THE START OF A MILLION

A year ago, Ganita Funk, Lynn Kessler and Krista Pankratz looked over the start of the bottle cap collection at the Suncrest school at Hillsboro.

*They have
their million...*

HERE'S THE MILLION

Here's the million, all in one pile. The collection was started in October 1969 in an attempt by elementary teachers to get young students to visualize some concept of large numbers.

EDUCATION AND FUN

The third-graders not only learned some elementary addition and subtraction, worked to collect the bottle tops, gathered some concepts of big numbers and estimating, but they also had a good deal of fun.

When Hillsboro Elementary School third-graders speak of million," they know what they're talking about.

Since October 1969, the classes of Eileen Butler, Virginia Lungren and Mrs. R. D. Belton have been collecting soft drink bottle caps, and now they have a million of them — or to be more precise, 1,000,063.

"They're in one great big pile beside the school," said Miss Lungren after the goal had been reached. The pile stacks about five feet high and measures about 12 feet across at the base.

Purpose of the unusual collection, according to the teachers, was to help the children obtain a concept of one million. Miss Butler started the cap drive and the other two teachers followed.

Major teachers followed.

Major contributions came from Kansas cities of Wichita, Winfield, Salina and Caldwell, and as far away as Iowa, in addition to the Hillsboro area.

Plans for the mountain of caps are not certain, but the children probably will stomp them into the schoolground to pave a now-muddy driveway with in the next two weeks.

... now what do they do?

Housewife Calls Tune In Farm Markets

The day is near when a housewife looking for a dessert to serve her family will simply reach into a frozen food counter at her supermarket for an aerosol can which will dispense ice cream sundaes.

That's the claim of Richard J. Jones, Chicago, president of the Independent Grocers' Alliance Distributing company. Jones was one of several speakers looking into the agricultural future at a 3-day national marketing conference sponsored by the Department of Agriculture at Denver.

"I recently saw a prototype of a triple-valve aerosol can," Jones told the more than 200 persons attending the session. "One valve dispensed ice cream, another dispensed syrup and a third dispensed whipped cream."

"If you're a purist, you'd have to add a maraschino cherry, but one aerosol can could — and probably will — produce a complete ice cream sundae — and other rather exotic finished food dishes."

Among other innovations to un-complicate life is paper clothing. Jones said the idea has not really caught on yet, but with a little more time and technology it will.

"You soon may be able to purchase a 6-pack of dress shirts at the supermarket for less than the costs

of laundering six cloth shirts," he said.

Another speaker with the same theme was J. Phil Campbell, the No. 2 man in the agricultural department and key-note speaker at the conference.

Campbell's remarks were addressed more to the producers and manufacturers of farm products, but he emphasized that in dollars-and-cents merchandising it was the homemaker everybody must please.

"What has a housewife got to do with how a cattle rancher operates?" he asked. "I'll tell you: Housewives' buying changes actually can change breeds of livestock."

"We are all familiar with the leaner breeds of cattle now being grown as a means of meeting the changed demand for meats. The word fat is about the most unpopular word that exists today and buying changes all tend to get away from this unpopular item."

Keeping up with such marketing changes, Campbell added, is the biggest challenge to agriculture. Farmers who do not know grow what the buyers want and need will find themselves out of the game.

"One thing we've learned," he continued, "is that the American housewife is willing and even eager to buy convenience and time-saving in a package. We see this in a multitude of examples — ready-packaged steaks, pork chops and chicken, all cleaned and ready to be cooked."

"Today's housewife does not have time to shuck corn, shell peas, or churn milk for butter. A large percentage of housewives work away from home and because they don't have time for so many home chores, they have changed the

structure of the ways farm products are marketed."

The ways in which foods are purchased and prepared have changed, Campbell said. So have the way they are produced and, in several cases, even the diet of consumers.

"We have shifted our diets toward more beef, poultry and convenience foods," he said. "People today eat less fresh fruits and vegetables, but this is offset by larger consumption of processed products."

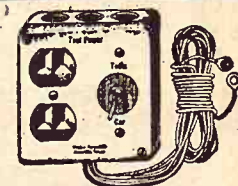

In marketing his products, Campbell said, the typical farmer is no longer so much the independent minded, rugged individualist, but a realistic business executive whose average investment in 1971 has reached \$91,700 not including farm dwellings.

"Until recently marketing was regarded as of very secondary importance by farmers," he said. "They produced the products; other people took them from there. Now farmers have awakened to the fact that marketing is no longer

secondary, no longer subordinate.

"Cattlemen, dairymen and egg and poultry producers are in the forefront of an ever-enlarging effort to enable producers to influence the marketing of their products. There are many examples of how farmers are getting a better grip on the decision-making part of the marketing process through co-operative action."

"They are doing this to be able to continue as independent farmer-businessmen," he said.

TOOL POWER

110 VOLTS ELECTRICITY FROM ANY CAR, TRUCK, TRACTOR or PICKUP ALTERNATOR

Operates heavy duty drills, saws and lights. Charges all batteries fast. Does good arc welding on plate steel. Starts cars with dead batteries instantly. Eliminates jump cables. Output is 3000 watts or 0 to 45 amps. Installs in 5 minutes. Guaranteed 5 years. Post paid \$22.95 or C.O.D. \$22.95 plus charges. Complete installation instructions with shipment.

State To Fight Gas Price Hike

Two proposed increases in wholesale natural gas rates that would cost Kansas gas users more than \$7.8 million a year are being opposed by the Kansas Corporation Commission.

announced that the KCC has filed intervention proceedings with the Federal Power Commission (FPC) in Washington to oppose increases sought by Cities Service Gas Co., Oklahoma City, and Northern Natural Gas Co., Omaha.

Cities Service previously announced it had asked the FPC for an increase totaling \$18 million, to be effective about Oct. 23 in five states including Kansas, Missouri and Northern Oklahoma. Northern had requested a similar increase, most

of which would be felt in north central states.

Saffels said the \$7.8 million of the Cities Service increase would be paid by Kansas residential and industrial users.

"It affects 391,000 Kansas residential customers, whose cost of gas would be increased approximately 14 per cent, and 40,000 industrial customers, whose cost would be increased by 25 per cent," Saffels said.

The KCC position is that the proposed increase should not be granted in light of the fact that in September 1970 the FPC settled a Cities Service application for an increase of \$16 million which allowed the company about half of the increase.

"This settlement," Saffels said, "indicates to the commission that an additional increase is not warranted at this time."

Saffels pointed out that the proposed increase would give Cities Service a 9½ per cent rate of return, a rate "higher than ever granted by the KCC."

"We recognize that we can't require a blanket rate of return — some companies need more, some less," Saffels said, "but the rate of return is fundamental, representing returns after all costs have been defrayed."

Northern has asked for an \$18.3 million increase that would give it a 9 per cent rate of return, Saffels said.

Northern supplies gas at wholesale and through its affiliate utilities to 1,092 communities in Illinois, Iowa, Kansas, Michigan, Minnesota, Nebraska, South Dakota and Wisconsin.

The requested Northern increase would boost wholesale rates by approximately 6.5 per cent, effective Oct. 27.

Saffels said the effect of the Northern hike, if granted, would be less in Kansas than that of Cities Service, but he did not estimate the amount.

Four representatives of the company have appeared before the arguing and soaring operating costs necessitate raising the firm's rates in Kansas. Witnesses for the firm

said Northern now realizes a return of only 2.4 per cent.

Subject to refund, Northern was granted a \$38 million increase on Dec. 27, 1970, which is now being settled through compromise proceedings.

Principal utility distributors affected by both of the proposed wholesale increases are Gas Service Co., Kansas City, Mo., which serves the Wichita and Kansas City areas and much of central and eastern Kansas; Kansas Power & Light Co., Topeka; Union Gas System Inc., Independence; Peoples Natural Gas Division of Northern Natural, Omaha; and Kansas Public Service Co., Lawrence.

Limit Car's Top Speed To That Of State Limit

The National Transportation Safety board has recommended the top speed of cars be limited to no more than the highest legal speed limit in the nation.

The recommendation is far stronger than any other government proposal to reduce speeds.

The National Highway Traffic Safety administration proposed December 1 to curb high speed driving with a device that activates a car's warning lights and horn at a speed of 85 miles an hour.

It also recommended limiting the maximum attainable speed to 95 miles an hour and to require speedometers that register no greater than 85. Police vehicles would be exempted but all other cars, trucks, busses and motorcycles built after October 1, 1972, would be affected under the proposal.

The safety board's recommendation today asked the safety administration to amend its proposal and further reduce speeds attainable on new cars. The board did not say which state has the highest legal speed limit but several have limits of 75. Nevada has no limit in unpopulated areas.

Guard that investment by giving your cattle the Sunflower brand.

By telephone. It's that easy. A call to Dickens 2-7270 brings you Kansas Soya's custom-mixed cattle feed, carefully prepared in accordance with your formula

and dependably delivered in compliance with your timetable. Just in case you're not completely satisfied with the results you're getting with your present formula, that same telephone call will also give you valuable formula guidance. Free. Before you hang up, you'll have the feedlot-proven formula that will provide maximum gain at lowest cost.

If you mix your own ration, let Kansas Soya supply the best protein supplement you can feed. Sunflower Brand Soybean Meal or Pellets are made from prime soybeans, nature's richest source of

protein. They're specially processed to retain their weight-lifting protein elements and, at the same time, improve their natural palatability and digestibility. That's why Sunflower Brand tastes better, packs on the pounds faster and makes marketing more profitable.

Whether you choose custom-mixing or mix your own, prefer pre-arranged delivery or pick up your own order, Kansas Soya's automated in-and-out truckloading and grain bank facilities are always available. Call Kansas Soya now. And call collect.

World Demand Pushing Up Price Of Barley

World demand for feed grains, coupled with a shortage due to last year's drought in Eastern Europe, has pushed the price of barley to a 14-year high.

The grain, widely used for cattle feed as well as for brewing, now sells for \$1.35 a bushel at Eastern seaboard cities, up from \$1.16 a year ago. On the West coast, where the market is supplied by local crops rather than the Mid-Western fields, the price is \$1.60. In the G&G area, barley was around \$1.20 at Kansas

City late last week.

"There has been an increasing demand for feed grains for some time," said one market expert. "The drought in Eastern Europe was a factor, because there hasn't been a crop since then."

This demand has finally caught up with barley and it has reached parity with the other feed grains. It had been under-priced until just now."

On the Pacific coast, whose barley is mostly exported to Korea, the largest U.S. customer for the grain, there still is another factor pushing prices up at least temporarily.

"Out there," this expert said, "they're reaching the tail end of the old crop. It will be a couple of

months before the new one comes in. That means exporters are paying a premium for the old crop grain that still is available."

The present price is the highest since the Korean war when prices went above \$1.60 a bushel several times. Immediately after the end of World War II prices reached their all-time high — above \$2.40 — as the grain was shipped abroad to help in rehabilitation efforts.

However, U.S. exports of barley have been falling steadily since the 114 million bushels of 1959. Ten years later they were down to 11 million bushels.

The fall has been spread throughout the chief markets for the U.S. grain. More than half of it goes to only three countries: Korea, Italy and West Germany.

In the 1968-69 crop year, the latest for which there are full reports, Korea took 3.2 million bushels, down from 11 million. Italy took 2.1 million, down from 9.1 million, and West Germany exports were 1 million, down from 18 million.

Brewing is a fairly small market for U.S. barley, taking only about 4 million bushels of the 100 million or so grown annually. Exports are slightly larger, accounting for 11 million bushels.

Farmland Plans Research Center In Wyandotte Co.

Farmland Industries has announced plans to establish a research and demonstration farm in Wyandotte County north of the Agricultural Hall of Fame.

A Farmland Industries spokesman said papers were filed for the deed transfer. The company

purchased the site, about four miles north of the Agricultural Hall, from Mr. and Mrs. William Theno Sr. and Mr. and Mrs. William Rosche.

The Wyandotte County register of deeds office said the transaction involves 118 acres owned by the Rosches and an unspecified portion of a 150-acre tract owned by the Thenos.

The selling prices were not disclosed.

Farmland Industries said the cooperative will close its present research and demonstration farm at Trimble, Mo. The move to Wyandotte County is being made to locate the facility in proximity to the Ag

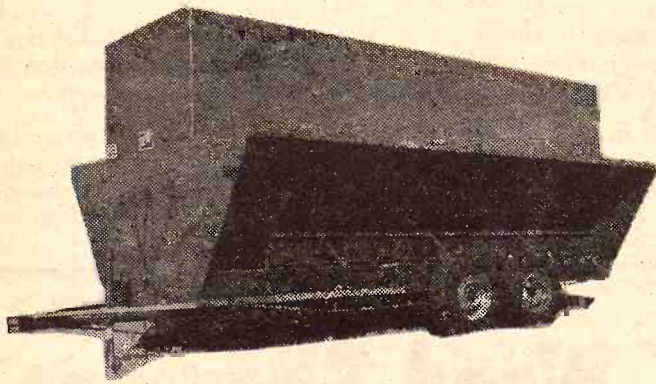

Hall and to other Farmland operations.

The agricultural cooperative has a feed mill at Muncie and nitrogen fertilizer plant near Lawrence.

The farm will be supervised by Dr. Buell W. Beadle, vice president of research and development for Farmland. The size of the research farm and number of employees weren't specified.

A company spokesman estimated that between 5,000 and 10,000 members of the cooperative visit the research farm annually.

"RANCHERS PRIDE" Cattle Self Feeders

These all steel — all welded, fully portable cattle self-feeders are offered by leading feed mills and farm supply firms throughout Kansas. If your feed dealer doesn't keep any in stock — Then ASK him to contact:

Black Illegitimacies Down In Past Decade, Says Census Study

Black women, on the average, had significantly fewer illegitimate babies in the late 1960s than at the beginning of the decade, while white women had more, according to a census bureau study.

The black illegitimacy rate, 10 per cent, was higher than the white rate in 1960, but it dropped to about seven times higher in 1968, the latest reported year, the study showed.

Of the 339,000 illegitimate births in 1968, 184,000 were black and 155,000 were white. The total, about 10 per cent of all births, represented a continued slight growth in the

national illegitimacy rate.

The census study entitled "Fertility indicators: 1970," is an unusually comprehensive compilation from federal and private sources. Its various findings also include the following:

o After a period of sharp decline the national fertility rate appears to have stabilized at a low level. In 1957 the women of child-bearing age in the United States had a lifetime average of 3.7 children. In 1968, 1969 and 1970 the figure fell below 2.5.

o There is a rising number of prospective young mothers — those in the early part of the child-bearing years, which for most tables in this study were considered to be from 15 to 44. The number of children born rises as the number of women capable of bearing children increases. Thus the number of births increased both in 1969 and 1970 after having declined for eight years.

o Young women with college educations are considerably more likely to have fewer children than women with less than eight grades of education.

The findings that specialists found most striking were those concerning illegitimacy. In 1961 the rate among blacks reached a record high of 101 illegitimate babies for every 1,000 unmarried women. By 1968 this had fallen to less than 87.

Among whites however, illegitimacy increased from 10 to

more than 13 illegitimate births a 1,000 unmarried women in the same period.

In 1968 5 per cent of all white births and 10 per cent of white first births were illegitimate. For blacks the comparative figures were 31 per cent of all births and 48 per cent of first births.

A series of explanations for the large difference between black and white illegitimacy rates was advanced in a paper published in December by two authorities at Johns Hopkins university, Melvin Zelnik and John F. Kantner.

They concluded that a black woman was more likely to engage in premarital intercourse, less likely to use contraception, less likely to undergo abortion, and "better able to feel that her child has as good a chance in life as any legitimate child of her race born into similar

economic circumstances."

In an interview Kantner said he did not know what accounted for the narrowing of the gap between the black and white races, but he offered what he termed a hunch:

"Illegitimacy is concentrated among women under 20" and it is at those ages that one is most likely to

Grass & Grain

May 4, 1971

7

be influenced by public information. "It could be that the use of contraception is catching on, and that young black women are more willing to undergo abortions."

FLAGSHIP OF THE GREAT SILVER FLEET...

GLEANER MODEL F COMBINE

GLEANER combines have earned a reputation for efficiency and dependability in all grain and seed crops. They feature *total* performance that has been tested in on-the-farm operations around the world and in many state and national contests. And all of these built-in abilities are included in the Model F.

It has big power . . . up to 93 horsepower to pull it through muddy fields and big yields without cutting performance. It has a 37½-inch down-front cylinder that threshes across its full width . . . thanks to the exclusive "sure-feed" system that controls the crop every inch of its short journey from header to cylinder.

The Model F handles the job of separation and cleaning right, down to the last grain. Your crop never had it so good. And the F's comfort and convenience features make it pretty soft for you, too. You'll find the Going's always Great with the Gleaner Model F combine.

OUR DAILY BREAD

— by G&G Area Cooks

Mrs. Alfred Kroening Of Herington Wins Prize

Mrs. Alfred Kroening, 119 North 2nd, Herington, wins the contest prize.

NO EGG CAKE

Mix together the following:

- 1 1/2 cups flour
- 1 cup sugar
- 1 teaspoon soda
- 1 teaspoon baking powder
- 3 tablespoons cocoa
- 1/2 teaspoon salt

Place these ingredients in an ungreased 8x8-inch pan which will be the pan you bake this cake in. Then make three indentations in this mixture. In one put 1 teaspoon vanilla, in the second put 5 tablespoons melted shortening, in the third put 1 tablespoon vinegar. Pour a cup of lukewarm water over all and stir with a fork. Bake 35 minutes at 350 degrees. Let cool in pan then put on frosting.

+++++

Mrs. R.T. Tucker, Lincolnville: "We enjoy the paper. I especially like the recipe page. Am enclosing a recipe for Apple Crisp that is our favorite. Have not seen one just like it in your paper."

APPLE CRISP

- 3 medium apples (Jonathan preferred)
- 1 tablespoon butter
- 1 cup sugar
- 1 teaspoon cinnamon
- 1/2 cup cold water
- 1/2 cup flour

Wash apples and slice into about 9-inch square baking dish. Add water. Mix dry ingredients mixed with water over the top. Bake at 350

degrees about 45 minutes or until apples are done and topping a little browned.

+++

Mrs. J.W. Green, R 2, Clifton: "Don't throw away those fresh green onion tops! Try this recipe with them."

SPANISH ONION TOPS

Dice and fry:

- 6 slices bacon

Add:

- 2 tablespoons vinegar
- 2 cups minced green onion tops
- 1/4 teaspoon salt
- Dash of pepper

Cook about five minutes or till tops are just tender. Stir in 2 well-beaten

eggs just till eggs are set. Note: Instead of stirring eggs into tops you may place cooked tops in a serving dish and sprinkle 1 or 2 minced, hard-cooked eggs over top.

+++

Tenderized Meat

Tenderness is a criteria of quality for many shoppers for meat. So the meat is sometimes tenderized for us. It is sometimes treated with a liquid tenderizer. The tenderizer may be

injected into the vascular system of the animal before it is killed. You buy it under a trade name. Or your retailer sometimes uses a mechanical treatment to cut or break connective tissues and muscle fibers. It is simply dropped into a tenderizing machine.

No Frayed Edges

Sew new washcloths on the sewing machine through the button hole edge and the edges will never fray.

Measure Windows Carefully For Readymade Draperies

Readymade draperies come in all sizes — but careful measurement will make your job easier when you get ready to hang them. Simply apply these rules from the experts to take maximum advantage of the great variety available:

1. Never set foot in a store without your measurements. Measure every window separately. Windows sometimes look alike, but may not be.

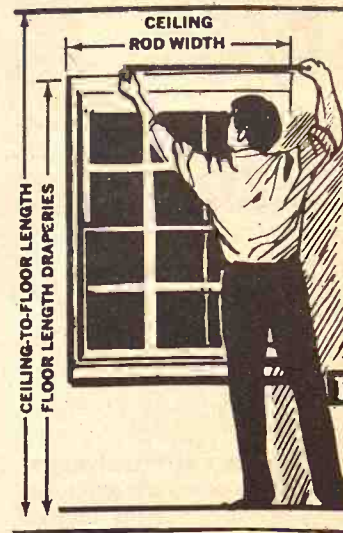

2. Some combination of "readymade" or "made-to-measure" draperies might solve a window problem you thought required more expensive "custom-made." Your saleslady will explain.

3. Take a carpet swatch with you. Most decorators use the color in the draperies that can blend into almost any color scheme. Now they come in yarn-dyed colors. Maybe you want a solid orange. Paisleys. Stripes. Or?

4. Some draperies require costly "extras." Such as linings — to protect them from dirt and fading. Not draperies of fiberglass. They resist dirt and sun, without a lining. That's one reason they cost less. Save the rest of your money for that little Queen Anne coffee table at the antique shop. Tip: foam-backed fiberglass draperies give a self-lined look and extra insulation.

5. Don't buy any draperies until you ask — how to clean them — or how much it costs to have them cleaned!

6. Nubby textures give more privacy than most open weaves.

Nice to know if you're an apartment dweller.

7. Don't buy draperies that will look a hundred years old six months from now. Fiberglass draperies will last longer than others. They're fire-safe, won't rot, mildew, or yellow. Also, they won't shrink or sag with every change of the weather or after every washing.

Wash Furniture To Remove Wax Buildup

Furniture should be washed when waxes have built up and created a thick film. To do so, wash one section at a time with a cloth and a mild detergent in warm water. Rinse the cloth often and follow the grain of the wood with your strokes. More than one washing may be needed to get down to the original finish.

When the furniture surfaces have dried thoroughly, they are ready to be waxed or polished.

Norman Taylor, Newtown, Missouri, says,

"I think we have reached the point in the cattle business where we can't afford not to feed on grass."

PURINA GRASS STRETCHER®

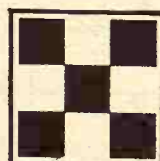

Norman Taylor, Newtown, Missouri, discovered that beef gains on grass alone was costing him valuable extra income. Before he turned to feeding on grass the Purina Grass Stretcher way, Mr. Taylor normally stocked his 210 acres of pasture in Missouri's "Green Hills" country with 175 yearlings producing an average of 350 lbs. of gain per animal and 287 lbs. of beef per acre. In 1970, he put 258 yearlings on the same 210 acres and fed them the "Grass Stretcher" way . . . A 47% INCREASE IN CARRYING CAPACITY. Mr. Taylor's yearlings gained 410 lbs. per head during the season which meant that his 210 acres of pasture produced 503 lbs. of beef per acre—216 lbs. MORE BEEF PER ACRE. At a sale price of \$30 cwt., Mr. Taylor's 210 acres of pasture yielded \$13,608 more income.

Costs to obtain the extra income totalled \$5,000 which included feed and interest costs on the capital borrowed for the extra 83 head. That's why Norman Taylor says, "I think we have reached the point in the cattle business where we can't afford not to feed on grass."

Isn't this what the beef cattle business is all about? You, too, can increase the carrying capacity of your grass and the per head gains your cattle make on grass with PURINA GRASS STRETCHER.* Call your Purina man today.

*PURINA GRASS STRETCHER is available with STILBOSOL® — Elanco Products Company.

Conditioner Shampoo Helps Give Hair New Life

Isn't enough just to shampoo and wash oils away to keep your hair in the best condition. It is necessary each strand is being nourished and cared for, that the scalp is receiving the stimulation and conditioning it requires.

A newly developed natural protein scalp conditioner shampoo provides complete treatment for your hair every time you wash it. Used regularly, the shampoo helps control dandruff and adds shine to dry, tinted or bleached hair.

To be certain the conditioning will work, follow these steps:

First, brush your hair with a natural-bristle brush. Use long strokes and brush each strand from scalp to tip to loosen dirt, encourage oil glands to lubricate the hair and stimulate the scalp. Continue until your scalp tingles.

To shampoo, wet the hair thoroughly with warm water. Apply a small amount of the rich lathering shampoo. Massage the lather through the hair to the scalp.

Next, rinse your hair thoroughly, giving special attention to hair ends which tend to retain shampoo unless rinsed carefully. Repeat the

lathering and rinsing.

Carefully wrap your hair in a towel for several minutes, patting gently. Wet hair must be treated carefully or it can easily be damaged.

Paper Towel Removes Ashes

A dampened paper towel will remove ashes from messy trays before you dust and polish the living room furniture.

Keeps Grapefruit Fresh Till Use

To refrigerate grapefruit halves after cutting, place the cut sides down on china plates. This will keep them fresh until you are ready to use them.

Warm Beaters To Prevent Sticking

Cold shortening or butter won't stick to the beater of your mixer if you warm the beaters in hot water before using.

Stains Disappear

Plastic dishes quickly shed stains when washed in a baking soda and water solution.

To Launder Sheer Curtain

When a curtain is extra sheer, launder it in a closed cheesecloth bag.

Grain Trade Not Happy With Size Of Storage Hike

The grain trade, unhappy with a rate increase granted for storing government-owned commodities, plans to seek new negotiations with the Agriculture department for a larger boost.

The department had announced approval of a rate hike of about 2.5 cents a bushel in storage and handling charges paid private warehousemen or taking care of grain owned by the Commodity Credit corporation.

The increase included a 1.46 cent increase in the annual storage rate, beginning July 1. The annual rate now ranges from 12 to about 13 cents per bushel.

A half-cent boost was allowed for handling charges, both for receiving grain at elevators and for shipping it.

Industry representatives wanted at last a 5-cent boost in the annual storage rate to offset rising costs of

warehouse operations. The Agriculture department itself said in a recent report storage costs have risen sharply in recent years.

At country elevators, the Economic Research service reported recently, grain storage costs currently are at least four cents per bushel higher on an annual basis than they were four years ago.

Now, following the 2.5 cent package approved by the department, the National Grain and Feed association says the increase was "considerably below" that proposed by the industry.

The association said in its weekly newsletter recently it will seek grain storage costs rate negotiations because the government's increase was "far short of the mark."

A spokesman said privately the industry was "very much disgusted" with the increase approved by the Agriculture department, adding that the matter "is not closed and we will try to get more."

team, with no question about areas of jurisdiction, to provide maximum protection for consumers and economy of conducting the state and federal enforcement activities."

Under the agreement information on suspected violations and records will be shared by state and federal officials, to strengthen consumer protection against unwholesome, adulterated or improperly labeled meat and poultry foods.

Without compromising administrative obligations, state and federal compliance officers will be cross-utilized fully to inquire into alleged violations, conduct compliance reviews and develop evaluation materials.

Staff training will be co-ordinated to assure uniform methods of operation. The signing with Kansas brings to 19 the number of states which have completed such an agreement with USDA.

Kansas, USDA Agree On Meat Inspection Pact

Officials of the Kansas Department of Agriculture and the U.S. Department of Agriculture have completed plans to co-ordinate enforcement of state and federal meat and poultry inspection laws and regulations.

An agreement was signed here yesterday by Roy Freeland, Kansas secretary of agriculture, and the USDA's consumer and marketing service.

"The agreement," Freeland said, "means we will work as a single

clouds
...so does

A cloud is a common thing... fleecy white in a sky of blue, becoming sail for our imagination.

But nature's cloud is not a smudge of trailing fumes and dirt... hazing the horizon. Why? Because a cloud is a softly sculptured cluster of water drops.

The clouds seen rising upward from KPL's Lawrence generating station, like nature's, are not smoke or soot, but water vapor virtually free of pollution.

This is the result of KPL's new \$5,000,000 air quality control system which represents part of our effort to maintain a high quality of life in Kansas.

We are a Kansas company. We are as concerned as you are that we continue to have clean, fresh air for you... and for us.

Revenue-Sharing Could Change Face Of Extension Service

The future of the 57-year-old Agricultural Extension Service — including 4-H Club and farm educational programs — remains undecided by the Nixon Administration's revenue-sharing proposals.

"We don't know what effects these proposals would have on the Kansas Extension Service," says KSU Cooperative Extension Service Director Robert A. Bohannon.

The President's proposals would shift federal funds tagged for the Extension Service, although a process whereby states could continue to use federal funds for this purpose would be established.

In Kansas, the Extension Service is financed by state, federal and county funds with only about 20 per cent of the total funding coming from federal sources.

However, if federal monies were withdrawn from state and local levels, it would necessitate a dismissal of some personnel and a cutback on expenditures for various programs, Bohannon said.

"It would constrict personnel numbers and our programs," he said, "creating serious overtones on programs related to agriculture, home economics 4-H and rural development."

The President's revenue sharing proposal includes \$149 million of the Cooperative Extension Service budget at the federal level under the broad area of rural community development as a part of the special revenue sharing grants.

The plan appears to propose that federal funds for Extension Service programs be distributed to the states without specific legislation as long as the funds are to be used.

Currently, funding is through state and federal grant colleges and universities such as Kansas State University, headquarters of the state Extension Service, which has permitted a staff to be trained and programs developed relatively free of political pressures.

Without the direction of the present Smith-Lever Act, federal funds for the Extension could be distributed in many manner determined by the state. It appears federal funds will be distributed to states to be used as directed by the governor. There is also a possibility funds could be distributed to numerous state institutions or agencies in small parcels.

The money might be used for rural development through another agency," Bohannon said. "Off hand, I don't know which, but I would expect it would be handled through the Kansas Department of

Economic Development."

If this happened, it would move headquarters to Topeka, changing the complexion of the Extension Service.

"The Extension Service might no longer be so closely identified with land-grant universities," Bohannon said.

Presently the decentralized organization of the Extension Service with a small corp of federal and state staff members in relation to the professionals in the counties working with local people has kept it sensitive to the problems and needs of people at the local and state level.

Elected representatives from each township elect an Extension board to help decide local needs and programs.

Bohannon said latest information sent to the KSU Extension indicates Secretary of Agriculture Clifford Hardin has had talks with Vice President Spiro Agnew and the chairman of the House Agriculture Committee, and now indicates the level of expenses for cooperative expenditures will remain the same as last year. However, any new employees may not be included for federal retirement costs.

The government is also planning to discontinue free Extension Service mailing privileges.

"It's still not clear," Bohannon said, since final decisions haven't been formulated by the federal government. He expects the Extension Service to be continued, at least in its principal programs such as 4-H, food nutrition programs and agriculture.

"There is an over-riding possibility the Extension Service would become more subject to political pressures than in the past," he added.

Bohannon said the principle of revenue sharing is good, as has been proven by the work done by the Cooperative Extension Service financed by this principle when it was started in 1914. Money was distributed to the states through a distribution pattern.

"This worked very well," he said. "But the present proposals are brand-new with the monies going through the governor's office. Always before it was directed to the university for administration of the Extension Service."

He said he thought the nutritional programs, mainly centered in Wichita, Hutchinson, Salina, Topeka, Kansas City and Leavenworth, would "probably continue."

The Kansas Extension Service has conferred with the Kansas Congressional delegation, which, by and large, is supporting efforts to

continue Extension efforts, he said.

In his message to Congress, Nixon said:

"Conversion of the existing categorical aid programs for agriculture and development into special revenue-sharing for rural development is a logical evolution in line with the history of these efforts and consistent with their basic purposes."

"Over a number of years, the U.S. Department of Agriculture has been moving to make its assistance to farmers and rural residents more effective and flexible by a steady process of decentralization."

"Placing these programs fully in the hands of the states is just one more step in sharpening their ability to deliver the services they were designed to provide."

Whether the transfer will be beneficial and the transition smooth is a question to which the example of the Cooperative Extension Service may provide a partial answer. The states are ready to take charge of the Extension Service, which they already largely administer and which all states now fund above the present federal contribution.

requiring retreading tires for passenger car tires that will perform safely under modern driving conditions."

"These conditions," the agency maintained, "are the same whether a new tire of a retreaded tire is involved, and call for the same performance requirements as far as is practicable."

Retreads account for about 25 per cent of the market for replacement tires — those sold as replacements for original equipment.

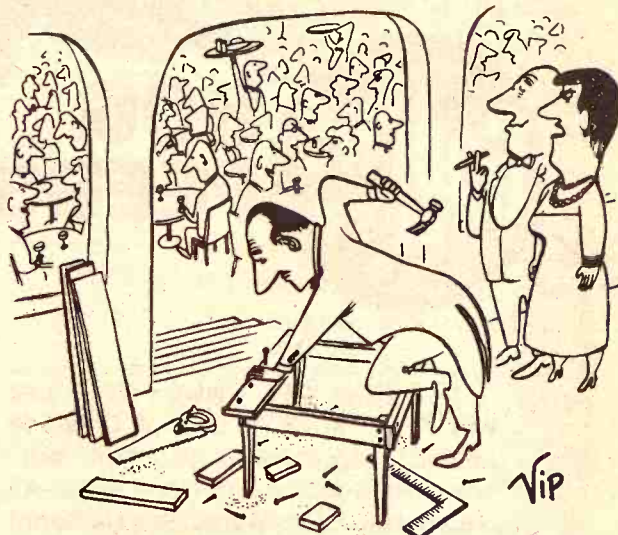

Most retreaders are satisfied with the new standard and believe it will improve "consumer acceptance," according to Philip P. Friedlander, communications director of the National Tire Dealers and Retreaders association.

Grass & Grain 13
May 4, 1971

Tires must comply with detailed performance specifications for strength, endurance, high-speed driving and unseating of the bead — the metal ring that fits on the rim.

While requiring retreaders to meet the same performance specifications, the new standard gives the retreaders leeway in labeling their tires as to size. This is because tires are likely to shrink during the retreading process. A tolerance of up to 10 per cent in size will be allowed.

The new standard also exempts retreaders from a requirement to maintain records of performance tests.

"How much did you tip him?"

To Apply Tougher Standards On Retread Tires

After more than three years of deliberation, the federal government has issued a safety standard requiring retreaded tires for passenger cars to meet the same performance criteria as new tires.

The standard, first published as a proposal October 14, 1967, becomes effective next January 1.

In the final version, the National Highway and Traffic Safety administration rejected arguments that it was unreasonable to apply new-tire requirements to retreaded tires. The agency said its purpose was to "provide the public with

\$5.66 Milk Average Pushes 1970 Dairy Income To Record

Milk production in Kansas totaled 1,662 million pounds in 1970, moderately below the 1969 production while cash receipts for milk and cream totaled \$90.0 million, moderately above the previous year for a new record high, according to the Kansas Crop and Livestock Reporting Service.

Milk production per cow increased

slightly to 8,269 pounds, up 80 pounds from 1969. The number of milk cows on farms continued to decline and averaged 201,000 head in 1970, compared with 206,000 head in 1969.

Kansas farmers sold 1,535 million pounds of whole milk to plants and dealers in 1970. Whole milk sold to plants and dealers accounted for 92 per cent of whole milk produced in

1970, unchanged from 1969.

Some 34 million pounds of milk was separated on farms and sold as cream, down 19 per cent from the earlier. Milk retained by farmers direct to consumers as fluid milk and cream was estimated at 1 million pounds, unchanged from the previous year.

Milk used on farms

produced was estimated at 72 million pounds, compared with 79 million pounds in 1969. This includes 36 million pounds fed to calves, 36 million pounds consumed as fluid milk and cream and 3 million pounds used for farm churned butter. Cash receipts from marketings of milk and cream totaled \$90,026,000 in 1970, up 2 per cent from the previous year and the highest in 47 years of record. Receipts of whole milk sold to plants and dealers totaled \$88,000,000 compared with \$86,000,000 a year earlier. Milk and cream retained by farmers sold for \$2,198,000, slightly from \$2,198,000 in 1969. Receipts of farm separated cream totaled \$850,000, compared with \$1,039,000 the previous year. The average returns from milk marketed as milk or cream was \$1.66 per hundred weight, a new record high. The gross farm income for dairy products in 1970 was \$92,233,000, moderately above the \$90,523,000 in

1969. This included the value of milk, cream and butter consumed on the farm and cash receipts from marketings.

The value of whole milk produced, including whole milk fed to calves, was \$94,069,000 in 1970, compared with \$92,448,000 the previous year.

United States

Milk production for the United States in 1970 totaled 117.4 million pounds, an increase of 1 per cent from a year earlier. Milk cow numbers decreased 1 per cent while milk production showed an increase of 1 per cent.

Milk used for all purposes on farms where produced is estimated at 4.1 billion pounds, 6 per cent less than a year earlier. The average yearly decline during the 1964-68 period was 7 per cent.

Of the 1970 milk used on the farm, 55 per cent was consumed in farm households as milk and cream, 42 per cent was fed to calves and 3 per

cent was used for farm churned butter.

Milk and cream marketed by farmers totaled 113.3 billion pounds of milk equivalent in 1970, up 1 per cent from 1969.

These marketings consisted of whole milk and farm separated cream, sales to plants and dealers and milk sold directly to consumers. Marketing of whole milk to plants at 110.3 billion pounds was slightly more than in 1969.

Farmers' cash receipts from milk and cream were \$6,523 million in 1970, up 5 per cent from the previous high last year.

Cash receipts from milk sold to plants and dealers totaled \$6,271 million in 1970, an increase of 5 per cent from 1969. Returns from sale of cream, at \$33 million, were down 17 per cent from the previous year, continuing the downward trend for this item. Direct sales to consumers totaled \$218 million, up 7 per cent from 1969.

Value of milk used in farm households in 1970 is estimated at \$140 million, down 6 per cent from the previous year. The farm value of all milk produced is \$6,759 million, a 5 per cent increase over 1969.

MIDWEST SELLING BEEF IN JAPAN

Beef from Mid-America was a prominent item at the U.S. food show in Tokyo. American Ambassador Armin H. Meyer checked a product list of Midwest beef suppliers at this booth as he made his official tour of the exhibit after opening ceremonies.

Left to right are Jon Wefald, Minnesota Commissioner of Agriculture; William E. Galbraith, U.S. deputy under secretary of agriculture; Wolfgang Grunel, executive director of the Mid-American International Agri-Trade Council; Tokuo Masi, president of the Japan Self Service Association; the Japanese interpreter who assisted at the booth; Gene Thompson, director of the Marketing Division of the Missouri Department of Agriculture; the ambassador, and Gordon L. Ropp, Illinois director of agriculture.

Silo Fires May Burn For Months

Farmers used to think there was nothing much worse than a barn fire — but they've found a blaze that not only is more persistent, it is likely even more damaging — that is a silo fire.

With a barn fire, at least, the blaze goes out when the barn burns down — if not before. The whole thing takes only a couple of hours, according to the agricultural situation reports from U.S. Department of Agriculture in the May issue.

Not so with silo conflagrations. They are almost impossible to extinguish before they burn themselves out — and that can take months. On the record books are one fire that burned from October to January and another that began in fall and still was active the following April.

Silo fires can get a start with only the slightest amount of outside air — air that filters through supposedly air-tight walls, leaks through cracks

or bolt holes, or enters at unloading ports or doors.

Micro organisms in the silage use oxygen trapped within the silage at the filling time to cause initial heating up. After this oxygen is gone, outside air must enter somehow to support slow oxidation and eventually spontaneous combustion.

There appears to be a correlation between moisture level, researchers at University of Wisconsin believe, and the silage is apt to burn. Unless a silo is known definitely to be airtight, researchers say, it shouldn't be filled with clover or grass silage containing more than 45 per cent moisture.

Night Patrol At Milford Lake

JUNCTION CITY — A permanent night shift to patrol all areas of Milford Lake has been added to the Geary County Sheriff's office, Sheriff Jim Gross says.

He warned that boisterous beer parties would not be tolerated and that intoxicated persons and those causing disturbances will be arrested.

Regular sheriff deputies and members of a new volunteer deputy force will be utilized in the patrols. The special deputies will be uniformed and have regular sheriff department insignia and credentials.

Gross said four beer parties were stopped at the lake with one broken up several times when participants went to new locations on the lake. One party resulted in a later incident which led to arrests and jail sentences, the sheriff said.

HEADS GRAIN DEALERS ASSN

Henry Lueck of Netawaka is the new president of the Kansas Grain Dealers Association. Lueck, center, is shown with Moore Johnson, left, Columbus, a director, and Tom McNieve, right, Edmond, vice president.

Other officers are L.J. Holger, Wichita, 2nd vice president; Aliff Neel, Windom; Kermit Adelgren, Hutchinson; Frank McBride, Salina; Dave McKee, Topeka; and Earl Bryan, Hugoton, directors.

Lueck operates the Lueck Grain Co. at Netawaka, Jackson county. The Kansas Grain Dealers Assn has 650 firms as members, representing 90 per cent of the grain, feed, handling and processing firms in the state.

IS THAT TAXATION WITHOUT REPRESENTATION?

The state tax on a pack of cigarettes in Nebraska has been raised from 8 cents to 13 cents. Some of that \$7 million in revenue will go for a new fieldhouse at the University of Nebraska, a fact that has some smokers fuming because no smoking is allowed in the fieldhouse on the Lincoln campus.

Funds For Area To Control 'Wild Hemp'

The G&G area will be included in a program by the Justice Department to get rid of marijuana growing wild in farmers' fields.

The Agriculture department will use \$85,000 in funds from the Justice department to pay farmers for killing the plants. The program covers 10 states, of which Kansas is one. Nebraska is not in the program.

The control season is May 15 to July 15. ASCS will handle most of the funds. USDA has estimated that marijuana — or "wild hemp," the department calls it — is growing on about 22,000 acres. The counties where the marijuana is growing were not announced, but is known that Cloud, Republic and Riley in the G&G area are included.

There was a voluntary program a year ago to get rid of marijuana growing along roads but the program did not reach into private land. Presumably most marijuana can be found along fence rows, areas along streams and corners of fields.

The growth is apparently volunteer from plantings year ago. During World War II, farmers were encouraged to grow wild hemp as a replacement for hemp supplies from the Far East.

In 1943, according to government records, farmers grew more than 146,000 acres of the now illegal weed.

Cut In Poultry Values

Lower prices caused a slump in the over-all value of eggs, broilers and other chickens produced by farmers last year, to a gross of 3.77 billion dollars compared with 3.94 billion dollars in 1969, according to a new analysis by the Agriculture department.

Although output increased in 1970, the Crop Reporting board said, eggs prices averaged 37.6 cents per dozen at the farm level, compared with 40 cents in 1969; broilers averaged 13.5 cents compared with 15.2 cents; and other chickens brought 8.8 cents on a live weight basis, compared with 9.7 in 1969.

The total gross value included consumption of poultry and eggs on

farms where they were produced. That was about one per cent of the total, meaning that actual cash receipts from sales was about 3.73 billion dollars, the report said.

Consumption of eggs and chickens by the farmers who produced them was down 9 to 11 per cent, respectively, officials said.

The top three egg-producing states in terms of sales last year, were California 226.7 million dollars; Georgia 192.6 million; and North Carolina 129.6 million.

Leading chicken and broiler producers were: Arkansas 100 million dollars; Georgia 200 million; and North Carolina 150 million, according to state tables.

A Slowdown In Welfare Rolls?

The government's latest welfare statistics show the first significant slowing since mid-1969 in the booming expansion of relief rolls.

But the Department of Health, Education and Welfare said it is too early to tell whether the leveling-off in January — the latest month for which statistics are available — signals a definite trend away from rapid public assistance inflation. The number of welfare recipients increased by 24 per cent during 1970.

HEW said some 14 million persons received public assistance in January, an increase of 150,000 or 1.1 per cent from the preceding month. The increase was the smallest since July 1969 and contrasted to a growth of 274,000

recipients the previous months.

If sustained for the year, the January statistics would indicate a 13 per cent increase for the year — about half that in 1970.

In addition, total welfare and medical assistance payments in January declined \$16 million from December to \$1.37 billion.

But government welfare specialists said payments are subject to rapid statistical shifts because of the timing of disbursements. Because of this, payments frequently do not accurately show welfare trends, they said.

The welfare specialists attributed the slowed growth to settlement of last fall's strike at General Motors Corp., a general stepup in the economy, and the shortage of relief money in some states.

Settlement of the GM strike cut welfare rolls by almost 74,000 in Michigan, HEW said.

Once a major handler of eggs in the G&G area, the Washington County Co-op Creamery quit handling eggs this month. Now a part of Associated Milk Producers, the Washington co-op sold the building at Linn to a group of local men.

Irrigation Impact Reaches Far

Irrigation is more than drilling a well and pumping water onto fields. Dr. E.S. Bagley, a Kansas State

University economist, points out that irrigation often has far-reaching effects.

He cites the development of a groundwater irrigation agricultural economy — such as is occurring in the High Plains of western Kansas — as an example.

First, irrigation affects the farm

enterprise itself. "Yield per acre and gross income are increased, land values rise and types of crops grown and farm organization may change," observes Bagley.

But costs also will rise due to increased fixed capital such as land preparation, wells and pumps, and current expenses such as fuel, fertilizer and seed. Hopefully, net income will go up, too.

The impact of irrigation on businesses which provide resources used in irrigation agriculture is also important. Examples are well drillers, farm supply producers and dealers, and farm machinery companies.

The effect of irrigation on agencies and businesses which benefit from irrigation-generated income is a major consideration. In this category are producers and retailers of consumer goods, and communities which provide schools and health, recreation, police and fire protection facilities.

Bagley points out the effect of irrigation often extends beyond national boundaries through international trade.

A word of caution: Communities benefiting from widespread growth of irrigation should understand that some effects are temporary.

During the development period, the demand for goods and services will peak. When the development ends, the demand will shrink to replacement levels, says the KSU faculty member.

Kodak Challenge To Polaroid?

Eastman Kodak has plans to take on Polaroid in the instant photography field, and the battle could start within a year.

Kodak officials said at the recent annual meeting that they would begin marketing Kodak film for Polaroid cameras and were working on an "in-camera" developing process of their own.

Polaroid, at its annual meeting, showed stockholders a glimpse of a camera only an inch thick and three inches wide which it believes will hold off competition from Kodak. The new Polaroid wasn't explained other than a suggestion that is was not a conventional camera.

How Kodak can compete with Polaroid in the instant film field wasn't clear. For several years Kodak has supplied Polaroid with color negatives that the latter uses in color film packs, being the only source of supply.

A year ago Polaroid agreed to license Kodak to make and sell Polaroid type film packs but the license isn't supposed to be effective until 1976. Kodak could get the license a year earlier if it were able to make a major improvement on the negative material.

Instant film has had spectacular gains in sales since Polaroid started marketing, although conventional film still outsells it by many times.

Big Decline In Hatcheries

A long-term trend to fewer and larger commercial poultry farms has had an effect on the hatchery business, says the Agriculture Department.

On Jan. 1 there were 1,209 commercial chicken hatcheries in the country, compared with 1,468 on the date in 1969 and more than 3,500 in 1961, says a department report.

The average capacity now is about 368,000 eggs, compared with 305,000 two years ago and 144,000 a decade ago, officials said.

Turkey hatcheries numbered 252 on Jan. 1, compared with 303 in a similar survey two years ago and 621 in 1961.

June Vote On Wool Promotion Funds

Wool producers will vote in June on whether to continue financing a promotional campaign operated by the American Sheep Producers Council, Inc., the Agriculture department announced.

Under the program approved by producers since 1954, the department deducts fees from government wool payments to farmers and turns the money over to the council for advertising and promotion.

***** Add \$400 Million For Federal Spending On Agriculture *****

President Richard Nixon announced this weekend he was increasing spending on agriculture to help the American farmer with the "high cost of farming" and to hike exports of harvests. The package was reported to total 400 million dollars, mostly in loans.

In a radio address to the nation Nixon fired a farm export goal of 10 billion a year. He said he expected this fiscal year's level to reach 7.4 billion, an all-time high.

The President said he was increasing loans and credits to help the inflation-troubled American farmer meet his production costs and also was upping spending for state and federal agricultural service programs.

This new aid, which will come as increases in this year's budget ending June 30 and the proposed 1971-1972 spending program, was described by White House and Agriculture department spokesmen as totaling 349.4 million dollars in loans and 50.6 million in spending.

In his speech Nixon did not specify how all the money would be spent. He did mention 1 million more in

fiscal 1971-1972 for the Foreign Agricultural service, a federal agency that helps farmers expand overseas sales; 9.6 million this year to federal and state agencies to fight crop, plant and livestock diseases and pests; 12 million more next year for the Soil Conservation service and 26 million more — to a level of 105 million — next year in federal grants for small watershed projects.

He said insured ownership loans would be increased from 210 million this year to 350 million next year and that the federally insured loan program for building water and sewer systems in rural areas would be increased by 100 million this year and 111 million next year.

Nixon said he also would recommend to Congress "the quadrupling of loan programs to help local communities finance their share" of the small watershed projects.

White House spokesmen said the administration would ask Congress within two weeks for legislative and budget changes needed to implement the aid.

In his speech Nixon said he was

optimistic about the overall trend of farm prices but added, "hog prices of course, are still too low."

But he reported the government was buying more pork for federal distribution and school lunch programs than at any time since 1856 and predicted hog prices "will show substantial improvement later this year."

Nixon taped the broadcast yesterday morning at the palatial desert estate of Walter H. Annenberg, publisher and ambassador to Great Britain.

The President flew there by helicopter from his San Clemente Western White House Saturday for an overnight stay with three friends, Hobart Lewis, president of Reader's Digest; Robert H. Abplanalp, Bronxville, N.Y. industrialist, and C.G. (Bebe) Rebozo, Key Biscayne, Fla., banker. Nixon is to fly back to Washington today. In discussing "the high cost of farming" Nixon said increases in total farm income were not always reflected in additional net income because of farming expenses, which often rise at a faster rate.

"This is why the farmer has such a tremendous stake in the battle against inflation," he said. "In a sense, he has a double stake, for inflation hits farmers in two ways. It drives up both the cost of farming and the cost of living."

While the battle is far from won, the January-March increase in living costs were the lowest in four years and cause for optimism," he added.

Nixon spoke as a prelude to Salute to Agriculture day Friday, when 60 to 80 farm leaders will go to Washington for conferences with government officials and entertainment including a White House dinner. Farm machinery and animals will be on display on the south lawn of the White House.

The chief executive recalled that he had promised in 1968 to reverse a then-current drop in farm exports.

"I am happy to say that we have delivered on that promise," he said, reporting that exports this year would reach a record high.

"Today," he said, "we are exporting the production from approximately one acre out of every

four we harvest. Two-thirds of our rice crop, more than half of our wheat and soybean crop and one-third of our cotton crop are going to foreign markets. That is a very good record. And yet we have to do even better."

Nixon said the government would continue efforts to lower trade barriers around the world.

"It seems to us," he said, "that the brightest future for agriculture is in actions that stimulate new energy in the market system."

He said new market centers abroad also had been mirrored at home and that beef consumption per person had increased by one-third the last decade.

"What these growing markets mean, of course, is growing income," he said. "As a result, part of expanding markets, export prices, for example, have been running a good half-dollar a bushel above the price support level. Cotton prices and cotton prices are well above loan levels. Cattle prices have recovered and stand at their levels of a year ago."

Nixon said he recognized farm credit was extremely tight and was working to expand it.

A Dent In Feed Grain Stocks

April 1 stocks of wheat in Kansas were a shade above 1970 and largest in a half dozen years, according to the Kansas Crop and Livestock Reporting Service.

However, combined stocks of four feed grains were the lowest in 4 years, and soybeans smallest in 3 years.

Wheat stored in Kansas on April 1 totaled 264,586,000 bushels, compared with 263,972,000 a year ago.

Wheat stocks were double the holdings 4 years ago, but less than half the record April 1 stocks in 1962. A slight increase in off-farm holdings from April 1970 was offset by a 2 per cent decrease in wheat stored on Kansas farms.

Rye holdings totaled 1,415,000 bushels, largest for April 1 on record.

Stocks of 4 major feed grains (sorghum grain, corn, oats and barley) in Kansas totaled 138,355,000 bushels, 22 per cent less than a year earlier.

Sorghum grain stocks in all positions totaled 735,341,000 bushels, down 34 per cent from a year earlier and lowest for the date since 1957. Farm stocks were down 25 per cent from a year earlier and off-farm stocks were down 38 per cent.

Corn stocks totaled 55,812,000 bushels, 6 per cent below a year earlier. Farm corn stocks increased 2 per cent but off-farm stocks decreased 10 per cent.

Oat stocks totaled 4,925,000 bushels, up 72 per cent from a year ago and highest for April 1 in 9 years.

Barley stocks were 2,277,000 bushels, up 32 per cent from this time last year and largest for April 1, since 1965.

Soybean holdings totaled 13,130,000 bushels on April 1, 11 per cent less than a year earlier, but still

the third largest of record for the date.

United States

The Nation's wheat stocks in all storage positions on April 1, were 11 per cent less than on April 1, 1970.

Stocks of the four feed grains (corn, oats, barley and sorghum) amounted to 98.4 million tons — 16 per cent less than a year earlier. Soybean holdings were 16 per cent below a year earlier.

All wheat in storage totaled 1,064,000 bushels including 386 million on farms and 687 million in off-farm locations. Off-farm stocks were 8 per cent less than the preceding April 1 and farm holdings were down 16 per cent from the large total a year earlier.

Rye stocks in all positions totaled 34.7 million bushels, 41 per cent more than a year earlier and the highest for the quarter since 1944.

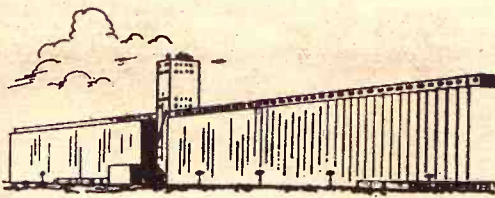

Sorghum grain stored in all positions on April 1, 1971 totaled 359 million bushels, 29 per cent below a year earlier. Farm holdings of 91 million bushels were down 26 per cent; off-farm holdings of 268 million bushels were the 31 per cent below stocks on the same 1970 date.

Corn stocks in all positions on April 1, 1971 totaled 2,531 million bushels, down 15 per cent from a year earlier. Off-farm stocks were 13 per cent less than a year ago and farm holdings were down 16 per cent.

Oats stored in all positions on April 1, 1971 totaled 702 million bushels, up 4 per cent from a year earlier. Oats stored off-farms was 54 million bushels over April 1, 1970, but farm holdings dropped 5 per cent from a year earlier.

Barley in storage April 1, 1971 totaled 259 million bushels, 22 per cent below a year earlier.

Soybeans in storage on April 1, 1971 total 619 million bushels, 16 per cent less than a year earlier. Farm stocks were 20 per cent bigger, but off-farm stocks were down 30 per cent.

Mobile Homes Dominating Purchases By Young Marrieds, Retirees

This year some 2.3 million people are expected to marry. And that makes the mobile home people happy — if last year's trend continues. Ninety-four per cent of all new single-family homes sold in 1969 under 20,000 were mobile home units.

Young married couples and retirees, caught in a tight money market and high mortgage rates, have increasingly turned to modular housing and mobile home units, producing a phenomenal demand for the industry in the last decade.

"Today you just can't build a house for under \$20,000," noted Thomas Meyers, executive vice-president of Guerdon Industries,

Inc., and president of its mobile homes and housing division. Stopping at the company's plants at Manhattan and Newton, Kas., Meyers said, "The majority of our sales to young, new families; retired couples are second. Coupled with the price advantage in the fact that mobile homes have become sophisticated," he explained. "Anything that you find in a conventional, stick house you can find in a mobile home today."

Guerdon ranks second in mobile home production and is the largest producer of modular housing in the country. Sales for the 16-year-old company last year topped 170

million dollars, up from 144.8 million in 1969, despite national housing sales being off 18 per cent for the last half of the fiscal year.

Meyers is enthusiastic about the advantages of mobile homes and modular buildings. "It's a new concept in building, especially modular housing. It has only been around for a few years and everything we do is a pioneer step. We have pretty well proved that we can satisfy any building authority," Guerdon, Meyers added, did 30 million dollars worth of business last year constructing modular units for hospitals, dormitories, offices, multi- and single-family dwellings.

Despite its jump in sales, Guerdon profits showed a decline from \$5,263,000 in 1969 to \$4,877,674 which Meyers attributed to the general slowdown in the housing industry and the poor economy.

"The industry as a whole suffered last year because of tight money. We expect a big boost this year now that Veterans administration and savings and loan associations were approved for financing. Money is not the problem now. Our biggest problem is the customer apathy for durable goods but it appears to be waning. Almost overnight we have seen a strong surge in orders."

One big problem confronting the industry is what Meyers terms "archaic" building codes.

Opposition for mobile homes in chiefly in urban area. As long as these archaic codes exist it will be difficult to provide the housing needed in cities. They must realize their problem. There are newer, faster, cheaper, better ways of building. Large companies, like ours, with mass buying power, are not limited as long as they can meet the codes. Detroit just approved plastic for drains and it will mean a huge savings for that one area alone."

Image is another priority for Meyers. "We are trying to outgrow the mobile home name, just as we did the 'trailer' idea. Trailer parks really hindered rather than helped

us; they wounded us badly with the 'gypsy' idea. The parks just did not develop as rapidly as the mobile homes did," he noted.

Guerdon, listed on the American Stock Exchange, is 52 per cent owned by City Investing corporation of New York, Big Board firm. In addition to mobile homes and modular units, it manufactures recreational vehicles such as travel trailers, plastics; business machines, aircraft instruments, refrigeration units. Home offices are in Louisville, Ky.

Meyers doesn't live in the product he so strongly advocates. "I've lived in a mobile home. I would now if I could; but I live in an apartment behind the office. I am a downtown urban dweller. But in Milwaukee they have constructed a vehicle mobile home park in the city,

22

Grass & Grain
May 4, 1971

similar to the Chicago twin towers. It has a steel core and modular units that simply slip into it. It's possible to change your home without moving. People who dream better than I, such as architects, see wide cities like this for the future."

SWEETEN SMELL FROM J.C. SEWAGE PLANT

JUNCTION CITY — A machine will spray deodorant in the air where the wind is blowing from the south of the sewage disposal plant here. Officials hope it will stop complaints from Grant avenue, the main route to Ft. Riley, and from mobile home parks in the area.

At Kansas Auctioneers Convention

MARSHALL BADGE
Front Street Marshal Jack Steinmetz gives an honorary marshal's badge to Dean Fleming, president of the National Auctioneers Assn. Miss Kitty looks on. Steinmetz manages the McKinley-Winter livestock auction in Dodge City and says his role as the Dodge City marshal takes quite a bit of time.

THE FAIR SIDE
Many auctioneers' wives take in the convention with their husbands. Here are Virginia Brewer, Mt. Hope; Margaret Kirk, Bucklin; and Jane Collins, Garden City.

TALKING IT OVER
Just talking trade occupies a good bit of the convention. Here are Earl Whitehurst, Emporia; Willis Darg, Bennington; Lawrence Welter, Manhattan; and Dick Brewer, Mt. Hope.

FUN AUCTION
The "fun auction" has become a regular part of the auctioneers convention. Hunkstering the stuff are Larry Lagasse, Concordia; Willis Darg, Bennington; and Harold Kirk, Bucklin.

KEEPING TABS
Clerking the fun auction were Mrs. Bob Jessup, Phillipsburg; MaDonna Mayers, Russell; and Lana Lagasse, Concordia.

Crimp In April Farm Prices

Prices received by farmers for raw products dropped one percent in April, the first downward trend since last December, the Agriculture Department announced. Crop Reporting Board officials said lower prices for hogs, milk and lettuce contributed most to the decline. Higher prices were reported for cattle and cotton.

Average prices for farm products

had risen since last December before holding steady in March.

Hog prices averaged \$16 per hundredweight in April compared with \$16.90 in March and \$23.80 a year earlier. All beef cattle averaged \$29.10 per hundredweight compared with \$28.60 in March, the same as a year earlier.

Corn averaged \$1.41 per bushel compared with \$1.43 in March and

\$1.15 a year earlier.

Meantime, farm expenses, which almost monthly have set new records, rose one percent during the month ended April 15, the report said. They were 4 percent more than a year ago.

The parity ratio, based on a 1910-14 cost and price relationship, dropped during the month to 69 percent, compared with 70 percent in March and 72 percent a year earlier.

Under a new formula based on 1967 costs and prices, the ratio for April was 93 percent compared with 95 percent in March and 97 percent on the same basis for April last year.

Prices received by farmers in April averaged 111 percent of the 1967 base, compared with 112 percent in March. The comparable rate

COW CHIP SLINGER

That's the Oklahoma governor, David Hall, throwing a genuine cow chip at the 2nd annual Cow Chip Throwing contest at Beaver, Okla., last week. The pan-handle town attracted about 5000 people to the contest.

Longest throw of the day was by E.J. Cash, Forgan, Okla., who threw a chip 150 feet. The governor tossed one chip 80 feet.

Really cow chips? That's right. How do you pick out a cow chip that's suitable for throwing? Very carefully.

HANG ON A SECOND - I'LL SEE IF I CAN CATCH HIM BEFORE HE DASHES OFF!

Auction SALE

Saturday, May 29 — 10 a.m.

We will sell at Public Auction all of our Real Estate acreage of approximately 520 acres of pasture land at the ranch headquarters located three miles northwest of Manhattan, Kansas on Highway US 24 & K 177 or 1 mile west of Tuttle Creek Dam on Highway US 24 & K 177 in various tracts as described.

REAL ESTATE — 520A Riley County Land

GENERAL DESCRIPTION—These tracts of land lie just northwest of city limits of Manhattan, Kansas. It is composed largely of good bluestem pasture and is in excellent condition. Nearly all tracts have water either by wells or ponds or both. We will offer these various acreages as described separately with the auctioneer holding the bid on each high bidder of each tract and then he will offer the entire unit of 520 acres for sale and whichever brings the higher bid, it will be sold.

Tract No. 4 — 52.3A

Located in SE 1/4 of Sec. 21-9-7 consisting of 52.3 acres of pasture with a good fence. This tract lies on the north side of Highway US 24 & K 177.

Tract No. 5 — 4.9A

Located in SE 1/4 of Sec. 21-9-7 consisting of 4.9 acres of pasture. Has a good entrance road off of Highway US 24 & K 177.

Tract No. 6 — 40A

Located in NW 1/4 of NW 1/4 of Sec. 28-9-7 consisting of 40 acres of pasture. Lies to the west of a county road and completely fenced.

Tract No. 7 — 200A

Located in W 1/2 of Section 28-9-7 consisting of 200 acres of pasture with some improvements. Has two ponds and good fences.

TERMS: Twenty-five percent (25%) down day of sale when contract will be signed. The balance will be due when merchantable title is given by the owner to the purchaser. Immediate possession of all tracts of land. 1970 and all prior taxes shall be paid in full by seller, 1971 and all subsequent taxes to be paid by the buyer.

ANNOUNCEMENTS made day of sale take precedence over any earlier statements.

Tract No. 1 — 88.5A

Located in SW 1/4 of Sec. 22-9-7 consisting of 88.5 acres of pasture with improvements consisting of a house, barn and other building. Has good water of both wells & pond. This tract lies on the south side along Highway US 24 & K 177.

Tract No. 2 — 36.8A

Located in SW 1/4 of Sec. 22-9-7 consisting of 36.8 acres of pasture with a pond and good fence. This tract lies on the north side of Highway US 24 & K 177.

Tract No. 3 — 91.5A

Located in SE 1/4 of Sec. 21-9-7 consisting of 91.5 acres of pasture with a good fence. This tract lies on the south side of Highway US 24 & K 177 and there is a county road on the west side of tract.

A Home For You
IN CLAY CENTER
Beautifully decorated new home with spacious family room and kitchen. Has three bedrooms, 1 1/2 baths, completely carpeted, large two-car garage, close to schools, perfect location for a family.

IN CLAY CENTER
A real family home with large yard, three bedrooms, separate dining room, very convenient kitchen, attractive bath, located in area where there are no special taxes. Walking distance to several churches and schools. This is a lovely older home.

IN CLAY CENTER
Smaller two bedroom home with large living room, kitchen large enough to eat in, and an excellent basement. This needs a bit of decorating, but will make a very attractive home. Older home, priced under \$6000, with many good features.

IN CLAY CENTER
Good location, good sized living room, good yard. Be perfect for small family or an early-retired couple.

NEW LISTINGS

McPherson & Rice County Land

560 acres, Rice County — SE 1/4 23-18-6, SW 1/4 24-18-6, E 1/2 SW 1/4 13-18-6 and the NE 1/4 13-19-6. Excellent improvements — nearly new house with finished basement, 2 bedrooms up and 2 bedrooms and office down. Beautiful carpeting & draperies. All Birch kitchen with dishwasher. Forced air and central air conditioning, 40x80 new machine shed, 3 new 1350 bu. steel bins with aeration, heated farrowing house. Approximately 172 acres excellent growing wheat, 1/2 of all crops and government payments go to buyer. Can assume loan on part and would sell on contract on balance at 6 1/2 percent.

160 ACRES McPherson Co. — SW 1/4 21-19-5 1 mile east of Windom on Highway 56. This is a real good quarter with excellent growing wheat, 1/2 of all crops and government payments go to buyer.

Just sold 320 acres last week and have other listings — Let me help you sell yours. See or call me for an appointment.

USED FARM MACHINERY

AT DISTRESS PRICES
1030 Case tractor with new tires, etc., free radio. Comfort Cover, will deliver to Washington, D.C., if necessary. Last week: \$5250. This week: \$4999.99. This is a steal!

Can't believe that our politicians could pass a law that you had to be 21 years old to drive a truck, I just can't believe it.

Still have one WD that runs like a sewing machine, "Allis" for \$399.99, will take \$39 for cultivator, \$29 for the chisel & 39 for the plow to fit!

Looks like we have a new sport starting. To see who can throw cow chips the farthest? ?

Still have one Comfort King tractor left, will reduce this week 3250.00, has factory cab, nearly new tires, PTO, power steering, etc., this dam tractor will pull a 5 bottom plow anywhere; will deliver to your farm anywhere in the state.

Wonder why Mr. Dick Nixon leaves town every week end, especially when he had several hundred thousand guests drop in and he don't even stick around to greet them! He goes to his retreat and watches his guests on television, Too bad!!? Spiro don't even stick around!

One heavy duty manure loader GB, rams on bucket, will handle "heavy duty" manure, will deliver or let you haul it, \$549.99; for a bit more will deliver to D.C.

660 Case combine, now reduced again, was \$4450.00, this week will take \$3695.00, 65 model. We will take \$1895.00 for this 800 Case in excellent condition, new engine overhaul, combine 14-ft., rebuilt.

Will take \$2695.00 for Case series 1000, 14-ft., rebuilt, has cab & chopper, perfect shape. We really can't afford to sell this cheap!

1968 Allis Gleaner, 20-ft., G combine, better than good, take \$7500.00.

Looks as though the politico's are going to force compulsory health insurance down our throats whether we are sick or not. It's enough to make one sick - write the "last Kennedy" and say "No Thank You Sir."

I see where Vern Miller is now appointing his own private army of police & snooters! — Watch out for the "Evaluators" the judge is sending them out.

One antique left hand walking plow \$29.99
To sell at once — One Allis-180 gas tractor, with wide axle, power steering, 3-point, etc. This is a big tractor, sells around seven thousand and now we are going to sell to you for \$5200.00, look it over.

Allis Chalmers Gleaner, 13-ft. model E, like new condition, \$2995.00
New Allis side rake, \$499.00, below cost

Blair 4x10 Feedwagon, 71 model, demonstrator \$749.00

"Dick" ought to get "Martha" to help him wind down the war. As talkative as she is she could probably talk us out of Vietnam. Even why not send her over to try.

Looks like the peace march in Washington by the "kids" is building up to something. Too bad. If they do manage to stop the workers for one or 2 days and they didn't get paid for it, lookit what us poor old tax payers out here might have. Way I see it they've got 2 people for every job in Washington, D.C., anyway.

Still think "Dick" ought to stick around and run things on weekends instead of taking off and leaving it up to Spiro T, Marthan and John and Kissinger, yes, and J. Edgar.

4 heavy duty wagon wheels, in good condition, antique, take less than \$50.00.

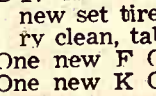

Giant size Brady chopper, cuts 12-ft., good condition \$695.00.

D-17 Allis tractor on LP gas, new set tires. This tractor very clean, take \$1495 this week.

One new F Gleaner at cost

One new K Gleaner at cost

MORE EXOTIC IMPORTS

Another of the cattle breed imports is the German Fleckvieh, imported thru an Iowa firm which contends that the Fleckvieh is the most rigidly tested strain of Simmental cattle to be imported.

The two examples are a 2700-pound bull above whose sons have averaged 2.7 pounds per day of age. The cow below averaged 14,984 pounds of milk with a 4.37 percent butterfat in nearly 11 years of production.

The first sale of German Fleckvieh cattle in the United States was completed about a month ago when an unborn bull calf sold for \$125,000. The bull calf will be born in England this year in the herd of Ernest Dodd of Chester, England, and imported to the U.S. by German Fleckvieh of America. Curtiss Breeding Service of Cary, Ill., purchased the calf from the Iowa organization.

The contract calls for Curtiss getting the pick of the 1971 crop from the Dodd herd.

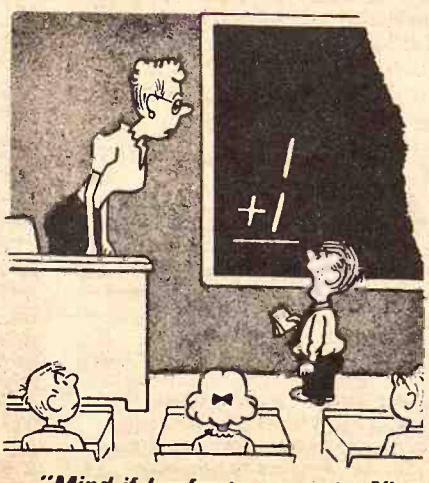

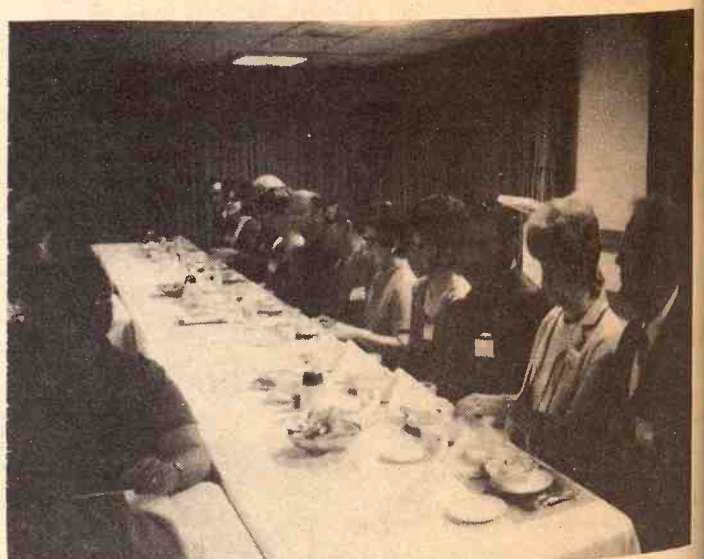

In 1970 England permitted an importation of Fleckvieh cattle from German for the first time after several hundred years of strict barriers due to the danger of hoof and mouth disease. Dodd acquired twelve head of the Fleckvieh through the Scottish Milking Board. The herd has now been expanded to 17 head.

When Greiner made a trip to England in September, he and Dodd formed a partnership. The eleven stockholders of German Fleckvieh of America are all Iowans except for Dodd, GFA vice president.

Germany has set up rigid laws for the selection and production of Fleckvieh to meet high standards of meat and milk production. Bulls must be production and progeny tested before being used in the AI studs. The country's top cows are also selected for breeding to the top bulls. The breeding program falls under government control.

The objective of German Fleckvieh of America is to establish a purebred herd of Fleckvieh cattle in the U.S. as soon as possible following the tests used in Germany.

CLEANING UP THE FISHPOND

As part of an 8th grade class observance of Earth Day, 27 students of Mrs. Carole Odell cleaned a fish pond in the city park at Fredonia.

Duckwalls Will Offer Stock Sale

The A. L. Duckwall Stores Co. is in its greatest expansion year in history, and will "go public" in stock sales early next year to finance further expansion.

A. L. Duckwall Jr., president of the Abilene-based company, made that report at the annual stockholders meeting. Stock presently is held privately by members of the Duckwall family, company executives and employees.

Duckwall said sales and profits for the past fiscal year were highest in the firm's 70-year history, and fiscal 1971 will be a record expansion year.

Most of the recent expansion has been into the Alco Discount Store division. Plans yet to be announced could result in 2 or 3 additional Alco stores by fall of 1972.

The company closed stores during the past year in Salina, Aggieville (Manhattan), Albuquerque, N.M., and Denver, Colo.

Variety stores are being enlarged and remodeled this year at Phillipsburg, Norton, Burlington and Wamego. The company also has 7 fabric stores, including one in Concordia.

There have been rumors that Duckwall's plans a new store in south Salina but officials said they could not confirm them.

A NEW HOME?

Dick Robbins thinks some jackrabbit imports may multiply at his Anchor D ranch near Olsburg. Robbins bought 26 does and 10 bucks from Earl Johnson of Rago in far western Kansas. Johnson has sold jacks for years to dog racing groups.

FOR SALE

Truck Bed & Truck With Bed

Bureau of Standards to all government departments and agencies over the past year or so.

The Bureau of Standards, in the Commerce Department, is handling a survey and study of the metric issue. A final report is scheduled to be made to Congress on Aug. 9.

After that, Congress will decide whether to consider changing from inches, yards and pounds to centimeters, meters and kilograms, some of the most common units in the metric system.

Earl E. Houseman, a research adviser in the Statistical Reporting Service, heads up the liaison team on metrics for the Agriculture Department and is keeping in touch with the Bureau of Standards work.

The questionnaires, Houseman told a reporter, seemed to indicate a generally favorable attitude toward the metric shift as long as the public was given ample help and time to prepare for a changeover.

The United States is the only major industrial nation that has not adopted the metric scale or is in the process of doing so.

Proponents of the switch say the United States needs to use metric measurements so that exports, mainly industrial products, can compete more easily in world trade. Since most of the country's foreign customers use the metric system, they say, it would help U.S. traders if their products use the same units.

The metric scale has been gradually increasing in use by U.S. manufacturers anyway, the proponents claim. The pharmaceutical industry is almost completely metricized, and the ball-bearing industry is rapidly following suit.

No timetable has been proposed officially as yet, but government estimates thus far range from five to 15 years or more for the full switch.

GALENA, Kan.—Approximately half of the Galena Industries Inc. smelting plant has been sold and its personal property valuation nearly halved. The valuation drop, granted by the Kansas Board of Tax Appeals, will have an impact on Galena, Galena schools and Cherokee County finances. The smelter had been appraised at \$683,000, but the appraisal was reduced to \$341,500.

Plant officials were quoted as saying that part of the reason no longer was in use by pollution controls imposed by the Kansas Board of Tax Appeals.

Officials at plant headquarters in Joplin, Mo., said they believe the pollution controls were not the major factor in the shutdown. They attributed it to a "general downturn in business." The Galena plant had been operating since 1912.

Khapra Beetles Around In Stored Grain Again?

Agriculture Department sleuths are trying to trace and stamp out a possible invasion of Khapra beetles, rated as among the world's most

savage destroyers of stored grain, before they set up a base camp in the United States.

Officials have announced that khapra beetles had been found on March 31 in some grain at a small crossroads general store near Stanfield, Ariz.

But fire destroyed the store before fumigation operations could begin, the Agricultural Research Service

said. Now, because others may be in the area, a search is under way to trace the origin of all goods that were in the store.

The Khapra beetle is a small insect, one-tenth to one-fifth of an inch in length, an ARS spokesman said. "But what they lack in size, they make up for in their voracious appetite," he added.

Khapra beetles are natives of India and Ceylon, where they cause serious losses to grain reserves. The last reported infestation in the United States was in 1966.

"In Asia," the department said, "khapra beetles frequently destroy 5 to 15 per cent of stored grain and 75 per cent of sacked grain during the first year of an infestation."

"Total losses can be expected when infested grain is left undisturbed for long periods," though such losses are unknown in the United States, officials said, because ARS, working in cooperation with the states, has in the past eradicated the pest promptly.

The beetles have been found in the United States in stored wheat, oats, rye, barley, corn, flaxseed, beans, cottonseed, blackeyed peas, alfalfa seed, nuts and many other food products, the department said.

JOBLESS RATE AROUND WELLINGTON GETS AID

A sudden rise in unemployment in Sumner county (Wellington) will get that county emergency aid from the Department of Commerce, but aid for Cowley county (Ark City-Winfield) has been denied by the Economic Development Administration.

Gasoline Taxes Go Many Ways Before New Construction

State taxes on gasoline produce revenues of \$132 million but only \$37 million goes for road construction. What happens to the remainder?

Answering complaints against what some consider a skimpy road-building program, assistant highway director R.L. Peyton has itemized what happens to the gasoline taxes before there is any remaining for new construction.

Here's the arithmetic:

• \$10 million is returned to the taxpayer in refunds, mostly to farmers claiming taxes paid for gasoline used for nonhighway purpose.

• \$2 million goes to the state general fund, presumably in payment for services in collecting and distributing taxes. This is required by law.

• \$30 million goes back to counties and cities for their use. Some of this goes into new construction but not on state highways.

• \$1 million goes to the state highway safety fund, a government bureau which promotes highway safety.

• \$7 million is transferred to other funds — the highway patrol, various cities for maintaining state highways, port of entry, and miscellaneous refunds.

• \$44 million to operate the state highway department and keep up road maintenance.

That leaves \$37 million for road construction. About \$23 million of this goes for freeways, \$11 million for lesser roads, and \$2.5 million to match federal funds in roadbuilding. The latter, of course, is a major

36

item. Last year the state received \$100 million from the federal government for construction.

Will sell for the Richard S. Sedivy Estate at the farm, located 1/2 miles north of Blue Rapids, Kansas, 1 1/2 miles east and 1/2 miles south of the center.

Tuesday, May 11
Starts 1:30 p.m.

Three New Plans for On-Farm Feed Handling

Kansas grain producers have a choice among three new building plans for an efficient grain-feed handling center.

Leo Wendling, Extension Agricultural Engineer at Kansas State University, said the center is planned as a complete system. Producers can build one unit at a time or all units at once.

The plans feature 4 or 5 storage bins grouped around a grain-feed handling center with a storage capacity of from 20,000 to 40,000 bushels of grain. Midwest Plan Service's plan No. 73292 is shown here.

GRAIN-FEED HANDLING CENTER

Plan No. 73292

These centers use the closed loop method for handling grain. This method is adaptable to current, scientific developments in grain storage and conditioning such as drying, aeration, grain cleaning and feed processing, Wendling said.

Without having to move the equipment, the grain flows from the vertical elevator to each storage and process unit and returns by

mechanical conveyor to the boot of the elevator.

No. 73292 and No. 73293 are drive-through center buildings which have a shallow, hopper-bottom dump pit with a sloping cross conveyor, an across-the-drive work tower with overhead hopper-bottom bins for fast load-out, and space beside the drive for feed processing or grain cleaning equipment.

In No. 73292 the pit is at the center of the building, separating the processing areas. No. 73293 places the pit at one end of the building, features a single processing area, and allows space inside for a truck scale.

If a truck is used to unload the grain trucks, it can be placed outside the building, lessening the problems of overhead clearance. In No. 73294 the work tower is beside instead of across the drive. It also has an offset gate.

Variations in the plans affect only the location and arrangement of the center building and the position of the high-temperature dryer. Wendling noted.

The plans are available at the county Extension office or from Extension Agricultural Engineering, Umberger Hall, Kansas State University, Manhattan. The charge is \$3.50 per set.

Belleville Livestock Commission Co., Inc.

SELLING CATTLE AND HOGS

EVERY FRIDAY starts 12:30 Noon
Hogs Sell First

With a large run of livestock on hand for our sale Friday the market looked 50¢ to \$1.00 higher on feeder cattle. The light weight cattle sold on a steady to strong basis with cows and bulls selling on a fully steady market. Feeder pigs are in good demand and sold on a steady basis.

Listed below are some sales from our auction:

First Wheat Out Of Tulsa River Port

TULSA — The first outbound shipment of wheat from Tulsa's inland Port of Catoosa will be May 8 by Garvey Grain Inc., Wichita.

Approximately 35,000 bushels (1,050 tons) of wheat from south-central Kansas will be loaded at the Garvey Grain Elevator in Wichita aboard a fleet of trucks over a four-day period beginning May 5.

After the 180-mile trip, the wheat will be loaded on a river barge. The barge will travel the Arkansas, Mississippi, Ohio and Tennessee rivers to Chattanooga where the Dixie-Portland Flour Mills will take delivery.

The trip will take approximately 20 days over the 1,371 mile water route.

The Port of Catoosa is located at

the terminus of the Arkansas River Project recently completed by the Corps of Engineers. It provides a direct water route to the Gulf of Mexico, inland waterways and main highway connections.

The Arkansas-Verdigris Navigation System covers almost 400 miles and represents an investment of \$1.2 billion. The project leaves the Mississippi, climbs a 420-foot stairway of 17 locks and dams

May 4, 1971

Grass & Grain

37

and crosses the state of Arkansas into eastern Oklahoma to Tulsa.

Plan New Sale Barn At Herington

HERINGTON — Construction work on the new facilities of The Herington Livestock Auction Co., Inc., is expected to start in two weeks at the new location a 30 acre tract about a mile northeast of Junction US 77 and US 56, it was announced by Lee Remy one of the owners.

The sale pavilion will be all metal, will be air conditioned and will include a large cafe. About half the pens will be roofed, Remy stated.

An innovation will be the weighing system. It will be a self-balancing scale which flashes instantly the number of head on the scale, the total weight and the average weight. Remy said there are only four such scales in the country.

The rapid growth of this Tuesday auction, according to Remy, has made it imperative for the owners to make the move to their new facilities, which are expected to be ready August 10. Other owners are H. Irvin Christiansen, Edward B. Tolle and Joe Clemence.

Gov't. Purchases Helped Milk Price

The government bought an equivalent of 7 billion pounds of milk during the year ending March 31 to help support dairy prices, says the Agriculture department.

At a cost of 380 million dollars, the purchases compared with 4.1 billion

pounds of milk equivalent during 1969-70 marketing year when price support program cost 1.1 million dollars, officials said.

DOWNTOWN K.C. HOTEL CLOSES

A major hotel in downtown Kansas City for years, the Hotel Phillips locked its doors at 12th and Baker. The owners said a lack of business and a 20-story hotel caused the closing.

Johnny Kay Says:

You will accomplish more by doing right rather than just good enough.

FARMERS OUTLOOK

L.H. Simerl

Both Soybeans, Corn Stocks Down

Stocks of soybeans reported on April 1 were smaller than those reported in the trade had expected. Following the report, the market opened moderately higher but dropped very sharply later in the day, closing down 3 to 4 cents per bushel (Friday, April 23).

The USDA report showed only 619 million bushels of soybeans on hand. Some persons in the industry expected the total to be as high as 650 million bushels. Part of the difference may have been caused by

the movement of some seed beans to locations where they were not reported. The reported stocks were 16 per cent smaller than those of a year earlier.

Soybean use (crushings) during the seven months from September through March totaled about 446 million bushels — up 6 per cent from a year earlier. Most of this gain, however, was made in the first five months of this period. If crushings for the last five months equal those of a year ago, the total for the year

will be around 765 million bushels — up about 3.5 per cent from 1969-70. The USDA forecast is for 775 million bushels.

Soybean exports from September through March were around 265 million bushels — only 2 per cent more than a year before. In March, exports dipped sharply below the year-before figure. During the final five months of the marketing year, exports may be boosted by efforts to get beans out before a threatened dock strike that would begin in September. If exports during this period equal those of a year ago, the total for the year will be around 435 million bushels — only 1 per cent more than in 1969-70. However, the USDA expects exports to total 450 million bushels.

Farmers will use 53 to 55 million bushels for seed. Some 5 to 10 million bushels may be fed to animals and lost in storage, transfer, and transportation. The USDA has projected a carryover of about 75 million bushels on September 1, but private forecasts range all the way from 65 to 100 million bushels.

Corn Down 15 Per Cent

Stocks of corn on hand April 1 totaled 2,531 million bushels — 15 per cent less than a year earlier. Thus, the disappearance of corn during the first half of this marketing year was 2,583 million bushels — 4.5 per cent less than a year before. These figures were about the same as the general expectation. When the market opened after the report,

TRACTOR DRIVING SCHOOLS

Tractor driving certification schools have been underway in many G&G area counties. The schools enable a 14 or 15-year old driver to exempt from federal regulations. Here, Douglas county extension agent Bill Merhoff tests Danny Rake of Berryton. In the background are Clark Keffer, Pat O'Bryon, Jerry Edmonds, and Lanny Rake.

prices advanced, then broke sharply, and closed 2 or 3 cents lower.

Exports of corn between October 1 and April 1 (six months) totaled about 264 million bushels — 17 per cent less than a year before. The apparent domestic disappearance was about 2,320 million bushels — down 3 per cent from a year earlier.

Exports seem likely to continue well below year-ago levels, since foreign buyers are increasing their use of other grains for animal feed. Domestic use may drop even further below the 1970 level, because of reductions in the production of

broilers and hogs.

The prospective carryover of corn on October 1 is 600 to 700 million bushels. About half of this will be required for pipeline supplies, or working stocks. Thus, the usable carryover may be only 300 to 400 million bushels — enough to meet normal domestic and foreign needs for about one month.

The big question, of course, is the size of the 1971 crop. Blight is a serious threat, but perhaps not the greatest one. Drought could cause more destruction than the blight did last year.
