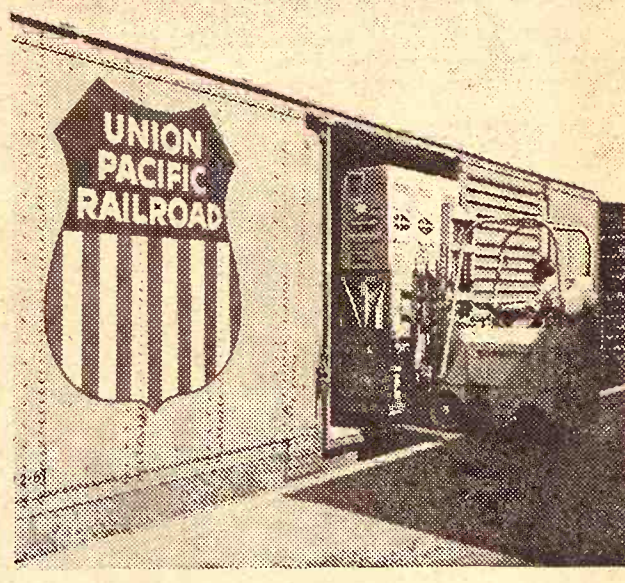

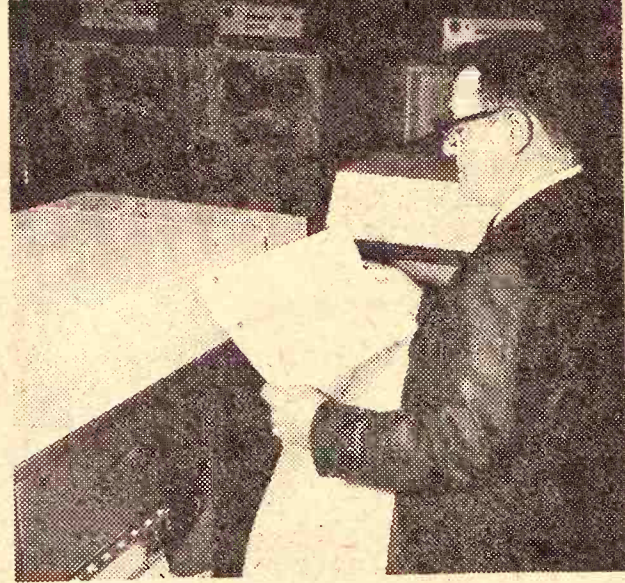

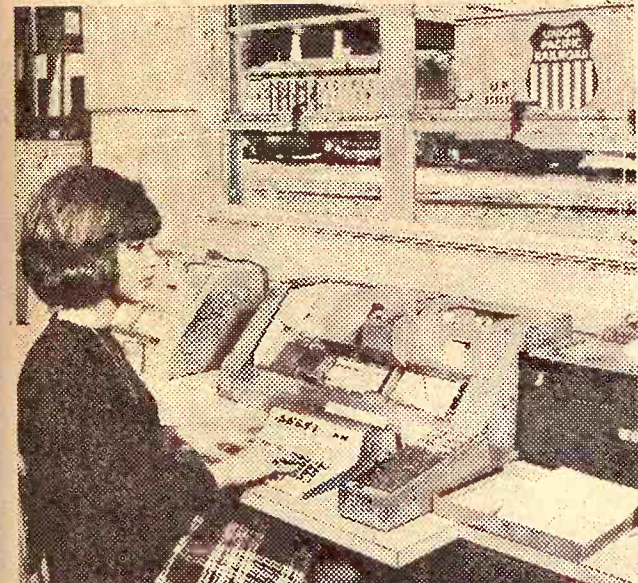

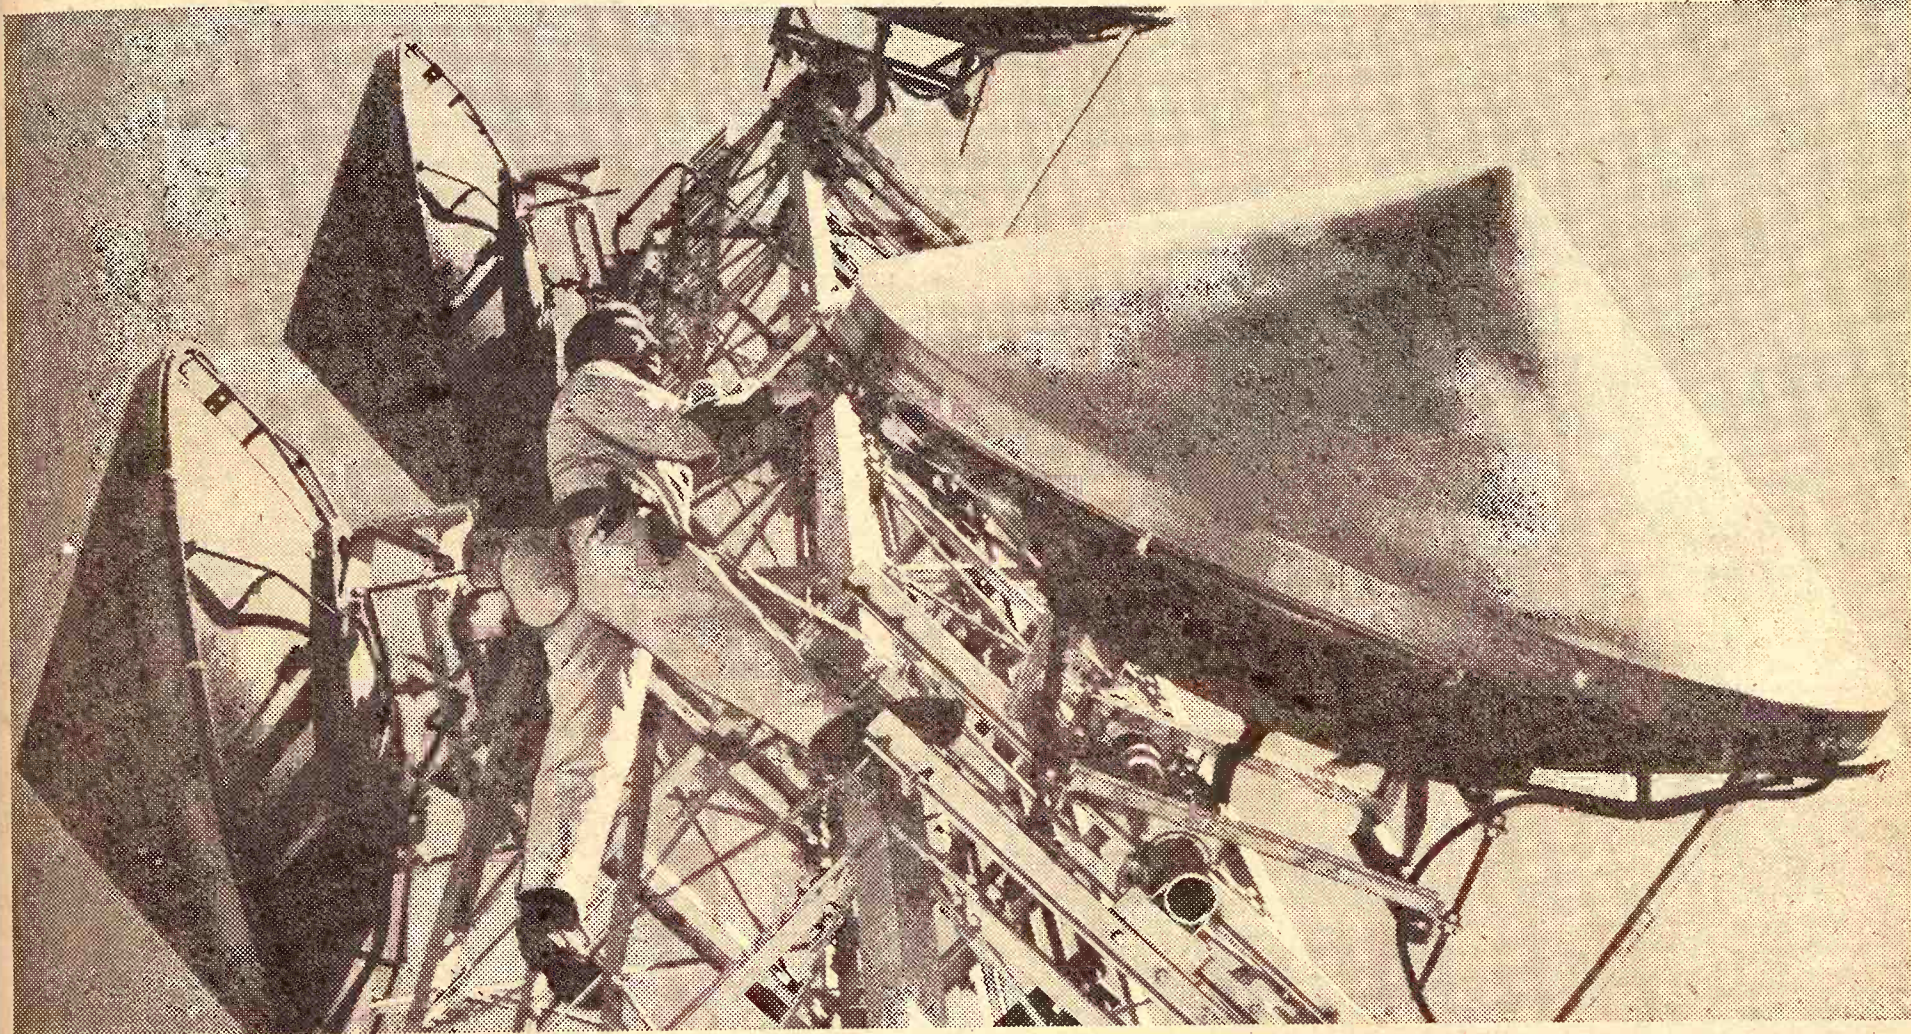

"After rules and regulations are established, it may be too late to change those found difficult for agriculture to live with," explains Holmes.

person to person communications:

direct lines to people whose performance you can depend on

Dependability . . . that's what makes us different. Every day our people handle thousands of tons of raw materials and finished products—safely and on time. To do this they must maintain a communications system that has to be the best in the world . . . and it is.

To assure your shipments the personal attention they demand, communicate—call the Union Pacific office serving your territory.

UNION PACIFIC RAILROAD

Dighton Man New KLA Head Bill Amstein Next In Line

Kalo A. Hineman, Dighton, was elected president of the Kansas Livestock Association during the closing business session of the organization's annual convention in Wichita, replacing Fred Germann, Dwight.

Hineman, a Lane County rancher and wheat farmer, served as president-elect during 1971 and brings a wealth of tax and legislative knowledge to his office. He has served as the chairman of both the KLA Tax and Legislative Committees and has many years experience in local and state school board activities.

Serving at the helm of the KLA with Hineman will be William G. Amstein, Jr., Clifton. The stockmen elected Amstein as president-elect for the coming year. He is engaged in farming and has a registered Hereford operation near Clifton. He has served on the board for the past five years and was elected to the board of the Kansas Hereford Association this past September.

Elected to the board of directors

for three year terms were Mark Piper, Oswego; Earl Moyer, Manhattan; Frank Stielow, Paradise; and Max Oltjen, Robinson. Piper is a Labette County grain farmer and co-owner of the Coffeyville Livestock Sales Company; Moyer runs approximately 300 commercial and registered Hereford cows on a ranch north of Manhattan. Stielow has 180 commercial and registered Angus cows and farms wheat in Russell County. Oltjen is a farmer-feeder in Brown County.

Going off the board, in addition to Amstein, were W. W. Duitsman, Hays; Rolland Parr, Rossville; and J. Richard Pringle, Yates Center.

In assuming control of the Kansas Livestock Association's leadership, Hineman noted that a new momentum was moving throughout the industry as a result of increased KLA activity and services. "In nearly every section of the state stockmen are discussing the new services initiated by the KLA and the impact these services are having on our economic well being. Cattle-Fax, for example, is a service provided through the American National Cattlemen's Association to member subscribers with the cooperation of the KLA. It is a program that has already made significant alterations in the market stability of fed cattle and is one that offers high hopes for the total red meat industry."

Continuing, the president added, "The Cattle Feeders Council was formed within the framework of the KLA to work effectively on special problems inherent with the mushrooming feeding industry in Kansas." Virg Huseman was chosen as the individual to direct and coordinate the various activities and to spearhead work on feedlot problems of ecology, taxation, labor

and legislation. This organization is vigorously working on an aggressive legislative program and is striving to call proper attention to the state's leading economic force.

Hineman also applauded the Industry Information Council as a program offering the urban dweller a factual, more authentic picture of the livestock producers today. "There are many preconceived ideas about stockmen, especially cattlemen, that a program of this kind can help eliminate," he emphasized.

The IIC concept brings the actual producer before civic and professional groups to enlighten them with the facts of modern livestock production. Hineman said, "There are some fascinating facts surrounding our business and in many cases they are not known or understood, but in still other cases they are not believed."

Advice On Good Milking Practices

A good milking program should obtain highest production per cow, control mastitis, and produce clean, excellently flavored milk with a minimum amount of labor.

The actual milking program consists of stimulation of the cow, use of a strip cup, applying the machine, stripping by machine, and removing the machine.

Ralph Bonewitz, Extension dairyman at Kansas State University, suggests dairymen follow the same routine at each milking, avoid the unusual, and allow nothing to frighten or disturb

the cow. An excited cow does not respond completely to the letdown stimulus, points out Bonewitz. The result is slow and incomplete milk removal.

Bonewitz believes many dairymen overlook the importance of stimulation. It takes more than just wiping the cow off with warm water. A good 30-second wash and massage can pay big dividends. Washing should be done with individual single service paper towels.

"The use of the strip cup takes a little time, but consider this time as a wise investment," urges Bonewitz.

"Milking a few streams of milk from each quarter aids stimulation and improves quality of milk."

"The machine should be attached one minute after stimulation. This is the time when maximum letdown occurs; therefore, it is also the time when the cow will milk out in the shortest time."

Attaching the machine before letdown occurs may irritate the cow and she will never give her maximum cooperation, says Bonewitz. If the machine is attached too late, the effect of the letdown hormone may begin to wear off before milking is completed and milking time will be prolonged.

Premilking stimulation can pay

off in increased milk production and reduced milking time, says the KSU dairyman. He cited a test in which 18 sets of identical twins were used. One of each set was stimulated. The test showed increased production, shorter milking time, and greater persistency for the stimulated twins. Stimulated twins required an average of 3.9 minutes of milk out compared to 5.1 minutes for twins not stimulated.

"Milking routine becomes a habit," says Bonewitz. "In many other situations, our habits are not as good as we would like. The cow also is a creature of habit and she responds favorably to 'tender loving care' of a good milking routine."

SALE EVERY

Thursday

Our market last Thursday, January 13, 1972 was much higher than any of us had expected it to be. Stocker and Feeder cattle were in the greatest demand, price-wise, that we have ever seen during our term at this auction company.

We are expecting a good run of cattle this week. Below is a partial listing of our sale last week:

STOCKER AND FEEDER CATTLE

KANSAS FARM BUREAU VOTING DELEGATION

Here was the Kansas Farm Bureau voting delegation at the national convention at Chicago last month: standing, Marvin E. Smith, Topeka; John Junior Armstrong, Muscotah; Dale Higginson, Parsons; and Joie McCormick, Kingman; seated, Robert Huser, Syracuse; president Ray Frisbie, McDonald; and Walter Mugler, Wakefield.

How Much Debt Can A Farm Carry?

How much debt can a farm carry with reasonable safety?
That's a broad question with no

simple answer, says Wilton Thomas, Kansas State University Extension economist. The answer depends on the individual circumstances.

Thomas cites two types of farm indebtedness. One involves borrowing for specialized buildings, facilities, machinery, or land. "This

type of debt usually must be repaid from net income," he points out.

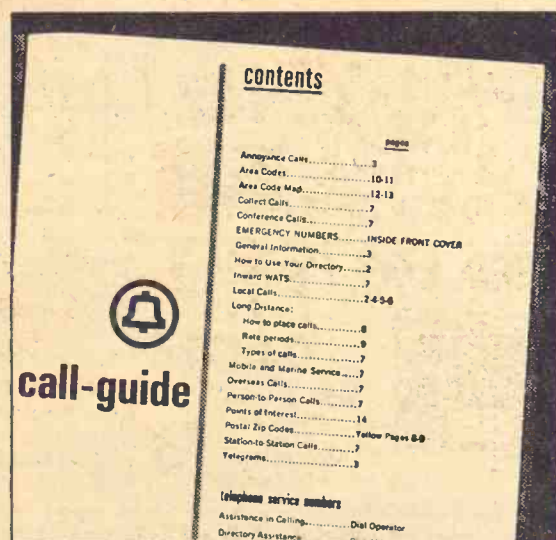

Another type of debt is usually for such purposes as buying something which will be resold, such as feeder cattle. This type of debt can be repaid from gross sales since the cattle will be sold and purchase cost

recovered.

Since net income is less flexible, Thomas urges consideration of several points that affect the amount of debt that can be repaid from the net income.

"First, determine the net income above family living costs that can be

Questions about calling?

Here's the answer!

The Call Guide section in the front of your telephone directory has the answer to almost any question you might have about calling.

The cheapest way to call Long Distance. Area Codes.

Time zones. Emergency numbers. When you want to know, Call Guide's the place to go.

Southwestern Bell

used annually for this repayment, including possible increased income from the new investment," says Thomas.

"Then consider the length repayment period, the interest rate and the dependability of the come."

The economist emphasizes thorough analysis of the income risks involved, such as market weather, disease, and age and health of the operator.

"The greater the weather or price risk on a project, the more conservative the amount of the loan should be," Thomas advises. "Where insurance can be used to reduce risk, it should be considered."

\$420,000 For Swine Research

The National Pork Producers Council says that the U.S. Department of Agriculture now has \$420,000 earmarked for swine research, the six most problem areas of swine production as identified by producers and research coordinators.

These funds will be contracted with research workers in Land Grant Colleges during the first three months of 1972.

"Attainment of these swine research funds in the Federal Budget is the result of tremendous cooperation," says Marvin Garner, NPPC Executive Vice President. "Pork Producer Leaders in many states implementing the information brought about through the cooperation of the NPPC Production, Agricultural Extension Committee and Research Coordination Committee made the earmarking of these badly needed funds possible," said Garner.

PROPOSED STATE SENATE DISTRICTS

State senatorial districts will be reapportioned to look something like this if the state legislature adopts the plan recommended by the Senate Apportionment Committee. Here's the way they would line up:

1-Doniphan, Atchison, Jackson & Brown. 2-Douglas. 3-Leavenworth and extreme western section of Wyandotte. 4-Most of Wyandotte, including metropolitan Kansas City, Kans. (three senators). 5-Johnson (four senators). 6-Osage, Franklin and Labette. 7-Coffey, Anderson, Allen, Linn, Bourbon and the northwest corner of Crawford. 8-Remainder of Crawford and Cherokee. 9-Wilson, Neosho and Labette. 10-Elk, Chatauqua and Montgomery. 11-Butler, Greenwood and Woodson. 12-The portion of Geary southeast of the Kansas River, Morris, Lyon, Chase and Marion. 13-Shawnee and Jefferson (three senators). 14-Washington, Marshall, Nemaha, Pottawatomie and Wabaunsee. 15-Riley and remainder of Geary. 16-Cloud, Clay, Ottawa and

Dickinson. 17-Saline and Ellsworth. 18-McPherson and Harvey. 19-Sedgwick (six senators). 20-Cowley and all but the western tier of townships in Sumner. 21-Southern half of Reno, western edge of Sumner, Stafford, Pratt, Kingman, Harper, Kiowa and Barber. 22-North half of Reno, including Hutchinson. 23-Russell, Barton and Rice. 24-Phillips, Smith, Jewell, Republic, Rooks, Osborne, Mitchell and Lincoln. 25-Trego, Ellis, Rush, Ness, Lane, Hodgeman, Edwards and Pawnee. 26-Gray, Ford, Clark, Meade, Comanche, and Seward. 27-Greeley, Wichita, Scott, Finney, Kearny, Hamilton, Stanton, Grant, Haskell, Stevens and Morton. 28-Cheyenne, Rawlins, Decatur, Norton, Graham, Sheridan, Thomas, Sherman, Wallace, Logan and Gove.

Cain urged the researchers to take the time and make effort to show adults, particularly legislators, what they are doing.

Banquet speaker was Dr. Glenn H. Beck, vice-president for agriculture; he explained the importance of ruminants, particularly cattle, to the development of Africa and illustrated his talk with slides made throughout Africa while he was associate director of agricultural sciences for the Rockefeller Foundation.

son Ron and Father Edward who own a beef and hog operation near Randolph; William Pishney, a schoolteacher-farmer of Blue Rapids; and Robert Thorman, dairyman from Green.

Stations Plot Future Plans

Research efforts of the future will be aimed at achieving more effective use of Kansas land, keeping the state competitive for industry and new jobs, and maintaining it as a good place to live.

That's the direction research of the Kansas Agricultural Experiment station will take in coming years, Dr. Keith Huston, the station's associate director, predicted here at Manhattan last week.

Huston spoke to scientists from throughout the state who were in Manhattan to plan and to coordinate research for the coming year.

To create more jobs for young Kansans and greater income for all the state's people, Huston said research must be done which keeps processing of Kansas-grown commodities in Kansas. Many Kansas commodities now are processed out-state.

"We have the resources in Kansas for attracting meat packaging and

processing plants, soybean crushing and processing plants, wheat processing and milling companies, and other agribusinesses," Huston said.

As an example of what new research is needed, Huston cited animal research. "For Kansas to remain competitive in meat and milk production, she must have low cost, efficient fattening rations, growing rations, and pastures," he said.

Research to make Kansas a better place to live will deal with nutrition at lower costs, supplying information so Kansas citizens can have equitable taxes to fund city, county, and state services; developing wildlife, forest and park areas; controlling pollution, and improving student life.

To achieve more effective use of the state's land, scientists will need to emphasize research on plants that resist diseases, insects, and drought, Huston pointed out. Such plants include grains, forages, vegetables, fruits, turf grasses, ornamentals and trees.

Plants that produce with less water and water-conserving

irrigation practices must be developed, Huston said, and Kansas needs to continue and to expand research on such alternative crops as sunflowers, millet, potatoes, pecans, trees for pulp, triticale, kenaf and others.

Huston made it clear that he was naming areas where research is needed to keep Kansas both competitive and a good place to live. "What will be done," he said, "will depend largely on how well we convince taxpayers and legislators that funds used for research are invested well for Kansas and for Kansans."

The United States, like advanced European nations, will have much closer planning and improved coordination among states, regions and the federal government beginning in this decade, Huston predicted.

At the annual banquet Monday evening, President James A. Mc-

Cost per veterinary student per year runs \$10,000 to \$12,000, compared to about \$15,000 for physicians and about \$5,000 for dentists. State and federal governments pick up tabs for most of the expenditure.

"States have taken enlightened attitudes towards out-of-state students, but as costs rise they naturally give precedence to their own young people," Dr. McCoy said. "The profession is very attractive because there are about five positions for each graduate; therefore, the quality of student drawn from within the state is of such high scholastic calibre that they don't need anyone else."

Educating paramedical personnel to take over "duties we ordinarily envision when we speak of nurses in human medicine" is one means of helping to alleviate the veterinary shortage, he said. Some 25 schools are offering two-year associate degree programs to students who will work directly under veterinarians, Dr. McCoy said, thus freeing the doctors for diagnostic and surgical work.

Veterinary research is suffering because funding is at a low level unless the particular study has a counterpart human disease, Dr. McCoy said. National Institute of Health is supporting Cancer research because of findings concerning new drugs and correlations between host and tumor.

In terms of food production, Dr. McCoy believes first priority in research should go to study of residues of chemicals in meats—especially quicker processes for testing cuts and determining levels that are tolerable in human consumers.

Asked if artificial growth drugs permit fattening of a diseased animal that ordinarily would never go to market, Dr. McCoy said "if an animal is ill, the illness itself uses extra food to create its own energy. Unless an animal is basically healthy to begin, the drug does little towards putting on more weight."

SUPER-STRONG BALL RETURN

Net contraptions that will return a lightweight ball are fairly common backyard toys, but two G&G area men, Ken and Elmo Mahoney of Dorrance, have built one strong enough to handle a basketball thrown by big men.

The two have a firm, Mahoney Inc., which has marketed several devices of their invention or refinement. This one is called a Toss-Back, and the two Mahoneys think it has a market as a coaching tool.

Ken Mahoney, left, played basketball for Kansas State in the late 1940s. He first built a Toss-Back about seven or eight years ago but the piece was not marketed while he went on a Peace Corps assignment.

Elmo, Ken's brother, once ran for Congress and narrowly lost. Later he managed the Agricultural Hall of Fame at Bonner Springs.

So far, the Mahoneys have sold only about 100 Toss-Backs, but they think it has potential for sizable sales to the coaching profession.

Short 10,000 Veterinarians, Says AVMA Head

In keeping with shortages suffered in other medical fields, a death of 8,500 to 10,000 veterinarians is expected in the United States by next year, Dr. John R. McCoy, New

schools are expanding, but new ones are desperately needed, he said. Florida and Louisiana are starting new schools and several other states are sponsoring feasibility studies.

Getting accepted into veterinary school is even more difficult than medical school because of the keen competition, Dr. McCoy said, and for students living in a state without its own facility, the feat is doubly difficult for financial and scholastic reasons.

Brunswick, N.J., president of American Veterinary Medical Association, says.

On a worldwide basis, the shortage runs around 250,000, Dr. McCoy said at the 68th annual Kansas Veterinary Medical Association meeting at Wichita.

Link Between Electric Co-ops, City Power

MCPHERSON — Nineteen municipalities and 11 rural electric

cooperatives met here in what was described as an historic first statewide meeting to discuss ways of cooperating to meet the power needs of their areas in the future.

"I doubt that such an important meeting could have been held even three years ago... until recently, we have gone our own separate ways," said John Lofthouse, Chanute,

Grass & Grain

17

January 18, 1972

president of Kansas Municipal Utilities Association, host for the meeting.

"The time for strong joint action and cooperation is now," he said.

Fred Diehl, general manager of the McPherson Board of Public Utilities, said he believes municipal and REA power units make compatible partners. Municipalities are in a position to produce power and the REAs have a better capacity for distributing power, he said.

Charles Ross, Topeka, Kansas Electric Cooperatives manager, said he believes there is a need for strong cooperation and electrical energy interties between cooperatives and municipal power generating systems to provide better consumer service in the future. He suggested power systems should consider interties with systems in adjoining states, especially along the Kansas-Nebraska border, where it is more feasible to obtain readily available excesses of power than to construct new generating facilities.

Ross said "this would break a barrier of long standing," but Kansas utilities should work toward this goal, including getting any necessary legislation to clear up any legal blocks.

Much of the day-long program was devoted to comparing notes about what each of the utility groups had planned for the future or were working to accomplish. Agencies represented at the meeting included Kansas Municipal Power Agency, Northwest Kansas Power Agency and North Central Kansas Power Agency, the latter two of which include both municipal and cooperative members.

Robert O. Marritz, Denver, executive director and staff counsel, Missouri Basin Systems Group, encouraged the municipal and cooperative power representatives to work together and develop future power systems on an area basis. He said regional development and cooperative efforts between units is becoming a necessity to maintain bargaining power for competitive fuel and contract rates. Marritz also encouraged the Kansas utilities to take advantage of and join in with current studies being conducted by the Missouri River Power Systems Group.

Homer Loutzenhaiser, assistant general manager of Nebraska Public Power District, told the Kansans the Nebraska utility is interested in making its surplus power available to Kansas utilities. He said completion of the Cooper Nuclear Station at Brownville, Neb., and three "peaking" generators paralleling the Kansas border in southern Nebraska would provide excess power.

"We think there is enough (power) for you if we have something you can use," he said.

The nuclear plant, nearest one to Kansas, is scheduled to begin generating in July, 1973, and the additional peaking turbines are planned to be operational about the same time.

FINE, PROHIBITION ON AREA CATTLE DEALER

A G&G area cattle dealer, Vernon Neal of Pleasanton, has been fined \$250 by the P&S Division of USDA and prohibited from dealing in livestock without first being bonded and registered.

One Arrest Solves 16 Farm Robberies

HUTCHINSON—Authorities say the arrest of Fred C. Blackwell, 25, Hutchinson, may have solved 16 burglaries of farm homes in Reno and Kingman counties.

The burglaries started in September and continued until last week. Some of the stolen items have been recovered, authorities said.

Blackwell was in Reno County Jail later today on burglary and theft charges.

G&G AREA HONORS AT ARIZONA SHOW

Two G&G area cattle breeders came up with honors at the Arizona National Livestock Show at Phoenix. The grand champion Angus bull, top, was shown by McCurry Brothers of Sedgwick, showing their Sedgwicks Ballot 3.

Post Rock Hereford Ranch of Waldo, showed PRH Miss A Dynamo 8, bottom, to the top female Hereford honor.

Fed Reserve Sees Livestock Prices Propping Income

Boosted by significant improvement in the livestock sector, total net farm income for 1972 will likely show a moderate increase over the \$15.7 billion estimated for 1971.

The outlook is offered in the "Monthly Review" of the Federal Reserve Bank of Kansas City by Dr. C. Edward Harshbarger, staff agricultural economist.

He said net income from crops will probably fall below the 1971 level, although larger payments by the federal government will aid crop farmers in the coming year.

Total red meat production registered a moderate gain in 1971, mostly as a result of the sharp increase in commercial hog slaughter.

However, the article said, in the year ahead red meat production is expected to differ only slightly from the 1971 level, with likely increases in beef supplies offsetting most of the anticipated declines in pork, lamb and veal output.

Cattle and milk prices are expected to average near the 1971 level, Harshbarger said, but hog prices should show significant improvement and poultry and egg prices may strengthen somewhat.

He said the income prospects are brightest among crop farmers for soybean growers because of a relatively tight supply situation. But the outlook for wheat and feed grains is not as encouraging due to the likelihood of a large buildup in the year-to-year carryover of stocks—a reflection of the record production of 1971.

Special Feeder Pig Auction January 19 — 7 p.m.

Have your herds inspected by a licensed veterinarian of your choice and bring a blanket bill of health. Also all pigs will be vaccinated for erysipelas prior to the sale. We will also sell serviceable age breeding boars.

4 brand new Papec grinder mixers, 2 left

WHAT DO YOU NEED? WE HAVE IT.

We have Miller, Miller, Miller. Another big load just arrived. And, Oh Yes, we have DuAl loaders, the loader you can take on and off in 1 minute. The D'ual 3000.

No, we haven't forgotten Great Bend, we also have them. The 800 and 900 on display. Yes, we handle Farmhand. We have their Grinder Mixer and Loader on display.

And that ain't all — we have Hesston and we have most of their machinery on display. Right now we have a 420, 14' swather on display and a No. 10 pull type.

Yes! We have "Big Ox" and we have it on display. Not only their chisel plows but their blades.

Stop by with your pickup and take it home.

And we also have Waldon Dozer blades and they are also on display.

And we have Grain-O-Vator wagons and we have a couple of specials on a No. 30 and No. 55.

We are the dealers for Gilmore-Tagge Augers and they are on display.

We are the dealers for Lilliston Cultivators. A semi-load due in soon. Don't wait like you did last year and find they were all sold out. Buy now.

We are the dealers for Sidwinder cutters and they are on display.

We handle Hiniker, Excel, and Egging Cabs for combines and tractors!

And we even handle Irrigation equipment. We have the Valley Self Propelled. We can make it rain when the sun shines.

We are also the dealers for Berkley and Western Land Roller pumps, Ames Irrigation equipment, McDowell Irrigation Equipment and ASC Tubing.

Stop by and see us. On top of everything else, we have one of the most complete hardware lines in the country. Anything from pliers to equipment in St. Marys.

Ag Station Points Out Own Accomplishments

Grass & Grain

January 18, 1972

Homemakers, taxpayers, rural developers, and ecologists are now benefiting along with farmers and stockmen by research done by the Kansas Agricultural Experiment Station, its branches and outlying stations, Dr. Floyd W. Smith, station director, said at the annual experiment station conference at Manhattan.

New color standards that will give consumers better beef, a better and more convenient watermelon, a new wheat to celebrate a century of hard wheat in Kansas, improved ways to use whey so it is neither a waste nor a pollutant, new strains of alfalfa that resist diseases and help eliminate use of pesticides, emergence of rural development research, and production of tax research data that have been highly praised by city, county, and state governments in Kansas were among 1971 accomplishments of the Kansas Agricultural Experiment Station cited by Smith.

Great color standards developed by Dr. Harold Tuma and his KSU colleagues have been published, circulated, and are being used by meat processors throughout the United States to improve beef for homemakers.

Sweet, the watermelon mentioned by Smith and developed by Charles Hall, has superior bright flesh, few seeds, longer shelf life, and ability to stay healthy on ice 10 days to two weeks without ripening.

The new wheat, has shown a 10 percent improvement in production efficiency, Dr. Smith said.

Use of whey, developed by Dr. Robert Claydon and Dr. Robert Hinkle, is important for two reasons, Smith said. Whey is used instead of being discarded as a pollutant, and a nutritious by-product of cheese manufacturing is created.

E.L. Sorenson and Dr. D.L. Leville developed the resistant strains of alfalfa that Smith mentioned.

The tax research group in agricultural economics has developed and tabulated data to show what would happen in each county in Kansas with various combinations of possible taxes. They show, for example, how much it would take of one kind of tax to replace or reduce another kind, and property taxes as used by Kansas city, county, and state governments.

Preliminary copies of the tax data sent earlier to legislators working on tax problems, Smith indicated; a final copy will be printed this month.

Barry Flinchbaugh of KSU Extension economics has conducted numerous tax-study sessions in many Kansas counties using data from the tax research team.

Other accomplishments of the Kansas Agricultural Experiment Station that Director Smith singled for praise included (1) Approval of three new soybeans for Kansas, Columbus, Williams, and Cutler 71. Columbus is the first soybean variety ever developed exclusively in Kansas.

(2) Approval for release of germ plasm of four greenbug-resistant grain sorghum lines by the Fort Hays branch station. The four provide a nonchemical aid to solving the greenbug problem;

(3) Increasing market potentials for wheat by supplementing it with amino acids for pigs by Dr. Gary Allee, John Brethour's discovery of how valuable wheat is in high roughage rations, and Prof. Arlin Ward's generating interest in alternate market classes of wheat;

(4) Dr. Leonard Schruben's development of efficient school-bus routing plans;

(5) A veterinary medicine and animal science cooperative project formed to investigate the "sudden death syndrome" of feedlot cattle;

(6) A predicted breakthrough by Dr. A.L. Burroughs of infectious diseases on transmitting certain viruses common to both animals and man. Burroughs's research was made possible by acquisition of a lymphoma-afflicted herd of Holstein cows in 1965, Smith observed;

(7) Information on the environment and on air-borne spores from research by Dr. Charles Kramer and Dr. Stuart Pady;

(8) Arrangements completed to acquire a Neotec grain quality analyzer which permits protein and oil contents of grain to be analyzed rapidly — something plant breeders need in their accelerated search for high protein germ plasm;

(9) Rural development research projects dealing with rural life and

urbanized society, which study factors that affect disadvantaged families, relation of population to social change, analysis of tax structures, development of viable employment centers;

(10) Research results by Dr. Benny Eaton and his staff showing that marijuana is neither so widespread nor so difficult to control as early reports indicated.

Other Parts Of Area Considered For Nuclear Waste

The Kansas Geological Survey is in the final stages of crash studies of eight large areas of the state bearing

the most logical characteristics for a nuclear waste repository.

The three-month-long study will be submitted without specific recommendations to the Atomic Energy Commission within the next few days. Dr. William Hambleton, survey director, said.

He said his agency undertook the study at the request of the AEC after

certain unfavorable geological factors cropped up regarding the salt beds in the Lyons area.

The AEC has not officially abandoned consideration of the Lyons site, but there are reports it has been shelved.

The study was made in areas that included all or parts of 19 counties in western, southwestern and central Kansas, Hambleton said.

"These areas seemingly would have salt beds at least 200 feet thick, no deeper than 2,000 feet and no shallower than 500 feet, and would have few oil and gas wells, pipelines and small population," the director said.

He said, "No field studies were made in any of these areas. We just used available information. And by deliberately choosing areas with few oil and gas wells, we are faced with the paradoxical situation of having little information in the third dimension (side views of the rock formation)."

The report "will present an evaluation of the quality of the salt, ground water conditions, regional geological characteristics and mineral resources, well locations, pipelines, populations and railroads," Hambleton said.

"But much additional information will be required by the AEC before any is judged suitable."

The eight areas considered were in the west part of the state including Wallace, Logan, Greeley, Wichita and the western quarter of Scott counties; one of the southwest taking in part of Trego and the western half of Ness counties; another including parts of southern Hodgeman, the northeastern part of Ford, the southwestern part of Pawnee and the northwestern part of Edwards counties; Comanche County; Harper County; the western half of Reno County; Rice County, of which Lyons is the seat; and a large part of Lincoln County and half of eastern Russell County; the southeaster part of Osborne and the northern part of Ellsworth counties.

GREENLEAF MANAGER IN JULY CO-OP ROLE

Ivan Wieters, manager of the Farmers Elevator Assn. at Greenleaf, will represent Kansas on the planning committee for the University Conference on Cooperatives to be held in July at Iowa State University.

Kansas In Special 4H Effort On Citizenship

Kansas is one of eight states invited to participate in the 1972 "Citizenship in Action" grants to 4-H Clubs.

Sponsored by the Reader's Digest Foundation through the National 4-H Foundation, the program offers grants from \$50 to \$500 to supplement local funds for citizenship projects conducted by 4-H groups.

The project, a group effort of the club, should be separate from present on-going 4-H projects or activities and related directly to citizenship learning. "More than a service project," is one description of the project.

States other than Kansas participating in the 1972 program are Arizona, Kentucky, Massachusetts, Minnesota, Montana, Oregon, and Washington.

The application blanks will go to the National 4-H Foundation for consideration.

4-H groups in other states are conducting one-day workshops on citizenship, assisting in organizing and conducting 4-H work among children of migrant workers, providing three-day camping experiences for disadvantaged youth, conducting work training activities for mentally retarded girls, developing recreational facilities and nature trails on community land, helping restore pioneer home, and holding "Get out the Vote" campaigns.

GEARY COUNTY FARM HONOR

Merle Fitzgerald, who dairies in south-
east Geary county, has been named
Young Farmer of the Year in the county
by the Junction City Jaycees.

Hemp Weed Control Less A Problem Than Expected

Marijuana is not going to present
early so many problems for Kansas
many thought before the 1970
session of the Kansas legislature,
Floyd W. Smith, director of the
Kansas Agricultural Experiment
Station, said at Kansas State
University, Manhattan.

Research authorized by the 1970
legislature has shown that
marijuana infests only about one-
tenth as much land in Riley
county as was estimated before
1970.

All of Riley County's marijuana
would be put in an area of less than
one square mile. And all of the
files north and south of the
Ks., or 10 south

the county can be effectively con-
trolled with tillage, mowing,
flaming, or herbicides or a com-
bination of those methods.

Dr. Smith thinks an in-depth
educational program by the KSU
Extension service could achieve
voluntary control of marijuana in
Kansas without having the plant
declared a noxious weed, and
perhaps without incentive
payments.

Results of research on marijuana
(wild hemp) by Dr. Ben Eaton and
his staff can be used to describe
controls for any of numerous
situations without endangering the
environment, Dr. Smith said. He
praised Eaton and his staff for their
"excellent research effort" and said
that it would save literally
thousands of dollars in Kansas and
much more in other states.

The research project by the
Kansas Agricultural Experiment
Station on controlling marijuana is
the only one of its kind in the United
States.

"It is an example of a tremendous
return on a relatively small in-
vestment for research," Smith said.
Results from the research can be
used throughout Kansas and in other
states, he said. The research
already has been praised in other
states.

A publication resulting from the
research and now being processed
details control methods. It will be
available to Kansas farmers this

year. "We expect every state where
wild hemp (marijuana) is con-
sidered a problem to use the results
of our Kansas research," Smith
said.

LETTERS

THIS IS A FARMER FROM 1961 MAGAZINE

I enjoyed the article "This is a Farmer"
in a recent issue of "Grass & Grain".

If my memory is correct you can find
the name of author of "This is a Farmer"
in the January issue of Farm Journal, 1961.
I believe it was written by a Farmer's Wife.
Recalling further she was from Minnesota,
North or South Dakota, or possibly Wis-
consin.

When I first came across the article I
was a 4-H Club agent in Harvey County.
I was scheduled to say something at
Town & Country night so I used it.

All-New IH No. 1™ Engine Oil First in Tractor Engine Protection

The ultimate in tractor engine protection.

That's the promise that is fulfilled with the all-new IH No. 1™ engine
oil. It's specifically formulated to meet the demands placed on today's
precision equipment. It's the only oil we know of that will give
your engine full protection hour after hour at the punishing temperatures
built up in modern, high-speed equipment.

International Harvester offers two distinct oils—one tailored for
carbureted engines, one for diesel engines. One oil can't be best
for both.

IH No. 1 engine oil for carbureted engines is a low-ash formulation.
Unlike passenger car oils, it has no barium, calcium or magnesium.
These additives leave ash deposits of metallic salts when some of
the oil burns in normal operation, contributing to spark plug fouling
and exhaust valve failures.

IH No. 1 engine oil for diesel engines has a full complement of
detergent-dispersant additives. The detergent additives keep the engine
clean, helping to keep rings free. The dispersant additives keep the
carbon particles in suspension so that they can't cause engine damage.

Both IH No. 1 engine oil for gasoline engines and for diesel engines
are available in two grades: SAE 10W and SAE 30. Standardize
on IH No. 1 engine oil—use it in every tractor engine that will
be called on to do the "big job."

We Feature a Complete Line Of Lubrication Products

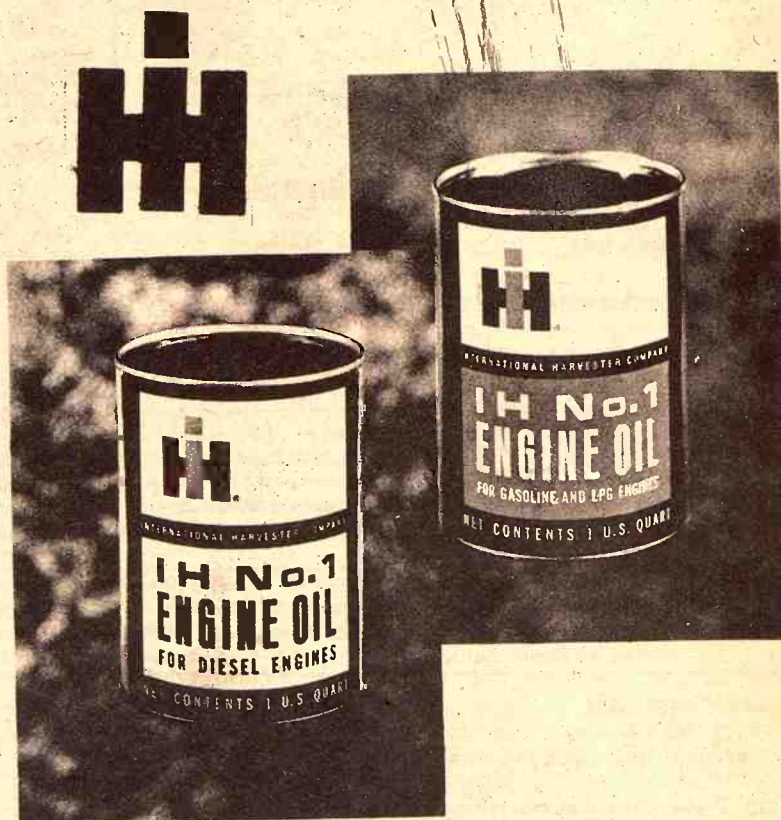

The new IH No. 1 engine oil rounds out the complete line of
lubrication products we have available.

International Hy-Tran® fluid. Hy-Tran fluid is the nation's leading
transmission and hydraulic fluid. If you don't use Hy-Tran, you don't
have full protection. It's as simple as that.

International gear lube. Another brand new IH product, International
135-H EP gear lube (SAE 90).

Multi-purpose grease. International 251-H EP grease is the finest
No. 2 lithium extreme pressure grease you can buy. Ideal for general
lubricating of all types of equipment. In 35-pound pails, 1-pound cans,
and 14½-ounce cartridges.

Lubricating equipment. Grease guns, grease gun filler pumps, booster-
type pumps, grease gun accessories, grease fittings—even household
oil cans. Almost any lube equipment you need you'll find on our
shelves.

ANCA Convention At Denver This Week

DENVER—The American National Cattlemen's Association is celebrating its 75th anniversary by holding its annual convention at home in Denver Jan. 19-22 in conjunction with the National Western Stock Show.

Treasury secretary John B. Connally will deliver the keynote address at the opening general session of the "Diamond Jubilee UnConvention" the morning of Jan. 20, and William D. Ruckleshaus, head of the Environmental

Protective Agency, will be the headliner for the Jan. 21 program.

Connally is expected to outline the effect of Phase II of the President's economic policies and interpret their effect on the cattle business.

Ruckleshaus speaks the morning of Jan. 21 prior to a seminar on the environment, titled "It's the Cattlemen's Environment Too." Ruckleshaus is the chief enforcer of federal laws on air and water pollution, pesticides, and solid waste disposal.

The environment seminar is one of two that will provide the nucleus of the convention program. It is co-sponsored by ANCA and American Cyanamid.

The other seminar is titled, "The Growing Beef Market in a Shrinking

World," and is scheduled for 1:30 p.m. Jan. 20. Production Credit Associations of the U.S. has assumed co-sponsorship of this seminar.

Market seminar participants are Dr. Robert Kramer, president of California State Polytechnic College, Pomona, moderator; Edward F. Huskisson, president, International Division, Swift & Co., to answer questions on the international beef market; Dr. Max Brunk, prof. of marketing, Cornell University, to deal with domestic markets; Jonathan S. Tobey, president, Chase Manhattan Bank, to discuss international beef market money questions; Dr. Val Brungardt, asst. prof. of meat and animal science, Univ. of Wisconsin, to deal with technology in beef

markets; and J. E. Herberger, manager, Northwest Livestock Production Credit Association, to discuss domestic financing.

The speakers for the environment seminar are Dr. Gerald Thomas, president, New Mexico State University, moderator; John A. Matthews, Abilene, Tex., to deal with the use of range herbicides and pesticides; and Thomas Kimball, executive director of the National Wildlife Federation to discuss land use and the natural balance of wildlife and cattle.

The seminar format is somewhat changed from past ANCA conventions in that less time will be

22

Grass & Grain

devoted to formal presentations by the participants, and more will be given to questions from the floor.

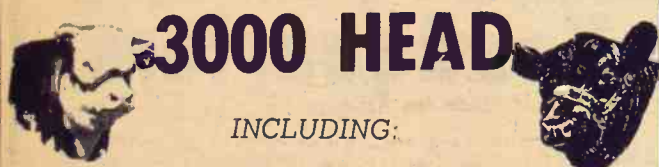

Dr. Herrell DeGraff, president of the American Meat Institute will wrap up the convention with a summary address Jan. 22 in which he will analyze the speech by Connally, the seminars, the resolutions and the committee reports.

Denver's new Currigan Convention Center is the site of the convention and the second annual ANCA Trade Show, which is held in connection with the convention.

Green City Sale Pavilion

SPECIAL BREEDING COW & BRED HEIFER SALE

SATURDAY, JANUARY 29
(All Day Sale starting promptly at 8 a.m.)

3000 HEAD

INCLUDING:

1000 ANGUS & HEREFORD COWS

Dear Customer:

We are pleased to announce

Mr. Vaughn Hofmeier

is the new manager of Morrison Warehouse and Lumber.

Vaughn has had 20 years experience in the building materials business. He has been manager of the Galva Lumber Co. in Galva for the past 6 years where he built a large volume in business with contractors, farmers and do-it-yourselfers. The previous 6 years he managed the Leidigh and Haven Lumber Co. at McPherson. Prior to that he was employed at the Leidigh and Haven Lumber Co. at Junction City.

Vaughn and his wife, Barbara, have 5 children, Dennis 16, Gary and Larry 14, Connie 11, Sharon 5.

We will continue our policy of tougher price competition with especially good buys on salvage and surplus building materials. We will maintain a large stock of all building materials including builders' hardware, Dutch Boy paint, carpet and other floor covering. Our quantity buying will mean dollars saved to you, our customers. You will like doing business with Vaughn.

We express our sincere appreciation for the opportunity to serve you in the past. We enter 1972 determined to merit your continued patronage.

DECAY DETECTOR

A new device for detecting disease-causing dental plaque may mean this little girl will never wear false teeth. A concentrated water-soluble solution makes the plaque visible when optically-filtered incandescent lamp is shown on it. It then is just brushed away.

mittee to begin advertising the property for sale and make preparations for disposing of campus land.

A financial crisis and a desire for more unity in the church were cited as reasons for closing the facility, which has an enrollment of 115 students. The closing was announced late last year.

Many Want Free Oklahoma Land To Grow Grapes

About 2,000 applications from Oklahomans and 3,000 others from out of state have been filed for free 10-acre sites to be used as grape farms.

State Office of Economic Opportunity director Rex Sparger said that Oklahoma families on welfare have first priority on the land and that it was unlikely any of it would go to out-of-staters.

Sparger said he is acquiring government surplus mobile homes for about 300 families expected to arrive later this month to begin clearing the 3,100 acres of available

OEO land.

"You would just not believe the logistics that are involved," Sparger said.

Under the program, each family is given title to a 10-acre plot to use for fruit orchards and grape farms as the price of clearing the land. OEO officials said the farms, when in the price of clearing the land. OEO

officials said the farms, when operation, will produce an estimated \$7,000 yearly income for the families.

"This will be no giveaway," Sparger said. "These people will have to be willing to work hard for the first three years."

That is how long it will take to begin producing crops.

PUREBRED CHAROLAIS BULLS

Start the New Year right. You can add 50 to 100 lbs. to your calves at weaning with the right bull.

We have top bulls available, recommended for commercial & purebred herds — 12 to 22 mo. of age — sons of our outstanding herd sires, CRESTOMERE ALGER (Full-French) and LCR SIR PERFECTO SAM 624 (domestic). Complete records available on all bulls.

Call us collect and arrange a visit soon.

WANTED — Good I Minneapolis Moline gas tractor, wide front. No phone. Write Glenn Allison, Rt. 2, Minneapolis, Ks. x48

No Price Increase

We still have not received a price increase on Krause tillage tools. Most of the other short line companies have increased. Now is the time to buy that new Chisel or Disc.

We have 16 used tandem discs all sizes. Mostly John Deere & International. There is one 11' and one 12' Krause, wide disc spacing that is extra good. One 12' 3-point Sunflower chisel. Two 9' Grahame Hoeme chisels. Extra good Allis 3-pt. 5x16 semi mounted steerable plow. 28' Crustbuster, used. Used Grain-O-Vator feed wagon. Case-Helix feed wagon. No. 224 WS JD baler. No. 47W IH baler. New Holland no. 68' wire baler. These are extra good balers, stored in our warehouse. Two no. 46T IH balers. 14T John Deere baler. 2 extra good No. 5 John Deere mowers. Two used manure spreaders. Used M670 Super gas tractor, low hours.

Hay-Hauling A Mealticket Thru College For K-State Grad

A recent accounting graduate of Kansas State University has worked his way through college hauling baled hay.

Allen Taylor, known on the campus as the "hay king," has supervised hauling of enough hay bales that if laid end to end to reach from Yates Center, his home, to the KSU campus.

His investment in a truck instead of a car while he was a junior in high school really has paid off. He now owns four trucks and has hauled nearly a half million bales since he began at age 18.

Yates Center, where his crews operate is also known as the "Hay Capitol of the World."

Taylor operates a custom service for farmers and ranchers. Attachments on the side of the trucks enables him to pick up bales in fields for restacking.

Taylor hires women to drive his trucks while his crew of nine older high school and college students are stacking hay. "Women keep morale up," he said, but women drivers do have drawbacks.

"One time a spider slid down the windshield and the girl got scared and jumped out of the truck leaving it to amble across the field without a driver," he added.

Taylor's crews begin hauling about July 4. They do not quit in their seven-day week until the season ends in August.

About 1,800 bales are picked up and delivered in a 130-hour working day. Once during a threatening storm, the crews hauled 976 bales in five hours.

Now that he has graduated, plans to do off-season hauling grain and hedge posts.

Taylor has "mixed emotion" about continuing in the hay hauling business. "I would like to get a job as an accountant for a time at least," he said.

A son of Mr. and Mrs. Duane Taylor, he lives on an 850-acre farm five miles west of Yates Center.

Gas Service Out Back To Some G&G Area Users

It was cold enough last week that parts of the G&G area got a taste what has been mostly a problem the East: not enough capacity gas companies to keep furnaces warm as most people want them.

The Gas Service Co., which services parts of the western G&G area kept the gas flowing to homes by told some industrial and commercial customers they would be back on gas while the temperature was the lowest and demands for gas were highest.

At Hutchinson, for example, thermostats in some city offices such as the library and the sports arena, were cut back to 60 degrees. The city was included among commercial customers of the company. Industrial and commercial users pay lower rates for gas, partly for their volume, partly for assuming the risk that service can be interrupted in case of shortages of energy.

NOTICE ---

Mr. Farmer, Businessman, Salesman, Truck Driver, etc:

HAVE YOU EVER CONSIDERED OWNING YOUR OWN BUSINESS?

We have available some excellent dealership locations in —

Great Bend, Kansas or vicinity; Holyrood, Kansas or vicinity; Ellsworth, Kansas or vicinity; Lindsborg, Kansas or vicinity; Lyons, Kansas or vicinity; McPherson, Kansas or vicinity, or maybe some others.

We manufacture the big Allis Chalmers 220 tractors, winner of the National Pulling Contest, along with several other models. We also manufacture the famous Gleaner Combines (absolutely the standard of the world).

We are looking for dealers and we would be most anxious to talk with you concerning your being our dealer.

Our dealer contracts are considered to be among the very best in the industry, if not the best.

The performance and reliability of our equipment will equal or surpass any competitor's.

We also have a full line of all sizes and models of lawn and garden tractors, mowers, motor bikes, etc.

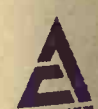

If you have ever considered being a farm equipment dealer, now is the time.

SEND ALL INQUIRIES TO:

D. D. Davis, District Manager

Allis Chalmers Manufacturing Co.
Box 206, Alta Vista, Kansas Phone 913-229-6410

January 18, 1972 33

Kermit E. Adelgren, vice president of grain sales for Collingwood Grain Inc., with headquarters in Hutchinson, first of 16 witnesses to testify, said the common boxcar is antiquated and obsolete for handling grain.

"Let me assure you we have a covered jumbo hopper car shortage in today's transportation of grain to its market," said Adelgren. "Many times a market is predicated on quick shipment which necessitates cars being available in order that we can bid the farmer top prices for his grain. If grain contracts are not shipped according to the terms of the contract, then they are subject to penalties and the grain company loses money because of the railroads inability to furnish cars."

"Car utilization is a term used regularly in connection with car shortages. Most railroads today have more boxcars than they can maintain in an adequate condition for grain loading. We never have a full spot of empty boxcars which are in satisfactory condition for loading grain. There are times when we reject more boxcars because of unfit condition than we load."

C. W. Bath, director of traffic for Farmland Industries Inc., Kansas City, Mo., testified about numerous car-switching problems and delays in movements of cars by the railroads. He said the industry prefers hopper cars and loads them "on a preferred basis and boxcars on a have-to basis" when hoppers are unavailable.

Henry Yunk, director of transportation for Far-Mar-Co, Inc., with headquarters in Hutchinson, submitted for the record pictures of dilapidated boxcars in unsanitary condition which he said had been sent to his company by the railroads for moving grain. He suggested some of the shortage problems might be alleviated if damaged cars could be reconditioned. He also suggested tax incentives to encourage railroads to purchase new grain handling equipment.

"The railroad management people have actually done wonders with what they have to work with," said Yunk.

Henry W. Metz, general superintendent of transportation, Chicago, Rock Island and Pacific Railroad Co., testified 10,000 of that lines fleet of 26,800 freight cars have been purchased new since 1965. He cited power unit shortages as one of Rock Island's major problems, saying the company is in such bad financial condition it cannot buy new equipment but instead must lease whatever it obtains.

Metz said more cars would mean more shortages, because with the power unit shortages, more cars would only congest terminals and delay movement of cars.

Representing the Union Pacific Railroad, Henry C. May, Omaha, said UP feels the car shortage and utilization problem "is the greatest facing the railroad industry and supports any efforts of the committee to improve it."

Don Baumgartner, general superintendent of Transportation for Santa Fe, noted that railroads are becoming more cooperative among themselves through working together as members of the American Association of Railroads. He said interconnecting computers between railroads are needed.

"I will be the first to agree that railroads have a problem and must make improvements," he said.

G&G Area Honors At Phoenix Show

Three Kansans won awards at the Arizona National Livestock Show at Phoenix.

Karen Laflin of Olsburg had the champion in the Angus heifer class of the junior division and Greg Rusk of Sun City had the reserve champion in the Hereford heifer class of the same division.

Post Rock Hereford Ranch at Waldo showed the Champion Hereford female.

Grass & Grain
January 18, 1972

caused Dr. Young to fly immediately back to Texas to continue the eradication program there.

A goal of complete eradication hog cholera throughout the United States by 1973 has been set, USDA representative was reported to have said.

Dr. Young practiced veterinary medicine in Roanoke, Ind., for years before joining the USDA years ago. He has served the past years as regional hog cholera epidemiologist for the north central states area.

Progress On Control Of Hog Cholera

Progress in the eradication of hog cholera over the nation has exceeded expectation, a speaker told the annual meeting of Kansas Veterinary Medical Association at Wichita.

Kansas became hog cholera free the past year leaving Texas, Oklahoma and Puerto Rico yet to be certified, said Dr. Sam Young, animal health department, USDA.

In an interview, Dr. Ralph A. Bruce, Ottawa, president-elect of KVMA, reviewed the speaker's address.

Hog cholera, the No. 1 hog disease, has cost heavy losses in money over the nation, he said.

The method used in the eradication of the disease at present is the depopulation of the herd found infected, he said. Dr. Young showed slides and charts on the progress of eradication, Bruce said.

An outbreak of hog cholera in 16 counties in extreme southern Texas

NO VISITORS DURING AREA FLU EPIDEMIC

Two hospitals in Washington County — at Washington and Hanover — were closed to visitors last week because of flu epidemics in the county.

Trends Indicate Area To Lose Congressional Vote

Kansas and Nebraska will hold to their congressional representation after the 1980 census but both states will lose one House seat by the year 2000, if the projections of a Presidential Commission on Population Growth prove to be accurate.

A study by Richard Lehne of the Department of Housing and Urban Development figures that Kansas will hold onto its five House seats after 1980 and Nebraska will continue to have three congressmen. But by the year 2000 both states will lose one voice each in their congressional representation.

The study presumes that 435 seats will continue to be the size of the House of Representatives, and that a state's representation will be roughed on the one man - one vote theory. The neither Kansas nor Nebraska have lost population in the past decades, neither have gained at as fast a rate as the average of other states.

Thus, Kansas, which had eight Congressmen as recently as 1933, may have only half that representation at the end of this century. The state had eight congressional districts formed in 1907, and shortly before that had an eighth voice in the House thru a Congressman elected at large.

The rest of the US grew faster than Kansas in the 1920s and as a result of the census of 1930 the state lost one congressman, the official paring not taking place until 1933.

Ten years later the state lost another representative because of population changes, leaving the state with only six men in the House. Twenty years later, in 1963, the Kansas delegation was reduced to five, with the formation of the huge 1st district in western Kansas largely the merger of two former districts.

The one man - one vote mandate has resulted in regular shifting from

district to district since, but the state has maintained its 5-voice complement in Washington. The census of 1970 did not reduce it, nor will the 1980 head-counting, if the federal study projects accurately.

By 1990 or 2000, however, the state figures to lose one more man.

Nebraska, which generally has had two less men in Washington than Kansas has, will likely continue that representation, says the study, maintaining its 3-representative team thru 1980 but likely being cut to two men by the year 2000, unless there are new population trends between now and then.

What the Population Growth study foresees is largely a continuation of trends of the past three decades. California, now with 43 seats, is seen to have 48 seats after 1980 and 59 seats by 2000. California had only 30 seats in 1950.

With California leading the way the West is seen as getting the most new representation in the next 30 years.

Most of this gain will come from the East and Midwest. The South will largely hold its own in this period.

In fact, the study indicates that the South, sometimes thought to be losing its political impact in Washington, may actually be the voting beneficiary of population shifts.

Dividing the country into four general regions, East, Midwest, South and West, shows that in 1950 there was almost an equal division of votes in the House among three of the regional blocks. In 1950 the East - 12 states extending thru West Virginia and Maryland - had 129 congressmen. The 12 states of the Midwest - starting with Ohio and extending thru Kansas counting all states north of that line extension - had 129 House votes also. The South - 13 states counting Texas and

Oklahoma to the west and everything south of Ohio - had 120 votes. At the time, the 11 Western states - everything west of Kansas - had only 57 votes.

The current House of Representatives gives the South 121 votes, the Midwest 121, the East 117 and the West 73. The other three votes have been acquired by the new states, Hawaii and Alaska. The population study figures that those two states will still have but three House seats by the year 2000.

By the end of the century the regions will vote like this: East 107, Midwest 110, West 94, South 121. The South's voting edge at that time, if the projection proves true, will be based not on outgrowing the rest of the country but holding its own, while the West gains its votes from the East and Midwest.

Whatever is lost by Southern states will be matched by the gain in Florida and Texas. Florida, now with 15 congressmen, is projected to have 23 by the end of the century, nearly three times its voting clout 50 years before. Texas is figured to gain two seats in the next 30 years.

Losers in this projection will be New York, which is figured to lose six seats in the next 30 years, and Pennsylvania, which might subtract five.

South Dakota, North Dakota, Montana and Idaho are figured to drop from two seats in the House to one. North Dakota figures to lose its extra seat in the apportionment.

The loss of two congressmen in the 50-year period from 1950 by both Nebraska and Kansas will be matched by similar losses in Minnesota, North Carolina and Tennessee. But seven states will lose three votes in that period - Alabama, Arkansas, Illinois, Kentucky, Massachusetts, Mississippi, and Missouri.

Iowa and West Virginia will lose

four in that period. New York and Pennsylvania figure to lose 10 seats each in the five decades.

Besides California and Florida, the big gainers will be Arizona and Texas, four each; Maryland, three; and Colorado, two.
