The following budget provides cost and return estimates for flood-irrigated wheat in western Kansas. The majority of irrigated wheat acreage is typically located in southwest Kansas, but this budget is also applicable to south central, west central, and northwest Kansas as well. This crop enterprise is particularly suited for low volume irrigation systems in these regions.

Income Per Acre

Crop production costs per unit and net returns are highly dependent on yields. The following estimated budgets include three different yield levels, which are intended to represent expected yields for land of varying quality for a given level of management. Producers can compare the profitability of crop enterprises on farmland tracts with varying yield potential by considering alternative expected yield scenarios. Land values and government payments have been adjusted for alternative yield levels in this budget. In customizing a budget to your farm, attention should be given to using land values representative of your farm's productive capacity and local farmland market conditions.

Price per bushel represents an expected harvest price in Scott City, Kan., accounting for government marketing

Table 1. Production Inputs — Flood-Irrigated Wheat

Item	Yield Level (bu)			
	45	60	75	
Seed, lbs	75	90	120	\$0.08/lb
Fertilizer:

loan price support levels. Wheat producers in other regions of western Kansas should use an expected price that is representative for their location.

Table 2. Machinery and Land Resources — Flood-Irrigated Wheat

Item	Yield Level (bu)			Custom Rate	Farm Rate
	45	60	75		
Tillage/Planting/Chemical Applications:					
Disk	2	2	2	\$6.34	\$8.01/a
Field cultivate	1	1	1	\$6.16	\$7.78/a

Anhydrous application	1	1	1	\$5.90	\$7.45/a
Fertilizer application	0	0	0	\$3.58	\$4.52/a
Herbicide application	1	1	1	\$3.81	\$4.81/a
Insecticide / fungicide application	0	0	0	\$3.90	\$4.93/a
Harvest					
Base charge	1	1	1	\$13.80	\$17.43/a
Extra charge for yields exceeding	22	22	22	\$0.131	\$0.165/bu
Hauling	45	60	75	\$0.133	\$0.168/bu
Non-machinery labor	0.93	0.99	1.04		\$10.00/hr
Irrigation labor	1.00	1.00	1.00		\$10.00/hr
Land value/acre	\$612	\$765	\$917		
Interest on capital					7.0%
Irrigation Equipment	Investment, \$/a		Years	Salvage value	
Well, pump and gearhead value	\$305.00		25	0%	
Power unit and meter	\$45.00		7	0%	
Irrigation system	\$34.00		20	0%	

Crop insurance was not included as an input expense in this budget because yields reflect an average of all years (good and bad). If crop insurance is included as an input expense, then an expected value for indemnity payments should be included in the returns section. Historically, crop insurance indemnity payments have exceeded premiums due to government subsidies.

Costs Per Acre

Production costs at the three production levels are shown on lines 1 through 13. Kansas Custom Rates for specific field

operations are used to represent fuel and labor costs as well as machinery repair, depreciation, and interest expenses in these budgets. Table 1 identifies the typical seed, fertilizer, herbicide, insecticide, and irrigation water requirements (rate and cost/unit) for flood-irrigated wheat. Herbicide requirements include both pre-crop and in-crop treatments. Table 2 outlines the machinery, irrigation equipment, and land resources used for flood-irrigated wheat. Each tillage, planting, and harvest operation is identified.
