A STRAW-FIRED FURNACE FOR
GRAIN DRYING PURPOSES

by

APOLONIO VALENTINO GUEVARRA
B.S.A.E., CLSU, PHILIPPINES, 1975

A MASTER'S THESIS

submitted in partial fulfillment of the

requirements for the degree

MASTER OF SCIENCE

Department of Grain Science & Industry

LIST OF TABLES	ii
LIST OF FIGURES	iii
ACKNOWLEDGEMENTS	v
INTRODUCTION	1
OBJECTIVES	4
REVIEW OF LITERATURE	5
Combustion theory	7
Drying principles	8
Theory of drying	9
Optimum drying air temperature and relative humidity	12
Farm grain driers for developing countries	13
MATERIALS AND METHODS	24
Materials	27
Instrumentation	27
Procedure	30
RESULTS AND DISCUSSIONS	35
CONCLUSIONS AND RECOMMENDATIONS	53
LITERATURE CITED	55
APPENDIX	58

LIST OF TABLES

Table		Page
1	Test number assigned to the different treatment combinations	33
2	Drying air temperature and CO content of flue gas in the first preliminary test	36
3	Experimental results on drying rates for all drying tests	40
4	Estimated drying efficiency and evolution of carbon monoxide for all drying tests	41
5	Estimated drying potential for all drying tests	43
6	Average drying efficiency and evolution of carbon monoxide as affected by grain depth	49
7	Average drying efficiency and evolution of carbon monoxide as affected by turning the grains	49
8	Drying capacity, drying efficiency and specific fuel consumption of three types of driers at 4-in. grain depth turned every 4 hours	51

LIST OF FIGURES

Figure		Page
1	Brook's drier (1964)	14
2	Brook's drier modified by Bolduc (1978)	16
3	Pyramidal cover used by Adeyemo (1979) in the modified Brook's drier	17
4	Bialostocki's drier (1977)	19
5	Kajewski's furnace (1977)	19
6	Acasio's rice hull furnace (1972)	20
7	Chancellor's drier (1971)	22
8	Design of the straw-fired furnace and drier . . .	25
9	Photographic views of the direct-fired grain drier	26
10	Thermolyne portable pyrometer Model PM 20700 . . .	28
11	Yellow springs instrument Company's Tele- thermometer (Thermistor)	28
12	Platform scale used to measure the amount of straw burnt	29
13a	Kitagawa Toxic gas detector kit Model 8014-400 . . .	31
13b	Measurement of carbon monoxide in the flue gas below the grain bed	31
14	Points of temperature measurement during drying . .	34
15	Drying air temperature at 20 lb per hr fed at three different locations	37
16	Drying air temperature at 40 lb per hr fed at three different locations	37
17	Rate of fuel vs drying air temperature (second preliminary test)	38

Con't.

Figure		Page
18	Rate of fuel vs drying air temperature (third preliminary test)	38
19	Rate of drying at 2-in. grain depth	44
20	Rate of drying at 4-in. grain depth	45
21	Rate of drying at 6-in. grain depth	45
22	Rate of drying at no grain turning	47
23	Rate of drying at 4 hours grain turning interval . .	48
24	Rate of drying at 1 hour grain turning interval . .	48
A1 & A2	Drying air temperature fluctuations (second preliminary test)	59 & 60
B1 & B2	Drying air temperature fluctuations (third preliminary test)	61 & 62

ACKNOWLEDGEMENTS

The author wishes to express his profound gratitude to his major adviser, Dr. Charles W. Deyoe and to the members of his committee, Dr. Paul A. Seib and Dr. Do Sup Chung for their technical guidance and evaluation of this study.

He also recognizes the Integrated Agricultural Production and Marketing Project (IAPMP) for sponsoring this work. Moreover, his sincere thanks to the following people:

Dr. Harry B. Pfof : for encouraging and helping him design
the furnace and drier;

Dr. Ekramul Haque : for his technical aid and assistance in
organizing this thesis;

Dr. Jim Jorns : for his assistance in purchasing all the
materials used;

Dr. Ulysses A. Acasio : for his help in constructing the
straw-fired furnace and drier;

Dr. Amado C. Campos : for giving the chance to complete this
work;

Rosemary Burroughs : for her help in analyzing the grain
samples; and

To all his friends : for their unselfish supports.

Finally, to his parents, Mr. and Mrs. Severino S. Guevarra and to his wife, Flocer for providing all the necessary encouragements and moral supports throughout the study.
